Less than a year later⁹⁰⁷, in a new election, the Bolivian Movement for Socialism (MAS) was resoundingly returned to power. The US backed coup had 'failed' and those who engineered it were seeking asylum in the United States.

But, of course, this would not be the conclusion to Bolivia's political troubles! It is one thing for a South American 'socialist' party to win elections, it is quite another for the US to allow them to exercise their responsibilities. The coup leaders, their concerns ignored by the Trump administration in its refocusing on the 2020 US presidential contest, were not granted asylum and faced the inevitable and entirely justifiable reckoning for the crimes committed during their short reign. Bradley Blankenship summed it up⁹⁰⁸:

The arrest of Bolivia's former interim president Jeanine Áñez and her coup co-conspirators is being painted by pro-Western organizations as political persecution, but it's far from that.

Bolivian authorities arrested ex-interim president Jeanine Áñez on March 14 for sedition, terrorism and conspiracy for her role in the 2019 coup that ousted former president Evo Morales and ushered in a dark age of violence and repression in the country. Justice Minister Ivan Lima said days after the arrest that he would seek a 30-year sentence for Áñez if found guilty, a sign that the victims of the coup regime's repression will get the justice they deserve.

There have been many more arrests, including several ministers under the Áñez government and right-wing paramilitary leaders involved, and more are expected to follow. In many of these cases, it's social movements leading the pressure for charges to be brought against co-conspirators in the coup.

(Bradley Blankenship, ["Bolivia has every right to prosecute coup perpetrators for their crimes"](#), RT, 17 March, 2021)

One can but hope that (the acting head of the US State Department's Western Hemisphere bureau) Julie Chung's (March 14, 2021) response to the arrests signals that the US is changing course on past repression of South American 'socialist' governments:

Americans and many across the Americas know from hard experience the need to safeguard and constantly renew democratic rule of, by, and for the people.

Should we view such statements as sympathetic recognition of past US interference or as veiled threats of 'constantly renewed' interventions? Perhaps if we all believe hard enough, it will turn out that leopards can change their spots!

Venezuela's ongoing troubles provide clear illustration of what the future is likely to hold for the elected Bolivian 'socialist' government.⁹⁰⁹

Yet another demonstration of the way in which the US can [sociopathically](#) make the economies of other sovereign nations 'scream'.⁹¹⁰

US President Trump, if that were possible, embarked on the process of regime change with even less aforethought than his predecessors. As a

Guardian headline declared: ⁹⁰[Trump has hitched his wagon to regime change in Venezuela - so now what?](#) The problem for Juan Guaidó and his foreign backers is how to convert assets abroad to real power inside Venezuela.

Trump finally decided against military action in pursuing his 'prerogative'. Of course, his track record includes such belligerence. Apparently all Trump needed to justify his actions in 2018 (and, again in 2019) were 'media reports' in the Main Stream Media ⁹¹¹. No need for Congressional approval or 'scientific evidence', he heard it in the media! Carol Morello, Anne Gearan and Missy Ryan explain the results well:

President Trump declared victory Saturday in the largest application of military force he has ordered, as the U.S. ambassador to the United Nations vowed that the United States is ready to launch another strike if the Syrian government uses chemical weapons in the future.

"Mission Accomplished!" Trump tweeted a day after the allied assault on Syrian facilities that the United States, Britain and France say are part of a large chemical weapons program. The phrase was the same one the last Republican president, George W. Bush, employed to his regret in 2003, when the Iraq War was far from over.

"I spoke to the president this morning, and he said, 'If the Syrian regime uses this poisonous gas again, the United States is locked and loaded,' " U.N. Ambassador Nikki Haley said at an emergency Security Council meeting called by Russia, the Syrian government's most powerful ally.

"When our president draws a red line, our president enforces the red line," she added.

(Carol Morello, Anne Gearan and Missy Ryan, ⁹⁰[President Trump declares victory as Pentagon details U.S.-led strikes in Syria](#), *The Washington Post*, April 14, 2018)

Responsibility for political oversight of military authorities and activities in the United States has, over the past half-century, been progressively 'streamlined', short-circuiting long-established political safeguards against the possibility of impulsive war making. [Rebecca Gordon](#) has described the process:

During the second half of the 20th century, Congress repeatedly ceded its constitutional power to declare war to successive executive administrations....

In any examination of US 'regime change' activity in sovereign nations around the world, the obvious starting region is what US politicians have always seen as their own backyard⁹¹² - Central and South America. Marjorie Cohn has summarized it well:

As Venezuela's second president, Simon Bolivar, noted in the 19th century, the US government continues to "plague Latin America with misery in the name of liberty."

From engineering coups in Chile and Guatemala, to choreographing a troop landing at the Bay of Pigs intended to establish an exile government in Cuba, to training Latin American strongmen at the School of the Americas in torture techniques to control their people, the United States has meddled, interfered, intervened and undermined the democracies it claims to protect.

(Marjorie Cohn, [“The US Is Orchestrating a Coup in Venezuela, Truthout](#), February 2, 2019)

From Vietnam, Laos and Cambodia⁹¹³; to [Indonesia](#); to [“nation after nation in Central and South America”](#)⁹¹⁴; to Kosovo; Afghanistan⁹¹⁵; Iraq⁹¹⁶; [“Syria”](#)⁹¹⁷ Yemen⁹¹⁸; Somalia⁹¹⁹; [Libya](#); Kenya; Cameroon; Uganda; South Sudan; Democratic Republic of Congo⁹²⁰; Central African Republic; Djibouti; Niger; [Venezuela](#); [Brazil](#); [Bolivia](#) , [Ukraine](#)..., the Western world has found itself drawn into ill-considered, poorly justified, and increasingly impetuous war-making.

Perhaps John Newton's description of both his own and British involvement in the slave trade best sums up the mindset which allows such atrocities to be committed without revulsion on the part of the perpetrators:

Perhaps what I have said of myself may be applicable to the nation at large. The Slave Trade was always unjustifiable; but inattention and interest prevented, for a time, the evil from being perceived. It is otherwise at present; the mischiefs and evils, connected with it, have been, of late years, represented with such undeniable evidence, and are now so generally known, that I suppose there is hardly an objection can be made, to the wish of thousands, perhaps of millions, for the suppression of this Trade, but upon the ground of political expedience,

Tho' I were even sure, that a principal branch of the public revenue depended upon the African Trade (which, I apprehend, is far from being the case), if I had access and influence, I should think myself bound to say to Government, to Parliament, and to the Nation, "It is not lawful to put it into the Treasury, because it is the price of blood [[“Matthew Ch. 27 V. 6](#)]."

(John Newton, [“Thoughts Upon The African Slave Trade](#), London : Printed for J. Buckland, in Pater-Noster Row; and J. Johnson, in St. Paul's Church-yard, 1788)

['Weeding out enemies' around the world: There will be nowhere to hide!](#) 🐦

As the 21st Century has unfolded, the United States has developed more 'precise' means of 'weeding out enemies' around the world. Why invade and occupy countries when one can simply kill those who are deemed a 'threat' to ... (whatever provides the immediate justification for such killing)?

[Nick Turse](#), in [2021](#), described US 'special forces' activities and consequences around the world:

Members of the U.S. special operations forces deployed to 154 countries, or roughly 80 percent of the world's nations, last year, but information about exactly where elite forces conduct missions, under what authorities they operate, who they've killed, and whether they're adhering to the laws of armed conflict is closely guarded, buried in obscure legal provisions, shrouded in secrecy, or allegedly unknown even to Special Operations Command.

Paul Lushenko, Sarah Kreps, and Shyam Raman, in a study disquietingly subtitled "A More Just Drone War Is Within Reach", have described the development of drone killing, part of the 2022 [US assassination program](#):

According to the nonprofit Bureau of Investigative Journalism, which collects data from news reports, official statements, press releases,

and other documents, ^œ[U.S. drone strikes in Afghanistan, Pakistan, Somalia, and Yemen](#) from 2002 to 2020 killed between 10,000 and 17,000 people. Between 800 and 1,750 of the dead are thought to have been civilians, the highest percentage of them in Pakistan. But these aggregated data mask differences in the rate of killing over time - and in the criteria that different U.S. administrations used to balance the need to target suspected terrorists with the requirement to protect civilians.

The last year of President George W. Bush's administration saw a tenfold increase in strikes from the previous three years combined. The Obama administration accelerated this trend, conducting three times as many strikes in its first two years as the Bush administration conducted in its entire second term. The accompanying surge in civilian casualties, which amounted to three civilian deaths per strike in 2009, drew criticism from the United Nations and from watchdog groups such as Amnesty International. It was against this backdrop that Obama adopted a set of more stringent requirements for U.S. strikes in undeclared theaters, including Pakistan.

Critics have suggested that the policy achieved little. The legal expert Jameel Jaffer argued in his 2016 book, *The Drone Memos*, that Obama's 'stricter limitations on drone strikes seems to have had an effect only at the margins.' Such analysis is based on overall civilian casualty figures, however, rather than the rate of change in civilian deaths over time. It also does not look at the mechanisms through which Obama's near certainty standard may have affected results on the ground. By 2017, moreover, the question of the effectiveness of Obama's policy appeared moot, since President Donald Trump returned to the more permissive reasonable certainty standard. (Paul Lushenko, Sarah Kreps, and Shyam Raman, ^œ[A More Just Drone War Is Within Reach](#), *Foreign Affairs*, January 12, 2022)

In the 2021 aftermath of the withdrawal from Afghanistan, President Biden assured the world that they were not leaving the Afghanistan region, that '[We have what's called over-the-horizon capabilities](#)'!

The United States seems incapable of ending embarrassing foreign adventures. Its Afghanistan debacle has not deterred it from mindless interference in its affairs. Bhadrakumar, in a posting on his blogsite *Indian Punchline*, has described the US' ongoing interference in Afghanistan:

...Iran and Russia have common concerns over Afghanistan. They are concerned over the western attempts to (re)fuel the civil war in Afghanistan.

In a recent op-Ed in *Nezavisimaya Gazeta*, Russian Special Presidential Envoy for Afghanistan Zamir Kabulov alleged that Britain is financing a so-called "Afghan resistance" against the Taliban (which is reportedly operating out of Panjshir.) Kabulov wrote that the US is baiting two Central Asian states by offering them helicopters and aircraft in lieu of cooperation in covert activities against the Taliban.

Kabulov made a sensational disclosure that the US is blackmailing the Taliban leaders by threatening them with a drone attack unless they broke off contacts with Russia and China. He said, specifically, that the US and Britain are demanding that Kabul should refrain from restricting the activities of Afghanistan-based Uyghur terrorists.

Interestingly, Moscow is exploring the creation of a compact group of five regional states who are stakeholders in Afghanistan's stabilisation and could work together. Kabulov mentioned Iran, Pakistan, India and China as Russia's partners.

(M. K. Bhadrakumar, ^œ[Russia strategises with Iran for the long haul in Ukraine](#), *Indian Punchline*, November 14, 2022)

It's time that the United States learned how to develop more constructive involvement with other nations and peoples. The constant emphasis on destabilizing communities and nations around the world is not merely destructive for those it targets, it is destructive for its own peoples and its own peace and security. As Pete Seeger asked long ago: "^œ[When Will They Ever Learn?](#)"

In an intriguing display of US hubris and historical amnesia, the US Vice President, Kamala Harris, on 25th August, 2021, visited Vietnam! (A short 10 days after the US mismanaged withdrawal from another 'regime change' debacle - Afghanistan):

Fifty years before, the US and its allies were engaged in the longest and heaviest aerial bombardment in history over Vietnam, Laos and Cambodia; killing millions, maiming many more and reducing significant parts of those nations' infrastructures to rubble.

Now, that was, apparently, a barely remembered, historical irrelevance. Harris' mission to South East Asia was to enlist their support in opposing the '[bully of Asia](#)'. As she explained to the Vietnamese President Ngyuen Xuan Phuc,

We need to find ways to pressure and raise the pressure, frankly, on Beijing to abide by the United Nations Convention on the Law of the Sea, and to challenge its bullying and excessive maritime claims," she said, adding that the US would "maintain a strong presence in the South China Sea" to challenge China.

With impressive restraint the [Vietnamese Government issued a response](#):

"Vietnam does not align itself with one country against another," it said. "Territorial disputes in the South China Sea should be settled according to international law and "high-level common sense"... (^œ[US vice president pledges Vietnam COVID jabs; says China bullies](#), *Al Jazeera*, 25 August, 2021)

[Kwame Nkrumah spelt out a common understanding of the real intent](#) of Western interference in other sovereign nations (still viewed as regrettably 'post-colonial' territories):

... [T]he methods of neo-colonialists are subtle and varied. They operate not only in the economic field, but also in the political, religious, ideological and cultural spheres.

Faced with the militant peoples of the ex-colonial territories in Asia, Africa, the Caribbean and Latin America, imperialism simply switches tactics. Without a qualm it dispenses with its flags, and even with certain of its more hated expatriate officials. This means, so it claims, that it is 'giving' independence to its former subjects, to be followed by 'aid' for their development.

Under cover of such phrases, however, it devises innumerable ways to accomplish objectives formerly achieved by naked colonialism. It is this sum total of these modern attempts to perpetuate colonialism while at

the same time talking about 'freedom', which has come to be known as neo-colonialism.

Foremost among the neo-colonialists is the United States, which has long exercised its power in Latin America.

Fumblingly at first she turned towards Europe, and then with more certainty after world war two when most countries of that continent were indebted to her. Since then, with methodical thoroughness and touching attention to detail, the Pentagon set about consolidating its ascendancy, evidence of which can be seen all around the world.

Because We're a shining city upon a hill; A model of freedom to the rest of the world 🇺🇸

 (14/03/23) (01/06/23) (29/09/23) (04/09/24)

The United States has long believed itself to have, quite literally, a God-given responsibility. ^œIt is the light of the world. A city on a hill that cannot be hidden.

Patrick Reardon explained:

The United States is an exceptional country, and it stands as a shining city upon a hill as a model of freedom to the rest of the world.

That's the message that American politicians from John F. Kennedy to Newt Gingrich to Hillary Clinton have preached over the past six decades, using, as illustration and proof, what they and scholars have called one of the founding documents of the nation.

The document, "A Model of Christian Charity," was written, the story goes, as a lay sermon delivered by John Winthrop, the elected governor of a community of Puritans, to his followers in 1630 on a small wooden ship in the mid-Atlantic as they headed into the unknown of the New World. Its key sentences come near the end:

"For we must consider that we shall be as a city upon a hill; the eyes of all people are upon us. So that if we shall deal falsely with our God in this work we have undertaken and so cause him to withdraw his present help from us, we shall be made a story and a byword through the world."

(Patrick T. Reardon, 'As a City on a Hill': ^œExcavating the cultural history behind a defining American phrase, *Chicago Tribune*, Jan 15, 2019)

Their belief in a manifest destiny was exemplified in the Reagan mobilized ^œmoral majority' (the 'heartland' of America) against that 'evil empire' threatening 'the world': the Soviet Union.

They have been divinely commissioned to 'free' enslaved people (dominated by rapacious 'dictators' and authoritarian/ totalitarian governments) to unfettered, individualized, 'self-development', enjoying 'the blessings and choices opened up by the march of compound interest' in a capitalist reality. Doing 'what is necessary' for 'freedom's' sake!

Their justification for the mission they have accepted to 'free the world' was well expressed in the *Battle Hymn of the Republic*:

In the beauty of the lilies
Christ was born across the sea,
With a glory in His bosom

That transfigures you and me;
As He died to make men holy,
Let us die to make men free;

Without a clear understanding of what they meant by 'freedom', they set out to 'free' the world. They had, they believed, done all that was necessary to 'free' their own slaves; now they would do the same for the rest of the world.

There was no apparent realization of what 'freeing' enslaved people inevitably entailed. It was enough that those who had been forcibly removed from their own communities; herded together with other captured individuals without regard to their disparate origins; transported in shackles across thousands of kilometers of ocean to an unknown land; sold at auction to the highest bidders; and forced to work in atrocious conditions for years were now 'free'.

There was (and is) little evidence that they understood that real 'freedom' requires much more than 'opening the gates' and telling the enslaved that they are now 'free'!

There has certainly been no introspection on their part in pursuing their mission to 'free the world' from 'authoritarian', 'totalitarian', 'socialist' governments everywhere. Enough to demolish those repressive governments; remove the oppressors and proclaim the 'freedom' of the populace.

And, when the early 21st Century center of Western capitalism finds itself unable to 'remove the oppressors', this is what it does:⁹²¹

When the Taliban captured Kabul, it ruptured Afghanistan's relationship with the international community. The problems now facing its aid-dependent economy and new Taliban rulers are rapidly piling up. Adding to the damage already wrought by conflict, pandemic and drought, foreign aid is now suspended and in doubt, the treasury is empty and foreign reserves held overseas are frozen, meaning the banking system is paralysed, and many of the country's skilled workforce have fled the country. Economic catastrophe looms for a population, half of whom were already living in poverty.

In 2022 one could, but perhaps forlornly, have hoped that the United States and its allies would, at last, forgo their regime change agenda in the region and not [resurrect the mujahideen](#) in Afghanistan. But, that hope was always forlorn!

It is one thing to proclaim the 'withdrawal' of US forces from Afghanistan (or any other of the many nations within which it has interfered over the past many years). It is quite another to actually cease belligerent interference in the affairs of such nations!

The United States, in 2021, withdrew its troops from Afghanistan, but it did not cease its, often lethal, meddling in the nation and surrounding regions - After all, with constantly expanding military budgets and armaments and a declared mission to 'free the world from terror', there remains a constant need to 'weed out enemies'.

In 2023 United States' meddling in a nation it could not control has not ceased. If it cannot be in control then it will, with every means at its disposal, ensure that no-one else will either! ⁹²²

Neha Khan, in *The Siasat Daily*, described US' continued funding of the Islamic State (IS, formerly ISIS) both in Afghanistan and in the other Central Asian states:

The US has been reaching out to armed groups that oppose the Taliban and secretly giving money to Islamic State (IS, formerly ISIS), as per Russia's Presidential envoy for Afghanistan, Zamir Kabulov, media reports said.

Asked if the US is in contact with the Afghan opposition, Kabulov, in an interview with Russia 24 TV on Friday, said: "Yes, there is such data", RT reported.

The Americans have been acting this way "because they really want to avenge their shameful military-political defeat in Afghanistan, and in retaliation they do everything so that peace isn't established in this troubled land".

"But worst of all is that, in addition to contacts with the armed opposition in Afghanistan, the Anglo-Saxons are covertly sponsoring Islamic State, who are aimed at undermining not only the stability of our Central Asian partners... but also the security of Russia," Kabulov added.

(Neha Khan, ^œ[US covertly sponsoring IS, says Russia](#), *The Siasat Daily*, January 20, 2023)

Of course, in line with its behavior in many other regions, the US does not limit its funding to a single organization or movement: It will fund any group, however radical, which is prepared to act as a proxy in destabilizing target nations⁹²³.

The ^œ[National Resistance Front of Afghanistan](#) is the most prominent and well-funded of the organizations fighting for 'the liberation of Afghanistan' in 2023 but it is not alone. In a ^œ[Daily Evacuation Brief](#), March 12, 2023, the *The Afghan Digest* (TAD) summarized the situation:

TALIBAN REJECT NOTION THAT OVER 20 ARMED GROUPS ARE OPERATING IN AFGHANISTAN

The Taliban roundly rejected a recent UN report that claimed 23 armed groups are operating in Afghanistan. They suggested the UN had fallen for several online propaganda campaigns led by anti-Taliban groups to give the appearance of significant opposition to their rule. At the same time, they accepted elements of the report which praised their counter-terrorism and drug enforcement efforts. A survey of the many groups who have announced their existence on Twitter, Facebook, and other social media sites tends to support the Taliban's position. Of the many groups, TAD has only been able to confirm that three main Resistance Groups have engaged the Taliban consistently and appear to be organized:

1. National Resistance Front
2. Afghanistan Freedom Front
3. Afghanistan Liberation Movement

Masood Farivar, in a *Voice of America* ('committed to providing comprehensive coverage of the news and telling audiences the truth') article entitled ^œ[Afghan 'Fighting Season' Ushers in New Anti-Taliban Groups](#) (April 28, 2022), has provided a description of these organizations:

The new groups have names such as the Afghanistan Freedom Front and the Afghanistan Islamic National & Liberation Movement. But beyond claims made on social media, little is known about their kinetic power.

Researchers who have studied the groups say while they all share the goal of toppling the Taliban's eight-month-old government, they are hobbled by a lack of unity and coordination.

"It will take some coordination and unity to be able to have a more decisive effect in terms of contesting Taliban governance," said Peter Mills, Afghanistan researcher at the ^œ[Institute for the Study of War](#), who recently published a study of anti-Taliban groups.

Displaying a bloody-minded determination to ensure that the Taliban do not succeed where they failed over more than four decades, The United States is doing what it does best! it is fomenting insurrection and chaos in Afghanistan.

Let's remind ourselves of how they left the country in 2021!

Audrey Cronin described the true nature of US 'withdrawal' from Afghanistan:

American soldiers may now be out of Afghanistan, but the U.S. military and intelligence services are not.

As President Joe Biden has made clear, the United States will continue conducting drone strikes in Afghanistan to weed out enemies. "We will maintain the fight against terrorism in Afghanistan and other countries," Biden declared at the end of August, explaining his decision to withdraw forces. "We have what's called over-the-horizon capabilities" - including drones - "which means we can strike terrorists and targets without American boots on the ground."

The president's plan might seem logical, or even necessary. A number of anti-American terrorist groups continue to operate in Afghanistan, and without troops on the ground, American officials may rely on armed, unmanned aerial vehicles to kill potential opponents.

This represents a tragic irony: by increasing its reliance on drone strikes, Washington will be embracing a tactic that played a major role in the United States' strategic defeat in Afghanistan.

Throughout the two decades of war there, U.S. policymakers used short-term operations such as drone strikes to put off thinking about and confronting the weaknesses of the Afghan National Army, the foibles of President Ashraf Ghani's government, and the absence of a workable endgame. Drones also killed hundreds of innocent civilians, most recently Zemari Ahmadi, a longtime worker for a U.S. aid group, and nine members of his family. Errant strikes, especially those that hit children, can inflame local populations and help extremists recruit new members.

Despite years of withering "decapitation strikes" against terrorist leaders, one estimate found that there are more than four times as many Islamist extremists worldwide now as there were on September 11.

(Audrey Kurth Cronin, ^œ[The Future of America's Drone Campaign: Time for a Clean Break With a Failed Approach](#), *Foreign Affairs*, October 14, 2021)

For those around the world who have fallen out of favor with the United States or who have favored 'totalitarianism', 'socialism', 'social democracy', or - God forbid - 'communism', there was and will be nowhere to hide. The US and its Western 'allies' would and will, with God's help, seek them out and 'neutralize' them - US citizens who dream of such things should beware!

Branko Marcetic:

As explained in a 1976 report by Harry W. Shlaudeman, Richard Nixon's assistant secretary of state for inter-American affairs, South American officials like Uruguay's foreign minister Juan Carlos Blanco Estradé ("one of the brighter and normally steadier members of the group") saw themselves as fighting a "Third World War," with "the countries of the southern cone as the last bastion of Christian civilization." Having come to power "in battle against the extreme left," he noted, these repressive governments had "their ego, their salaries, and their equipment-budgets" inextricably wrapped up in this concept.

The result was [and still is] a stream of often stomach-churning crimes...

Embroiding 'Coalitions of the Willing' in years of fruitless wars 🧵

 (01/09/24)

US executive administrations continue to use their ceded constitutional powers to embroil 'Coalitions of the Willing' in '[years of fruitless wars](#)', most now "generational" conflicts with no end in sight', which have encouraged the creation and spread of terror groups and the disintegration of order across significant parts of the planet.

In 2021, with an increasingly common view that US power and, therefore hegemony, is waning, the question is 'Who Will Intervene in the World's Hot Spots?':

As conflicts and crises persist around the world, there is growing uncertainty about how - or if - they will be resolved. The international order is fraying, generating uncertainty about who will intervene and how these interventions might be funded.

There are interminable conflicts, like the situations in Syria, Yemen and Afghanistan, which have produced years of violence, countless thousands of deaths and even more refugees. Then there are the emerging hot spots, including northern Mozambique and the China-India frontier, and any number of potential flashpoints, like the Eastern Mediterranean. Even in situations where there is some tenuous hope of reconciliation, there is also uncertainty - such as South Sudan, where a 2018 peace deal that put an end to years of civil war is for now holding, even as widespread violence continues to plague the country.

At the same time, the nature of terrorism is also changing....

After several high-profile failures of its peacekeeping missions in the 1990s, the U.N. set out to rethink and improve blue-helmet operations at the turn of the millennium. But they continue to be dogged by a number of critical problems, including the intransigence of local leaders and missions that are simultaneously bloated and underfunded. ...

(Editorial, ^{oe}[Who Will Intervene in the World's Hot Spots?](#), *World Politics Review*, April 28, 2021)

China's President Xi Jinping, in a keynote speech via video at the opening ceremony of the Boao Forum for Asia Annual Conference 2021, put it all well:

...Instability and uncertainty are clearly on the rise. Humanity is facing growing governance deficit, trust deficit, development deficit, and peace deficit. Much remains to be done to achieve universal security and common development.

That said, there is no fundamental change in the trend toward a multi-polar world; economic globalization is showing renewed resilience; and the call for upholding multilateralism and enhancing communication and coordination has grown stronger.

While we live in an age rife with challenges, it is also an age full of hope.

Where should humanity go from here? What kind of future should we create for future generations? As we try to answer these important questions, it is crucial that we bear in mind the shared interests of mankind and make responsible and wise choices.

China calls on all countries in Asia and beyond to answer the call of our times, defeat the pandemic through solidarity, strengthen global governance, and keep pursuing a community with a shared future for mankind.

- We need consultation on an equal footing to create a future of shared benefits. Global governance should reflect the evolving political and economic landscape in the world, conform to the historical trend of peace, development and win-win cooperation, and meet the practical needs in addressing global challenges.

We need to follow the principles of extensive consultation, joint contribution and shared benefits, uphold true multilateralism, and make the global governance system more fair and equitable.

We need to safeguard the UN-centered international system, preserve the international order underpinned by international law, and uphold the multilateral trading system with the World Trade Organization at its core.

World affairs should be handled through extensive consultation, and the future of the world should be decided by all countries working together.

We must not let the rules set by one or a few countries be imposed on others, or allow unilateralism pursued by certain countries to set the pace for the whole world.

What we need in today's world is justice, not hegemony. Big countries should behave in a manner befitting their status and with a greater sense of responsibility.

(President Xi Jinping, ^œ[Full Text: Keynote speech by Chinese President Xi Jinping at the opening ceremony of the Boao Forum for Asia Annual Conference 2021](#), *China Daily*, April 20, 2021 [their emphasis])

On August 29, 2024, President Xi Jinping met with Assistant to the U.S. President for National Security Affairs Jake Sullivan at the Great Hall of the People in Beijing. In a *People's Republic of China Ministry of Foreign Affairs* account of the meeting, President Xi reiterated China's position:

President Xi pointed out that in this changing and turbulent world, countries need solidarity and coordination, not division or confrontation. People want openness and progress, not exclusion or regress. As two major countries, China and the United States should be responsible for history, for the people and for the world, and should be a source of stability for world peace and a propeller for common development.

President Xi stressed that when China and the United States, two major countries, engage with each other, the No.1 issue is to develop a right strategic perception, and they need to first and foremost find a good answer to the overarching question:

Are China and the United States rivals or partners?

China's foreign policy is open and transparent and its strategic intentions are aboveboard, both of which have been highly consistent and stable. China is focused on managing its own affairs well and will continue deepening reform comprehensively to further improve and develop the system of socialism with Chinese characteristics that suits China's national conditions.

China follows a path of peaceful development. While realizing its own development, China is also ready to work with other countries for common development, and to jointly build a community with a shared future for mankind.

President Xi pointed out that China's U.S. policy is highly consistent.

While great changes have taken place in the two countries and in China-U.S. relations, China's commitment to the goal of a stable, healthy and sustainable China-U.S. relationship remains unchanged, its principle in handling the relationship based on mutual respect, peaceful coexistence and win-win cooperation remains unchanged, its position of firmly safeguarding the country's sovereignty, security and development interests remains unchanged, and its efforts to carry forward the traditional friendship between the Chinese and American people remain unchanged.

President Xi expressed the hope that the United States will work in the same direction with China, view China and its development in a positive and rational light, see each other's development as an opportunity rather than a challenge, work with China to find a right way for China and the United States, **two countries with different civilizations, systems and paths, to coexist in peace and achieve common development on this planet, and work to maintain the stability of China-U.S. relations and, on that basis, improve and take forward the relationship.**

(^œ[President Xi Jinping Meets with U.S. National Security Advisor Jake Sullivan](#), *Ministry of Foreign Affairs: The People's Republic of China*, August 29, 2024 (my emphasis))

One can but hope that Sullivan and all his contemporaries in the US Administration have been able to put aside their apparently natural arrogant immaturity and appreciate what Xi was trying to explain:

This world should be governed by relationships based on mutual respect, peaceful coexistence and win-win cooperation between countries with different civilizations, systems and paths, coexisting in peace and interdependent sovereign independence.

President Xi's desire for a 'more just world' reiterates [the ambition of both China and Russia](#) through the past two decades and more:

...The firm intent of both nations to ensure the establishment of 'a truly democratic multipolar world, [in which] any society, culture and civilization [will] have the right to choose its own path and socio-political system' with the full support of all other nations intent on living in this new multipolar world of truly independent nations bound together in an interdependent world of sovereign equals.⁹²⁴

[Houènou, in 1924](#), accurately summed up European involvement in other nations and territories over the past 500 and more years, a summation which can, with little amendment, be applied to all those nations and territories subjected to US impulsive war making over the past half century and more:

Europe has inaugurated in the Colonies an area of veritable savagery and real barbarism which is carried out with science and premeditation - with all the art and all the refinement of civilization. The unfortunate natives have mingled their destinies with yours.

The next step in the [empowerment of that Western military industrial complex](#) was taken in 2017. The US moved another step closer to abdication of the principle of political responsibility for military activity⁹²⁵. President Trump:

...outsourced the decision on how to proceed militarily in Afghanistan to the Pentagon, a startling break with how former President Barack Obama and many of his predecessors handled the anguished task of sending Americans into foreign conflicts.

Risa Brooks, Jim Golby, and Heidi Urban have summarized the 2021 continuation of the slow-motion erosion of civilian control over the US military:

When U.S. President Donald Trump left office on January 20, many of those concerned about the state of civil-military relations in the United States breathed a deep sigh of relief. They shouldn't have. Yes, Trump used the military as a political prop, referred to some of its leaders as "my generals," and faced a Pentagon that slow-rolled his attempts to withdraw troops from battlefields around the world. But problems in the relationship between military officers and elected officials did not begin with Trump, and they did not end when Joe Biden took office.

Civilian control over the military is deeply embedded in the U.S. Constitution; the armed forces answer to the president and legislature. Starting in 1947, Congress built robust institutions designed to maintain this relationship. But over the past three decades, civilian control has quietly but steadily degraded. Senior military officers may still follow orders and avoid overt insubordination, but their influence has grown, while oversight and accountability mechanisms have faltered. Today, presidents worry about military opposition to their policies and must reckon with an institution that selectively implements executive guidance. Too often, unelected military leaders limit or engineer civilians' options so that generals can run wars as they see fit.

Civilian control is therefore about more than whether military leaders openly defy orders or want to overthrow the government. It's about the extent to which political leaders can realize the goals the American people elected them to accomplish. Here, civilian control is not binary;

it is measured in degrees. Because the military filters information that civilians need and implements the orders that civilians give, it can wield great influence over civilian decision-making. Even if elected officials still get the final say, they may have little practical control if generals dictate all the options or slow their implementation - as they often do now.

Resetting this broken relationship is a tall order. It demands that Congress doggedly pursue its oversight role and hold the military accountable, regardless of who occupies the White House. It requires that defense secretaries hire skilled civilian staffs composed of political appointees and civil servants. But most important, it requires an attentive public that is willing to hold both civilian leaders and the military to account.

(Risa Brooks, Jim Golby, and Heidi Urban, [“Crisis of Command: America's Broken Civil-Military Relationship Imperils National Security,”](#) *Foreign Affairs*, May/June 2021)

Melvin Goodman, in an article entitled 'Biden's Pentagon Pick: a Five-Sided Blunder', addressed Biden's apparent willingness to perpetuate Trump's blurring of military and civilian roles with his first choice for US secretary of defense, retired Army General Lloyd J. Austin III, and explained why this is problematic:

The nomination of retired Army General Lloyd J. Austin III will lead to an unnecessary battle over his required waiver as well as his confirmation. The opposition should not be dismissed as the usual progressive voices against a leading member of the military-industrial community, which Austin represents, but the need to maintain civilian control of the military as the Founding Fathers wished.

First of all, civilian control of the military has been under attack since the unfortunate passage of the Goldwater-Nichols Act in 1986 that enhanced the political influence of the regional commanders-in-chief, such as General Anthony Zinni and David Petraeus, and marginalized the civilian leaders of the Department of Defense. These regional commanders became more influential than U.S. ambassadors and assistant secretaries of state.

The Act created a more powerful chairman of the Joint Chiefs of Staff, allowing the chairman to bypass the secretary of defense and personally brief the president on war plans. Nevertheless, the Act passed the Senate with little discussion and without one vote of opposition.

President Ronald Reagan's strengthening of the uniformed military was at the expense of the Department of State. President Bill Clinton further weakened the State Department by abolishing the Arms Control and Disarmament Agency and the United States Information Service. Clinton ignored the strong opposition of our diplomats when he pursued the expansion of the North Atlantic Treaty Organization, which continues to complicate U.S. relations with Russia. President Barack Obama demonstrated too much deference to the military, particularly in his first term, which then Vice President Biden tried to prevent.

Second, General Austin has an excellent background in operational and tactical issues, but he has never had to deal with serious strategic issues. The best secretaries of defense, Harold Brown and William Perry, have been serious strategic thinkers, and have made contributions to the development of strategic weapons as well as the

conduct of arms control and disarmament.

(Melvin Goodman, [Biden's Pentagon Pick: a Five-Sided Blunder](#), *CounterPunch*, December 11, 2020)

Marjorie Cohn described the 2017 maneuverings of President Trump's appointees to further expand presidential power to wage war:

Defense Secretary James Mattis and Secretary of State Rex Tillerson told the Senate Foreign Relations Committee on October 30 that the Trump administration has all the legal authority it needs to kill people anywhere in the world. But just in case Congress wishes to update its old Authorization for the Use of Military Force (AUMF), Mattis and Tillerson told them how to do it: Write a blank check to the president. (Marjorie Cohn, [Mattis, Tillerson Want Blank Check to Wage Illegal War](#), *Truthout*, November 04, 2017)

In 2018, the US president, Donald Trump, acted on presumption of that 'blank check'.

Marjorie Cohn, in a closely reasoned essay entitled '[Trump Sets Deadly Precedent by Hiding Rationale for Bombing Syria](#)' (*Truth-Out*, Wednesday, February 21, 2018) outlined Trump's presumption of the right to extend his powers beyond those ceded to past Presidents by the US Congress under the 'authorizations for use of military force (AUMF)' to include unauthorized presumptuous bombing raids on targets in other sovereign nations.

With little apparent objection from Congress, Trump assumed the right to attack other nations without any other authorization than 'the president's authority as Commander in Chief and Chief Executive under Article II of the Constitution "to defend important U.S. national interests."' In 2018, President Trump and his administration had already invoked that 'blank check' which Mattis and Tillerson requested from Congress.

Danny Sjursen has explained it well:

The Dangerous Evolution of Article II of the Constitution

When you get right down to it, all the debate over AUMFs is little more than a charade. It hardly matters whether Congress ever updates that post-9/11 document. When, for instance, President Trump recently sent missiles soaring against the Assad regime in response to an alleged chemical attack on a suburb of Damascus, neither he nor his advisers even bothered to suggest that the strike fell under that AUMF. Instead, they simply claimed that Trump was exercising his presidential prerogative under [Article II, Section 2, of the Constitution](#), which makes him commander-in-chief.

(Danny Sjursen, [War and the Imperial Presidency: Congress Offers a Bipartisan Blank Check to Donald Trump](#), *Tom Dispatch*, May 3, 2018)

And, in 2021, in the first aggressive act against a foreign nation of his presidency, President Biden invoked that same Article as providing all the authorization he needed.

Thursday's strikes mark the first military action by the Biden administration.

The attack in Syria was meant to send "an unambiguous clear message" to "all adversaries in the region ... that are operating in ways that are inimical to security stability of the region and to our interests into those of our partners that we will defend ourselves. That we will protect our interests," Kirby told reporters.

He also said the attack aimed to hurt the militias' ability to conduct future attacks, adding, "These targets were chosen carefully [and] very deliberately."

Kirby said two F-15 fighter jets dropped seven bombs Thursday on buildings used by pro-Iran militants, decimating nine structures and partially destroying two in Abu Kamal, near the Iraqi border.

The location is known as a hub for the Iraqi Shiite militias backed by Iran, Kirby acknowledged.

Noting that there was no congressional authorization for the U.S. to carry out the strikes in Syria, a reporter asked the Pentagon spokesman to address the move's legality.

Kirby responded:

There are two frameworks here [that] clearly define the legality of this strike. One is Article II [of the U.S. Constitution]. The commander-in-chief [President Biden], under Article II, has not only the authority but the obligation to protect American forces in combat theaters and in military operations. ... Then, second, under Article 51 of the United Nations International Law, it gives nations involved in operations the right of self-defense.

Kirby did not mention the two Authorization of Use of Military Force (AUMF) approved by the U.S. Congress in 2001 in response to the 9/11 attacks and the other AUMF approved in 2002 to authorize the 2003 Iraq war.

(Edwin Mora and Kristina Wong, [Biden's Pentagon: Syria Bombing Legal Under International Law](#), *Breitbart*, February 27, 2021)

Nick Turse summarized US war-making over the past half century:

...[T]he United States has not won a major conflict since 1945; has a trillion-dollar national security budget; has had 17 military commanders in the last 17 years in Afghanistan, a country plagued by 23,744 "security incidents" (the most ever recorded) in 2017 alone; has spent around \$3 trillion, primarily on that war and the rest of the war on terror, including the ongoing conflict in Iraq, which then-defense secretary Donald Rumsfeld swore, in 2002, would be over in only "five days or five weeks or five months," but where approximately 5,000 U.S. troops remain today; and yet 74% of the American people still express high confidence in the U.S. military.

Let the math and the implications wash over you for a moment. Such a calculus definitively disproves the notion that "the conventional army loses if it does not win." It also helps answer the question of victory in the war on terror. It turns out that the U.S. military, whose budget and influence in Washington have only grown in these years, now wins simply by not losing - a multi-trillion-dollar conventional army held to the standards of success once applied only to under-armed, under-funded guerilla groups.

Unlike in the Vietnam War years, three presidents and the Pentagon, unbothered by fiscal constraints, substantive congressional opposition, or a significant antiwar movement, have been effectively pursuing this strategy, which requires nothing more than a steady supply of troops, contractors, and other assorted camp followers; an endless parade of Senate-sanctioned commanders; and an annual outlay of hundreds of billions of dollars. By these standards, Donald Trump's open-ended,

timetable-free "Strategy in Afghanistan and South Asia" may prove to be the winningest war plan ever. As he described it:

"From now on, victory will have a clear definition: attacking our enemies, obliterating ISIS, crushing al-Qaeda, preventing the Taliban from taking over Afghanistan, and stopping mass terror attacks against America before they emerge."

Think about that for a moment. Victory's definition begins with "attacking our enemies" and ends with the prevention of possible terror attacks. Let me reiterate: "victory" is defined as "attacking our enemies." Under President Trump's strategy, it seems, every time the U.S. bombs or shells or shoots at a member of one of those 20-plus terror groups in Afghanistan, the U.S. is winning or, perhaps, has won. And this strategy is not specifically Afghan-centric. It can easily be applied to American warzones in the Middle East and Africa - anywhere, really.

Decades after the end of the Vietnam War, the U.S. military has finally solved the conundrum of how to "out-guerrilla the guerrilla." And it couldn't have been simpler. You just adopt the same definition of victory. As a result, a conventional army - at least the U.S. military - now loses only if it stops fighting. So long as unaccountable commanders wage benchmark-free wars without congressional constraint, the United States simply cannot lose...

(Nick Turse, ["The U.S. Military is Winning. No, Really, It Is! A Simple Equation Proves That the U.S. Armed Forces Have Triumphed in the War on Terror,"](#) *TomDispatch*, September 4, 2018)

'Is it really about defeating 'terrorism'; spreading 'democracy'; and protecting populations from 'ruthless dictators'?

 (17/02/23)

So, what motivates US aggression toward other nations? Is it really about defeating 'terrorism'; spreading 'democracy'; and protecting populations from 'ruthless dictators'?

If it ever was, it no longer is!

President Trump, in 2019, ripped away the mask of selfless concern.

The US has, finally, been exposed, not as a state dedicated to fighting 'evil' around the world - summed up in the absurd G. W. Bush promoted 'War on Terrorism' - but as [just another kleptocratic capitalist nation](#) intent on appropriating the resources of other peoples and nations, whatever the collateral cost to those on the receiving end of their predations.

Ben Norton, in an article subtitled

Hundreds of American soldiers are remaining in Syria to occupy its oil reserves and block the Syrian government from revenue needed for reconstruction. Trump said openly, "We want to keep the oil."

explained:

US President Donald Trump has reassured supporters that he is "bringing soldiers home" from the "endless" war in Syria. But that is simply not the case.

While Trump has ordered a partial withdrawal of the approximately 1,000 American troops on Syrian territory - who have been enforcing

an illegal military occupation under international law - US officials and the president himself have admitted that some will be staying. And they will remain on Syrian soil not to ensure the safety of any group of people, but rather to maintain control over oil and gas fields.

The US military has already killed hundreds of Syrians, and possibly even some Russians, precisely in order to hold on to these Syrian fossil fuel reserves.

Washington's obsession with toppling the Syrian government refuses to die. The United States remains committed to preventing Damascus from retaking its own oil, as well as its wheat-producing breadbasket region, in order to starve the government of revenue and prevent it from funding reconstruction efforts.

The Washington Post noted in 2018 that the US and its Kurdish allies were militarily occupying a massive "30 percent slice of Syria, which is probably where 90 percent of the pre-war oil production took place."

Now, for the first time, Trump has openly confirmed the imperialist ulterior motives behind maintaining a US military presence in Syria. "We want to keep the oil," Trump confessed in a cabinet meeting on October 21. "Maybe we'll have one of our big oil companies to go in and do it properly."

(Ben Norton, ["US troops are staying in Syria to 'keep the oil' - and have already killed hundreds over it"](#), *The GrayZone*, October 23, 2019)

Trump's pronouncement merely made explicit what has [long been a major implicit driving motivation](#) in US war-making. As the capitalist West has, [since the early years of Western European expansion](#) into the rest of the world, so the US, as leader of that capitalist West, has (ignoring all international laws, regulations and treaty obligations which do not suit its purposes) once again, 'set out to discover the "riches" of another sovereign nation and appropriate them'.

Michael Crowley has explained:

Mr. Trump first spoke approvingly about the United States seizing foreign oil in April 2011, when he complained about President Barack Obama's troop withdrawal from Iraq. "I would take the oil," Mr. Trump told *The Wall Street Journal*. "I would not leave Iraq and let Iran take the oil."

He elaborated in an interview with ABC News a few days later. "In the old days, you know, when you had a war, to the victor belong the spoils," he said. "You go in. You win the war and you take it."...

Last week, Mr. Trump offered a variation on that idea, saying that "we'll work something out with the Kurds so that they have some money, they have some cash flow." He added that he might "get one of our big oil companies to go in and do it properly."

(Michael Crowley, ["Keep the Oil": Trump Revives Charged Slogan for New Syria Troop Mission](#), *New York Times*, Oct. 27, 2019)

In 2021 the US presidency changed. So, did anything really alter or is it a matter of smoke and mirrors (or self-delusion)?

David Miliband (British Prime Minister Tony Blair's Head of Policy in the run-up to his election in 1997; Foreign Secretary from 2007 to 2010 and president and chief executive officer of the *International Rescue Committee*), in an essay entitled 'The Age of Impunity And How to Fight It', demonstrates the real problem with US and British foreign policy.

The 'impunity' - which one might have thought would be referring to their unaccountable belligerent interference through the Middle East over the past four decades - is all about 'them'. All about those 'regimes' and 'emboldened autocrats'.

President Biden, in his first White House press conference, explained the 'battle' which confronts the United States in the 21st century: It will be a battle between democracy and autocracy (which, of course, includes a wide range of governmental types from fascism to communism which the US believes to have been threatening 'democracy' through the past 70 and more years):

I predict to you, your children or grandchildren are going to be doing their doctoral theses on the issue of Who succeeded - autocracy or democracy? Because that is what is at stake.... We're in the midst of a fourth industrial revolution, of enormous consequence. Will there be a middle class? How will people adjust to these significant changes in science and technology and the environment? How will they do that? Our democracy is equipped, because all of the people get to speak, to compete.... This is a battle between the utility of democracies in the twenty-first century and autocracies.... We've got to prove democracy works.

(Brian Karem, Biden: [œWe've Got to Prove Democracy Works](#), *The Bulwark*, March 25, 2021)

Of course, the 'fourth industrial revolution' to which Biden alludes is not a consequence of new technologies but of [Corporate offshoring of production](#). Those 'autocracies' with which the US must now do 'battle' did not 'take' US jobs, they were relocated to them through 'the slicing up of the value-added chain as individual [production stages were located where the costs of production are lowest](#)'

The ongoing devolution of wages and conditions in Western nations is a result of deliberate Western government and corporate policy (coinciding with Biden's period in the United States Senate and US administration from 1973 to 2017 - though he does not seem to have connected the dots!).

But, we digress!

Miliband, in that strangely myopic understanding of reality one has come to expect from the Western commentariat, explains the 'new' 'trans-Atlantic' foreign policy foci:

Values are back, and not only on the domestic front. Biden's administration will place greater emphasis on defending human rights around the world, including in China and Russia. He wants humanitarian need to figure in military strategy and has withdrawn U.S. support for offensive measures by the Saudi-led coalition fighting against the Houthi rebels in Yemen, which is now home to the world's largest humanitarian crisis [though, of course, they will continue to employ US munitions because those are provided by 'private companies']. He wants the United States to live up to its legal and moral commitments and has restored some rights to asylum seekers.

For all this, there are good reasons to be grateful. Former President Donald Trump's commitment to deals rather than values emboldened autocrats around the world. Civilians killed in war were not Trump's concern. Nor were refugees driven from their homes or journalists imprisoned in authoritarian countries. However, the experience of his

two immediate predecessors makes clear that simply declaring support for values does not make them spread.

President George W. Bush proclaimed in his second inaugural address that "the survival of liberty in our land increasingly depends on the success of liberty in other lands," and his administration set out to support the expansion of electoral democracy around the world. Yet according to Freedom House, which tracks global democratic trends, 2005 was the year that political freedom began a multiyear retreat.

For his part, President Barack Obama set up an Atrocities Prevention Board to make halting genocide and mass atrocities a "core national security interest and core moral responsibility." But the belligerents in Syria and South Sudan, among other places, would not be disciplined by a committee of officials in Washington.

(David Miliband, ^œ[The Age of Impunity: And How to Fight It](#), *Foreign Affairs*, May 13, 2021)

And another of those true believers protecting and promoting 'Western Values' around the world has expanded on David Miliband's rhetoric.

Samantha Power (U.S. Ambassador to the United Nations 2013-2017 and Administrator of the U.S. Agency for International Development (USAID) at the time of writing this piece) explained to us all 'How Democracy Can Win' and 'The Right Way to Counter Autocracy'.

With no attempt to define her terms, she explained:

...Between mid-2020 and the end of 2022, populist leaders saw an average decline of 10 percentage points in their approval ratings in 27 countries analyzed by researchers at Cambridge University. In the same time frame, prominent leaders with autocratic tendencies lost power at the ballot box. And American democracy has proved resilient; the U.S. Congress passed meaningful electoral reforms and held powerful public investigations into the events leading up to January 6.

Autocrats are now on the back foot. Under Biden's leadership, the United States and countries around the world have joined forces to protect and strengthen democracy at home and abroad and to work together on challenges such as climate change and corruption. After a year of faltering authoritarianism and stubborn democratic resilience, the United States and other democracies have a chance to regain their momentum - but only if we learn from the past and adapt our strategies. For the last three decades, advocates of democracy have focused too narrowly on defending rights and freedoms, neglecting the pain and dangers of economic hardship and inequality. We have also failed to contend with the risks associated with new digital technologies, including surveillance technologies, that autocratic governments have learned to exploit to their advantage. It is time to coalesce around a new agenda for aiding the cause of global freedom, one that addresses the economic grievances that populists have so effectively exploited, that defangs so-called digital authoritarianism, and that reorients traditional democracy assistance to grapple with modern challenges.

(Samantha Power, ^œ[How Democracy Can Win: The Right Way to Counter Autocracy](#), *Foreign Affairs*, February 16, 2023)

The 'Trans-Atlantic Alliance' remains determined to 'free' the world from:

'Populist parties with xenophobic and antidemocratic tendencies';

★ The world's 'Autocracies' and 'autocratic rulers';

and

★ Nations which 'bear the hallmarks of authoritarianism'.

Short-hand for 'nations and leaders who will not fall in line and do as they are told'!

Let us all be 'grateful' that during Biden's presidency the US has returned to its 'core values'. It has renewed its determination to develop its own peculiar brand of 'democracy' in all those 'autocratic', 'populist' and 'authoritarian' countries around the world which resist change.

The world can be assured that, if institutions such as USAID are successful, their governments will be transformed through 'the cultivation of democracy abroad'.

Samantha Power, Administrator of the U.S. Agency for International Development in 2023, explained what she sees as the task motivating her and her organization:

...[T]he cultivation of democracy abroad has largely meant the provision of what we call democracy assistance: funding to support independent media, the rule of law, human rights, good governance, civil society, pluralistic political parties, and free and fair elections....

...[I]n September, U.S. Secretary of State Antony Blinken and I gathered the heads of state of many of these rising democracies, together with corporate executives and private philanthropies, to encourage new partnerships...

Expediency as Morality: Means limited only by Ends Nations Without Moral Compasses: Adrift in Dangerous Times 🇺🇸

 (07/01/19) (11/01/19) (19/05/19) (09/09/19) (26/11/19) (11/03/20) (23/07/24) (25/07/24)
(27/07/24)

Not only does the US now have 'unaccountable commanders', it has insisted that members of the US military and CIA personnel are beyond the reach of international prosecutors.⁹²⁶

President Trump (September 10, 2018) threatened to ban ICC judges and prosecutors from entering the United States, sanction their funds in the United States financial system, and, prosecute them in the United States criminal system if they formally open an investigation into US war crimes⁹²⁷.

Bolton, Trump's national security advisor, claimed that

The ICC [International Criminal Court] constitutes a direct assault on the concept of national sovereignty, especially that of constitutional, representative governments like the United States.

As former Secretary of State [Condoleezza Rice](#) and President Barack Obama (amongst others) have explained, America and all that it does in the world is a reflection of the fact that the US is "on the right side of history".

Geoffrey Aronson has explained the mindset well:

America observes the world from the relative safety of its faraway shores and sees conflicts shaded in black or white. The complex and

nuanced ambiguities that define all conflicts are avoided, if not denied outright. Far easier to man the battlements, when, as US President Barack Obama is fond of saying, America and all that it does in the world is a reflection of the fact that the US is "on the right side of history".

Moral clarity is the rule - for the American public and policymakers alike - an easy and clean divide between good guys and bad guys. In my youth it was a backyard game of cowboys versus Indians, or the real battles pitting nasty Communists, whether in Cuba, Moscow, or Vietnam, against true-blue Americans and their trustworthy allies.

Who then are today's outliers, those who have lost history's coin toss?...

What happens... when the moral clarity that Americans crave is itself a mirage?

Dividing the world into good guys and bad guys makes it easier to pick a winner and mobilise popular and military support for its victory - Syria being the most recent case in point.

But is this the best way to understand how the world really works, let alone to make it the lodestar for your policies?

(Geoffrey Aronson, ["Is America on the right side of history?"](#) America sees conflicts shaded in black or white and avoids all complex and nuanced ambiguities., *Aljazeera*, 15 Oct 2016)

Sam Raphael, Crofton Black and Ruth Blakeley, in an examination of US CIA involvement in secretive programs, run by the Central Intelligence Agency outside the Pentagon's chain of command, in the post-September 11, 2001 21st century, have documented the descent of United States' agencies into ["expediency-justified torture programs"](#). Clive Stafford Smith, in the preface, describes the scene:

When I first visited Guantánamo Bay in 2004, the nearly 800 prisoners held there were mostly nameless. It took years for the government to release a list of its captives - a prerequisite to establishing whether or not they should be held at all. Many, it turned out, were there on the basis of malicious, false or inaccurate information, had been handed over by bounty hunters, or had been imprisoned because they wore a certain type of Casio watch. These were the people the Bush administration called 'the worst of the worst'.

Information about its prisoners had to be prised out of the US military's unwilling bureaucracy. But already at that time there were rumours of an even more secretive programme, run in parallel by the Central Intelligence Agency outside the Pentagon's chain of command. Occasional press stories spoke of people abducted in the middle of the night, manhandled onto planes and never heard of again. Leaks from US government officials began to tell a tale of secret detention locations, in Asia or Europe or elsewhere...

(Clive Stafford Smith, in: Sam Raphael, Crofton Black and Ruth Blakeley, ["CIA Torture Unredacted: An Investigation Into the CIA Torture Programme"](#), The Bureau of Investigative Journalism, July 2019)

Mujib Mashal, writing in the *New York Times* (Dec. 31, 2018) described the consequences of a belief that morality can, finally, be reduced to expediency, that, in clandestine extra-military operations, the ends justify the means:

At a time when the conventional Afghan military and police forces are being killed in record numbers across the country, the regional forces overseen by the C.I.A. have managed to hold the line against the most brutal militant groups, including the Haqqani wing of the Taliban and also Islamic State loyalists.

But the units have also operated unconstrained by battlefield rules designed to protect civilians, conducting night raids, torture and killings with near impunity, in a covert campaign that some Afghan and American officials say is undermining the wider American effort to strengthen Afghan institutions....

...[S]enior Afghan and international officials say that the two most effective and ruthless forces, in Khost and Nangarhar Provinces, are still sponsored mainly by the C.I.A....

In nearly every case examined by The Times, the victims' families said they were at a loss for where to seek justice, or an explanation of why they had been raided. And nearly every government official in those areas expressed helplessness about the strike forces' operations. (Mujib Mashal, [C.I.A.'s Afghan Forces Leave a Trail of Abuse and Anger](#): The fighters hold the line in the war's toughest spots, but officials say their brutal tactics are terrorizing the public and undermining the U.S. mission, *New York Times*; December 31, 2018)

The truly sad postscript to all this is that, back in 2001, the US justified its invasion of a sovereign nation not only because it gave sanctuary to 'terrorists', but, also, because of the outrageous abuses which it claimed were being perpetrated by the Taliban government of Afghanistan against the population⁹²⁸.

These, of course, were outrages to which it had, in fact, as [William Blum has described](#), turned a blind eye during its support of those same 'terrorists' in the 1980s. Now, it being expedient to do so, those morally outraged Western crusaders and their 'coalition of the Willing' have adopted the tactics of the mujahideen. Condemnation of similar 'terror' tactics by the Taliban and claimed determination to eliminate the perpetrators has 'justified' the Coalition's 17 year-long, ongoing, occupation of the country.

Marjorie Cohn has summed it up:

Once again, the United States is blackmailing countries that would send Americans to face justice in the International Criminal Court. Trump's National Security Adviser John Bolton is leading the charge to shield US and Israeli war criminals from legal accountability.

On September 10, Bolton told the right-wing Federalist Society that the United States would punish the ICC if it mounts a full investigation of Americans for war crimes committed in Afghanistan or of Israelis for human rights violations committed in the Occupied Palestinian Territories....

On September 10, the same day Bolton vilified the ICC before the Federalist Society, Donald Trump issued a statement saying that if the ICC formally opens an investigation, his administration would consider negotiating "even more binding, bilateral agreements to prohibit nations from surrendering United States persons to the ICC." He threatened to ban "ICC judges and prosecutors from entering the United States, sanction their funds in the United States financial system, and, prosecute them in the United States criminal system," as

well as "taking steps in the United Nations Security Council to constrain the Court's sweeping powers."

(Marjorie Cohn, ^œ[John Bolton Escalates Blackmail to Shield US War Criminals](#), *Truthout*, September 14, 2018

see also: Marjorie Cohn, ^œ[As Trump Orders US Out of Afghanistan, Notorious CIA-Backed Units Will Remain](#), *TruthOut*, January 6, 2019)

In 2024, the United States of America finally abandoned all pretense of 'morality'. A sociopathic determination to destroy its designated 'enemies' and dismantle their states, demonstrating to the world the futility of resisting its hegemonic power, now drives United States' foreign policy.

As [Henry Giroux explained](#):

The discourse of war, violence and fear now largely mold our conception of ourselves, our relations to others and the larger world. The defining vocabularies of American life undercut the possibility of challenging the assumption that violence is the most important tool for addressing social problems.

In this instance, the "war on terrorism" has created a war culture that works through various cultural apparatuses from the schools to the mainstream media to produce what amounts to a society steeped in violence. The United States is a country saturated in the discourse of war and violence,...

Ukraine, ^œ[groomed to act as a US and NATO proxy in finally dismantling Russia since 1994](#), would, over the next 30 years, [be sacrificed to US ambitions](#).

And Palestinians, victims of Western ambitions over more than a century, would be [subjected to Israel's 'final solution'](#) to the 'problem' of their existence.

On the 24th of July, 2024 the United States Congress demonstrated its true nature to the world:

The longest-serving prime minister in Israel's history, responsible for its genocidal policies and activities, was invited to ^œ[address a sycophantic United States Congress](#).

Ignoring the Israeli ^œ[Hannibal Directive](#)' which resulted in many of the October 7th, 2023 deaths and injuries attributed to ' Hamas Terrorists', Netanyahu, to multiple standing ovations, described those who "refuse to make the simple distinction between those who target terrorists and those who target civilians," and fail to distinguish "between the democratic state of Israel and the terrorist thugs of Hamas."

He then proceeded to "praise President Joe Biden for "tireless" support of Israel and promised that America's stance with Israel during her "darkest hour" will "never be forgotten".

Turkish Minute summed it up:

Turkish President Recep Tayyip Erdoğan sharply criticized the United States for hosting Israeli Prime Minister Benjamin Netanyahu in a recent speech to Congress, calling Netanyahu "the Hitler of our age" and accusing the US of hypocrisy regarding human rights,

Speaking at an event on Friday, Erdoğan condemned the warm reception Netanyahu received during his address to Congress, where he was met with prolonged applause.

"The whole world watched as a genocidal killer was applauded in the US Congress," Erdoğan said.

(^œ[US hosts "Hitler of our age" Netanyahu without shame: Erdoğan](#), *Turkish Minute*, 26 July, 2024)

Tony Kinnett described it all:

"In the heart of the Middle East, standing in Iran's way, is one proud, pro-American democracy - my country, the state of Israel!"

Israeli Prime Minister Benjamin Netanyahu, visiting Washington amid the Israel-Hamas war, spoke these words Wednesday to enthusiastic applause during an address to a joint meeting of Congress that some Democrats boycotted....

"I want to thank you for giving me the proud honor of addressing this citadel of democracy for the fourth time," Netanyahu told lawmakers.

Netanyahu thus became the foreign leader who has spoken to Congress more than any other in history. Israel's prime minister previously had been tied with Winston Churchill, the celebrated British prime minister, with three appearances before Congress.

Netanyahu began by accusing Iran and its allies of aggression and "barbarism" against Israel, Western allies, and other Arab nations.

"America and Israel must stand together," he said to a standing ovation, "because when we stand together, something very simple happens: We win, they lose."...

Amid the standing ovation and cheers that followed, many lawmakers in the audience began to chant "USA! USA!"

"For all we know, Iran could be funding the anti-Israel protests going on right outside this building - not that many, but they're there, and throughout the city," Netanyahu said. "Well, I have a message for these protesters: When the tyrants of Tehran, who hang gays from cranes and murder women for not covering their hair, are praising and promoting and funding you, you have officially become Iran's useful idiots."...

(Tony Kinnett, ^œ[Netanyahu Almost Drowned Out by Standing Ovations From Congress](#), *The Daily Signal*, July 24, 2024)

A Cold, Calculated Determination To Ensure Overwhelming Military Supremacy 🇺🇸

 (05/03/18)(08/03/18) (27/03/18) (05/11/18) (23/11/18) (03/03/19) (30/03/19) (16/06/19) (29/10/19) (25/02/20) (24/06/20) (18/07/20) (12/08/20) (16/09/20) (09/10/20) (16/12/20) (20/12/20) (28/05/21) (27/12/21) (21/01/22) (11/03/22) (07/09/24)

As [with global warming](#), so with military power and weapons controls: Western capitalists have myopically reshaped the world to their 'needs', driven, not by a clear understanding of the environmental or geopolitical implications of their behavior, but by the economic 'bottom line'.

The mistakenly believed 'triumph' of US 1980s foreign policy in bringing the USSR to its knees emboldened US leaders over the next thirty years. As Reagan had 'bankrupted' the USSR, so the United States would do with the rest of the world. As Lee Edwards explained

The "Reagan Doctrine" (a name coined by syndicated columnist Charles Krauthammer) was the most cost-effective of all the cold war doctrines, costing the United States less than a billion dollars a year

while forcing the cash-strapped Soviets to spend some \$8 billion annually to deflect its impact.

(Lee Edwards, ^œ[How Ronald Reagan Won the Cold War](#), *The Heritage Foundation*, February 26, 2020)

All that was required to ensure its post-1980s hegemony was that the United States ensure the overwhelming military superiority of itself and its allies over the rest of the world.

US president Trump, commenting on a Saudi Arabian deal guaranteeing long-term, increasing flows of armaments from Western armaments factories (responsible for 92+% of world arms exports) to one of the most unstable regions of the world: "That was a tremendous day, Tremendous investments in the United States."

Western societies, in this 21st century, are being confronted by seemingly insurmountable problems, most, but not all, of our own making. And, in the face of these challenges, we have demonstrated, once again, the limits of our abilities as societies to deal with them.

In global warming, as in nuclear weapons stockpiling and in many other challenges, we have demonstrated an ability to foresee future problems, research their likely impacts, and devise plans and schemes for tackling them. But, we have also displayed an inability to follow through on those plans and deal with future threats before it is too late. It is not that we cannot foresee threats or that we cannot devise solutions. It is that we cannot follow through on the solutions we devise.⁹²⁹

Noam Chomsky illustrated this well:

Humanity faces two imminent existential threats: environmental catastrophe and nuclear war....These are the most critical and urgent questions that have arisen in all of human history...

There have been many monsters in the past ... but it would be hard to find one who was dedicated to undermining the prospects for survival of organized human society, not in the distant future - in order to put a few more dollars in overstuffed pockets.

It's hard to find words to describe what is happening before our eyes.

The same is true of the second truly existential threat: nuclear war. A few weeks before the election, Trump announced that the US is withdrawing from the INF treaty, which eliminated short-range missiles deployed in Western Europe and Russia - extremely hazardous weapons, which have only a few minutes flight-time to Moscow, posing a decapitation threat, a sudden attack that would destroy any possibility of response. That, of course, sharply increases the danger of a nuclear response to warnings given by automated systems that have often failed in the past, thus ending all of us.

Anyone familiar with the record knows that it's a virtual miracle that we have so far avoided terminal nuclear war. The threat, which was already grave, was heightened by the Trump ^œ[nuclear posture review](#) that authorized new destabilizing weapons and lowered the threshold for nuclear attack.

(C.J. Polychroniou, ^œ[Noam Chomsky: Moral Depravity Defines US Politics](#), *Truthout*, November 21, 2018)

Given the disingenuous justificatory language of the *US Nuclear Posture Review* (2018), it would be prudent to consider carefully the implications of

the outlined intentions and ambitions of US nuclear aims, plans and justifications.⁹³⁰

The US, in this 21st century, is displaying a short-sighted and potentially extremely dangerous willingness to extrapolate its nuclear arsenal to include forms of weaponry previously subject to international treaties, commitments and verification.

It has also displayed a dangerous willingness to abrogate those commitments and associated verifications, simultaneously escalating threats and confrontations.

Daniel Larison has outlined the emerging US reality:

The United States is no good at making lasting diplomatic commitments anymore. Other states have no difficulty believing in U.S. threats to use force and impose broad sanctions, but it is much harder to convince them that the U.S. can be trusted to honor its promises in negotiated agreements....⁹³¹

William Perry and Tom Collina have posed a life-and-death question for the US (and, of course, for all of us wherever we might live) in this pre-apocalyptic century:

Who Can We Trust With the Nuclear Button?

And, then, given the US track-record in fomenting and prosecuting invasions of other nations and territories, provided the obvious answer:

No One.⁹³²

Why, indeed, does the US give so much power to one fallible human being. The trail of [indiscriminate bullying, invasion, destruction, mayhem, torture and death](#) over the past half-century and more forces us to ask: [Why? Why? Why?](#)

William Astore, in a *TomDispath* post entitled 'Only Fools Replay Doomsday: The Cold War, Reborn and Resurgent', provides a sobering description of what the first 'Cold War' entailed and then describes what is being planned for the next.

I'm less than convinced that the United States 'won' the first 'Cold War' - perhaps the best that can be said is that the US outlasted a Soviet Union riddled with internal contradictions and tensions which would finally result in the unravelling of the Union ([the US is not so different!](#))⁹³³. But that is something to be discussed on cold winter evenings when we've nothing better to do! It should certainly not be allowed to detract from the importance of the questions Astore asks:⁹³⁴

Michael Beckley, in an essay entitled 'Rogue Superpower: Why This Could Be an Illiberal American Century', has questioned the post-Trumpian future of the United States of America. What roles will the US play through the rest of the 21st Century?

President Donald Trump came into office promising to overhaul U.S. foreign policy. Since then, he has scorned allies, withdrawn the United States from international agreements, and slapped tariffs on friends and foes alike. Many experts bemoan the damage Trump's "America first" policy has done to the so-called liberal international order - the set of institutions and norms that have governed world politics since the end of World War II. They hope that once Trump has left the Oval

Office, the United States will resume its role as leader of a liberalizing world.

Don't count on it. The era of liberal U.S. hegemony is an artifact of the Cold War's immediate afterglow. Trump's transactional approach to foreign policy, by contrast, has been the norm for most of U.S. history. As a result, Trump's imprint could endure long after Trump himself is gone....⁹³⁵

Chomsky has examined one of the many 21st century consequences of the expanding powers of the US administration and pentagon: "[the US missile systems have been improved by such a huge factor that they are now capable of instantly wiping out](#)" any perceived nuclear challenge to its vaunted supremacy (how fortunate the world is that the [US has a sane, intelligent, empathic leadership and government](#)).

[Chomsky's description](#), on April 24, 2017, of the goads which ensured what has followed, sets the scene:

...the US missile systems have been improved by such a huge factor that they are now capable of instantly wiping out the Russian deterrent.

[and] This is massive overkill and nuclear stability is gone, and of course, the Russians know this. What that implies is that if they ever feel a threat, they're just going to be compelled to launch a preemptive strike because otherwise they're dead, you know? And that means we're all dead.⁹³⁶

US Democratic Senator Mark Warner used a US foreign-policy think tank forum (March 2, 2018) to spell out the prevailing Washington 'Consensus' on the need for this absurd nuclear weapons enhancement program. The forum discussion was framed by a report on "[The Return of Global Russia](#)" (Paul Stronski and Richard Sokolsky, *Carnegie Endowment for International Peace*, December 2017) 'a reassessment of the Kremlin's international agenda, which focuses on Russia's new activist foreign and military policies':⁹³⁷

At the start of 2021, with a new administration in Washington, the drive to 'modernize and enhance' US nuclear strike capabilities was, if anything, stronger. The US Congressional Budget Office report on [Projected Costs of U.S. Nuclear Forces, 2021 to 2030](#) (May 2021) described the increase in funding for the next ten years:

..[T]he plans for nuclear forces delineated in the Department of Defense's (DoD's) and the Department of Energy's (DOE's) fiscal year 2021 budget requests, submitted in February 2020, would cost a total of \$634 billion over the 2021-2030 period, for an average of just over \$60 billion a year, CBO estimates.

Almost two-thirds of those costs would be incurred by DoD; its largest costs would be for ballistic missile submarines and intercontinental ballistic missiles. DOE's costs would be primarily for nuclear weapons laboratories and supporting activities.

The current 10-year total is 28 percent higher than CBO's most recent previous estimate of the 10-year costs of nuclear forces, \$494 billion over the 2019-2028 period.

Mikhail Gorbachev, in an October 25, 2018 essay entitled 'A New Nuclear Arms Race Has Begun', explained the direction in which US administrations

are taking the world in the 21st century:

A new arms race has been announced. The I.N.F. [Intermediate-Range Nuclear Forces] Treaty is not the first victim of the militarization of world affairs. In 2002, the United States withdrew from the Antiballistic Missile Treaty; this year, from the Iran nuclear deal. Military expenditures have soared to astronomical levels and keep rising.

As a pretext for the withdrawal from the I.N.F. Treaty, the United States invoked Russia's alleged violations of some of the treaty's provisions. Russia has raised similar concerns regarding American compliance, at the same time proposing to discuss the issues at the negotiating table to find a mutually acceptable solution. But over the past few years, the United States has been avoiding such discussion. I think it is now clear why.

With enough political will, any problems of compliance with the existing treaties could be resolved. But as we have seen during the past two years, the president of the United States has a very different purpose in mind. It is to release the United States from any obligations, any constraints, and not just regarding nuclear missiles.

The United States has in effect taken the initiative in destroying the entire system of international treaties and accords that served as the underlying foundation for peace and security following World War II....

Faced with this dire threat to peace, we are not helpless. We must not resign, we must not surrender.

(Mikhail Gorbachev, ^{ae}[A New Nuclear Arms Race Has Begun](#): President Trump says he plans to withdraw from a nonproliferation treaty that I signed with Ronald Reagan. It's just the latest victim in the militarization of world affairs., *New York Times*, October 25, 2018)

Since the start of the 21st Century, as Gorbachev explained, the United States has displayed a willingness to abrogate international treaties. A [senior official](#) in the 2nd George Bush administration explained the rationale:

You can't count on the international community to establish a new democratic or political order.

...the reigning power [will] distribute power and businesses, and which people it chooses to deal with are automatically made into kings. Do we want to be the kingmaker, or do we want to default that over to the U.N.?

Scott Anderson and Christopher Fonzone describe the 2020 scene:

...[I]nstead of embracing international cooperation, the administration of U.S. President Donald Trump has leaned into its "America first" foreign policy, turning its back on U.S. allies and exiting some of the United States' longest-standing treaty relationships.

On May 21, Secretary of State Mike Pompeo announced that the United States would begin the six-month process of withdrawing from the Open Skies Treaty, a Cold War legacy that promotes military transparency by facilitating mutual surveillance overflights among NATO members and former Warsaw Pact countries. Then on July 6, the Trump administration announced that the United States was terminating its relationship with the World Health Organization by withdrawing from the organization's foundational agreement, the WHO Constitution.

These are not the first treaty relationships Trump has jettisoned. Over the last three and a half years, he has exited or threatened to exit a long list of international treaties, ranging from the Intermediate-Range Nuclear Forces Treaty (from which the United States withdrew in August 2019) to the North Atlantic Treaty that created NATO (from which Trump has repeatedly suggested he would like to withdraw). But the Open Skies Treaty and the WHO Constitution are the first two treaties that the president has sought to exit on terms that appear to be in tension with the wishes of Congress.

(Scott R. Anderson and Christopher C. Fonzzone, [^œCongress Must Protect America's Treaties: It Is Not Too Late to Stop Trump From Abandoning Vital International Agreements](#), *Foreign Affairs*, July 17, 2020)

With the US displaying a willingness to abandon long-established treaties and international commitments and obligations, those whom it is defining as its current and future foes are left with few reliable treaty arrangements upon which they can depend⁹³⁸.

The preemptive nature of the US nuclear arms 'modernization' and 'enhancement' program, apparently aimed at a 'capacity to fight and win a nuclear war by disarming enemies with a surprise first strike', leaves Russia (and now, of course, China) with little or no option other than to respond in like manner⁹³⁹.

The emergence of a [hypersonic missile arms race](#) should concern (panic?) all who believe that humanity (and, perhaps, Capitalism) deserves a future on this planet. A hypersonic missile whose speed exceeds Mach 20 can cover the distance between Moscow and Washington in less than 20 minutes!

At 20 °C (68 °F), the speed of sound in air (Mach 1) is about 343 meters per second (1,235 km/h). So, Mach 8 is 9880 km/h, the distance from international waters to the center of mainland USA is ~2960km or less than 15 minutes at Mach 8; Mach 20 would be 24,720 km/h; The distance from Washington to Moscow is ~8,400 km - or less than 20 minutes at Mach 20. O, what a tangled web we weave...!

A 2018 CBS News report described Russia's reaction to the announced US nuclear weapons program :

Russia has tested an array of new strategic nuclear weapons that can't be intercepted, President Vladimir Putin announced Thursday, marking a technological breakthrough that would dramatically increase Russia's military capability and boost the Kremlin's global position. Speaking in a state-of-the-nation speech, Putin said the weapons include a nuclear-powered cruise missile, a nuclear-powered underwater drone and new hypersonic missile.

He said the creation of the new weapons has made NATO's U.S.-led missile defense "useless," and means an effective end to what he described as Western efforts to stymie Russia's development.

([^œPutin touts new weapons in Russia's nuclear arsenal](#), CBS/AP, 01 March, 2018)

Patrick O'Neill, member of a group convicted of vandalism in a symbolic protest against nuclear weapons at the US Kings Bay Naval Base on April 4, 2018, described the apathy of the jury (in this case representative of the attitudes of many, if not most, US citizens):

"When Judge Lisa Wood asked the entire jury pool: 'Do any of you have a strong opinion about nuclear weapons - pro or con, would you raise your hand?' Of 73 people, not one raised a hand," O'Neill told Truthout. "That is an indication that people living in the throes of the nuclear age, at 2 minutes to midnight on the Doomsday Clock, have come to see [weapons of mass destruction] as inconsequential - nuclear weapons on hair-trigger alert 24/7 is now a 'normal' part of people's lives."

(Marjorie Cohn, ^œ[Convicted Anti-Nuclear Activists Speak Out:](#)

["Pentagon Has Brainwashed People"](#), *Truthout*, October 28, 2019

The military/ industrial/ surveillance complexes of the US have, over more than fifty years, and increasingly through the early 21st century, relied on a citizenry rendered apathetic through long exposure to and familiarity with the Cold War WMD 'deterrent'. The 'if they have it we must get it' logic of that era still holds sway and can be used to justify any and all of a range of escalations by those complexes.

This is Military-Industrial Complex Budgetary Justification 101:

- Determine what budgetary increases are wanted;
- Create the conditions which [will ensure the emergence of a 'credible threat'](#) to justify those increases;
- Define that 'credible threat' and [garner 'political' support](#) in promoting its reality among 'the public';
- Goad the, now defined and alerted, external 'threat' into [some kind of public affirmation](#) of its consequent intentions;
- Declare that, in the light of that affirmation, ['There Is No Alternative'](#) to a massive build up in preemptive nuclear and conventional strike power.

NASA has explained it to 'younger students':

Sir Isaac Newton first presented his three laws of motion in the "Principia Mathematica Philosophiae Naturalis" in 1686. His third law states that for every action (force) in nature there is an equal and opposite reaction. In other words, if object A exerts a force on object B, then object B also exerts an equal and opposite force on object A. (Glenn Research Center, ^œ[Newton's Third Law](#), NASA, [accessed 05 March, 2018])

One can only assume that the Russian reaction is precisely what was planned for by an administration and [intelligence/ surveillance/ military industrial complex](#) which has committed itself to spending \$40 billion a year for the next thirty years to 'upgrade' and 'enhance' its nuclear capabilities and a further \$110 billion over the next two years (2018-19), added to its already grossly over-inflated \$600+ billion [non-nuclear military budget](#).

(04/04/19) Welcome to 'Cold War Mark II'⁹⁴⁰: A new hypersonically delivered nuclear arms race justified by a reinvented external nuclear threat - 'The Russians' (and, in the light of the [2020 Secretary of Defense pronouncements](#) to the world, China) will nuke us if they think they can get away with it!!⁹⁴¹

From Vietnam Era Carpet Bombing to Targeted Killing: The Evolution of Forever War 🇺🇸

 (26/05/20) (22/03/21)

The influence of the Western intelligence/surveillance/military industrial complex ('a hidden world, growing beyond control' - responsible for more than 92% of world arms exports) is being felt in every community, every country and by every ally and every potential or pronounced foe in all those 150 countries (and counting) which have been subjected to the, all-too-often lethal, extra-legal ministrations of that increasingly powerful, secretive, independent governing complex.⁹⁴².

Tom Engelhardt has summed it all up well:

Osama bin Laden managed to involve the United States in 16 years of fruitless wars, most now "generational" conflicts with no end in sight, which would only encourage the creation and spread of terror groups, the disintegration of order across significant parts of the planet, and the displacement of whole populations in staggering numbers.

At the same time, he helped turn 21st-century Washington into a war machine of the first order that ate the rest of the government for lunch. He gave the national security state the means - the excuse, if you will - to rise to a kind of power, prominence and funding that might otherwise have been inconceivable. In the process - undoubtedly fulfilling his wildest dreams - he helped speed up the decline of the very country that, since the Cold War ended, had been plugging itself as the greatest ever.

In other words, he may truly be the (malign) genius of our age. He created a terrorist version of call-and-response that still rules Donald Trump's Washington in which the rubblized generals of America's rubblized wars on an increasingly rubblized planet now reign supreme. (Tom Engelhardt, ^œ[Osama Bin Laden's America](#): The apocalyptic humiliation of 9/11 has shown us just what the al-Qaida leader could goad a triumphalist Washington into. *Moyers & Company*, November 2, 2017)

And,

It's clear that, while there is no way to adequately count all civilian casualties from America's twenty-first-century air wars, "towers" of dead noncombatants have been piled atop one another in Iraq, Afghanistan, and elsewhere. This next-to-eternal version of war, with all its destructiveness and "collateral damage" (which a few organizations have tried their best to document under difficult circumstances), should be the definition of state barbarism and terror in a world without mercy. That none of this has proven effective in the very terms that the bombers themselves set seems to matter little indeed.

Put in more graphic fashion, does anyone doubt that the Kurdish wedding slaughter (assumedly by an Islamic State suicide bomber) was a barbaric act? If not, then what are we to make of the eight documented cases - largely ignored in this country - in which U.S. air power eviscerated similar wedding parties in three countries (Afghanistan, Iraq, and Yemen) between December 2001 and December 2013, killing almost 300 celebrants?

Of course, you already know the answer to that question. In our world, there is only one type of barbarism: theirs.

(Tom Engelhardt, ^œ[A 9/11 Retrospective: Washington's 15-Year Air War](#), *TomDispatch*, September 8, 2016)

Through the first decades of the 21st century, from 2001, the United States has maintained and expanded its military drone 'targeted killing' activities in nations around the world. In 2020, President Trump stripped away almost all of the cautionary regulations put into place by President Obama (who nonetheless maintained, expanded and routinized the military drone killing program) to limit the international range and number of such strikes and ensure at least some scrutiny of the reasons for them.

Kelsey Atherton explained the 2020 situation well:

...[T]he United States' targeted killing program persists to this day, another legacy of the forever war that has now lasted for three presidential administrations and shows no signs of stopping in the next one. Under U.S. President Donald Trump, however, an already opaque and murderous set of rules has become even more widely applied, and ever less accountable.

The elastic nature of the September 2001 Authorization for Use of Military Force (AUMF) has stretched so far as to cover strikes in Yemen, Libya, and Somalia. The first modern drone attack, a Hellfire missile fired from a CIA-piloted Predator drone in October 2001, was covered by the AUMF, as was the airstrike in Janaale, conducted by U.S. Africa Command (Africom), itself born in the dying years of President George W. Bush 's administration as part of the "war on terror."

In a press release also published March 10, Africom claimed that its attack in Jaanale killed five terrorists. Shortly after, images of the wrecked vehicle began to circulate online, some linked to al-Shabab, the terror group actively targeted by the strike, claiming that instead it had left only civilians dead. Subsequent investigations by journalists found relatives of the deceased, who attested to the innocence of their family members.

As of April 27, Africom records the incident as still open and under investigation. The investigations are a voluntary move towards transparency, though one that reflects the limitations of self-reported accountability. Of the 20 possible civilian casualty incidents investigated and closed by March 31, Africom found only one claim substantiated.

The Janaale airstrike is the drone war in microcosm. To the extent that there is transparency, it is voluntary, not mandated. Tracking civilian harm is done - at least at first - by people outside government. And, as with all news save the most dramatic or scandalous in the Trump administration, it is largely absent from public awareness, a boring holdover of past consensus politics that leaves a trail of corpses and mangled limbs behind it worldwide.

As of May 18, the Trump administration had launched 40 airstrikes in Somalia in 2020 alone. That figure is made all the more staggering by the fact that, from 2007 through 2016, the administrations of George W. Bush and Barack Obama conducted 41 airstrikes in Somalia total, according to reporting from Airwars.

(Kelsey D. Atherton, ^œ[Trump Inherited the Drone War but Ditched](#)

In this brave new borderless world, Western forces, armed and funded as never before, are supported by Western-based 'intelligence', 'surveillance' and military industrial complexes which [are unaudited](#); out of control; and justifying their burgeoning power through seeking out and dealing with presumptuously pronounced threats to 'freedom' and 'democracy' around the world⁹⁴³.

Frank Bruni, in a clearly written *New York Times* Op-Ed entitled 'Donald Trump's Phony America: As Michael Cohen made clear, this is the land of the fraud and the home of the knave', summed up the contribution made by the 2019 incumbent of the US White House to the character of the 21st century United States of America. But, cast your mind back to earlier incumbents of that 'house for rent' which bequeaths that burgeoning power to its tenants and you'll realize that Trump is not alone.

The flaws of a Trump - who has little apparent ability to hide them from public gaze - can be found in abundance in many of the post-2nd-World-War presidents of the United States (not least, in the 2nd George Bush and his coterie of thugs and duplicitous knaves):

...I sometimes think that when Trump came down that escalator at Trump Tower, he didn't just begin a presidential campaign. He pinched the edge of a scab on our body politic and began to tug, revealing all the racism, resentments and partisan fury beneath it. He gave us a fresh, jolting glimpse of just how much depravity and even criminality exist among the powerful (and the power-mad). Look at his own collaborators: Paul Manafort, Roger Stone, David Pecker and lesser reprobates who either still serve in his administration (Alex Acosta, Jared Kushner) or did until they went too far (Tom Price, Scott Pruitt).

They're favor traders, corner cutters, rule breakers, perk hoarders. They're notorious examples of types that many of us see all the time. How many people owe their success to exaggerating their talents, grabbing credit when it doesn't belong to them and projecting a potency that's really smoke and mirrors? How many depend on the continued support of people who bought the performance in the beginning and don't want to admit that they were duped? Trump and Holmes are such achievers in extremis.

They also have a competitive advantage: They're without shame. There's a whole lot you can do once you've slipped that tether. To the unscrupulous go the spoils.

Trump's amorality play contradicts our paeans to the Puritan work ethic. It's not the script that we teach our children. But with Trump in the White House, validated by tens of millions of votes, it may well be what some of them are learning.

(Frank Bruni, ⁹⁴⁴[Donald Trump's Phony America](#), *New York Times*, March 2, 2019)

The Potential for the Disastrous Rise of Misplaced Power Exists and Will Persist (Eisenhower 1961)

Dana Priest and William Arkin, in a 2010 *Washington Post* investigation into 'Top Secret America' entitled, 'œA hidden world, growing beyond control', outlined the top-secret world the United States' government created in response to the terrorist attacks of Sept. 11, 2001.

The 21st century has witnessed an unprecedented, and largely undocumented, growth in the 'intelligence' and 'surveillance' capabilities of US agencies; of 'what amounts to an alternative geography of the United States, a Top Secret America hidden from public view and lacking in thorough oversight'⁹⁴⁴.

As the authors explain:

"There has been so much growth since 9/11 that getting your arms around that - not just for the CIA, for the secretary of defense - is a challenge," Defense Secretary Robert M. Gates said in an interview with The Post last week.

In the Department of Defense, where more than two-thirds of the intelligence programs reside, only a handful of senior officials - called Super Users - have the ability to even know about all the department's activities. But as two of the Super Users indicated in interviews, there is simply no way they can keep up with the nation's most sensitive work.

"I'm not going to live long enough to be briefed on everything" was how one Super User put it. The other recounted that for his initial briefing, he was escorted into a tiny, dark room, seated at a small table and told he couldn't take notes. Program after program began flashing on a screen, he said, until he yelled "Stop!" in frustration.

"I wasn't remembering any of it," he said.

Underscoring the seriousness of these issues are the conclusions of retired Army Lt. Gen. John R. Vines, who was asked last year to review the method for tracking the Defense Department's most sensitive programs. Vines, who once commanded 145,000 troops in Iraq and is familiar with complex problems, was stunned by what he discovered.

"I'm not aware of any agency with the authority, responsibility or a process in place to coordinate all these interagency and commercial activities," he said in an interview. "The complexity of this system defies description."

An editorial comment on an essay by Lu Chuanying summarized United States' 21st century domination and manipulation of cyberspace by its 'intelligence', surveillance and 'cybersecurity' agencies:

It has been a decade since the œPRISM scandal which enraged the world was exposed by Edward Snowden. Under the guise of so-called national interests, the US government and its related intelligence agencies utilize their technological and first-mover advantages to conduct cyber surveillance on and attack the rest of the world.

Relying on its hegemony in cyberspace, the US has used its cyber capabilities as one of its tools in hybrid warfare. Just like other tools such as economic sanctions, terrorist activities, and military intervention, the US has used cyberwarfare to interfere in other countries' internal affairs for political gain. To maintain its hegemony, the US has conducted "digital colonization" over other countries and committed various covert crimes, marking itself as a "surveillance

empire," an "attacking empire," and a "bullying empire."
(Lu Chuanying, ^œ[Bullying Empire: US promotes 'digital colonialism' to maintain hegemony, exposes American democracy hypocrisy](#), *Global Times*, June 29, 2023)

This is, of course, not a post-Sept. 11, 2001 development. Since Eisenhower's presidency, this 'secret government' has grown more entrenched and dominant within the United States, able to veil its activities behind a smoke screen of 'visible government'.

David Wise and Thomas Ross had spelt out this already well-established US problem in 1964:

There are two governments in the United States today. One is visible. The other is invisible.

The first is the government that citizens read about in their newspapers and children study about in their civics books. The second is the interlocking, hidden machinery that carries out the policies of the United States in the Cold War.

This second, invisible government gathers intelligence, conducts espionage, and plans and executes secret operations all over the globe.

The Invisible Government is not a formal body. It is a loose, amorphous grouping of individuals and agencies drawn from many parts of the visible government. It is not limited to the Central Intelligence Agency, although the CIA is at its heart. Nor is it confined to the nine other agencies which comprise what is known as the intelligence community: the National Security Council, the Defense Intelligence Agency, the National Security Agency, Army Intelligence, Navy Intelligence, Air Force Intelligence, the State Department's Bureau of Intelligence and Research, the Atomic Energy Commission and the Federal Bureau of Investigation.

The Invisible Government includes, also, many other units and agencies, as well as individuals, that appear outwardly to be a normal part of the conventional government. It even encompasses business firms and institutions that are seemingly private.

To an extent that is only beginning to be perceived, this shadow government is shaping the lives of 190,000,000 Americans. Major decisions involving peace or war are taking place out of public view. **An informed citizen might come to suspect that the foreign policy of the United States often works publicly in one direction and secretly through the Invisible Government in just the opposite direction.**

(David Wise and Thomas B. Ross, ^œ[The Invisible Government](#), *Random House*, New York, 1964.) (my emphasis)

Nkrumah summed it up well:

Here, from the very citadel of neo-colonialism, is a description of the apparatus which now directs all other Western intelligence set-ups either by persuasion or by force.

([The mechanisms of neo-colonialism](#))

It is not only 'foreign policy of the United States that often works publicly in one direction and secretly through the Invisible Government in just the opposite direction'.

Just as one finds within political parties involved in the 'visible' government, so one will find in those 'invisible' networks: coalitions of interests setting policy and manipulating the reins of power. Networks of key players; power-brokers who are directly connected with the visible 'political authorities' and whose 'opinions' will powerfully influence the policies and activities of 'visible' politicians and parties.

It's not just about 'money'! 'What you see' is *not* what you get! Politicians might set out their 'visions' for the nation, but they will be subject to revision and all-too-often to apparently '[insurmountable roadblocks](#)' to implementation of those 'visions'⁹⁴⁵.

Through June of 2021, Biden and his team worked assiduously to obtain a 'bipartisan consensus' for their trillion dollar infrastructure plan. What a relief that, by late June, they could finally announce 'success': they had achieved both bipartisanship and an agreed "\$579 billion in new spending to repair the nation's roads, rails and bridges".

Sadly, despite their best efforts, they had not managed to include those announced plans for addressing looming climate change problems; it was no longer a \$trillion plan; but half a trillion is surely better than nothing - and it got bipartisan support!

It's tough, in Washington, to get everything you 'really' want.

Those who unrealistically claim that it was not enough are sadly 'making the ideal the enemy of the real'!

"We have a deal," Mr. Biden told reporters outside the White House after a meeting with the 11 senators who had negotiated the package. "We made serious compromises on both ends."

Mr. Biden, who spent nearly 40 years in the Senate before becoming vice president, has positioned himself as a dealmaker who is able to work with both sides of the aisle. But this proposal may have a rocky path to passage, since several progressive Democrats in the House and the Senate are unhappy about the exclusion of provisions related to climate change, child care, health care and education.

(Grace Segers, ⁹⁴⁵["We have a deal": Biden announces bipartisan compromise on infrastructure, CBSNews, June 24, 2021](#))

It takes a strong, determined 'visible' politician to do what FDR did in the 1930s. As he explained:

For nearly four years you have had an Administration which instead of twirling its thumbs has rolled up its sleeves. We will keep our sleeves rolled up.

We had to struggle with the old enemies of peace - business and financial monopoly, speculation, reckless banking, class antagonism, sectionalism, war profiteering.

They had begun to consider the Government of the United States as a mere appendage to their own affairs. We know now that Government by organized money is just as dangerous as Government by organized mob.

Never before in all our history have these forces been so united against one candidate as they stand today. They are unanimous in their hate for me - and I welcome their hatred.

I should like to have it said of my first Administration that in it the forces of selfishness and of lust for power met their match. I should like to have it said of my second Administration that in it these forces met their master.

The American people know from a four-year record that today there is only one entrance to the White House - by the front door. Since March 4, 1933, there has been only one pass-key to the White House. I have carried that key in my pocket. It is there tonight. So long as I am President, it will remain in my pocket.

(October 31, 1936: ^œ[Speech at Madison Square Garden](#))

The United States of America is in desperate need of such a 'visible' politician in this 21st century! One who is capable of resetting the government of the nation and guaranteeing that government of, by and for the people which Lincoln envisaged and Roosevelt delivered.

Without it, 'the old enemies of peace - business and financial monopoly, speculation, reckless banking, class antagonism, sectionalism, war profiteering' will continue to govern in their own interests and the world will continue to suffer from their self-interested predations.

Nick Turse, in a report on that 'strange new military', America's elite forces, describes some of its features:

They're some of the best soldiers in the world: highly trained, well equipped, and experts in weapons, intelligence gathering, and battlefield medicine. They study foreign cultures and learn local languages. They're smart, skillful, wear some very iconic headgear, and their 12-member teams are "capable of conducting the full spectrum of special operations, from building indigenous security forces to identifying and targeting threats to U.S. national interests."

They're also quite successful. At least they think so.

"In the last decade, Green Berets have deployed into 135 of the 195 recognized countries in the world. Successes in Afghanistan, Iraq, Trans-Sahel Africa, the Philippines, the Andean Ridge, the Caribbean, and Central America have resulted in an increasing demand for [Special Forces] around the globe," reads a statement on the website of U.S. Army Special Forces Command.

The Army's Green Berets are among the best known of America's elite forces, but they're hardly alone. Navy SEALs, Air Force Air Commandos, Army Rangers, Marine Corps Raiders, as well as civil affairs personnel, logisticians, administrators, analysts, and planners, among others, make up U.S. Special Operations forces (SOF). They are the men and women who carry out America's most difficult and secret military missions. Since 9/11, U.S. Special Operations Command (SOCOM) has grown in every conceivable way from funding and personnel to global reach and deployments. In 2015, according to Special Operations Command spokesman Ken McGraw, U.S. Special Operations forces deployed to a record-shattering 147 countries - 75% of the nations on the planet, which represents a jump of 145% since the waning days of the Bush administration. On any day of the year, in fact, America's most elite troops can be found in 70 to 90 nations. (Nick Turse, ^œ[Iraq, Afghanistan, and Other Special Ops "Successes"](#): America's Elite Forces Deploy to a Record-Shattering 147 Countries in 2015, *TomDispatch*, October 25, 2015)

For an annually updated picture of World Military Expenditures and Arms Transfers, see this U.S Department of State site: [World Military Expenditures and Arms Transfers](#). As the site introduction says,

The "World Military Expenditures and Arms Transfers" (WMEAT) series of reports is designed to be a convenient reference on annual military expenditures, arms transfers, armed forces, selected economic data, and relative indicators consisting of pertinent military-economic ratios. The aim is to provide the arms control and international security community with useful, comprehensive, and accurate data, accompanied by analyses and highlights.

Unfortunately, 'WMEAT 2021, which the Department of State published in December 2021, is the final edition of World Military Expenditures and Arms Transfers (WMEAT)'

WMEAT Will No Longer be Published

WMEAT 2021, which the Department of State published in December 2021, is the final edition of World Military Expenditures and Arms Transfers (WMEAT). Section 5114(b)(4) of the National Defense Authorization Act for Fiscal Year 2022 repealed the 1994 statutory provision that required the Department of State to publish an edition of WMEAT every year. Consistent with this repeal, the Department of State will cease to produce and publish WMEAT.

The 2015 edition of the report summarizes:

During the period, about 78% of the world arms trade, by value, appears to have been supplied by the United States, about 11% by the European Union, about 5% by Russia, less than 2% by China. The U.S. share of the world arms market appears to have grown, while the E.U. share appears to have diminished, with no clear trend in the Russian and Chinese shares.

Countries in the richest quintile of world population appear to have accounted for about 96-97% of world arms exports and about 70% of world arms imports, regardless of whether quintiles are based on national GDP per capita at a real market exchange rate or at purchasing power parity. By either standard, the richest quintile was the only GDP-per-capita quintile with a positive arms trade balance.

Countries in the most democratic quintile of world population appear to have accounted for 92% of world arms exports and about 58% of world arms imports. The most democratic quintile was the only degree-of-democracy quintile with a positive arms trade balance.

(World Military Expenditures and Arms Transfers, 2015 edition, pp. 4,5 (for the 2018 version see: [World Military Expenditures and Arms Transfers 2018](#)))

As [Eisenhower warned](#), Western nations and peoples should be very cautious: alert to the dangers of becoming enmeshed in [perpetual preparation for, and involvement in, dubious military interventions around the world](#), provoked and promoted by that US-based 'military-industrial complex' which is increasingly shaping foreign and domestic policy in Western democracies.

It is all-too-easy to create and foment conditions which can later be used to justify military interventions aimed at quelling 'terrorist' threats to the security of Western democracies. And, cynical though this might seem, motivated much less by noble concern for the well-being or safety of human

beings than by a cold, calculating, sociopathic concern for profit and power, whatever the cost in human lives; 'collateral' destruction; and violation of sovereign and human rights⁹⁴⁶.

In a depressingly clear explanation of the ongoing evolution of United States' 'special forces' (and of course of similar forces elsewhere in the Western World), Nick Turse has summed up their impact in countries around the world:

...[O]n any given day, more than 8,000 exceptionally well-equipped and well-funded special operators from a command numbering roughly 70,000 active-duty personnel, reservists, and National Guardsmen as well as civilians are deployed in approximately 90 countries. Most of those troops are Green Berets, Rangers, or other Army Special Operations personnel. According to Lieutenant General Kenneth Tovo, head of the U.S. Army Special Operations Command until his retirement last month, that branch provides more than 51% of all Special Operations forces and accounts for more than 60% of their overseas deployments. On any given day, just the Army's elite soldiers are operating in around 70 countries...

For years, U.S. Special Operations forces have been in a state of seemingly unrestrained expansion. Nowhere has that been more evident than in Africa. In 2006, just 1% of all American commandos deployed overseas were operating on that continent. By 2016, that number had jumped above 17%. By then, there were more special operations personnel devoted to Africa -- 1,700 special operators spread out across 20 countries -- than anywhere else except the Middle East...

Last year, in fact, Secretary of Defense Mattis noted that the lines between U.S. Special Operations forces and conventional troops were blurring and that the latter would likely be taking on missions previously shouldered by the commandos, particularly in Africa. "So the general purpose forces can do a lot of the kind of work that you see going on and, in fact, are now," he said.

(Nick Turse, ⁹⁴⁶[Commandos Sans Frontieres: The Global Growth of U.S. Special Operations Forces](#), *TomDispatch*, July 17, 2018)

The ⁹⁴⁶[United States Special Operations Command](#) (USSOCOM), in a glossy promotional publication entitled: ⁹⁴⁶[The 2016 Fact Book](#), lists and provides general information on a few of the organizations under its umbrella (many others, like **SEAL Team 6** (whose nefarious activities are detailed below), are 'classified' units and so not included in information supplied by USSOCOM):

Special Forces

Special Forces (Green Berets) units perform seven missions - unconventional warfare, foreign internal defense, special reconnaissance, direct action, combatting terrorism, counter-proliferation, and information operations. These missions make Special Forces unique because they are employed in peacetime, conflict and war. The Special Forces motto is "De Oppress Liber - to Free the Oppressed."

Rangers

The 75th Ranger Regiment is a unique Special Operations Force comprised of the specially selected and well trained Soldiers constantly tested for the privilege of serving in the Regiment. Rangers conduct

large-scale Joint Forcible Entry operations while simultaneously executing surgical Special Operations raids across the globe. The 75th Ranger Regiment's motto is "Rangers Lead The Way."

Army Special Operations Aviators

Army Special Operations Aviators are highly trained and ready to accomplish the very toughest missions in all environments, anywhere in the world, day or night, with unparalleled precision. The professionalism and capabilities of Army Special Operations Aviation are developed through a "train as you fight" mentality.

Civil Affairs Soldiers

Civil Affairs units support military commanders by working with civil authorities and civilian populations in the commander's area of operations during peacetime, contingency operations and war. Civil Affairs specialists identify critical requirements needed by local citizens in war or disaster situations.

Military Information Support Operators

MISO cover a broad range of U.S. political, military, economic and ideological activities used by the U.S. government to secure national objectives. MISO units develop, produce and disseminate truthful information to foreign audiences in support of U.S. policies.

Training Cadre

The U.S. Army John F. Kennedy Special Warfare Center and School assesses, trains, educates and manages Army Special Operations Force Operators for Special Forces, Military Information Support Operations and Civil Affairs.

Sustainment Soldiers

Sustainers are responsible for providing logistical, medical and signal support for Army Special Operations Forces worldwide in support of contingency missions and warfighting commanders.

It summarizes its mission:

What USSOCOM Does:

- Civil Affairs - Counterinsurgency - Counterterrorism - Countering Weapons of Mass Destruction - Direct Action - Foreign Humanitarian Assistance - Foreign Internal Defense - Hostage Rescue and Recovery - Military Information Support Operations - Security Force Assistance - Special Reconnaissance - Unconventional Warfare

Admiral Eric T. Olson, U.S. Navy Commander, United States Special Operations Command, summed up USSOCOM's mission before the Senate Armed Services Committee On The Posture Of Special Operations Forces (March 4, 2008):

America's Special Operations Forces (SOF) are organized, equipped and trained, and then deployed by USSOCOM to meet the high demands of Geographic Combatant Commanders (GCCs) around the world. The range of special operations is wide, the geographic dispersion is great, the quality is exceptional and the results are impressive.

Although most special operation forces deployed from the United States since the attacks of 9/11 have served in and around Iraq and Afghanistan, we clearly understand the enduring value of a global presence. We are proud to be serving in about 60 countries today [expanded to more than 135 countries by 2016].

(^œ[Statement Of Admiral Eric T. Olson](#), U.S. Navy Commander United States Special Operations Command Before The Senate Armed Services Committee On The Posture Of Special Operations Forces March 4, 2008; See also the website ^œ[Special Operations Command \(SOCOM\)](#) for up-to-date information on its operations and activities)

Nick Turse has provided a 2021 updating of SOCOM activities:

Members of the U.S. special operations forces deployed to 154 countries, or roughly 80 percent of the world's nations, last year, but information about exactly where elite forces conduct missions, under what authorities they operate, who they've killed, and whether they're adhering to the laws of armed conflict is closely guarded, buried in obscure legal provisions, shrouded in secrecy, or allegedly unknown even to Special Operations Command.

The command, known as SOCOM, will only name half the countries where its forces were active in 2020. It claims that its personnel - Navy SEALs, Army Green Berets, and Marine Corps Raiders among them - have captured or killed "thousands of terrorists" under one obscure program but also that it doesn't track such data. SOCOM refuses to provide even basic information about publicly acknowledged operations....

Some of the least-known special operations missions are authorized under a provision known as "Section 1202 Authority," which first appeared in the 2018 National Defense Authorization Act, or NDAA, and is "used to provide support to foreign forces, irregular forces, groups, or individuals" taking part in irregular warfare. Neither the Defense Department, SOCOM, nor any media outlet has ever revealed detailed information about 1202 missions, but based on what little is known about them, they are explicitly focused on so-called near-peer competitors such as China and Russia or, as former Secretary of Defense Mark Esper put it, "non-terrorist threats, including malign state actors."

China, Russia, and Iran are "practitioners of campaigns of disinformation, deception, sabotage, and economic coercion, as well as proxy, guerrilla, and covert operations," according to an unclassified summary of the Irregular Warfare Annex to the 2018 National Defense Strategy released last October. The document called for the U.S. military to fight fire with fire through "proactive, dynamic, and unorthodox approaches to [irregular warfare] that can shape, prevent, and prevail against our nation's adversaries." Gen. Mark Milley, chair of the Joint Chiefs of Staff, praised Section 1202 Authority as a "highly useful tool for enabling irregular warfare operations" aimed at countering "coercion and aggression by revisionist powers and rogue regimes."

(Nick Turse, ^œ[Will The Biden Administration Shine Light On Shadowy Special Ops Programs?](#), *The Intercept*, March 20, 2021)

Eisenhower ([belatedly - and, perhaps, remorsefully](#)) explained to the American people their deep responsibility for maintaining control of, and regulating, the activities and ambitions of that military-industrial complex which he bequeathed them:

In the councils of government, we must guard against the acquisition of unwarranted influence, whether sought or unsought, by the military-

industrial complex. The potential for the disastrous rise of misplaced power exists and will persist.

We must never let the weight of this combination endanger our liberties or democratic processes. We should take nothing for granted. Only an alert and knowledgeable citizenry can compel the proper meshing of the huge industrial and military machinery of defense with our peaceful methods and goals, so that security and liberty may prosper together.

The rest of the world is left to wonder if, and perhaps vainly hope that, they will take their responsibilities seriously.

An Orwellian 'Newspeak' World 🌐

 (20/11/16) (04/05/18) (16/05/19) (17/05/19) (14/06/19) (22/06/19) (24/06/19) (07/07/19)
(25/02/20) (21/01/23) (24/02/23) (08/06/24)

"I have said it thrice: What I tell you three times is true"

œ Don't Fear Putin's Demise, Victory for Ukraine, Democracy for Russia.

The regime of Russian President Vladimir Putin is living on borrowed time. The tide of history is turning, and everything from Ukraine's advances on the battlefield to the West's enduring unity and resolve in the face of Putin's aggression points to 2023 being a decisive year. If the West holds firm, Putin's regime will likely collapse in the near future....

Putin's effort to restore Russia's lost empire is destined to fail. The moment is therefore ripe for a transition to democracy and a devolution of power to the regional levels....

Reality is perception and perception is the actualization of propaganda⁹⁴⁷.

In June 2024 the world is living in a truly propagandized 'reality'. The [inconceivably atrocious genocidal activity of Israel in determinedly 'ethnic-cleansing' the Palestinian people](#) from the historical and mandatory land of Palestine and the equally [atrocious maneuvering of the peoples of Ukraine into war](#) with Russia have both been deliberately 'camouflaged'.

- Western audiences are being told that the 'problems' driving the 'troubles' in 'Israel' are those of attempting to establish either a 'ceasefire' or a 'truce' between two more or less equally belligerent warring parties;
- And they are being told that if only Ukraine could widen the conflict between itself and Russia through accessing and using Western missile technology with sufficient range to strike into Russia itself, then Ukraine would be able to 'go on the offensive' and Russia would be forced to capitulate.

Both are not merely distortions of reality but a truly Orwellian reinvention of reality!

Palestinians are a people betrayed and disenfranchised by Western colonizing powers in 1948 who still, 76 years later, view the settler colonial demolition of Palestinian communities by Israel as 'legitimate' and 'unfortunate but necessary' consequences of Israel's legitimate right to ethnic-cleanse 'its territory'. A people denied citizenship within their own country and abandoned by Middle-Eastern political 'leaders';

And Ukrainians, whose sovereignty has been compromised and whose neutrality has been stripped from them by Western interests determined to finish what they started in 1991 - the 'privatization' of Russia and its dismantling into 'manageable' regions under Western control - find themselves fighting a war they were never going to win!

Sadly, [we live in an Orwellian 'Newspeak' world](#). US (and other Western) main stream media continue to play their part in promoting and then air-brushing Western military activity, ambitions and consequences. This is, of course, not unique to the air-brushing of military activity and consequences.

As nations descend into [self-created and perpetuating Orwellian realities](#), they increasingly [come to believe their own, often phantasmic, reworkings of reality](#). This results, inevitably, in a subliminal reworking of information and commentary to fit that illusory world to which they have committed themselves and gives 'rise to a "thicket of unreality that stands between us and the facts of life."'.
"

As Suzanne Maloney explained of the JCPOA negotiated between Iran and the US, China, France, Germany, Russia, and the United Kingdom, President Biden, prior to entering the White House

...was determined to resuscitate the 2015 nuclear deal with Iran, known as the Joint Comprehensive Plan of Action (JCPOA), from which his predecessor, Donald Trump, had unilaterally withdrawn the United States in 2018....

And, upon entering Office

Biden quickly appointed a special envoy to begin negotiations with Tehran and the five great powers that remain party to the agreement: China, France, Germany, Russia, and the United Kingdom....In his first speech before the United Nations, he declared that his administration was "prepared to return to full compliance" and was engaged in diplomacy to persuade Iran to do the same.

At this point, the renewal of the Joint Comprehensive Plan of Action seemed inevitable. Biden was prepared to renew and Iran declared that, provided it was the same deal as first negotiated and included the removal of the sanctions agreed as a condition of the first deal, Iran was prepared to restore all the conditions required by the agreement.

What could go wrong?

Suzanne Maloney continued:

...Senior Biden administration officials and many outside experts hoped for a "longer and stronger" deal. But Tehran had advanced its nuclear program since the Trump administration's withdrawal and demanded a stiff price to roll that progress back. Biden nonetheless hoped his team could create a new understanding that would lower the risk of nuclear proliferation.

Despite the challenges, trying to salvage the deal made tremendous sense for Biden. The president was eager to shake off the United States' post-9/11 entanglements in the Middle East, and he wanted to show the world that after the tumultuous Trump era, Washington was again committed to diplomacy. Resurrecting the deal was central to Biden's plan for restoring U.S. leadership in the world - a tangible step toward undoing the reputational damage incurred by Trump's abandonment of the agreement.

But as the boxer Mike Tyson once said, "Everyone has a plan until you get punched in the face." And Biden's Iran aspirations have suffered from multiple blows....

Sadly, in the face of changing world affairs, Iran required the deal to remain unchanged. But, of course, Biden had been forced by changing circumstances around the world to modify the deal. It wasn't his fault, each of those jolts of change 'was enough to keep JCPOA on the ropes. Together, they constituted a knockout'.

Despite Biden's goodwill gesture in returning to the agreement, Iran had proved intransigent, unwilling to agree to necessary alterations:

...As Iranian Supreme Leader Ayatollah Ali Khamenei himself said in 2015, "The reason why we entered into negotiations and made some concessions was to lift sanctions." But today, the regime no longer sees the West as a necessary - or even viable - conduit for economic benefits. "Today, the U.S. is not the world's dominant power," Khamenei proclaimed in a speech last November commemorating the embassy seizure. "Many of the world's political analysts believe that the U.S. is declining," he continued. "It is gradually melting away." He and other Iranian leaders instead see the new global locus of power shifting eastward. "Asia will become the center of knowledge, the center of economics, as well as the center of political power, and the center of military power," Khamenei exulted. He added: "We are in Asia."

According to Suzanne, the US 'really tried' to develop amicable relations with Iran...

...but the regime has now forsaken access to the West and staked Iran's future on relationships with other authoritarian states. Meanwhile, the ordinary Iranians who have confronted the regime in street protests for months despite incalculable risks are paving the way for a different future for their country.

(Suzanne Maloney, [After the Iran Deal: A Plan B to Contain the Islamic Republic](#), *Foreign Affairs*, February 28, 2023)

Andrew Bacevich has explained it well:

...Just about anything that happens at the White House, for example, is deemed historic. Watch the cable news networks and you'll hear the term employed regularly to describe everything from Oval Office addresses to Rose Garden pronouncements to press conferences in which foreign dignitaries listen passively while their presidential host pontificates about subjects that have nothing to do with them and everything to do with him.

Of course, almost all of these are carefully scripted performances that are devoid of authenticity. In short, they're fraudulent. The politicians who participate in such performances know that it's all a sham. So, too, do the reporters and commentators paid to "interpret" the news. So, too, does any semi-attentive, semi-informed citizen.

Yet on it goes, day in, day out, as politicians, journalists, and ordinary folk collaborate in manufacturing, propagating, and consuming a vast panoply of staged incidents, which together comprise what Americans choose to treat as the very stuff of contemporary history. "Pseudo-events" was the term that historian Daniel Boorstin coined to describe them in his classic 1961 book [The Image: A Guide to Pseudo-Events](#)

in America. The accumulation of such incidents creates a make-believe world. As Boorstin put it, they give rise to a "thicket of unreality that stands between us and the facts of life."

As substitutes for reality, pseudo-events, he claimed, breed "extravagant expectations" that can never be met, with disappointment, confusion, and anger among the inevitable results. Writing decades before the advent of CNN, Fox News, Google, Facebook, and Twitter, Boorstin observed that "we are deceived and obstructed by the very machines we make to enlarge our vision." So it was back then during the presidency of John F. Kennedy, a master of pseudo-events in the still relatively early days of television. And so our world remains today during the presidency of Donald Trump who achieved high office by unmasking the extravagant post-Cold War/sole superpower/indispensable nation/^œ[end of history](#) expectations of the political class, only to weave his own in their place.

(Andrew Bacevich, ^œ[Tomgram: Andrew Bacevich, When Reality Sneaks Through](#), *TomDispatch.com*, 23 February, 2020)

Max Fisher, of the *New York Times*, in a truly myopic Newspeak 'explanation' of the 2016 Middle East chaos, explains who those responsible for the mayhem are:

Saudi Arabia and Iran are waging a struggle for dominance that has turned much of the Middle East into their battlefield. Rather than fighting directly, they wield and in that way worsen the region's direst problems: dictatorship, militia violence and religious extremism.

(Max Fisher, ^œ[How the Iranian-Saudi Proxy Struggle Tore Apart the Middle East](#), *New York Times*, The Interpreter, November 19, 2016)

It's all a matter of internal Middle East rivalries. No apparent recognition of the US promotion and arming of Middle East conflict through the period; of their manipulation of the 'region's direst problems: dictatorship, militia violence and religious extremism'. It was and apparently still is a matter of Middle East rivalries. No recognition of US military meddling and ambitions; of their direct, self-interested, military aggression in the region; of the massive flows of armaments to all involved parties; of the [sociopathic fomenting](#) and fueling of Middle Eastern tensions by US provocateurs in the mold of Rumsfeld and others like him: just Middle East hatreds and minor US involvement to maintain their 'interests' in the Middle East.

In a strange inversion (perversion?) of reality, the US appears as victim of scheming Middle Eastern intrigue which has seen 'a pattern of Iranian-Saudi struggle through proxies, and of sucking in the United States'. Through a newspeak rewriting of reality, their involvement becomes more a consequence of naivety than aggression.

And, in 2019, the US is at it again. From the ^œ[Gulf of Tonkin](#) incidents in the 1960s, to the ^œ[weapons of mass destruction](#) claims of 2002-3, to dubious pronouncements justifying US aggression in Afghanistan, Syria, Libya, Yemen, Venezuela, Iran... US 'intelligence' seems to have been (and continues to be) a [highly manipulable foreign policy weapon](#) in the hands of belligerent US warmongers for the past sixty and more years.

Such distortions of the truth and outright lies have been readily taken up by the US mainstream media in support of [sociopathic warmongering](#). A comment on a *New York Times* report puts it well:

This is all so predictable, and so incredibly sad. Trump needs a war, Bolton has wanted to bomb Iran for years, you put the two together

and what do you get? "Significant identifiable threats," a phrase that will live in infamy alongside Bush's "WMDs."

Starting a war under false pretenses is probably the worst thing a president can do. Given that Trump is our worst president, and given his need for a war to prop up his re-election campaign, we should expect nothing less.

(Joe M., comment on: Edward Wong, ["U.S. Orders Partial Evacuation of Embassy in Baghdad, New York Times,"](#) May 15, 2019)

Vivian Yee has described the accompanying 'justificatory incidents' designed to give credence to such pronouncements:

Charges that four oil vessels were attacked at the mouth of the Persian Gulf over the weekend have amplified fears across the region about the escalating tensions between Iran and the West.

The unconfirmed reports come as the United States has tightened sanctions against Iran and mobilized an aircraft carrier, bombers and an antimissile battery to the gulf to deter what the Trump administration has said is a heightened risk of Iranian aggression.

Saudi Arabia said Monday that two of its oil tankers had been sabotaged, and a Norwegian company reported that one of its tankers was damaged in the same area, near the Strait of Hormuz. The fourth ship belonged to the United Arab Emirates, which, like Saudi Arabia, is an avowed enemy of Iran.

(Vivian Yee, ["Claim of Attacks on 4 Oil Vessels Raises Tensions in Middle East, New York Times,"](#) May 13, 2019)

The world (perhaps they are remembering past US 'intelligence' reports) apparently did not believe that the Iranians were responsible for the attack on those tankers. So, what now? [Goebbels provided the answer:](#)

If you tell a lie big enough and keep repeating it, people will eventually come to believe it.

Perhaps they will this time!

Secretary of State Mike Pompeo said Thursday that intelligence reviewed by American officials showed that Iran was responsible for attacks earlier in the day on two tankers in the Gulf of Oman, a critical waterway for the transit of much of the world's oil.

Mr. Pompeo did not present any evidence to back up the assessment of Iran's involvement. The assertion is certain to further fuel tensions between the Trump administration and Iranian leaders, which have been at heightened levels since early May, when the White House announced military movements in response to what American officials have said is an increased threat from Iran.

(Edward Wong, ["Pompeo Says Intelligence Points to Iran in Tanker Attack in Gulf of Oman, New York Times,"](#) June 13, 2019)

 (26/06/19)

The escalation of 'incidents' reported and promoted by belligerent US Administration officials and their media echo-chamber continues in predictable fashion: A process scripted from a schoolyard [bully's playbook](#).

Trump said the US was prepared to hit "3 different sites" Thursday night but that he scrapped the strikes "10 minutes" before they were to have been launched. "I asked, how many will die. 150 people, sir, was the answer from a General."

One grows weary and exasperated at the blatancy of it all, but such nonsense must be called out for what it is! As the BBC has reported:

A US military surveillance drone has been shot down by Iranian forces while flying over the Strait of Hormuz.

... [T]he US military insisted the drone had been over international waters at the time, and condemned what it called an "unprovoked attack" by the IRGC.

President Donald Trump tweeted: "Iran made a very big mistake!"

The incident comes at a time of escalating tension between the two countries.

On Monday, the US defence department said it was deploying 1,000 extra troops to the region in response to "hostile behaviour" by Iranian forces. It has already sent an aircraft carrier strike group and B-52 bombers.

(^œ[Strait of Hormuz: US confirms drone shot down by Iran](#), *BBC News*, 20 June, 2019)

A last set of comments on the belligerent rhetoric directed toward Iran by US President Trump (there seems little point in commenting further on his intemperate, immature outbursts!):

A report by Australian SBS News (26 June, 2019) entitled "'Trump threatens Iran with 'obliteration' as tensions escalate'" commented on Iranian President Hassan Rouhani's measured reaction to the unseemly nature of [Trump's 'tweets'](#):

Amid rising tensions between Washington and Tehran, Mr Trump tweeted: "Any attack by Iran on anything American will be met with great and overwhelming force. In some areas, overwhelming will mean obliteration."...

Rouhani, a pragmatist who won two elections on promises to open Iran up to the world, described the US moves as desperate and called the White House "mentally retarded" - an insult Iranian officials have used in the past about Trump but a departure from Rouhani's own comparatively measured tone....

"The White House actions mean it is mentally retarded," Rouhani said. "Tehran's strategic patience does not mean we have fear."

(*SBS News*, ^œ[Trump threatens Iran with 'obliteration' as tensions escalate](#), June 26, 2019)

Leaked secret cables from Sir Kim Darroch, the British Ambassador to the United States, over the years 2017 to 2019, seem to corroborate Rouhani's assessment of Trump's abilities: Michelle Kosinski, Schams Elwazer and Stephen Collinson of CNN have summarized it all:

Diplomatic cables sent from the United Kingdom's ambassador to the United States back to London describe President Donald Trump as "inept," "insecure" and "incompetent," a UK government official confirmed Saturday to CNN.

The leak could cause serious diplomatic damage between the two "special relationship" allies.

While foreign envoys of all nations are often candid in classified dispatches back home, there are periodic episodes when such assessments leak, causing great political embarrassment. Months of

efforts by the ambassador, Kim Darroch and his diplomats to build ties and trust with Trump and his political acolytes will be undermined.

The cables were leaked to and first published by the Daily Mail. Darroch used secret cables and briefing notes to warn the UK government that Trump's "career could end in disgrace," and described conflicts within the White House as "knife fights," according to the Daily Mail.

A UK government source told CNN the memos described in the Daily Mail story are genuine.

The Daily Mail says the memos span the period between 2017 to present day, covering everything from Trump's foreign policy to his 2020 reelection plans.

In one memo dated June 22, according to the Daily Mail, Darroch questioned Trump's claim that he pulled back from retaliating against Iran last month after the downing of a US drone because the President was told at the last minute that US air strikes could kill 150 Iranians. (Michelle Kosinski, Schams Elwazer and Stephen Collinson, ["Cables from UK's ambassador to the US blast Trump as 'inept,' 'incompetent'", CNN, July 7, 2019](#))

 (22/07/19)

It seems that, in 2019, the world has become engrossed in inept US Administration attempts to emulate George W. Bush's deceitful 'justification' of Middle-East war after September 11, 2001. Roger Cohen has explained:

President Trump has been all over the place on Iran, which is what happens when you take a serious subject, treat it with farcical superficiality, believe braggadocio will sway a proud and ancient civilization, approach foreign policy like a real estate deal, defer to advisers with Iran Derangement Syndrome, refuse to read any briefing papers and confuse the American national interest with the Saudi or Israeli.

This American slouching toward another Middle East war has been a disgrace, shot through with the twisting of truth or outright lies. Now Trump has approved, only to reverse, a retaliatory strike for the Iranian downing of an American drone, an aptly chaotic culmination to the drift the president has allowed.

... Dazzled by Saudi blandishments, Israeli veneration, the opportunity to trash Barack Obama's diplomacy and the lure of evangelicals' votes, Trump determined from Day 1 that the Islamic Republic was the enemy from Central Casting. His view was unburdened by any serious assessment of how to balance toughness and engagement in the long-traumatized American-Iranian relationship.

The United States does not need the war with Iran that John Bolton, the national security adviser, and Secretary of State Mike Pompeo seem determined to deliver. It would be a war of choice, illusion and irresponsibility. It would place Americans at risk across the Middle East, with no benefit to the United States or its allies.

(Roger Cohen, ["Trump's Slouching Toward War With Iran Is a Disgrace. New York Times, 21 June, 2019](#))

Michael Hudson has described the emerging chaos of this 21st century, being created by US administrations fast losing control of a world they once believed belonged to themselves. As Francis Fukuyama had absurdly

claimed, they had brought about 'The End of History': the triumph of liberal democracy and the arrival of a post-ideological world.

Now, in 2019, their uneasy and increasingly insecure sense that they are losing control of that world has resulted in an 'economic belligerence [which] is driving countries to withdraw from the global financial and trade order that has been turned into a New Cold War vehicle to impose unilateral U.S. hegemony'. Their behavior is hastening the dissolution of a self-proclaimed 'Pax Americana' world:

...The rules of international law and order put in place toward the end of World War II are being broken by U.S. foreign policy escalating its confrontation with countries that refrain from giving its companies control of their economic surpluses. Countries that do not give the United States control [of] their oil and financial sectors or privatize their key sectors are being isolated by the United States imposing trade sanctions and unilateral tariffs giving special advantages to U.S. producers in violation of free trade agreements with European, Asian and other countries.

This global fracture has an increasingly military cast. U.S. officials justify tariffs and import quotas illegal under WTO rules on "national security" grounds, claiming that the United States can do whatever it wants as the world's "exceptional" nation. U.S. officials explain that this means that their nation is not obliged to adhere to international agreements or even to its own treaties and promises. This allegedly sovereign right to ignore... its international agreements was made explicit after Bill Clinton and his Secretary of State Madeline Albright broke the promise by President George Bush and Secretary of State James Baker that NATO would not expand eastward after 1991. ("You didn't get it in writing," was the U.S. response to the verbal agreements that were made.)

Likewise, the Trump administration repudiated the multilateral Iranian nuclear agreement signed by the Obama administration, and is escalating warfare with its proxy armies in the Near East. U.S. politicians are waging a New Cold War against Russia, China, Iran, and oil-exporting countries that the United States is seeking to isolate if [it] cannot control their governments, central bank and foreign diplomacy...

(Michael Hudson, [U.S. Economic Warfare and Likely Foreign Defenses](#), Keynote paper delivered at the 14th Forum of the World Association for Political Economy, Posted on *NakedCapitalism*, by Yves Smith, July 21, 2019)

When will Western populations finally rebel against the blatant manipulation of public opinion to favor warmongering - or are they so terminally confused that they can no longer distinguish reality from theater?

The drums of war are sounding across the Middle East, driven by the Trump administration as well as by disputed attacks on Saudi Arabian tankers and an oil pipeline. But Rohile Gharaibeh, a prominent Jordanian politician and newspaper columnist, has watched it all with a mixture of disdain and weary exasperation.

"A circus," Mr. Gharaibeh said in a phone interview, describing recent events as little more than a spectacle with multiple foreign actors on the stage. "It's no more than shenanigans to apply more pressure on Iran."

As the Trump administration squares up against Iran, with what many see as alarming echoes of the buildup to the Iraq war in 2003, people across the Arab world are trying to figure out how worried they should be. In interviews, writers, businessmen and exiles expressed fear of a potentially dire war between the United States and Iran that for many has been brewing since the 1979 embassy siege in Tehran.

(Declan Walsh, [∞][Iran Crisis or 'Circus'? A Weary Middle East Wonders](#), *New York Times*, May 16, 2019)

An article (sub-titled "The unit best known for killing Osama bin Laden has been converted into a global manhunting machine with limited outside oversight") outlined the nature and scope of clandestine operations pursued by SEAL Team 6 and other covert Western military organizations in countries around the world since the 1970s:

They have plotted deadly missions from secret bases in the badlands of Somalia. In Afghanistan, they have engaged in combat so intimate that they have emerged soaked in blood that was not their own. On clandestine raids in the dead of the night, their weapons of choice have ranged from customized carbines to primeval tomahawks.

Around the world, they have run spying stations disguised as commercial boats, posed as civilian employees of front companies and operated undercover at embassies as male-female pairs, tracking those the United States wants to kill or capture.

Those operations are part of the hidden history of the Navy's SEAL Team 6, one of the nation's most mythologized, most secretive and least scrutinized military organizations. Once a small group reserved for specialized but rare missions, the unit best known for killing Osama bin Laden has been transformed by more than a decade of combat into a global manhunting machine.

That role reflects America's new way of war, in which conflict is distinguished not by battlefield wins and losses, but by the relentless killing of suspected militants.

Almost everything about SEAL Team 6, a classified Special Operations unit, is shrouded in secrecy - the Pentagon does not even publicly acknowledge that name - though some of its exploits have emerged in largely admiring accounts in recent years. But an examination of Team 6's evolution, drawn from dozens of interviews with current and former team members, other military officials and reviews of government documents, reveals a far more complex, provocative tale.

While fighting grinding wars of attrition in Afghanistan and Iraq, Team 6 performed missions elsewhere that blurred the traditional lines between soldier and spy. The team's sniper unit was remade to carry out clandestine intelligence operations, and the SEALs joined Central Intelligence Agency operatives in an initiative called the Omega Program, which offered greater latitude in hunting adversaries.

Team 6 has successfully carried out thousands of dangerous raids that military leaders credit with weakening militant networks, but its activities have also spurred recurring concerns about excessive killing and civilian deaths.

Afghan villagers and a British commander accused SEALs of indiscriminately killing men in one hamlet; in 2009, team members joined C.I.A. and Afghan paramilitary forces in a raid that left a group of youths dead and inflamed tensions between Afghan and NATO

officials. Even an American hostage freed in a dramatic rescue has questioned why the SEALs killed all his captors.
(Mark Mazzetti, Nicholas Kulish, Christopher Drew, Serge F. Kovalski, Sean D. Naylor and John Ismay, ^œ[SEAL Team 6: A Secret History of Quiet Killings and Blurred Lines](#), *New York Times*, June 6, 2015)

A *New York Times* report (May 3 2018) has described a clandestine Green Beret operation which illustrates the kinds of 'special forces' activities involved in the '[continuing escalation of America's secret wars](#)' around the world:

For years, the American military has sought to distance itself from a brutal civil war in Yemen, where Saudi-led forces are battling rebels who pose no direct threat to the United States.

But late last year, a team of about a dozen Green Berets arrived on Saudi Arabia's border with Yemen, in a continuing escalation of America's secret wars.

With virtually no public discussion or debate, the Army commandos are helping locate and destroy caches of ballistic missiles and launch sites that Houthi rebels in Yemen are using to attack Riyadh and other Saudi cities.

Details of the Green Beret operation, which has not been previously disclosed, were provided to The New York Times by United States officials and European diplomats.

They appear to contradict Pentagon statements that American military assistance to the Saudi-led campaign in Yemen is limited to aircraft refueling, logistics and general intelligence sharing.

(Helene Cooper, Thomas Gibbons-Neff And Eric Schmitt, ^œ[Army Special Forces Secretly Help Saudis Combat Threat From Yemen Rebels](#), *New York Times*, May 3, 2018)

A *New York Times* editorial has elaborated:

In at least 14 countries, American troops are fighting extremist groups that are professed enemies of the United States or are connected, sometimes quite tenuously, to such militants...

Such significant military decisions require public debate to force presidents and their generals to justify their decisions and be held accountable for the consequences. But checks and balances have eroded since Sept. 11, 2001, as ordinary Americans became indifferent to the country's endless wars against terrorists and Congress largely abdicated its constitutional role to share responsibility with the president for sending troops into battle.

(Editorial, ^œ[Why Are American Troops in the Yemen War?](#), *New York Times*, May 3, 2018)

A Guardian report entitled 'Massive US airstrike in Yemen kills 'dozens' of people, Pentagon says' described the nature of 'American military assistance' in Yemen:

A massive US airstrike in Yemen has killed what the Pentagon estimates is "dozens" of people, the second such mass-casualty strike the US military has undertaken this month.

The two strikes, killing more than 200 people at what the Pentagon described as terrorist training camps, diverged so sharply from the

previous years' worth of relatively low-casualty strikes that observers speculated US policy may have quietly changed.

Peter Cook, the Pentagon spokesman, announced late Tuesday that the US had bombed a mountain redoubt in Yemen used by al-Qaida's local affiliate, al-Qaida in the Arabian Peninsula (AQAP). He said it was a "training camp" used by "more than 70 AQAP terrorists".

An independent assessment of the actual impact of the strike, to include a full casualty total and civilian impact, was not immediately available. The Pentagon did not provide further detail of where in Yemen the alleged camp was located.

"We continue to assess the results of the operation, but our initial assessment is that dozens of AQAP fighters have been removed from the battlefield," Cook said in a statement.

The US airstrike happened hours after multiple attacks killed over 30 people and wounded more than 200 in Brussels, although it is unclear if any connection exists between the two events. Islamic State has claimed credit for the Brussels attacks. ...

(Spencer Ackerman, ["Massive US airstrike in Yemen kills 'dozens' of people, Pentagon says,"](#) *The Guardian*, Wednesday 23 March 2016)

Adam Johnson, in an analysis of US military action subtitled, 'What began two years ago as "limited" air strikes in Iraq now includes Syria, Afghanistan, and Libya - all with little public debate':

Meanwhile, an anti-ISIS bombing campaign that began as "limited," "targeted" air strikes in Iraq two years ago expanded to Syria six weeks later, to Afghanistan in January of this year, and to Libya this week. Combat troops and special forces have also crept into play, with US military personnel first appearing in Iraq and Syria in 2014, 2015, or 2016, depending on how one defines "boots" and "ground."

(Adam H. Johnson, ["Obama Expands the ISIS Bombing Campaign to a 4th Country, the Media Barely Notice,"](#) *The Nation*, August 5, 2016)

Chapter 14: 🌟

The nature and limitations of our most vaunted capability 'Human Intelligence',

 (11/08/23) (12/08/23) (14/08/23) (17/08/23) (30/08/23) (15/09/23)

We are living in a time when the nature and limitations of our most vaunted capability, 'Human Intelligence', are, sadly, being exposed.

It has been this capability which has made humanity the most successful mammalian species, able to adapt to and exploit almost any environment within which we have found ourselves.

And the limitations of that capability have resulted in the looming 21st century nightmares which will haunt us through future centuries and possibly lead to our extinction.

Ian Bremmer and Mustafa Suleyman explain how 'We' are likely to exploit advances in artificial intelligence in coming decades:

It's 2035, and artificial intelligence is everywhere. AI systems run hospitals, operate airlines, and battle each other in the courtroom. Productivity has spiked to unprecedented levels, and countless previously unimaginable businesses have scaled at blistering speed, generating immense advances in well-being. New products, cures, and innovations hit the market daily, as science and technology kick into overdrive. And yet the world is growing both more unpredictable and more fragile, as terrorists find new ways to menace societies with intelligent, evolving cyberweapons and white-collar workers lose their jobs en masse.

Just a year ago, that scenario would have seemed purely fictional; today, it seems nearly inevitable. Generative AI systems can already write more clearly and persuasively than most humans and can produce original images, art, and even computer code based on simple language prompts. And generative AI is only the tip of the iceberg. Its arrival marks a Big Bang moment, the beginning of a world-changing technological revolution that will remake politics, economies, and societies.

(Ian Bremmer and Mustafa Suleyman, ^œ[The AI Power Paradox: Can States Learn to Govern Artificial Intelligence - Before It's Too Late?](#) *Foreign Affairs*, August 16, 2023)

We have explored the history and nature of 'capitalism', but, of course, 'capitalism' is merely shorthand for [the primary and secondary ideological presumptions and structures](#) historically forged by 'Western' communities.

Driven by '[capitalist](#)' imperatives, the almost inevitable outcome of successful 'artificial intelligence' development is that more and more features of the physical, social and intellectual realms will become recognized as commodities and, therefore, available for divestment to private individuals to be 'profitably' developed.

In the process, communities will unravel and [governmental responsibilities will be further weakened and warped](#) to individualized, self-interested ends.

Western nations have [increasingly emphasized individual rights and responsibilities](#) at the expense of those of the community. In the process, the community becomes weakened until it no longer provides its members with a strong, immediate sense of shared responsibility and identity.

We will find ourselves in a [truly Thatcherian reality](#) in which there is no such thing as society, there are only individual men and women - and 'the devil will take the hindermost'!.

A world where '[homo economicus](#)' reigns supreme!

As suggested at the outset, capitalism, in its various guises, is the means [by which those communities have defined themselves](#), adapted to and exploited their perceived 'environments'.

Most non-Western forms of resource utilization are closed, with a built in upper limit to demand, but capitalist utilization of the material environment is open-ended, with no upper limit to its use and a built in inflation of demand for natural resources.

For possibly the first time in human history, those 'capitalist' communities have defined themselves as the legitimate *optimizing* exploiters of perceived 'resources' wherever in the world they might be found.

They have, [sociopathically](#), ignored the human communities which have built utilization of those resources into their primary and secondary ideologies, presuming that, always, the needs and wants of Western communities override those of any other communities. Indeed, those communities should be reorganized to contribute to Western 'needs'.

Driven by 'profit', they have become predatory societies, believing themselves entitled to access and appropriate the resources of other communities, demonstrating to them the 'true potential' of their 'underutilized' resources. They have 'justified' all this as a 'civilizing' mission, ushering invaded regions into the modern world as 'developed' communities and 'nations'.

[J. S. Mill explained:](#)

Nobody can suppose that it is not more beneficial to a Breton, or a Basque of French Navarre, to be brought into the current of the ideas and feelings of a highly civilized and cultivated people - to be a member of the French nationality, admitted on equal terms to all the privileges of French citizenship, sharing the advantages of French protection, and the dignity and prestige of French power - than to sulk on his own rocks, the half-savage relic of past times, revolving in his own little mental orbit, without participation or interest in the general movement of the world. The same remark applies to the Welshman or the Scottish Highlander as members of the British nation.

But, of course, those 'highly civilized and cultivated people' are recognized by Mill as both 'civilized' and 'cultured' because he, like them, lived in a world imbued with 'meaning' by primary and secondary ideologies which require such behavior.

The 'gardens' of the Western World are required by their primary and secondary ideologies. They are built using products [obtained through 'legitimate' appropriation of the resources of communities](#) whose understanding of their world and utilization of the 'resources' of their environments are very different and required by their quite different primary and secondary ideologies.

The tragedies of colonialism, neocolonialism and the rampant exploitation and pollution of our world have been the inevitable consequence of the human belief that the primary and secondary ideologies which shape our activities are objectively existing, universally shared 'realities'.

Western peoples have been more 'successful' in exploiting the resources of the world than non-Western societies because they are [no longer ruled by past 'superstitions' and 'traditions'](#) but have ['discovered' the laws](#) which make such exploitation possible. Non-Western peoples, however, in the minds of well enculturated Westerners, remain mired in superstition and tradition, shackled by their pasts.

Western peoples have long realized that, having learned to free themselves from past limitations and focus on the future, they [have a duty to the rest of the world to 'bring it into the light of civilization', to 'educate' it!](#)

John Wilmot explained:

Obedience is one of the capital benefits arising from a public education, ... for to break the natural ferocity of human nature, to subdue the passions and to impress the principles of religion and morality, and give habits of obedience and subordination to paternal as well as political authority, is the first object to be attended to by all schoolmasters who know their duty and do it.

And, unfortunately, in the 21st century, post-colonial nations, eager to show themselves 'developed', have uncritically accepted that 'truly developed' societies legitimately access and exploit resources beyond their own territorial borders.

We cannot look to 'Western' societies for the way out of the quagmire into which the Western world has led humanity. Their primary and secondary ideologies will, inevitably, lead them to believe that the way out requires 'more of the same'.

Nidhi Verma and Mohi Narayan, in a *Reuters* report, have demonstrated the sad reality:

Global oil major BP (BP.L) said the world must invest in the production of oil and gas to avoid sharp price spikes while accelerating the energy transition to combat greenhouse gas emissions.

Global gas prices surged seven-fold last year as 3% of global gas supplies were hit following Russia's invasion of Ukraine, forcing countries to boost energy spending and shift to coal, BP CEO Bernard Looney said in New Delhi.

"We need to do both. We need to invest in today's energy system responsibly and, at the same time, we must invest in accelerating the energy transition," Looney told the B20 conference.

Energy transition has to be orderly to maintain its pace as emission levels have risen since the Paris conference on climate change in 2015, despite global efforts, he said.

The Paris-based energy watchdog International Energy Agency (IEA) expects global oil demand to climb by 2.2 million barrels per day (bpd) in 2023 to reach a record high of 102.2 million bpd.

Looney said his company would invest 40% of its capital on energy transition projects by the middle of this decade and 50% by the end of the decade. "We will invest between \$55 and \$65 billion as BP this decade in energy transition growth engines," he said.

BP, investing in energy projects in India along with its partner Reliance Industries Ltd (RELI.NS), has set up about 3,000 electric vehicle

charging points to date, up from 750 in January. The two have set up 300 battery swapping stations.

BP has invested in India's gas sector, and its venture arm has bought a stake in electric ride-hailing startup BluSmart.

"I have every expectation that we will do more in India in years to come," Looney said.

(Nidhi Verma and Mohi Narayan, [BP urges more oil, gas investment while speeding energy transition](#), *Reuters*, August 28, 2023)

As Alphonse Karr (1849) put it "plus ça change, plus c'est la même chose" (The more it changes, the more it is the same).

Mark Mills, in a *YouTube* video (46.49 minutes) entitled [The energy transition delusion: inescapable mineral realities](#), explains the impossibility of realizing the 21st century ambition of achieving 'carbon neutrality' through transitioning to 'sustainable energy' technologies. As he says, it's simply not going to happen!

Western societies will find that technological fixes are not going to save us from the disasters looming on humanity's horizon.

If we are to escape the consequences of the Western 'development' of the world, we will need to attempt the seemingly impossible: We will have to rapidly adopt and adapt to the lifestyles and understandings of societies whose primary and secondary ideologies 'naturally' lead to what Western thinkers have termed 'radical conservation'⁹⁴⁸.

Chapter 15: ♣

Epilogue - What Drives Western People to Commoditize their World?

Introduction

Value creation

The nature of value

The nature of Money

Nature of production

Consumer society and Commoditization

Investment Growth Packages:
the Commoditization of Investment

Conclusion

- The nature of 'marginal utility'

Introduction ♣

Perhaps the greatest strength and weakness of capitalism lies in the definition of 'the economy' as an independent environment within Western thought ⁹⁴⁹. This has made economic activity and organization asocial in character. Those involved in economic activity are concerned with 'the economy'. 'Non-economic' concerns are issues to be addressed in other social forums.

Organizations (artificial individuals) and individuals involved in 'the economy' will always assume that 'demands' made from other areas of social life are intrusive, aimed at limiting economic 'freedom' and 'enterprise'. And, as economic concerns have become central in the lives of Western people, they, in daily life, resist attempts to harness economic activity to 'non-economic' ends. The result is the reorganization of reality to the requirements of 'economic activity'. The result is Capitalism - the commoditization of life.

We, in Western communities, live in a commoditized world. In a manner never before seen in human society, Western peoples convert anything and everything into money-making commodities - objects which can be exploited for profit. Vast financial and promotional industries have grown over the past three hundred years, driven by and dedicated to the commoditization of the world.

The Western need to accumulate money inevitably results in more and more of the forms of activity, interaction and organization which people perceive as important to themselves, being exploited for profit. The consequence is the *commoditization of society*.

To understand the nature and consequences of this burgeoning commoditization of everything around us, we need to ask why we feel such a deep need to accumulate material wealth; to make everything around us a source of material profit.

Karl Marx ⁹⁵⁰, in the second half of the 19th century, put it bluntly:

The capitalist knows that all commodities, however scurvy they may look, or however badly they may smell, are in faith and in truth money, inwardly circumcised Jews ⁹⁵¹, and what is more, a wonderful means whereby out of money to make more money.
(1887 Vol. 1 Pt 2 Ch. 4)

By the time Adam Smith, the acknowledged founder of modern economics, published his most famous book ^{ae}*An Inquiry Into the Nature and Causes of the Wealth of Nations* in 1776, the concept of a "commodity" was already well-established in Western European discussions on economic issues. Smith's achievement was to tease out the understandings which people in the mid-18th century already intuitively held.

He started his examination of what was happening in 18th century Europe with an attempt to define the terms 'value' and 'commodity'. It was this ability to clearly understand and explain the peculiar nature of these terms in Western European thinking which was Smith's genius.

There are, he claimed, two different *kinds* of value: "value in use" (soon abbreviated to *use value*), and "value in exchange" (now known as *exchange value*). He also made a further definitional distinction between *objects* and *commodities*. An object is any item which can be either used or exchanged. It is the superset of all items used in human living and interacting.

The value of an object *which is not a commodity* is the "usefulness" of the object to the person who uses it. A commodity, on the other hand, is the subset of items which are *exchanged*. And the "value" of a commodity is the "price" of that commodity *in an exchange*.

So, on the one hand, commodities are directly linked to "exchange values"; on the other, objects which are not acting as commodities are directly linked to "use values", that is, to their *utility*:

The word value, it is to be observed, has two different meanings, and sometimes expresses the utility of some particular object, and sometimes the power of purchasing other goods which the possession of that object conveys. The one may be called "value in use"; the other, "value in exchange."

The things which have the greatest value in use have frequently little or no value in exchange; and, on the contrary, those which have the greatest value in exchange have frequently little or no value in use.

Nothing is more useful than water: but it will purchase scarce anything; scarce anything can be had in exchange for it. A diamond, on the contrary, has scarce any value in use; but a very great quantity of other goods may frequently be had in exchange for it.

In order to investigate the principles which regulate the exchangeable value of commodities, I shall endeavor to show:

- First, what is the real measure of this exchangeable value; or, wherein consists the real price of all commodities.
- Secondly, what are the different parts of which this real price is composed or made up.
- And, lastly, what are the different circumstances which sometimes raise some or all of these different parts of price above, and sometimes sink them below their natural or ordinary rate; or, what

are the causes which sometimes hinder the market price, that is, the actual price of commodities, from coinciding exactly with what may be called their natural price.

(Adam Smith, 1776, Chapter 4)

The questions Smith raised and endeavored to answer have been central to economic, and, increasingly, to everyday Western concern over the past two hundred years ⁹⁵².

- ★ First, what is the "real measure" which gives commodities their exchange values?
- ★ Secondly, what are the constituent elements of this "real price"?
- ★ Thirdly, what causes fluctuations in price in the marketplace?

In answering these questions Smith drew on the work of earlier thinkers in Western Europe ⁹⁵³. The "wealth" of a community is determined by:

- ★ the raw labor available to the community;
- ★ the level of skill built into that labor;
- ★ and the ratio of laborers to non-laborers in the society.

The "price" of a commodity is determined by the labor input into that commodity, which will contribute both a wage to the worker and a value which is surplus to the worker's needs which forms the profit of the organizer and controller of production.

This definition was so central to Smith's thesis that it forms the subject of the first paragraph of his book:

The annual labor of every nation is the fund which originally supplies it with all the necessities and conveniences of life which it annually consumes, and which consist always either in the immediate produce of that labor, or in what is purchased with that produce from other nations.

According therefore as this produce, or what is purchased with it, bears a greater or smaller proportion to the number of those who are to consume it, the nation will be better or worse supplied with all the necessities and conveniences for which it has occasion.

(Smith 1776, Chapter 1)

Given the intellectual climate within which Smith was writing, this emphasis was inevitable.

Those who were industrious would, as John Locke (1690 Ch. 5 Sect. 35) had explained, accumulate possessions ⁹⁵⁴. However, precisely because they were industrious and intent on the accumulation of possessions, they would not dissipate their acquired assets. Rather, they would reinvest them so as to make more money. In doing so they would create jobs, which would provide others with paid employment. So, although wealth ultimately derives from labor, it can only continue to grow when invested in further production ⁹⁵⁵.

Value creation

Smith, in his writing, presumed that all human beings are intent on accumulating material 'wealth' and on conserving their assets. Their "natural" behavior would stem from this acquisitive and conservative drive. His explanations strongly reinforced the increasingly entrenched 18th century belief among Western Europeans that if life could be reorganized so that individuals could follow these natural urges then:

- accumulated wealth would be reinvested, producing further wealth;
- jobs would be created and, as workers found themselves also able to accumulate;
- the society would become increasingly wealthy and everyone would have a higher standard of living ⁹⁵⁶.

The greater the investment in productive enterprise; the greater the labor input; the greater the wealth produced in the society.

Wealth was created by the productive labor of the community and the value of any commodity was determined by the labor input into its production. The *surplus value* of a commodity, that which gave the seller his or her profit, was that part of the labor input into production which was not returned to the worker in wages.

Smith claimed that such profit was essential to ensure that employers would organize production, so creating employment for workers. This became known as the *labor theory of value* ⁹⁵⁷, the belief that material wealth creation is directly tied to the quantity and quality of the labor input into production and to the organization of production by employers; whose profits are made from the surplus value created by workers in addition to their own wages.

So, a profit could only be made if the organizer of production could ensure that workers labored for longer than was necessary to provide for their own subsistence. It was in the accumulation of that surplus value that wealth was assumed to be created ⁹⁵⁸.

A major problem through much of the history of western European capitalism has been how 'The Poor' could be motivated to consistent, prolonged labor. Those who supplied most of the labor for capitalist enterprise, seemed unable to understand that they had a duty not only to generate a subsistence wage for themselves, but also to contribute to the profit of the organizers and controllers of production ⁹⁵⁹.

Of course, as Smith realized, *exchange value* requires goods to be *exchanged*. If everyone produced only what they needed *for their own subsistence*, only exchanged items for those they needed for subsistence, and did not consider possessions to also be stores of another kind of value (exchange value), then the only value which goods would possess would be their use value to those who needed or wanted them.

Exchange value becomes important when people focus not on *production for use*, but on *production for exchange value* - for '*profit*'. If one only produces for use, then, once the required needs have been met, production will stop.

Communities do not become involved in open-ended production of the kind that was already entrenched in Western Europe at the time when Smith

wrote his book unless people are, as Smith presumed, focused on obtaining objects for the value they might acquire if the objects were exchanged.

People, Smith claimed, have an innate, always less-than-satisfied urge to accumulate possessions. They have a deep need to express their own social and self worth through the accumulation of a particular form of value believed to be contained within possessions. That value requires conspicuous ownership and/or consumption. One's social and self-worth are best expressed and asserted through the accumulation and consumption of 'valuable' goods and services.

All this, of course, says a lot more about Smith and capitalism than it does about 'human nature'!

The nature of value 🐦

It is this second reason for production that Smith was really interested in, the power of purchasing other goods which the possession of [an] object conveys.

That is, in Smith's estimation, there can be two very different, but concurrent reasons for acquiring an object: the usefulness of the object as an object; and the possession of the object as a store of exchange value, which can be realized through selling it in order to acquire other objects or in order to acquire money. Both these forms of value can be aimed at in acquiring a possession.

In fact, however, there are three, not two forms of value contained within commoditized objects:

- ★ their use value,
- ★ their exchange (or *investment*) value and
- ★ their value in *status*, *prestige* and *self-image* enhancement - their *status value*.

We can acquire a possession for its practical usefulness, for the exchange value which we perceive as stored in it (i.e. it is an 'investment'), and for its contribution to our status and enhancement of our self-definition.

This is perhaps most obviously exemplified in the common Western understanding that if one buys a house one can: live in it; consider it an investment; and also gain social and personal definitional enhancement from its quality and location. Every object held can be, at the same time, a *use value object*, an *investment*, and a *status enhancing possession*.

When we speak of a commodity we are speaking of an object which incorporates either or both of the latter two forms of value for the holder. And, I would suggest, the last form of value is the most potent in Western communities. Investment which does not lead to the acquisition of possessions which primarily convey status and prestige or enhanced self-image is of little value.

We all know stories of eccentric people who died leaving large fortunes yet lived the lives of "ordinary" people. These stories are newsworthy precisely because of the oddity of such behavior. Why would anyone, owning a fortune, not spend some part of it to enhance their "quality of life"? That is,

why haven't these people realized the status enhancing value of their assets?

An important consequence of Smith's emphasis on exchange values over the succeeding 200 years has been that Western writers have presumed that there is only one definition of "exchange", that which pertains to market transactions as a consequence of the "human drive" to accumulate and conserve possessions.

Of course, this is not so. In fact, there is a range of forms of exchange which occur in any society, most of which cannot be understood in terms of market exchange and do not result in any perception of "exchange value" being inherent in the acquired possession ⁹⁶⁰.

In non-Western communities, most forms of exchange focus on the use value of the exchange object to the exchangers; and/or the ways in which the exchange *affects/expresses the relationship between the parties* involved, not on the relative exchange values of *the objects* of exchange. Many Western people find it difficult to comprehend that human beings can engage in an exchange without "automatically" assessing the exchange values involved and without calculating the investment potential of acquisitions ⁹⁶¹.

In the form of exchange to which Smith was referring, however, exchangers focus on the presumed *exchange value of the objects* of exchange, and only secondarily on each other.

If I give an item, I feel the need to express myself and my regard for the receiver through the 'price' of the gift - the investment or exchange value. If I receive a gift, I can readily assess the giver's regard for me through assessing the exchange value of the item given. What did it 'cost' the giver?

As a seller, I give the buyer an item, not to further a relationship, or because I perceive that he/she needs the item, but to obtain the cash in their pocket. The reason why I sell the object is not because anyone needs the item, but because I want to accumulate the medium of exchange - money - and production and sale of the item seem a good avenue to this end ⁹⁶².

As a buyer, I not only buy the item because it might have an intrinsic use value to me, I also buy it because I perceive that it has another kind of value inhering in it (investment value), a value which can be added to the similar values of all my other possessions, giving me a sense of accumulating this kind of value in the objects I possess.

Yet, of course, I also perceive another kind of value in the object, one which might, in fact prove more important to me than its adding to the value of my accumulated possessions. I perceive that through owning and/or consuming the object I can enhance my status and self-definition. I can *release the status value* inherent in its possession through consuming it ⁹⁶³.

In the end, the real reason for emphasizing accumulation is so that I will have a stock of possessions which can be used in this status and self-image building way.

Nature of Money 🐦

 (21/07/16)

It is important, in 21st century capitalist societies, to clearly differentiate between:

➤ *public* credit creation and official currency creation (printing money);

and

➤ *private* credit creation, and creation of various forms of unsecured tokenized credit.

It is equally important to clearly distinguish between 'credit' and 'money'; whether one is speaking of the public creation of credit and official currency or the [private creation of unsecured credit and tokenized credit](#). The, unfortunately common, conflation of pre-tokenized or un-tokenized credit with tokenized credit through use of the term 'money' leads to mental and terminological confusion.

[As observed elsewhere](#): the creation of unsecured credit by private financial institutions is [not the same as credit creation by sovereign central banks](#). One is based on an assumption of 'credit-worthiness' backed by presumed access to sovereign credit; the other is the issuer of unencumbered sovereign credit⁹⁶⁴.

Having said that, in the private realm, as Smith recognized, money performs three separate functions.

- ★ It is the *medium of exchange*, that is, *relative exchange value* is expressed in terms of it.
- ★ It is the *unit of accounting*, that is, it provides a way of determining the *quantity of exchange value* summed up in objects, and so provides a means for assessing the relative "worth" of different accumulations of objects.
- ★ And, finally, it is, itself, a *store of value*.

 (16/07/16)

In capitalist societies, money is the purest form of a commodity. It provides a simple, single measure of the exchange value of all commodities. In doing so, in the minds of those who use it to establish commodity values, it becomes the embodiment of the values it expresses. It becomes a universal symbolic expression of any and all commodities - stripped of their use values.⁹⁶⁵

Marx was to explain this some 100 years after Smith:

commodities have a value-form common to them all, and presenting a marked contrast with the varied bodily forms of their use-values. I mean their money-form.
(1887 Vol. 1 Ch. 1 Pt 3)

Money, according to both Smith and Marx, provides the means for expressing the common value-form which exists within all commodities - the labor contained within a commodity.

The reason why Smith and others decided that money represented the value of "labor" was that middle ranking Western Europeans believed that it was virtuous to diligently apply oneself to labor⁹⁶⁶. Those who increased their possessions and their consumption through diligent commitment to "habits of industry" (whether that involved labor or the creation of opportunities for others to labor) gained increasing status and respect. As

Locke (1690) had argued, "Labor makes the far greatest part of the value of things".

Inevitably, when people enmeshed in Western communities thought of "value" they thought of "labor". So, money must represent stored labor. In Western communities, the acquisition of money and other objects representing exchange value provides an indicator to the community of one's commitment to and successful performance of socially approved forms of activity and behavior.

Whereas use values take a multitude of forms, exchange value has only *one* form. That is why it can be expressed through a single medium of exchange: a univalent valuing system, through which the value of every commoditized object can be compared with any or all others. To understand why Western people see it as important to know the monetary worth of everything and calculate 'total worth', one has to understand the peculiar [nature of Western understandings of the world](#).

Of course, if money stores a particular *kind of value*, such a storing of value can only be symbolic in nature - there is no "real" labor or any other form of activity, nor any quality of any other kind physically stored in money. Rather, Western peoples have organized their communities in such a way that a particular kind of value which the community perceives as being of central importance to life in that community can be expressed in money terms.

The key to understanding the nature of money value in the community is not to look for some objective substance which creates value - whether it be presumed to be labor inputs into production or the [marginal utility](#) of goods and services to consumers, as modern neo-classical economics suggests. Rather, to understand the nature of money value, one should examine how and why increasing numbers of objects in the community are drawn into this evaluative system, that is, are *commoditized*.

Marx very persuasively argued that in capitalist societies there is a driving need to commoditize more and more of the objects, forms of organization and activities of people. And, the reason why this is not only accepted but applauded, is that people gain power and authority, prestige and status from the demonstrated accumulation of the value that inheres within both money and commodities.

Value is *not* generated by some substance or other in the society. It is the tangible expression of the successful commitment of people to those forms of activity, attitude and interaction which are required of stasured individuals and groups within the community⁹⁶⁷.

In western communities, status and prestige are closely linked to the accumulation of money; to the accumulation of objects whose money worth can readily be calculated; and to the consumption of items which are "expensive", that is, can only be consumed by those who have accumulated money.

And, since an increasing range of goods and services in the community is being drawn into this common evaluative system, we can, with constantly increasing precision, determine the relative standing or "success" of individuals in the community.

If one accumulates money and other possessions in ways which are considered "legitimate" in the community then one earns status and

respect. One is socially rewarded for doing what the community has determined is relevant to increased status and respect.

Not only can others assess my placement through my possessions and through my forms of consumption, I, myself, as a well-enculturated Western person, am oriented to evaluating my own "self-worth" in similar ways. Whether others were around or not, I would still feel it necessary to express myself through my patterns of consumption and accumulation.

Accumulation is *assumed* to be a consequence of one's successful commitment to those socially approved forms of behavior ⁹⁶⁸. That is why it is accepted in Western communities that people who have "made money" deserve to be able to spend it as they see fit. The latent status and prestige value of money is fully realized not in hoarding it but in its use in acquiring those possessions which either through ownership and/or consumption confer status and prestige. Equally, it is why so many argue that people who have not accumulated money and/or possessions should suffer the consequences.

Nature of production 🐼

📅 (20/01/17)

When people are driven to expressing their relative "success" through accumulating possessions and through expanding particular forms of consumption, then the production of goods and services in the community becomes open-ended ⁹⁶⁹.

Open-ended production, where people produce more than they need and attempt to convince others to buy their surplus production, is of a fundamentally different nature to production for use. It is in production for exchange that exchange value becomes important. A fundamental shift in the *reason for production* occurs when people move from production for use to production for exchange value.

Subsistence production focuses on supplying people with needed or wanted products. Production for exchange value is not focused directly on supplying people with goods, that is just a means to a very different end. The reason for production is now *the accumulation of exchange value*. That is, one is producing, accumulating and consuming goods and services so as to *appropriate the exchange value* contained in those products ⁹⁷⁰.

When one is producing, accumulating and consuming goods and services, not primarily for the use value they represent but in order to appropriate the *social definitional value* (or *status value*) they provide, then production, accumulation and consumption have no upper limits ⁹⁷¹. The accumulation and consumption of goods and services becomes the avenue to status and prestige. This contrasts with non-Western communities where accumulation and consumption activity and behavior are defined and limited by the status and prestige position held in the community ⁹⁷².

The more emphasis placed on production, accumulation and consumption as a means of status attainment and self-definition within a community, the more those forms of activity and behavior are stimulated; and the more preoccupied people become with commoditized forms of behavior and interaction.

Consumer society and Commoditization 🐦

Advertising has become a ubiquitous industry in the Western world, driven by the snowballing focus on and preoccupation with commoditization in Western communities. The successful accumulation of money depends on others buying the goods and services you are offering. In order to persuade them to do so, you must make them feel that what you are offering will benefit them in some relatively important way, and enhancement of one's social/personal definition is a powerful attractant.

Since everyone is trying to convince the consumer that he or she should buy the wares on offer, the *focus of money making shifts* from productive enterprise to the *marketing of consumables*. The successful competitor in the marketplace will be the one who is able to read the changing whims and fancies of those with money to spend and alter production to cater to those changing fancies.

This leads, inevitably, to the involvement of advertising professionals in shaping the commodities they are going to promote. So, over time, the persuaders begin to shape commodities. In this way, the process folds in on itself. Those who are persuading consumers to consume, fashion the products to be consumed. The entire process of production, accumulation and consumption becomes driven by the persuaders' perceptions of what will lead people to consume and accumulate.

Their perceptions of consumer wants are, of course, fashioned by various forms of social inquiry geared not to improving the use value of the commodities being promoted, but to improving their "appeal" - primarily their social definitional value as perceived by consumers. So, production becomes driven by persuaders' perceptions of consumers' perceptions of what constitutes social definitional value and a *consumer society* emerges.

Since the driving force behind this proliferation of consumer goods is the accumulation of exchange value (money making), sellers are constantly on the lookout for new resources which can be transformed into commodities. What can I exploit that has not already been over-exploited by others in order to make money? As Marx put it,

The capitalist knows that all commodities, however scurvy they may look, or however badly they may smell, are in faith and in truth money, ...a wonderful means whereby out of money to make more money. (1887 Vol. 1 Pt 2 Ch. 4).

This driving ambition for the accumulation of money inevitably results in more and more of those forms of activity, interaction and organization in the community, which people perceive as important to themselves, being exploited for profit.

More and more of the activities and interactions of community members are reorganized by those intent on making money from them. And those who become involved in the newly commoditized forms perceive their involvement as another means of enhancing social definition. They consume them as commodities rather than as 'useful' objects.

Whenever an object, whether tangible, intangible or a form of organization of one kind or another, which previously existed within the community without being linked to exchange value, is used in order to make money, it becomes *commoditized*. Commoditization is the process of taking items which previously could not legitimately be used to make money, and

reorganizing, modifying and marketing them so that they become legitimate avenues through which money can be made.

Of course, in doing so, we are also giving them a new rationale. Whatever their purpose and place might once have been in the community, they are now being employed to the particular end of making and spending money. Inevitably, therefore, involvement in such modified forms becomes linked to the accumulation and/or expenditure of exchange value - to accumulation of the potential for increasing status; and to the translation of that accumulated potential into status defining and maintaining activity.

Investment Growth Packages: the Commoditization of Investment 🐦

 (17/07/16)

From the 10th to second half of the 20th centuries in Western Europe *usury* ⁹⁷³ was illegal and considered socially unacceptable. As late as the 1960s, a 20% interest rate was considered gross extortion in most Western countries. Governments closely controlled interest rates.

Since the mid 1970s, the setting of interest rates by "the market place" has been assumed to be "natural". The individual, interested in making accumulated capital "work" for him or her, is assumed able to determine the rates most useful in the enterprise. If people will pay the rate, then it is clearly 'reasonable'⁹⁷⁴.

Consumers, intent on conserving and enhancing both self-image and status/prestige, pay whatever they have to in order to obtain the money with which to do so. The result is the massive personal and 'credit card' debt within Western communities, primarily held by people struggling to ensure that their current social standing and self-image are protected.

The offering of "investment growth" packages by various financial institutions has become one of the most important forms of industry in the last fifty years. Investment has been commoditized and one can accrue social definitional value by letting others know that one is involved in such activity.

Both perceived position in the community and perceptions of self are preoccupations of most people in most communities. In Western communities, where these are directly related to commoditization, over time, *economic* ⁹⁷⁵ activity overtakes more and more of the interaction and organization of the community.

People come to believe that life is about economic activity and matters which have not been subjected to "the bottom line" of "profit and loss" accounting must be considered aberrant and in need of reorganization. Social, political, aesthetic, even religious involvement can be subjected to this process.

The world becomes "professionalized" with people choosing "services" which meet their needs, and spending their accumulated exchange value on those commodities they feel are necessary to securing their self and social images. They consume services and goods and feel that this consumption, *in itself*, is beneficial. The benefit coming, of course, not from the use value of the services consumed but from the social definitional value of the expenditures.

Conclusion 🇺🇸

In the early 21st century Western communities have become highly commoditized. Both the commoditization of communities and the evolution of economics are inevitable consequences of the particular social templates which have emerged within Western communities.

Commoditization is driven by Western systems of status, prestige and self-image attainment and maintenance. One cannot alter the direction of the evolution of such processes through focusing on them, they are *effects* rather than causes. At root are the particular bases for the categorization and classification of people which have emerged over a thousand years in Western communities ⁹⁷⁶.

The commoditization of society in Western communities will continue unchecked for so long as Western peoples live in communities in which status, prestige and self-image are consequences of the individualized, competitive accumulation and consumption of goods and services.

Conclusion

Introduction

★ ... just at that moment, as though at a signal, all the sheep burst out into a tremendous bleating of-

Four legs good, two legs better! Four legs good, two legs better! Four legs good, two legs better!

It went on for five minutes without stopping. And by the time the sheep had quieted down, the chance to utter any protest had passed, for the pigs had marched back into the farmhouse.

Benjamin felt a nose nuzzling at his shoulder. He looked round. It was Clover. Her old eyes looked dimmer than ever. Without saying anything, she tugged gently at his mane and led him round to the end of the big barn, where the Seven Commandments were written. For a minute or two they stood gazing at the tatted wall with its white lettering.

"My sight is failing," she said finally.

Even when I was young I could not have read what was written there. But it appears to me that that wall looks different. Are the Seven Commandments the same as they used to be, Benjamin?

For once Benjamin consented to break his rule, and he read out to her what was written on the wall. There was nothing there now except a single Commandment. It ran:

ALL ANIMALS ARE EQUAL
BUT SOME ANIMALS ARE MORE EQUAL THAN OTHERS

After that it did not seem strange when next day the pigs who were supervising the work of the farm all carried whips in their trotters.
(Orwell 1951 p. 114)

If there is a single defining feature of Western capitalism, it might well be the peculiar definition of exchange which lies at its core. If we can get that

definition of exchange into perspective, it will be of great help in getting capitalism into comparative perspective.

As we have already discussed, the fundamental assumptions upon which perceived reality is built are historically developed ⁹⁷⁷. They form the bedrock upon which community organization and human interaction are constructed.

There is a constant ideological management of reality in communities. Dominant groups continuously and subliminally define and refine *objective reality* for their community (this is what many of the 'specialisms' of Western communities are about). At the core of that reality are the ways in which people relate to both their environments and each other. Communities ensure that their populations know and live by those understandings.

Since dominant groups *know* how the world operates, they also *know* the best ways in which life should be organized and lived. They, therefore, feel responsible to ensure that people in the communities in which they live conform to those understandings. This is ensured through the many acculturative agencies and processes which can be found in any community of human beings. These ensure that community organization and individual thought and action conform to the community's version of objective reality.

The most important acculturative agencies in Western communities are contained within the institutional complex known as 'The Education System'. *Education* is a major acculturative force in Western communities. One does not find Western style 'education systems' in non-Western communities. Where non-Western countries have education systems they are modelled on the systems developed in Western communities.

Western education systems are focused squarely on ensuring that the most important fundamental understandings of Western communities are understood and adhered to. Where they exist in non-Western countries, education systems are essential elements of the hegemonic processes and structures which Western countries insist non-Western countries must 'develop' and continuously monitor and regulate (to counter 'poor educational practice') if they are to receive recognition and 'aid' from the West.

The fundamental assumptions which drive Western education also drive the development of theory in Western institutions and specialties. Many of the most powerful theoretical models of social interaction and societal organization developed in Western academic and professional circles incorporate and reaffirm the basic ideological understandings of Western communities. Such models become unwitting tools in the hegemonic promotion of Western capitalism.

There is nothing fundamentally 'wrong' or reprehensible in this, that is what dominant ideological communities do and have always done, wherever they are found, and whatever their understandings of the world might be. However, it is a problem if we want to understand communities in their own terms.

We, as Westerners, are often not aware that the most 'convincing' models will, almost inevitably, incorporate the central cultural presumptions of Western capitalism. So, we are likely, unwittingly, in using the models, to describe and explain phenomena we investigate in terms of similarity to and deviation from Western forms, processes, behaviors and understandings.

Effectively, by default, we judge other cultural communities against Western 'standards' built into the theoretical models we employ, even as we claim that we are trying to understand them in their own terms. Annette Weiner (1992), in her book *Inalienable Possessions: The Paradox of Keeping-While-Giving*, tackled this problem head on in examining the cultural baggage built into many anthropological ideas and understandings. As she said,

... ethnographers do not record informants' words as though on a tabula rasa, but as modified by their own theories and perceptions honed on the issues and arguments of previous anthropological discourses. How to get beneath what historically we, as anthropologists, take most for granted and, in its stead, hear what our field interpreters are actually saying is a major problem. (1992 p. 24)

In this discussion we need to be alert to the problem. If our own cultural assumptions are built into the models we use, we end up comparing other cultural communities against the values and understandings of the community to which we belong.

That might be the task assigned to Western moralists (e.g. 'human rights' specialists), or to those involved in the hegemonic expansion of Western capitalism (e.g. 'Third World Development' specialists). However, if we are to understand communities of people rather than be party to a hegemonic imposition of Western cultural forms on the rest of the world, we must attempt, to the degree that this is possible, to understand communities and people in their own terms.

The *economic* models of capitalism are ideological models which incorporate all the most basic presumptions about the world and about human beings which are extant in Western communities. When economic models are applied to life in non-Western communities they automatically produce recommendations for change. Inevitably, they compare forms of organization and activity based on very different presumptions against the forms and activities extant in Western communities.

Recommendations stemming from the application of these models are, all too often, used as the base for 'Third World development' programs and projects.

At the heart of economic and most other models of social interaction and organization lies the Western definition of 'the individual' and the Western definition of 'balanced exchange'. Both are assumed to be fundamental to human interaction and organization everywhere. Tsui, Farh and Lih provided a clear summary of the Western view of 'independent individuals':

... the Western view of an independent self ... sees each human being as an independent, self-contained, autonomous entity who (a) comprises a unique configuration of internal attributes (e.g. traits, abilities, motives, and values) and (b) behaves primarily as a consequence of these internal attributes. (1997, p. 59)

Two additional impulses drive the Western independent individual. Western individuals are both competitive and acquisitive. These features, in combination, determine the nature of exchange within Western communities

Models of Reciprocity and Exchange 🦋

In most of the social sciences, it is presumed that the relationships which exist between individuals 'emerge' from the processes of exchange in which they engage. Human beings, it is assumed, are first and foremost 'actors' and the social relationships in which they are involved are outcomes of self-interested interaction aimed at satisfying individual needs and wants. So, exchange based on self-interest comes first, and groups emerge from those exchanges as people enter into ongoing, mutually beneficial relationships.

Because they are convinced of the importance of reciprocity and exchange in understanding community organization and interpersonal interaction, theorists in the social sciences have attempted to define the nature of exchange. There have been two directions in which these attempts at definition have gone.

The most common direction has been toward a single definition of exchange. This has been encapsulated most clearly in economic models of exchange, but has been replicated in a range of social models developed out of social exchange theory.

The second direction has been toward defining exchanges contextually. This approach assumes that the nature of exchanges is determined by the nature of the relationships perceived as existing between those involved in exchange. The interconnections between people come first. Exchanges occur between people who already know how they relate to each other and already know the kinds of exchanges which are legitimate for such relationships.

There cannot be a single definition of exchange. Rather, the characteristics of exchange depend on the context in which it occurs.

The presumptions about the nature of individuals and communities of human beings upon which these two approaches base their reasoning are very different.

The approaches to reciprocity and exchange which we are going to examine next illustrate this divide. They are presumed, by those who promote them, to provide a framework for understanding human interaction and the relationships in and through which they occur.

Social Exchange Theory 🦋

In Western communities, it is commonly believed that we are all, at heart, pre-social, independent, self-interested, self-promoting, competitive and acquisitive beings. We view relationships as the means by which we satisfy our 'needs' and 'wants'. It is assumed that we are all intent on conserving and expanding our consumption/possessions and furthering our own well-being and independence, if necessary, at the expense of others around us.

There has been a range of models of 'social exchange' developed through the 19th and 20th centuries which are founded on these assumptions. According to social exchange theorists (whom you will meet in various guises in most social science theorizing) all exchange is based on the acquisitive, competitive, and self-interested drives of human beings who want to be independent ⁹⁷⁹.

According to this model, if you and I were in an exchange relationship (since I'm assuming you're a well-enculturated Westerner, let's use the relationship: 'teacher and student') it would be because you perceived me

as having something you want (a good grade?) and I perceive you as having something I want (your money?).

I look for ways of getting as much money as I can out of you while giving you as little as possible of what 'belongs' to me (I want to 'conserve' what is mine). You look for ways of getting the best grade you can out of me for the lowest price. The relationship might look like one of cooperation - teacher and student in the pursuit of knowledge - but it is, in reality, competitive, with each of us pursuing our own, independent, self-interested goals.

Our relationship will continue for only so long as I can convince you to keep giving me money and you can convince me to keep passing you! Once we see the other as having nothing to offer (you run out of money - I run out of units you want to do) the relationship ends.

The development of education in most Western countries, over the past couple of decades, has largely been driven by this caricature of human motivation and sociability. Educational institutions have become primarily 'profit making' organizations and education is being promoted as a 'commodity' or 'consumable'⁹⁸⁰.

In the process, communities have devalued education as a cooperative pursuit of understanding and emphasized its value as a preparation for entry into the world of competitive wealth attainment. If it doesn't lead to money, what's the point? Not, of course, that you and I have such a crass view of the value of education!

Edward Lawler and Shane Thye described the model,

Social exchange theory assumes self-interested actors who transact with other self-interested actors to accomplish individual goals that they cannot achieve alone. Self-interest and interdependence are central properties of social exchange.

Whether it is two lovers who share a warm and mutual affection, or two corporations who pool resources to generate a new product, the basic form of interaction remains the same. Two or more actors, each of whom has something of value to the other, decide whether to exchange and in what amounts.

(1999 p. 217)

In an earlier article Thye and his co-authors addressed the nature of the 'networks' which emerge out of exchange activities:

Whether the setting involves corporate agents in commercial enterprises, management-labor negotiations over salaries and benefits, children vying for limited space on playground equipment, or the ebb and flow of interests and offers in dating networks, the cumulative effects of what happens in the short-term - e.g., feedback from, and responses to, each exchange offer - has profound implications for the long-term state of the larger social system in which negotiations and exchanges are embedded.

(Thye *et al* 1997 p. 1031)

Social exchange theory shares a great deal of common ground with *rational action theory* and *cost benefit analysis*. Their roots can be found in the Western philosophy of utilitarianism⁹⁸¹. The approach, with minor variations in emphasis and definition, is also sometimes referred to as *rational choice*, the *problem of collective action*, *research in 'micro fundamentals'*, or *methodological individualism*. In anthropology it is also

known as *formalism*, in contrast to the *substantivism* of Karl Polanyi and those who have developed his ideas over the past fifty years. We will examine Polanyi's ideas shortly.

Both of Thye's articles presume the validity of the social exchange model and review the literature on social exchange theory. They provide an excellent illustration of the ways in which Western ideological understanding becomes unconsciously built into Western 'explanatory' models and a reminder that social science theorizing is not acultural.

The ways a theorist sees his or her world, and the basic presumptions about life which are held to be self-evident are usually either explicitly or implicitly written into the theoretical constructs which theorists build.

Social exchange theory presumes that individuals interact in terms of competitive self interest. Their interactions are focused by both *social incentives* to behave in particular socially approved ways and *social constraints* on 'unacceptable' behavior (social 'benefits' and 'costs').⁹⁸²

Independent, pre-social individuals are constrained in their interactions by 'rules and regulations' which, ultimately, work against those most adept at exchange negotiations. It is this presumption that the entrepreneurs in communities are stifled in their activities by those who feel threatened which lies at the heart of Western demands that people be 'freed' to uninhibited exchange activity.

Those incentives and constraints have been developed over time as a consequence of individuals' experiences in the competitive cut and thrust of getting what they feel they need and want. They channel activity to minimize the costs and maximize the gains of interaction for the greatest number in the community (it is in this that the model draws most heavily on utilitarian ideas - the ideal community is, therefore, 'democratic').

In these ways, *ostensible* cooperation between individuals and groups emerges. A variety of communal structures develop to further what are, ultimately, individual, self interested activities aimed at meeting individual needs and wants in an environment of competitors and scarce resources. The innate traits of human beings turn out to be remarkably similar to those of individuals as defined in Western industrialized communities.

Claude Levi-Strauss (1963, pp. 279ff), an anthropologist writing during the 1940s to 1980s, made a distinction between what he called 'home-made' models of social interaction and organization, and models designed to uncover the basic presumptions and principles upon which social life is constructed.

Home-made models *perpetuate* the phenomena they claim to explain. Explanatory models elucidate the fundamental presumptions and principles upon which social life is built.

Although those who employ the conscious, home-made models will claim that their use 'explains' social phenomena, in fact, they are part of the ideological acculturative process. The use of the models reaffirms and reinforces the behaviors, attitudes and understandings which they are supposed to 'explain'. According to Levi-Strauss,

conscious models... are by definition very poor ones since they are not intended to explain the phenomena but to perpetuate them. Therefore structural analysis is confronted with a strange paradox well known to the linguist, that is: the more obvious structural organization is, the

more difficult it becomes to reach it because of the inaccurate models lying across the path which leads to it.
(1963, p. 282)

Many anthropologists are wary of models which employ a singular definition of the nature of social exchange such as that presented in social exchange theory. However, theoretical models which either explicitly or implicitly rely on this set of assumptions about human interaction are very common in social science theorizing.

For researchers and theorists who espouse a variant of social exchange theory, individual human beings are primary. Social organization and social interaction are outgrowths of individual human beings trying to fulfill their own needs and wants and ensure their status as independent individuals.

So, individual human beings, and the relationships they form in the process of achieving their independent goals come first. Change the needs and wants of individuals and they will change their interactions and, consequently, the social structures which have emerged to facilitate the pursuit of their independent ends.

In the words of George Homans who wrote widely from this perspective in the mid 20th century,

... elementary social behavior, pursued long enough by enough people, breaks through the existing institutions and replaces them. Probably there is no institution that was not, in its germ, elementary social behavior.
(Homans, 1961 p. 1)

Social structures and institutions emerge from the interactions of independent individuals pursuing their own private ends. The relative statuses of people and the relative power they exercise are also derived from these relationships, driven by people trying to ensure that they retain any advantages they have in the exchange process.

Linda Molm and her co-authors (2001) summed up the relative 'power' positions of human beings in interacting groups like this:

The concept of dependence is pivotal to the theory's analysis of power. Each actor's power derives from the other's dependence: A's power over B increases with B's dependence on A, and vice versa (Emerson 1972a, 1972b).

Inequalities in power and dependence create power imbalanced relations, in which the less dependent actor has a power advantage over the more dependent, disadvantaged actor.

The theory distinguishes between power as a structural potential, determined by actors' relations of dependence, and power use as the resulting inequality in benefits obtained by more and less powerful actors in a relation or network. The former affects the latter, in that imbalances in power tend to produce corresponding inequalities in exchange benefits.

Because power is a function of dependence, predicting power and its use requires identifying variables that affect actors' relative dependencies.
(Molm et al 2001 p. 259)

According to social exchange theory, if two people are in an exchange relationship, the person most committed to making the relationship work is

in a disadvantageous position. That person will have put more 'resources' into making the relationship a success than the other person and so the 'costs' and 'benefits' of the relationship vary inversely to the commitment of the participants.

The one who is more committed will have to 'pay' more than the other party to maintain the relationship - they become relatively more 'dependent' on the relationship. People who are in 'relationships of dependence' feel subservient to those on whom they depend and so, inevitably, human beings dream of independence, of not having to rely on others for their needs and wants.

Redistribution - another form of exchange 🐦

Social exchange theory presumes that human *action* is primary and that social structures and institutions emerge out of human interaction and are finally sustained by it. But what if human action is instituted by the structures of the community?

Then the forms of interaction which occur will be determined by the forms of organization and by the ways people are brought up to behave through their placement within the social whole. Community structures will be primary and human interaction and exchange will reflect the ways in which communities are organized.

Karl Marx 🐦

This was the focus of a great deal of Marxist theorizing ⁹⁸³ of the late 19th and 20th centuries. Human beings, Karl Marx believed, behave as they are brought up to behave, determined by the ways in which their society is organized and articulated to the material environment, that is, the 'relations of production' which exist in the society.

In his own words,

In the social production of their existence, men inevitably enter into definite relations, which are independent of their will, namely relations of production appropriate to a given stage in the development of their material forces of production.

The totality of these relations of production constitutes the economic structure of society, the real foundation, on which arises a legal and political superstructure and to which correspond definite forms of social consciousness.

The mode of production of material life conditions the general process of social, political and intellectual life. It is not the consciousness of men that determines their existence, but their social existence that determines their consciousness.

(1859 p. 1)

Marx, living in a capitalist world, assumed that 'relations of production' would be central to the ways in which people are defined and interact.

The self-interested, competitive, acquisitive individualism of Western communities is an inevitable consequence of the stage they have reached 'in the development of their material forces of production'. It is instilled in people through their upbringing.

Capitalist societies require self-interested, competitive individualism and so people are brought up to display those characteristics in their interactions.

In other societies, people will be trained to behave in ways required by the dominant 'relations of production' of their communities. Economic exchange is the kind of exchange required for capitalism to work.

Marx was a thinker of his time, and an optimist. He was convinced that human societies were evolving toward a particular set of 'relations of production'. There would be a final structuring of society reached ⁹⁸⁴, where human beings would fully understand the productive potential of their environments and would harness that potential for the greatest good of each individual in the society.

Individuals would, 'naturally', be brought up to behave in ways required by the dominant relations of production, ensuring that, at last, each person would contribute what he or she was able to the social whole and receive what he or she needed. This is the meaning of the term 'communism'.

Polanyi

Karl Polanyi, an economic historian writing in the middle of the 20th century was strongly influenced by Marxist ideas, but less than convinced about the evolutionary direction of human development. He argued that,

the term *economic*, as commonly used to describe a type of human activity, is a compound of two meanings. ...

The first meaning, the formal, springs from the logical character of the means-end relationship ... from this definition springs the scarcity definition of *economic*.

The second, the substantive meaning, points to the elemental fact that human beings, like all other living things, cannot exist for any length of time without a physical environment to sustain them; this is the origin of the substantive definition of *economic*.

The two meanings... have nothing in common.
(1977 p. 19)

On one hand, there is an economy as defined in economic theory and as experienced in Western communities. This economy works best if people behave as self-interested, competitive, acquisitive individuals because it is a 'market' economy. People are brought up to behave in ways which will ensure their success in such an environment.

Polanyi argued that the particular ways in which human beings utilise their material environments and the forms of relationships through which goods and services are distributed throughout the society, are not derived from innate individual human traits and instincts; and are *not* 'natural' consequences of exploiting material environments (it was in this assertion that he parted company with Marxists).

Rather, the ways in which people behave and the ways in which they use their material environments are determined by the ways in which their communities are organized.

He claimed that there is an *economistic fallacy*, which

consists in a tendency to equate human economy with its market form.
(1977 p. 20)

The *substantive* economy in any community, he argued, is *embedded* in the organization and interactions of the community. So, exchange relationships

are determined by the structure of the community rather than the structure of the community being determined by exchange relationships.

To demonstrate that not all economic activity is organized like a Western market economy he described the economic activities of ancient historical Mesopotamian communities, showing that they were very differently organized. He labelled the system he described a *redistributive* system.

Redistribution stands for a movement towards a centre and out of it again, whether the objects are physically moved or only the disposition of them is shifted.

(1977 p. 36)

He claimed that in communities which are organized with a wide peasant base and a hierarchical leadership structure, goods and services initially flow from the peasant base upward through the hierarchy ⁹⁸⁵.

If you examined the system at some periods it would appear that there was a systematic exploitation of the peasant base by the elite of the community. However, it is the task of the elite not merely to use the surpluses they receive, but to provide a range of services and to store and redistribute surplus production to community members who are in need.

So, if you examined the system from the perspective of the elite or during times of hardship, you would find that there was a reverse flow occurring. Goods and services would be flowing from the center out toward the peasant base.

To understand how such an economy worked one had to understand the organization of the society, not merely individual exchanges. What might be seen as an exploitative system from either perspective, could be shown to be a 'social welfare' system when one looked at the long-run activities of all members of the community.

A reciprocity continuum 🐦

Polanyi's challenge to economic theory was based on his claim that there are forms of exchange of goods and services which do not conform to the definition of exchange which is used in economic and social exchange theory. So, it was a fallacy to claim that economic and social exchange models could be universally applied.

This was a fairly rudimentary attack on the universal validity of social exchange theory, but it was a start. Polanyi's models did not explain *why* different communities had different forms of redistribution and exchange, only that it could empirically be shown that this was the case. It remained for someone to provide a model of exchange relationships which would spell out why it was possible to have such different forms of community organization and interpersonal exchange.

Sahlins and Spheres of Exchange 🐦

The next major contribution to the debate came from Marshall Sahlins. Although Sahlins' model of exchange relationships provided a way forward, it did not directly deal with the kinds of exchange Polanyi described. Rather, it described forms of exchange between people who are roughly equal in status within a community.

Polanyi introduced a focus on hierarchically structured exchange relationships, the ways in which goods and services moved through political

and social hierarchies. Sahlins was more concerned with the ways in which kinship and social distance influenced exchange relationships.

He explained this in his most influential book on the subject, *Stone Age Economics*, when he said,

Rank difference as much as kinship distance supposes an economic relation. The vertical, rank axis of exchange - or the implication of rank - may affect the form of the transaction, just as the horizontal kinship-distance axis affects it.

(1972 p.206)

Polanyi's redistributive system is one focusing on exchange between people of different rank (the 'vertical, rank axis of exchange'). Sahlins' model of reciprocity and exchange focuses on the horizontal axis: the ways in which the nature of exchange differs with the degree to which people see themselves as 'related' to each other, coupled with the amount they have to do with each other.

There are 'spheres' of exchange. Exchange relationships differ, depending on the kind of relationship existing between the parties involved and the contexts in which exchange occurs.

A number of anthropologists have examined spheres of exchange ⁹⁸⁶, exchange complexes which are focused within particular organizational areas of a community. Frederick Damon described such spheres in the U.S.A.,

there are spheres of gifts, of wage labor, and of productive and financial capitals. It is easy to show that each operates by different principles with different purposes. It is also easy to show - requiring only a book or two - that complex patterns of reciprocal dependencies, with painful contradictory consequences, govern their interactions.

(1993 p. 243)

Damon went on to describe similar spheres of exchange for a Melanesian community involved in Kula exchange.

Sahlins is dealing with one of the spheres of exchange which exist within communities. The nature of reciprocity and exchange become much more complex in Sahlins' typology. Social exchange theory limits its focus to simple interactions between two individuals (either 'natural' or 'artificial') in face to face relationships, with presumed 'instincts' driving their activity.

The key to understanding Sahlins' contribution to the debate on the nature of exchange is that he, following Polanyi's lead, envisaged more than one definition of an exchange relationship. He concluded that the kind of exchange relationship which would be found between two individuals or groups was determined by the nature of the relationship which existed between them.

There are many possible definitions of exchange, since particular instances of exchange and reciprocity are *individuated* expressions of relationships which exist between categories of people.

This points us directly to the kind of model which Levi-Strauss (1963) called a 'structural' model, based on the unconscious principles of categorization and classification which exist within any 'structured' community. One can understand exchanges best when one realizes that they are visible expressions of the kinds of relationship which people perceive as existing between themselves, making them into a *community* of human beings.

The relations which people perceive as existing between themselves are a sub-set of the relations which occur within and between the classificatory categories of thought which each member of a community learns from his or her community from the moment of birth ⁹⁸⁷.

A human being can't 'think' without such a classificatory structure since thought is a process of comparison to determine similarities and differences between perceived items (and that is the definition of *classificatory categorization*). These relations of similarity and difference are expressed in all forms of structured communication between people, from language to the exchange of material goods and services.

The classificatory categories of any community have been unconsciously developed over the history of the community and so will be unique to that community. Yet, because there is a finite set of relations which can occur between elements in a structure, there will be many apparent similarities between communities.

We can't pursue this further here, but, in *formal system* analysis it is recognized that there is a variety of kinds and combinations of relationship which can exist between elements of a structure. As the Encyclopaedia Britannica puts it,

Each formal system has a formal language composed of primitive symbols acted on by certain rules of formation (statements concerning the symbols, functions, and sentences allowable in the system) and developed by inference from a set of axioms.
(2010 ⁹⁸⁸)

Since human beings are sentient and capable of reflexive thought, they do not merely conform to the structural requirements of the system in which they live. They are able, individually, to focus on, and compare and contrast the forms of relationship in which they are involved. They experiment with alternative definitions of, and behaviors in structured interactions. That is, they *individuate* their social relationships, just as they do every facet of their experience and understanding.

People are constantly defining and redefining themselves in their interactions. The structure is, necessarily, conservative, but it is neither static nor completely prescriptive.

Sahlins pointed to this when he said that,

it is not only that kinship organizes community, but communities kinship, so that a spatial, coresidential term affects the measure of kinship distance and thus the mode of exchange
(1972 p. 197).

While, in many communities, exchanges are formally structured by kinship relationships, kin who live close to each other often develop closer relationships than kin living at a distance. This results in different forms of exchange developing between an individual and two or more kin who might share the same formal kinship relationship with him or her but live closer or further away.

However, the set of relationships from which they build their individuated interactions is already spelt out in the social structures of their community. Christina Torens (1999) in a discussion of the ways in which Fijian kinship relations pattern interactions between people in Fiji, explained,

A Fijian village child lives kinship as the very medium of existence; such a child constitutes ideas of self and others or, in simpler terms, comes to be who he or she is, in reciprocal relations between kin.
(1999 p. 265)

Sahlins was suggesting that the forms of reciprocity which will be observed will take their character from the forms of social relationship which exist between exchangers as members of a structured community. And, in turn, the social relationships which exist between the exchangers will depend on the number and kinds of relationships summed up in each person.

People are *individuated nodes of relationships* and their interaction with each other person or group is 'flavored' by the blend of relationships in which they are involved.

If you stop for a moment and think of yourself. You 'know' who you are by the way you relate to everything around you. All the perceived relationships between yourself and all the recognized elements of your environments, provide the raw material from which you construct your self-image.

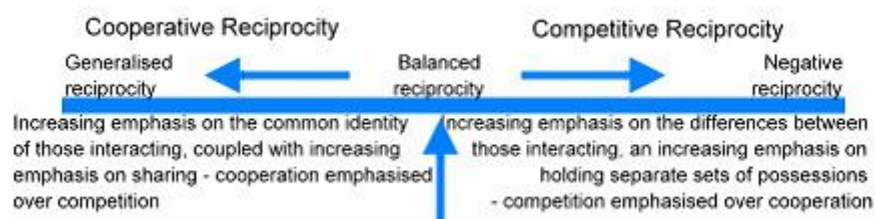

If someone tries to change those perceived relationships, that person assails your self-image. You, inevitably, react to defend your definition of yourself. That is, you try to *conserve* your present definition by conserving present recognized relationships.

Human beings, born into communities, are taught that certain forms of relationship are important. So, in any community, one will find that some kinds of relationship are emphasized more than others.

In Western communities many individuals are taught that competitively balanced exchange is important and that each individual should value privacy, independence, and material possessions. Relationships tend to take their 'flavor' from these values. Not all communities see these values as important.

To understand an act of exchange one has to understand the relationship which the participants in the exchange perceive as existing between them.

The form of an exchange between family members will be different to the form of an exchange between strangers (and different to the forms of exchange found between people of variant rank or status in the community). Horizontal relationships between individuals can be viewed as occurring on a continuum of relationship as below:

The illustration above deals with a *continuum* of relationships, not just three different relationships. As we move from left to right along the line, the relationship is progressively based on perceiving fewer similarities and more differences between participants in an exchange⁹⁸⁹. The resulting exchange behavior takes its flavor from those perceptions and so varies as you move along the line.

The more two people see themselves as 'related', that is, as sharing a common identity, the more they will emphasize sharing rather than holding

sets of separate possessions. So, when one person wants something the other has, they will tend to assume the right to take it and use it, rather than having to 'ask permission' or 'buy' it from the other person.

Generalised reciprocity is a very common form of exchange within nuclear family groupings. There are many possessions that belong to the household rather than to the individuals in the household. Members use them when they need to without having to ask permission of other family members. The item might be in the possession of one of the members, but it can be taken and kept by another member until someone else needs it.

Degrees of similarity and difference between people are *contextually* defined. I might emphasize my 'difference' from other family members when acting inside the home. I might emphasize 'similarity' to my family members when we are acting as a unit in a wider setting. And, perhaps, I, my family, the family of my uncle and/or my aunt might act as a unit in a still wider setting. So, depending on the context, I might well behave differently toward members of those groups at different times.

Sometimes I will emphasize our differences, by insisting that some things are 'mine' and others are 'theirs'. But, sometimes, in different contexts, we will emphasize our similarity, finding it much easier to 'share' things with each other.

The less interacting people see themselves as sharing the same identity, the more differences they will recognize as existing between them. This will make it more likely that they will have to ask permission to use an item in the other person's possession.

As the differences increase, they will increasingly feel the need to 'balance' the relationship by offering something to the other person in exchange for an item they want to use. The people involved will tend to hold separate sets of possessions and feel that they are 'losing' something when an item they have is given to the other person (there is a conservation principle at work).

By the time we reach the mid-point on the diagram above, there is a feeling that when something is given to one person, the other should get something of fairly equal value in return. The exchange should be 'balanced'.

In most forms of exchange to the left of the diagram, the people involved in exchange feel themselves to be in some degree related to each other and are not interested in making a 'profit' at the expense of those with whom they associate. The more closely they consider themselves to be integrated with each other, the more complete the sense of sharing possessions among them becomes. Exchanges on the left side of our diagram tend to reinforce social relationships based on similarity and often seem deliberately designed to do this.

The 'balanced reciprocity' relationship is most commonly found between acquaintances rather than friends, people who are considered connected with us in some way, but are very definitely not members of our 'in-group'. Neighbors in Western communities are often in this kind of relationship. One doesn't feel that it is right to make a profit out of them, but exchanges should be balanced and when something is lent or borrowed it should fairly promptly be returned.

As we move to the right of the diagram, people who interact with each other emphasize their differences rather than their similarities. The less like

each other they consider themselves to be, the more they emphasize keeping their own possessions and trying to get yours for as little cost as possible (Weiner's (1992) 'keeping-while-giving' relationship). If you have this kind of relationship with another person you have no problem in 'buying' and 'selling' items. If you try to buy and sell to people on the left side there is an uneasy feeling that this is not the appropriate thing to do.

This is one important reason why many business activities in close knit communities fail. Outsiders do much better at business because they can buy and sell without resentment developing in the community as a result of their activities. Of course, by engaging in competitive exchange they are also cementing their definitions as 'outsiders'.

This is very similar to the consequences of Western understandings of social exchange. The independent individualism which is at the root of Western processes of socialisation and upbringing is reinforced by Western exchange activities.

In any community one will find *all forms* of reciprocity. It is not that in some communities one finds generalised reciprocity and in other communities one finds balanced or negative reciprocity. Rather, in every community one will find people who are closely defined as similar to each other and others who will be less closely related.

'Correct' forms of behavior in relationships will be formalized and appear, to those outside the community, as sets of constrictive 'rules and regulations'. Those who live in the communities in which the formalized relationships are 'normal', however, will see them as statements of the obvious, not as externally imposed restrictions on their individual 'freedoms'.

All these relationships are, of course, relative to the person on whom attention is being focused.

One will also find people living in neighboring communities or on the fringes of communities who are defined as primarily different from community members. The forms of exchange which occur will reflect the relationships perceived as existing between people. They will also, in quite different ways, reflect the status, rank and prestige differences which are perceived between people.

Conclusion

The exchange presumptions which underpin Western economic and social exchange theories strip away the multidimensional qualities of human interaction both with other human beings and with their material environments. All that is left is 'economic behavior'.

The arguments of neoliberal economic theory over the past forty years have been based on the simplistic presumption that all communities are the outcome of the interactions of independent individuals intent on their own gain. To ensure that those communities serve the interests of individuals, rather than inhibiting them, it is necessary to remove all those constraints and incentives (the 'rules and regulations') which have historically been built to limit the success of enterprising individuals⁹⁹⁰.

If independent individuals are 'freed' to uninhibited, self-interested, acquisitive self-promotion, all human beings will be the beneficiaries of their entrepreneurial activity. That is why they are so admired. Adam Smith explained this admiration two hundred and fifty years ago:

that eminent esteem with which all men naturally regard a steady perseverance in the practice of frugality, industry, and application, though directed to no other purpose than the acquisition of fortune. The resolute firmness of the person who acts in this manner, and in order to obtain a great though remote advantage, not only gives up all present pleasures, but endures the greatest labor both of mind and body, necessarily commands our approbation.
(1759 Part 4 Ch. 2)

Such people do not merely pursue prudent self-interest for their own gain or because others insist they should. They know, in their own hearts, that prudent, self-interested industry and frugality are amongst the most important of the virtues:

In the steadiness of his industry and frugality, in his steadily sacrificing the ease and enjoyment of the present moment for the probable expectation of the still greater ease and enjoyment of a more distant but more lasting period of time, the prudent man is always both supported and rewarded by the entire approbation of the impartial spectator, and of the representative of the impartial spectator, the man within the breast.

(Smith 1759, Part 6 Section 1)

And this admiration is not only shown toward individual 'natural' human beings! The world also has 'artificial' individuals. Since social exchange and economic theory focus on interaction between instinct driven 'individuals', they must define groupings of 'natural' individuals as also 'individuals' so that they can incorporate them into their predictive models.

Business enterprises become 'individuals', entitled to the same protections under law as 'natural' individual human beings. Adam Ferguson explained the entitlements of entrepreneurial individuals well:

... he alone has every virtue, except the force to defend his acquisitions. He needs no aid from the state, but its protection; and is often in himself its most intelligent and respectable member.

Adam Ferguson (1767 Pt 3, Section 4)

We are all 'equal': human beings and corporations. We can all compete 'on a level playing field', where the most deserving win. We must ensure that 'rules and regulations', aimed at stifling entrepreneurial enterprise, are not generated by the envious and those less willing to persevere "in the practice of frugality, industry, and application, though directed to no other purpose than the acquisition of fortune".

Communal 'rules and regulations' exist to protect the lazy, the indisciplined, the free-loaders. What we need is less government, less regulation, more enterprise. We only need one commandment:

Henry Thoreau spelt it out:

I heartily accept the motto, - "That government is best which governs least"; and I should like to see it acted up to more rapidly and systematically. Carried out, it finally amounts to this, which also I believe, - "That government is best which governs not at all"; and when men are prepared for it, that will be the kind of government which they will have. Government is at best but an expedient; but most governments are usually, and all governments are sometimes, inexpedient.

(^œThoreau 1849)

We need no 'safety net'; globalized, unregulated markets will take care of us all. Leave our future and our wellbeing in the hands of independent, self-interested, self-promoting, competitive and acquisitive natural and artificial plutocrats - as God intended!

How to search on editing dates in the book †

(06/07/16) The most efficient way to search on edit dates is to [access the list of edit dates](#) at the end of this book. To search for edits and updating in the book based on the edit dates, select the 'Search this document' option in the application you are using and type the date to be searched there.

Edit dates are formatted like this: (dd/mm/yy), e.g. (31/12/17).

End Notes †

- ¹ (11/03/16) This evolution of ideas is, of course, an evolution of my own understanding as well as the evolving nature of capitalism and the understanding of those who comment on and/or study capitalism and its wide ranging impacts. If you feel, at times, that what is being presented is inconsistent with what has been presented in earlier times, then, very often, you are probably sensing a shift in my own understanding of issues. To paraphrase Keynes: When I am confronted with new information and/or reach conclusions which seem more legitimate than those I have previously held, I change my position.

This is widely known as "being open to new ideas". I trust that you, too, will keep an open mind - and realize, always, that I may well be wrong!! If you feel that then, please, first ensure that you understand why you think this, check your conclusions, and if you are satisfied that they are appropriate then do not change your position to align with mine!

We are, together, growing wiser and you will most probably be more capable of such growth than I. As Star Wars authors might say "May the Force be with you"!

- ² Given the horrendous atrocities being perpetrated by self-proclaimed 'civilized' people around the world in 2025, it is time, once again, to assess what is happening. The incongruous exemplar of this behavior in the wake of the ^œ80th anniversary of [Auschwitz](#), is Israel, demonstrating the depraved depths to which human beings can sink in their inhumanity to those they have decided to classify as 'lesser' humans; those who can be considered '[ideologically deluded threats](#)'; or '[human animals](#)'; or the [inhabitants of 'humanity's jungles'](#).

It is clear that, in 2025 (as in 2024), we have a sad and inexcusable tolerance of behavior toward such 'lesser humans' even more depraved than the behavior we daily exhibit toward this amazing planet upon which we have evolved, developed a small measure of self and other awareness, and the ability to use that awareness and emerging intellect to '[shape](#)' our own preferred realities.

Humanity's self-absorbed certainty of its own importance has fueled many a conquest and justified many a crime and that 'Western' civilization, of which we have been so inordinately proud as we have subjugated and colonized the world, has attested to this. Israel's ongoing depravity is but the most recent example of [the depraved indifference of](#)

Western Europeans toward those they have, over more than 500 years, considered 'nuisance populations of lesser humans'.

The behavior of the 'civilized West' has contributed little or nothing to any emerging species' empathy toward which humanity might have been struggling.

It is indeed sadly true that, to paraphrase someone on the receiving end of our 'enlightened' behavior: "[Without empathic humanity there is no civilization](#)", just sociopathy and psychopathy masquerading as altruism.

As Shakespeare observed, the evil that we do lives after us. Our young learn, not from our pretentious rhetoric, but from our deeds and attitudes and all those things we tolerate or even actively support ⁹⁹¹.

In the 21st century we are imprinting on our offspring the future they will inherit: a future of genocide and ethnic cleansing; of mass murder and weapons manufacture; of drone killing and torture; of arrogance and intolerance.

Pity humanity's offspring!

We are going to focus on the history and nature of capitalism, but much of what we will find as the story unfolds, is not unique to capitalism. Humanity has proved, time-and-again, that it is an inherently hubristic, savage species.

As we will see, the story of the expansion of Western capitalism into the world over the past five centuries and more is riven by examples of unbelievable hubris and unspeakable atrocity; of blind arrogance and ecocide.

We have claimed divine endorsement and perpetrated crimes against 'creation'. And we have been convinced that we have been commissioned by a supreme deity - a transcendent Creator - to consummate its creation and [fashion the future!](#)

It truly is long-past time that Western peoples got themselves into perspective!

We live in a universe so large that it is beyond our ability to observe its entirety and we can but surmise that it might be infinite in extent.

There are perhaps two trillion galaxies in this universe (given the nature of the universe all such numbers are mere guesstimates but they serve to give us some perspective on our place in the universe in which we exist as a species).

On average, each of those galaxies contains more than one hundred billion stars, and circling the majority of those stars are planets.

Let's pause for a moment and consider what it is that we are describing.

The material universe within which we find ourselves comprises perhaps 5% of the substance of the universe as we currently understand it. A NASA Science article explains:

...It turns out that roughly 68% of the universe is dark energy. Dark matter makes up about 27%. The rest - everything on Earth, everything ever observed with all of our instruments, all normal matter - adds up to less than 5% of the universe. Come to think of it, maybe it shouldn't be called "normal" matter at all, since it is such a small fraction of the universe.

(⁹⁹[Dark Energy, Dark Matter](#), *NASA Science*, accessed November 24, 2022)

But, even the material universe of which we are aware and within which we live is much more 'mysterious' than most of us assume.. As [Michael Pennington \(2015\) explained](#), "what you see depends on the scale at which you look."

Underwriting and sustaining our experienced universe is, apparently, a seething realm of quarks and antiquarks engaged in perpetual destruction and recreation of what we consider to be the 'solid ground' of our lives and understanding. A boiling 'sea' perpetually 'remaking' and 'refreshing' the realm of our existence. Even the depths of outer space seem sustained by this unfathomable sea.

And, of course, were we able to penetrate to a scale which allowed this, we might well find that 'sea' to be, itself, sustained by something beyond our present comprehension.

It appears that 'our universe' might merely be the froth of a reality far, far beyond our present understanding.

We are a species driven to understand the nature of the universe within which we live: from our perspective, unimaginably vast and unreachable.

Our galaxy is more than 100,000 lightyears (the distance light travels in a year) in diameter and tens of thousands of lightyears deep. At its center is ^œa massive 'black hole', [Sagittarius A*](#), with about 4 million times the mass of the Sun. If they come too close, stars in a galaxy 'feed' its 'black hole', and untold numbers of stars in our galaxy have suffered that fate!

And there are millions of galaxies as large or larger than ours in this universe with far more massive 'black holes' at their centers.

To get some idea of the size of our galaxy: light travels from our sun to Earth in 8.32 minutes and our sun is ~26,000 lightyears from the galaxy's center and 4.24 lightyears from the nearest other sun, Proxima Centauri which has two planets: Proxima b, an Earth-sized exoplanet in the habitable zone discovered in 2016; and Proxima c, a super-Earth. Suns with planets are the norm! As John Forbes put it:

We are not that special after all, and we should expect many other Solar Systems like our own floating in the Milky Way.

(John C. Forbes, João Alves and Douglas N. C. Lin, ^œ[A Solar System formation analogue in the Ophiuchus star-forming complex](#), *Nature Astronomy*, 16 August 2021)

And, of course, we are merely *one* of more than 8 million species currently existing on our own planet and have existed as a species for less than a million of the ~4 billion years of this planet's existence. Life has existed for ~3.5 billion years and, with any luck, it could continue to thrive for about another 4-5 billion years.

But **we have developed an awful ability** on this one habitable planet we currently know of:

We are, right now, in the early 21st century, in the process of creating the conditions for the destruction of not only our species but of the majority of other species which co-habit this world of ours!

Unless we take swift action to prevent it, it is possible, as the poet T. S. Elliot suggested, that untold millions will die with either [a Bang](#) or a [Whimper](#)!

³_(31/08/17) You will find that I make a great deal of use of end notes to expand ideas developed through the book. The reason for this is straight

forward - To include the ideas within the text would make it irredeemably convoluted.

The topics addressed are, by their nature and by the ideological propensities of the 'experts' involved, at times difficult to comprehend for those not already versed in them. I would suggest, should you find the various digressions proffered in the text confusing or difficult to handle, that you first read each chapter without following those leads. Then, for further clarification, reread the chapters following those digressions. These might enable a deeper understanding of the issues addressed.

The digressions themselves include digressions, designed to allow the reader to explore particular issues developed in various chapters throughout the book. This, of course, will result in very different focuses than those provided by the chapter within which the digressions began. They offer a sort of 'do it yourself' narrative as you follow digressions which interest you. And, of course, once you follow suggested external readings, you might end up exploring issues simply not addressed in the book itself. What can I say, life was meant to be an adventure!

All clickable references to information in the various chapters have been internalized. References to external sources are marked, at the start of the address, with œ, the Latin Ligature oe to alert you to the fact. If you are using a mouse then, as the mouse pointer passes over them, they should display the message 'link to external address' (this may not work in 'mobi', 'epub' and 'pdf' versions). All other references are internal and will take you elsewhere in the book. To return from these digressions, simply right click your mouse button on the text and select 'back'. This will return you to your previous location. Keep doing this until you arrive at your starting place!

The internet is a constantly changing environment. Addresses referenced in the text were there when they were included but may have disappeared or been altered since then. Where this is found, the reference is altered. Where no alternative address can be located, if the content is significant, the original address remains so that, if possible, the website can be searched for the content of the original document.

⁴ In 2007, the United States, alone, spent almost \$29 billion in 'economic' aid (including contributions to USAID, Food for Peace, Peace Corps, and paid-in subscriptions to international financial institutions, such as IBRD, and IDB) and more than \$13 billion in 'military assistance'. (see ^œ[US Foreign Aid](#) for details).

Sebastian Edwards has provided an economist's perspective on foreign aid and economic development: ^œ[Economic development and the effectiveness of foreign aid: A historical perspective](#), VOX, 28 November 2014

⁵ We will use the generic term 'Western' to refer to communities that have their hegemonic roots in the Western European historical experiences outlined in [History of the Emergence of Capitalism](#)

⁶ See [First the Poor, Then the World](#) for the origin of this.

⁷ See ^œ[Common classificatory principles of metaphor and proverb](#) for more on processes of categorization

⁸ See [Reciprocity and Exchange](#) for more on this.

⁹ (or possibly K'ung Chi, grandson of Confucius)

¹⁰ It is the nature of philosophical discourse that it becomes laden with allusions to axioms and aphorisms only truly grasped by those already familiar with the discourse.

This is not simply a feature of Chinese 'intellectual' discourse, it is shot through similar Western discourse too. A superficial example might be an allusion to the 'Goldilocks effect' in addressing a predisposition to 'just right' solutions or results in Western discourse. For those 'in the know', the allusion to Goldilocks might trigger a variety of understandings (depending on the focus of the discourse) held by participants - and the more 'knowledgeable' the participant, the more varied those understandings will be. And, of course, the speaker (or writer) will tend not to elaborate on the allusion; its varied possible interpretations will be 'taken for granted'.

Where the written language of a community is character (or phonemically) based (rather than being phonetically based) such allusions can be carried by the written symbols themselves. Understanding then requires not merely an awareness of the rich history of existing axioms and aphorisms but also understanding of the historical possibilities of the written symbols being used in the discourse.

This is particularly true of Chinese (and similarly historically laden phonemically and character based) written language which carries meaning accumulated through centuries of utilization.

For Chinese, a predisposition of scholars to accentuate that richness of meaning as a means of demonstrating their scholarship further complicates the task of appreciating the nuances of discourse for those who are not immersed in the culture.

So, understanding references to the writings of sages like Confucius will, inevitably, for those well versed in them, conjure up that historical heritage. When the major formal focuses of reciprocal responsibility which Confucius outlines are referenced, the understanding of participants in the discourse will depend heavily on the depth of their understanding of that multilayered historical heritage.

Larry Neal Gowdy, in his ^œ[2021 'interpretation' of 'The Doctrine of the Mean' \(*Zhong Yong*\)](#), explains all this very well: All 'translations' of historical texts are, in reality, 'interpretations'. Not only are the aphorisms and axioms of the text those of the time of writing, the [primary and secondary ideologies of the authors are, themselves, lost in time](#). The 'River of Life' has flowed on and, as Heracleitus observed, 'you cannot go into the same water twice'.

Already, for those immersed in Chinese scholarship, the following reference to Confucius' explanation of an underlying principle invoked in the 'duties of universal obligation' will conjure up this layered interpretive understanding.

Confucius, in response to the questioning of a disciple, summed it all up like this:

Zigong asked, "Is there a single saying that one may put into practice all one's life?"

The Master said, "That would be 'reciprocity': That which you do not desire, do not do to others."

(^œ[The Analects of Confucius: An Online Teaching Translation](#), XV, 15.24 (2015 (Version 2.2), R. Eno))

- 11 For an examination of the historical movement of Western Europeans from *interdependence* to *independence* see [From hierarchical to oppositional relationships](#)
- 12 The nature of hegemonies (which should not be confused with neo-Marxist use of the term) is discussed in [^{oe}Subsistence and Status](#)
- 13 See [Who were the 'Middle Sorts'?](#) for an explanation of the interaction of Western European hegemonies during the emergence of capitalism in Europe
- 14 See [History of the Emergence of Capitalism](#) for some of the tensions which emerge as primary presumptions are challenged and displaced.
- 15 See [Using Law to Rob the Poor and Dispossess the Weak](#) for more on this.
- 16 This is a fundamental problem for anthropological research, since anthropologists are no less prone to reorganizing what they find in their research communities to fit their own primary ideologies than any other human beings.
- 17 For example, the various [economic and social exchange models](#), which are assumed to explain human interaction but actually reflect and reinforce belief in the universal validity of the 'independent self' - the individualistic acquisition of needs and wants within a regulatory framework.
- 18 For example, emphases on the relative responsibilities of the public and private domains.
- 19 See [The Development of Systems of Laws](#) for more on this.
- 20 Yet, we must not fall into the trap of imputing too great a set of effects to the world economic system. It is very easy, when examining the blatant intrusiveness of the forms of entertainment, education and exploitation, which come from the West, to assume they are swamping the lives of people everywhere; turning them into cardboard cut-outs of Western people - with all the aspirations and acquired 'needs' of an affluent capitalist world, while not giving them the income that is necessary to fulfilling those new demands in their lives.

It is true that the intrusions of the world-system in the lives of people everywhere are great, and that they are being barraged with advertisements, soap operas, game shows, manufactured goods, 'news', opinion and 'documentaries' of life elsewhere. However, human beings are not simply slates on which the latest influences can scrawl their graffiti, erasing the past and eliminating other influences.

Human beings always have to interpret their worlds, and their interpretations always stem from the primary ideologies of their communities. Left to their own devices, human beings take what is offered and translate it in ways that are meaningful to them. In the process, what Western people think they're understanding may well be very different from what is being understood in those communities. Human beings also have the ability to filter garbage, to impute greater or less significance to events to which they are exposed.

- 21 See [Denial of Hierarchical Responsibilities](#) for more on this.
- 22 See [Open-ended and Closed Utilization of the Material Environment](#) for more on this.
- 23 The designation of the apex of patron - client hierarchies as 'dictatorial' is ethnocentric, based on presumptions of independence rather than

interdependence.

Most hierarchically organized communities can identify a person or small group that is at the apex of the hierarchy and therefore, in a manner similar to feudal kingships in European history, 'own' or at least 'hold' superior title to all the land and resources available to the communities they head. That person or group is, by definition, not democratically elected to the position.

²⁴ See [Legally Bounded Confrontation](#) for more on this.

²⁵ See ^œ[Eqbal Ahmad "Terrorism. Theirs and Ours "](#) (accessed 18 September 2010), a lecture by Eqbal Ahmad on the nature of terrorism.

²⁶ See [Religious and Secular Corruption](#) for more on this.

²⁷ See [Capitalism and Third World Nations](#) for discussion and illustration of Western imputation of their own commitments onto the Third World groups they armed and supported in the Cold War era.

²⁸ See Ray Takeyh (2002) for a discussion of the process of routinization of the Iranian revolution.

²⁹ Nader Hashemi addresses this widespread belief in the Western press and among Western academics, as he says:

The historical Muslim encounter with modern democracy has been a bitter experience. The late Eqbal Ahmad [1996], a prominent democracy activist and dissident Muslim intellectual, captures this point:

Our first encounter with democracy was oppressive. Democracy came to us as oppressors, as colonizers, as violators. As violators, they spoke in the language of the Enlightenment and engaged in the activities of barbarians

Secondly, after de colonization our experience was again with the democratic power centers, the United States, France [and] Britain. Our experience, even in [the] second stage of our post-colonial history, was one of these big Western powers calling themselves the '[Free World](#)' and ... actively promoting neo-fascism and neo-fascist governments in one Muslim country and Third World country after another.

Historically the United States has spoken of democracy and has supported Somozas, Trujillos, Mobutu Sese Seko, Suharto of Indonesia, the Shah of Iran, Zia ul Haq of Pakistan Therefore, our first experience with democracy was one of outright oppression, and our second experience with democracy was one in which [the West] promoted fascism, global fascism in some cases.

Finally, a comment from the doyen of American democratic theorists, Robert Dahl [1999 p.2]: in responding to the question of how a democratic culture can be created in a non-democratic society, he observed that

...few would seriously contest [that] an important factor in the prospects for a stable democracy in a country is the strength of the diffuse support for democratic ideas, values, and practices embedded in the country's culture and transmitted, in large part, from one generation to the next.

...In the Muslim world today, who is promoting, propagating, and transmitting democratic values, ideas and practices? The ulema

(clergy)? The educational system? The media? The intellectual class? The family? (I am deliberately leaving out the state for obvious reasons.) The point is a self-evident one. To quote Ghassan Salame [1994], there cannot be "democracy without democrats." (Hashemi 2003, p. 30)

³⁰ Robert Malley and Jon Finer have neatly summed up the US driven 'War on Terror':

When it comes to political orientation, worldview, life experience, and temperament, the past three presidents of the United States could hardly be more different. Yet each ended up devoting much of his tenure to the same goal: countering terrorism.

Upon entering office, President George W. Bush initially downplayed the terrorist threat, casting aside warnings from the outgoing administration about al Qaeda plots. But in the wake of the 9/11 attacks, his presidency came to be defined by what his administration termed "the global war on terrorism," an undertaking that involved the torture of detainees, the incarceration of suspects in "black sites" and at a prison camp in Guantánamo Bay [[still open for business in 2020](#)], the warrantless surveillance of U.S. citizens, and prolonged and costly military campaigns in Afghanistan and Iraq.

Barack Obama's political rise was fueled by his early opposition to Bush's excesses. He was clear-eyed about the nature of the terrorist threat and aware of the risks of overstating its costs. Once in office, he established clearer guidelines for the use of force and increased transparency about civilian casualties. But he also expanded the fight against terrorists to new theaters, dramatically increased the use of drone strikes, and devoted the later years of his presidency to the struggle against the Islamic State (also known as ISIS)....

In short, in an era of persistent political polarization, countering terrorism has become the area of greatest bipartisan consensus. Not since Democrats and Republicans rallied around containing the Soviet Union during the Cold War has there been such broad agreement on a foreign policy priority. Counterterrorism was a paramount concern for a president avenging the deaths of almost 3,000 Americans, and for his successor, who aspired to change the world's (and especially the Muslim world's) perception of the United States - and now it is also for his successor's successor, who is guided not by conviction or ideology but by impulse and instinct. (Robert Malley and Jon Finer, ["The Long Shadow of 9/11: How Counterterrorism Warps U.S. Foreign Policy"](#), *Foreign Affairs*, July/August 2018)

The term 'war on terror' is, of course, problematic. There can be no end to such a 'war' since 'terror' shifts in meaning with context. How can one declare victory against a term which is, inevitably, open to constant redefinition. The term was conceived in haste and soon used to 'justify' deceitfully pursued US economic and strategic ambitions. The focuses of the 'War on Terror' became whatever were necessary in justifying and then pursuing those defined as 'terrorist' individuals, organizations and nations.

The website [USLegal](#) provides some contextualization of the term:

The War on terror is an international military campaign launched in 2001 with the US and UK invasion of Afghanistan in response to the

attacks on New York and Washington of 11 September 2001. It is a global military, political, legal and ideological struggle employed against organizations designated as terrorist and regimes that were accused of having a connection to terrorists or presented as posing a threat to the US and its allies in general. The phrase War on Terror was adopted by former US President George W. Bush and other high-ranking US officials. The campaign was led by the U.S. and the U.K. with the support of other North Atlantic Treaty Organization (NATO) and non-NATO countries. The campaign was originally carried on against al-Qaeda and other terrorist organizations with the purpose of eliminating them. It is also known as the Global War on Terror or the War on Terrorism.

When U.S. President Barack Obama took the office, the term war on terror was replaced with the term Overseas Contingency Operation. As a result the term war on terror was not used officially. However, it is still commonly used by politicians, in the media and officially by some aspects of government, such as the Army's Global War on Terrorism Service Medal.

(Accessed September 27, 2019)

- ³¹ The election of Donald Trump to the US presidency in 2016 marked little more than a deepening of the long-incubated, slow-motion moral/ political/ economic/ military decline of the nation toward militarism, plutocracy and fascism. As [Roosevelt warned](#) in the 1930s:

The liberty of a democracy is not safe if the people tolerate the growth of private power to a point where it becomes stronger than their democratic state itself. That, in its essence, is Fascism - ownership of Government by an individual, by a group, or by any other controlling private power.

The process has been neatly summarized by Farhad Manjoo:

On a bitter night nearly two-and-a-half squandered years ago, Donald Trump was duly elected the 45th president of the United States of America. His victory was a political scandal, a democratic emergency and a moral shame...

Mr. Trump's win was not the illegitimate product of a treasonous conspiracy...

...[T]he Mueller investigation [into Trump's possible [collusion with Russia](#) to skew the 2016 US presidential election] sucked up all the political energy. For many in the political and media establishment, the possibility of collusion offered moral expiation for collective complicity. Rather than begin the hard work of addressing what had actually gone wrong, many of us were swept up in social-media-fueled feedback loops looking for an instant fix: The orgiastic pee tape would turn up and clear up the whole funny misunderstanding.

... [T]he story of 2016 looks rather straightforward: Mr. Trump was the corrupt, misbegotten choice of a citizenry mired in partisan mistrust, seething with racial grievance, informed by a beleaguered and fracturing news media, and laboring under an economic and political system that had long ceased functioning for all but the wealthiest of its citizens.

His victory pointed to a systemic failure. In the end the only golden shower that mattered was the one soaking American democracy - but it's been raining so long and so hard that we're just about

content to ignore the storm.

(Farhad Manjoo, ^œ[Collusion Was a Seductive Delusion](#): It's our own fault we elected Trump, *New York Times*, 25 March, 2019)

An excellent English language term for what seems to have guided post-2016 United States' government administrative appointments is *kakistocracy*: government by the most unscrupulous or unsuitable people, or a state governed by such people. Steven Harper has elaborated:

Trump promised to be a transformational leader. It wasn't an idle threat. He has assembled an unprecedented governmental wrecking crew. This is the third installment on Trump's unique combination of kleptocracy and kakistocracy that is reshaping America in ways that most of voters won't like....

It Will Get Worse

The current Trump rogue's gallery is only the beginning. Legal scholars Eric Posner and Emily Bazelon observe that Trump's first US Supreme Court pick, Neil Gorsuch, "embraces a judicial philosophy that would do nothing less than undermine the structure of modern government - including the rules that keep our water clean, regulate the financial markets and protect workers and consumers. In strongly opposing the administrative state, Gorsuch is in the company of incendiary figures like the White House adviser Steve Bannon, who has called for its 'deconstruction.'"

Trump's lifetime appointments to the judiciary could inflict the most lasting damage on the country. During the final year of the Obama administration, the intransigence of Senate Republicans gave Trump 124 federal judgeships to fill, including 19 appellate positions. In his first term, retirements and other departures could give Trump the opportunity to name 40 percent of the nation's federal bench - more than any first-term president in 40 years. Think about that as he rails against the federal judges who have dared to cross him on his unconstitutional travel ban.

Across the federal government, Trump is determining the country's fate. The first 100 days of deconstruction set the stage for 1,360 that will follow. Make no mistake: he and his minions are playing for keeps.

(Steven Harper, ^œ[100 Days of Deconstruction: Part 3](#): Across the federal government, Trump is determining the country's fate. The first 100 days of deconstruction set the stage for 1,360 that will follow. *Moyers & Company*, April 21, 2017)

³² Whether going by the name of Taliban, Ba'th Party supporter, Communist, Islamic Fundamentalist, Al-Qa'eda operative or any other of the terms that will come to prominence and join the pantheon of evil-doers in the years to come.

³³ Those who believe that they are truly 'independent' individuals, living in a democracy which enables this, would do well to remember Edward Bernays' jaundiced take on the nature of democracy in the United States:

The conscious and intelligent manipulation of the organized habits and opinions of the masses is an important element in democratic society. Those who manipulate this unseen mechanism of society

constitute an invisible government which is the true ruling power of our country.

We are governed, our minds are molded, our tastes formed, our ideas suggested, largely by men we have never heard of. This is a logical result of the way in which our democratic society is organized. Vast numbers of human beings must cooperate in this manner if they are to live together as a smoothly functioning society.

Our invisible governors are, in many cases, unaware of the identity of their fellow members in the inner cabinet.

They govern us by their qualities of natural leadership, their ability to supply needed ideas and by their key position in the social structure. Whatever attitude one chooses to take toward this condition, it remains a fact that in almost every act of our daily lives, whether in the sphere of politics or business, in our social conduct or our ethical thinking, we are dominated by the relatively small number of persons - a trifling fraction of our hundred and twenty million - who understand the mental processes and social patterns of the masses. It is they who pull the wires which control the public mind, who harness old social forces and contrive new ways to bind and guide the world.

It is not usually realized how necessary these invisible governors are to the orderly functioning of our group life. In theory, every citizen may vote for whom he pleases. Our Constitution does not envisage political parties as part of the mechanism of government, and its framers seem not to have pictured to themselves the existence in our national politics of anything like the modern political machine. But the American voters soon found that without organization and direction their individual votes, cast, perhaps, for dozens or hundreds of candidates, would produce nothing but confusion. Invisible government, in the shape of rudimentary political parties, arose almost overnight. Ever since then we have agreed, for the sake of simplicity and practicality, that party machines should narrow down the field of choice to two candidates, or at most three or four.

In theory, every citizen makes up his mind on public questions and matters of private conduct. In practice, if all men had to study for themselves the abstruse economic, political, and ethical data involved in every question, they would find it impossible to come to a conclusion about anything. We have voluntarily agreed to let an invisible government sift the data and high-spot the outstanding issues so that our field of choice shall be narrowed to practical proportions. From our leaders and the media they use to reach the public, we accept the evidence and the demarcation of issues bearing upon public questions; from some ethical teacher, be it a minister, a favorite essayist, or merely prevailing opinion, we accept a standardized code of social conduct to which we conform most of the time.

In theory, everybody buys the best and cheapest commodities offered him on the market. In practice, if every one went around pricing, and chemically testing before purchasing, the dozens of soaps or fabrics or brands of bread which are for sale, economic life would become hopelessly jammed. To avoid such confusion, society consents to have its choice narrowed to ideas and objects brought to its attention through propaganda of all kinds. There is

consequently a vast and continuous effort going on to capture our minds in the interest of some policy or commodity or idea.

(Edward L. Bernays, ^œ[Propaganda](#), 1928, Chapter 1, 'Organizing Chaos', pp.9-10)

- ³⁴ The term means 'the foundation' or 'the base'. Its intent: to reaffirm and reassert the most basic understandings of life as understood by those who have committed themselves to its goals. Its aim: to remove all those forces which threaten and oppress their world and revitalize their communities and people.
- ³⁵ Of course, as Marxist writers have stressed so heavily, those who commit themselves to a particular ideology are likely to be those in the community who perceive that if it is organized in those ways they will benefit. However, commonly, they do not simply cynically support an ideology out of self-interest; rather, they believe that only when life is organized in those ways will it fulfill its potential.
- There are also likely to be many others in the community who are persuaded by the logic of the arguments presented and support the ideology without seeing any great benefit to themselves personally, though, of course, they are unlikely to support it if they perceive any particular threat to themselves.
- ³⁶ It is because they share the same basic understandings that confrontations are so intense and clearly articulated
- ³⁷ See [Primary Ideology](#) for further discussion.
- ³⁸ People holding competing versions of Western secondary ideology are likely to oppose each other at the ballot box and in other ways within Western countries.
- ³⁹ See [Ideology and Reality, Subsistence and Status](#), for more on this.
- ⁴⁰ See [The Economy: A New Environment](#) for more detail on the final distillation of 'The Economy' in Western thought and practice.
- ⁴¹ The 18th century conversion of the Little Gentry to capitalism is dealt with in a section in Chapter 4: [A Deeply Religious Capitalist Revival](#)
- ⁴² See ^œ[Basic Presumptions of Capitalism](#) for more on this

- ⁴³ Since the 17th century, those Western people who have ordered their lives by 'modern' primary ideological presumptions have been very aware of the need for individuals and communities to 'realize their potential'. This awareness, in turn, has led to an increasingly strong emphasis on 'progress'.

It has been assumed that through realizing both their potential and the potential of their 'environments', people will make the future better than the past. Though in the last fifty years that belief in progress has been severely shaken by the apparent consequences of this Western drive.

From the second half of the 20th century, Western people have preferred the term 'development' to the term 'progress'. The former term carries the implication that people and communities, through applying themselves to particular forms of activity and organization, will 'realize their potential'. It suggests that there are particular forms of organization and activity which are *required* if human beings are to live as they should.

Inevitably, the presumption is that all human beings think as Western people think (or if they do not they ought to), and that what Western

people perceive as being the 'goals' of life are universally the best goals for all human beings.

Since the forms of organization and activity which are promoted in this drive to 'develop' the world are Western, it becomes inevitable that true development requires an absorption of Western values and Western motivations in life. As we will see later in this chapter, the whole exercise is an extension of a metaphysically inspired commitment by Western people, since the 16th century, to establishing a practical utopia on earth

- 44 The West might prize 'freedom' but that freedom is founded in conformity. As Samuelson (first American to win the Nobel Prize in Economics⁹⁹²) explained, although the Western world prizes individualism and 'freedom', this freedom is guaranteed through the imposition of 'order'.

We ... have to coordinate and cooperate. Where cooperation is not forthcoming we must introduce upon ourselves coercion (Samuelson 1972, p. 629).

In the West the individual's 'freedom' is contingent upon acting within the framework established for 'legitimate' economic behavior. Impersonal bureaucratic agencies are endowed with responsibility for ensuring such compliance.

- 45 This word has a distinctive and peculiar meaning in Western communities. As the Oxford Dictionary says, it refers to what is 'based on the innate moral sense', or is 'instinctive'. When Western people say that a thing is 'natural', they imply that it is as it 'ought' to be. This is the way it was 'made', or the way in which it best fulfills its 'potential'. When things are not 'natural' they are in some way 'contaminated' or contrived.

So, when Western people consider a particular form of organization or activity 'natural', they also consider that other forms of organization and activity are in some way deviant, distortions, and un-natural.

The term has metaphysical implications. One of the focuses in this discussion will be on seeing how this term became so important to Western people, on uncovering its implications as they were established throughout history.

- 46 A random selection of a few of the plethora of regulatory systems which constrain economic organization and activity in Western countries includes antitrust, commerce, contract, copyright, industry, labor, patents, privacy, property, trade - I could list many other legal focuses, all of which are intimately intertwined with the others, forming a legislative mesh which securely holds the rights and obligations of interacting parties in place, defining acceptable and unacceptable forms of practice, organization and even intent.
- 47 Western people live in a Western maze, the walls of which are constructed by a plethora of rules and regulations. Once the maze has been learned, the walls limiting and defining movement become invisible.
- 48 John Wesley, a revivalist preacher of the 18th century, recognized that '... religion must necessarily produce both industry and frugality, and these cannot but produce riches' (quoted in Thompson 1980, p. 391). See [The Conversion of the Little Gentry](#) for more on this.
- 49 See [How Born Again Christians Rescued Capitalism](#) for the origin of this, also, [Subsistence and Status](#)

- ⁵⁰ Although Western people have always very readily identified 'systems of law' in other communities, few non-Western communities in fact develop and apply systems of law in the way Western Europeans do.

In many communities, including even those which have been conceded to have been 'civilized' in the past, those who are responsible for enforcing the 'law' deliver ad hoc judgments, based on the particular circumstances and people involved, rather than on the basis of impartial adherence to a centralized, closely defined system of rules and regulations. In most matters, justice is decentralized, personalized and particularised by communities and/or by those responsible for its administration.

This contrasts strongly with the Western European insistence on the establishment of detailed, impartially administered systems of rules and regulations, applied consistently across communities. See Chanock (1985) for a description of the ways in which 'fluid, shifting set[s] of principles and procedures', in Zambia and Malawi, were changed into 'fixed, written set[s] of codes which claimed continuity with an African past' (Merry 1991, p. 897).

- ⁵¹ See [Nations as Enclaves](#) for a description of the use of 'nation' in the medieval and modern eras.

- ⁵² Feudal communities, in common with many present-day communities in the Third World, were hierarchically organized through personalized, redistributive relationships (see [Reciprocity and Exchange](#)).

A society which is redistributively organized usually comprises a base population of producers and laborers with a more or less developed political hierarchy (see Figure 1 below), the members of which depend on taxes, rent, tribute, and gifts from producers for their livelihood and to fund their political and social activities.

Some kind of redistributive system is required by any large integrated group of people to ensure community works, the funding of political offices, support of the needy, and so on. Even in Western Industrialized societies people are required to be involved in such redistributive systems, administered by Inland Revenue services in most nations.

In some societies the hierarchies are well established and formalized as systems of 'kings', 'chiefs', 'nobles' and so on. In other societies, particularly those in which formalized hierarchies have been severely disrupted during the past two centuries, the hierarchical system is less formalized, with more fluid, less well-defined patron-client relationships either taking the place of, or working alongside, the formalized hierarchies. Patron-client relationships are extremely common in present-day redistributive communities.

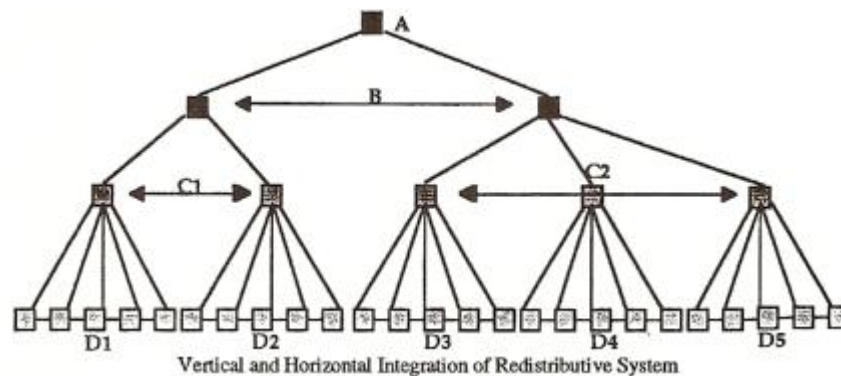

In its simplest form a redistributively organized community is pyramidal. At the base are the majority of people, whose status is low and who look to those of higher status for support whenever they have to deal with people in authority; whenever they have to interact with the wider community beyond their own homestead or village; and when times are difficult. It is the task of patrons not merely to use the surpluses they receive, but to provide a range of services and to store and redistribute surplus production to community members who are in need.

So, the society is organized in 'tiers', with people interacting on the basis of similar status. This is, of course, reminiscent of 'class' relationships but the term is misleading. It comes from analyses of Western

Industrialized communities whose organizational principles are very different from redistributively organized communities. We will therefore avoid it, speaking instead of 'common interest groups'.

Figure 1 provides a simplified picture of the networks which develop. The group D1 is a common interest group, as are groups D2, D3, D4, D5, C1, C2, and B. In each, group members cooperate with each other and support each other when requested. Acceptance into the group is based on an individual's demonstrated reliability and trustworthiness in relations with other group members. Those who fail to live up to the group's requirements soon find themselves on the outside, seldom consulted, and seldom helped.

Figure 1:

We will call people of higher status patrons and those of lower status clients. This follows the extensive literature on patron-client relationships within anthropology and political science. In most redistributively organized societies those who share a common patron are also cooperatively related to one another, seeing themselves as a distinct group, separate from other similar groups connected with other patrons.

So, in Figure 1, all the members of D1 share a common identity, as do members of D2, D3, D4 and D5. Similarly, the patrons in C1 are cooperatively related, as are those of C2 and B. Because the patrons of groups D1 and D2 share a common patron, members of those groups are likely to consider themselves more closely related to each other than to members of D3, D4 and D5. Similarly, the patrons in C1 and C2 will identify fairly readily with each other.

- 53 As much because of the increasing influence of common-interest groupings based on education and money making, as because of the growth of 'corruption'. Indeed, it can be argued that the corruption so loudly condemned during the period from the 13th to the 16th centuries was, in large measure, as John Wyclif (1324-1384) claimed, a result of the self-interest of these egalitarian groups (see ^œTawney 1938, p. 40)
- 54 This dependence on various forms of hunting and foraging is common to most extensive agriculture communities.
- 55 One of the most pressing concerns of colonial powers, faced with systems of land use not based on legal definition, was to compile registers of landowners so that all relationships to land could be defined in terms of legally established individual ownership. This concern has remained important in 'international development' circles. See Holznecht (2003) for a description of the colonial processes; Dale (1997) for an explanation of the international development world's concern with the 'problem'.
- 56 As the Vatican web site explained (2010):

The modern archives of the Holy See were established thanks to Paul V Borghese around 1610, but the roots of the history of the archives of the Roman Pontiffs reach way back in time, linking up with the very origin, nature, activities and development of the Roman Church itself. Right from the apostolic times, the Popes carefully preserved the manuscripts concerning the exercise of their activities.

This collection of manuscripts was kept in the *scrinium Sanctae Romanae Ecclesiae* that usually followed the Popes in their various residences, but the fragility of the papyrus, normally used at the papal chancery until the XI Century, the transfers and the political upheavals nearly caused the total loss of all the archival material preceding Innocent III.

From the XI Century onwards, when the Roman Pontiff and his Curia gained a central role, the number of offices of the Curia grew, as well as the number of archives, and in the XV Century the most precious documents were taken to Castel S. Angelo.

After several projects for the creation of a main archive of the Church, Paul V gave the order to transfer the registers of the Papal bulls and briefs, the books of the Camera and the collections of documents up to the papacy of Pius V included, to the three halls next to the Secret Library (the so-called Sale Paoline). This gave life to a new archive *pro privata Romanorum pontificum commoditate* and *ad publicam studiorum utilitatem*, for a total of just over three thousand pieces, of which the most important part included the registers of the papal bulls from Innocent III onwards, (Registra Vaticana).

The new archive was called *Vatican Secret Archives*.

During the XVII Century, the Archives increased considerably, especially under Urban VIII Barberini (the Bulls of Sixtus IV and Pius V; the papers of the Briefs Secretariat from Alexander VI to Pius V, the abundant documentation contained in the Armaria XXXIX-XLV; the books of the Apostolic Camera from Avignon, where they had remained after the end of the Scism; the papers of the Council of Trent), and under Alexander VII, who chose to place the diplomatic correspondence of the Secretariat of State on a specific floor of the Vatican Palaces.

(^œ[The Vatican Secret Archives](#) [Accessed 2 January 2010 - page since removed]; See ^œ[the Vatican Secret Archives](#) for general information on the Vatican Archives [March 6, 2017]; See ^œ[Ecclesiastical Archives](#), *Catholic Encyclopedia* for a general description of the development of the Archives.)

⁵⁷ See Bagge (2002:36-38) for a description of Otto's coronation and administration of the ritual of Unction.

⁵⁸ As claimed in the opening paragraph of the oldest collection of Church law embodied in the 1441 collection of Church laws.

⁵⁹ This same situation now exists in many Third World countries. Under colonial authorities legal statutes were extended to cover a constantly increasing range of activities (cf. Chanock 1985; Cooper 1987; Fitzpatrick 1987; Mitchell 1988, etc.).

As control has passed to indigenous leaders, these systems of rules and regulations have been modified but maintained so that, in ways which

are very similar to that described by Génicot (1971, p. 701), people find themselves subjected to 'orders from above and from distant places, and to officials sent from outside'.

Long-established customary understandings are being challenged and denied. Traditional rights to land are being subverted, and those least able to defend themselves find legal systems working against rather than in their interests.

⁶⁰ Western European communities, as a result of a range of experiences we will briefly consider, strongly emphasize the separateness and competitive opposition of people involved in interaction (cf. [Ideology and Reality](#)). Each interactant is assumed to be attempting to get the best return for the least outlay in any interaction. This is, of course, a key feature of 'market relations' (cf. [Reciprocity and Exchange](#)).

⁶¹ A legal training became a guarantee of worldly success. In a world where legal claim could be matched by legal claim at every level of society, the legally trained person was in great demand. Murray tells us that

...it is in satire that we find some of the clearest evidence for lawyers' worldly success. "If you want wealth, be a lawyer"; "Justinian is the distributor of honours"; "Follow the decretalists and fill - not purses, *but - chests*"
(Murray 1978, p.222).

As William Langland claimed in 1370 in his *Piers the Ploughman*,

Besides all this, a hundred men in silk gowns stood swaying from side to side and making speeches. These were the lawyers who served at the bar, pleading their cases for as much money as they could get ... you could sooner measure the mist on the Malvern Hills, than get a sound out of them without first, producing some cash!
(Langland 1966, p. 31).

⁶² Educated people were at the forefront of many of the religious protest movements which developed in succeeding centuries. The movement which most strongly identified itself with education as a means to both social betterment and individual 'development' was Calvinism. Calvinism, more than the other religious reform movements of the 16th century, attracted upwardly mobile people. Not only was education seen as a means to social betterment, involvement in commerce was also seen as a means to upward mobility.

These 'middle sorts', middle ranking people in the medieval hierarchies, would provide most of the state bureaucrats and capitalists in emerging nation states during the 16th to 19th centuries (see [Who were the Middle Sorts?](#) for more on this).

Reformers who passed through the Geneva schools of Calvinism during the 16th and 17th centuries went away convinced of the importance of a legally spelt-out faith, and of the need to establish education systems for the training of the population in both Church doctrine and a 'vocation serviceable to God and neighbour, to Church and community' (McNeill 1954, p.224).

Educationally achieved position was of more importance in society than feudally attained position, and the test of one's worthiness was in the diligence with which one pursued that vocation for which one was trained in one's youth.

As Tawney has argued, for a period, Calvinism became identified with entrepreneurial activity, and it was through the influence of these entrepreneurs that Calvinist teaching was to develop its ideal society

which seeks wealth with the sober gravity of men who are conscious at once of disciplining their own characters by patient labor, and of devoting themselves to a service acceptable to God...

Calvinism was largely an urban movement ... In its early days, it was carried from country to country partly by emigrant traders and workmen; and its stronghold was precisely in those social groups to which the traditional scheme of social ethics, with its treatment of economic interests as a quite minor aspect of human affairs, must have seemed irrelevant or artificial.

As was to be expected in the exponents of a faith which had its headquarters in Geneva, and later its most influential adherents in great business centers, like Antwerp with its industrial hinterland, London and Amsterdam, its leaders addressed their teaching, not of course exclusively, but none the less primarily, to the classes engaged in trade and industry, who formed the most modern and progressive elements in the life of the age.

(^œTawney 1938, p. 113, 114).

- ⁶³ Indeed, natural law would be seen not merely as a set of laws established by God, but as an expression of the very nature of God Himself. As William Blackstone would explain in the 18th century:

... as man depends absolutely upon his maker for every thing, it is necessary that he should in all points conform to his maker's will.

This will of his maker is called the law of nature. For as God, when he created matter, and endued it with a principle of mobility, established certain rules for the perpetual direction of that motion; so, when he created man, and endued him with freewill to conduct himself in all parts of life, he laid down certain immutable laws of human nature, whereby that freewill is in some degree regulated and restrained, and gave him also the faculty of reason to discover the purport of those laws.

(Blackstone, 1765, ^œCommentaries on the Laws of England, Introduction, Section 2 pp. 39-40)

To challenge the certified laws of nature was to challenge the will and nature of God. It was blasphemy.

- ⁶⁴ There is more than a suggestion of the ^œOuroboros in all this.

Similar logic has underpinned far too much of the 'philosophical' discussion of the 20th and the 21st centuries. As Ayn Rand (1971) expounded in this delightful pleonasm:

I am not primarily an advocate of capitalism, but of egoism; and I am not primarily an advocate of egoism, but of reason. If one recognizes the supremacy of reason and applies it consistently, all the rest follows.

(Rand, Ayn, "Brief Summary", *The Objectivist* 1971, Vol. 10 No. 9, p. 1)

Drawing by Theodoros Pelecanos,
(1478 copy of a lost alchemical tract by Synesius.)

The flaw in all this, of course, is that since reason flows from one's ideological understandings, it inevitably reflects those and we're trapped in a tautology.

(I had a puppy (an Australian Kelpie) whose behavior, at six months, epitomized this problem. He discovered his tail and chased it until he finally caught hold. Then, with the tail in his mouth, he would pause, unsure of the cause of the pain he experienced when he bit it, and clearly nonplussed as to what to do next! A month or two older and he had worked it out - so much smarter than the ideologues (and far too many of the economists) of the Western World!)

- ⁶⁵ Where, for the Church, 'natural law' referred to the laws established by God for the smooth running of his creation, for Roman jurisprudence it meant searching for rules corresponding to the 'real' nature of things (cf. d'Entreves 1965, pp. 29-30).
- ⁶⁶ A claim which is echoed in neo-classical economic and other forms of positivistic theory in the 21st century.
- ⁶⁷ Just as the definition of instincts in 21st century economic theory happens to coincide with the requirements of a capitalist society - while those required by neoliberal economic theory make internationalized free markets 'necessary' to economic 'efficiency'.
- ⁶⁸ Through the combined focus on Roman jurisprudence and Greek thinking, those searching for the 'natural laws' which governed the secular realm found themselves trying to come to grips with laws which underwrote both social organization and action and the physical world. They were to resolve this problem by assuming the existence of self-contained environments which reflected the interests of those looking for the laws. The natural world could be seen to be compartmentalised, each compartment with its own system of rules and regulations ensuring its perfect functioning.
- ⁶⁹ Because canonical law was, by definition, the preserve of the Roman Church, when people, from the 16th century onwards, rejected the Church, whether to gain political, mercantile or religious autonomy, they rejected Church law which had been used throughout the centuries to secure the pre-eminence of the institutionalized Roman Church in western Europe. They therefore found themselves committed to demonstrating their sincerity and morality by living an upright life in this world, conforming to the natural laws established by God and, in so doing, living in obedience to the will and purpose of God.

This understanding of the road to sanctification, often summarized as the 'duty of human beings to live as God intended them to live', had long been accepted as an alternative form of Godliness, but in the 16th century, for increasing numbers of people, it became the only acceptable form of Godliness. Since society was perfected in the perfection of its members, if individuals lived moral lives, society would benefit. If they failed to live such lives, all members of society would suffer.

This was taken to an extreme and clearly spelt out in the deistic writings of Lord Herbert of Cherbury in the early 17th century. The central beliefs were summed up by Matthew Tindal in a book entitled *Christianity as Old as Creation; or the Gospel a Republication of the Religion of Nature* (1732).

According to Tindal, natural religion consisted of belief in God, the pursuit of what makes for one's good and happiness, promotion of the

common happiness, and conformity to the moral rules which indwell all people. Apart from a first requirement of acknowledging the existence of God, religious activity was to be focused within the present world. A moral life was evidence of the spiritual orientation of the individual. 'The only religious "experience" in their sense was moral experience' (Kent 1982, p. 7).

⁷⁰ Hugo Grotius, early in the 17th century, claimed that

the law of nature is a dictate of right reason which points out that an act, according as it is or is not in conformity with rational nature, has in it a quality of moral baseness or moral necessity ... in consequence, such an act is either forbidden or enjoined by the author of nature, God.
(quoted in O'Brien 1975, p. 23)

⁷¹ The bases for this movement are to be found in attempts within emerging self-governing territories of western Europe (from the 15th century), to organize the administration of their populations and finances through legal and fiscal bureaucracies.

The development of probability theory by de Fermat and Pascal in the 17th century gave the approach formal mathematical structure. Huygens, with the publication of a book ^æ*Concerning Reasoning in Games of Chance* in 1657, gave impetus to applying the approach to a wide range of issues within the natural sciences.

⁷² While this refocusing set the scene for future scientific exploration, its weakness in studying human beings lies in the potential for losing sight of the forest while studying the 'nature' of the trees. There really is a case for arguing that human beings, treated as independent, self-existent entities, lose much of what makes them 'human'. We start with individuals, and skip to 'humanity', ignoring the social environment within which human individuals gain both their *categorizational models* and their *individuated personas*.

A lack of awareness of the fundamental importance of primary ideological models and the variant '*objective realities*' of communities of people, allows us to focus on aggregations of human beings and produces studies such as this recent examination of worldwide *population trends and problems*:

As the world's population reaches 7 billion this year, we should reflect on the many ways in which population dynamics matter to the planet's future. Population growth patterns are linked to nearly every challenge confronting humanity, including poverty reduction, urban pollution, energy production, food and water scarcity, and health. With world population projected to surpass 9 billion by 2050, these issues and the desire to raise living standards at the same time will create a huge challenge. What immediate actions can be taken to deal with growth while ensuring a sustainable future for all of the world's inhabitants?
(*'Population and Development'*, Babatunde Osotimehin, *Science* 29 July 2011: Vol. 333 no. 6042 p. 499)

⁷³ Matthew 25:14-30; (also Luke 19:12-28):

Again, it will be like a man going on a journey, who called his servants and entrusted his property to them. To one he gave five talents of money, to another two talents, and to another one talent, each according to his ability. Then he went on his journey. The man

who had received the five talents went at once and put his money to work and gained five more. So also, the one with the two talents gained two more. But the man who had received the one talent went off, dug a hole in the ground and hid his master's money.

After a long time the master of those servants returned and settled accounts with them. The man who had received the five talents brought the other five. 'Master,' he said, 'you entrusted me with five talents. See, I have gained five more.' His master replied, 'Well done, good and faithful servant! You have been faithful with a few things; I will put you in charge of many things. Come and share your master's happiness!' The man with the two talents also came. 'Master,' he said, 'you entrusted me with two talents; see, I have gained two more.' His master replied, 'Well done, good and faithful servant! You have been faithful with a few things; I will put you in charge of many things. Come and share your master's happiness!' Then the man who had received the one talent came. 'Master,' he said, 'I knew that you are a hard man, harvesting where you have not sown and gathering where you have not scattered seed. So I was afraid and went out and hid your talent in the ground. See, here is what belongs to you.'

His master replied, 'You wicked, lazy servant! So you knew that I harvest where I have not sown and gather where I have not scattered seed? Well then, you should have put my money on deposit with the bankers, so that when I returned I would have received it back with interest. 'Take the talent from him and give it to the one who has the ten talents. For everyone who has will be given more, and he will have an abundance. Whoever does not have, even what he has will be taken from him. And throw that worthless servant outside, into the darkness, where there will be weeping and gnashing of teeth.

(The Bible, New Testament, Matthew 25:14-30. New International Version)

- ⁷⁴ Inevitably, all that referred to the 'supernatural' was the preserve of canonical law. Civil law could include no such allusions. It therefore became firmly anchored within the 'natural' world. From this point onwards, 'natural' laws are clearly, and necessarily, separated from the supernatural.

Supernatural principles, relating to a spiritual realm, while they might exist, were separate from, and did not override, the laws of the natural world. If God intervened in people's non-religious affairs, He did so in ways consistent with the operation of the natural laws.

David Hume's assertion that a miracle was 'a violation of the laws of nature', in his ^{ae}*Enquiry Concerning Human Understanding* (Hume 1748, p. 114), was the inevitable result of the direction in which the separation of the supernatural and the natural in the 13th century was to lead western Europeans.

- ⁷⁵ By the 17th century this was to result in bureaucracies being established to safeguard each set of laws as they were discovered. Many of the scientific associations established at the time took as a prime responsibility the establishment of the body of laws of the 'discipline', and the safeguarding of those laws once they were uncovered (cf. Berman 1978).

⁷⁶ This use of law as justification for dispossessing the poor and taking advantage of their weakness has been a feature of business activity in the 20th century, whether in the First or in the Third Worlds. If it is not legally required then those engaged in business activity can rightfully dismiss any demands made by members of a community. It is against 'economic rationality' to incur business costs when they can be avoided.

Any conflict between 'morality' and 'economic rationality' will always be settled in favor of the latter. After all, if a particular business incurs costs based on 'moral' (i.e. non-legally defined) claims, it will be severely disadvantaged by other businesses which govern their affairs by the 'natural' requirements of economic rationality. Under capitalism, the logic of the marketplace effectively emasculates (or spays) morality.

⁷⁷ What became 'capitalism', started out as forms of trade and rivalry between city states in northern Italy (e.g. the rivalries of Lombardy, Genoa and Venice) in the period of the late western Roman Empire (AD 450 -). As Kenneth Galbraith (1975, p.18) put it,

The banking houses of Venice and Genoa are the recognized precursors of modern, everyday, commercial banks. Almost as advanced were those of the Po valley, and, as money lending developed in London, it was natural that the street on which it settled should be named for the Lombards.

(*Money: Whence It Came, Where It Went*, 1975, Houghton Mifflin, Boston)

By the 14th century, these regions were synonymous in feudal communities with immoral behaviors and attitudes attributed to merchants and traders.

William Langland (c. 1332?- c.1400?) of London, in his ^œ*The Vision of Piers the Ploughman*, presented a vivid picture of their assumed activities and attitudes in a chapter subtitled 'Confession of the Seven Deadly Sins':

AVARICIA

'Usedest thou every usury - in all thy life-time?'

'Nay, soothly,' he said - 'save in my youth.

I learned a lesson - among Jews and Lombards,

To weigh pence with a weight - and pare down the heaviest;

And lend it for love of the Cross - for a pledge, to be lost;

Such deeds I did write - lest he due day miss.

I have more money through arrears - than through *miseretur et commodat*.

(Passus V (Confession of the Seven Deadly Sins) pp. 38, 39)

The Latin phrase '*miseretur et commodat*' is a reference to Verse 5 of ^œ*Psalm 112* in the Vulgate Latin Bible: '*Iucundus homo, qui miseretur et commodat, disponet res suas in iudicio*':

Here is a *New International Version* (NIV) of the Bible translation:

1 Praise the Lord. Blessed are those who fear the Lord, who find great delight in his commands.

2 Their children will be mighty in the land; the generation of the upright will be blessed.

3 Wealth and riches are in their houses, and their righteousness endures forever.

4 Even in darkness light dawns for the upright, for those who are gracious and compassionate and righteous.

5 Good will come to those who are generous and lend freely, who conduct their affairs with justice.

78 Medieval literature provides numerous examples of the snowballing effects of simony throughout the later medieval centuries, and the resulting civil unrest and rebellion of those who saw this as a corruption of feudal relationships. Those who purchased position were, increasingly, a suspect group who took their feudal responsibilities lightly and used their positions to promote their money-making activities. William Langland (1370) commented that,

...nowadays, bondmen's children are made into Bishops and bastards into Archdeacons; and soap-makers and their sons buy themselves knighthoods, while the sons of true noblemen toil and sweat for them - for they mortgage their estates to ride out against our enemies ...

And the monks and nuns, who should feed the poor, buy up the incomes of knights and make noblemen of their relatives. Even Popes now, and ecclesiastical patrons, are refusing noble blood, and appointing the sons of Simony to keep God's sanctuary (œLangland 1966, pp. 258-9).

79 This same movement from traditional leadership spelt out in the land-holding systems of Third World communities to authority based upon the control of legal and fiscal bureaucracies is a feature of Third World nations. The West would not recognize them as nations if they did not base political and economic organization and activity on such bureaucracies.

Just as this movement produced growing alienation between the state and its people in medieval Europe, tensions have arisen in Third World countries as people try to come to terms with these very different bases for authority and direction within society.

The shift in the justification of leadership from direction of land holding to control of bureaucracies does not require a shift away from patron-client relationships. That is, it is perfectly reasonable to have hierarchical relationships within a society reinforced bureaucratically, and this is precisely what happened in medieval Europe (and in a large number of Third World countries in the 20th century, in South America, Asia and Africa). The result, however, is bureaucratic behavior of a very different kind from that which is required by Western capitalism.

The reorientation of Third World bureaucracies to stress depersonalized egalitarianism, at the insistence of Western 'experts', represents a triple shift:

- ✳ from leadership based on land holding,
- to leadership based on control of bureaucracies,
- to bureaucracies organized to emphasize impersonal egalitarianism,
- to leadership based upon 'democratic' principles.

It took Western European nations five hundred years to make these shifts, and, even then, people on the receiving end of the changes suffered extreme privation.

It is small wonder that attempts at moving directly from land-based leadership to 'democracy' in Third World communities have failed, with bureaucracies subverted to serve hierarchical patron-client interests. Only 'experts' who have failed to understand the nature of the changes they are introducing could possibly assume that one can, by putting 'democratic institutions' in place, effect the transition from hierarchical leadership based on land holding to leadership justified in terms of control of impersonalized bureaucracies (aimed at guaranteeing 'equality' and freedom to engage in competitive self-promotion to members of a community).

As we will see shortly, this change requires stripping social obligations from hierarchical relationships and attaching them to 'things' and the development and internalization of a complex network of rules and regulations in terms of which community members 'automatically' relate to one another.

For Third World people, it has certainly been true that 'experts' with a little knowledge have proved dangerous. They have forced changes which, in many communities, have resulted in mounting tension and stress, resulting, all too often, in a loss of hierarchical authority relationships (cf. [Ideology and Reality](#)), and increasing opportunity for a ruthless few to gain and wield power through control of resources and of the armed forces. Far from enhancing the 'freedom' of people, such developments all too often lead to despotism and police states (see [Parliamentary democracy, one-party states, military coups](#) for more on this).

- ⁸⁰ One might think that this is of little but long-passed medieval historical interest, but one would be wrong! See Nicholas Shaxson, ^œ[A Tale of Two Londons](#) (*Vanity Fair*, April 2013) for an intriguing picture of medieval London in the 21st century. As Shaxson says,

... to understand why so much of the world's money goes to London in the first place, you need to go back hundreds of years, to the emergence of what must be the most peculiar, the oldest, the least understood, and perhaps one of the most important institutions in the menagerie of global finance: the City of London Corporation.

It is the local authority for "the Square Mile," the pocket of prime financial real estate centered on the Bank of England and located about three miles to the east of Knightsbridge, along the Thames River. But the corporation is also much more, its identity embedded in-and slightly apart from-the British nation-state.

The corporation has its own constitution, "rooted in the ancient rights and privileges enjoyed by citizens before the Norman Conquest, in 1066," and its own lord mayor of London-not to be confused with the mayor of London, who runs the Greater London metropolis, with its eight million inhabitants.

One sign of the City of London's distinct identity is the fact that the Queen, on official visits there, will stop at the boundary of the Square Mile, where she is met by the lord mayor, who engages her in a short, colorful ritual, before she may proceed. Most Brits see this merely as a relic from a bygone age, a show for the tourists. They are wrong.

The lord mayor's principal official role, his Web site says, is to be "ambassador for all UK-based financial and professional services." He lobbies far afield, with offices in Brussels, China, and India,

among other places, the better to "expound the values of liberalization" far and wide. The City Corporation and closely linked think tanks issue streams of publications explaining why finance should be less tethered by taxes and regulation. The corporation also has its own official lobbyist, with the delightfully medieval-sounding name of The Remembrancer (currently one Paul Double), lodged permanently in Britain's Parliament. Local elections in the City are unlike any other in Britain: multi-national corporations vote alongside and vastly outnumber the tiny borough's 7,400 human residents.

Over the centuries the City has thrived, thanks to a simple advantage: it has had money to lend when governments or monarchs needed it. So the City has been granted special privileges, allowing it to remain a political fortress withstanding the tides of history that have transformed the rest of the British nation-state.

It has nurtured a British tradition of welcoming foreign money, with few questions asked, and so has for centuries attracted the world's wealthiest citizens. "There the Jew, the Mahometan, and the Christian transact together," Voltaire wrote in 1733, "as though they all professed the same religion, and give the name of infidel to none but bankrupts."

A documentary entitled *The Spider's Web; Britain's Second Empire* provides an interesting complement to all this. As the website says,

The British Empire collapsed, in large part because of the revolution in the Colonies (the USA). Since that collapse, the Black Nobility (incl. Khazar Zionists) and British monarchy together have sought ways to collaborate to resurrect control of the planet. This film tells a main part of the story of how that has happened. But it is only a beginning...

(^œ[The Spider's Web; Britain's Second Empire](#))

- ⁸¹ This belief still exists in the minds of many Western people, who assume that those in Third World countries who have moved to towns are, by definition, moving from a life 'bound by tradition' to a life of 'freedom'. This assumption has provided one of the justifications for stimulating rural-urban migration.

Of course, since rural environments in many Third World countries have been steadily degraded over the past hundred years, it is true that life in rural areas has become increasingly harsh and many people see life in the country as no longer sustainable. However, we should not automatically assume that people living in Third World communities have this very Western attitude to people who live outside urban areas.

- ⁸² A strong consideration in acquiring property was that it was a shortcut to status. Ownership of formerly feudal estates gave the new owners some entree into interaction with the nobility and into recognition of noble status by those who still operated within the feudal system. In order to be accepted they found themselves emulating the lifestyles of the nobility, which resulted in increasing consumption as the trade in country properties escalated.
- ⁸³ As we have seen, the medieval period is marked by the emphasis placed on groupings of people with common interests:

- from the specialisation of some districts into suppliers of particular products to fairs and markets;
- to the establishment of guilds and associations of artisans and tradesmen;
- to the establishment of associations of merchants and traders - such as the English Fellowship of the Staple or Merchants Adventurers, or the German Hanseatic League, or various city groupings of Italian traders;
- to associations based on learning, common social position, religious interests, and so on.

The people of western Europe seemed to enter naturally into quite consciously recognized and organized common-interest groupings, prepared and able to act together to preserve and promote their own rights and interests.

As the hierarchical nature of society became questioned, the importance of common-interest groups began to dominate, increasingly unchecked by any sense of duty and commitment to the wider society. Already, before the close of the medieval period, social commentators were decrying the activities of guilds and nations. Wyclif condemned them because 'they conspire to bear up each other, yea in wrong, and oppress other men in their right by their wit and power' (quoted in ⁸⁴[Tawney 1938](#), p. 40).

By the 17th century feudal hierarchies were being successfully challenged by the dominant common-interest groups. Over the next two hundred years, this development was to produce a consciousness of 'class', that is of separate groupings within society having relationships of competitive opposition with each other.

As the feudal legacy of Western Europe has faded, and the primary ideology of the dominant common-interest groups has been absorbed by increasing numbers of people, these 'classes' have become less and less important to most people in Western communities. So, 'class'-based studies in Western communities now seem outdated, no longer corresponding to a reality in which Western communities have become ideologically increasingly homogeneous.

⁸⁴ See [Loss of subsistence resources](#) for more on this.

⁸⁵ For more on 'the traditional conception of time in Christian theology' see Noonan (1957 pp.43-44). As he explained, citing Guillaume d'Auxerre (1166-1229), *Summa Aurea* (III, 21, 225v),

The usurer acts in contravention to universal natural law, because he sells time, which is the common possession of all creatures. Augustine says that every creature is obliged to give of itself; the sun is obliged to give of itself in order to shine; in the same way, the earth is obliged to give all that it can to produce, as is water. But nothing gives of itself in a way more in conformity with nature than time; like it or not, every thing has time. Since, therefore, the usurer sells what necessarily belongs to all creatures, he injures all creatures in general, even stones. Thus, even if men remain silent in the face of usurers, the stones would cry out if they could; and this is one reason why the Church prosecutes usury....

- 86 Western people have a very distinctive understanding of time, based on centuries of wage labor. For them, life is first and foremost about work; 'socializing' is done in one's 'spare time' (see [The Nature of Work](#) for more on this). As a result, many non-Western people, who place far greater value on 'socializing' and far less value on 'work', have, over the years, been accused of 'moral degeneracy', 'childish indiscipline' and 'blindness to religious virtue' (cf. Cairns 1965, p. 76ff) .

When status attainment and maintenance are based on social interaction, people will spend much more time in 'socializing' than in 'being productive'. Time is not 'spent'; it forms a less than conscious backdrop to the activities of community members.

- 87 Relationships in which those of different ranks saw themselves as cooperatively interconnected.
- 88 Objectified oppositional relationships make it possible for the exchangers to focus solely on the object of exchange, without having to consider the other party. This is, of course, a prime characteristic of 'market exchange'.

In many societies, even where people work for 'wages' or rent property, the obligations and responsibilities remain with the *exchangers* rather than with the *objects of exchange*. Where this is so, *exchangers remain in hierarchical relationship*, which is a fundamental feature of patron-client relationships.

- 89 This feature has been one of the common experiences of Third World people in interaction with Western people over the past two hundred years. Since the interactions are 'economic', that is various forms of employee-employer relationships, Western people see no reason to 'socialise' with indigenous people.

They need to assume no social relationship with them at all. Nor do they need to investigate the living conditions or breakdown of community suffered by the people they employ. That is none of their concern.

Their relationship starts and ends with the 'job' and the payment of wages. They do not even have to ensure that the wages they pay are sufficient to meet the subsistence needs of their employees - that is a responsibility of the employee. As Townsend argued in the 18th century, 'Let the market look after the poor, and things will look after themselves' (quoted in Polanyi 1957, p. 113).

This attitude remains central to the 'economic development' activities that are promoted in Third World countries. During the 15th to 17th centuries, western Europeans expanded the range of 'economic' relationships to include many previously 'social' relationships. They also became convinced that economic relationships could be strictly limited and bounded by the exchange of 'cash' and/or 'things'.

- 90 The text from which this comes expands the insight:

...the face of madness has haunted the imagination of Western man.

...Up to the second half of the fifteenth century, or even a little beyond, the theme of death reigns alone. The end of man, the end of time bear the face of pestilence and war. What overhangs human existence is this conclusion and this order from which nothing escapes. The presence that threatens even within this world is a fleshless one.

Then in the last years of the century this enormous uneasiness turns on itself; the mockery of madness replaces death and its solemnity. From the discovery of that necessity which inevitably reduces man to nothing, we have shifted to the scornful contemplation of that nothing which is existence itself.

Fear in the face of the absolute limit of death turns inward in a continuous irony; man disarms it in advance, making it an object of derision by giving it an everyday, tamed form, by constantly renewing it in the spectacle of life, by scattering it throughout the vices, the difficulties, and the absurdities of all men.

Death's annihilation is no longer anything because it was already everything, because life itself was only futility, vain words, a squabble of cap and bells. The head that will become a skull is already empty. Madness is the *deja-la* of death. But it is also its vanquished presence, evaded in those everyday signs which, announcing that death reigns already, indicate that its prey will be a sorry prize indeed.

(Foucault 1971, pp. 15, 16)

- ⁹¹ Just as the 'laboring poor' of western Europe found themselves oppositionally defined in relation to landlords and employers, people in colonial territories found themselves classified in oppositional terms, with relationships deliberately depersonalized and bounded by rules and regulations.

This produced real confusion amongst many colonial people who very often assumed that Europeans with whom they interacted would become, as Patrice Lumumba suggested, 'his friend and his guide or his "godfather"', (quoted in Anstey 1966 p. 214). Instead, they found themselves placed in a 'class', to which was attributed particular characteristics, and individuals found themselves treated as members of that class, with their relationships with Europeans standardized and bounded by legislation.

No matter what their personal abilities, aptitudes, achievements, intentions or aspirations, they could not escape their legally spelt-out, exclusive, oppositional categorization as different from and hierarchically inferior to Europeans.

- ⁹² The international nature of these merchant houses, and their freedom from the control of any one state, resembles the development of multinational corporations in the late 20th century.
- ⁹³ Those who belonged to this emerging class brought with them, from the Middle Ages, a deep respect for those who showed prudent self-control (cf. Murray 1978, p. 134) in their economic dealings, and who demonstrated an ability to 'realize the potential' of the resources at their disposal. As we have seen, in breaking free of the rules and regulations imposed by the Roman Church, one of the prime means of demonstrating one's morality was through 'making the most' of the 'talents' given by God. For this emerging class, prudent people used their resources to the full and disciplined themselves to successful business activity.
- ⁹⁴ From the 16th century onwards the 'responsible people' of Western Europe became increasingly opposed to 'political' appointments, a viewpoint which, as we have seen, was strongly reinforced by Calvinist and Puritanical emphases on vocational education. It became increasingly seen as essential that those holding either bureaucratic or

business positions should be 'educated' for the positions they held and that appointment on any other basis was illegitimate.

This point of view has, in succeeding centuries, become an indisputable requirement of life. Nepotism or 'favoritism' are considered 'corrupt' practices. But this belief did not develop because they *are* corrupt by any other standards than those developed historically in western Europe.

Although Weber (1930) has considered the emphasis on vocational education and hard work a 'Protestant' ethic, as we have seen, these are western European emphases, which emerged long before the 16th century Protestant movements became important.

- ⁹⁵ See [Thomas More's \(1516\) description](#) of their experiences as this form of dispossession gathered momentum.

Many people in Third World countries have found that the patron-client relationships which they assumed would provide them with support, direction and protection have similarly failed, though, with nowhere else to turn, they have to accept the exploitation to which they are subjected as unavoidable 'costs' of the relationship.

- ⁹⁶ In the 21st Century, Western communities remain committed to those primary ideological presumptions forged during the turmoil of the 14th to 20th centuries. 'Responsible People' of the early 21st century remain convinced that they have a responsibility to discipline those who will not discipline themselves; that [they should 'reform' those who stubbornly resist reformation](#). Emily Badger and Margot Sanger-Katz have described the attitudes of those who feel responsible for reforming society in the 21st century United States of America:

The "able-bodied" are now everywhere among government programs for the poor, Republican officials point out. They're on food stamps. They're collecting welfare. They're living in subsidized housing. And their numbers have swelled on Medicaid, a program that critics say was never designed to serve them.

These so-called able-bodied are defined in many ways by what they are not: not disabled, not elderly, not children, not pregnant, not blind. They are effectively everyone left, and they have become the focus of resurgent conservative proposals to overhaul government aid, such as one announced last month by the Trump administration that would allow states to test work requirements for Medicaid.

Able-bodied is not truly a demographic label, though: There is no standard for physical or mental ability that makes a person able. Rather, the term has long been a political one. Across centuries of use, it has consistently implied another negative: The able-bodied could work, but are not working (or working hard enough). And, as such, they don't deserve our aid.

"Within that term is this entire history of debates about the poor who can work but refuse to, because they're lazy," said Susannah Ottaway, a historian of social welfare at Carleton College in Minnesota. "To a historian, to see this term is to understand its very close association with debates that center around the need to morally reform the poor."

(Emily Badger and Margot Sanger-Katz, ["Who's Able-Bodied Anyway? The 400-year history of how we talk about the deserving versus the undeserving poor,"](#) *New York Times*, Feb. 3, 2018)

⁹⁷ See [The 'Responsible' people of western Europe](#) for an explanation of the origins and importance of the 'middle ranking' people of Europe.

⁹⁸ As Roscoe Pound elaborated:

...Grotius and those who followed him made reason the measure of all obligation. They conceived that the end for which law exists is to produce conformity to the nature of rational creatures. They had broken with authority as authority, but they accepted the Roman law as embodied reason and ventured little that did not have authority behind it. Hence they accepted the Roman maxim-not to injure another and to give to everyone his due, that is, respect for personality and respect for acquired rights-as conformity to the nature of rational creatures.

This raised certain obvious problems:

- What is injury to another?
- What is there in personality that makes aggression an injury?
- What is it that constitutes anything one's own?

Grotius and his successors tried to answer by a theory of natural rights; not merely natural law, as before, not merely principles of eternal validity, but certain qualities inherent in persons and demonstrated by reason and recognized by natural law, to which therefore the national law ought to give effect.

Thus, again, at the very time that the victory of the courts in the contests between the common-law courts and the Stuart kings had established that there were fundamental common-law rights of Englishmen which Englishmen might maintain in courts and in which courts would secure them even against the king, a juristic theory of fundamental natural rights, independent of and running back of all states, which states might secure and ought to secure, but could not alter or abridge, had sprung up independently and was at hand to furnish a scientific explanation when the next century called for one.

By a natural transition, the common-law limitations upon royal authority became natural limitations upon all authority; the common-law rights of Englishmen became the natural rights of man. Each underwent some change of substance along with this change of name.

To understand this change and the effect which it had upon the law as we received it at the end of the eighteenth century and worked it over in the fore part of the nineteenth century, we must examine the theory of natural rights, the theory of the relation of law to natural rights, and the theory of natural law and of the possibility of deducing a fixed and complete system of positive law from the principles of natural law, as these theories were held when our bills of rights were framed and our constitutional law was formative.

(Roscoe Pound, ^æ[The Spirit of the Common Law](#) Marshall Jones Company Publishers, Francetown, New Hampshire, 1921, pp. 89-90. Digitized version: University of Nebraska - Lincoln, College of Law, Faculty Publications. Paper 1)

⁹⁹ Tawney, in 1938, summed up the mood of the era:

The result was that, while the penalties on the vagrant were doubled, religious opinion laid less emphasis on the obligation of charity than upon the duty of work, and that the admonitions which had formerly been turned upon uncharitable covetousness were now directed against improvidence and idleness.

The characteristic sentiment was that of Milton's friend, Hartlib:

The law of God saith, "He that will not work, let him not eat".
This would be a sore scourge and smart whip for idle persons if
... none should be suffered to eat till they had wrought for it.

... Parliament took it up and in 1649 passed an Act for the relief and employment of the poor and the punishment of beggars, under which a company was to be established with power to apprehend vagrants, to offer them the choice between work and whipping, and to set to compulsory labor all other poor persons, including children without means of maintenance.

¹⁰⁴ The continual complaint by the United States that Japan engages in restrictive import practices, and that Japanese firms collude in taking over American industries, are classic examples of this form of activity. While neither is understandable, or acceptable, from a Western economic perspective, both are perfectly understandable from a Confucian perspective. It is very likely that over the next several decades similar complaints will be made about the activities of the Chinese when interacting with the West.

¹¹¹ Aquinas's version of the same claim was:

... natural processes develop from simple to compound things, so much so that the highly developed organism is the completion, integration, and purpose of the elements. Such indeed is the case with any whole in comparison with its parts. (Gilby 1960, p. 369)

¹¹² Although one started with the 'atoms', these were, by implication, parts which were necessary to a whole. The presumption that one could ascertain the 'potential' of an atom, was a consequence of Aquinas's holism.

In line with the new focus, developing the individual's 'potential' was, increasingly, to displace 'perfection' as the goal of human activity. This, however, still implied a 'purpose' in creation.

However 'earthly-minded' Western Europeans were to become, they carried with them an implicit understanding that there was more to life in this world than meets the eye!

- ¹¹³ Although many of those who held this position claimed that it no longer relied on a metaphysical dimension to reality, the presumption that individual self-interest leads to communal good assumes the 'Unseen Hand' at work. Of course, many (including most economists) still, either implicitly or explicitly, hold this position
- ¹¹⁴ See ['From the subversion of tradition to plotting the future '](#) for more on this.
- ¹¹⁵ This was a saying which first appeared in English literature in the 16th century (though it had a far longer history in Hebraic writings). Nicholas Breton, in his ^œ[The Works of a Young Wyt](#) (1577, p. 33) put it like this: "The world is hard, they must take pain that look for any gayn".
- ¹¹⁶ Summed up in 'development' circles over the past fifty years as 'you can't make an omelette without breaking eggs'.
- ¹¹⁷ See [The emergence of environments in European History](#)
- ¹¹⁸ See [17th C. Protestant jurist-theologians](#) for more on this
- ¹¹⁹ The divide between the virtue of a 'social conscience' and the virtue of self-interest remains as potent now as it was in the 18th century. Many of the most bitter confrontations in U. S. politics are a consequence of ideological commitment to one or other focus.
- ¹²⁰ It is easy to forget that, while the formulation of environments seems perfectly logical and based on the distillation of features of an objective reality, the objective reality itself is subjective to Western communities. The environments are *reifications* of aspects of life, not distinct areas of life. Though, of course, once an environment is outlined and behavior channeled into conformity with its requirements, it will, in the minds of those involved, become a distinct area of reality.
- ¹²¹ See ["'Money-making' patron-client networks and an emerging emphasis on quantification "](#) for more on this
- ¹²² Though, in keeping with the times, he distilled his laws from *postulated* behaviors and postulated forms of social organization and interaction through history. This was the 18th century, a time when applied statistical reasoning was coming into its own. Some 12 years earlier, Bayes' (1763) paper, ^œ[An Essay towards solving a Problem in the Doctrine of Chances](#), had been posthumously read to the Royal Society. As Bradley Efron put it:

Bayes' 1763 paper was an impeccable exercise in probability theory. The trouble and the subsequent busts came from overenthusiastic application of the theorem in the absence of genuine prior information... trying to assign an "uninformative prior" or "objective prior"... Whether or not this can be done legitimately has fueled the 250-year controversy [the Bayesian-frequentist argument]. (^œ[Bayes' Theorem in the 21st Century](#), *Science* 7 June 2013: Vol. 340 no. 6137 pp. 1177-1178)

This is a form of reasoning which became common in the 18th and 19th centuries, and, indeed, is all-too-often employed in the 21st century:

- ✴ Determine what life must have been like in the historical past by reasonable extrapolation from what you know, then,

✳ from that postulated reality, distill the principles which 'explain' it.

The principles, inevitably, reflect those which order 'objective reality' for the reasoner.

¹²³ If this solution seems familiar, that is because it is. It is very similar to the approach Thomas of Aquinas used in defining the nature of natural and ecclesiastical laws. And, it has produced very similar consequences.

The end result of Aquinas's separation of the natural and the supernatural was the dominance of the natural over the supernatural in Western European thinking. The end result of Adam Smith's model has been that 'economic rationality' has lain siege to 'moral virtue' (see [Economic Rationality](#)).

¹²⁴ See ['Producing Conformity To The Nature Of Rational Creatures'](#)

¹²⁵ See [Social Exchange Theory](#) for an example of this reasoning in the 20th and 21st centuries

¹²⁶ As Plato (360 B.C.) in his ^œ[Cratylus](#) has Socrates summarize:

Heracleitus is supposed to say that all things are in motion and nothing at rest; he compares them to the stream of a river, and says that you cannot go into the same water twice.

¹²⁷ How wonderfully adept human beings are in rationalizing apparent contradictions when they feel the need to do so!

¹²⁸ See [Teaching Western Europeans to Work](#)

¹²⁹ The claims of the past decade - that those involved in financial activity must 'discipline themselves' flows from this reasoning. To impose discipline from outside the 'economic environment' is illegitimate.

¹³⁰ among many of the middle and upper ranks of British and western European communities - including many of those who had been involved in the religious revivals we examine shortly

¹³¹ This logic only holds if one accepts Aquinas's holistic view of reality - that we live in a perfect creation, governed by laws which ensure that perfection. If you don't believe in a Supreme, Benevolent Creator, then you really have no reasonable base from which to argue this.

¹³² While many would argue that government exists to protect the poor and weak, this was not the presumption of 18th and 19th century 'responsible' Western Europeans. It was the task of government to train the poor to productive endeavor and protect the rights of those engaged in self-interested accumulation of 'assets'.

¹³³ [Herbert Spencer \(1884\)](#) provided an explanation of the need for such measures:

Humanity is being pressed against the inexorable necessities of its new position - is being molded into harmony with them, and has to bear the resulting unhappiness as best it can. The process must be undergone, and the sufferings must be endured.

John Maynard Keynes, in his work ^œ[The General Theory of Employment, Interest and Money](#) (London: Macmillan 1936, p. 33) would comment on all this:

The completeness of the Ricardian victory is something of a curiosity and a mystery. It must have been due to a complex of suitabilities in the doctrine to the environment into which it was

projected. That it reached conclusions quite different from what the ordinary uninstructed person would expect, added, I suppose, to its intellectual prestige. That its teaching, translated into practice, was austere and often unpalatable, lent it virtue. That it was adapted to carry a vast and consistent logical superstructure, gave it beauty. That it could explain much social injustice and apparent cruelty as an inevitable incident in the scheme of progress, and the attempt to change such things as likely on the whole to do more harm than good, commended it to authority. That it afforded a measure of justification to the free activities of the individual capitalist, attracted to it the support of the dominant social force behind authority.

The more extreme extrapolations of neoliberal economic thought have a long history. From the outset, belief in the *Summum Bonum* consequences of whole-hearted commitment to the 'natural laws' of the economy, produced such reasoning.

¹³⁴ See [The alienation of property](#) for more

¹³⁵ See [From Subsistence to Open-ended Accumulation](#) for more

¹³⁶ It was this early movement of 'potential labor' into towns *prior* to the expansion of industrial production in the late 18th century which inspired those modernization evangelists, Lewis (1955), Hirschman (1958) and [Rostow \(1961\)](#), to formulate their plans for 'Third World development' in the 20th century.

In order to ensure 'economic development' in the Third World it was necessary to move 'surplus labor' from the countryside to the towns, build factories, and provide 'seeding capital' to entrepreneurs which, it was presumed, would produce that 'trickle-down' effect for which the world has waited so long.

Those who taught this doctrine 'knew' that they were right. There were no 'communities', only individuals - pawns in a 'development' game. Their models were based on and consistent with the 'laws of economics' and demonstrated in their interpretation of Western European history.

¹³⁷ Marx was a little late in his speculations on the possibility of a revolution against capitalism. The revolution of the proletariat which Marx anticipated in the second half of the 19th century, might possibly have happened in the 18th but for the intervention of Protestant evangelicalism. The revolution which occurred was not an overthrow of capitalism but a religious conversion of the dispossessed and down-trodden to a reinvigorated version of the values of their oppressors.

¹³⁸ Large numbers of these people formed the backbone of Cromwell's 'New Model Army' in the English civil war and subsequent Commonwealth (1642-1660). Following the restoration of the monarchy they lost political protection and became fair-game to those who had opposed the parliamentary reforms - and any others who saw in their political weakness an opportunity for profit.

I am sure that those who know that economic principles are indeed universal laws of nature, crafted by an 'unseen hand', will argue that the description which follows is yet another demonstration of the 'unseen hand' at work - I prefer to believe in blind chance, or, perhaps, a greater law which ensures, as Hobbes suggested, that human beings, unfettered (perhaps, especially, those who live in an unregulated capitalist world),

are red in tooth and claw. As Jefferson put it "they have divided their nations into two classes, wolves and sheep".

Fred Guerin has summed it all up:

...[E]ven today many economists still hold onto the mythic assumption that the "impartial" self-regulating market is no more than a theoretical expression of the "order of human nature" itself and not, after all, a product of powerful political and moneyed interests. This belief has distant origins in Thomas Hobbes fear-inspired mechanistic account of human beings who in their natural state are war-like and driven by self-interest.

Not only does the latter perspective resonate in many manifestations of capitalist theory, it also underscores a desire to replicate in economic theory what nature apparently prescribes - a war-like disposition disciplined through competitive markets based on innate selfishness. But what if the incapacity to imagine alternatives is not because we are naturally selfish, but simply a function of the reality that in capitalist societies we are all conditioned to see the world in terms of individual economic self-interest rather than in terms of common human good or planetary limits, health and equilibrium?

Over time, the promotion of selfishness as a virtue not only changes the way we look at ourselves, it influences the way we relate to each other and to the planet itself. Instead of citizens who define themselves in relation to common goods, we are reduced, under the selfish orientation of capitalism, to aggregates of self-interested atomistic individuals encouraged to believe that we can continue a lifetime of limitless consumption. Those who are entirely left out of the consumer game - the increasing numbers of homeless, stateless refugees, destitute and imprisoned whose day-to-day life is taken up by the fight for mere survival - are the necessary residue of a global capitalist system.

(Fred Guerin, [The Compelling Conclusion About Capitalism That Piketty Resists](#), *Truthout*, 26 June 2014 00:00)

¹³⁹ Thomas Jefferson, in a letter to Dr. Thomas Cooper, Monticello, September 10, 1814, provided his own description of conditions in Great Britain:

The population of England is composed of three descriptions of persons (for those of minor note are too inconsiderable to affect a general estimate). These are,

1. The aristocracy, comprehending the nobility, the wealthy commoners, the high grades of priesthood, and the officers of government.
2. The laboring class.
3. The eleemosynary class, or paupers, who are about one-fifth of the whole.

The aristocracy, which have the laws and government in their hands, have so managed them as to reduce the third description below the means of supporting life, even by labor; and to force the second, whether employed in agriculture or the arts, to the maximum of labor which the construction of the human body can endure, and to the minimum of food, and of the meanest kind,

which will preserve it in life, and in strength sufficient to perform its functions.

To obtain food enough, and clothing, not only their whole strength must be unremittingly exerted, but the utmost dexterity also which they can acquire; and those of great dexterity only can keep their ground, while those of less must sink into the class of paupers. Nor is it manual dexterity alone, but the acutest resources of the mind also which are impressed into this struggle for life; and such as have means a little above the rest, as the master-workmen, for instance, must strengthen themselves by acquiring as much of the philosophy of their trade as will enable them to compete with their rivals, and keep themselves above ground.

Hence the industry and manual dexterity of their journeymen and day-laborers, and the science of their master-workmen, keep them in the foremost ranks of competition with those of other nations; and the less dexterous individuals, falling into the eleemosynary ranks, furnish materials for armies and navies to defend their country, exercise piracy on the ocean, and carry conflagration, plunder and devastation, on the shores of all those who endeavor to withstand their aggressions.

A society thus constituted possesses certainly the means of defence. But what does it defend? The pauperism of the lowest class, the abject oppression of the laboring, and the luxury, the riot, the domination and the vicious happiness of the aristocracy. In their hands, the paupers are used as tools to maintain their own wretchedness, and to keep down the laboring portion by shooting them whenever the desperation produced by the cravings of their stomachs drives them into riots. Such is the happiness of scientific England; now let us see the American side of the medal.

Despite eight years in the White House (1801-9) and a remarkable depth and breadth of intellectual interests and insight, Jefferson's subsequent description of "the American side of the medal" shows how much easier it is to get others into perspective than oneself. He is, after all, speaking of a country still exploiting a large slave population and reducing large indigenous populations to destitution and the verge of extinction:

And, first, we have no paupers, the old and crippled among us, who possess nothing and have no families to take care of them, being too few to merit notice as a separate section of society, or to affect a general estimate.

The great mass of our population is of laborers; our rich, who can live without labor, either manual or professional, being few, and of moderate wealth.

Most of the laboring class possess property, cultivate their own lands, have families, and from the demand for their labor are enabled to exact from the rich and the competent such prices as enable them to be fed abundantly, clothed above mere decency, to labor moderately and raise their families. They are not driven to the ultimate resources of dexterity and skill, because their wares will sell although not quite so nice as those of England.

The wealthy, on the other hand, and those at their ease, know nothing of what the Europeans call luxury. They have only somewhat more of the comforts and decencies of life than those

who furnish them. Can any condition of society be more desirable than this ?

For more on Jefferson's attitude toward the retention and incorporation of "the blacks into the state", see Thomas Jefferson, *Notes on the State of Virginia*, Query 14, 1781-1782:

It will probably be asked, Why not retain and incorporate the blacks into the state, and thus save the expence of supplying, by importation of white settlers, the vacancies they will leave? Deep rooted prejudices entertained by the whites; ten thousand recollections, by the blacks, of the injuries they have sustained; new provocations; the real distinctions which nature has made; and many other circumstances, will divide us into parties, and produce convulsions which will probably never end but in the extermination of the one or the other race.

To these objections, which are political, may be added others, which are physical and moral. The first difference which strikes us is that of colour. Whether the black of the negro resides in the reticular membrane between the skin and scarf-skin, or in the scarf-skin itself; whether it proceeds from the colour of the blood, the colour of the bile, or from that of some other secretion, the difference is fixed in nature, and is as real as if its seat and cause were better known to us. And is this difference of no importance? Is it not the foundation of a greater or less share of beauty in the two races? Are not the fine mixtures of red and white, the expressions of every passion by greater or less suffusions of colour in the one, preferable to that eternal monotony, which reigns in the countenances, that immoveable veil of black which covers all the emotions of the other race? Add to these, flowing hair, a more elegant symmetry of form, their own judgment in favour of the whites, declared by their preference of them, as uniformly as is the preference of the Oranootan for the black women over those of his own species. The circumstance of superior beauty, is thought worthy attention in the propagation of our horses, dogs, and other domestic animals; why not in that of man?

(Jefferson, Thomas, 1743-1826 . ^œ[Notes on the State of Virginia](#), pp. 264ff, Electronic Text Center, University of Virginia Library)

¹⁴⁰ This is not surprising of course. Processes of categorization and classification require that, if closely similar groupings are to be kept separate, the *differences* between them must constantly be emphasized. The more similar they seem to be, the more often one will focus on and emphasize the differences.

¹⁴¹ The problems experienced by the small-holders of Western Europe during the 18th and 19th centuries have been replicated in Third World communities in the 20th and this century. The UN Agency for Human Settlements described the scene in 2003:

...urban poverty levels are less than rural poverty and ... the rate of growth of the world's urban population living in poverty is considerably higher than that in rural areas. The absolute number of poor and undernourished in urban areas is increasing, as is the share of urban areas in overall poverty and malnutrition. In general, the locus of poverty is moving to cities, a process now recognized as the 'urbanization of poverty'.

(UN Agency for Human Settlements, ^œ[The Challenge of Slums: Global Report on Human Settlements 2003](#) 'Key Findings')

Toynbee described some of the conditions in England:

The misery which came upon large sections of the working people at this epoch was often, though not always, due to a fall in wages, for, as I said above, in some industries they rose. But they suffered likewise from the conditions of labor under the factory system, from the rise of prices, especially from the high price of bread before the repeal of the corn-laws, and from those sudden fluctuations of trade, which, ever since production has been on a large scale, have exposed them to recurrent periods of bitter distress.

The effects of the industrial Revolution prove that free competition may produce wealth without producing well-being. We all know the horrors that ensued in England before it was restrained by legislation and combination.

(^œToynbee (1884) Lecture VIII 'The Chief Features of the Revolution')

- ¹⁴² whether already destitute or fearful of the possibilities of destitution which they saw around them as rural communities came increasingly under attack and life became more and more difficult
- ¹⁴³ How easy it is for those who belong to exploiting groups to blame their victims for the consequences of their policies. First, dispossess them, then, as their communities disintegrate and they become demoralised, point to the consequences as justification for your attitudes and policies.
- ¹⁴⁴ See Armstrong (1997) for a description of some of these preachers. As a reviewer put it:
- John Armstrong introduces his readers to five key evangelists whose ministries covered a period of two hundred years, impacted hundreds of thousands of lives, and were marked by unusual boldness, passionate proclamation, and an outpouring of Spiritual blessing on two continents.
- ¹⁴⁵ A similar confusion followed the success of those whose material fortunes resulted from their religious conversion in the 18th and early 19th centuries - as John Wesley was to lament
- The Methodists grow more and more self-indulgent, because they grow rich. And it is an observation which admits of few exceptions, than nine in ten of these decreased in grace, in the same proportion as they increased in wealth.... Does it not seem (and yet this cannot be) that Christianity, true scriptural Christianity, has a tendency to destroy itself?
(quoted in Armstrong 1973, p. 95)
- ¹⁴⁶ cf. Stephen (1876), Hammond & Hammond (1918), Hobsbawm (1964), Thompson (1964), etc.
- ¹⁴⁷ published in a separate tract in the year 1762, under the title of "Cautions and Directions given to the Greatest Professors in the Methodist Societies,"
- ¹⁴⁸ See John Wesley, ^œ*A Short History of Methodism* (From the Thomas Jackson edition of *The Works of John Wesley*, 1872) for a brief account of the movement.
- ¹⁴⁹ As Gamm and Putnam (1999) claimed of the United States between 1760 and 1840,
- Methodist and Baptist churches flourished in this era ... In communities across the country, Americans established Bible and

tract societies, missionary societies, temperance groups, and benevolent associations. Sunday schools, too, were organized in these years.

150 As Tom Bates put it, describing the town of Cromford in his *Insider's Guide to Cromford* :

The present-day village owes its existence to Richard Arkwright who was responsible for most of its construction; not only did he build an entire industrial complex of mills and workshops, but he also built houses for his workers, a school, a chapel, and an inn in the Market Place.

151 The often quoted successful organization and activity of the ^{ae}Grameen Bank in Bangladesh over the past twenty five years is an excellent example of the way in which this kind of 'pump-priming' works when properly adapted to the understandings and organization of the communities within which it is developed. As its founder, Muhammad Yunus explained, in an interview on CBC,

I came across a woman and she makes only two pennies a day by making bamboo stools. And I couldn't accept why anybody should work so hard and make only two pennies. And she explained why she makes two pennies: she doesn't have the money to buy the bamboo which goes into the bamboo store, so she has to borrow money from a trader, the trader who buys the final product. So he lends her the money to buy the bamboo. When he buys the final product, he offers her a price which barely covers the cost of all the raw materials. Her labor comes almost like free, like she works like a slave. So I said, look, this is so simple to solve. It doesn't need big theories to solve this.
(1991)

His solution was to take the initiative away from those exploiting the woman, allowing her to reap the profit of her activity rather than allowing the lender to set the terms of the interaction. The result was the Grameen Bank.

The loans average no more than seventy-five dollars - too small for other banks to even bother with - and yet with these loans people revolutionize their lives. The Grameen Bank is founded on a bold but simple idea that the answer to poverty is not charity but credit.

The Grameen Bank initially restricted its activities to destitute women, and, whether consciously or not, developed very similar patron-client relationships between the borrowers and lender as exist in the wider community. It has not, until recently, challenged existing structures but augmented them.

This is precisely why the Methodist system was so successful in the 18th and early 19th centuries and received so little opposition from those involved in business in the period. It emancipated those who were destitute from reliance on money lenders and others intent on exploiting them. This allowed them to build up their businesses in a protected environment. As the movement grew in strength, this allowed networks of business interaction to emerge based on similar principles.

152 Campbell's (1871 Pt 1 P.1) explanation of the Archbishop's views is as follows:

The Arch-Bishop's position is shortly this, - that mere savages - that is to say, "men in the lowest degree, or even anything approaching

to the lowest degree, of barbarism in which they can possibly subsist at all - never did and never can, unaided, raise themselves into a higher condition"; that even when they are brought into contact with superior races, it is extremely difficult to teach them the simplest arts; that they "seem never to invent or discover anything," because even "necessity is not the mother of invention except to those who have some degree of thoughtfulness and intelligence"; that whatever the natural powers of the human mind may be, they require to have some instruction from without wherewith to start.

He holds it to be "a complete moral certainty that men left unassisted in what is called a state of nature - that is, with the faculties Man is born with not at all unfolded or exercised by education - never did, and never can, raise themselves from that condition." Therefore, "according to the present course of things, the first, introducer of civilization among savages is, and must be, man in a more improved state."

153 ^œ[Letter to Colonel Edward Carrington, Paris, January 16, 1787](#)

154 The 'trickle down' theory of economics is not the preserve of the 20th and this century, it has been an implicit presumption of capitalism since the late 17th century. John Locke popularised the idea in the 1690s,

God gave the world to men in common; but... it cannot be supposed he meant it should always remain common and uncultivated. He gave it to the use of the industrious and rational (and *labor* was to be *his title* to it). (1982, p.21).

See Robert Frank (*The New York Times*, April 12th 2007) ^œ[In the Real World of Work and Wages, Trickle-Down Theories Don't Hold Up](#) for a discussion of the practice in the later 20th and this century. Experiences in the 18th and 19th centuries did little to convince the poor that if the rich got richer so would they!

155 It seems almost inevitable that those living inside the bubble of capitalism will see everything beyond it as a wasteland which needs to be reclaimed. From the missionary movement of the past 250 years; to the 'colonial endeavor' of the 19th and 20th centuries; to the 'development' drive of the past sixty years, Western Europeans have dedicated lives, time and resources to attempting to 'save', 'reclaim' and 'develop' the 'heathen', 'primitive' and 'undeveloped' of the world.

156 It is a little difficult to see how this description fits the current crop of 'financial wizards' and their unconditional bonuses!

157 See [The nature of feudalism](#) for more on this.

158 The reference to runaway apprentices and 'gentlemen's servants' makes sense to present ears only when the attitudes to apprenticeship which had evolved over the preceding two centuries are understood.

In 16th century Tudor England, responsible citizens were faced with burgeoning numbers of displaced people. They 'clogged the highways and byways' and presented a menace to 'decent' citizenry. One of the remedies devised for dealing with displaced children and the children of paupers during the period was to place them in apprenticeships. As Henry Craik (1884, p. 6) put it,

It was under the reign of Henry VIII that the chief apprentice laws were added to the Statutes book; and under them, children between five and thirteen who were found begging or idle were to

be bound apprentices to some handicraft. The apprenticeship laws were compulsory upon master and servant alike.

Charlotte Neff (1996) explained that this, from the outset, resulted in two forms, 'trade' and 'pauper', apprenticeships being recognized in England.

By the 18th century, pauper apprenticeships had (from a less than auspicious beginning)

grown into what was often little less than serfdom or slavery (Craik, 1884, p. 9).

The situation did not improve through the century. Speaking of the early 19th century, John Burnett claimed that,

apprenticeship survived only in the wretched bondage to which pauper children were sometimes subjected by penny-pinching poor law administrators. (1974, p. 23)

It became commonplace for children who found themselves bound in often very abusive relationships, to run away and join the floating population of 'idle poor'. That population, through the 18th century, grew constantly larger as the policies of reformers took effect.

¹⁵⁹ Practice of economic relief for the poor that was adopted over much of England following a decision by local magistrates at the Pelican Inn, Speenhamland, near Newbury, Berkshire, on May 6, 1795. Instead of fixing minimum wages for poor laborers, the practice was to raise workingmen's income to an agreed level, the money to come out of the parish rates. This allowance was designated as the price of 3 gallon loaves a week for each man (a gallon loaf was 8 1/2 pounds [about 4 kilograms]) plus the cost of 1 1/2 loaves each for a wife and every child. The money was to cover all expenses. This allowance system lasted until the enactment of the Poor Law Amendment (1834).

Contemporary commentators and modern historians alike have condemned the system; the former claim it encouraged the poor in idleness, while the latter stress the opportunity it gave unscrupulous employers and landlords to reduce wages and raise rents respectively, knowing their depredations would be redressed from the public pocket. ("Speenhamland system". (2010). In *Encyclopedia Britannica*. Retrieved February 08, 2010, from Encyclopedia Britannica Online:

¹⁶¹ See [Capitalism and the Nature of Work](#) for more on this

¹⁶² This same criticism has commonly been made by 'development' experts dealing with people in 'under-developed' countries. One cannot rely on people turning up for work when they should. They all-too-often find something else they would rather be doing!

Of course, the Western belief in the vital importance of 'work' is ideological in nature. The term 'work' encompasses a set of peculiar meanings in Western communities (see [Nature of Work](#)). It is closely related to the Western emphasis on production, consumption and accumulation in determining and maintaining status, and, when taken from that context, loses a great deal of its moral significance.

When status is attained and maintained by other means, work, in the sense of labor, becomes something one has to do, but in which one engages only to the extent required for particular, quite specific purposes. Once the particular objectives have been reached, people stop working until another objective spurs them once more to labor. The central activities of their lives are focused by the social template through which status and prestige are spelt out and contextualized.

They are not, as McClelland (1976) suggested people in any society should be, 'achievement motivated'. Goal oriented behavior is closely allied to the Western drive to 'realize one's potential' (see [fulfilling One's Potential](#) for more on this).

¹⁶³ In "an epistle to all the slothful and careless people" John Bunyan wrote:

WHAT SHALL I SAY? Time runs; and will you be slothful? Much of your lives are past; and will you be slothful?

Your souls are worth a thousand worlds; and will you be slothful?

The day of death and judgment is at the door; and will you be slothful?

The curse of God hangs over your heads; and will you be slothful?

Besides, the devils are earnest, laborious, and seek by all means every day, by every sin, to keep you out of heaven, and hinder you of salvation; and will you be slothful?

Also your neighbors are diligent for things that will perish; and will you be slothful for things that will endure for ever?

Would you be willing to be damned for slothfulness?

Would you be willing the angels of God should neglect to fetch your souls away to heaven when you lie a-dying, and the devils stand by ready to scramble for them?

Was Christ slothful in the work of your redemption? Are his ministers slothful in tendering this unto you?

And, lastly, If all this will not move, I tell you God will not be slothful or negligent to damn you - whose damnation now of a long time slumbereth not - nor the devils will not neglect to fetch thee, nor hell neglect to shut its mouth upon thee.

(^{oe}[John Marshall 1698](#))

¹⁶⁴ See [Born Again Capitalists](#)

¹⁶⁵ See [From the Subversion of Tradition to Plotting the Future](#) for more on this.

¹⁶⁶ See [The emergence of time as currency](#) for more on this. Also, Hatcher (1994) for a discussion of the consequences of the 14th century plagues.

¹⁶⁷ This problem is not one of simply historical interest. In the present, in non-Western countries, very similar problems of dispossession, inflation of living costs and degradation of land are forcing growing numbers of people out of rural areas and into towns and cities. And, as numbers have multiplied and associated problems of social dislocation and inadequate living conditions have snowballed, governments and international agencies have seen the problem, not as one of dispossession and extortion, but as one of 'development'.

This is remarkably similar to the response which was made in 18th century western Europe to the problems of the age. Only through

'progress' could the problems of poverty be dealt with. And that progress, so far as those in authority were concerned, required the policies, which were resulting in the dispossession and eviction of small-holders, being promoted throughout the country.

- 168 Search on the phrase "without benefit of clergy" in the following text, ^{ae}[Commentaries on the Laws of England](#) by William Blackstone (1765), for further information. As Blackstone explained:

...In China murderers are cut to pieces, and robbers not: hence in that country they never murder on the highway, though they often rob. And in England, besides the additional terrors of speedy execution, and a subsequent exposure or dissection, robbers have a hope of transportation, which seldom is extended to murderers. This has the same effect here as in China: in preventing frequent assassination and slaughter.

Yet, though in this instance we may glory in the wisdom of the English law, we shall find it more difficult to justify the frequency of capital punishment to be found therein; inflicted (perhaps inattentively) by a multitude of successive independent statutes, upon crimes very different in their natures.

It is a melancholy truth, that among the variety of actions which men are daily liable to commit, no less than an hundred and sixty have been declared by act of parliament to be felonies without benefit of clergy; or, in other words, to be worthy of instant death. So dreadful a list, instead of diminishing, increases the number of offenders.

(BOOK 4, CHAPTER 1, Of the Nature of Crimes; and Their Punishment)

- 169 See [Time and work](#) for more on this.

- 170 Furniss provides a number of other examples of this kind of intervention. As he says:

William Bailey, as an introduction to his scheme, stated the benefit which all advocates of the workhouse expected from that institution:

Employing the poor in parish workhouses will very much promote the commerce, wealth and peace of this kingdom. These houses will also become proper schools to train up the children of the poor to religion, sobriety and industry. ... They will like-wise be nurseries for spinners, weavers, and other artificers ... and give occasion to the exercise of many other trades and useful employments [William Bailey, *A Treatise* (1758), p. 1.].

Apparently seven decades of disappointing experience had not freed the mind of this writer from the illusion that direct economic benefits would flow from the employment of the people at artificial occupations in houses of industry. He affirmed that it had been the want of proper direction, rather than a fault of principle, that had caused all efforts at creating employment to fail of their purpose, and proposed again that the labor of the poor should be so directed as to compete with no established manufacture:

Linen cloth would be obtained from the labor of our own poor and employment and subsistence furnished for a multitude of men, women and children. ... Whereas at present immense sums are sent abroad to feed, clothe, and enrich the poor, the

landlords, the manufacturers and the merchants of foreign countries.

(Furniss 1920 pp. 115-6)

- ¹⁷¹ Quotation from a letter to his daughter in 1777, in his memoirs:
^œ*Memoirs of the Life of the Right Hon. Sir John Eardley Wilmot, Knt, late Lord Chief Justice of the Court of Common Pleas, and one of His Majesty's most Honourable Privy Council: with some Original Letters.* By John Wilmot, Esq., White and Co (The Second Edition, with Additions; 8vo. pp. 235.), 1811, p. 179.
- ¹⁷² Hansard's Parliamentary Debates, First Series, Vol. IX col 798-806 (13 July 1807)
- ¹⁷³ See ^œ*Robert Raikes and Sunday Schools* for a succinct discussion of the origins of the movement
- ¹⁷⁴ Thomas Jordan (1993) has summed up the value of education during the first half of the 19th century,

In 1851, Henry Mayhew reported that costermongers sent their children to school only to "save the trouble of tending them" (Quennell 1969). In the early decades, reformers established Sunday schools to promote access to the Bible, although some of them were anxious about educating the poor beyond their presumed station in life.

At a more political level, the tension between the Anglicans' National Society for Promoting the Education of the Poor in the Principles of the Established Church and the Chapel's British and Foreign Schools Society delayed reform of education. The National Society was the larger, and the Royal Lancasterian Society was smaller than either.

Overall, the pattern of schooling was spotty in the early and middle decades of the 19th century, and Bedfordshire had the highest rate of illiteracy. Wolverhampton, according to the Morning Chronicle's special correspondent in 1851, had " ... 15,000 children in a space of a few square miles growing up in dense and total ignorance."

It should be noted that education in the period owed much to the efforts of individuals. Hannah More, early in the 19th century, promoted literacy through Wesleyanism, Robert Raikes' Ragged Schools laid a foundation for later efforts, and Mary Carpenter directed her efforts toward delinquents through scholarship and penal reform.

With the Elementary Education Act of 1870, the government finally undertook serious educational planning. A series of commissions from the Devonshire Report in 1872 subsequently undertook further reform of education. In 1902, public policy led to administrative changes and to promotion of secondary education.

- ¹⁷⁵ How little has changed in two and a half centuries!!
- ¹⁷⁶ Townsend has a grossly inadequate and ideologically distorted perception of the historical past, common to those who share - even now - his ideological understandings.
- It is, unfortunately, still the case that gross distortions of history can be and are employed by many social commentators to support their views. It seems that, provided one states such distortions authoritatively and

confidently, people who want to agree with the position being presented will readily accept and repeat the distortions.

(One should treat *anything* presented as history with caution. Always check the 'facts')

¹⁷⁷ See [Thomas More's description](#) of what happened in the 16th century for a more realistic, contemporary explanation.

¹⁷⁸ See Rosser (1997) for a discussion.

¹⁷⁹ See [maximizing Profits Through The Law](#) for more.

¹⁸⁰ This is a description which is all-too-often ignored by those who use Smith's writings to justify their positions:

[In any confrontation between workers and employers] ...the common wages of labor, depends everywhere upon the contract usually made between those two parties, whose interests are by no means the same. The workmen desire to get as much, the masters to give as little as possible. The former are disposed to combine in order to raise, the latter in order to lower the wages of labor.

It is not, however, difficult to foresee which of the two parties must, upon all ordinary occasions, have the advantage in the dispute, and force the other into a compliance with their terms. The masters, being fewer in number, can combine much more easily; and the law, besides, authorizes, or at least does not prohibit their combinations, while it prohibits those of the workmen. We have no acts of parliament against combining to lower the price of work; but many against combining to raise it.

In all such disputes the masters can hold out much longer. A landlord, a farmer, a master manufacturer, a merchant, though they did not employ a single workman, could generally live a year or two upon the stocks which they have already acquired. Many workmen could not subsist a week, few could subsist a month, and scarce any a year without employment. In the long run the workman may be as necessary to his master as his master is to him; but the necessity is not so immediate.

We rarely hear, it has been said, of the combinations of masters, though frequently of those of workmen. But whoever imagines, upon this account, that masters rarely combine, is as ignorant of the world as of the subject. Masters are always and everywhere in a sort of tacit, but constant and uniform combination, not to raise the wages of labor above their actual rate. To violate this combination is everywhere a most unpopular action, and a sort of reproach to a master among his neighbors and equals.

We seldom, indeed, hear of this combination, because it is the usual, and one may say, the natural state of things, which nobody ever hears of. Masters, too, sometimes enter into particular combinations to sink the wages of labor even below this rate. These are always conducted with the utmost silence and secrecy, till the moment of execution, and when the workmen yield, as they sometimes do, without resistance, though severely felt by them, they are never heard of by other people.

Such combinations, however, are frequently resisted by a contrary defensive combination of the workmen; who sometimes too, without any provocation of this kind, combine of their own accord to raise the price of their labor. Their usual pretences are, sometimes the

high price of provisions; sometimes the great profit which their masters make by their work. But whether their combinations be offensive or defensive, they are always abundantly heard of.

In order to bring the point to a speedy decision, they have always recourse to the loudest clamour, and sometimes to the most shocking violence and outrage. They are desperate, and act with the folly and extravagance of desperate men, who must either starve, or frighten their masters into an immediate compliance with their demands.

The masters upon these occasions are just as clamorous upon the other side, and never cease to call aloud for the assistance of the civil magistrate, and the rigorous execution of those laws which have been enacted with so much severity against the combinations of servants, laborers, and journeymen.

The workmen, accordingly, very seldom derive any advantage from the violence of those tumultuous combinations, which, partly from the interposition of the civil magistrate, partly from the necessary superior steadiness of the masters, partly from the necessity which the greater part of the workmen are under of submitting for the sake of present subsistence, generally end in nothing, but the punishment or ruin of the ringleaders.

(1776, pp. 84-5)

- ¹⁸¹ See Rosser (1997) for discussion of artisanal labor in both the medieval period and through the 18th and early 19th centuries. As he says,

Crafts guilds and fraternities offered workers to distance themselves from the underclass, but it also provided access to masters and patrons. The networks created through work extended into the political and social lives of medieval workers.

Over more than five hundred years, the artisans of western Europe became separated from 'The Poor', a distinct grouping of people with their own networks and understandings of the world.

- ¹⁸² See [Attitudes of the 'little gentry' to the 'idle poor'](#).

- ¹⁸³ I first became aware of this divide during the early 1960s. I was truck driving for an old, well-established trucking firm and became aware that there were a few skilled employees who remained aloof. They were (quite literally) a dying breed by then but they still belonged to their working men's club and clearly considered themselves superior to the rest of us who were just 'common workers'.

- ¹⁸⁴ See [A New Moral Leadership in the 18th century](#)

- ¹⁸⁵ For a discussion of the *Summum Bonum* see [In Search of the 'Greatest Good'](#). People living in Western communities continue to assume that they deserve the prosperity and wellbeing which capitalism has, by and large, delivered to the middle classes. The 'problems' of the 'non-western' world (or even of their own poor and marginalized) are not their concern. In true capitalist style, the victims have brought it on themselves. The remedy is at hand: summed up in that wonderfully myopic absurdity "teach a man to fish and he has food for life" - [in oceans rapidly being emptied by the fishing fleets of capitalism](#).

- ¹⁸⁶ A final comment on the nature of 19th century capitalism by Alexis de Tocqueville (1835) after his visit to Manchester:

Look up and all around this place you will see the huge palaces of industry. You will hear the noise of furnaces, the whistle of steam.

These vast structures keep light and air out of the human habitation which they dominate; they envelope them in perpetual fog; here is the slave, there the master; there the wealth of some, here the poverty of most; there the organized effort of thousands produce, to the profit of one man, what society has not yet learned to give. Here the weakness of the individual seems more feeble and helpless even than in the middle of a wilderness; here the effects, there the causes.

A sort of black smoke covers the city. The sun seen through it is a disc without rays. Under this half-daylight 300,000 human beings are ceaselessly at work. A thousand noises disturb this damp, dark labyrinth, but they are not at all the ordinary sounds one hears in great cities....

From this foul drain the greatest stream of human industry flows out to fertilise the whole world. From this filthy sewer pure gold flows. Here humanity attains its most complete development and its most brutish; here civilization works its miracles, and civilized man is turned back into a savage.

(^œ1958 pp. 107-108)

187 442 Robert Steinfeld (2007) described the legal developments affecting union activity in the 1870s,

An initial attempt at a new "settlement" was made by a Liberal government in 1871, which passed the "Trade Union Act" to accord legal recognition to unions, and the Criminal Law Amendment Act to loosen criminal restrictions on collective activity. But union officials reacted with hostility to certain aspects of the Criminal Law Amendment Act. Its clause on picketing, in particular, became especially controversial. And the courts proceeded to inflame this situation by basing a criminal prosecution for conspiracy on a group violation of the Master and Servant act.

In 1875 a Conservative government, which had recently replaced the Liberal government in an electoral upset, implemented a more stable "settlement" that endured for a number of decades.

The new "settlement" was effected by the passage of two new pieces of legislation, the "Employers and Workmen Act," which eliminated criminal penalties for breaches of employment contracts in most cases, and the "Conspiracy and Protection of Property Act," which repealed the Criminal Law Amendment Act, revised the controversial picketing clause, and completely removed trade disputes between employers and workmen from the reach of the common law of criminal conspiracy.

This legislation bestowed on unions broad freedoms (and greater power) to conduct the economic struggle for life in capitalist society. (2007, p. 663)

188 I have a great admiration for the dedication of ordinary Salvation Army officers, often working on their own in the remaining wastelands of the West. In my wanderings I have seen them accept, with amazing patience and kindness, practical responsibility for the dispossessed, the homeless and the outcasts of Western communities - yes, they still exist, and in growing numbers!

¹⁸⁹ See [A New Moral Leadership and Support Network](#) for more on this.

¹⁹⁰ Pasha of Egypt and Inspector General of the British Army in The Sudan.

¹⁹¹ It would take another fifty years for many of the entitlements which, over the past half century, most Western workers have seen as basic, to be securely written into law in most Western nations - such as the forty hour week and two weeks paid annual leave.

[Memory is short](#). In the past thirty years increasing numbers of Western people have accepted the deregulated capitalist argument that such 'luxuries' are not sustainable. They seem to have forgotten (or don't know about) the bitter experiences of the West's Poor in previous centuries (with whom, of course, they don't identify - see [What shall we do with The Poor](#) for more on this). Unthinking believers in the 'power of the marketplace' are allowing hard-won employment conditions to be eroded.

¹⁹² A few quotations from influential Western Europeans set the scene:

We must find new lands from which we can easily obtain raw materials and at the same time exploit the cheap slave labor that is available from the natives of the colonies. The colonies would also provide a dumping ground for the surplus goods produced in our factories.

(Cecil Rhodes, Founder of Rhodesia. [Now Zambia and Zimbabwe])

The colonial question is, for countries like ours which are, by the very character of their industry, tied to large exports, vital to the question of markets ... From this point of view ... the foundation of a colony is the creation of a market.

(Jules Ferry, Speech to the French House of Deputies, July 1885)

We have spoken already of the vital necessity of new markets for the old world. It is, therefore, to our very obvious advantage to teach the millions of Africa the wants of civilization, so that whilst supplying them, we may receive in return the products of their country and the labor of their hands.

(Lord Lugard, British Governor of Nigeria.)

The most useful function which colonies perform ... is to supply the mother country's trade with a ready-made market to get its industry going and maintain it, and to supply the inhabitants of the mother country - whether as industrialists, workers or consumers - with increased profits, wages or commodities.

(Paul Leroy-Beaulieu, *De la Colonisation chez les Peuples Modernes*, 1874.)

(From [Ecologist Vol 20 No 6 - November / December 1990 pp. 201-2](#))

¹⁹³ Experiences in the first decade of the 21st Century have once again demonstrated the validity of this assertion (see [Revitalization Movements and Fundamentalism](#) for more on this).

¹⁹⁴ This was the start of the Boer War in South Africa, reminiscent of the Iraq adventure of the 1st decade of this century - what is it about the start of centuries and the West?

¹⁹⁵ See Achebe (1969); Césaire (1972) Fanon (1967); Kenyatta (1965); Memmi (1967) for descriptions of European colonisation from the perspective of the colonized and Mphahlele (1959) for a description of life for non-Europeans in South Africa *before* apartheid.

¹⁹⁶ to the Inter-Allied School of Higher Social Studies, University of Paris

As Alphonse Karr (1849) put it "plus ça change, plus c'est la même chose" (The more it changes, the more it is the same).

¹⁹⁷ included in *The Modern Traveler* (1898)

¹⁹⁸ And as any well trained *Third World Development* person of the past 50 years would tell you...

¹⁹⁹ Edward Goldsmith (1997) suggests that this mission is still strong in Western understanding of their responsibility for those who are, even now, 'undeveloped' (see [Development as Colonialism](#)):

The massive effort to develop the Third World in the years since the Second World War was not motivated by purely philanthropic considerations, but by the need to bring the Third World into the orbit of the Western trading system in order to create an ever-expanding market for the West's goods and services and to gain a source of cheap labor and raw materials for its industries.

This was also the goal of colonialism, especially during its last phase which started in the 1870s.

For that reason, there is a striking continuity between the colonial era and the era of development, both in the methods used to achieve their common goal and in the social and ecological consequences of applying them. With the development of the global economy, we are entering a new era of corporate colonialism that could be more ruthless than the colonialism that preceded it. (1997 p. 69)

²⁰⁰ Rudyard Kipling, 1899. 'Take up the White Man's Burden', *McClure's Magazine*, New York and London

The full poem is below:

Take up the White Man's burden -
Send forth the best ye breed -
Go bind your sons to exile
To serve your captives' need;
To wait in heavy harness,
On fluttered folk and wild -
Your new-caught, sullen peoples,
Half-devil and half-child.

Take up the White Man's burden -
In patience to abide,
To veil the threat of terror
And check the show of pride;
By open speech and simple,
An hundred times made plain
To seek another's profit,
And work another's gain.

Take up the White Man's burden -
The savage wars of peace -
Fill full the mouth of Famine
And bid the sickness cease;
And when your goal is nearest
The end for others sought,
Watch sloth and heathen Folly

Bring all your hopes to nought.

Take up the White Man's burden -
No tawdry rule of kings,
But toil of serf and sweeper -
The tale of common things.
The ports ye shall not enter,
The roads ye shall not tread,
Go mark them with your living,
And mark them with your dead.

Take up the White Man's burden -
And reap his old reward:
The blame of those ye better,
The hate of those ye guard -
The cry of hosts ye humor
(Ah, slowly!) toward the light: -
"Why brought he us from bondage,
Our loved Egyptian night?"

Take up the White Man's burden -
Ye dare not stoop to less -
Nor call too loud on Freedom
To cloke your weariness;
By all ye cry or whisper,
By all ye leave or do,
The silent, sullen peoples
Shall weigh your gods and you.

Take up the White Man's burden -
Have done with childish days -
The lightly proffered laurel,
The easy, ungrudged praise.
Comes now, to search your manhood
Through all the thankless years
Cold, edged with dear-bought wisdom,
The judgment of your peers!
(Rudyard Kipling *McClure's Magazine* 1899)

²⁰¹ See [Responsibility for securing the future](#) for more on this.

²⁰² See [From personalized, cooperative hierarchical relationships to object-oriented, competitive oppositional relationships](#) and [What shall we do with The Poor](#) for more on this.

²⁰³ Having been involved with and observing those involved in this business (both religious and secular) through most of my life, I know that almost all of them deeply believe in what they're doing. They find it incomprehensible that someone like myself should question the importance of their activities.

²⁰⁴ See [Primary and Secondary Ideologies](#) for more on this.

²⁰⁵ This belief is as strong now as it has been over the past hundred years. Western nations and communities send personnel and provide financial support to dozens of 'aid' organizations which are committed to providing education, 'life skills' and 'work skills' to the impoverished of the world.

²⁰⁶ See [People and recognized Environments](#) for more on this.

207 It was this intuitive recognition of the truth of the basic principles underpinning his ideas which was used by Stanley Jevons (who was one of the pioneers in spelling out the basic principles of neo-classical economics) in 1871, as evidence in his argument for the universal validity of economic propositions. As he says,

The science of economics, however, is in some degree peculiar, owing to the fact, pointed out by J. S. Mill and Cairnes, that its ultimate laws are known to us immediately by intuition... (1970, p. 88).

What is known "intuitively" is that which is fundamental to processes of thought, action, interaction and organization in any community, those forms and understandings which constitute the principles and presumptions of the primary ideologies of communities (see [Primary and Secondary Ideology](#)). These are, of course, specific to particular communities, so, what makes "intuitive sense" in one community may well seem less than rational in another.

208 See [Unravelling Empires](#) for more on this. Western 'experts' have, time and again, demonstrated their unshakable faith in the present and future universal validity and efficacy of their forms of governance and 'development'.

The number of conferences and learned papers (particularly by economists) on 'sustainable development' and 'degrowth' has proliferated over recent years (another 'growth industry?'). They are replete with optimistic assessments of the future (for one of the latest sets of conference papers see Giorgos Kallis *et al* 2010). This, despite the continued emphasis on economic growth and explosion in advertising expertise over the past fifty years.

However, Western middle classes (now the vast majority of Western community members (see [The emergence of 'class'](#))) are highly unlikely to develop 'sustainable' lifestyles. This would require them to drastically reduce their wants and needs. That could only happen, in the long-run, if they changed the basic drivers of their systems of status and prestige attainment and maintenance.

These are expressions of particular primary ideological presumptions of Western thought, action and organization (see [Primary and Secondary Ideology](#)). So, they are highly unlikely (in the short to medium-term) to be changed by the conscious decisions of individuals. We might, as individuals, determinedly reduce our needs and wants (I would recommend this only if you are able to truly dissociate yourself from the need for the approval and respect of others who remain within the system) but we should not delude ourselves that our lifestyles will change the course of Western civilization.

Of course, if more and more individuals adopt similar lifestyles, in the long-run it is likely that the basic drivers of Western systems of status and prestige attainment and maintenance will alter. However, the consequences of such change are all but impossible to predict.

209 See [From Feudalism to Capitalism](#) for a summary of the processes through which Western Europeans moved from feudal to modern forms of meaning, interaction, organization and activity.

210 See [What shall we do with The Poor?](#) for more on this. Also Thompson 1980, 1967; Polanyi 1957; Wilson 1969 for descriptions of the

experiences of those on the receiving end of this four-century-long re-education program.

- ²¹¹ See [The Breakdown and Revitalization of Communities](#) for more on the experiences of colonial territories.
- ²¹² comprising those who had begun to reorder their lives by the emerging economic principles
- ²¹³ Comprising those who were not ordering their lives by the new economic presumptions. Were Third World governments to implement some of the measures used by Western Europeans during this re-education period, Western nations would be the first to loudly protest the inhumane treatment and insist that those governments be pressured to change their policies.
- ²¹⁴ It has become fashionable to use the term "class" in defining variant socio-economic groupings in communities. This, however, too easily links the features of 19th century classes to what is a very different phenomenon. The "lower classes" were not simply the economically disadvantaged, they were the groups within the community who were being re-educated to take their place within a capitalist system. People who have already accepted that their lives should be organized in terms of capitalism can still find themselves economically disadvantaged, but they are not members of the "lower classes" as traditionally defined.
- ²¹⁵ Because these principles are even more fundamental than linguistic principles (indeed they underpin linguistic principles), while the superficial organization of life might be changed as a result of Western pressures, the underlying rationale for behavior will remain very consistent through time.

Communities might appear to change and adapt when they are forced to accept new ways of organization. However, over time, those new ways inevitably become reshaped to make them consistent with the underlying cognitive principles and structures through which community members make sense of themselves and their worlds.

As anthropologists have come to realize over the past thirty years, the term *culture* should not be seen as referring to immutable forms of organization, interaction and meaning. The *surface features* of human community, which include what has over the past century been referred to as culture, can change considerably, yet remain consonant with the underlying principles expressed in those surface forms. So, all "cultural" change within communities must be understood in terms of the fundamental cognitive principles which order both thought and community (see [Primary and Secondary Ideology](#))

- ²¹⁶ Longer than the time-span of Western European occupation of North America!
- ²¹⁷ See Stefan Mair, 2008, ^œ[A New Approach: 'The Need to Focus on Failing States'](#) (in *Harvard International Review*, Vol. 29, No. 4, Winter 2008) for a balanced discussion of the nature of failed states and reality of their threat to 'international security'.

As President Obama claimed in 2009,

Africa's future is up to Africans... Africa's destiny lies in her own hands and the solutions to her myriad problems lie in Africa itself- not inside the corridors of the World Bank or the inner sanctum of the Oval Office or the Kremlin. Moreover, Africa's salvation lies in returning to and building upon its own indigenous institutions and

heritage.

(July 2009 speech in Accra, Ghana)

See [George Ayittey](#) (2010) for a contextualisation of the above quotation.

²¹⁸ The rationality of a community is, of course, always relative to its cognitive frame.

²¹⁹ See

- ^œ[Land Rights in Africa](#)
- ^œ[Growing a Better Future: Food justice in a resource-constrained world](#) (Robert Bailey, *Oxfam International* July 2011);
- Klaus Deininger and Derek Byerlee *et al* 2011, ^œ[Rising global interest in farmland : can it yield sustainable and equitable benefits?](#), *The International Bank for Reconstruction and Development/The World Bank*;
- ^œ[The tragedy of public lands: The fate of the commons under global commercial pressure](#) (Liz Alden Wily, *International Land Coalition*, January 2011)

for more on this.

As Wily (2011) explained,

Of course, neither foreign-driven nor more locally driven land acquisition at scale is new. Millions of hectares of customary domains around the world have already been involuntarily lost to large-scale commercial land pressures, such as through

- (i) allocation to settler communities during colonial times;
- (ii) the creation of 1.7 billion hectares of forest and wildlife reserves, as described earlier;
- (iii) the issue of concessions amounting to millions of hectares for oil, mining, and timber extraction; and
- (iv) establishment of large-scale farming schemes involving limited numbers of local farmers, such as seen most typically in recent years in Brazil, in the mechanised farming schemes of central Sudan of the 1970s and 1980s, in the groundnut scheme in Tanzania in the 1950s, in the rubber plantation developments by Firestone in Liberia since the 1920s, or indeed, going much further back, in the initial oil palm plantation developments, especially along the western coast of Africa, in the late 19th century.

Nevertheless, the current wave of large-scale land acquisition (LSLA) in poor agrarian economies is deservedly referred to as a "land rush", given its scale and short timeframe (since 2007). "The demand for land has been enormous. Compared to an average annual expansion of global agricultural land of less than 4 million hectares before 2008, 45 million worth of large scale farmland deals were announced even before the end of 2009," according to the ^œ[World Bank \(2011 p. xiv\)](#). Confirmed leases issued from 2007 to the end of 2009 were in the region of 20 million hectares in the lands of some 33 host lessor states, all but one or two of which are developing countries.

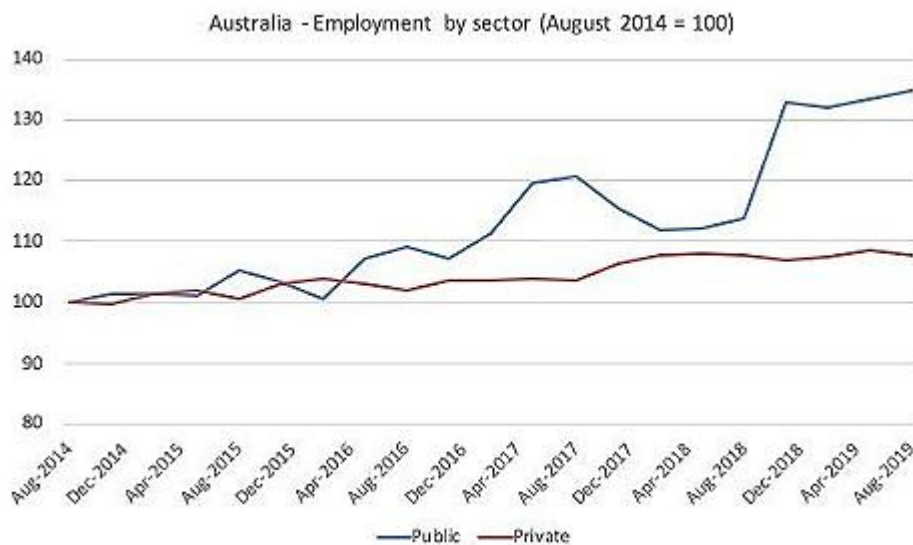

The sheer scale of this globalized land acquisition at scale is indicative of a tipping-point in the globalization of the land market. It signals the opening up of virtually all economies and land classes to externally derived land purchases or leases. This is unlikely to be reversible. The implications for polarisation in the ownership of natural resources are immense. They are also alarming, considering that they occur in environments where industrialisation has not taken off and where opportunities for alternative wage employment for those deprived of their land are scarce.

220 Despite Roland Rust's focus on private sector employment, in the neoliberal world of the past half century private sector employment possibilities in Western nations have stagnated. The reality is that, in order to maintain acceptable levels of unemployment, [governments have stepped into the breach](#). Bill Mitchell has described the 2014-19 Australian scene:

Since August 2014 (when this data first became available), total public sector employment has risen by 34.7 per cent whereas total private sector employment has risen by only 7.8 per cent.

Combined, total employment has risen by 11 per cent.

The following graph shows the evolution of the two series - noting the expansion of public employment over the last 12 months. Private employment growth has stagnated over the last two years.

The following supporting statistics are relevant for the same period:

1. Full-time employment growth: Public 32.6 per cent; Private 6.3 per cent, Total 9.8 per cent.
2. Part-time employment growth: Public 40.6 per cent; Private 10.8 per cent, Total 14.0 per cent.
3. Public sector employment is now 15.1 per cent of the total whereas in the August-quarter 2014 the proportion was 12.6 per cent.
4. Part-time employment has risen from 31.2 per cent of the total in the August-quarter 2014 to 32 per cent in the August-quarter 2019.

As I noted in the blog post - [RBA cuts rates as a futile exercise as Dr Schwarze Null demands fiscal action \(October 2, 2019\)](#) - the shift

to public sector employment has intensified in the last year (see also previous graph).

We now have the stunning result that over the 12 months to the August-quarter 2019, 312 thousand jobs have been created (net) in Australia, of which 301 thousand (96.5 per cent) of those net jobs have been in the public sector. The private labour market is thus stagnating.

(Bill Mitchell - Modern Monetary Theory, [^œGovernments can always create jobs if they choose](#), October 10, 2019)

Later in this blog posting he has discussed the "Australian Occupational Classification divided by Above-average, Below-average and Low Pay".

In a previous blog post he has explained the remuneration direction of US wages through 2019:

In the past, I have demonstrated that the proportion of jobs in the total employment in sectors that pay below-average pay has increased.

But at that level of aggregation, we are unable to say whether these jobs in question were high-pay or low-pay. The next table helps to expand on that understanding.

It shows the net job losses (in the downturn) and net job gains (in the recovery to date) for the major occupations in the BLS classification.

I have sorted the occupations relative to median weekly earnings as at the second-quarter 2019.

Low-pay is 75 per cent of the median.

Summary results:

1. In the downturn 90.6 per cent of the jobs lost were in occupations that paid below median weekly earnings (1.3 per cent of those were in low-paid occupations). Very few jobs (relatively) were lost in the higher paying occupations.
2. Given 86.1 per cent of the total jobs lost in the downturn were in sectors paying above average pay. The inference is that the jobs lost were predominantly the lower paying jobs in those sectors (although we cannot strictly compare mean and median in a wage distribution given the skewness).
3. In the upturn to date, the net jobs added have not yet replaced those lost in the occupations with below median weekly earnings. 58 per cent of the net jobs added have been in occupations with above median weekly earnings.
4. While only a small number and proportion of jobs were lost in the low-pay occupations, the recovery has seen a much larger number of those jobs being added. Of the 42 per cent share of below median earning jobs added in the recovery, the proportion that are in low-pay occupations is currently 18 per cent.
5. This tells us that there is a polarisation going on in the occupational employment structure with a bias towards low-pay jobs in the below median weekly earnings occupations and towards jobs in the above median weekly earnings.

6. That is there has been a hollowing out around the overall median pay levels.

	Downturn	Recovery	Downturn	Recovery
	000s	000s	Per cent	Per cent
Above-median weekly wages	-971	12572	9.4	58.0
Management, business, and financial operations	-521	6117	5.1	28.2
Professional and related	332	6066	-3.2	28.0
Installation, maintenance, and repair	-782	389	7.6	1.8
Below-median weekly wages	-9338	9097	90.6	42.0
Sales and related	-1432	583	13.9	2.7
Office and administrative support	-1812	-24	17.6	-0.1
Construction and extraction	-2691	1372	26.1	6.3
Production	-2139	1106	20.7	5.1
Transportation and material moving	-1131	2153	11.0	9.9
Low-pay (< 75 median weekly wages)	-133	3907	1.3	18.0
Service	0	3540	0.0	16.3
Farming, fishing, and forestry	-133	367	1.3	1.7
Total	-10309	21669	100.0	100.0

(Bill Mitchell - Modern Monetary Theory, ^œ[US labour market slower but unemployment reaches lows not seen since the late 1960s](#), Monday, October 7, 2019)

See Jennifer Hunt and Ryan Nunn, ^œ[Is Employment Polarization Informative About Wage Inequality and Is Employment Really Polarizing?](#) (NBER Working Paper No. 26064, Issued in July 2019) for a rather different take on job polarization. As they summarize:

Equating a job with an individual rather than an occupation, we re-examine whether U.S. workers are increasingly concentrated in low and high-wage jobs relative to middle-wage jobs, a phenomenon known as employment polarization. By assigning workers in the CPS to real hourly wage bins with time-invariant thresholds and tracking over time the shares of workers in each, we do find a decline since 1973 in the share of workers earning middle wages.

However, we find that a strong increase in the share of workers in the top bin is accompanied by a slight decline in the share in the bottom bin, inconsistent with employment polarization. Turning to occupation-based analysis, we show that the share of employment in low-wage occupations is trending up only from 2002-2012, and that the apparent earlier growth and therefore polarization found in the literature is an artefact of occupation code redefinitions. This new timing rules out the hypothesis that computerization and automation lie behind both rising wage inequality and occupation-based employment polarization in the United States.

Also, Neil Irwin, ^œ[Jobs Numbers for the Optimists, the Pessimists, and Everybody in Between](#) (The Upshot, *New York Times*, October 4, 2019). As he concludes:

So where do all these competing signals leave us? Where does someone who is neither a president seeking re-election, a central

banker seeking steadiness nor a stone-cold pessimist conclude that things stand?

The slowing wage growth paired with low unemployment is a genuine conundrum. It should make the Federal Reserve even more skeptical of the theoretical relationships between jobs, wages and inflation that have traditionally driven its policy choices.

In particular, the longer the United States carries on with sub-4 percent unemployment with no negative consequences, the stronger the case for testing just how low things can go.

But the rest of these results are not particularly surprising, nor inconsistent with one another. Slower job growth is nothing to mourn if it takes place as the economy inches closer and closer to full employment. And that it is taking place with continued gains in the share of prime-age adults working means the job market is still going in the right direction, at least in terms of creating jobs.

A comment by J.I.M. on the above piece by Irwin is apposite:

The unemployment rate is not a reliable way to gauge the general level of employment. It has many flaws that don't take into account important factors about employment and wages. Just because someone is employed under the official criteria in the unemployment rate doesn't mean that they have a good job. People at the bottom often have two or more jobs just to get by.

The actual living wage employment is in bad shape. Overall wages have fallen. Housing costs are up. Child care costs a fortune. They have no savings because it has already been wiped out or they just don't have enough money that they can afford to save. One unforeseen expense like car repair or illness could render them homeless.

221 The relevant section of the report is as follows:

The fundamental problem posed by the cybernation revolution in the U.S. is that it invalidates the general mechanism so far employed to undergird people's rights as consumers. Up to this time economic resources have been distributed on the basis of contributions to production, with machines and men competing for employment on somewhat equal terms. In the developing cybernated system, potentially unlimited output can be achieved by systems of machines which will require little cooperation from human beings. As machines take over production from men, they absorb an increasing proportion of resources while the men who are displaced become dependent on minimal and unrelated government measures - unemployment insurance, social security, welfare payments. These measures are less and less able to disguise a historic paradox: That a substantial proportion of the population is subsisting on minimal incomes, often below the poverty line, at a time when sufficient productive potential is available to supply the needs of everyone in the U.S.

...There is no question that cybernation does increase the potential for the provision of funds to neglected public sectors. Nor is there any question that cybernation would make possible the abolition of poverty at home and abroad. But the industrial system does not possess any adequate mechanisms to permit these potentials to become realities. The industrial system was designed to produce an

ever-increasing quantity of goods as efficiently as possible, and it was assumed that the distribution of the power to purchase these goods would occur almost automatically. The continuance of the income-through jobs link as the only major mechanism for distributing effective demand - for granting the right to consume - now acts as the main brake on the almost unlimited capacity of a cybernated productive system.

...An adequate distribution of the potential abundance of goods and services will be achieved only when it is understood that the major economic problem is not how to increase production but how to distribute the abundance that is the great potential of cybernation. There is an urgent need for a fundamental change in the mechanisms employed to insure consumer rights.

(^{oe}[AD Hoc Committee on the Triple Revolution](#) (1964))

²²² (09/02/16) Robert Skidelsky has addressed this question in 2019 (the article - referenced below - provides supporting web information on the various points made). However, I do think that his argument that historically 'hours of work have fallen and real incomes have risen' needs a great deal of qualification. Both Western colonization of the rest of the world through the 17th to the 20th centuries and the [hyper-globalization](#) of the past several decades have simply shifted the focus of exploitation from Western to other communities and nations:

Surveys from round the world show that people want secure jobs. At the same time, they have always dreamed of a life free from toil. The "rise of the robots" has made the tension between these impulses palpable.

Estimates of job losses in the near future due to automation range from 9% to 47%, and jobs themselves are becoming ever more precarious. Yet automation also promises relief from most forms of enforced work, bringing closer to reality Aristotle's extraordinary prediction that all needed work would one day be carried out by "mechanical slaves," leaving humans free to live the "good life." So the age-old question arises again: are machines a threat to humans or a means of emancipating them?

In principle, there need be no contradiction. Automating part of human labor should enable people to work less for more pay, as has been happening since the Industrial Revolution. Hours of work have fallen and real incomes have risen, even as the world's population increased sevenfold, thanks to the increased productivity of machine-enhanced labor. In rich countries, productivity - output per hour worked - is 25 times higher than it was in 1831. The world has become steadily wealthier with fewer man-hours of work needed to produce that wealth.

Why should this benign process not continue? Where is the serpent in the garden? Most economists would say it is imaginary. People, like novice chess players, see only the first move, not the consequences of it. The first move is that workers in a particular sector are replaced by machines, like the Luddite weavers who lost their jobs to power looms in the nineteenth century. In David Ricardo's chilling phrase, they become "redundant."

But what happens next? The price of clothes falls, because more can be produced at the same cost. So people can buy more clothes, and a greater variety of clothes, as well as other items they could

not have afforded before. Jobs are created to meet the shift in demand, replacing the original jobs lost, and if productivity growth continues, hours of work can fall as well.

Notice that, in this rosy scenario, no trade unions, minimum wages, job protections, or schemes of redistribution are needed to raise workers' real (inflation-adjusted) income. Rising wages are an automatic effect of the fall in the cost of goods. Provided there is no downward pressure on money wages from increased competition for work, the automatic effect of technological innovation is to raise the standard of living....

But while the need for policy intervention to channel automation to human advantage is beyond question, the real serpent in the garden is philosophical and ethical blindness. "A society can be said to be decadent," wrote the Czech philosopher Jan Patocka, "if it so functions as to encourage a decadent life, a life addicted to what is inhuman by its very nature."

It is not human jobs that are at risk from the rise of the robots. It is humanity itself.

(Robert Skidelsky, ^œ[The AI Road to Serfdom?](#), *Project Syndicate*, February 21, 2019)

Robert Reich has given a depressingly realistic sketch of [what is happening as the 21st century unfolds](#):

How would you like to live in an economy where robots do everything that can be predictably programmed in advance, and almost all profits go to the robots' owners?

Meanwhile, human beings do the work that's unpredictable - odd jobs, on-call projects, fetching and fixing, driving and delivering, tiny tasks needed at any and all hours - and patch together barely enough to live on.

Brace yourself. This is the economy we're now barreling toward.

They're Uber drivers, Instacart shoppers, and Airbnb hosts. They include Taskrabbit jobbers, Upcounsel's on-demand attorneys, and Healthtap's on-line doctors.

They're Mechanical Turks.

The euphemism is the "share" economy. A more accurate term would be the "share-the-scrap" economy.

(Robert B. Reich, ^œ[The Share-the-Scraps Economy](#), Monday, February 2, 2015).

Carl Frey and Michael Osborne (2013) explored the susceptibility of jobs to computerization in the 21st century. As they summarized:

We examine how susceptible jobs are to computerisation. To assess this, we begin by implementing a novel methodology to estimate the probability of computerisation for 702 detailed occupations, using a Gaussian process classifier. Based on these estimates, we examine expected impacts of future computerisation on US labour market outcomes, with the primary objective of analysing the number of jobs at risk and the relationship between an occupation's probability of computerisation, wages and educational attainment. According to our estimates, about 47 percent of total US employment is at risk. We further provide evidence that wages and educational attainment exhibit a strong negative relationship with

an occupation's probability of computerisation.

(Carl Benedikt Frey and Michael A. Osborne, ^œ[The Future Of Employment: How Susceptible Are Jobs To Computerisation?](#) , Oxford Martin Programme on the Impacts of Future Technology, University of Oxford, September 17, 2013)

Ambrose Evans-Pritchard put the 2014 consequences of this revolution in a nutshell:

"Wages don't matter any longer. Off-shoring was just a way station." We are back to reshoring, but without jobs. Welcome to our brave new world.

(Ambrose Evans-Pritchard, ^œ[Will the 2nd Great Machine Age be a frightening jobless dystopia? Machines have been displacing jobs for years and the rate is accelerating](#), *The Telegraph*, 25 Jan 2014)

See '[The move to automation](#)' for some of the reasons why the move to automation from the 1980s did not make Western workers' lives easier and free human beings to leisure activity.

See David Graeber, ^œ[On the Phenomenon of Bullshit Jobs](#) (August 17, 2013, *Strike! Magazine*) for an interesting take on how 'technology has been marshaled, if anything, to figure out ways to make us all work more'. As he says,

...rather than allowing a massive reduction of working hours to free the world's population to pursue their own projects, pleasures, visions, and ideas, we have seen the ballooning not even so much of the "service" sector as of the administrative sector, up to and including the creation of whole new industries like financial services or telemarketing, or the unprecedented expansion of sectors like corporate law, academic and health administration, human resources, and public relations. And these numbers do not even reflect on all those people whose job is to provide administrative, technical, or security support for these industries, or for that matter the whole host of ancillary industries (dog-washers, all-night pizza deliverymen) that only exist because everyone else is spending so much of their time working in all the other ones.

These are what I propose to call "bullshit jobs."

It's as if someone were out there making up pointless jobs just for the sake of keeping us all working. And here, precisely, lies the mystery. In capitalism, this is precisely what is not supposed to happen...

Jayati Ghosh has provided a range of possible responses to the possible loss of employment:

There is a need to take a new look at technological change that threatens job security and workers' rights.

The latest fear factor to hit the world relates to the disappearance of jobs. Everywhere now the buzz is about how technology is going to transform work - and reduce it dramatically. The Davos World Economic Forum Chief Executive Officer Klaus Schwab (whose book *The Fourth Industrial Revolution* was released recently) is just the latest in a long line of recent predictors of this gloomy possibility. From 3-D printing to robots that perform not just some basic services but even more skilled activities such as accountancy, and so on, the fear is that human labour will be increasingly displaced

by machines, and so there will simply not be enough work to provide employment to all the people who need jobs.

However, there is some confusion in all this doomsaying about the future (or lack of it) of work. Let us distinguish first between two types of technological change: productive and disruptive. The first describes changes that increase productivity and change the nature of economic activities. They include increasing automation, and a host of new developments in biotechnology and other areas, which reflect the "creative destruction" inherent in a lot of technological change.

There is little point in fighting against such advance of technology or even trying to slow it down in some way, because that simply will not work and, in any case, is not desirable. But that does not mean that we should despair simply because it will displace a lot of human work - in fact, where technology replaces arduous work full of drudgery, or makes it easy to do things, we should celebrate it.

However, this means that the greater surpluses generated in these more productive activities should be transferred to more employment-intensive activities that enhance the quality of life in society. A lot of these would be in services both old and new, which would include care activities in which the human element is essential, as well as creative industries and knowledge and entertainment activities and a range of other services...

(Jayati Ghosh, [∞][The future of work](#), *Frontline*, Print edition, February 19, 2016)

[Michael Spence and Sandile Hlatshwayo \(2011\)](#) provide an interesting perspective on the kinds of jobs which have been created in the US over the past thirty years.

Georgios Petropoulos (2017) has provided a summary of studies investigating the likely impact of the inevitable development of machines and processes resulting from advances in research into artificial intelligence in the 21st century in a blog posting subtitled:

Artificial intelligence is already transforming the world of work, but the future is hard to predict. Some see most jobs at risk of automatisisation, while others argue robots will only take on a narrow range of tasks in the coming decades. Nevertheless, we need a broad debate to prepare the appropriate economic policy response to the new industrial revolution.¹

As he says,

The benefits are clear, but there are also concerns for the future of human work and employment. If indeed machines continue to improve their performance beyond human levels, a natural question to ask is **whether machines will put humans' jobs at risk and reduce employment**. Such a concern is not new but in fact dates back to the 1930s, when John Maynard Keynes postulated his "technological unemployment" theory.

(Georgios Petropoulos, [∞][Do we understand the impact of artificial intelligence on employment?](#), Blog Post, *Bruegel*, April 27, 2017)

²²³ See Douglas A. Irwin, [∞][Historical Aspects of U.S. Trade Policy](#) (*NBER Reporter* : Research Summary Summer 2006) for an historical perspective on US tariff protection. As Irwin explained:

While international trade and trade policy continue to be as controversial as ever, the United States has been committed for more than half a century to maintaining an open market. It was not always that way. For most of U.S. history, the United States imposed fairly substantial barriers to imports in an effort to protect domestic producers from foreign competition.

²²⁹ As ^œ[Wikipedia](#) explains,

A free trade zone (FTZ) or export processing zone (EPZ) is an area of a country where some normal trade barriers such as tariffs and quotas are eliminated and bureaucratic requirements are lowered in hopes of attracting new business and foreign investments. It is a region where a group of countries has agreed to reduce or eliminate trade barriers. Free trade zones can be defined as labor intensive manufacturing centers that involve the import of raw materials or components and the export of factory products.

Free trade zones are domestically criticized for encouraging businesses to set up operations under the influence of other governments, and for giving foreign corporations more economic liberty than is given indigenous employers who face large and sometimes insurmountable "regulatory" hurdles in developing nations. However, many countries are increasingly allowing local entrepreneurs to locate inside FTZs in order to access export-based incentives.

Because the multinational corporation is able to choose between a wide range of underdeveloped or depressed nations in setting up overseas factories, and most of these countries do not have limited governments, bidding wars (or 'races to the bottom') sometimes erupt between competing governments.

Sometimes the domestic government pays part of the initial cost of factory setup, loosens environmental protections and rules regarding negligence and the treatment of workers, and promises not to ask payment of taxes for the next few years.

When the taxation-free years are over, the corporation that set up the factory without fully assuming its costs is often able to set up operations elsewhere for less expense than the taxes to be paid, giving it leverage to take the host government to the bargaining table with more demands, but parent companies in the United

States are rarely held accountable.

230 Western economies, contrary to popular economic opinion, are not based on scarcity but on glut. It therefore becomes inevitable, over time, that production will result in oversupply and suppliers will, therefore experience difficulty in moving stock. See [Glut not Scarcity](#) for more on this.

231 The consequences of the relocation of labor intensive industry to cheap processing centers have been rather different than initially anticipated by the experts. Jorge Nef explained some of the associated problems of this move to relocate labor intensive industry to low-wage countries:

The transnationalization of production and the displacement of manufacturing to the semi-periphery, on account of the 'comparative advantages' brought about by depressed economic circumstances and the 'low-wage economy', results in import dependency in the North.

This deserves further explanation. The import dependency mentioned here does not mean that developed countries become dependent on less-developed countries for the satisfaction of their consumption needs. Since most international trade takes place among transnationals, all that import dependency means is First World conglomerates buying from their affiliates or from other transnationals relocated in peripheral territories.

The bulk of the population at the centre, therefore, becomes dependent on imports coming from core firms domiciled in 'investor friendly' host countries. Via plant closures and loss of jobs, such globalism replicates in the centre similarly depressed conditions to those in the periphery.

Manufacture evolves into a global maquiladora operating in economies of scale and integrating its finances and distribution by means of major transnational companies and franchises (for an analysis of maquiladoras, see Kopinak 1993, pp.141-162). Abundant, and above all cheap, labor and pro-business biases on the part of host governments are fundamental conditions for the new type of productive system.

Since there are many peripheral areas with easy access to inexpensive raw materials and with unrepresentative governments willing to go out of their way to please foreign investors, a decline of employment and wages at the centre will not necessarily create incentives to invest, or increase productivity. Nor would it increase 'competitiveness'. Since production, distribution, and accumulation are now global, it would rather evolve into a situation of permanent unemployment, transforming the bulk of the blue collar workers - the 'working' class - into a 'non-working' underclass.

(Nef 1995, ch. 3)

232 The Sandwichman, a contributor to the Blogging site *Angry Bear*, has summarized a range of 'reasons' given for the failure to reduce working hours in capitalist nations (and, of course, in all those countries and communities which, since the mid-1970s, have been reorganized to contribute additional labor to capitalist endeavors). As s/he explains:

...The Sandwichman has amassed the world's largest collection of lame excuses offered by opponents. I assembled 21 of them and

sorted them into eight categories having to do with productivity, new consumer wants, unsatisfied needs, labor costs, government policy, self-adjusting markets, history and inevitability, and the devious motives of proponents.

To be kind, the rationales are opportunistic. Mostly, they are jejune partial equilibrium statements invoked as if they were eternal verities. More bluntly, they are mendacious. **Every single reason** given for not shortening the hours of work is complemented by a contradictory reason for not shortening the hours of work. Damned if you do and damned if you don't.

Regarding the vagaries: the hours of work cannot be reduced because that would lower productivity; but if they were reduced, it wouldn't lower unemployment because the shorter hours would be just as productive as the longer hours. The hours of work don't have to be reduced because new consumer demands will create more jobs; but they *cannot* be reduced because there are so many unmet needs of those living in poverty. The economy will adjust automatically to reabsorb workers displaced by automation; and there is no need for government intervention because government policy will *lubricate* the self-adjustment process. History gives proof that future reductions are inevitable because in the past they always have occurred; but history shows that the economy has always generated sufficient jobs, implicitly without any need for reducing the hours of work....

S/He then lists some of those 'lame excuses' and concludes:

...Implicit in much of this pretentious double talk is the notion that consumer demand is utterly independent of wages, so "the economy" can become more prosperous by lowering wages. Apparently, economists are still so enamored of Say's Law that they haven't paused to consider the implications of Say's *other* law - that "misery is the inseparable companion of luxury."
(The Sandwichman, ^œ[The Boundless Thirst for Surplus-Labor](#), *Angry Bear*: Relevant and even prescient commentary on news, politics and the economy, April 14, 2017)

See [The Triumph of Neoliberalism](#) for some of the other forces involved.

²³³ For this reason, one needs to be very careful in employing the term when discussing organization and activity in non-Western communities. The term carries all the baggage of Western presumptions of what is important in life, including key presumptions of the primary ideologies of Western communities (see [Primary and Secondary Ideology](#)).

²³⁴ We need to clearly differentiate between causes and consequences when understanding the nature of work. As we will see later, cash income has historically been used as a primary means of enforcing and reinforcing the commitment of Western people to "habits of industry".

Over the past three decades, as Western people have recommitted themselves to their economic formulations of life, it has, once again been used in this way, with "user pays" schemes being promoted and reliance on Government welfare payments being challenged. It is, therefore, understandable that Western people strongly link the two.

This does not mean, however, that work and income must logically *necessarily* be tied to each other. What it does demonstrate is that Western people have so closely tied both material and social wellbeing to

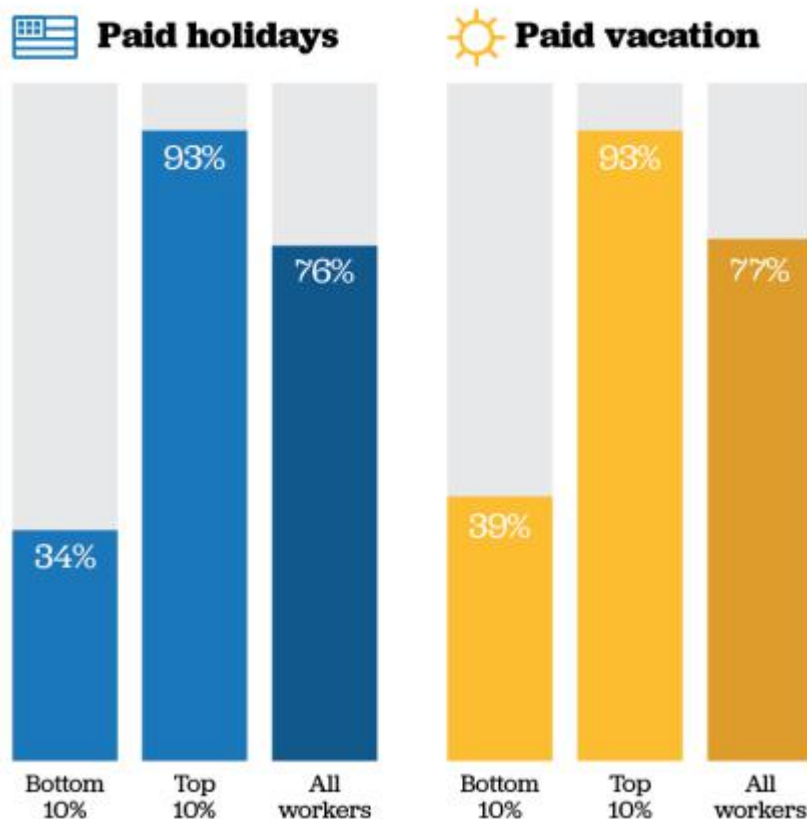

"habits of industry", that is, to work, that they can scarcely conceive of any other means for distributing income.

- ²³⁵ See [fulfilling One's Potential](#) for an examination of the reasons why Western Europeans became so concerned that individuals "perform" to their potential.
- ²³⁶ See [From Interdependence to Independence](#) for discussion of this deep felt need in Western communities for individuals to be "independent"
- ²³⁷ Elise Gould has given a picture of the 2014 experience of US private sector workers. As she explains,

As Labor Day approaches, about a quarter (24 percent) of private sector workers will not be enjoying a paid day off on Monday. A similar number (23 percent) earn no paid vacation time. While this overall lack of paid holidays and vacation time is quite telling (especially compared to our international peers, who more or less universally mandate paid time off), access to paid time off varies dramatically between workers by their pay. As the chart below shows, only 34 percent of private-sector workers at the bottom of the wage distribution receive paid holidays and only 39 percent receive paid vacation. Among the top 10 percent of workers, meanwhile, 93 percent receive both paid holidays and paid vacation.

Millions of working people don't get paid time off for holidays or vacation

Share of private sector workers at different earnings levels receiving paid holidays and paid vacation

ECONOMIC POLICY INSTITUTE

(Elise Gould, ^{oe}[Millions of Working People Don't Get Paid Time Off for Holidays or Vacation](#), Economic snapshot, Wages Incomes and Wealth, Economic Policy Institute, September 1, 2015)

238 As we have already suggested, these times have not always been available to Western workers. They have been negotiated between those who believe they have a moral responsibility to ensure that work is taken seriously and those who represent the workers and who, themselves, feel that people have a moral responsibility to work.

The times negotiated have always been justified in terms of the overall increased efficiency of workers when they are allowed these times of relaxation and leisure. This is why, if a person uses these times in ways which do not refresh and re-equip him or her for work, employers have always believed they have the "right" to challenge the use being made of leisure time. This is, of course, reminiscent of Karl Marx's claim,

The Roman slave was held by fetters: the wage-laborer is bound to his owner by invisible threads. The appearance of independence is kept up by means of a constant change of employers, and by the *fictio juris* of a contract.

(Marx ^œ[Capital](#) 1887 Chapter XXIII)

239 Though we gear our education systems to determining the aptitudes of children and to honing those aptitudes so that they might be as successful as possible in work in later lives.

So important is work to most people in Western communities that it seems not only desirable but necessary that other forms of organization and activity be geared to supporting it or to preparing people to better perform in the world of work.

Education in Western communities is not geared to increasing knowledge or to the pursuit of wisdom or "truth". It is geared to [equipping people to more effectively participate in the "workforce"](#) and few people in those communities would argue that it should be otherwise.

240 Decreasingly defined as the production of goods and services, and more and more defined as the production of a cash income. Whereas being "productive" was considered centrally important with the cash return secondary, now "material success" is the focus and being "productive" is increasingly assessed by the cash return for one's endeavors.

This is one of the reasons why we now sense that we live in a "consumer society", rather than in a "producer society". The most direct evidence of the size of our "income" is our levels of consumption, not our levels of production. This leads, inevitably, to extending our consumption beyond our income so that we are also living in a "credit society".

The pressures to spend come not only from advertising, they also come from our own self-image, from our need to show ourselves and others that we really are "successful". Disturbing as it might be (certainly to me!), increasing numbers of people feel the need to 'go shopping' when they are feeling depressed.

²⁴⁶ See [Who were the 'Middle Sorts'?](#) for more on this.

²⁴⁷ See [Primary and Secondary Ideology](#)

²⁴⁸ In British history, a body of laws undertaking to provide relief for the poor, developed in 16th century England and maintained, with various changes, until after World War II. The Elizabethan Poor Laws, as codified in 1597-98, were administered through parish overseers, who provided relief for the aged, sick, and infant poor, as well as work for the able-bodied in workhouses. Late in the 18th century, this was supplemented by the so-called Speenhamland system of providing allowances to workers who received wages below what was considered a subsistence level. The resulting increase in expenditures on public relief was so great that a new Poor Law was enacted in 1834, based on a harsher philosophy that regarded pauperism among able-bodied workers as a moral failing. The new law provided no relief for the able-bodied poor except employment in the workhouse, with the object of stimulating workers to seek regular employment rather than charity. ("Poor Law". (2010). In *Encyclopedia Britannica*. Retrieved February 08, 2010, from Encyclopedia Britannica Online:

[∞]<http://www.britannica.com/EBchecked/topic/469923/Poor-Law> .)

²⁴⁹ Institutions to provide employment for paupers and sustenance for the infirm, found in England from the 17th through the 19th century and also in such countries as The Netherlands and in colonial America. The Poor Law of 1601 in England assigned responsibility for the poor to parishes, which later built workhouses to employ paupers and the indigent at profitable work. It proved difficult to employ them on a profitable basis, however, and during the 18th century workhouses tended to degenerate into mixed receptacles where every type of pauper, whether needy or criminal, young or old, infirm, healthy, or insane, was dumped. These workhouses were difficult to distinguish from houses of correction. According to prevailing social conditions, their inmates might be let out to contractors or kept idle to prevent competition on the labor market. The Poor Law Amendment of 1834 standardized the system of poor relief throughout Britain, and groups of parishes were combined into unions responsible for workhouses. Under the new law, all relief to the able-bodied in their own homes was forbidden, and all who wished to receive aid had to live in workhouses. Conditions in the workhouses were deliberately harsh and degrading in order to discourage the poor from relying on parish relief. Conditions in the workhouses improved later in the 19th century, and social-welfare services and the social-security system supplanted workhouses altogether in the first half of the 20th century. ("workhouse". (2010). In *Encyclopedia Britannica*. Retrieved February 08, 2010, from Encyclopedia Britannica Online:

[∞]<http://www.britannica.com/EBchecked/topic/648132/workhouse>).

²⁵⁰ See [How Born Again Christians rescued Capitalism](#) for a description of the deep religious commitment of Western Europeans, since the 18th century, to the moral requirements of Capitalism.

²⁵¹ So convinced were Western Europeans of the value-creating nature of labor as spelt out by Locke (1690) that through the 18th and 19th centuries the "labor theory of value" became the standard for both classical economics and for Marx (see [The Labor Theory of Value](#) for more on this).

Locke's argument for the logical primacy of individualized property and its necessary connection with individual industry has, in the early 21st century, remained central to neoliberal arguments for the importance of private accumulation as both a reward of and spur to industriousness.

²⁵² A vagrant was one who was able to work but preferred instead to live idly, often as a beggar. The punishment for this, during the 18th and 19th centuries, ranged from branding and whipping to conscription into the military services and transportation to penal colonies. During the 20th century, this form of behavior continued to be punished though the severity of the punishments lessened as the century unfolded.

²⁵³ see [Subsistence and Status](#) for further discussion of these alternative emphases in accumulation

²⁵⁵ See [What shall we do with The Poor](#) for more on this.

²⁵⁶ See [From Interdependence to Independence](#) for discussion

²⁵⁷ (See [Teaching 'The Natives' to Work](#) for more on this.)

Colonial land redistribution has been perpetuated in many post-colonial countries. (see ^œ[Background to Land Reform in Zimbabwe](#); ^œ[Mugabe Is Right About Land Reform](#) for a specific example of these practices - replicated in most Western European colonies).

While colonial authorities closely controlled movement from native reserves into administrative centers and employment regions during the colonial era, this was not considered acceptable practice for post-colonial authorities. No government should have the right to control movement. The *United Nations International Covenant on Civil and Political Rights* (1966) spelt this out clearly.

Western nations, seeing this as a crucial distinction between themselves and those aligned with the Eastern Bloc, put pressure on Third World governments to comply with the United Nations covenants, which, over the years, have consistently addressed current social, political and economic concerns of First World countries.

Article 12 of the above Covenant reads:

1. Everyone lawfully within the territory of a State shall, within that territory, have the right to liberty of movement and freedom to choose his [sic] residence.
2. Everyone shall be free to leave any country, including his own.
3. The above-mentioned rights shall not be subject to any restrictions except those which are provided by law, are necessary to protect national security, public order (ordre public), public health or morals or the rights and freedoms of others, and are consistent with the other rights recognized in the present Covenant.
4. No one shall be arbitrarily deprived of the right to enter his own country. ⁹⁹³

Not only were Third World governments pressured to implement such resolutions, a range of United Nations organizations (formed to provide development assistance) provided means of leverage to donor countries.

The consequence of this insistence on free movement has been that people, previously confined within reserves, are able to move to both employment and administrative centers and millions have done so. This has resulted in the slum conditions one finds in many Third World cities.

²⁵⁸ See Moore and Feldman (1960), Day (1966), Kuper and Smith (1960), among many others, for discussion of colonial labor practices.

The following is an excerpt from Gilbert Murray's (1900) essay describing labor practices in British colonies:

There are two really extensive and organic systems of exploiting the labor of inferior races.

The first is simply the old Graeco-Roman system improved and modified - the system of importing destitute or semi-destitute aliens to countries where they can serve us. The difference is that the ancients used undisguised force throughout the whole process; we use economic pressure to get our laborers, though we mostly use force to keep them.

The simplest case is the system of indenture as applied to Indian and Chinese coolies, and to Polynesians or Kanakas. The laborer voluntarily signs an agreement for a term of years, and is shipped off to a foreign country, where he is, for most purposes, not under the ordinary law, but under special indenture regulations.

His freedom is curtailed in every direction; but, on the other hand, his wages are secured and his general condition inspected by Government. He is looked after when he is sick, protected against extremes of cruelty and dishonesty on the part of his master, and taken home again at the end of his time.

The system works well in places like Fiji, where the area is small, supervision easy, and the Government not dependent upon the employers ⁹⁹⁴. It works ill in large continental regions, such as Queensland, where these conditions are reversed. About 15,000 indentured coolies leave India every year. About 10,000 Kanakas go from Polynesia to Queensland every year...

In all the above cases the alien laborer is imported.

But - and this forms the second of what we have called the really extensive and organic systems of exploiting inferior races - the great field for the working of the alien in modern times is the alien's own country.... In modern times, the increasing ease of communication has enabled white men to go abroad to all parts of the earth without suffering much real exile, and without losing the prospect of returning home at will.

Our Governments... are strong; our superior weapons make rebellions almost impossible. Consequently, we do not attempt to import blacks, coolies, and Polynesians into Great Britain...

The whole economic conditions are in favor of working the coloured man in his own home. It may also be permitted to us to reflect that, when the slave or subject is among his own people, there must remain to him a large remnant of life which is not utterly poisoned by the advent of the white master.

The whole of tropical mining, and almost the whole of tropical agriculture - the raising of rice, coffee, sugar, and the like - are carried out by gangs of cheap laborers of inferior race under the

rule of white men. And not only in India, where it is a natural outcome of the system of Government, but in most of the semi-civilized nations of the world, white men can be found directing the ill-paid and often forced labor of the inhabitants.

As to South Africa, I should for many reasons prefer to be silent ⁹⁹⁵. That region is so wrapped in concealment and misrepresentation at the present moment, that it is hard to find any certain groundwork to build upon. Still, the South African systems are altogether too important to be omitted, and their main lines seem to be tolerably clear.

The capital feature of South African life, as every traveller observes, is that all unskilled work is done by black people. That is the rudimentary and essential condition of slavery, and is doubtless quite unavoidable. As to direct cruelty, the laws are, as usual, a great deal more humane than the facts, though some of the laws themselves sound a little odd to English ears.

A white master in Cape Colony is not allowed to flog his own servants, a Bill which gave him that power having recently been defeated; but he can send them to a magistrate to be imprisoned for negligence, insolence, or misbehavior. A coloured man in Natal cannot walk on the footpath or go in a tramcar, and so on.

Yet a radical improvement in the laws would probably do more harm than good. The essential cause of cruelty and oppression is not the law, but, to quote Mr. Bryce's careful and temperate description,

'the strong feeling of dislike and contempt one might almost say of hostility which the bulk of the whites show to their black neighbors.'

This curious feeling, a compound in which physical repulsion, race hatred, and pride of birth seem to be accentuated by actual shame and remorse, appears to be even stronger in South Africa than in most similar societies.

Yet, on the whole, the cruelties to blacks in those regions seem to be less atrocious than in Australia. The following case, which I select from half a dozen as having been already published by Mr. Bryce, reminds one of Queensland:

'A shocking case of the kind occurred a few years ago in the Eastern Province. A white farmer - an Englishman, not a Boer - flogged his Kaffir servant so severely that the latter died; and when the culprit was put on his trial and acquitted by a white jury, his white neighbors escorted him home with a band of music.'

Two African systems of exploiting black labor seem to promise great developments - the compound and the location. At Kimberley the natives are herded, some 3,000 together, in compounds or huge enclosures, covered with wire netting, and having no egress except an underground passage to the mines.

These special precautions are taken in order to prevent the blacks from stealing diamonds. They buy their food on the truck system from the company, and cannot go outside for any purpose. They are imprisoned in this way till the end of their contract time, which may in some cases be as short as three months.

The location system, which is contemplated at Johannesburg, consists in inducing large numbers of natives to settle with their families in the neighbourhood where their work is required. Once there, they are prevented by law from having enough land to live upon, prevented from leaving the locality by a rigorous system of passes, deliberately reduced to destitution by a Hut Tax and a Labor Tax, and thus forced into the mines to work at twopence a day, or whatever wage the Chamber of Mines thinks fit.

As Lord Grey [Governor of the Cape Colony and British territories in South Africa, and previously Governor in both New South Wales (Australia) and New Zealand] puts it:

'Means must be sought to induce the natives to seek spontaneously (*sic* !) employment at the mines, and to work willingly for long periods of more or less continuous service.'

The means he proposes are those mentioned above - a Hut Tax in money, which the native will be unable to pay except by resorting to the mines, and a Labor Tax on all able-bodied natives who are unable to show a certificate for four months' work in the year.

This is also the principle of the Glen Grey Act, passed in Cape Colony in 1894. The penalty for non-payment of the tax is imprisonment with hard labor - that is, we reduce the native to destitution by special laws in order to force him to work for us, and if he will not work then we can kidnap him! This system is so ingenious and elastic, offers such opportunities for the fraud which is normal in contracts between whites and blacks, and does its work of gradual demoralization so insidiously, and with so little shock to public feeling, that we may expect it to spread and flourish in other continents, almost in the manner of the Roman plantation system.

Like that system, the compound wishes to care for the welfare of its beasts. The employers - some of them, no doubt, made rich by selling liquor to blacks elsewhere - have set their faces against the supply of alcohol to their own workers. But, like the Romans, they will probably be disappointed. As a matter of fact, the mines have hitherto been the great centers of drinking, as well as of even more degrading corruption.

Mr. Scully, for instance (Blue Book G. 31, 1899, p. 76), notes the 'deplorable demoralization' of natives returning from the mines, 'brutish in their knowledge', and the increase, or introduction, among those to whom they return of phthisis, rheumatism, pulmonary diseases, and syphilis.

In military operations, again, we of the British Empire depend to a quite enormous extent upon soldiers of alien race, more, possibly, than any State since Carthage. Nearly all our African fighting before the present war, and most of our Indian fighting, has been done for us by natives. The great victories of Clive over the French, which we are accustomed to regard as proofs of British strength or valour, were almost entirely victories of Sepoys over Sepoys. The economic situation is really the same as in the other cases. We cannot spare more of the ruling race to fight. We take instead some naturally warlike savages, train them, officer them, and make them do the fighting for us.

(Gilbert Murray 1900 pp. 135-144)

259 The following extract is part of a larger description of European treatment of 'useful' and 'useless' indigenous peoples in their colonies:

A slave is ultimately a man spared in war; a man whom you might kill, but whom you prefer to keep, in order to make him work for you.

It is abundantly clear, if one considers the question, that this has historically been the position of most of the subject races in the British Empire. And it is in a sense their condition still. Those whom we cannot utilize we exterminate; those whom we can utilize we protect, and often enable to increase in numbers. Tasmanians were useless, and are all dead.

The Bhils are mostly dead. Australians were all but useless, good only for horse-taming and man-tracking, and they are dwindling to nothing. Red Indians, in spite of enormous care, and the large sums of money that a penitent Government now spends upon them, are dying gradually. In Africa, those blacks for whom we have some use tend, with certain exceptions, to increase and multiply; those for whom we have no use die by drink, by war, by economic pressure, and by the mere discouragement which works like poison in the veins of a race that finds its occupation gone.

The cruelties perpetrated by white men upon coloured men are, almost wherever and however they meet, stupendous. But the coloured men who are worked under definite rules and indentures are far better off than those who cannot be worked at all, or those who, under conditions of nominal equality, are forced to work, unprotected, beneath the hand of any chance master.

The Kanakas in Queensland, under the old indenture system, were no doubt treated both harshly and unfairly. They were kidnapped, they were brutally used, they were cheated of their miserable earnings. And it may be doubted whether the improvement of their condition under the present system is as great as is alleged. Yet they were probably better off than the Matabele forced laborers, strong men held down under a weak and irregular system, which had necessarily to be backed up by fraud or violence. But go, if you dare, into a searching comparison between the treatment of the Queensland Kanakas, who were useful beasts of burden, and that of the Queensland aborigines, who were regarded as vermin, and you will bless the lot of the half-enslaved Kanaka.

Let no one delude himself with the fancy that, though the German Dr. Peters may flog his concubines to death, though Frenchmen in the New Hebrides may twist the flesh off their servants' backs with pincers, though our own newspapers may revel in reported horrors from the old Transvaal or the Congo Free State, Englishmen, Scotchmen, and Irishmen are quite of another breed. Not to speak of strange and unpleasant dealings with black women, I myself knew well one man who told me he had shot blacks at sight. I have met a man who boasted of having spilt poisoned meal along a road near a black-fellows camp, in order to get rid of them like rats.

My brother was the guest of a man in Queensland who showed him a particular bend of a river where he had once, as a jest, driven a black family, man, woman, and children, into the water among a shoal of crocodiles. My father has described to me his fruitless

efforts to get men punished in New South Wales in old days for offering hospitality to blacks and giving them poisoned meat.

I received, while first writing these notes, a newspaper from Perth, giving an account of the trial of some Coolgardie miners for beating to death with heavy bits of wood a black woman and boy who had been unable to show them the way. The bodies were found with the shoulder-blades in shivers, and the judge observed that such cases were getting too common!

These atrocities are not necessarily the work of isolated and extraordinary villains. Two of the men mentioned above were rather good men than bad. Nor have I mentioned the worst class of outrages....

(1900, pp. 152-4)

²⁶⁰ It is often forgotten that sub-Saharan Africa endured more than three centuries of predation by both Western European and Middle Eastern slavers. The wars were, very often, a consequence of demands placed upon communities to deliver slaves. They could either enslave themselves or invade neighboring territories. The repercussions of such predations reverberated through the continent as communities attempted to escape the threat or, in turn, raided neighboring regions to satisfy the demand for slaves. As ^œGustave Speth (1994(a)) put it:

We conveniently forget Africa's history. We forget that the transatlantic slave trade robbed Africa of about 12 million of its able-bodied men and women.

²⁶¹ This is of course an issue of debate in philosophical circles (cf. Wolfe (1997) for an exploration of the debate). 'Work' is, of course, not a *universal* moral imperative. It is a moral issue only for Western communities and for people who have learned not only to behave, but also *think* in Western terms.

For the purposes of this discussion we are defining *morality* as acceptance of and compliance with forms of behavior, attitude and interaction which individuals *intuitively recognize* as being of central importance to ensuring "quality of life" in their communities.

Robert Greene (1997 p. 193), summarising Bonaventure, suggests that moral understandings are "apprehensions for which no reason could be given, apprehensions somehow rooted in affective human experience." (Kant's *moral imperative* below) (see [footnote](#) on the nature of such intuitions). Community members instinctively "know" that such attitudes and behaviors are inescapable requirements of life and are inevitably rewarded. The moral obligations imposed on community members are justified through appeal to these intuitively recognized forms.

As Immanuel Kant ((1785) 1909) has explained, the concepts of "the moral" and of "duty" go hand in hand. As he says,

We know our own freedom - from which all moral laws and consequently all rights as well as all duties arise - only through the moral imperative, which is an immediate injunction of duty; whereas the conception of right as a ground of putting others under obligation has afterwards to be developed out of it.

When a community becomes convinced that its members have certain inescapable duties and responsibilities, it buttresses and reinforces the associated forms of behavior and organization in a wide variety of ways

so as to channel people into conformity. So, it becomes "common sense" that the person should conform to the moral order.

²⁶² Definitions of Absenteeism and statistics of its incidence abound in both government statistics and in private assessments of 'the problem'. See ^{ae}[USLegal Definitions](#) for a succinct explanation of the issue.

²⁶³ Very similar reasons can be given for commitment to the requirements of any social template. In any society, the central processes of status attainment and maintenance, of self-image and self-respect are supported by claims such as these. And people in those societies are just as convinced of the validity of the claims as are Western people of the validity of theirs.

²⁶⁴ See [The emergence of Welfarism](#) for more on this. For a nation which is assumed to be amongst the best 'educated' on earth, it is sad to hear people in the United States equating 'social welfare' with 'socialism' and denouncing any who argue for social safety net provisions as 'socialists'.

²⁶⁵ (02/01/16) This developmental project is based on a millenarian belief in the existence of an evolutionary process in which all cultures and all peoples are involved. Human beings have a common evolutionary direction.

(The assumed process inverts the biological model of evolution: The biological model assumes increasing diversity; the social evolutionary model assumes increasing convergence.)

The process has been explained in many ways and takes many forms, as Blaut (1992, pp. 1-2) has described, his own explanation being one of them:

... the date 1492 represents the breakpoint between two fundamentally different evolutionary epochs. The conquest of America begins, and explains, the rise of Europe

... Before 1492, cultural evolution in the Eastern Hemisphere was proceeding evenly across the landscape; in Africa, Asia, and Europe a multitude of centers were evolving out of (broadly) feudalism and toward (broadly) capitalism.

This remarkably naive belief in a universal evolutionary direction is a feature of the particular historical experiences of Western Europeans (see [From the subversion of tradition to plotting the future](#)). Blaut's schema is no less Eurocentric than all those others which he condemns for this 'evil'.

Social evolutionary models presume that all cultural communities hold similar primary ideological models and presumptions and live within fundamentally similar 'objective realities' (see [Primary and Secondary Ideologies](#) for more on this).

Capitalism, of course, is no more advanced or retrograde than any other cultural form underpinning systems of status and ranking in communities. It is required by the particular social templates which govern behavior in Western societies. And, it requires the historical antecedents of Western Europe.

It can no more successfully be grafted onto other cultural communities than the Potlatch could successfully be grafted onto Western communities (see Walens S. 1981 *Feasting with Cannibals: An Essay on Kwakiutl Cosmology* for an excellent examination of the nature of the Kwakiutl Potlatch). Hence the catalogue of failures amassed by those

most deeply involved in this enterprise. And hence, also, the disorientation and disruption of communities, and cultural and material poverty of so many people in the world affected by those intent on global modernization.

266 It has, subsequently, imposed similar reorganization on the rest of the world.

267 The historical context of the book was the English Civil War, the beheading of the English monarch and the subsequent Commonwealth under Oliver Cromwell (1642-1660).

...the agreement of... men is by covenant only, which is artificial: and therefore it is no wonder if there be somewhat else required, besides covenant, to make their agreement constant and lasting; which is a common power to keep them in awe and to direct their actions to the common benefit.

The only way to erect such a common power, as may be able to defend them from the invasion of foreigners, and the injuries of one another, and thereby to secure them in such sort as that by their own industry and by the fruits of the earth they may nourish themselves and live contentedly, is to confer all their power and strength upon one man, or upon one assembly of men, that may reduce all their wills, by plurality of voices, unto one will: which is as much as to say, to appoint one man, or assembly of men, to bear their person; and every one to own and acknowledge himself to be author of whatsoever he that so beareth their person shall act, or cause to be acted, in those things which concern the common peace and safety; and therein to submit their wills, every one to his will, and their judgements to his judgement.

This is more than consent, or concord; it is a real unity of them all in one and the same person, made by covenant of every man with every man, in such manner as if every man should say to every man: I authorise and give up my right of governing myself to this man, or to this assembly of men, on this condition; that thou give up, thy right to him, and authorise all his actions in like manner.

This done, the multitude so united in one person is called a COMMONWEALTH; in Latin, CIVITAS. This is the generation of that great LEVIATHAN, or rather, to speak more reverently, of that mortal god to which we owe, under the immortal God, our peace and defence.

For by this authority, given him by every particular man in the Commonwealth, he hath the use of so much power and strength conferred on him that, by terror thereof, he is enabled to form the wills of them all, to peace at home, and mutual aid against their enemies abroad.

And in him consisteth the essence of the Commonwealth; which, to define it, is: one person, of whose acts a great multitude, by mutual covenants one with another, have made themselves every one the author, to the end he may use the strength and means of them all as he shall think expedient for their peace and common defence.

And he that carryeth this person is called sovereign, and said to have sovereign power; and every one besides, his subject.

The attaining to this sovereign power is by two ways.

One, by natural force: as when a man maketh his children to submit themselves, and their children, to his government, as being able to destroy them if they refuse; or by war subdueth his enemies to his will, giving them their lives on that condition.

The other, is when men agree amongst themselves to submit to some man, or assembly of men, voluntarily, on confidence to be protected by him against all others. This latter may be called a political Commonwealth, or Commonwealth by Institution; and the former, a Commonwealth by acquisition. And first, I shall speak of a Commonwealth by institution.

(Hobbes 1651, Chapter xvii, 'Of The Causes, Generation, And Definition Of A Commonwealth')

²⁶⁸ See [From Interdependence to Independence](#) for more on this.

²⁶⁹ See William Blackstone, 1765, ^œ[Commentaries on the Laws of England](#) , Chapter the Second, 'Of the Parliament' (pp. 142-182), for an explanation of 'democracy' in 18th century England.

Noam Chomsky has given a possibly polemically biased, and unfortunately unsourced, set of quotations of historical expressions of this mindset in the US:

[John] Dewey and American workers held one version of democracy, with strong libertarian elements. But the dominant version has been a very different one. Its most instructive expression is at the progressive end of the mainstream intellectual spectrum, among good Wilson-FDR-Kennedy liberal intellectuals. Here are a few representative quotes.

The public are "ignorant and meddlesome outsiders [who] must be put in their place." Decisions must be in hands of the "intelligent minority [of] responsible men," who must be protected "from the trampling and roar of the bewildered herd." The herd does have a function. Its task is to lend its weight every few years to a choice among the responsible men, but apart from that its function is to be "spectators, not participants in action." All for their own good. We should not succumb to "democratic dogmatisms about men being the best judges of their own interests." They are not. We are: we, the responsible men. Therefore attitudes and opinions must be shaped and controlled. We must "regiment the minds of men the way an army regiments their bodies." In particular, we must introduce better discipline into the institutions responsible for "the indoctrination of the young." If that is achieved, then it will be possible to avoid such dangerous periods as the 1960s, "the time of troubles" in conventional elite discourse. We will be able to achieve more "moderation in democracy" and return to better days as when "Truman had been able to govern the country with the cooperation of a relatively small number of Wall Street lawyers and bankers."

These are quotes from icons of the liberal establishment: Walter Lippmann, Edward Bernays, Harold Lasswell, Samuel Huntington, and the Trilateral Commission, which largely staffed the Carter administration.

This shriveled conception of democracy has solid roots. The founding fathers were much concerned about the hazards of democracy. In the debates of the Constitutional Convention, the main framer, James Madison, warned of these hazards. Naturally

taking England as his model, he observed that "in England, at this day, if elections were open to all classes of people, the property of landed proprietors would be insecure. An agrarian law would soon take place," undermining the right to property. To ward off such injustice, "our government ought to secure the permanent interests of the country against innovation," arranging voting patterns and checks and balances so as "to protect the minority of the opulent against the majority," a prime task of decent government.

(^œNoam Chomsky | [Notion of Elite Guardian Class Dates Back to Founding of US](#), *Truthout*, 11 February 2016)

- ²⁷⁰ A brief selection of texts on the nature and emergence of Western nations and nationhood includes: Gellner (1994); Goddard, Llobera & Shore (1994); Hobsbawm (1990); Kedourie (1993); and Norbu (1992).
- ²⁷¹ Kings were established in their kingdoms through the Church's administration of the ritual of Unction. It was, therefore, assumed that religious authority was superior to secular authority. As Ullman (1965, p. 86) says, 'It was that act alone which made the king'.
- ²⁷² such as shires, counties, principalities and similar sub-divisions within the borders of recognized regions associated with nations (as administrative regions of the medieval Church)
- ²⁷³ See [Medieval Common-Interest Groups](#) for more on this.
- ²⁷⁴ England experienced its revolution in the second half of the 17th century; France in the late-18th century; Germany in the mid-19th century; and other Western European nation-states experienced similar revolutions during the same period.
- ²⁷⁵ In stark contrast, the names and identities of Third World nations were, in large measure, inventions of 100 years (or less) of colonial rule, through which colonial powers identified regions they controlled. The colonized peoples identified the names and the administrative organizations through which they were controlled as 'foreign' colonial impositions. Yet, over the past sixty years, Western nations have insisted that people living in those artificially contrived nation-states would, with little difficulty, identify themselves with, and commit themselves to the nations within which they lived.
- ²⁷⁶ At the risk of belaboring the point, it needs to be remembered that, through the medieval period, 'successful' members of small ethnic groups, included within the Church's administrative regions, became connected to similar individuals in other groups in the territory through either travelling beyond their own group's area or through social interaction with others who did travel.
- One became recognized as 'cultured' through acceptance into these wider networks of 'cultured' people. One was also interlinked with the influence, wealth and information held and generated by members of such networks.
- ²⁷⁷ See Herbert Spencer (1857, p. 153 ^œ[Progress: Its Law And Cause](#)) for a succinct 19th century 'theoretical' statement of this principle for the social sciences:

... the series of changes gone through during the development of a seed into a tree, or an ovum into an animal, constitute an advance from homogeneity of structure to heterogeneity of structure.

In its primary stage, every germ consists of a substance that is uniform throughout, both in texture and chemical composition. The

first step is the appearance of a difference between two parts of this substance; or, as the phenomenon is called in physiological language, a differentiation.

Each of these differentiated divisions presently begins itself to exhibit some contrast of parts: and by and by these secondary differentiations become as definite as the original one. This process is continuously repeated - is simultaneously going on in all parts of the growing embryo; and by endless such differentiations there is finally produced that complex combination of tissues and organs constituting the adult animal or plant.

This is the history of all organisms whatever. It is settled beyond dispute that organic progress consists in a change from the homogeneous to the heterogeneous.

Now, we propose in the first place to show, that this law of organic progress is the law of all progress. Whether it be in the development of the Earth, in the development of Life upon its surface, in the development of Society, of Government, of Manufactures, of Commerce, of Language, Literature, Science, Art, this same evolution of the simple into the complex, through successive differentiations, holds throughout.

From the earliest traceable cosmical changes down to the latest results of civilization, we shall find that the transformation of the homogeneous into the heterogeneous, is that in which progress essentially consists.

(Spencer 1857, p.10)

This belief, of course, still holds in many 'evolutionary' theoretical constructs of the present.

278 For examples of this kind of interconnection one need look no further than the many novels of the period which simply assume networks and friendships between middle-class people not only within national territories but internationally.

279 Those who identified with each other as belonging to the same nation were usually those who had reason to travel or to associate with others who travelled. In Western Europe there was a strong sense of unity amongst merchants, traders, landed gentry, and educated people which resulted, in Britain as elsewhere, in a revolution of these 'middle sorts' (Manning 1976) against feudally-based aristocracies and governments.

While political revolution usually required the overthrow of feudal leaders, there was much less need for revolution within the administrative bureaucracies of western Europe. These were, very largely, already staffed by educated, middle ranking people who supported political revolution.

Through such revolution, in which, very usually, these 'middle sorts' managed to obtain the commitment of peasant and laboring people, they established new forms of government which reflected and enhanced their particular interests (see [From Subversion of Tradition to Plotting the Future](#)).

280 See [The White Man's Burden](#) for more on this.

281 While Western empires have largely disintegrated in the 21st century (though they have, as [Nkrumah explained](#), continued to dominate many of their former colonies - and other 'less developed' regions = through neo-colonialism), France has tenaciously clung onto a few remaining,

smaller territories which have been unable to successfully insist on their right to independence from its hegemonic control ⁹⁹⁶.

France has perpetuated this version of the nation-state in its incorporation of 'overseas departments' - previously colonial territories - which have been given the status of metropolitan departments and are argued to be integral to France as a nation. As the French Embassy in the U.S.A. (and most other French Embassy web-sites) explains:

Thanks to her overseas departments and territories, France extends far beyond the boundaries of Europe and into the four corners of the earth. Outside the borders of metropolitan France, she has coasts washed by the Indian, Atlantic and Pacific Oceans and land borders from the icy wastes of Antarctica to the great Amazonian rainforest. (^œ[Overseas France](#), *Embassy of France in Washington, D.C.*, November 29, 2007)

Lipset and Halvaksz explained it for French Polynesia:

Organized under constitutional revisions in 2003 as a French Overseas Collectivity French Polynesia maintains a local governing body. However, France retains control over military, police, the judicial system, tertiary education, monetary policy, defense, and foreign affairs. With representation in France, French Polynesia is governed as if part of the French state. (2009 p.122)

²⁸² Western Europeans have, over several centuries, demonstrated a remarkable nescience in dealing with the rest of the world. Their perspective is the universal perspective; the only valid understandings, theirs.

²⁸³ The middle-classes of Western Europe were thoroughly schooled in 'classical studies' and saw those 'civilizations' as providing models for their own empires and civilizations. The 18th and 19th century political institutions and practices of Western European nation-states borrowed a great deal from the 'classical civilizations' and empires of Rome and Greece.

The integration of colonies into the identities of Western European nation-states and designation of inhabitants as 'citizens' echoed Roman practice. Rome had employed similar strategies throughout its empire. Regions which Roman officials considered merited the 'honour' were declared 'Provinces' of Rome and the responsible people of those regions were declared to be 'Roman Citizens'.

²⁸⁴ see Crick (1997) for discussion of colonial practices and influences.

²⁸⁵ An excellent set of documentaries on the independence movements in French colonies, entitled ^œ[Blood and Tears: French Decolonisation](#), has been published by *AlJazeera*. As the subtitle says, it is

'The story of the decline of the French empire and the indelible mark colonialism left on countries that were colonised.'

²⁸⁶ Kwame Nkrumah, in the conclusion to his book, summed up it all up:

Speaking in 1951, the then President of the United States, Mr Truman, said, 'The only kind of war we seek is the good old fight against man's ancient enemies. . . poverty, disease, hunger and illiteracy.' Sentiments of a similar nature have been re-echoed by all political leaders in the developed world but the stark fact remains: whatever wars may have been won since 1951, none of them is the

war against poverty, disease, hunger and illiteracy. However little other types of war have been deliberately sought, they are the only ones which have been waged.

Nothing is gained by assuming that those who express such views are insincere. The position of the leaders of the developed capitalist countries of the world are, in relation to the great neo-colonialist international combines, very similar to that which Lord Macaulay described as existing between the directors of the East India Company and their agent, Warren Hastings, who, in the eighteenth century, engaged in the wholesale plunder of India. Macaulay wrote:

'The Directors, it is true, never enjoined or applauded any crime. Far from it. Whoever examines their letters written at the time will find there are many just and humane sentiments, many excellent precepts, in short, an admirable code of political ethics. But each exultation is modified or nullified by a demand for money. . . . We by no means accuse or suspect those who framed these dispatches of hypocrisy. It is probable that, written 15,000 miles from the place where their orders were to be carried into effect, they never perceived the gross inconsistency of which they were guilty. But the inconsistency was at once manifest to their lieutenant in Calcutta.

'... Hastings saw that it was absolutely necessary for him to disregard either the moral discourses or the pecuniary requisitions of his employers. Being forced to disobey them in something, he had to consider what kind of disobedience they would most readily pardon; and he correctly judged that the safest course would be to neglect the sermons and to find the rupees.'

Today the need both to maintain a welfare state, i.e. a parasite State at home, and to support a huge and ever-growing burden of armament costs makes it absolutely essential for developed capitalist countries to secure the maximum return in profit from such parts of the international financial complex as they control. However much private capitalism is exhorted to bring about rapid development and a rising standard of living in the less developed areas of the world, those who manipulate the system realise the inconsistency between doing this and producing at the same time the funds necessary to maintain the sinews of war and the welfare state at home. They know when it comes to the issue they will be excused if they fail to provide for a world-wide rise in the standard of living. They know they will never be forgiven if they betray the system and produce a crisis at home which either destroys the affluent State or interferes with its military preparedness.

Appeals to capitalism to work out a cure for the division of the world into rich and poor are likely to have no better result than the appeals of the Directors of the East India Company to Warren Hastings to ensure social justice in India. Faced with a choice, capitalism, like Hastings, will come down on the side of exploitation. (Kwame Nkrumah, 1965, *Neo-Colonialism, The Last Stage of Imperialism*, Thomas Nelson & Sons, Ltd., London, Conclusion)

²⁸⁷ See ^{ae}[Preparing for Independence](#) for Nigeria's experiences in moving toward independence from Britain. As Paul Beckett (1987, p. 87) put it,

Nigeria's Westminster-like parliamentary system was developed hurriedly, seemingly with little consideration given to possible alternative forms.

²⁸⁸ See [The Breakdown of Communities](#) for more on this.

²⁸⁹ See ^œ[Political experiences in Nigeria](#) for a brief sketch of post-colonial political experiences in Nigeria.

²⁹⁰ Oren Ziv, in a report entitled

'I'm bored, so I shoot': The Israeli army's approval of free-for-all violence in Gaza:

Israeli soldiers describe the near-total absence of firing regulations in the Gaza war, with troops shooting as they please, setting homes ablaze, and leaving corpses on the streets - all with their commanders' permission,

recounts six Israeli soldiers' accounts of their activities during routine 'active duty in Gaza in recent months':

...The six sources - all except one of whom spoke on the condition of anonymity - recounted how Israeli soldiers routinely executed Palestinian civilians simply because they entered an area that the military defined as a "no-go zone." The testimonies paint a picture of a landscape littered with civilian corpses, which are left to rot or be eaten by stray animals; the army only hides them from view ahead of the arrival of international aid convoys, so that "images of people in advanced stages of decay don't come out." Two of the soldiers also testified to a systematic policy of setting Palestinian homes on fire after occupying them.

Several sources described how the ability to shoot without restrictions gave soldiers a way to blow off steam or relieve the dullness of their daily routine. "People want to experience the event [fully]," S., a reservist who served in northern Gaza, recalled. "I personally fired a few bullets for no reason, into the sea or at the sidewalk or an abandoned building. They report it as 'normal fire,' which is a codename for 'I'm bored, so I shoot.'"

(Oren Ziv, ^œ['I'm bored, so I shoot': The Israeli army's approval of free-for-all violence in Gaza](#), *The Landline*, +972's weekly newsletter, July 8, 2024)

²⁹¹ B'Tselem, 'The Israeli Information Center for Human Rights in the Occupied Territories', has since issued a report entitled ^œ[The Israeli Prison System as a Network of Torture Camps](#) (August 2024). As they explain:

"Welcome to Hell" is a report on the abuse and inhuman treatment of Palestinians held in Israeli custody since 7 October 2023.

B'Tselem collected testimonies from 55 Palestinians held during that time and released, almost all with no charges. Their testimonies reveal the outcomes of the rushed transformation of more than a dozen Israeli prison facilities, military and civilian, into a network of camps dedicated to the abuse of inmates as a matter of policy. Facilities in which every inmate is deliberately subjected to harsh, relentless pain and suffering operate as de-facto torture camps.

Oren Ziv described the atrocious public Israeli support of the right to rape prisoners:

...For much of the demonstration, masked Force 100 soldiers stood directly in front of the few policemen and soldiers trying to prevent

the rioters from entering the base. Yet the officers on guard did very little to disperse the crowd.

The police did not use horses or water cannon vehicles - tactics that are familiar to every Palestinian, Ethiopian, or ultra-Orthodox Israeli who has dared to protest. Even after demonstrators breached the entrances and broke into Sde Teiman, and later into Beit Lid, no one was arrested or even identified by the police. Only after many minutes, soldiers, some with shields and clubs, forcibly evacuated the rioters from Beit Lid. During the mass anti-government demonstrators in 2023, some protesters were stripped of gun licenses and others removed from army reserve duty after being arrested; it is clear that none of this will happen to Monday's rioters.

'I kicked B'Tselem's photographer'

The terrifying sight of armed Israeli militias is well known to Palestinians and anti-occupation activists in the West Bank. In recent years, masked men, both soldiers and settlers, have been main agents of the occupation's oppressive laws, even giving orders to Israeli police and other soldiers. Since the start of the war on Gaza, Jewish militias have operated throughout the country under the guise of "alert squads." So on Monday, it was not out of the ordinary to see the gunmen walk around the demonstration unhindered.

From the ground, it was clear that the police simply did not want to evacuate the demonstrators from Beit Lid. And earlier in the day, when protesters broke into Sde Teiman, the police reportedly refused the army's request for assistance. Defense Minister Yoav Gallant has now demanded an investigation into whether National Security Minister Itamar Ben Gvir deliberately hindered the police's response to the riots.

Since there were no serious clashes with the police or soldiers, many of the demonstrators vented their anger to the media: attacking, cursing and spitting on journalists, with the exception of the right-wing Channel 14 staff, who were greeted with applause... (Oren Ziv, ^œ[A riot for impunity shows Israel's proud embrace of its crimes](#): Far-right protesters, soldiers, and MKs rallied for guards suspected of raping a Palestinian detainee. Once fringe, they're now the public face of the state, *The Landline*, +972's weekly newsletter, August 01, 2024)

For more on all this see Jonathan Cook, ^œ[Israel is in a death spiral. Who will it take down with it?](#), *Middle East Eye*, August 07, 2024.

Al Mayadeen, ^œ[Leaked video shows Israelis sexually assaulting Palestinian prisoner](#).

²⁹² There is some confusion between the nature and affiliations of the *International Court of Justice* (legally established by The United Nations) and the *International Criminal Court* (**not** established by or affiliated with The United Nations):

An article published on the site *Pursuit*, the research news website at the University of Melbourne (Australia), has explained the nature of the two bodies well:

Let's clear up these misunderstandings.

A TALE OF TWO COURTS IN ONE CITY

The ICJ and ICC are often confused with each other, and while both courts sit in The Hague, Netherlands, that is about where the similarities end.

The ICJ has been around since 1945 and its primary duty is to resolve disputes between States. For example, much of its work is devoted to settling the boundary lines (maritime or land) between States.

Cases are brought by one State against another, in almost the same way that in a civil court, a plaintiff must sue a defendant to initiate proceedings. The difference is that at the ICJ proceedings can only be brought where both States have consented to the ICJ's jurisdiction.

This consent can happen in a few different ways, but a common one is called a compromissory clause. There is one in the Genocide Convention - it says that:

Disputes between the Contracting Parties relating to the interpretation, application or fulfilment of the present Convention, including those relating to the responsibility of a State for genocide ... shall be submitted to the International Court of Justice at the request of any of the parties to the dispute.

This means that where one State believes another to be committing genocide, if both States are parties to the Genocide Convention a case can be brought using this compromissory clause.

However, if a case is brought, it can address only the question of 'the interpretation, application or fulfilment of the present Convention' - a very limited question that we will return to shortly.

There are 153 State parties to the Genocide Convention, meaning that many States have the option of bringing a case against another State under the compromissory clause. Russia, Myanmar, and Israel are all parties to the Genocide Convention.

The ICC is a much more recent institution that has only been operating for about 20 years. Rather like a domestic criminal court, it prosecutes individual people for committing crimes.

Once States have ratified the Rome Statute, which sets out the list of crimes that the ICC can prosecute, they have almost no other role. States do not 'sue' at the ICC, only the ICC Prosecutor can elect to open an investigation.

Usually, the Prosecutor will investigate a situation in which crimes have likely been committed such as in Darfur, Ukraine, Palestine, or Venezuela to name a few presently on the books.

If the Prosecutor's team can gather enough evidence of crimes, link those crimes to individuals, and (this is the hardest part) have those people arrested, those individuals can be tried and convicted of a crime, and then imprisoned.

One of these crimes is genocide. The catch is that the Prosecutor is only permitted to open investigations into situations arising in countries that have ratified the Rome Statute. While the Rome Statute has 123 State parties, there are notable absentees including Russia, Israel, Myanmar and even the United States....

(Juliette McIntyre, ^œ[How Does The International Court Of Justice](#)

Differ From The International Criminal Court?, The Hague has two international courts that deal with genocide, but they have very different remits, Legal Affairs, *Pursuit*, 8 January 2024)

²⁹³ A transcript of the presentation, provided by the ICJ, is available here:
^œ[ICJ presentation by Ralph Wilde for the League of Arab States](#).

A transcript of the full proceedings of the Court on Monday 26 February 2024, published by the *International Court of Justice* is available here:
^œ[Public sitting held on Monday 26 February 2024, at 10 a.m., at the Peace Palace, President Salam presiding](#).

With world-wide outrage mounting at the ^œ [psychopathic, indiscriminate killing of those designated 'human animals'](#) Western 'leaders' are desperate to divert attention away from the carnage.

The New York Times, propaganda-disseminating mouth-piece for 'The West', describes French President Macron's deliberate attempt to divert attention from Genocide to the possibility of European nations sending their troops into Ukraine. Macron is despicably trying to diffuse outrage at the massacre of starving Gazans!

²⁹⁴ As [explained elsewhere](#), Israel's expansive covert Western influence ensures unconditional political and military support for Israel's policies and activities.

Lee Fang and Jack Poulson in an article entitled

^œ[Israeli Documents Show Expansive Covert U.S. Influence Campaign: Israeli government officials closely coordinate with advocacy groups shaping congressional and state legislation, social media and campus discourse](#)(*Lee Fang*, 24 June 2024),

expand on the various [organizations and policies which Israel supports and promotes within both the United States and Western Europe](#) 'designed to carry out what Israel called "^œ[mass consciousness activities](#)" targeted largely at the US and Europe'.

The result is unconditional commitment to Israeli policies and practices no matter how egregious they become, as ^œ[this video](#) and *Haaretz* illustrate:

A *Haaretz* report entitled 'Israel Created 'Kill Zones' in Gaza. Anyone Who Crosses Into Them Is Shot' explained the Israeli 'justification' for such killing:

The Israeli army says 9,000 terrorists have been killed since the Gaza war began. Defense officials and soldiers, however, tell *Haaretz* that these are often civilians whose only crime was to cross an invisible line drawn by the IDF....

"In practice, a terrorist is anyone the IDF has killed in the areas in which its forces operate," says a reserve officer who has served in Gaza...

(Yaniv Kubovich, ^œ[Israel Created 'Kill Zones' in Gaza. Anyone Who Crosses Into Them Is Shot](#), *Haaretz.com*, March 31, 2024)

- 295 The contrast between Western Mainstream Media protests at the indiscriminate killing of Palestinians over decades and the killing of 7 Western aid workers could not be more stark. Here are a few Western headlines demonstrating this:
- œAlbanese is outraged over the death of an Australian aid worker in Gaza, but what will Israel do?
 - œSeven Gaza aid workers including UK, US and Australian citizens killed in Israeli strike, charity says
 - œIsraeli Strikes on Aid Convoy Prompts Condemnation and an Apology From Netanyahu
 - œBiden 'outraged' at Israel over aid workers' deaths as Netanyahu rival Benny Gantz calls for new elections
 - œIsraeli ambassador, summoned by Poland in protest, apologizes for death of Polish aid worker

- 296 A œWikipedia explanation of the evolution of Israeli land and property laws gives a detailed account of the process:

Overview

In 1945, of the 26.4 million dunams (26,400 km²) of land in Mandatory Palestine, 12.8 million was either owned or held in indefinite lease by Arabs, 1.5 million by Jews, 1.5 million was public land and 10.6 million constituted the desertic Beersheba district (Negev). Of the 9.2 million dunams of land that was arable, 7.8 million dunams was owned by Arabs, 1.2 million by Jews and 0.2 million was public land.[2][3]

By 1949, 700,000 Palestinian Arabs had fled or been expelled from their lands and villages. Israel was now in control of some 20.5 million dunams (approx. 20,500 km²) or 78% of lands in what had been Mandatory Palestine: 8% (approx. 1,650 km²) were privately controlled by Jews, 6% (approx. 1,300 km²) by Arabs, with the remaining 86% being public land.[4] Land laws were passed to legalize changes to land ownership.[5]

As at 2007, the Israel Land Administration (ILA), which was established in 1960, manages 93% of Israel's land comprising 19,508 km² under the following laws and land policy. The remaining 7% of land is either privately owned or under the protection of religious authorities.

- Basic Law: Israel lands (1960) states that all the lands owned by the state of Israel will remain in state ownership, and will not be sold or given to anyone, but allows for the Knesset to override that ban on privatization by legislation.[6]
- Israel Lands Law (1960) details several exceptions to the basic law.
- Israel Land Administration Law (1960) describes the details of establishing and operating the Israel Land Administration.[7]
- Covenant between the State of Israel and the World Zionist Organization, establishing the Jewish National Fund (1960). [8] 13 percent of Israel's land belongs to the Jewish National Fund,[9] which is managed by the ILA.

Use of land in Israel usually means leasing rights from the ILA for a period of 49 or 98 years. Under Israeli law, the ILA cannot lease land to foreign nationals, which includes Palestinian residents of Jerusalem who have identity cards but are not citizens of Israel. In practice, foreigners may be allowed to lease if they show that they would qualify as Jewish under the Law of Return.[10]

For a well-documented explanation of Israeli citizenship law as it applies to Palestinians in Israel and its 'Occupied Territories' see the Wikipedia entry ^œ[Israeli citizenship law](#). As it summarizes:

The territory of modern Israel was formerly administered by the British Empire as part of a League of Nations mandate for Palestine and local residents were British protected persons. The dissolution of the mandate in 1948 and subsequent conflict created a set of complex citizenship circumstances for the non-Jewish inhabitants of the region that continue to be unresolved. While pre-1948 Palestinian Arab residents of the former mandate and their descendants who remained living in Israel were granted Israeli citizenship in 1980, those resident in the West Bank and Gaza Strip are largely considered stateless.

Ronen Bergman and Mark Mazzetti, in a *New York Times* article entitled ^œ[The Unpunished: How Extremists Took Over Israel: After 50 years of failure to stop violence and terrorism against Palestinians by Jewish ultranationalists, lawlessness has become the law](#), have provided a long-overdue reassessment of Israel's 'lawlessness [which] has become the law'. Though they still cannot resist labelling all Palestinian attempts at resisting that lawlessness as 'terrorism'!

They provide an interesting explanation of Israel's manufactured 'justifications' for seizing control of Palestinian lands to establish 'Jewish settlements' on lands seized in the 1967 war:

...In 1977, the Likud party led a coalition that, for the first time in Israeli history, secured a right-wing majority in the country's Parliament, the Knesset. The party was headed by Menachem Begin, a veteran of the Irgun, a paramilitary organization that carried out attacks against Arabs and British authorities in Mandatory Palestine, the British colonial entity that preceded the creation of Israel. Likud - Hebrew for "the alliance" - was itself an amalgam of several political parties. Kach itself was still on the outside and would always remain so. But its radical ideas and ambitions were moving closer to the mainstream.

Likud's victory came 10 years after the war that brought Israel vast amounts of new land, but the issue of what to do with the occupied territories had yet to be resolved. As the new prime minister, Begin knew that addressing that question would mean addressing the settlements. Could there be a legal basis for taking the land? Something that would allow the settlements to expand with the full support of the state?

It was Plia Albeck, then a largely unknown bureaucrat in the Israeli Justice Ministry, who found Begin's answer. Searching through the regulations of the Ottoman Empire, which ruled Palestine in the years preceding the British Mandate, she lit upon the Ottoman Land Code of 1858, a major effort at land reform. Among other provisions, the law enabled the sultan to seize any land that had not been cultivated by its owners for a number of years and that was

not "within shouting distance" of the last house in the village. It did little to address the provisions of the Geneva Convention, but it was, for her department, precedent enough. Soon Albeck was riding in an army helicopter, mapping the West Bank and identifying plots of land that might meet the criteria of the Ottoman law. The Israeli state had replaced the sultan, but the effect was the same. Albeck's creative legal interpretation led to the creation of more than 100 new Jewish settlements, which she referred to as "my children."

At the same time, Begin was quietly brokering a peace deal with President Anwar Sadat of Egypt in the United States at Camp David. The pact they eventually negotiated gave the Sinai Peninsula back to Egypt and promised greater autonomy to Palestinians in the occupied territories in return for normalized relations with Israel. It would eventually win the two leaders a joint Nobel Peace Prize. But Gush Emunim and other right-wing groups saw the accords as a shocking reversal. From this well of anger sprang a new campaign of intimidation. Rabbi Moshe Levinger, one of the leaders of Gush Emunim and the founder of the settlement in the heart of Hebron, declared the movement's purposes on Israeli television. The Arabs, he said, "must not be allowed to raise their heads."

Leading this effort would be a militarized offshoot of Gush Emunim called the Jewish Underground. The first taste of what was to come arrived on June 2, 1980. Car bombs exploded as part of a complex assassination plot against prominent Palestinian political figures in the West Bank. The attack blew the legs off Bassam Shaka, the mayor of Nablus; Karim Khalaf, the mayor of Ramallah, was forced to have his foot amputated. Kahane, who in the days before the attack said at a news conference that the Israeli government should form a "Jewish terrorist group" that would "throw bombs and grenades to kill Arabs," applauded the attacks, as did Rabbi Haim Druckman, a leader of Gush Emunim then serving in the Knesset, and many others within and outside the movement. Brig. Gen. Binyamin Ben-Eliezer, then the top I.D.F. commander in the West Bank, noting the injuries suffered by the Palestinian mayors under his watch, said simply, "It's a shame they didn't hit them a bit higher." An investigation began, but it would be years before it achieved any results. Ben-Eliezer went on to become a leader of the Labor party and defense minister....

Israel, as a colonizing state, has presumed the right to behave as a Western colonizer.

In the 18th to 20th centuries *terra nullius* presumptions were considered, by Western states, to be the 'right and proper' way for the colonial state to behave toward its populations - making no 'legal' distinction between Western settlers and indigenous inhabitants. Property ownership required colonially granted/ recognized 'legal entitlement'.

To be considered a 'land owner' one had to have colonially 'registered' title to the land one claimed and, inevitably, all land titles were to be owned by legally recognized individual entities. The only exception to this rule was residence within colonially established 'indigenous reservations'.

Israel's 'sin' (from a Western perspective) is that it is employing colonial practices of 'homesteading', 'land grants' and lease holding in a discriminatory way: limiting rights of legal ownership/ leasehold to Jewish settlers, discriminating against 'indigenous inhabitants'. Though, of course, most Western colonial bureaucracies biased rights of land

registration in favor of colonial settlers. As a well-established aphorism puts it, the 'responsibility' to even-handedly grant property title rights to applicants was 'more honored in the breach than in the observance' in earlier colonial practice.

The problem for Israel is that previous 'colonies' have been granted putative independence and the absurdity of assuming *terra nullius* state control of all land is seen for what it always has been - the denial of all forms of 'unregistered' pre-colonial land use and 'ownership' using the pretext of colonially legitimized legal 'land registration'.

It is this presumption which delegitimizes all pre-Israeli land ownership and use, requiring all such ownership and use to be 'legally' legitimized by the state (which, of course, will strongly bias such ownership/ lease holding in favor of Jewish 'settlers') which lies at the heart of 'settler' practices in Israel and its 'occupied territories'.

The very common practice in both past Western colonies and in Israel has been to harass, intimidate, physically assault current possessors of lands and dwellings until they finally vacate them⁹⁹⁷. The aggressors are then able to move onto the property, and 'establish ownership/ leasehold rights' by applying for registered title to the property. Non-Jewish property owners (in common with non-Western property owners in other colonies) who are absent from their properties for any period of time can find that, in their absence, 'settlers' have legally acquired ownership/ leasehold rights of the property.

'Settlers' in Israel's 'occupied territories' can 'legally' claim to be 'within the law' in seizing and 'registering' non-Jewish lands legitimized through pre-Israeli practices and legal processes. Both they and the dispossessed know that the existing owners will never be granted legal Israeli titles.

²⁹⁷ And, for its 'audacity' in opposing the genocidal activities of Israel and its US partner, in January 2024 ^œ[The United States and its obedient vassal, The United Kingdom, are bombing Yemen!](#)

The problem facing the rest of the world is that, since Israel has shown itself willing to ignore international opinion and, in the event of believing itself facing an existential threat, is clearly capable of employing an undisclosed number of nuclear weapons, and the United States has a 'first-strike' nuclear policy, which states

...that any U.S. president has the authority, without consulting anyone, to order a pre-emptive nuclear strike - not merely in retaliation if and when missiles start flying in our direction. Our warheads could be launched in defense of allies, after the onset of a conventional war involving our troops (think: Iraq, 2003) or in response to a bellicose threat posed by a nuclear (e.g., North Korea) or not-yet-nuclear state (e.g., Iran).

(Greg Mitchell, ^œ[U.S. Must End Nuclear 'First Strike' Policy | Opinion, Newsweek](#), August 24, 2020)

the use of military force to compel Israel to stop its genocidal behavior is fraught with enormous danger.

Israel knows this and is capable of psychopathically threatening any nation which interferes in its genocidal 'solution' to its 'Palestinian problem'.

²⁹⁸ Alastair Crooke, in an excellent discussion on the site *Judging Freedom* explains the nature of Hamas and the inevitable consequence of Israeli oppression: ^œ[Alastair Crooke: Does Netanyahu have an exit plan?](#)

299 In a flagrant display of arrogant indifference, Israeli forces, with explicit support and backing by the United States Congress and Administration, continue to demonstrate their hubristic disregard for international law and conventions of civilized behavior. As Vasily Nebenzya, Russian Permanent Representative to the UN, explains:

the UN flag in the Gaza Strip not only fails to guarantee protection to civilians, but also tends to become a target for the Israel Defense Forces (IDF).

"Schools, hospitals and refugee camps are being shelled in different parts of the Strip. The US media are quoting volunteer doctors working in Gaza hospitals, who almost every day - according to their very testimonies - encounter cases of gunshot wounds to the heads among minors from 2 to 12 years old," he told a UN Security Council briefing on the situation in the Middle East, including the Palestinian question. "It appears that the UN flag is not only failing to protect civilians, humanitarian workers and civilian social infrastructure, but also tends to become a direct target for the IDF."

"All humanitarian workers, including our today's briefer, are stating "in unison" that "there are no safe places in Gaza left." And this is not a figure of speech, it is a bitter reality," Nebenzya continued.

In his words, "the number of civilians killed, wounded and maimed, including women and children, is staggering."

([∞][Israel begins to view UN flag in Gaza as target indicator - Russia's UN envoy, TASS, Middle East conflict, 17 October, 2024](#))

Caitlin Johnstone described the nightmare:

Someone filming from their window in northern Gaza captured the moment when Israeli forces who had injured a child with a sniper drone launched an airstrike on the site after people ran to his rescue. Imagine being scared to run to the rescue of an injured child because you could be killed for it.

That's the kind of nightmare Palestinians are facing in Gaza. One where a child injured by a flying robot could be being used as bait to draw rescuers to the scene in order to bomb them. One where people have to watch their family members burn alive right in front of them. One where they have to listen to their disabled loved one get ripped apart by dogs in the next room while they're held at gunpoint by Israeli soldiers. One where they have to watch everything they've ever known incinerated all around them while the world watches and yawns....

(Caitlin Johnstone, [∞][What's Happening In Northern Gaza Proves Israel Lied About Everything](#), October 19, 2024)

300 Israel, treating the West Bank and other Palestinian refugee camps as separate from and not covered by the Gaza Truce, continued its 'normal' settlement expansion and associated killing,

Palestinian news agency Wafa said Israeli forces stormed Jenin "from several directions, firing bullets and surrounding government hospitals and the headquarters of the Red Crescent Society".

The Israeli military spokesperson's office said it was looking into the reports.

The raids come despite an ongoing four-day truce between Israel and Palestinian group Hamas in the war-torn Gaza Strip, where nearly 15,000 Palestinians, including more than 6,000 children,

have been killed in Israeli strikes.

(^œ[Israeli forces carry out deadly raids in the West Bank amid Gaza truce](#), *Aljazeera*, 26 November 2023)

But, of course, for the United States that was not the reason for ending the Gaza Truce. It was all the fault of those murderous ' Hamas Terrorists' who refused to accept that Israel had the right to continue seizing Palestinian lands and killing Palestinians who resisted their activities in the West Bank:

Dubai [UAE], December 2 (ANI): US Secretary of State Antony Blinken said on Saturday that the pause in the ongoing Israel-Hamas conflict ended due to Hamas, claiming the terror group 'reneged' on commitments.

"He highlighted that the end of the pause resulted from Hamas breaking commitments, citing a terrorist attack in Jerusalem and firing rockets before the pause ended.

"It's also important to understand why the pause came to an end. It came to an end because of Hamas. Hamas reneged on commitments it made. In fact, even before the pause came to an end, it committed an atrocious terrorist attack in Jerusalem, killing three people, wounding others, including Americans. It began firing rockets before the pause had ended. And as I said, it reneged on commitments it made in terms of releasing certain hostages."Blinken reiterated US support for peace in the region, and said that the US is focusing on the release of Israeli hostages.

(^œ[Humanitarian pause ended because of Hamas, says US State Secy Blinken as Israel-Hamas fighting resumes](#), *Big News Network*, December 03, 2023)

Context and perspective bias are everything in such matters, and the United States is very-well-practiced in manipulating reality to suit themselves and their proxies.

³⁰¹ [As we have seen](#), once human beings commit themselves to particular understandings of the nature of 'reality' and of their obligations within that ideologically defined reality, behaviors which, outside of their ideologically justified worldview, would be considered abhorrent, become 'necessary'.

All 'morality' becomes defined by the ideological frame within which they live and 'immorality' defined as behavior which contravenes the ideogical presumptions of their own understanding of 'reality'.

The ethos of 'settlers' of the state of Israel has been driven both by a sense of entitlement as '^œ[The Chosen People](#)' in a '[Promised Land](#)' and by the history of Jewish people in Western European countries through centuries of antagonism between traditional messianic Judaism ⁹⁹⁸ and messianic Christianity.

It combines both a belief in 'racial destiny' of an inherently 'superior' people and a sense of victimisation which requires a 'Jewish Homeland' where they can be safe from the horrors of Auschwitz.

Caitlin Johnstone summed it up:

There's a certain particularly toxic personality type which thrives on being hated. They behave in wildly odious and destructive ways, and then when people react to this with hostility they plunge into poor-me victimhood, which they then use to justify more odious and destructive behavior.

You may have been unfortunate enough to have encountered such personalities in your own life. They behave atrociously, and then when people react to it they say "See?? I really AM being persecuted!"...

(Caitlin Johnstone, ^œ[Israel Weaponizes Sympathy And Victimhood](#), February 12, 2024)

It needs to be understood that this ethos drives the ^œ[Jewish Zionist movement](#) (and has since its inception in the late 19th century, long before the Nazi atrocities of the 1940s), not all 'Jewish People'.

It is, in fact, very similar to the ethos of many of the 'settlers' within what is now The United States of America. The 'Pilgrim Fathers', settlers who traveled to America on the Mayflower and established their Colony in Plymouth, Massachusetts also believed that they were travelling to a 'promised land', escaping persecution and establishing a new haven for all like-minded Christians.

It was this strong belief that they were responsible to [become 'the light of the world', a 'city set on a hill'](#), that committed them to preserving and reinforcing their place as God's 'indispensable nation'; a nation which would inscribe on its coin ^œ[In God We Trust](#)!

The official ^œ[website for BBC History Magazine and BBC History Revealed](#) explains it well:

The pilgrims who risked their lives to settle in a strange land were more - and less - than folklore heroes. They were extreme Puritans, that is to say they disapproved of several of the rituals and practices of the Church of England that had been established by parliament at the beginning of Elizabeth I's reign. They believed that the official church was too similar to the Roman Catholic church and they wanted forms of worship and church organisation that would, in their opinion, be closer to what the Bible taught. All Puritans were critical of the established church, but members of this radical fringe were 'separatists'. They refused to attend their parish churches and, when the government imposed fines upon them, some decided to leave the country....

Their discontent coincided with a growing interest in colonisation. The English and Dutch governments were both sponsoring the establishment of settlements on the North American coast. Having claimed the territory they called 'Virginia', the English government offered incentives to anyone prepared to travel there and develop plantation agriculture (mainly of tobacco). So it was that, in 1620, a minority of those who had settled in the Low Countries decided to move again - this time across the Atlantic....

Many of those who went into voluntary exile held strong beliefs backed by their own understanding of the Bible; they had suffered much for their beliefs and were not prepared to compromise them in the interests of harmony with other religious migrants..

(Accessed November 19, 2023).

Fast-forward to the 21st Century and we have two distinct groups of people, both recognizing themselves as 'Zionists'; both intent on establishing a Zionist State in the Biblical 'Land Of Israel'; and both believing themselves justified by 'God' to do 'whatever it takes' to ensure the establishment of such a nation.

But, the motivations of the two groups (both subsets of much larger communities which do not share their determinations) are antithetical.

Exponents of 'Jewish Zionism' believe that they are establishing an exclusive safe haven for ALL 'ethnically' Jewish people (though, of course, the 'ethnic' identity of 'Jews' is largely illusory. It is instructive that Zionist practices within the modern State of Israel strongly discriminate in favor of 'Europeanized' Jews).

Exponents of 'Christian Zionism' believe that they are ensuring the prophecies of the 'Book of Revelation': The return of the Christian Messiah who will establish His Kingdom and eliminate all Jews who do not convert to Christianity and accept his rule.⁹⁹⁹

If either is right it will not end well for others!

³⁰² Rabea Eghbariah sums it up::

Some may claim that the invocation of genocide, especially in Gaza, is fraught. But does one have to wait for a genocide to be successfully completed to name it? This logic contributes to the politics of denial. When it comes to Gaza, there is a sense of moral hypocrisy that undergirds Western epistemological approaches, one which mutes the ability to name the violence inflicted upon Palestinians. But naming injustice is crucial to claiming justice. If the international community takes its crimes seriously, then the discussion about the unfolding genocide in Gaza is not a matter of mere semantics.

The UN Genocide Convention defines the crime of genocide as certain acts "committed with the intent to destroy, in whole or in part, a national, ethnical, racial or religious group, as such." These acts include "killing members of a protected group" or "causing serious bodily or mental harm" or "deliberately inflicting on the group conditions of life calculated to bring about its physical destruction in whole or in part."...

(Rabea Eghbariah, ^œ[The Ongoing Nakba: Towards a Legal Framework for Palestine](#), *The Nation*, November 21, 2023)

On December 29, 2023, South Africa ^œ[submitted its case to the International Court of Justice](#) accusing Israel of genocide against Palestinians in Gaza. As the submission explained:

4. The facts relied on by South Africa in this application and to be further developed in these proceedings establish that - against a background of apartheid, expulsion, ethnic cleansing, annexation, occupation, discrimination, and the ongoing denial of the right of the Palestinian people to self-determination - Israel, since 7 October 2023 in particular, has failed to prevent genocide and has failed to prosecute the direct and public incitement to genocide. More gravely still, Israel has engaged in, is engaging in and risks further engaging in genocidal acts against the Palestinian people in Gaza. Those acts include killing them, causing them serious mental and bodily harm and deliberately inflicting on them conditions of life calculated to bring about their physical destruction as a group. Repeated statements by Israeli State representatives, including at the highest levels, by the Israeli President, Prime Minister, and Minister of Defence express genocidal intent. That intent is also properly to be inferred from the nature and conduct of Israel's military operation in Gaza, having regard inter alia to Israel's failure to provide or ensure essential food, water, medicine, fuel, shelter

and other humanitarian assistance for the besieged and blockaded Palestinian people, which has pushed them to the brink of famine. It is also clear from the nature, scope and extent of Israel's military attacks on Gaza, which have involved the sustained bombardment over more than 11 weeks of one of the most densely populated places in the world, forcing the evacuation of 1.9 million people or 85% of the population of Gaza from their homes and herding them into ever smaller areas, without adequate shelter, in which they continue to be attacked, killed and harmed. Israel has now killed in excess of 21,110 named Palestinians, including over 7,729 children - with over 7,780 others missing, presumed dead under the rubble - and has injured over 55,243 other Palestinians, causing them severe bodily and mental harm. Israel has also laid waste to vast areas of Gaza, including entire neighbourhoods, and has damaged or destroyed in excess of 355,000 Palestinian homes, alongside extensive tracts of agricultural land, bakeries, schools, universities, businesses, places of worship, cemeteries, cultural and archaeological sites, municipal and court buildings, and critical infrastructure, including water and sanitation facilities and electricity networks, while pursuing a relentless assault on the Palestinian medical and healthcare system. Israel has reduced and is continuing to reduce Gaza to rubble, killing, harming and destroying its people, and creating conditions of life calculated to bring about their physical destruction as a group.

5. South Africa, mindful of the *jus cogens* character of the prohibition of genocide and the *erga omnes* and *erga omnes partes* character of the obligations owed by States under the Genocide Convention, is making the present application to establish Israel's responsibility for violations of the Genocide Convention; to hold it fully accountable under international law for those violations; and - most immediately - to have recourse to this Court to ensure the urgent and fullest possible protection for Palestinians in Gaza who remain at grave and immediate risk of continuing and further acts of genocide.

³⁰³ I well remember, in my childhood, going to the bioscope to watch 'cowboys and Indians' films provided as an endless stream of indoctrinating propaganda by 'Hollywood'. The 'good guys' (all 'cowboys') would demonstrate their 'heroism' and proficiency with Smith and Wesson 'six-guns' in pursuing and killing the 'marauding Indians'. Then we would go home and play 'cowboys and Indians' in the backyard!.

As 'Solomon son of David, king of Israel' taught: 'Start children off on the way they should go, and even when they are old they will not turn from it.' (Proverbs Ch. 1:1; Ch. 22, 6 (NIV))

³⁰⁴ It is easy, given the horror of the Gaza genocide, to forget that, while Israeli atrocities have descended into new depths of depravity in Gaza, the ongoing activities of Israeli 'settlers' elsewhere have continued and escalated.

Houq Al Adara, in a description of her own experience in the post-October 7th 2023 Palestinian reality, describes it all in an account entitled

^{ae}A settler shot my husband. Then Israel bulldozed my childhood home: Zakariyah has suffered immensely since being wounded by an Israeli settler. Yet his attacker roams free, and demolitions continue to devastate our communities in Masafer Yatta' (*The Landline*, +972 Magazine's weekly newsletter, June 20, 2024).

The nightmare continues for Palestinians within the occupied territories (and, of course, within the putative borders of Israel itself).

305 Ehud Olmert explained Israel's ambition in the third decade of the 21st Century:

The supreme aim of the far-right duo National Security Minister Itamar Ben-Gvir and Finance Minister Bezalel Smotrich is not the occupation of the Gaza Strip.

Even settlement throughout the devastated Strip is not the final goal of the bunch of messianic hallucinators that has seized power in the state of Israel. Gaza is just the introductory chapter, the platform this gang wants to build as the foundation upon which the real fight they are eyeing will be conducted: the battle for the West Bank and the Temple Mount.

The ultimate aim of this gang is "purging" the West Bank of its Palestinian inhabitants, cleansing the Temple Mount of its Muslim worshippers and annexing the territories to the state of Israel. The way to achieve this goal is blood-soaked. Israeli blood, in the state and in the territories it has been controlling for 57 years now, as well as Jewish blood in places elsewhere in the world. As well as a lot of Palestinian blood, of course, in the territories, in Jerusalem and if there is no alternative - also among Arab citizens of Israel.

[For Additional Information:]

- [Israel's worst-ever government wants to let the country burn](#)
- ['100-200,000, not two million': Israel's finance minister envisions depopulated Gaza](#)
- [Israel's far-right must let the public judge its policies in an early election](#)

This aim will not be achieved without extensive violent conflict. Armageddon. All-out war. In the south, in Jerusalem, in the territories of the West Bank and to the extent necessary also on the northern border. Such a war will bolster the impression that we are fighting for our lives, for our very existence. In a war for survival, it is permissible to do insufferable things, and the hilltop youth are proving daily that among them are many who are capable of precisely that....

(Ehud Olmert, [Netanyahu's Messianic Coalition Partners Want an All-out Regional War. Gaza Is Just a First Step](#), *Haaretz*, February 22, 2024)

306 The time is long-passed when Western populations, wherever they might live, can simply claim that they 'no longer behave as genocidal colonists'! If they do not unequivocally demonstrate that they no longer support genocidal colonialism through any and every democratic form of protest, then they, with their governments, are complicit in Israel's genocidal activities.

Like it or not, The true nature of 2024 Western populations is on display before the rest of the world. We have only ourselves to blame if we find ourselves condemned by the non-Western World as Genocidal Westerners!

It is not enough that we write conscience twinged 'comments' on internet sites, lamenting our impotence in the face of our governments' support

of Israel. Whether we like it or not, Western Governments are 'democratically elected' and claim to speak in our names! And, if our governments are able to openly and deliberately speak in our names on behalf of Genocidal Colonization then what on earth are we doing about it?

³⁰⁷ On 21st January 2024 Hamas published a document entitled ^œ[Our narrative... Why Operation Al-Aqsa Flood?](#). The preamble explains its purpose:

In light of the ongoing Israeli aggression on the Gaza Strip and the West Bank, and as our people continue their battle for independence, dignity and breaking-free from the longest-ever occupation during which they have drawn the finest displays of bravery and heroism in confronting the Israeli murder machine and aggression. We would like to clarify to our people and the free peoples of the world the reality of what happened on Oct. 7, the motives behind, its general context related to the Palestinian cause, as well as a refutation to the Israeli allegations and to put the facts into perspective.

(^œ[Our narrative... Why Operation Al-Aqsa Flood?](#), *Hamas Media Office*, January 21, 2024)

The October 7th, 2023 Hamas' attack on Israel's illegal settlements in the vicinity of The Gaza Strip has been variously portrayed as a 'horrendous' 'terrorist' attack on innocent civilians; a barbaric crime against humanity including beheaded babies, raped and slaughtered women and wholesale torture and murder of Israeli communities - all committed within the short time that it took for the Israeli Defense Forces (IDF) to respond to the attack.

Western media, uncritically, accepted Israel's version of what had occurred and published lurid, embellished accounts of it all which United States' officials, including President Biden, repeatedly referred to as 'Hamas Crimes against Humanity'.

Three months later, those accounts have been shown to be, at best, wild exaggerations of what actually occurred. It is becoming increasingly clear that, in fact, Israel's accounts followed Goebbels' maxim: 'If you tell a lie big enough and keep repeating it, people will eventually come to believe it' .

There were no 'babies removed from incubators and beheaded' and there were no rapes and tortures committed by 'Hamas Terrorists'¹⁰⁰⁰.

There were, however, as the ^œ[Israeli News Site Haaretz put it](#) in an investigative article on January 17, 2024, "'Unlawful, Unethical, Horrifying'" acts committed by IDF personnel.

It seems that Israel was, indeed, well aware of the planned Hamas attack and used it to stage a psychopathic justification for a genocidal, ethnic-cleansing campaign against Gaza's inhabitants in what can only be described as pre-planned, choreographed, Hollywood style portrayals of horrifying, 'terrorist acts' garnished with various existing social media sourced scenes. Israel was well prepared for the events of October 7th, 2023.

It has, indeed, been a highly successful propaganda event 'justifying' the carpet bombing of Gaza.

A ^œ[comment on a Naked Capitalism post](#) put it very well:

...There is never any mention that Israel is an occupying power, that the occupied territories extend well beyond the borders of Gaza and the West Bank, that the Palestinians have every right to set up an armed resistance to their occupiers and that Hamas never left the occupied territories in its' incursions. Even wrt their attacks on the Kibbutzim, those are essentially militarized out posts and their targeting was well within the laws of war. What they have done is all perfectly legal under international law and is routinely misrepresented in the MSM....

The *modus operandi* of Israel and its 'settler' colonizers over more than a century has included pursuing deliberately provocative policies and practices, aimed at inflaming Palestinian indignation and resentment.

Then, when their victims' outrage leads to rebellion, using that rebellion as justification for further murder, oppression and dispossession, justifying their behavior as a 'reasonable' response to 'unprovoked' Palestinian aggression. (There is more than a passing similarity between this behavior and the behavior of the 'settlers' of the American 'Wild West') ¹⁰⁰¹

Ilan Pappé, in a keynote address at The Islamic Human Rights Commission's (IHRC) annual Genocide Memorial Day in London, UK on 21st January 2024, described the process:

At the early stages of the Zionist settler colonialist project, its leaders carried out their eliminatory policies with a genuine attempt to square the circle by claiming that it was possible to build a democracy and at the same time to eliminate the native population. There was a strong desire to belong to the community of civilised nations and it was assumed by the leaders, in particular after the Holocaust, that the eliminatory policies will not exclude Israel from that association....¹⁰⁰²

And, of course, The West, long enured to such duplicitous behavior, unhesitatingly supports them.

The October 07, 2023 attack on Israel has widely been condemned for its inclusion of 'civilian' targets. This needs to be put into perspective:

As Caitlin Procter and Luigi Achilli explain:

According to the Ministry of Health in Gaza and the United Nations, over 8000 Palestinians have already been killed, some 40% of whom were children, and more than half of Gaza's residents are now displaced. It has also disappeared thousands of Palestinians from Gaza, doubling the number of Palestinian prisoners in just two weeks. They are now believed to be held in inhumane detention conditions. And, in the West Bank, it has violently invaded Palestinian towns and refugee camps, killing more than 100 people.

Meanwhile, another campaign is raging on the airwaves and across social media. Waged by both volunteers and professional pundits, Tiktok, X (formerly Twitter), Instagram, and Facebook are all overflowing with content aimed at influencing public opinion on the crisis. Some posts make light of Palestinian death with memefied, casual cruelty. Others sex up the Israeli Defence Forces. Still others cheerlead genocide....¹⁰⁰³

On October 7, 2023 the Palestinian attackers came from an open-air prison (widely condemned as a 'concentration camp') within which Palestinians have been held and abused for decades.

Over those decades their abusers have included Israeli 'settlers' (designated 'civilians' by Israel) who have evicted Palestinian families from their homes and lands and claimed 'ownership' with the implicit and/or explicit support of both Israeli defense personnel and the Israeli government.

Those 'settlers' have been both armed and very aggressive in their invasion, subjugation and expulsion of Palestinians from what have become 'illegal' Israeli settlements. And those settlements have then been 'protected' by Israeli 'guards' and 'defense forces'.

Aljazeera, in a report entitled 'Israel approves plans for thousands of illegal settlement homes: Defence Ministry committee approves more than 5,000 new settlement housing units in the occupied West Bank', have described what happened in June, 2023, one of the recent examples of what has been happening for decades:

The Defence Ministry planning committee that oversees settlement construction approved more than 5,000 new settlement homes on Monday. The units are at various stages of planning, and it was not immediately clear when construction would begin. There was no immediate comment from the ministry.

The international community, along with the Palestinians, considers settlement construction illegal and an obstacle to peace. More than 700,000 Israelis live in the occupied West Bank and East Jerusalem - territories captured by Israel in 1967 and sought by the Palestinians for a future state.

"The Netanyahu government is moving forward with its aggression and open war against the Palestinian people," said Wasel Abu Yousef, a Palestinian official in the occupied West Bank. "We affirm that all settler colonialism in all the occupied Palestinian territories is illegitimate and illegal."

Israel's government, which took office in late December, is dominated by religious and ultranationalist politicians with close ties to the settlement movement. Finance Minister Bezalel Smotrich, a firebrand settler leader, has been granted cabinet-level authority over settlement policies and has vowed to double the settler population in the occupied West Bank.

Al Jazeera's Imran Khan, reporting from the Giv'at Ze'ev settlement in the occupied West Bank, said the news was "a very big victory for Smotrich".

"Normally, to approve settlement expansion, there are six phases. They included things like security considerations, who was going to actually build the settlement, political considerations. At each of those stages, MKs - members of parliament [the Knesset] - and the international community could voice their concerns and often they would be slowed down," Khan said.

"But last week the cabinet, led by Prime Minister Benjamin Netanyahu, streamlined that process completely and handed over almost complete control to Smotrich. He's exercised that control today."

(^{oe}[Israel approves plans for thousands of illegal settlement homes:Defence Ministry committee approves more than 5,000 new settlement housing units in the occupied West Bank, *Aljazeera*, June 26, 2023\)](#))

For an example of the eviction of people from their homes and lands see:
^œ[Israel-Hamas war: Settlers speed up eviction of Palestinian Bedouins in West Bank hills amid war](#) (Louis Imbert , *Le Monde*, October 23, 2023)

One can only imagine what citizens of Western nations would do in similar circumstances but I doubt they would bother with a refined distinction between those who have robbed them of their homes and livelihoods and have been designated 'civilians' and the guards and defense personnel protecting those 'civilian' 'acquisitions'!

³⁰⁸ The purpose in use of the term 'terrorist' has been neatly summed up by a commenter pseudonymed 'Eclair':

...Behind every report or mention of a 'terrorist attack,' there is a background story of another provocation or massacre or humiliation (or multiples thereof,) perpetrated by the side being currently attacked. 'Terrorists' aren't born, they are created.

"Terrorist" is a trigger word. Whenever I encounter it, my assumption is that the purpose of the writer is to create a state of emotional disgust in my mind.

I guess I can understand the actions and mindset of the Jewish settlers flocking into Palestine during and at the end of WW 2. PTSD-afflicted, shell-shocked, a bit crazed from losing family, being ejected from homes and communities, and from having lived with the reality of a massive and efficient State apparatus that was dedicated to eliminating you and all like you, one survival mode is to stop at nothing to create a safe space in which to flourish. So, 'never again' becomes your driving force.

The Problem: The British ruling class, having had such great luck in the past with sending off and clearing out their troublesome population (the peasant Irish and Scots, petty thieves, murderers, the poor), as well as the penurious second (and third and fourth) sons of landowners, saw no reason why they could not do the same with Jews, who had been routinely scoured from European countries for centuries. A humane 'final solution.' Get 'em their own land! Except they underestimated the compliance (and immune systems) of current occupants and 'owners' of Palestinian lands. They were not about to go gently. Or obligingly die off from some 'European' disease. Distributing small pox blankets went out with the widespread acceptance of vaccines.

And, so we have ended up with a terrorized people, moving in and terrorizing the local population, who develop their own terrorists to defend themselves. In a never-ending cycle. Which now threatens to spread into a larger regional conflagration, involving States who have replaced small pox blankets with nuclear weapons.

(^œ[Commenter 'Eclair'](#) in Conor Gallagher, *America's War for the Greater Middle East (Continued)*, *Naked Capitalism*, December 10, 2023)

³⁰⁹ As The West has demonstrated over many decades, the best way to muddy the waters when something disastrous or despicable has happened is to present a range of scenarios (which of course do not include themselves) to 'explain' what has happened.

The consequent public debate diffuses blame and public outcry over the event. But, this outrage demands objectivity and that objectivity leads to

only one conclusion: The outrageous bombing campaign carried out by Israel in the Gaza Strip is responsible for this crime against humanity!

The depravity of Western leadership is best illustrated by example.

Jonathan Cook, in a blog entry entitled 'œ[This is another Iraqi WMD moment. We are being gaslit](#)', describes the demolition of a Gaza hospital by Israeli missiles. As he says 'It's not just 'unlikely' that a Palestinian rocket hit the Gaza hospital. It's impossible. The media know this, they just don't dare say it'.

Bhadrakumar, in a posting entitled 'œ[Why Biden lied on Gaza hospital attack](#)', outlines the depravity at the heart of Western Capitalism. As he explains:

The US President Joseph Biden's white lie obfuscated the horrific truth about the Israeli missile attack on the Baptist church in Gaza on Tuesday night, which took the lives of over 500 people.

The true level of depravity contained in this needs to be understood. Biden, embracing the perpetrator of that horrendous outrage, tells him - and the rest of the world - "Based on what I've seen, it appears as though it was done by the other team, not you. But there's a lot of people out there, not sure."

As Cook explained, and Biden had to know, it could only have been done by Israeli precision weaponry. Biden and his advisors knew this and they chose to meet with and embrace the psychopath responsible for it all!

And, no officials in Western nations, who must surely be aware of what actually happened, dared to hold the perpetrators responsible! What kind of a world has the West fashioned in this 21st century?

³¹⁰ Netanyahu's outburst and psychopathic rage, directed toward not only the Hamas organization but toward all who support it, in all probability stems from two related determinations:

- His often stated intention of ethnic-cleansing the largely mythical and very short-lived Biblical 'Land of Israel' ¹⁰⁰⁴; and
- From the disastrous consequences of his inept attempt to neutralize the effectiveness of the Palestine Liberation Organization (PLO) by supporting an embryonic Hamas which he assumed would be rival to the PLO among Palestinian people

His aim was to sow disunity amongst Palestinians, enfeebling resistance to the genocidal ambitions of the Israeli government.

Bhadrakumar explained it well:

Israel under Netanyahu has a highly controversial past vis-a-vis Hamas. Two former prime ministers, Ehud Olmert and Ehud Barak, have given interviews to prominent western media recently alleging that Netanyahu is responsible for the rise of Hamas, having financed the movement with Qatari funds. A former Israeli general who was in charge of occupation of Gaza has actually admitted to have disbursed funds to Hamas.

These stunning disclosures by responsible people expose that Netanyahu is a man of many parts. When Ambassador Gilon demands that Delhi should declare Hamas as a terrorist

organisation, it all depends on which faction of Hamas he is referring to.

Curiously, the Hebrew-language daily newspaper published in Israel under the Ma'ariv Hashavu'a brand has just come out with a sensational report to the effect that between 2011 and 2023, Netanyahu rejected at least six plans presented by the Israeli intelligence agency Shin Bet - during the respective tenures of Yoram Cohen, Nadav Argaman, and the current head, Ronen Bar - to eliminate the leader of Hamas fighters in Gaza Yahya al-Sinwar (who apparently led the assault on October 7) and other senior members of the Palestinian movement.

On Tuesday, the former Israeli defence minister Avigdor Liberman confirmed the veracity of this report. According to Liberman, Netanyahu was the one who granted "immunity" to Sinwar and other leaders of Hamas, standing against any attempts to neutralise them. "I'm stating this not as mere speculation, but as someone with personal knowledge of the matter," he stated.

Indeed, Netanyahu has had a dubious record of systematically strengthening Hamas to deepen divisions between the Palestinian factions with an agenda of weakening the Palestinian Authority and its President Mahmoud Abbas. His ulterior objective has been to stall any and every peace process, buying time for Greater Israel project to be completed.

(M. K. Bhadrakumar, [Tread Softly On Hamas - For Good Reason](#), *Indian Punchline*, November 29, 2023) [For references see the original post]

³¹¹ As was the practice in the 'colonial period' of Western European expansion across the world in the 19th and 20th centuries, the United States has, in a wide range of ways, provided unconditional diplomatic and political protection and both funding and military support to Israel. Howard French explained:

As the situation between Israel and Palestinians has grown steadily more dangerous, the doses of denial needed to ignore it, too, have like a narcotic become constantly bigger....

..[T]he central problem at the heart of this crisis of denial can nonetheless be stated fairly simply: Israel has been steadily settling land it seized and occupied through war with its neighbors, while simultaneously relegating its Arab citizens, who represent a fifth of the Israeli population, to increasingly abject, second-class status.

Successive American administrations have been meek about the first problem and all but silent on the second.

Under Bill Clinton, the United States tentatively sought to withhold money from its generous annual aid package for Israel to avoid subsidizing its settlements in the occupied West Bank, but ponied up most of the money in the end and subsequently said little about the settlements.

Barack Obama made a settlement freeze a centerpiece of his administration's push for a negotiated two-state solution to the Israeli-Palestinian conflict, but his repeated demands were rebuffed by Israel with no negative impact on American largesse.

By official count, Washington has granted Israel the equivalent of nearly \$253 billion in aid since the nation's founding in 1948 and

has recently furnished that assistance at a rhythm of about \$3 billion a year.

This makes Israel unique in at least two respects. The first is that it receives such generous assistance despite its high level of economic development. Even more remarkable, though, is that the United States makes so little effort to leverage its help politically as it does with most aid recipients.

Taken together, rather than helping its close friend, as American aid is supposed to do, America's non-responses to the barely concealed crisis identified above, coupled with its nearly unconditional support for Israel, has only made a very dangerous situation worse.

During the Trump administration, Washington even began pretending that Palestinians could be imagined out of the political reality that underlies the region's looming seismic dangers.... (Howard W. French, ["The Costs of America's Unconditional Support for Israel,"](#) *World Politics Review*, May 19, 2021)

Talya Wintman, in an essay entitled ["The Entire US Tax Code Is Implicated in the Forced Displacement of Palestinians:"](#) Israeli settlements are supported by millions in U.S. tax-exempt donations funneled through corporations and nonprofits' (*Truthout*, 15 May, 2021) has described some of the putatively 'private' sources of Israeli funding from the United States. As she says,

While U.S. policymakers pay lip service to the peace process, how is it that private citizens have legally spent millions inciting political violence and Jewish supremacy through our tax codes? The donations are damaging to U.S. interests abroad, and they most certainly do not offset the societal monetary costs of the tax exemptions themselves. More importantly, this philanthropic system was never democratic to begin with. Somehow, a handful of subsidized U.S. donors whose identities are not even public have contributed to Israeli apartheid and violent incitement.

Gaza is on fire, and U.S. multinational corporations and their investors are not just fanning the flames, they are literally part of the combustion. Of the U.S. munitions used in Gaza - Boeing, Hewlett Packard, Lockheed Martin and Raytheon - the list is long and predictable. These corporations not only bring in revenue from their contracts with the Department of Defense and independent arms dealings, many also receive additional corporate welfare through state legislatures by bullying local officials and threatening job cuts. Raytheon did this in the mid-1990s in Massachusetts, my home state, radically rewriting Massachusetts' corporate income tax code. Boeing has historically been one of the largest recipients of corporate welfare in the country, receiving an incentive package estimated at \$8.7 billion in state tax breaks in 2013 that was only overturned in 2020. This corporate malfeasance is the product of rapacious capitalism with low taxes, low wages and little regulation.

As is to be expected of the US given its long-term support for this anachronous colony, President Biden took a long time to voice an opinion on the 2021 Israeli bombardment of Gaza:

President Biden for the first time expressed support for a cease-fire between Israel and Hamas militants in Gaza on Monday, as the devastating rocket and missile war there gave no sign of easing after the deaths of dozens of Palestinian children.

But he also reiterated that Israel had a right to defend itself, stopping short of publicly calling on Israel to change its approach despite rising international condemnation.

The statement, issued after Mr. Biden spoke with Prime Minister Benjamin Netanyahu of Israel, was the furthest that the president has gone toward calling for an end to the conflict. But it also reflected a continued and deep reticence by world leaders to criticize Israel, and a failure of diplomacy to persuade the two sides to curb a rising cycle of violence.

(Isabel Kershner and David E. Sanger, Biden Supports Israel-Gaza Cease-Fire, as Fighting Rages Into Second Week, *New York Times*, May 17, 2021)

³¹² The Israeli designation of Palestinian citizens of Israel as 'Middle Eastern Arabs' is aimed at denying their legitimate claim to belong in the land seized by the invading colonists. As a *Jewish Voice* disinformation article absurdly claims:

The creation of the State of Israel in 1948 didn't take a significant amount of land from Middle Eastern Arabs. Israel comprises 0.2 percent of the Middle East's land mass. (That's two-tenths of one percent! Clearly, that tiny sliver of land that is Israel is not a significant amount of real estate...

Palestinian Arabs are not a separate people group. They have no distinguishing cultural identity setting them apart from other Arabs, and there is no distinctly Palestinian language. Palestinians are Arabs living in a region formerly known as Judea. They are no more distinct as a people from other Arabs in the Middle East than are residents of the state of Wisconsin distinct from residents of Iowa.

The same logic could, of course, equally absurdly, be used to suggest that all immigrants to Israel should go back to their places of origin because 'they are not distinct as a people' from others in those places.

The formal drawing of boundaries of lands designated as '[nation-states](#)' is of course Western and should not be presumed to have existed in any regions not controlled in some way by those Western nations.

To argue that since inhabitants of a region are similar to inhabitants of other regions they can reasonably be required to relocate to those other regions could be used to justify all invasions and ethnic cleansings.

The colonial territory 'Palestine' is a region given this name and boundaries by British colonial authorities but its inhabitants predate that by many centuries and it will, once Western colonial activities fade into history, no doubt be renamed by the descendants of Palestine's inhabitants (as has occurred in post-colonial territories around the world).

³¹³ Raja Shehadeh, in an Opinion piece in the *New York Times*, provides a timely reminder of the bleakness of Israel's occupation of Palestinian lands and the demoralizing disenfranchisement of Palestinians. As he says, it seems inevitable that Israel will eventually proceed with the formal annexation of the West Bank¹⁰⁰⁵.

But, as Israel must surely know, formal annexation will, sooner or later, re-enfranchise Palestinians in a new expanded Israel. It might well be that ^{oe}[the gloom of the Palestinian night is that blackness which precedes the dawn:](#)

...[O]ver the span of Mr. Netanyahu's premiership, the situation has gone from gloom to more gloom, from dark times to darker ones, from some measure of hope to despair.

Then again, at this point, maybe even darker would be better for us - maybe that's the only way out. My one consolation watching Israel pursue its current path is to think that it is doing itself damage, too.

Consider three examples:

- Violence by Jewish settlers and right-wing activists against Palestinians in the West Bank more than tripled last year, compared with 2017.
- An Israeli family built a home on land taken away from Palestinians - and then tried to rent it out on Airbnb. When the company balked, citing a new policy announced late last year against listing properties in settlements, the family brought a case for discrimination in the United States. (The Palestinian family is suing back.)
- Last week, a family near the village of Hizma, north of Jerusalem, whose house is in an Israeli settlement, chose to destroy its home of more than three decades rather than paying Israeli authorities to do the job (and being fined).

Won't Israeli society at some point also feel the nefarious effects of its government's inhumanity toward us?

In Arundhati Roy's novel "The Ministry of Utmost Happiness," one of her characters, Musa, says that if Kashmiris have failed to gain independence from India, at least in struggling for it they have exposed the corruption of India's system. Musa tells the book's narrator, an Indian: "You're not destroying us. You are constructing us. It's yourselves that you are destroying." Palestinians today might say the same of our struggle with Israel.

(Raja Shehadeh, ["We Are Too Weak to Stop Israel"](#): For Palestinians, it doesn't matter who wins the election there next week. *New York Times*, April 4, 2019)

314 The inevitable has happened: The US has backed Israel: the last Western Colony; and a subjugated people, with nothing to lose but their lives, futilely protest US support for Israel in riding rough-shod over the rights of a subjugated people; the result is inevitable - as it has been in colony after colony through the past 70 years of colonial uprising against Western oppression.

We all know the history of Western colonialism! The subjugated will, eventually, successfully overthrow the colonists and inherit the arsenals of Israel!

David Halbfinger, Isabel Kershner and Declan Walsh have described the ongoing consequences: 'Israel Kills Dozens at Gaza Border as U.S. Embassy Opens in Jerusalem':

Protests on Gaza border turn bloody

A mass attempt by Palestinians to cross the border fence separating Israel from Gaza turned violent, as Israeli soldiers responded with rifle fire. Monday became the bloodiest day since the campaign of demonstrations began seven weeks ago to protest Israel's economic blockade of Gaza.

(David M. Halbfinger, Isabel Kershner and Declan Walsh, ^œ[Israel Kills Dozens at Gaza Border as U.S. Embassy Opens in Jerusalem](#), *New York Times*, 14 May, 2018)

315 (12/01/18) It seems that many 'citizens' of Israel happily visit upon the Palestinian people the Curse of Joshua upon the Gibeonites:

You are now under a curse: You will never be released from service as woodcutters and water carriers...

(^œ[Joshua 9:23](#), *New International Version: Bible*)

The alternative was genocide: 'wiping out all the inhabitants' (^œ[Joshua 9:24 NIV](#)). Such barbarism, of course, cannot, and never could, be justified - no matter what the perpetrators might claim about their inherent superiority or authorization by a sociopathic Deity!

Religious fundamentalism, in its more extreme manifestations can, as the Islamic State in Iraq and Syria (ISIS) ^œ[demonstrated in Syria](#), be used to justify almost anything - including beheadings and the taking of slaves. And Jewish fundamentalism is not an exception to this.

Here is a video of Jewish fundamentalists in Israel talking to a class in a fundamentalist school:^œ[Israeli "education" in genocide](#).

Palestinians (like so many indigenous peoples around the world [under Western colonialism](#)): disenfranchised, stateless people, forever under the thumb of a sociopathic right-wing invading minority. But we all know the history of Western colonialism! The subjugated will, eventually, successfully overthrow the colonists and inherit the arsenals of Israel!

Michelle Goldberg has addressed the issues well:

...[I]f the possibility of Palestinian statehood is foreclosed, Israel will be responsible for all the territory under its control. There will be one state; the question is what sort of state it will be. Some on the Israeli right foresee a system in which most Palestinians will remain stateless indefinitely, living under a set of laws different from those governing Israeli citizens.

Yoav Kish, a Likud member of Parliament, has drawn up a plan in which Palestinians in the West Bank will have limited local administrative sovereignty; rather than citizens they will be "Residents of the Autonomy."

Supporters of Israel hate it when people use the word "apartheid" to describe the country, but we don't have another term for a political system in which one ethnic group rules over another, confining it to small islands of territory and denying it full political representation.

The word "apartheid" will become increasingly inescapable as a small but growing number of Palestinians turn from fighting for independence to demanding equal rights in the system they are living under. "If the Israelis insist now on finishing the process of killing the two-state solution, the only alternative we have as Palestinians is one fully democratic, one-state solution," Barghouti says, in which everyone has "totally equal rights."

Needless to say, Israel will accept no such thing. Though demographics in the region are as contested as everything else, Palestinians are likely to soon become a majority of the population in Israel and the occupied territories. If all of them were given the right to vote, Israel would cease to be a Jewish state.

But most of the world - including most of the Jewish diaspora - will have a hard time coming up with a decent justification for opposing a Palestinian campaign for equal rights. Israel's apologists will be left mimicking the argument that William F. Buckley once made about the Jim Crow South. In 1957, he asked rhetorically whether the white South was entitled to prevail "politically and culturally, in areas in which it does not predominate numerically." The "sobering answer," he concluded, was yes, given the white community's superior civilization.

It's impossible to say how long Israel could sustain such a system. But the dream of liberal Zionism would be dead. Maybe, with the far right in power both here and there, it already is.

(Michelle Goldberg, ["Is Liberal Zionism Dead?"](#), *New York Times*, Opinion, Jan. 8, 2018)

³¹⁶ It seems appropriate, in a week when US 'progressives' choose to remember Martin Luther King, to recall his opposition to the passivism of so many of those who commemorate his life. Nicholas Powers has summed it up:

US jets bombed villages. US soldiers machine-gunned combatants and civilians. The Vietnam War had hit a fever pitch of death when Martin Luther King Jr. stepped onto the podium at Riverside Church on April 4, 1967, and said, "The greatest purveyor of violence in the world today: my own government."

The speech, "A Time to Break the Silence," cost him. Newspapers damned him. Friends distanced themselves. President Lyndon Johnson, angered by what he thought was betrayal, reportedly called King, "that goddamn n***** preacher."

King risked isolation to speak hard truths. The US's endless war had depleted the money needed to end poverty. The war was in support of a corrupt, authoritarian regime that suppressed a peoples' desire to be free. The US was poisoned by its militarism; it was not the beacon of democracy but its destroyer.

The King of "A Time to Break the Silence" is more relevant today than ever. The US's war on the world has been ongoing. Poverty has deepened. The body count has only grown.

(Nicholas Powers, ["The US Celebrates King's Nonviolence But Not His Antiwar Politics"](#), *Truthout*, January 21, 2019)

Michelle Alexander put it well:

On April 4, 1967, exactly one year before his assassination, the Rev. Dr. Martin Luther King Jr. stepped up to the lectern at the Riverside Church in Manhattan. The United States had been in active combat in Vietnam for two years and tens of thousands of people had been killed, including some 10,000 American troops. The political establishment - from left to right - backed the war, and more than 400,000 American service members were in Vietnam, their lives on the line.

Many of King's strongest allies urged him to remain silent about the war or at least to soft-pedal any criticism. They knew that if he told the whole truth about the unjust and disastrous war he would be falsely labeled a Communist, suffer retaliation and severe backlash, alienate supporters and threaten the fragile progress of the civil rights movement.

King rejected all the well-meaning advice and said, "I come to this magnificent house of worship tonight because my conscience leaves me no other choice." Quoting a statement by the Clergy and Laymen Concerned About Vietnam, he said, "A time comes when silence is betrayal" and added, "that time has come for us in relation to Vietnam."

It was a lonely, moral stance. And it cost him. But it set an example of what is required of us if we are to honor our deepest values in times of crisis, even when silence would better serve our personal interests or the communities and causes we hold most dear. It's what I think about when I go over the excuses and rationalizations that have kept me largely silent on one of the great moral challenges of our time: the crisis in Israel-Palestine.

(Michelle Alexander, ["Time to Break the Silence on Palestine"](#), *New York Times*, January 19, 2019)

³¹⁷ Stephen Walt, in a *Foreign Policy* essay entitled ["The Israel Lobby: There's a difference between fair and unfair criticisms of AIPAC - and it's time everyone, including AIPAC, acknowledges it"](#) (February 15, 2019), summed up the influence of the ["American Israel Public Affairs Committee"](#), AIPAC, within United States politics:

The recent uproar over Rep. Ilhan Omar's tweets criticizing the conduct of Israel's government and its U.S. supporters, especially the American Israel Public Affairs Committee (AIPAC), makes one thing clear: U.S.-Israel relations (and U.S. Middle East policy more broadly) remains a third rail that one touches at one's peril.

There can be no doubt that AIPAC has 'bought and paid for' members of the US congress over many years. As the AIPAC website explains:

The AIPAC PAC [Political Action Committee] is a bipartisan, pro-Israel political action committee. It is the largest pro-Israel PAC in America and contributed more resources directly to candidates than any other PAC. 98% of AIPAC-backed candidates won their general election races in 2022.

The ["Swiss Policy Research \(SPR\) website"](#) outlines the Israel Lobby's influence in a series of videos presented in an entry entitled ["The 'Israel Lobby': Facts and Myths"](#).

An *Open Secrets* site, entitled ["Pro-Israel Recipients"](#), lists recipients of AIPAC donations in 'all elections cycles' within the United States.

Every congress member has his/ her AIPAC 'minder' (often incorporated into congress members' personal staff, otherwise operating from their own offices, but, nonetheless, ["formally registered as American Israel Public Affairs Committee lobbyists with the House and the Senate"](#)).

They are supported by AIPAC and responsible for ensuring that each member supports and votes for AIPAC policies. An article by *The Politics Watcher*, entitled ["AIPAC Donations to Congress Members: Unveiling the Influence: A deep dive into the controversial AIPAC donations to Congress members"](#) (7 December 2023), describes the way in which AIPAC goes about ensuring all this:

In a notable incident, the U.S. House of Representatives voted 234-188 to censure Rep. Rashida Tlaib, the only Palestinian member of Congress, in November. This move drew attention to the ongoing tensions between AIPAC and members of Congress who advocate

for Palestinian rights. It also raised questions about the impartiality of AIPAC's donations and potential conflicts of interest.

Critics argue that AIPAC operates as a front group for conservative policies in the United States and that it is essential to expose its true intentions. They believe that shedding light on AIPAC's actions will help address concerns and prevent undue influence within Congress. It is crucial, they assert, to hold organizations like AIPAC accountable and challenge their practices openly.

This report, produced in partnership with Important Context, emphasizes the need to scrutinize AIPAC's efforts to undermine pro-Palestinian candidates. By revealing the strategies employed by AIPAC, it aims to provoke a broader discussion on the role of lobbying groups within the political landscape and the potential consequences of their actions.

The 2022 U.S. mid-term elections witnessed the emergence of a new player on the funding field: a political action committee (PAC) formed by the American Israel Public Affairs Committee. This development further underscores the organization's commitment to maintaining its influence within Congress.

As the debate surrounding AIPAC's donations continues, it is vital for Congress members and the public to critically examine the impact of such financial support. Balancing the interests of Israel and Palestine, as well as ensuring the integrity of the democratic process, requires a nuanced understanding of the influence exerted by organizations like AIPAC.

There can be no doubt that US Middle East policies, wars and other activities, over many years, have been strongly influenced (if not driven) by the demands of AIPAC, essentially a lobby group primarily funded by Israeli supporters both within the United States and based in Israel. (This is not dissimilar to the influence/ control exerted by similar lobby groups within European colonizing nations through the past 400 years)

In 2019, the US Israel lobby, true to its long-standing policy, continued to censure all criticism of Israel as 'anti-Semitic'. A sad, morally reprehensible 'disciplining' of newly elected US Representative Ilhan Omar by the US Democrat leadership illustrates this.

US House of Representatives Speaker, Nancy Pelosi, issued a statement disingenuously confirming the US constitutional right to free speech, while condemning criticism of Israel and of The American Israel Public Affairs Committee's (AIPAC) undeniable influence within United States politics; conflating criticism of Israel and AIPAC with 'anti-Semitism':

"Anti-Semitism must be called out, confronted and condemned whenever it is encountered, without exception.

"We are and will always be strong supporters of Israel in Congress because we understand that our support is based on shared values and strategic interests. Legitimate criticism of Israel's policies is protected by the values of free speech and democratic debate that the United States and Israel share. But Congresswoman Omar's use of anti-Semitic tropes and prejudicial accusations about Israel's supporters is deeply offensive. We condemn these remarks and we call upon Congresswoman Omar to immediately apologize for these hurtful comments.

"As Democrats and as Americans, the entire Congress must be fully engaged in denouncing and rejecting all forms of hatred, racism, prejudice and discrimination wherever they are encountered."
(Nancy Pelosi, [Democratic Leadership Statement on Anti-Semitic Comments of Congresswoman Ilhan Omar](#), February 11, 2019)

A comment appended to a *New York Times* article put things into much-needed perspective:

As someone who is both a Democrat and Jewish, I am very disappointed in the actions of Pelosi and the Democratic leadership.

It's a well-known fact that AIPAC has an iron grip on Congress, which is why the US Government supports the government of Israel no matter what it does. All Congresswoman Omar did was point out that very uncomfortable truth.

Let's not forget, many American Jews do NOT support the current government of Israel or its policies, and that AIPAC does not represent the views of many American Jews.

(Matt, Comment on: Sheryl Gay Stolberg, [Ilhan Omar Apologizes for Statements Condemned as Anti-Semitic](#), *New York Times*, February 11, 2019)

³¹⁸ See Matthew Brzezinski's book, [Isaac's Army: A Story Of Courage And Survival In Nazi-occupied Poland](#), Random House, 2012, for a description of it all

³¹⁹ (21/12/17) While the size of Israel's nuclear arsenal is in doubt, its existence is not. One can only wonder at the motives of US political and strategic planners that they should have been complicit in such a buildup of nuclear weaponry in an inherently unstable region of the world. Here is a BBC assessment of the size of that arsenal:

Israel 'has 150 nuclear weapons'

Ex-US President Jimmy Carter has said Israel has at least 150 atomic weapons in its arsenal. The Israelis have never confirmed they have nuclear weapons, but this has been widely assumed since a scientist leaked details in the 1980s. Mr Carter made his comments on Israel's weapons at a press conference at the annual literary Hay Festival in Wales....

Most experts estimate that Israel has between 100 and 200 nuclear warheads, largely based on information leaked to the Sunday Times newspaper in the 1980s by Mordechai Vanunu, a former worker at the country's Dimona nuclear reactor.

The US, a key ally of Israel, has in general followed the country's policy of "nuclear ambiguity", neither confirming or denying the existence of its assumed arsenal.

(BBC News, Monday, [Israel 'has 150 nuclear weapons'](#), 26 May 2008)

Of course, Western nations have not only colluded in indiscriminately supplying weapons systems to Israel; they have, concurrently, been, and still are, [supplying sophisticated weaponry to other Middle Eastern 'allies'](#). One cannot but wonder what they imagine the consequences of all this are likely to be.

The blatancy of Israel's expropriation of Palestinian lands and resources and the callous disregard of Palestinian rights since 1948 leave one

bemused. Yet, a century earlier, [as we have already seen](#), they would have been unremarkable.

One has only to juxtapose the current behaviors and practices of Israel against those of that earlier time to see how similar they are. Let's briefly consider the experiences of the peoples of Matabeleland and Mashonaland at the hands of Cecil Rhodes and his British South Africa Company¹⁰⁰⁶:

As Cecil Rhodes explained of the tribes of the regions which were to become Northern and Southern Rhodesia (Zambia and Zimbabwe): They were invaders, who had no 'real' right to the lands on which they lived.

Here is a Zimbabwe Embassy explanation of what happened:

The advent of European settler occupation of Zimbabwe in September 1890 is the genesis of the dispossession of blacks of their land. The 1893 invasion of the Ndebele Kingdom leading to the creation of the Gwaai and Shangani reserves: the 1896-97 Shona and Ndebele first Chimurenga/Imfazwe (war of liberation); the nationalist struggle in the period before and after the Second World War; the second Chimurenga/Imfazwe which gave birth to the independent Zimbabwe in 1980; the contentious Lancaster House Constitutional negotiations and the Agreement in 1979 and, as already stated the current internal political developments, all bear testimony to the centrality of the land issue in the country's history.

The systematic dispossession realised largely through violence, war and legislative enactments by successive colonial Governments led to the racially skewed land distribution and ownership pattern that until recently was characteristic of Zimbabwe.

Having regard to the political and related problems arising from the Boer controlled Witwatersrand gold fields in the Transvaal, Cecil John Rhodes, the Prime Minister of the Cape, and through his British South Africa Company (BSAC), became fixated with the idea of developing a second Witwatersrand (Second Rand) to the north of the Limpopo river. The Rudd Concession of 1888, fraudulently obtained from King Lobengula, became the vehicle through which colonialists obtained mineral rights in Mashonaland. The concession provided Rhodes with the impetus to obtain a Royal Charter in 1889, which among other things, granted the BSAC authority to administer and govern the region that encompasses present day Zimbabwe. The Charter was granted notwithstanding King Lobengula's protestations that he had been deceived.

Lobengula repudiated the Rudd Concession stating that he would "not recognise the paper, as it contains neither my words nor the words of those who got it." The response by Queen Victoria to King Lobengula's protestation to this development was that it "would be unwise to exclude white men".

... On account of the settler's superior firepower the African resistance fighters of the Chimurenga/imfazwe were subdued. The rapidity of the establishment of additional "Native Reserves" throughout the country was given impetus with codification - in the British Government's Southern Rhodesia Order in Council of 1898 - of the policy of racial segregation. By the same instrument it was provided that

The Company shall from time to time assign to Natives inhabiting Southern Rhodesia, land sufficient for their occupation and suitable for their agricultural or pastoral requirements

Invariably, this land was located in marginal and low potential areas.

Land acquisition for speculative purposes was the precursor to land acquisition for agricultural production as an economic activity, its euphemism being "white agricultural policy," which commenced in 1908. However, its successful realisation was predicated on the continued dispossession of the African of the best land and the destruction of his property in the years 1908-14. By 1914, white settlers, numbering 23 730 owned 19 032 320 acres of land while an estimated 752, 000 Africans occupied a total of 21 390 080 acres of land, (R. Palmer: *Land and Racial Domination in Rhodesia*, Heinemann 1977).

The end of the First World War saw the BSAC embarking on Land Settlement Policy through the launch of an elaborate and extensive campaign of wooing immigrants to Southern Rhodesia, (British South Africa Company Leaflet of 1st January 1919). The British Government under pressure to accommodate veterans of war as well as mitigate the demands on it arising for the post war economic depression, lent support to the campaign. An increase in the settler population necessarily had to be matched with the availability of additional land for the new immigrants.

(Embassy of Zimbabwe in Stockholm, accessed 16th Dec. 2012, ^œ[Background to Land Reform in Zimbabwe](#))

How wonderfully adept Western people are at contriving and manipulating law to justify naked aggression and land acquisition! And they really do believe the fantasy they create through weaving a web of self-serving legislation to justify their predations. And, yes, they're still doing it!

(See [Teaching 'the Natives' to Work](#) for more on this common Western colonial approach to the 'management' of indigenous populations - often argued to be not indigenous.)

³²⁰ See Jim Zanotti, ^œ[Israel: Background and U.S. Relations](#) (Congressional Research Service RL33476, October 28, 2016) for a brief description of United States and British involvement in Israel's legitimization, security and expansion since the Second World War.

³²¹ As Herbert Spencer put it in 1884,

To become fit for the social state, man has not only to lose his savageness, but he has to acquire the capacities needful for civilized life. Power of application must be developed; such modification of the intellect as shall qualify it for its new tasks must take place; and, above all, there must be gained the ability to sacrifice a small mediate gratification for a future great one.

The state of transition will of course be an unhappy state. Misery inevitably results from incongruity between constitutions and conditions. All these evils which afflict us, and seem to the uninitiated the obvious consequences of this or that removable cause, are unavoidable attendants on the adaptation now in progress.

Humanity is being pressed against the inexorable necessities of its new position - is being molded into harmony with them, and has to bear the resulting unhappiness as best it can. The process must be undergone, and the sufferings must be endured.

No power on earth, no cunningly-devised laws of statesmen, no world-rectifying schemes of the humane, no communist panaceas, no reforms that men ever did broach or ever will broach, can diminish them one jot.

(^œ1884 Ch. 3, p. 40)

Western people have given a great many absurd justifications for their ruthless suppression and exploitation of others through the centuries. It seems that we have not changed our spots!

It's time for the *aggressors* to learn to compromise and adapt. We do neither them nor ourselves any long-run favor by condoning and supporting their behavior.

³²² For discussion see Banuri (1990); Levy (1988); Leys (1992); Peet (1990); Philip (1990); Seligson & Passe-Smith (1993); So (1989); Sutton et al. (1989), etcetera.

³²³ An odd belief in the continuing existence of the colonial administrative apparatus and powers persisted well into the post-colonial period. It was largely taken for granted by 'development specialists' that administrations could simply decree and implement changes in their territories.

³²⁴ And still is believed by many of those most directly involved in advising Third World governments.

³²⁵ See [personalized Relationships](#) and ^œ[Politics and Indigenous Leadership in Papua New Guinea](#) for more on this.

³²⁷ Gregory Palast (2001), in a summary of interviews conducted with outgoing World Bank Chief Economist Joseph Stiglitz, described some of "the inside workings of the IMF, the World Bank, and the bank's 51% owner, the US Treasury":

Here in Washington we conducted exclusive interviews with Stiglitz, for The Observer and Newsnight, about the inside workings of the

IMF, the World Bank, and the bank's 51% owner, the US Treasury.

And here, from sources unnamable (not Stiglitz), we obtained a cache of documents marked, 'confidential' and 'restricted'.

Stiglitz helped translate one, a 'country assistance strategy'. There's an assistance strategy for every poorer nation, designed, says the World Bank, after careful in-country investigation.

But according to insider Stiglitz, the Bank's 'investigation' involves little more than close inspection of five-star hotels. It concludes with a meeting with a begging finance minister, who is handed a 'restructuring agreement' pre-drafted for 'voluntary' signature.

Each nation's economy is analysed, says Stiglitz, then the Bank hands every minister the same four-step programme.

Step One is privatisation. Stiglitz said that rather than objecting to the sell-offs of state industries, some politicians - using the World Bank's demands to silence local critics - happily flogged their electricity and water companies. 'You could see their eyes widen' at the possibility of commissions for shaving a few billion off the sale price. ...

After privatisation, Step Two is capital market liberalisation. In theory this allows investment capital to flow in and out.

Unfortunately, as in Indonesia and Brazil, the money often simply flows out.

Stiglitz calls this the 'hot money' cycle. Cash comes in for speculation in real estate and currency, then flees at the first whiff of trouble. A nation's reserves can drain in days.

And when that happens, to seduce speculators into returning a nation's own capital funds, the IMF demands these nations raise interest rates to 30%, 50% and 80%.

The result was predictable,' said Stiglitz. Higher interest rates demolish property values, savage industrial production and drain national treasuries.

At this point, according to Stiglitz, the IMF drags the gasping nation to Step Three: market-based pricing - a fancy term for raising prices on food, water and cooking gas. This leads, predictably, to Step-Three-and-a-Half: what Stiglitz calls 'the IMF riot'

The IMF riot is painfully predictable. When a nation is, 'down and out, [the IMF] squeezes the last drop of blood out of them. They turn up the heat until, finally, the whole cauldron blows up,' - as when the IMF eliminated food and fuel subsidies for the poor in Indonesia in 1998. Indonesia exploded into riots...

A pattern emerges. There are lots of losers but the clear winners seem to be the western banks and US Treasury.

Now we arrive at Step Four: free trade. This is free trade by the rules of the World Trade Organisation and the World Bank, which Stiglitz likens to the Opium Wars. 'That too was about "opening markets",' he said. As in the nineteenth century, Europeans and Americans today are kicking down barriers to sales in Asia, Latin American and Africa while barricading our own markets against the Third World 's agriculture.

In the Opium Wars, the West used military blockades. Today, the World Bank can order a financial blockade, which is just as effective

and sometimes just as deadly.

Stiglitz has two concerns about the IMF/World Bank plans. First, he says, because the plans are devised in secrecy and driven by an absolutist ideology, never open for discourse or dissent, they 'undermine democracy'. Second, they don't work. Under the guiding hand of IMF structural 'assistance' Africa's income dropped by 23%...

(Gregory Palast, ^œ[IMF's four steps to damnation](#): How crises, failures, and suffering finally drove a Presidential adviser to the wrong side of the barricades, *The Observer*, Monday 30 April 2001)

³²⁸ In a statement before the *Second World Conference on Human Rights*, Vienna, 14 June 1993, Ali Alatas, Indonesia's foreign minister, explained:

Human rights questions are essentially ethical and moral in nature. Hence, any approach to human rights questions which is not motivated by a sincere desire to protect these rights but by disguised political or, worse, to serve as a pretext to wage a political campaign against another country, cannot be justified.

Human rights are vital and important by and for themselves. So are efforts at accelerated national development, especially of the developing countries. Both should be vigorously pursued and promoted.

Indonesia, therefore cannot accept linking questions of human rights to economic and development cooperation, by attaching human rights implementation as political conditionalities to such cooperation. Such a linkage will only detract from the value of both.

On such conditionalities, the Leaders of the Non-aligned Movement, during their 10th Summit in Jakarta last year, emphasized that:

... any attempt to use human rights as a condition for social-economical assistance, thus sidelining the relevance of economic, social and cultural human rights must be rejected. No country should use its power to dictate its concept on human rights or to impose conditionalities on others.

It is now generally accepted that all categories of human rights - civil, political, economic, social and cultural, the rights of the individual and the rights of the community, the society and the nation - are interrelated and indivisible.

This implies that the promotion and protection of all these rights should be undertaken in an integral and balanced manner and that inordinate emphasis on one category of human rights over another cannot be justified. Likewise, in assessing the human rights conditions of countries, and of developing countries in particular, the international community should take into account the situation in relation to all categories of human rights.

(^œ[Alatas 1993](#))

³²⁹ See [The Problem with Austerity](#) for IMF assessments of some aspects of SAPs in 2013. ^œ[Jason Oringer and Carol Welch](#) (1998), in a well written critique of Structural Adjustment Plans (SAPs), identified three key points :

[Oringer and Welch use the terms 'north' and 'south' as collective terms for what we have, in this discussion, called the 'First World' and 'Third World'.]

- The U.S. leverages its dominant role in the global economy and in the IFIs [International Financial Institutions] to impose SAPs on developing countries and open their markets to competition from U.S. companies.
- SAPs are based on a short-term, profit-maximization model that perpetuates poverty, inequality, and environmental degradation.
- Social safety nets and good governance reforms do not compensate for the serious flaws that SAPs introduce by deregulating laws and diminishing the state's capacity to protect the welfare of its citizens.

... Through its aid and trade policies, Washington has worked to restructure the economic policies of the Southern [i.e. Third World] nations. The U.S. plays a fundamental role in designing and financing structural adjustment programs of the main IFIs, namely the World Bank and the International Monetary Fund (IMF), as well as those of the regional multilateral banks such as the Inter-American Development Bank (IDB).

³³⁰ The madness of the Cold War policy of 'mutually assured destruction' has, in this 21st century, mutated in the US into a cold, calculated determination to ensure overwhelming military supremacy.

A 2017 US Congressional Budget Office report entitled 'Projected Costs of U.S. Nuclear Forces, 2017 to 2026' summed up the US commitment over the next decade. As the report concludes:

... [T]he plans for nuclear forces delineated in the Department of Defense's (DoD's) and the Department of Energy's (DOE's) budget requests for fiscal year 2017 would cost a total of \$400 billion over the 2017-2026 period, CBO estimates - an average of \$40 billion a year. ...The current 10-year total is 15 percent higher than CBO's most recent previous estimate of the 10-year costs of nuclear forces, \$348 billion over the 2015-2024 period.

(^œ[Projected Costs of U.S. Nuclear Forces, 2017 to 2026](#), US Congressional Budget Office, February 14, 2017)

Noam Chomsky has explained the inevitable consequence of this commitment to nuclear arms 'modernization':

Hans M. Kristensen and Ted Postol from MIT... discuss the new targeting systems that have been invented under the Obama Modernization Program that's now being escalated by Trump, and it's extremely dangerous. What they claim based on disclosed information is that the US missile systems have been improved by such a huge factor that they are now capable of instantly wiping out the Russian deterrent.

This is massive overkill and nuclear stability is gone, and of course, the Russians know this. What that implies is that if they ever feel a threat, they're just going to be compelled to launch a preemptive strike because otherwise they're dead, you know? And that means we're all dead.

(Noam Chomsky, interviewd by Dan Falcone, ^œ[US Is the "Most Dangerous Country in the World"](#), *Truthout* | Interview, Monday, April 24, 2017)

Hans Kristensen, Matthew McKinzie and Theodore Postol provide some substantive background:

The US nuclear forces modernization program has been portrayed to the public as an effort to ensure the reliability and safety of warheads in the US nuclear arsenal, rather than to enhance their military capabilities. In reality, however, that program has implemented revolutionary new technologies that will vastly increase the targeting capability of the US ballistic missile arsenal.

This increase in capability is astonishing - boosting the overall killing power of existing US ballistic missile forces by a factor of roughly three - and it creates exactly what one would expect to see, if a nuclear-armed state were planning to have the capacity to fight and win a nuclear war by disarming enemies with a surprise first strike.

Because of improvements in the killing power of US submarine-launched ballistic missiles, those submarines now patrol with more than three times the number of warheads needed to destroy the entire fleet of Russian land-based missiles in their silos. US submarine-based missiles can carry multiple warheads, so hundreds of others, now in storage, could be added to the submarine-based missile force, making it all the more lethal.

The revolutionary increase in the lethality of submarine-borne US nuclear forces comes from a "super-fuze" device that since 2009 has been incorporated into the Navy's W76-1/Mk4A warhead as part of a decade-long life-extension program. We estimate that all warheads deployed on US ballistic missile submarines now have this fuzing capability.

Because the innovations in the super-fuze appear, to the non-technical eye, to be minor, policymakers outside of the US government (and probably inside the government as well) have completely missed its revolutionary impact on military capabilities and its important implications for global security.

(Hans M. Kristensen, Matthew McKinzie, Theodore A. Postol, [How US nuclear force modernization is undermining strategic stability: The burst-height compensating super-fuze](#), *Bulletin of the Atomic Scientists*, 1 March 2017)

What else does one do with '\$400 billion over the 2017-2026 period, ...an average of \$40 billion a year'?

³³¹ With the demise of the Soviet Union, the wars and rebellions of the Third World continued. However, they were no longer cast in the ideological frames of capitalism and communism, so the perception was that in the 1990s the world became increasingly Balkanised and 'ethnified'. In fact, of course, this process began with the breakdown of empires - it was simply mis-diagnosed, warped and enthusiastically promoted to reflect international interests in the era of Cold War politics.

In 1996, serious internal fighting continued within more than thirty post-colonial countries, including Afghanistan, Algeria, Angola, Burundi, Cameroon, Chad, Colombia, Guatemala, Iraq, Kashmir, Lebanon, Liberia, Myanmar, Philippines, Rwanda, Sierra Leone, Somalia, Sri Lanka, Sudan and many others.

In 2009, with the same tensions and confrontations now claimed to be part of the 'war on terror' by Western countries, serious conflict continued in many non-Western countries including Algeria, Armenia,

Azerbaijan, Bahrain, Chad, Djibouti, Ethiopia, Georgia, India, Indonesia, Kazakhstan, Kenya, Kyrgyzstan, Mali, Mauritania, Nepal, Niger, Oman, Pakistan, Philippines, Tajikistan, Thailand, Turkmenistan, Uzbekistan, Yemen, Colombia, Sudan, Afghanistan, and many other countries around the world.

³³² As Nef says (1991, p. 13):

... development - along neo-Keynesian and social democratic lines - was perceived as an explicit antidote to Soviet-type regimes. This fundamental 'orthodoxy' which conceived development as an alternative to revolution affected most of the subsequent development aid schemes, whether multilateral or bilateral. The Colombo Plan, President Truman's Point Four, or later the UN First Development Decade, were imbued with a reformist, missionary zeal.

³³³ In comparison with the literature on 'Third World development', writings on the involvement of the 'superpowers' in fomenting and sustaining Third World conflict in the post-Second World War period are sparse. A selection of them includes: Renner (1994); Chubin (1991); Economist (1994); Elguea (1990); Gareau (1994); Kick & Kiefer (1987); Makhijani (1992); Neuman (1994); Penny (1992); De Roux & Chelala (1993); and Nelson, Taylor & Kruger (1983).

³³⁴ Lavrov Warns the U.S:

I would like to emphasize that the collective West, led by the United States, is openly seeking to defeat Russia "on the battlefield." The United States and its allies are ready to sacrifice Ukraine for the sake of their geopolitical goals. To achieve them, they pump the country with weapons, and this leads to an escalated and prolonged conflict. It puts off the prospects of its settlement.

Washington is not interested in establishing peace and tranquility in Ukraine. That became clear already in March, when Moscow and Kiev came close to reaching mutual agreements. Such turn of events obviously frightened the Americans and the British, so they actually forbade Ukraine to conduct further dialogue with Russia. Since then, the Ukrainian authorities have been shying away from negotiation process....

The Russian-American interstate dialogue has been practically frozen owing to the United States. It is objectively not possible to maintain normal communication with Washington declaring the strategic defeat of Russia as an objective.

It equally pertains to the consultations on strategic stability and arms control discontinued by the American side. Naturally, we note some sketchy signals from the U.S. administration, and personally Joe Biden, concerning the resumption of the START dialogue, but what is behind those signals remains to be seen.

The Americans are avoiding any substantive interaction on regional deconfliction....

The frenzied response of the United States and its allies to Russia's special military operation has basically drawn the line under a whole era of interaction between our country and the West. Those whom we believed to be trustworthy economic partners have chosen illegitimate sanctions and a unilateral break-off of business ties.

Russia is not happy about it: what had been built by decades of hard work was destroyed virtually overnight. Well, we will draw our own conclusions from the behaviour of our Western colleagues - I do not think that in the foreseeable future they will be able to restore their credibility as business counterparts....

Unfortunately, the global situation continues to degrade. The main cause, and I have had to speak about it repeatedly, is the persistent desire of the West led by the United States to ensure its global dominance, though it is impossible for obvious reasons.

Nevertheless, Washington and its satellites do everything to slow down the process of democratization of international relations. They want to replace the UN-centered architecture formed in the wake of World War II and international law with some "rules-based order." Acting in the worst colonial traditions, they divide the world into "democracies" and "authoritarian regimes." They try to "press on" those who do not agree with this course, who pursue an independent policy and are guided by national interests, using unilateral sanctions, blackmail and blatant power play.

Today, Western states funnel weapons and military hardware into the neo-Nazi regime in Kiev, and train Ukraine's armed forces. NATO and U.S. arms are used to fire at the Russian territory bordering Ukraine, killing civilians there. The Pentagon does not hide the fact of passing on to Kiev intelligence and target designations for strikes. We record the presence of American mercenaries and advisers "in the battlefield." The United States, in fact, is teetering on the brink of turning into a party to conflict. This is to your question about the risk of a direct collision between nuclear powers....

(Tom O'Connor, [⁹Exclusive: Russia's Sergey Lavrov Warns U.S. It Risks Becoming Combatant in Ukraine War](#), *Newsweek*, 21 September, 2022)

³³⁵ Western hegemonic [unwillingness to address the security concerns of those branded 'enemies'](#) makes 'war' inevitable. For the West, compromise, reached through negotiation, is 'defeat'. The only alternatives are capitulation or war. Awolowo has put the dilemma of the threatened well: it's either defeat in war or surrender to Western domination and resource predation.

A *Global Times*¹⁰⁰⁷ editorial summed up Washington's purpose in Ukraine:

What Washington is concerned about isn't the peace of Europe and Ukraine, but how to bring down Russia using Ukraine as a pawn and taking advantage of Europe, as well as how to consolidate its hegemony in Europe and across the whole world. The international community should discard any illusions about any of the US' moves which appear to promote peace....

The US does not want to see the military conflict between Russia and Ukraine end soon. For Russia, Ukraine, as well as Europe, the longer the crisis, the more detrimental for them; while for Washington, the longer the conflict, the more favorable position it will be in. In spite of European countries' economies and energy supply heavily hit by the ongoing crisis, they have to supply Ukraine with large amounts of military and financial aid. This is what Washington wants to achieve - exploiting Ukraine as a pawn to drag down Russia and Europe; and amid the whole process, the US merely pays a light price.

(^œDrop any illusions that Washington could promote peace for Ukraine, *Global Times*, November 07, 2022)

The Russian invasion of Ukraine is a consequence of this dilemma. This is, indeed, an existential struggle for Russia: Ukraine is victim; sacrificed to the [hegemonic sociopathy](#) of 'The West'.

The resulting problem for those committed to pacifism has been well illustrated in a *Worlds Apart* discussion between Oksana Boyko and Norman Solomon (Executive Director of the Institute for Public Accuracy) entitled ^œ'Win or die trying?'.

³³⁶ 'The West' - or '[the collective West](#)' - is both an inclusive group of capitalist nations and, at the same time, a competitive group of nations with a well-defined 'pecking order' of dominance and subordination.

As the hegemonic center weakens, other group members will increasingly challenge its authority (this was, indeed, a driving motivation in both of the Euro-centered 'world wars' of the 20th century).

Hegemonic control of the group requires the subordination of possible peer alternatives to the current center of power. The US has used [the Ukraine conflict](#) to bring possible rival centers to heel, letting the 'rest of the West' know who is in charge and to whom they owe allegiance!

Western Europe will bear the pain (of 'sanctions blowback' and expensive liquified natural gas from its Hegemon to replace cheaper Russian pipeline gas) which ensures Washington's gain!

A *Global Times* editorial summed it up:

the US is not interested in helping Ukraine secure a "complete victory." Washington wants the flame to burn for much longer, according to Shen.

Europe was caught in the conflict, based on US playbook. Taking Europe under control is also a goal of the US. Once it becomes completely dependent on the US in the field of security and policies, the EU, without its strategic autonomy, will only confront a much bigger threat.

The European parliament has not quite played a positive role in this regard. It can be understood as a stage that gathers politicians who are fond of making publicity stunts. For them, performing in accordance with ideologies and stereotypes is the easiest way to maintain political prestige and leverage. Very few of them are willing to understand the real puzzle of Europe, Shen said.

(Editorial, ^œ[Stuck in US playbook, European Parliament is blind to real interests](#), *Global Times*, November 24, 2022)

Eric Zuesse explained:

On 3 December 2021, a year ago, Lockheed Martin shares cost \$333.81. On 23 November 2022, they cost \$481.07. That's a 44% gain during this year-long period.

\$4,027.26 is the S&P on 23 November 2022, and it was \$4,701.46 on 24 November 2021. That's a 14% decline during this year-long period.

A dollar invested in the S&P became \$0.86, but in Lockheed became \$1.44, and that is 68% more than the S&P market-average performance.

That's the benefit of owning a controlling interest in a mega-corporation whose market is the Government in which you have purchased a controlling interest (by political donations and lobbyists), as compared to not.

And you will see there that though the stock-price of Lockheed soared after Russia's 24 February 2022 invasion of Ukraine, the rise in its stock-price actually started on 3 December 2021. Perhaps that was when U.S.-Government insiders got their first clear indications that the U.S. Government was going to force Russia to invade Ukraine in order to prevent Ukraine from ever being able to join NATO so as for the U.S. to place its missiles only 317 miles away from The Kremlin.

(Eric Zuesse, ^œ[The Ukraine War is a sales-promotion campaign for Lockheed and other U.S. 'Defense' Contractors, modern diplomacy](#), November 25, 2022)

Barbara Moens *et al*, summed it up in an article entitled '^œ[Europe accuses US of profiting from war: EU officials attack Joe Biden over sky-high gas prices, weapons sales and trade as Vladimir Putin's war threatens to destroy Western unity](#).' (*Politico*, November 24, 2022).

³³⁷ Sarotte described the use of the 'NATO Carrot' to keep hopeful nations compliant with Washington's wishes:

As NATO states meet in Vilnius this week, they are confronting, yet again, the accession question: that is, whether to turn rhetoric about Ukrainian membership into reality. Ever since the coalition's 2008 summit in Bucharest, where the allies issued a declaration stating that both Georgia and Ukraine 'will become members of NATO' at some undefined point in the future, member states have debated how (or whether) to implement that pledge. Yet despite the passage of 15 years, neither Georgia nor Ukraine has joined the alliance.

Kyiv has made it clear that after years of fighting Russia, it is tired of waiting. The government wants to see a clear path to membership laid out at the Vilnius summit. Many allies are inclined to accede to Ukraine's wishes - despite the war raging within its borders. To fulfill Ukraine's hopes, a growing list of former policymakers are floating a proposal for partial membership. ...

To many of its proponents, adopting such a proposal might also feel like a form of atonement - a way to make up for 15 years without accession and the damaging consequences. By pledging to give Georgia and Ukraine membership but not following through, NATO left those states in the worst of all possible worlds. The Bucharest declaration gave both Georgia and Ukraine a misleading sense of how much NATO support they would have in dealing with Russia, leading them to make decisions based on assumptions later proven false....

Advocates of the German model for Ukraine misread history. Saying that a divided Germany entered NATO, as The New York Times headline does, is inaccurate. What became a member of NATO was a rump state called the Federal Republic of Germany, also known as West Germany, which emerged from the combination of the British, French, and U.S. post-World War II occupation zones....

Advocates of applying this history to Ukraine are, consciously or unconsciously, proposing accession in mutually exclusive ways.

Either they seek to draw a new NATO border within Ukraine, dividing Russian-held from Ukrainian-held territory, or they argue that its membership should include no fixed border at all, allowing Ukraine's battlefield performance to determine which territory falls under NATO's protection right away and which territories join later. Each scenario might seem appealing to some advocates, but neither would end well for anyone outside the Kremlin....

In short, this model would compel Ukraine to wrestle with a bitter question during a brutal war: Which is more important, NATO membership or holding out hope for retaking territory? Given the tragic nature and long-lasting consequences of this choice - the division of Germany lasted over 40 years - it is not one that Ukrainians or outsiders should be eager to make....

(M. E. Sarotte, ["NATO's Worst-of-Both-Worlds Approach to Ukraine: Why the German Model Won't Solve a Problem of the Alliance's Own Making," *Foreign Affairs*, July 10, 2023](#))

338 NATO sets sights on rebuilding Ukraine's defense industry:

NATO is developing a 10-year plan to rebuild the Ukrainian defense industry, with the first meeting between the alliance and Kyiv slated for next week.

The meeting will be the start of a long process hinted at for weeks by U.S. and NATO officials of a long-term commitment to Ukraine to bring it closer to the alliance in both training and equipment.

"We will be looking at defense planning requirements to get Ukraine fully interoperable with NATO," said a senior NATO official who asked not to be named due to ground rules for speaking to reporters during alliance meetings in Brussels this week. "It's about shifting away from Soviet equipment... to NATO-compatible Western equipment."...

The wider effort of looking beyond the day-to-day battlefield needs of the Ukrainian military will require years of attention from partners stretching from Warsaw to Ottawa, an effort that could eventually transform Ukraine into a NATO country by default, even if it is not a member of the alliance.

(Paul McLeary, ["NATO sets sights on rebuilding Ukraine's defense industry: "It's about shifting away from Soviet equipment," one NATO official said., *Politico*, October 12, 2022](#))

339 Nanjala Nyabola: Africa's Ukraine Dilemma: Why the Continent Is Caught Between Russia and the West:

As Russian President Vladimir Putin's war in Ukraine enters its seventh month, many African countries have yet to show strong support for Kyiv, to the chagrin of Western leaders. In the early days of the conflict, after 17 African countries declined to back a UN resolution condemning Russia, several European diplomats assigned to African capitals made a grand show of browbeating African leaders for not taking a stand against the invasion. South African President Cyril Ramaphosa, in particular, was the target of some strikingly undiplomatic tweets, with Riina Kionka, at the time the EU's ambassador to Pretoria, writing that "we were puzzled because [South Africa] sees itself and is seen by the world as a country championing human rights."

Despite continued Western pressure, however, the situation has not changed much in the months since. In July, for example, French President Emmanuel Macron traveled to central Africa and West Africa to rally support for Ukraine, yet he managed only to rankle many African leaders when he accused them of "hypocrisy" for refusing to condemn the war. By contrast, during a visit to multiple African countries that same month, Russian Foreign Minister Sergey Lavrov emphasized Russia's ties with the continent and portrayed Russia as a "victim" in Ukraine. To date, only a handful of African countries - Ghana, Kenya, and Nigeria among them - have taken a strong stance on the war, and even these have focused primarily on denouncing aggression more broadly and on general calls for diplomacy and peace rather than on specific criticism of Moscow.

Although leaders in the West are puzzled by these developments, there are clear reasons for African countries' reluctance to embrace the Western narrative about Ukraine. For one thing, Africa is a huge, complicated, and highly diverse continent, and its 54 countries and territories each have unique circumstances and histories, as well as different relations to both Russia and the West. It would be unreasonable - and condescending - to assume that the continent's leaders could unify around a single position instantaneously.... (Nanjala Nyabola, ^œ[Africa's Ukraine Dilemma: Why the Continent Is Caught Between Russia and the West](#), *Foreign Affairs*, September 05, 2022)

³⁴⁰ As Sanders continued:

This pattern continues today. After spending billions of dollars to support the Israeli military, the United States, virtually alone in the world, is defending Prime Minister Benjamin Netanyahu's right-wing extremist government, which is waging a campaign of total war and destruction against the Palestinian people, resulting in the deaths of tens of thousands - including thousands of children - and the starvation of hundreds of thousands more in the Gaza Strip. Meanwhile, in fear-mongering around the threat posed by China and in the continued growth of the military industrial complex, it's easy to see that the rhetoric and decisions of leaders in both major parties are frequently guided not by respect for democracy or human rights but militarism, groupthink, and the greed and power of corporate interests. As a result, the United States is increasingly isolated not just from poorer countries in the developing world but from many of its long-standing allies in the industrialized world, as well.

Given these failures, it is long past time to fundamentally reorient American foreign policy. Doing so starts with acknowledging the failures of the post - World War II bipartisan consensus and charting a new vision that centers human rights, multilateralism, and global solidarity.

(Bernie Sanders, ^œ[A Revolution in American Foreign Policy: Replacing Greed, Militarism, and Hypocrisy With Solidarity, Diplomacy, and Human Rights](#), *Foreign Affairs*, March 18, 2024)

³⁴¹ *Xinhua* summarized ^œ[The Report on Human Rights Violations in the United States in 2023's](#) findings:

The human rights situation in the United States continued to deteriorate in 2023. In the United States, human rights are becoming increasingly polarized. While a ruling minority holds

political, economic, and social dominance, the majority of ordinary people are increasingly marginalized, with their basic rights and freedoms being disregarded.

Gun violence spills over, while the government's control policies are ineffective. There were at least 654 mass shootings in the United States in 2023. Approximately 43,000 people were killed by gun violence in 2023, averaging 117 deaths per day. Driven by partisan polarization and interest groups, a growing number of state governments have taken the initiative to push legislation to expand residents' rights to own and bear arms. In 2023, at least 27 states did not require a license to carry a handgun.

The government has abused its power to monitor citizens' privacy, suppressing freedom of speech and expression. The FBI redirected Section 702 of the Foreign Intelligence Surveillance Act to conduct domestic surveillance, "persistent and widespread" monitoring of the communications of members of the Congress, congressional campaign donors, and anti-racist protesters. A growing number of states have passed legislation banning public schools from using educational materials and books that address specific topics such as race, history and gender. The number of faculty members punished or fired for speech and expression on U.S. college campuses has reached a 20-year high.

Deaths from police brutality hit a record high, rendering the police enforcement accountability system virtually non-existent. Police brutality persisted and at least 1,247 deaths were attributed to police violence, an average of roughly three people killed by officers each day. Internal-affairs departments are often more interested in exonerating colleagues than investigating misconduct, making it difficult for police to be held accountable, and more than half of police killings were incorrectly labeled as "general homicide or suicide" in CDC's official death statistics database.

The prominent issues of mass incarceration and forced labor make it a "prison nation." The United States is home to 5 percent of the world's population, but 25 percent of the world's prisoners, making it the country with the highest incarceration rate and the largest number of incarcerated individuals globally. Prisons force inmates to work for low or no pay, without benefits, while generating billions of dollars' worth of goods and services annually.

The two parties continue to manipulate the election. On the opening day of the 118th U.S. Congress in January 2023, the House of Representatives faced a "Speaker crisis," and 2023 was the lowest water mark for Congress' productivity ever since the American Civil War. The two parties continue to change their ways to manipulate the redistricting and distort public opinion for the sake of party self-interest. There are 16 states that have significant manipulation of congressional district boundaries, and 12 of them are states with serious manipulation of districts as a whole. The general public in the United States is extremely disappointed with the federal government and politics at all levels. A staggering 76 percent of Americans believe that their nation is in the wrong direction.

Ethnic minorities in the United States face systematic racial discrimination, as the chronic disease of racism persists. African American are three times more likely to be killed by police than whites, and 4.5 times more likely to be incarcerated. Nearly three

quarters of Chinese Americans had experienced racial discrimination in the past year, and 55 percent feared that hate crimes or harassment would jeopardize their personal safety. Native Americans have lived in a constant state of cultural oppression, with their religious beliefs and traditional practices ruthlessly stifled. Racist ideology is spreading virulently in the United States and spilling across borders.

Growing economic and social inequality makes life extremely difficult for the poor. The United States has been refusing to ratify the International Covenant on Economic, Social and Cultural Rights. The wealth gap has hit a record high since the Great Depression of 1929 under systematic designs to exploit the poor, subsidize the rich, and segregate the classes. The "working poor" caught in structural poverty lack equal opportunities and are difficult to move upwards. The number of homeless people in the United States exceeds 650,000, the highest since reporting began in 2007. Drug and substance abuse keeps raging. Suicide rates continue to rise.

The United States has not ratified the Convention on the Elimination of All Forms of Discrimination Against Women, and remains the only UN member state which has not ratified the Convention on the Rights of the Child. The U.S. Constitution does not prohibit gender-based discrimination. It is also the only country in the world that sentences children to life in prison without parole. The number of people dying from pregnancy-related causes in the United States has more than doubled in the last 20 years. More than 2.2 million U.S. women of childbearing age do not have access to obstetric care. At least 21 states in the United States ban or severely restrict abortion, where safe abortion is largely unavailable. Pregnancy discrimination is widespread, forcing nearly 54,000 women in the United States to leave their jobs every year. Millions of children have been excluded from the federal government's Medicaid health insurance program. Thousands of foster children go missing every year. Audits found state agencies failed to report an estimated 34,800 cases of missing foster kids across 46 states.

The humanitarian crisis along the border has escalated, causing heart-wrenching struggles of undocumented migrants. The U.S.-Mexico border is the world's deadliest land migration route, according to the United Nations migration agency. At least 149 migrants perished in the El Paso border patrol region in the 12 months ending on Sep. 30, 2023. In the fiscal year 2023, the number of immigrants apprehended or deported at the U.S. southern border reached more than 2.4 million, another record high. Migrants are also subjected to torture and other forms of inhuman treatment. U.S. border policies facilitate modern slavery. The U.S. government's border policies exacerbate the problem of human trafficking. Unaccompanied migrant children suffer from brutal forced labor and exploitation.

The United States has long pursued hegemonism, practiced power politics, and created humanitarian crises. In the theaters of war where the United States conducted overseas "counter-terrorism" operations following the 9/11 attacks, the total death toll ranges from at least 4.5 to 4.7 million people. The U.S. military violates the sovereignty and human rights of other nations via "proxy forces" programs and continued providing arms to conflict zones, resulting

in massive civilian casualties. The notorious Guantanamo prison which severely violates human rights is still in operation. Prolonged and indiscriminate use of unilateral sanctions has caused serious humanitarian consequences. The United States has used more sanctions than any other country in the world.

In the United States, human rights is essentially a privilege enjoyed only by a few. The country's various human rights problems seriously threaten and hinder the healthy development of the world human rights cause.

(^œ[Abstract of The Report on Human Rights Violations in the United States in 2023](#), *Xinhua*, Editor: Huaxia May 29, 2024)

³⁴² Let's remind ourselves of what capitalism is all about. It is about [privatized](#), deregulated control of sources of wealth and power. It is about 'liberating' individuals (and [corporations](#)) from communal responsibilities.

The 18th century controversy between atomism and holism, in a neoliberal world, is resolved in favor of atomism! Independent 'individual' self-interest and self-promotion (if necessary at the expense of others because life is a 'competition') are virtues.

The 'rugged, self-made individual', successfully exploiting his/her environments, becomes the admired model for human self-development and self-promotion.

But, of course, in an unregulated capitalist world, any entity which 'competitively' gains control of a region's resources (and [credit supply](#)) ultimately controls its people and its government.

For as long as human beings have formed communities and exploited their environments there have been those who realized that if they could control access to the resources of those environments they would, in doing so, gain control of communities and their members who relied on those resources for their own and the community's wellbeing.

And, of course, there have also been those who have realized the danger of [allowing such sociopathic control of their communities](#).

This is, in most communities, considered a common antisocial personality disorder:

Sociopathy refers to a pattern of antisocial behaviors and attitudes, including manipulation, deceit, aggression, and a lack of empathy for others. Sociopathy is a non-diagnostic term, and it is not synonymous with "psychopathy," though the overlap leads to frequent confusion. Sociopaths may or may not break the law, but by exploiting and manipulating others, they violate the trust that the human enterprise runs on.

(^œ[Sociopathy](#), *Psychology Today*, accessed June 16, 2023)

Both sociopaths and psychopaths are difficult to identify. Their greatest 'strength' is that they often present as personable and self-confident, the kind of person who, in 'normal circumstances' can, seemingly effortlessly, project friendliness and affability.

A *Psychology Today* entry provides a checklist of traits used by psychologists in the process of identifying psychopathic personalities: (Those with sociopathic tendencies will display subsets of these characteristics; not enough to be considered 'psychopathic' but more than one would find in a randomly selected group of people.)

- Glibness/superficial charm
- Grandiose sense of self-worth
- Need for stimulation/proneness to boredom
- Pathological lying
- Conning/manipulative
- Lack of remorse or guilt
- Shallow affect (i.e., reduced emotional responses)
- Callous/lack of empathy
- Parasitic lifestyle
- Poor behavioral controls
- Early behavioral problems
- Lack of realistic, long-term goals
- Impulsivity
- Irresponsibility
- Failure to accept responsibility for one's own actions
- Many short-term marital relationships
- Juvenile delinquency
- Revocation of conditional release (from prison)
- Criminal versatility (i.e., commits diverse types of crimes)

(^œ[The Signs of a Psychopath](#), *Psychology Today*, Accessed, 02 May, 2024)

A YouTube *Middle East Eye* video, published on 01 May, 2024, entitled '^œ[Netanyahu responds to possible ICC arrest warrant for senior Israeli officials](#)', provides a Netanyahu performance, informative for those who see [the destruction of Gaza](#) as a war crime and probable genocide.

Sociopathy is a condition which enhances capitalist performance (it is a central feature of unregulated capitalist enterprise), and is an always present possibility against which communities must develop and maintain safeguards (or, to use the Western term, 'regulations').

For the health and wellbeing of interdependent communities, those communities must develop and assiduously maintain processes and traditions which limit the possibility for the sociopathic to seize control of the means of livelihood.

The price of freedom is perpetual vigilance and that vigilance is best ensured through establishing community processes for recognizing and controlling those seeking to impose their will upon them. They must develop and maintain formalized 'traditions' which become part of a community's inheritance from its forebears.

I learned this lesson many years ago when working on an island in the central Pacific. The name of that island, which the inhabitants call *Tabiteuea*, means:

"Chiefs (or 'kings' or 'oligarchs' etc.) are not allowed here'!

Every time they invoked the name of their island it reminded them of the central importance of this principle.

Time and again, in community gatherings within their communal meeting houses, respected elders would reference this in speaking of problems confronting the community. And, because the issue had long been reinforced, there was no argument as to its validity.

³⁴³ In a world long-shaped by Western understandings and development imperatives, there is an almost irresistible sirens' song awaiting those who yearn to be 'free', to forge their nations' and communities' independent futures, unshackled from a disintegrating 'West'.

The 'new world order' within which they aspire to find acceptance, security and 'prosperity', can, all-too-easily, become a mere imitation of the world order from which they wish to be freed.

To be 'successful' in the Western forged world which they [assume to be 'objective reality'](#), they will find themselves pursuing the same priorities; the same 'educational' aims and aspirations; the same societal ambitions as those of Western nations. And, in doing so, they will find themselves ensnared within the very realities they thought they were escaping.

The prime exhortation which must guide them and their communities if they are to escape Western domination and control is that of Polonius in Shakespeare's *Hamlet*:

This above all: to thine own self be true,
And it must follow, as the night the day,
Thou canst not then be false to any man.

Do not remake the new world order in the image of the old!

Do not aspire to be more Western than the West!

Communities need to be true to those [primary ideological realities](#) long disparaged and dismissed by colonial powers, which they themselves forged, very often over millennia.

Moussa Ibrahim, in an essay entitled

Indigenous democracy: Why Africa should reject the Western way:
African traditional governance models can and should be
incorporated into modern socio-political life,

has convincingly argued for an 'Africa' whose nations and communities are governed through

traditional African governance systems, such as those found in various kingdoms, chiefdoms, and tribal structures, prioritize consensus-building, communal decision-making, and the integration of spiritual beliefs into governance.

As he explains:

African traditional systems are often viewed as more inclusive and participatory, encompassing a broader spectrum of voices within the community. Decision-making processes in traditional settings typically involve consultation with elders, community leaders, and spiritual authorities, ensuring that diverse perspectives are considered and a consensus is reached.

This contrasts with the hierarchical nature of many Western democratic systems, which can further marginalize disenfranchised groups and perpetuate power imbalances. African religions and spiritual beliefs also play a significant role in shaping the concept of governance and policy-making on the continent. Indigenous belief systems often emphasize interconnectedness, reverence for nature, and collective responsibility.

Many Africans argue that incorporating these values into governance structures can lead to more sustainable and holistic approaches to development, as opposed to the often utilitarian and anthropocentric outlook of Western political frameworks.

African leaders of national liberation, from Patrice Lumumba to Gamal Abdel Nasser and Muammar Gaddafi, always attacked the economic inequality and liberal/neoliberal policies in the West which prioritize market-driven growth and privatization. In many African countries, these policies have exacerbated economic hardships, widened the gap between rich and poor, and perpetuated dependence on foreign aid and investment. This economic disparity undermines the democratic ideal of equal opportunity and social justice.

There is also the issue of Western values incompatibility with African cultural diversity. Western democratic norms and practices may not always resonate with the cultural diversity present in African societies. For example, issues such as LGBTQ+ rights, gender-centred divisions and secularist policies of state building may clash with traditional and national beliefs and norms in certain communities. This cultural incompatibility can lead to tensions between progressive democratic principles and local customs, potentially undermining social cohesion and stability.

Furthermore, African history is replete with examples of sophisticated governance systems that predate colonial rule. Kingdoms such as the Mali Empire (c. 1226 to 1670 AD), the Ashanti Empire (1701-1901 AD), and the Great Zimbabwe civilization (11th century- 15th Century AD) thrived through systems of governance that combined political authority with cultural and economic institutions....

(Moussa Ibrahim, ["Indigenous democracy: Why Africa should reject the Western way: African traditional governance models can and should be incorporated into modern socio-political life", has convincingly argued for an 'Africa' whose nations and communities are governed through](#), RT, 8 April, 2024)

'Aspiring to be more Western than the West' is how Western colonial powers have subjugated invaded communities and peoples to their will! A people filled with self-doubt and unsure of their own understandings of the world is a people ripe for domination and exploitation.

³⁴⁴ The [non-aligned movement](#) has, over the past 65 years continued to hold meetings and insist on its independence from major 'power-blocs'. India has been at the heart of this movement since the early 1950s. Its influence on the Non-Aligned Movement has been summarized in an [Indian Public Service Examination 'exam prep'](#):

India's place in national diplomacy, significant size and economic prowess made it one of the founders of the Non-Aligned Movement (NAM) and torchbearer of the Third World Solidarity by making newly independent countries a part of the movement.

This article will focus on India's role in the Non-Aligned Movement within the context of the Civil Services Examination.

Origins of India's Non-Alignment Policy

India's policy of non-alignment was a result of its own colonial experience and its nonviolent independence struggle. It would be determined that an independent India's new foreign policy should be free from the political domination and economic interference from Western capitalism and Soviet communism.

The term "Non-Alignment" was coined by India's first defence minister V K Menon during a speech at the United Nations in 1953 and later would be used by Prime Minister Jawaharlal Nehru from 1954 onwards. In a speech at Colombo, Sri Lanka that same year he laid down five principles that would be the cornerstone of NAM policy.

1. Mutual respect for each other's territorial integrity and sovereignty
2. Mutual non-aggression
3. Mutual non-interference in domestic affairs
4. Equality and mutual benefit
5. Peaceful co-existence

Post-colonial India has used the concept of 'unity in diversity' as means of justifying the unity (at the national level) of diverse regions with their own historical backgrounds (the unity of India is a colonial construct - as is the 'unity' of so many other post-colonial nations - and other [post-colonial territories have addressed this issue](#) in their own ways). A ^œ[Wikipedia article](#) has put it well:

Unity in diversity is used as an expression of harmony and unity between dissimilar individuals or groups. It is a concept of "unity without uniformity and diversity without fragmentation" that shifts focus from unity based on a mere tolerance of physical, cultural, linguistic, social, religious, political, ideological and/or psychological differences towards a more complex unity based on an understanding that difference enriches human interactions.

³⁴⁵ Western communities, preoccupied with individual autonomy, independence and consequent self-interest, will struggle to understand a world which is interdependently defined, presuming the existence of reciprocal rights and responsibilities between individuals and communities.

The presumption of 'harmony' presumes the interdependence of phenomena. One starts from a presumption of the common identity or 'unity' of the phenomena and, assuming that 'unity', determines what makes them 'different'. That 'difference' embodies the 'harmony' of the phenomena, their deeper common nature and consequent reciprocal identity. Each is *positively* 'understood' in terms of the other.

As has been [observed elsewhere](#), Western thought starts from a presumption of difference between phenomena and, presuming difference (which, in Western models of communal organization and human interaction, results in presumptions of human individual independence and autonomy), searches for shared characteristics.

Chinese and other similarly oriented understandings of 'reality' which presume 'unity in diversity' or 'harmony without uniformity' presume an underlying homogeneity and consequent 'harmony' in phenomena and assume the need to differentiate that which is fundamentally unified.

This, for humanity, results in an understanding of a shared homogeneity of the state, community, family and individual. An homogeneity which binds them together and in terms of which each is reciprocally differentiated - a true reciprocated hierarchical and horizontal 'unity in diversity'.

The enemy of such a reciprocally united world is, of course, independent self-interest. As Ekstroem (2002, 259) says,

Indeed, the all-important Mencius (mid-fourth century B. C.) quotes Confucius himself as saying: "I detest that which [only] seems to be, but is not... I detest the bristlegrass, fearing that it will disorder... the young plants [which its leaves resemble]; I detest the lip server, fearing that he will disorder Righteousness; I detest the glib tongue, fearing it will disorder trust; I detest the [lascivious] tones of [the state of] Zheng, fearing that they will disorder [true] music...

(Martin Svensson Ekstroem, 'Illusion, Lie, and Metaphor: The Paradox of Divergence in Early Chinese Poetics', *Poetics Today*, Volume 23, 2002)

³⁴⁶ Zhang Lihua expanding on the Chinese concept of 'Harmony without Uniformity':

The cultural values of a country influence its national psychology and identity. Citizens' values and public opinions are conveyed to state leaders through the media and other information channels, both directly and indirectly influencing decisions on foreign policy. The traditional cultural values that influence the psyche of the Chinese people are harmony, benevolence, righteousness, courtesy, wisdom, honesty, loyalty, and filial piety.

Of these, the core value is harmony. Harmony means "proper and balanced coordination between things" and encompasses rationale, propriety, and compatibility. Rationale refers to acting according to objective laws and truths. Propriety indicates suitability and appropriateness. The value of harmony advocates "harmony but not uniformity." Properly coordinating different things by bringing them together in the appropriate manner allows them to develop from an uncoordinated state to one of coordination; from asymmetry to symmetry; and from imbalance to balance. Modern Chinese society tries to maintain harmony between humankind and nature; between people and society; between members of different communities; and between mind and body.

Benevolence, the core value of Confucianism, extends from the importance of familial ties and blood connections and is held in high esteem by the Chinese. "A peaceful family will prosper (jiahe wanshi xing...)" is a famous and widely embraced saying. This benevolence, although based in familial ties, extends to friendships and social relationships, producing a full set of values that include justice, courtesy, wisdom, honesty, loyalty, self-discipline, and commitment.

Righteousness refers to justice and correctness. As Confucius said, "the gentleman understands what is moral; the small man understands what is profitable (junzi yu yu yi, xiaoren yu yu li...)." There are not only individual benefits but also collective and social benefits. All people should seek what benefits both the individual and the society. As two Chinese sayings put it, "Everybody is responsible for the rise or fall of the country (tianxia xingwang, pifu youze...)" and "Be the first to show concern and the last to enjoy yourself (xian tianxia zhi you er you, hou tianxia zhi le er le...)." If the country suffers foreign invasions and perils, the people should "expel the foreign invaders [and] resuscitate the Chinese nation (quchu dalu, huifu zhonghua...)," brandishing their weapons and struggling for the glory of the country.

Courtesy stresses modesty and prudence. It is about respecting laws and preventing misconduct. Traditional Chinese culture respects the importance of rites and has special rites for various occasions, such as the emperor's sacrifice to heaven, the common people's sacrifice to ancestors, weddings, funerals, and courteous exchanges. As the saying goes, "It is impolite not to return what one receives (lai er buwang fei li ye...)." Confucius particularly stressed courtesy in daily life.

Wisdom requires that one distinguish right from wrong, place capable people in suitable positions, know oneself, and be resourceful. Confucius said, "Benevolence means to love and wisdom means to understand others renzhe airen, zhizhe zhiren...)." One must have a loving heart to love others, and one must have wisdom to understand others. People should have not only a loving heart but also wisdom to distinguish good from evil and right from wrong. They should have the wisdom and resourcefulness to control evil and promote good.

³⁴⁷ Modi's remarks on India-China relations:

Indian Prime Minister Narendra Modi's "rare" direct statement on China-India ties has been attracting attention. In an exclusive interview with US magazine Newsweek, he stated that for India, the relationship with China is important and significant; India and China "need to urgently address the prolonged situation on our borders so that the abnormality in our bilateral interactions can be put behind us." He said that stable and peaceful relations between India and China are important for not just the two countries but the entire region and world, adding that "I hope and believe that through positive and constructive bilateral engagement at the diplomatic and military levels, we will be able to restore and sustain peace and tranquility in our borders."...

...[T]his attitude is what China has always adhered to. The border issue is not the whole of China-India ties. It should be placed at an appropriate position in the bilateral relationship and properly managed. Both sides have enough wisdom and ability to resolve the issue through diplomatic and military channels. If India can implement Modi's statement and meet China halfway, bilateral relations moving forward on a healthy and stable track is something that can be expected....

[A]s two of the most eye-catching developing countries in the world, two Asian nations with ancient civilizations, how to perceive their relationship and how to approach development should transcend the mind-set and imagination of viewing each other as either friend or foe, or the zero-sum game of "your strength is my weakness."

In fact, China has consistently advocated for India to grasp the bilateral relationship from a strategic and long-term perspective. India faces significant temptations and strategic traps to overcome in doing so, which requires the country to remain vigilant and discard distractions from third parties with ill intentions at all times. (Editorial, ⁹⁶[Modi's remarks on China-India relations are thought-provoking](#), *Global Times*, April 11, 2024).

³⁴⁸ The inter-national use of national currencies, in 2023, is gathering momentum:

The process of using national currencies in mutual settlements between Russia and its partner countries will only gain momentum, Russian Foreign Minister Sergey Lavrov told reporters on Monday.

"Of course, as trade turnover grows, the transition to payments in national currencies will become more practical - this is the future. This is true not only for Africa, but also for Latin America, our Asian friends, as well as Iran, India, and China. We are already actively shifting to settlements in national currencies, and the dollar's share is steadily declining. <...> So, this process will only gain momentum," he said in response to a question about Kenya's intention to pay for oil exports in local currency.

Lavrov also stated that Brazilian President Luiz Inacio Lula da Silva "has already put forward his idea to focus on the development of payment mechanisms that would not rely on the dollar or the euro and would rely on decisions and agreements that would be developed, including within the framework of the BRICS New Development Bank."

Russian Deputy Prime Minister Alexey Overchuk said earlier that the Eurasian Economic Union (EAEU) has almost entirely shifted to payments in national currencies, their share totaled 90% in March. "We register a surge in the use of national currencies in mutual payments by the Union's countries," he said at the second Eurasian Economic Forum, adding that "the EAEU has virtually shifted to payments in national currencies."

The share of settlements in EAEU nations' mutual trade in national currencies "totaled 89% in Q1 2023," Overchuk said. "Speaking about March, [the share reached] 90%," he noted.

(^œ[Russia increases settlements with partners in national currencies](#) - Lavrov, TASS, May 30, 2023)

³⁴⁹ For a range of papers dealing with 'arrangements that replace independent national currencies (regional currency areas, currency boards, official or unofficial use of a foreign currency)' see this *Bank for International Settlements* (BIS) site: ^œ[Regional currency areas and the use of foreign currencies](#) (BIS Papers, No 17, 01 May 2003)

As is true for most international organizations involved in the current neoliberal management/ control of international finance, one should be aware of the inherent biases built into their management, operations and explanations. One should also be aware that regional currency unions such as the Eurozone presume an incipient subordination of participating nations to the monetary union.

For more on this see 'So-called 'sovereign' states included within the Eurozone are, of course, not truly sovereign at all' and 'We are, of course, talking about the 'sovereign' level of government which controls the monetary base'

³⁵⁰ The Shanghai Cooperation Organization, in 2022, is still in the process of being understood around the world. A good explanation of its formation and evolving purpose has been provided by the *Eurasian Research Institute* in an article entitled '^œ[Shanghai Cooperation Organization: Risks of Expansion](#)' but, as is inevitable in an evolving organization, its nature and purpose is currently variously understood and explained by national governments around the world.

TRTWorld, the television arm of the Turkish state broadcaster, described the nature of the Shanghai Cooperation Organization on 16 September, 2022:

Here is a brief breakdown of what the SCO is and its significance at a time of evolving geopolitical situation in the Eurasia region.

The organisation

21 years ago, on June 15, 2001, leaders of Kazakhstan, Kyrgyzstan, Tajikistan, Uzbekistan, Russia and China gathered in Shanghai and laid the foundation of the organisation.

It evolved from an earlier regional security grouping formed in 1996 after the collapse of the Soviet Union, when the Central Asian states gained independence from Moscow.

Later in August 2007, the Treaty of Long-Term Neighbourliness, Friendship and Cooperation, ratified in Bishkek, solidified the organisation's legal foundation.

One of the organisation's key aims is to strengthen friendly, good neighbourly relations and mutual trust among the member states.

The SCO member states occupy over 60 percent of the Eurasian landmass and have a population of over 3.2 billion, with their combined gross domestic product accounting for about a quarter of the global total.

The scope

Initially focused on regional security, including border conflicts, terrorism and militancy, the SCO's activities have expanded to cover economics and trade, transport and law enforcement.

However, security and economic cooperation remain top priorities.

In the early days of the body, some Western commentators likened the SCO to a potential NATO-style grouping that could one day challenge the West. But the organisation, in practice, limited itself to smaller military exercises and security initiatives.

A key aspect that appears to be obvious in the functioning of the SCO is that China and Russia are the dominant members. While Russia regards Central Asia as its sphere of influence, it is the Chinese economic sway through its various infrastructure projects across the region that puts it in the driving seat.

(^œ[What is the Shanghai Cooperation Organisation?](#) TRTWorld, 15 September 2022)

Benjamin Norton, in a wide-ranging, clear explanation of the nature and importance of the *Shanghai Cooperation Organization* entitled '^œ[Iran joins group with China & Russia, calls to drop US dollar in trade](#)' (July 9, 2023 - Youtube Video with transcript), has provided an important contextualization of the organization in the wider world.

³⁵¹ For the full text of 'Russia's New Foreign Policy Concept' officially signed by Russian President Vladimir Putin on March 31, 2023, see: Full Text: ^œ[Russia's New Foreign Policy Concept](#) (*Sputnik International*, March 31, 2023)

³⁵² And, no! That does not mean that defense of one's own territory and peoples through aggression is *a/ways* illegitimate.

We are living in a world which assumes the right of those with the military and/or economic power to coerce conformity in other nations. It

is the right *and duty* of threatened nations to defend their peoples, borders and legitimate interests.

We desperately need a new world order in which the presumptive interference of major military, financial and economic powers is no longer tolerated by 'the rest'!

353 Josep Borrell, High Representative of the Union for Foreign Affairs and Security Policy, of the European Union, spelled out Western Europe's blinkered understanding of what is happening in 2022:

Well, this is what is happening. Let us have a look now at the mega trends that will shape our world: Ukraine, but not only Ukraine. I want to insist on this.

Last year, everybody was talking about Afghanistan. Afghanistan was the big issue, remember in August [and] in September [2021]. Where is Afghanistan now? In Afghanistan, certainly, but it is no longer on the front pages of the newspapers. It looks like Afghanistan does not exist. The same problems exist - they are the same ones - but nobody talks about it. So, take care with the issues that appears - a crisis and then a following crisis erases the previous one, it looks like it is being solved but it is not solved. [It] is still there. There are many crises around the world, which are the trends that move this world.

First, a messy multipolarity. There is the US-China competition. This is the most important "structuring force". The world is being structured around this competition - like it or not. The two big powers - big, big, big, very big - are competing and this competition will restructure the world. And this will coexist with a broader "democracies vs. authoritarians", a big divide. I would not insist a lot on it because on our side, there are a lot of authoritarian regimes. We cannot say "we are the democracies", and the ones which follow us are also democracies - that is not true. That is not true.

Yes, there is a fight between the democratic systems and the authoritarian systems. But authoritarianism is, unhappily, developing a lot. Not just China, not just Russia. There is an authoritarian trend. Sometimes, they are still wearing the democracy suit, but they are no longer democracies. There are some who are not democracies at all - they do not even take the pity to look like democracies.

So, this competition is a structuring force. The fight between democracies and authoritarians is there. But it is much more than that.

The world is not purely bipolar. We have multiple players and poles, each one looking for their interest and values. Look at Turkey, India, Brazil, South Africa, Mexico, Indonesia. They are middle powers. They are swing states - they vote on one side or the other according to their interests, not only their theoretical values. But these people - I mention them again: Turkey, India, Brazil, South Africa, Mexico, Indonesia - are players and poles. This creates this messy multipolarity. These people - and there are a lot of people inside - are there, and not always following us. Look at Mexico's President [Andrés Manuel López Obrador]'s recent speech. Who is our Mexico delegate? Is he here? You heard what the Mexican President said about us recently.

The second characteristic is a competitive world where everything is being weaponised. Everything is a weapon: energy, investments, information, migration flows, data, etc. There is a global fight about access to some strategic domains: cyber, maritime, or outer space

The third characteristic of this world is the rising nationalism, revisionism plus identity politics. Putin does not want to re-store communism. He knows that nobody wants communism again. Putin is using a resource, which is an everyday resource, very powerful and they never disappear. And this is radical nationalism and imperialism.

And in the middle of that, we have the Global South. These people do not want to be forced to take sides in this geopolitical competition. More [importantly], they feel that the global system does not deliver, and they are not receiving their part. They are not receiving enough recognition. They do not have the role they should have according to their population and their economic weight. And when facing these multiple crises - these multipolar crises - financial, food and energy crises - it is clear that they are not there following us because they blame us, rightly or not....

(Josep Borrell, ^œ[EU Ambassadors Annual Conference 2022: Opening speech by High Representative Josep Borrell, The Diplomatic Service of the European Union](#), 10 October, 2022)

³⁵⁴ A *Swahili Nation* YouTube video entitled: ^œ[When and Why Coup d'état was Manufactured? Why Kwame Nkurumah was Overthrown: One Africa](#) gives a well-developed explanation of all this.

In the video P. L. O. Lumumba provides a very well researched, historically anchored explanation of the vital importance of 'African Unity' in ensuring the independence of 'African' peoples within the world.

As he says, Africa, like India, must become a region united through a profound continent-wide political and economic unity of African nations and communities. That unity must be based on a determination to both ensure Africa's place in the wider world and guaranteeing the unmolested freedom of its diverse peoples to be themselves,

³⁵⁵ As the Encyclopedia Britannica describes:

By the turn of the 20th century, the map of Africa looked like a huge jigsaw puzzle, with most of the boundary lines having been drawn in a sort of game of give-and-take played in the foreign offices of the leading European powers. The division of Africa, the last continent to be so carved up, was essentially a product of the new imperialism, vividly highlighting its essential features.

In this respect, the timing and the pace of the scramble for Africa are especially noteworthy. Before 1880 colonial possessions in Africa were relatively few and limited to coastal areas, with large sections of the coastline and almost all the interior still independent.

By 1900 Africa was almost entirely divided into separate territories that were under the administration of European nations.

The only exceptions were Liberia, generally regarded as being under the special protection of the United States; Morocco, conquered by France a few years later; Libya, later taken over by Italy; and Ethiopia.

(colonialism, Western. (2010). In Encyclopedia Britannica. Retrieved

April 30, 2010, from Encyclopedia Britannica Online:

^œ<http://www.britannica.com/EBchecked/topic/126237/colonialism>)

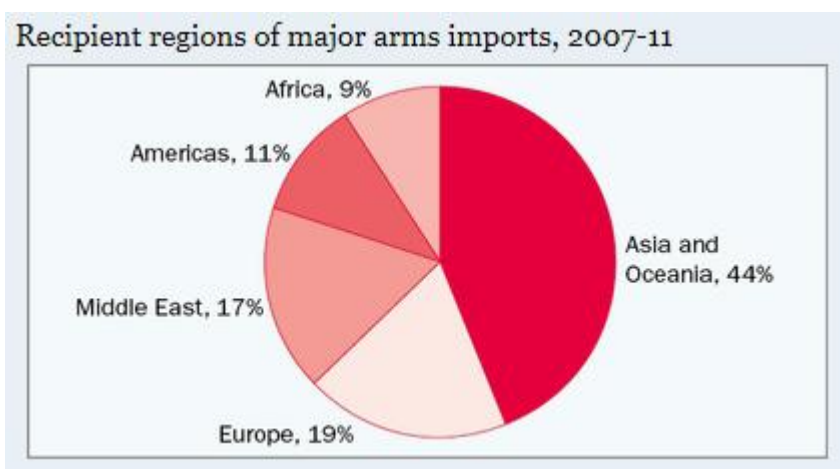

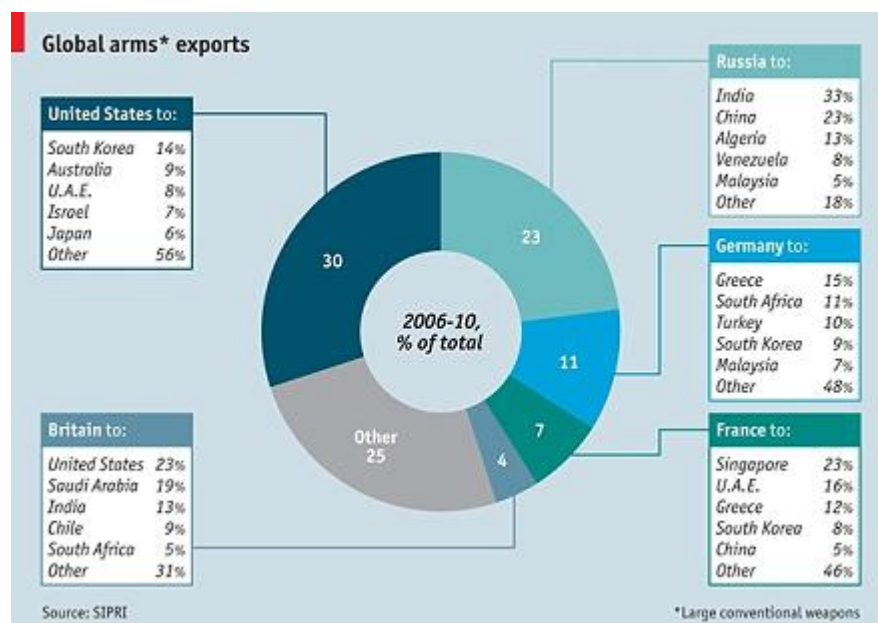

Anene (1970) put it clearly:

In the successive phases of the European partitioning of Africa, the lines demarcating spheres of interest were often haphazard and precipitately arranged. The European agents and diplomats were primarily interested in grabbing as much African territory as possible, and were not unduly concerned about the consequences of disrupting ethnic groups and undermining the indigenous political order...

The manner in which these boundaries were made was often a subject for after-dinner jokes among European statesmen.

(Anene 1970, p. 3)

- ³⁵⁶ A brief selection of texts which address these issues is: Anderson (1991); Arnason (1990); Brass (1991); Cohen (1991); Cole, Clay & Hill (1990); Eriksen (1993); Featherstone (1990); Feinberg (1990); Gellner (1983); Hassall (1991); Held & McGrew (1993); Ihonvbere (1994); James (1994); Lee (1990); Olwig (1993); Parker, Russo, Sommer & Yaeger (1992); Schiller, Basch & Szanton (1992); and Wijeyewardene (1990).
- ³⁵⁷ A naive belief in the pre-existing unity of people within the post-colonial nation-state in which they found themselves allowed Western specialists to suggest this kind of empowering of local communities and regions.
- ³⁵⁸ See ^œ[Parliamentary Democracy in PNG](#) for a description of the problems associated with the devolution of authority in a Third World country.
- ³⁵⁹ See Nnoli 1980, p. 218ff for a discussion of such activities within Nigeria; also ^œ[Political Experiences in Nigeria](#) for a discussion of these problems
- ³⁶⁰ Particularly First World leaders of the 'New World' who were coming to grips with the demands of indigenous minorities within their own borders
- ³⁶¹ Yet, most governments were as committed as ever to implementing the modernization agenda of the previous forty years. From the 1980s, Western nations increasingly required them to modify their focuses and activities to fit a growing emphasis on neoliberal governmental 'downsizing' and reliance on 'market forces'. Western nations, themselves, abandoned the developmental focuses of the post-war period and increasingly insisted on the deregulation of economic activity and privatization of governmental responsibilities.
- ³⁶² See ^œ[SIPRI Yearbook](#) for information on the source of arms exports. As the 2012 Yearbook explained:
- The volume of international transfers of major conventional weapons grew by 24 per cent between 2002-2006 and 2007-11. The five largest suppliers in 2007-11-the USA, Russia, Germany, France and the UK-accounted for three-quarters of the volume of exports.
- ... Major importers are taking advantage of the competitive arms market to seek attractive deals in terms of financing, offset arrangements and the transfer of technology.
- (*SIPRI 2012 Yearbook* Ch. 6. International arms transfers)

Shanker (*New York Times*, September 6, 2009) elaborated:

The annual report [titled "[Conventional Arms Transfers to Developing Nations](#)."] was produced by the nonpartisan Congressional Research Service, a division of the Library of Congress. Regarded as the most detailed collection of unclassified global arms sales data available to the general public, it was delivered to the House and Senate on Friday, ready for members' return from the Labor Day recess.

... The United States was the leader not only in arms sales worldwide, but also in sales to nations in the developing world, signing \$29.6 billion in weapons agreements with these nations, or 70.1 percent of all such deals.

The study found that the larger arms deals concluded by the United States with developing nations last year included a \$6.5 billion air defense system for the United Arab Emirates, a \$2.1 billion jet fighter deal with Morocco and a \$2 billion attack helicopter agreement with Taiwan. Other large weapons agreements were reached between the United States and India, Iraq, Saudi Arabia, Egypt, South Korea and Brazil.

Russia was far behind in 2008 with \$3.3 billion in weapons sales to the developing world, about 7.8 percent of all such agreements. The report says that while Russia continues to have China and India as its main weapons clients, Russia's new focus is on arms sales to Latin American nations, in particular to Venezuela.

France was third with \$2.5 billion in arms sales to developing nations, or about 5.9 percent of weapons deals with these countries.

The top buyers in the developing world in 2008 were the United Arab Emirates, which signed \$9.7 billion in arms deals; Saudi Arabia, which signed \$8.7 billion in weapons agreements; and Morocco, with \$5.4 billion in arms purchases.

The study uses figures in 2008 dollars, with amounts for previous years adjusted for inflation to give a constant financial measurement.

(^œ[September 6, 2009](#))

³⁶³ Dwight D. Eisenhower, in his farewell address at the conclusion of his presidency (1953-1961), warned the American people of the danger presented by the military industrial complex which was a legacy of the 2nd World War:

Our military organization today bears little relation to that known by any of my predecessors in peacetime, or indeed by the fighting men of World War II or Korea.

Until the latest of our world conflicts, the United States had no armaments industry. American makers of plowshares could, with time and as required, make swords as well. But now we can no longer risk emergency improvisation of national defense; we have been compelled to create a permanent armaments industry of vast proportions. Added to this, three and a half million men and women are directly engaged in the defense establishment. We annually spend on military security more than the net income of all United States corporations.

This conjunction of an immense military establishment and a large arms industry is new in the American experience. The total influence - economic, political, even spiritual - is felt in every city, every State house, every office of the Federal government. We recognize the imperative need for this development. Yet we must not fail to comprehend its grave implications. Our toil, resources and livelihood are all involved; so is the very structure of our society.

In the councils of government, we must guard against the acquisition of unwarranted influence, whether sought or unsought, by the military-industrial complex. The potential for the disastrous rise of misplaced power exists and will persist.

We must never let the weight of this combination endanger our liberties or democratic processes. We should take nothing for granted. Only an alert and knowledgeable citizenry can compel the proper meshing of the huge industrial and military machinery of defense with our peaceful methods and goals, so that security and liberty may prosper together.

(Dwight D. Eisenhower, ^œ[Farewell Speech to the Nation](#), January 17, 1961 (Press release containing the text of the address [DDE's Papers as President, Speech Series, Box 38, Final TV Talk (1); NAID #16972219]))

(27/03/16) Eisenhower's prescient warning, reminiscent of a similar concern [expressed by Abraham Lincoln](#) in the aftermath of the Civil War, seems to have fallen on deaf ears. William Astore, a retired lieutenant colonel

(USAF), in an article entitled 'A Force Unto Itself: A Military Leviathan Has Emerged as America's 51st and Most Powerful State', has described how the United States has become enmeshed in perpetual preparation for, and involvement in, military interventions around the world:

In the decades since the draft ended in 1973, a strange new military has emerged in the United States. Think of it, if you will, as a post-democratic force that prides itself on its warrior ethos rather than the old-fashioned citizen-soldier ideal. As such, it's a military increasingly divorced from the people, with a way of life ever more foreign to most Americans (adulatory as they may feel toward its troops). Abroad, it's now regularly put to purposes foreign to any traditional idea of national defense. In Washington, it has become a force unto itself, following its own priorities, pursuing its own agendas, increasingly unaccountable to either the president or Congress.

Three areas highlight the post-democratic transformation of this military with striking clarity: the blending of military professionals with privatized mercenaries in prosecuting unending "limited" wars; the way senior military commanders are cashing in on retirement; and finally the emergence of U.S. Special Operations Command (SOCOM) as a quasi-missionary imperial force with a presence in at least 135 countries a year (and counting).

(William J. Astore, ^œ[A Force Unto Itself: A Military Leviathan Has Emerged as America's 51st and Most Powerful State](#), *TomDispatch*, March 22, 2016)

The dominant themes of some of the most popular US films and television series over the past forty years provide ample illustration of Astore's description of the "strange new military [which] has emerged in the United States" over that time.

US understandings have been exported to the rest of the world through military 'aid' packages, mutual defense pacts and 'coalitions of the willing' in interventions around the world. Western armed forces have increasingly become involved in 'purposes foreign to any traditional idea of national defense'.

As Eisenhower warned, we should be very cautious, wary and alert to the dangers of involvement in the activities of the 'military-industrial complex' which is increasingly shaping foreign and domestic policy in Western 'democracies'. As a US State Department publication has explained:

Countries in the most democratic quintile of world population appear to have accounted for 92% of world arms exports and about 58% of world arms imports. The most democratic quintile was the only degree-of-democracy quintile with a positive arms trade balance.

(^œ[World Military Expenditures and Arms Transfers](#) (2015))

³⁶⁴ See [Who were the 'Middle-Sorts'?](#) for the origins and nature of this shift in understanding of political governance in Western Europe.

³⁶⁵ Many researchers have consciously set out to identify 'classes' in Third World nations, and a variety of studies have sought the emergence of the kinds of classes identified in Western nations. Many more have simply assumed the relevance of 'class' to the examination of Third World communities. However, classes in Western nations are a consequence of particular historical experiences which have not been repeated in these

non-Western countries. One needs to be very cautious in applying the concept of 'class' to non-Western communities.

³⁶⁶ Where such parties existed they usually symbolised the struggle for independence and received their legitimacy from that recognition, not from their representation of the interests of particular 'classes' or espousal of a particular ideology.

³⁶⁷ This has proved a problem for many new nations. Indonesia, attempting to do what Murtala Mohammed (1976, pp. 12-15) claimed was not possible, has tried to deal with the problem by spelling out a single ideology to which all political parties must adhere. The Government's aim is to have all Indonesians commit themselves to these ideals and accept them as fundamental to all public and political life. It has described its philosophy in the following way:

Pancasila Democracy is a system of life for the state and society on the basis of people's sovereignty. It is inspired by the noble values of the Indonesian nation. Pancasila itself, which means the five principles, is the name given to the foundation of the Indonesian Republic. The five principles of Pancasila are

- Belief in the One and Only God;
- A Just and civilized humanity;
- the Unity of Indonesia;
- Democracy guided by the inner wisdom of deliberations of representatives;
- and Social Justice for all the Indonesian people.

(Soetjipto (1995))

³⁶⁸ Which have usually come from First or Second World sources, based on those, not indigenous, conceptualizations of the world (see [History of the Emergence of Capitalism](#)).

³⁶⁹ See ^œ[Politics and indigenous leaders in PNG](#) for more on this.

³⁷⁰ The issue of corruption relates, of course, not only to pressures placed on government departments and personnel to favor particular regions and politicians, but also to the personalization of government. Western democratic government emphasizes impersonal and impartial bureaucratic delivery of government services and administration of expenditure. In most patron-client oriented communities such impartial and impersonal administration is considered distinctly odd. Government is inevitably personalized and Western commentators inevitably view that personalization as corruption.

³⁷¹ Vincent Bevins, in an *Atlantic* article, described United States involvement in the country's 1965 massacre:

A trove of recently released documents confirms that Washington's role in the country's 1965 massacre was part of a bigger Cold War strategy.

(incent Bevins, ^œ[What the United States Did in Indonesia](#), *The Atlantic*, October 21, 2017)

Resty Woro Yuniar has described Britain's role in it all:

Survivors and descendants of those killed in Indonesia's anti-communist purge of 1965-1966 are urging Western countries to

apologise for their roles in what the CIA has itself described as "one of the worst mass murders of the 20th century".

The spotlight on the West's role in the state-backed genocide, which claimed the lives of at least hundreds of thousands of Indonesians, has intensified with the recent declassification of British documents revealing that a shadowy propaganda unit of the UK's Foreign Office helped to incite the massacres.

(Resty Woro Yuniar, ["Victims of Indonesia's 1965 communist killings tell UK to tell truth about its role in genocide and anti-Chinese propaganda"](#), *South China Morning Post*, 21 October, 2021)

A Baobab Press article described Indonesia's move to effective one-party governance:

By the early 1960s, tensions between Washington and Jakarta were at an all time high, in large part because of Sukarno's 'growing resistance to foreign aid from Western countries,' explains a States News Service report that appeared in the Washington Post on May 21, 1990 [Kathy Kadane, ["US Officials' Lists Aided Indonesian Bloodbath In '60s"](#), *Washington Post*, Monday, May 21, 1990, p.A5, State News Service].

It was then that U.S. diplomats and intelligence officials decided to consummate the results of years of painstaking espionage. Over a period of several months beginning in October of 1965, high-ranking officials of the State Department turned over the names of more than 5,000 key members of the Indonesian Communist Party (PKI) to Sukarno's opponent, Gen. T. N. J. Suharto, says the States News Service report.

The story adds that the Indonesian communist group was at the time the largest in the world after the U.S.S.R. and China, and that American diplomats, after supplying the list of names, 'later checked off the names of those who had been killed or captured.'

The report describes the list of names turned over to the Indonesian general as 'a detailed who's who of the leadership of PKI,' that identified committee members and organizers of labor and youth groups at the national, provincial and municipal levels

... It is unknown how many people were killed in the bloodbath that followed

... The CIA estimated in 1968 that at least 250,000 people were rounded up and slaughtered, and called the incident 'one of the worst mass murders of the 20th century.' A 1966 Washington Post report estimated deaths at closer to half a million. But all accounts agreed that the Indonesian communist movement had been wiped out.

The disclosure of the names and the subsequent massacre were not isolated events. They took place against a backdrop of psychological warfare which helped set the stage for Sukarno's eventual removal from office.

A 1975 Congressional investigation into CIA covert activities uncovered evidence, for example, of a clandestine U.S.-sponsored propaganda campaign designed to discredit Sukarno by circulating accusations of sexual improprieties to news media throughout the world. By the time of the bloody anticommunist purge, Sukarno was

on his way out. Gen. Suharto was installed in March of 1967 as interim president.

(Baobab Press 1993)

The following was the official Suharto Indonesian Government explanation of the precursors to, and rationale for, its political reorganization of the country from 1967, following the period of political turmoil described above (see Cribb 1990 for a detailed examination of the period):

The Government Manifesto of November 3, 1945, opened the way to a rapid growth of political parties. Soon a multi-party system emerged with parties of different ideologies, ranging from nationalism to socialism, religion and even Marxism/Leninism. Hence, the political structure developed into a liberal democracy that was a complete departure from the type of democracy envisaged by Pancasila.

With sharply conflicting ideologies, political rivalry was the order of the day and a stable Government was out of the question. With a total of 23 political parties and their factions, cabinets could only be formed on the basis of a shaky compromise between the strongest parties. In point of fact, coalition cabinets were formed and dissolved very often. The administration was a complete shambles and development was a far cry.

The first and only general election ever held during the rule of the Old Order took place in 1955. Even that election did not produce a strong cabinet with a solid back-up in Parliament. On the contrary, because political conditions continued to deteriorate, the President ordered the formation of a Constituent Assembly to draft a new constitution. However, as mentioned earlier, this only ended up in a total deadlock which led the President to take all the power of the state into his own hands under the pretext of guided democracy.

Having learned from the experience of the unlimited multiparty system of the past, the New Order Government, which came into office in 1967, decided to Simplify the political system along the following lines:

1. In order to minimize ideological conflicts between political organizations, all political organizations shall adopt Pancasila as their sole basis principle.
2. To simplify the political system, particularly for the purpose of choosing a political organization by the people in general elections it was felt that the number of these organizations should be reduced.
3. In the past, villages were made the bases of political activities and manoeuvres, most notably in the heyday of the Indonesian Communist Party. This adversely affected the social and economic life of the village populations. Hence, it would be desirable to free villages from the activities of political organizations.

Furthermore, the large number of organizations has been reduced by the fusion of parties and their affiliated organizations into two political parties - Partai Persatuan Pembangunan (The United Development Party or Partai Persatuan) and Partai Demokrasi Indonesia (the Indonesian Democracy Party or PDI), and one Functional Group or Golongan Karya (Golkar).

Partai Persatuan is a fusion of Nahdlatul Ulama (the Moslem Scholars Party), Parmusi (the Moslem Party), PSII (the Islamic Confederation) and PERII (the Islamic Union).

PDI is a fusion of the former PNI (the Nationalist Party), the Catholic Party, the Christian (Protestant) Party, the Indonesian Independence Party, and Partai Murba (the People's Party).

Golkar accommodates the aspirations and political rights and duties of functional groups that are not affiliated with either party, namely civil servants, retired members of the Armed Forces, women's organizations, professional groups, farmers, students, etc.

By virtue of the 1983 Guidelines of State Policy and on the basis of Act No.3 of 1985, Pancasila has finally been adopted as the one and only ideological principle upon which all political organizations base their activities.

(Soetjipto 1995)

³⁷² The following snippets from discussions reported by the on-line service of Kompas (Kompas 1996), one the largest circulation newspapers in Indonesia, provides some insight into the actual relationships between the armed forces, Golkar (the ruling party) and the other two parties under Suharto's rule. Key terms and acronyms to understand the following excerpts are:

- ABRI: Indonesian armed forces
- Golkar: ruling party in Indonesia
- KIPP: The Independent Election Monitoring Committee (suggested by PDI and PPP as a replacement for Panwaslak)
- OPP: The three General Elections Participants Organization (PPP, PDI, Golkar)
- Panwaslak: The Election Monitoring Committee
- PDI: The Indonesian Democratic Party
- PPP: The United Development Party.

Chief of Staff of the Army General Hartono said it was clear that each member of the armed forces (ABRI) was a Golkar cadre and therefore persistent questions broaching the issue, themselves need to be queried. Hartono conveyed his sentiments at the Sabilil Muttaqien Pesantren (Islamic school) in Magetan, East Java on Thursday (14/3 [1996]) ...

In a meeting with Golkar officials in the Matesih Square, Central Java, Hartono said ABRI exists behind Golkar. Historically ABRI has never been separate from Golkar. Every ABRI member is a Golkar cadre and therefore there is no need for them to be dubious about stating their allegiance to Golkar (Kompas, 14/3 [1996]) ...

Hassan explained, it is not true that the existence of KIPP is the expression of all Indonesians. Golkar with 35 million card-holding members and its 1.5 million cadres can actually be called as the voice of the majority. 'So the refusal of KIPP is actually the majority desire. But Golkar does not claim that the people refuses KIPP, Golkar alone is enough to refuse KIPP,' he said. Regarding to the Initiative Rights Bill on the Amendment of the General Elections Law proposed by United Development Party Faction in the House of

Representatives, Hassan said, Golkar refused it not because the present Election Law brings benefit to Golkar. 'No, the Election Law brings benefit to all OPP. The law has been approved by the three General Elections Participants Organization (OPP), so if there should be any changes in the law, it must be on the approval from the three OPP,' he said ...

The theme for the working meeting which will be held March 26-28, 1996 is: 'Strengthening the Security Stability of Regions to ensure the Success of the 1997 General Elections'. The meeting is aimed at uniting perceptions in the effort to increase development and preparations for the upcoming elections. Besides all the governors, this meeting will be attended by the Chairpersons of the Regional House of Representatives, the First Assistant Secretaries of the Regional Government, the Heads of the Regional Social Politics Directorate, and the Heads of Regional Bureau of Governmental Affairs. Soebrata who is also the Secretary of the General Election Commission said that although governors are the Chairpersons of the Consultative Board of Golkar and the bureaucratic officials in the regions are Golkar functionaries, it does not mean that the meeting will discuss efforts to win Golkar, rather it is an effort by the governors as the Heads of the Regional Election Committee to execute the General Election successfully, safely, and orderly.

Asked why the governors' perceptions have to be unified, the Secretary General said that at present, there are many disturbing reports that disrupt the preparations of the General Election, for example, the matter of an independent election monitor al').d other matters related to the preparation of the General Election.

'Therefore the unifying of perception among government officials as the administrator of the General Election concerning the problems that arose,' he said ... Soebrata also reminded the governors as the officials in charge of the administration of the General Election in their respective region to implement their functions well while on duty, meaning that they should not mix up between their functions as the administrator of the General Election and their role as a Golkar functionary. 'I think this has been stressed enough, do not mix between the duties of an administrator of the election and Golkar functionary. While on duty as the election administrator, he should not campaign. Aside of that, please campaign,' he said. Soebrata said, until now there are no policies that forbid the governors to become campaign managers, as it was done in the 1992 General Election since the period of Minister of Home Affairs Rudini

³⁷³The 1972 American Telephone & Telegraph (AT&T)/CIA conspiracy in Chile, resulting in the overthrow of an elected but antagonistic government and the emplacement of a friendly dictatorship is one instance of such activity (see ^œ[Church Committee \(1975\). *Covert Action in Chile: 1963-1973* \(PDF\)](#) for an official explanation of its involvement). Similar support for autocratic governments can be found throughout Central and South America, East and South-East Asia and Africa since the post-Second World War era.

³⁷⁴As ^œ[Rachel Stohl \(2008\)](#) describes,

there have been important changes since the September 11 attacks, with the United States finessing its arms export policies to support its war on terrorism. The most significant changes have

involved the lifting of sanctions, the increase of arms and military training provided to perceived anti-terrorist allies, and the development of new programs focused and based on the global anti-terrorist crusade.

To understand and document this trend, the Center for Defense Information has analyzed military assistance data (using U.S. government data solely) for 25 countries that have been identified by the United States as having a strategic role in the war on terrorism. These countries include those that reflect the counterterrorism priorities of the United States - 17 are "frontline" states identified by the Bush administration as "countries that cooperate with the United States in the war on terrorism or face terrorist threats themselves" - and others strategically located near Afghanistan and Iraq.. Algeria, Armenia, Azerbaijan, Bahrain, Chad, Djibouti, Ethiopia, Georgia, India, Indonesia, Kazakhstan, Kenya, Kyrgyzstan, Mali, Mauritania, Nepal, Niger, Oman, Pakistan, Philippines, Tajikistan, Thailand, Turkmenistan, Uzbekistan, and Yemen

³⁷⁵ See [œPrivate Military Companies](#) for a list of companies providing military and 'security' services in 2010; Singer (2003) for an exploration of the issue.

James Hider described the situation in Iraq in 2004:

The US military has created much of the demand for security guards. It has outsourced many formerly military functions to private contractors, who, in turn, need protection.

"The military doesn't have the means to look after hundreds of government workers and contractors. What they're looking for is an intelligent solution," said James Blount, whose Control Risk Group guards British officials here.

That solution is expensive - an estimated 10 per cent of the vast reconstruction contracts are going towards security, with companies charging up to Pounds 5,000 a day for a four-man armed escort with two armoured vehicles to make sure that investors arrive at meetings alive.

For some, the costs are too high: cheaper solutions can mean travelling in vulnerable "soft-skin" vehicles, such as the one in which Colour Sergeant McDonald was riding when gunmen killed him and a Canadian colleague on Monday. Last week two Finnish businessmen were shot dead in their car in Baghdad, apparently travelling without an armed escort.

Some British companies operate on a small scale with elite British forces. Others, such as the newly founded Erinys, have built up a vast force of 14,000 British-trained Iraqi guards to protect Iraq's oil infrastructure.

Many of the 5,000 or so private security contractors estimated to be operating in Iraq use former soldiers from the Third World, in particular retired Gurkhas, to stand for long hours in front of coalition bases or contractors' hotels in blazing temperatures. The London-based Global Risk Strategy brought in an entire battalion of Fijian soldiers to provide security for the distribution of Iraq's new currency last year

Like the coalition troops who regularly fight insurgents, the Western security contractors are largely above the law. It is unlikely that a guard would face legal proceedings if he accidentally shot an Iraqi civilian, one contractor said.

(^œ[Iraq: Soldiers of Fortune Rush to Cash in on Unrest](#), *Times* (London) April 1st, 2004)

376 As Nef argued:

The 1970's was a period of drastic de-democratization and demobilisation. It was also an era when the old 'structuralist' policies of import substitution industrialization (with its corollary, the welfare state) were replaced by the new monetarist policy of deindustrialisation, denationalization, shrinkage of government services, the early phase of structural adjustments and a profound vertical expansion of the police function of the state (and repression) throughout the hemisphere. The events are too oft repeated to require discussion here.

What is important, however, is to highlight the decline of developmentalism as a desired strategy and discourse for conflict-management by both Latin American and U. S. elites. In fact, new 'reactionary coalitions' were forged, leading to a new type of dependency resulting from a growing process of transnationalization of the Latin American state

... As time went by and the illusion of economic miracles became ever more distant, development along orthodox Keynesian, liberal lines moved ever further and further to the background. To make prices and wages 'competitive', in the context of neoliberal, free market strategies, labor was repressed and purposely atomised, working class organizations were persecuted, left wing parties disbanded ... as the foreign-induced economic miracles failed to materialise, all that was left was a repressive state keeping a very large marginal sector at bay.

(Nef 1991, pp. 17-18)

377 See Ahene & Katz (1992); Bienen & Waterbury (1989); Gamble (1994); Jessop (1988); and Letwin (1993).

378 As Friedson spelt out for Latin America:

... for neo liberals developmentalism had hampered development, and only a free-market economy guaranteed the road to prosperity. For them, the main problem of Latin America was not dependency but the burden of an inefficient and corrupt state that prevented growth and modernization ...

With the worsening of the economic situation in the early 1980s, newly established civilian governments found themselves with few resources to confront a powerful community of international creditors determined to collect their debts. Thus, military governments as well as their civilian successors endorsed versions of the IMF adjustment program, which stressed domestic mismanagement as the cause of payment problems and domestic adjustment (reduction of government expenditures, curtailment of public subsidies, devaluations and trade liberalization) as a way out of the crisis ...

Many of the IMF measures curtailed state power, which carried obvious political costs. In the first half of the 1980s, many Latin

American governments found themselves signing agreements that were, for the most part, not to their liking ...

Instead of prosperity, Latin America witnessed further economic decline and impoverishment as a result of the externally-enforced adjustment programs implemented in the early 1980s ...

This no doubt represented a major blow for the technocratic approach to the debt crisis promoted by the IMF, which assumed that all it took to overcome the economic crisis was the decisive action of governments to liberalise their economies.

(Friedson 1983, pp. 33-5)

³⁷⁹ Many commentators seem to have accepted the rhetoric at face value, characterising the last thirty years as a remarkable period in which many formerly authoritarian Third World governments have turned to democracy.

Superficially, the change from authoritarian to democratic government has been very marked over the past twenty years. As an FAO report summarized: 'The United Nations reports that in 1993, elections were held in 45 countries and nearly three quarters of the world's population now live in countries with democratic and relatively pluralistic regimes' (UN 1996).

³⁸⁰ "More honour'd in the breach than the observance" (to misquote Shakespeare's Hamlet.)

³⁸¹ The ^œ[Transparency International Corruption Perceptions Index](#) provides graphic illustration of the blatantly ethnocentric judgements made, assuming that Western forms of governmental organization and practice are the standards against which all the world should be judged.

Of course corruption exists everywhere and where communities are unraveling and law and order are less effective one will find practices which, *in the eyes of inhabitants*, are corrupt (see [The Breakdown and Revitalization of Communities; Living within the Environmental Means](#)). However, what constitutes corruption must always be judged against the forms and processes of leadership and communal organization found in a community and country.

To do otherwise is to engage in social-engineering, re-fashioning non-Western systems of government and leadership to mimic Western forms. This produces the very conditions that 'development' enthusiasts and Western moralists are attempting to reform (see [Imposition of Western Secondary Models: The Breakdown and Revitalization of Communities](#)).

³⁸² See [History of the Emergence of Capitalism](#) for a discussion of the historical underpinnings of Western forms.

³⁸³ See ^œ[Rachel Stohl \(2008\)](#) for a discussion of changed US military assistance focuses.

The internet is replete with examples of the ways in which funding follows 'anti-terror' rhetoric:

^œ[Reconstruction Team Serves on Front Line of War on Terror](#)

^œ[The Front Line in the War on Terror: It's Israel now, not Afghanistan...](#)

³⁸⁴ (30/05/16) The International Monetary Fund (IMF) has, since the mid-1970s, strongly promoted the neoliberal agenda. Three of its researchers, in response to a growing realization that this has caused

serious harm to countries around the world, have provided a succinct, and uncharacteristically frank, definition of the neoliberal enterprise:

...The neoliberal agenda - a label used more by critics than by the architects of the policies - rests on two main planks. The first is increased competition - achieved through deregulation and the opening up of domestic markets, including financial markets, to foreign competition. The second is a smaller role for the state, achieved through privatization and limits on the ability of governments to run fiscal deficits and accumulate debt.

There has been a strong and widespread global trend toward neoliberalism since the 1980s...

... [T]here are aspects of the neoliberal agenda that have not delivered as expected. Our assessment of the agenda is confined to the effects of two policies: removing restrictions on the movement of capital across a country's borders ([so-called capital account liberalization](#)); and fiscal consolidation, sometimes called "austerity," which is shorthand for policies to reduce fiscal deficits and debt levels. An assessment of these specific policies (rather than the broad neoliberal agenda) reaches three disquieting conclusions:

- The benefits in terms of increased growth seem fairly difficult to establish when looking at a broad group of countries.
- The costs in terms of increased inequality are prominent. Such costs epitomize the trade-off between the growth and equity effects of some aspects of the neoliberal agenda.
- Increased inequality in turn hurts the level and sustainability of growth. Even if growth is the sole or main purpose of the neoliberal agenda, advocates of that agenda still need to pay attention to the distributional effects.

...Although growth benefits are uncertain, [costs in terms of increased economic volatility](#) and crisis frequency seem more evident. Since 1980, there have been about 150 episodes of surges in capital inflows in more than 50 emerging market economies; as shown in the left panel of Chart 2, about 20 percent of the time, these episodes end in a financial crisis, and many of these crises are associated with large output declines (Ghosh, Ostry, and Qureshi, 2016).

(Jonathan D. Ostry, Prakash Loungani, and Davide Furceri, ["Neoliberalism: Oversold?"](#) *Finance & Development*, June 2016, Vol. 53, No. 2)

Such a reassessment, half-hearted though it is, [is long overdue](#). As [Bill Mitchell has summed it all up](#):

...[T]he IMF is an organisation that goes into the poorest nations and bullies them into harsh policy agendas which the IEO has now found to be based on poor theory and inadequate model implementation.

That makes the IMF more than an incompetent and biased organisation. In my view it makes them culpable. Who is going to pay?

Julius Ihonvbere, in an impassioned address to the All-African Student's Conference, *University of Guelph*, spelt out some of the experiences of

African nations through the period:

How on earth can we build a credible, popular, and viable agenda in a context of such disheartening socio-economic and political conditions?

The African situation has not been helped with the imposition of misguided monetarist policies by the IMF and the World Bank prescribing policies of desubsidization, deregulation, privatization, commercialization, devaluation and the like. These policies which neglect the region's historical experiences; the character of state and class, existing coalitions, contradictions and conflicts; the ability of non-bourgeois forces to resist; the degree of state delegitimation; the credibility of the governing/ruling classes; the room for maneuver in the global system; the resource and other material and structural differences among African states and so on, have created more problems for Africa in the last decade or so.

In country after country, stabilization and adjustment policies have culminated in or precipitated [civil wars, ethnic and religious violence, coups and counter coups](#) demonstrations, massacre of protesting workers, peasants and women, inflation, bankruptcies, and an unprecedented deterioration in living standards and the general quality of life. There have been very destructive riots in Nigeria and Zambia to take just two examples.

Part of the crisis in Somalia, which the western media has been loudly silent about, has to do with the role of the IMF and World Bank in the country between 1985 and 1989 which effectively isolated and bankrupted the economy making an already desperate government even more brutal and insecure. As well, the failure of these monetarist prescriptions, usually conceived in purely economic terms have delegitimized the state, its institutions and agents, and at the same time ruined indigenous producers thus facilitating the recolonization of Africa.

[Debt-equity swap as a response to the debt crisis](#) for instance, has made it possible for foreign interests to buy over the more lucrative sectors in African economies.

(Ihonvbere Julius O., *Pan-Africanism: Agenda for African Unity in the 1990s*, Keynote Address at the All-African Student's Conference, Peter Clark Hall, University of Guelph, Guelph, Ontario, Canada, May 27 1994)

As President Kaunda of Zambia put it, 'The IMF does not care whether you are suffering economic malaria, bilharzia or broken legs. They will always give you quinine' (Cheru 1989, p. 37).

Despite an apparently [dawning realization by a few IMF personnel](#) that IMF policies have caused more harm than good, there is little indication that IMF policies have significantly altered. Their [track record in dealings with Greece](#) since 2012 does not bode well for nations which rely on their interventions in the future.

Neoliberalism places the market at the center of 'development'. The presumption is that if the state privatizes as much of its activity as possible, making it directly answerable to 'market forces', and deregulates fiscal and financial activity, market forces will ensure rational, efficient economic organization and activity which will, in the long-run, result in a more rational organization of society, to the benefit of its members.

A fundamental presumption underpinning neoliberalism is that all cultural and social forms are derivatives of individual, competitive, acquisitive behavior, which is fundamental to human nature. So, social change is driven by competitive individual exchange.

Uninhibited market exchange most directly expresses that human nature. Therefore, by subjecting communities to 'market forces', one introduces rational social change (see [Social Exchange Theory](#) for more on this).

Of course, these presumptions are highly questionable and open to challenge. However, even accepting the premises, the presumption that uninhibited individualistic competitive activity as expressed in the marketplace will result in social good requires a remarkable leap of faith. There seems to be no evidence from history that this is so (see [The Working Poor](#)).

³⁸⁵ This placed the state at the center of development planning and implementation, usually mapped out in five-year development plans.

³⁸⁶ Brahma Chellaney has given an incisive description of the whirlwind being reaped by short-sighted Western interventions in former Middle Eastern colonial territories:

The Islamic State's horrific attacks in Paris provide a stark reminder that Western powers cannot contain - let alone insulate themselves from - the unintended consequences of their interventions in the Middle East. The unraveling of Syria, Iraq, and Libya, together with the civil war that is tearing Yemen apart, have created vast killing fields, generated waves of refugees, and spawned Islamist militants who will remain a threat to international security for years to come. And the West has had more than a little to do with it.

Obviously, Western intervention in the Middle East is not a new phenomenon. With the exceptions of Iran, Egypt, and Turkey, every major power in the Middle East is a modern construct created largely by the British and the French. The United States-led interventions in Afghanistan and Iraq since 2001 represent only the most recent effort by Western powers to shape the region's geopolitics.

But these powers have always preferred intervention by proxy, and it is this strategy - training, funding, and arming jihadists who are deemed "moderate" to fight against the "radicals" - that is backfiring today. Despite repeated proof to the contrary, Western powers have remained wedded to an approach that endangers their own internal security.

It should be obvious that those waging violent jihad can never be moderate. Yet, even after acknowledging that a majority of the Free Syrian Army's CIA-trained members have defected to the Islamic State, the US recently pledged nearly \$100 million in fresh aid for Syrian rebels.

(Brahma Chellaney, ^{oe}[The Western Roots of Anti-Western Terror](#), *Project Syndicate*, November 16, 2015)

³⁸⁷ As Jeremy Grimm has depressingly (but realistically) lamented:

I believe Western Corporations and Government Agencies have evolved motives and drives alien to those that led to their creation and alien to those motives and goals they espouse. The members of Humankind giving flesh and bone to Corporations and Government

Agencies fit and embody these new motives and goals, and shape them even as the motives and goals shape their human agents.

The u.s. military is not concerned with winning battles and wars. That was a concern of the past. Military strategy and tactics focus on growing budget lines and the status and power of each Command within the hierarchy of Commands. The many wars of many recent decades have served the ignoble purpose of bloating u.s. military expenditures, fattening MIC Corporations, and growing the funding lines, Power and prestige of DoD Government Agencies. The u.s. military has demonstrated remarkable capabilities in achieving its intended goals.

Governments do not serve a Common Good. Governments and their human minions serve the perceived short term good of [the ever shifting Elite factions controlling the Government](#). The often incoherent outcomes of many Government initiatives reflect the incoherence of the Elite factions driving those initiatives. But the outcomes often reflect the broad short term interests of the Elites. Some Elite factions may suffer less profit than others but the Populace profits little if at all. The contending Elites demonstrate consistent capability in acquiring the gains for themselves and passing the costs to the Populace....

I do not see a collapse of operational capabilities in the West. I see a collapse of Society and Western Civilization carefully and capably achieved by Western Elites, Corporate Enterprise, and Government Agencies. There is and has been a tectonic shift in the intent and motivation of the forces driving Humankind in the West. We are being driven toward Collapse on a scale and scope beyond all past epochs of Collapse.

Arkady Bogdanov in a response comment put it clearly:

This truly is end stage capitalism. I can come to no other conclusion. This has been written about and predicted extensively in the past. Marx saw it 150 years ago, and many others predicted it too. Even Adam Smith saw it in the practices/behaviors that he stated should be avoided- his big mistake was in not understanding how powerfully these practices/behaviors were incentivized.

I think it is a huge mistake to believe that our problems lie in failures of governance. The failures of governance are baked into the system- they were and are completely unavoidable.

The question we have to ask ourselves, do we want to just dial the clock back to an earlier point via regulation and restructuring things as was done during the New Deal era- which will all be eroded, bringing us back to revisit this problem once again, or do we want to actually correct the problem by replacing the system that drives the entire process?

(Jeremy Grimm, Arkady Bogdanov, Comments on: [Yves Smith, More on the Collapse of Operational Capabilities in the West: How Did We Get Here](#), *Naked Capitalism*, August 04, 2023)

388 Well - one of them anyway!

Sovereign debts, in the form of 'sovereign deficits' resulting from credit and currency created and distributed by sovereign central banks are, of course, [not debts which have to be 'repaid'](#) and Budget Surpluses or Balanced Budgets resulting from attempts to 'pay back' credit generated

by sovereign central banks through such credit creation are not evidences of 'responsible economic management': they are not virtues.

Sovereign central banks engage in sovereign credit creation [on instruction from sovereign governments](#). Such credit creation can be engaged in for any reason deemed appropriate by that government as the [US 2008-2012 creation and distribution of sovereign credit](#) to financial institutions during the 2008-9 Global Financial Crisis (GFC) demonstrated.

However, sovereign debt accumulated through sovereign governments indulging in private and/ or foreign borrowing (whether from international organizations like the World Bank or International Monetary Fund; through [credit-swap arrangements with other central banks](#); or from various financial and other institutions) are debts which have to be repaid and are [potential millstones](#) around the necks of governments which indulge in such activity.

Sovereign Government expenditures *within* sovereign boundaries should *never* be funded through government borrowing from either private or international sources. That is what Central Reserve Authorities are for: to fund internal expenditures without creating debts which must be repaid. It is the [Sovereign Government's responsibility](#) to ensure that adequate redistributive and taxation regulations are in place to control that supply.

³⁸⁹ See [Conglomerates and the progressive modernization of poverty](#) for a discussion of what it means to live in a truly deregulated, internationalized capitalist world

³⁹⁰ For a detailed comparison of the external debt data of countries see ^œ[World Bank Quarterly External Debt Statistics](#).

For a comparison of holders of sovereign debt in various countries, see International Monetary Fund, World Economic and Financial Surveys: *FISCAL MONITOR* September 2011, ^œ[Addressing Fiscal Challenges to Reduce Economic Risks](#) (p. 12, Fig. 6).

As can be seen from Figure 6 of the above IMF publication (reproduced below), while non-resident and foreign official holdings in the US (which still has a relatively healthy - though rapidly deteriorating - ratio of external to internal debt despite its recent past) are at 31%, for Japan, those holdings comprise a mere 5% of Government Debt.

Paul Krugman (^œ[When Confidence Hurts](#) *New York Times*, November 12, 2012) has commented on the related issue of international trade denominated in an internal currency (in these cases, US and Japanese currencies):

The point, of course, is that America doesn't have a lot of foreign-currency debt. Neither does Japan - which is why I would say yes, reduced confidence in Japanese bonds would actually help their economy. Right now, as I've written in the past, the collision of deflation with the zero lower bound means that Japan actually offers investors a higher real interest rate than they can get in other advanced countries. The result is a strong yen that is really hurting Japanese manufacturing. Some loss of faith in those Japanese bonds, whether default risk or fear of higher inflation, would be a blessing.

Oh, and one more thing: there are cases right now of countries with their own currency but with lots of foreign-currency debt that make depreciation contractionary versus expansionary - for example,

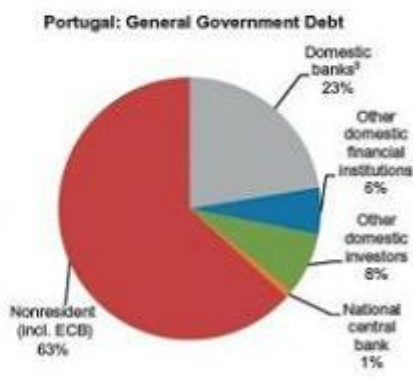

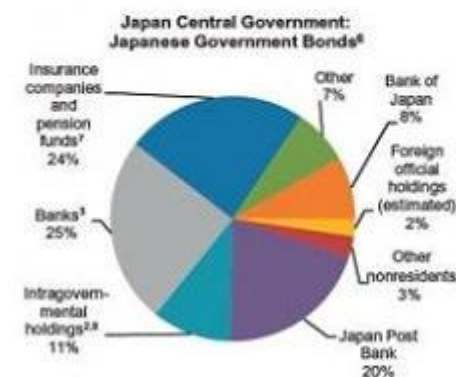

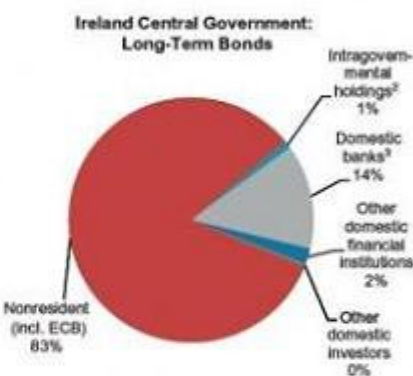

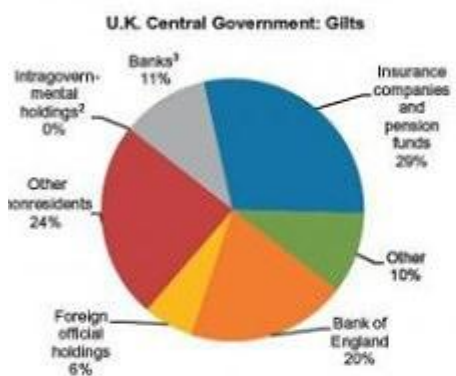

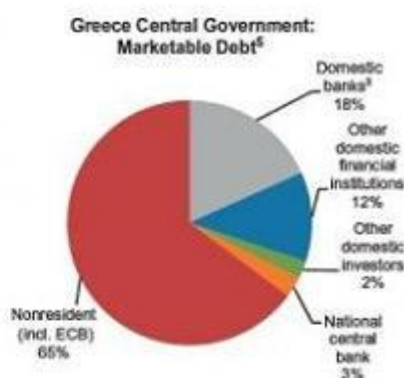

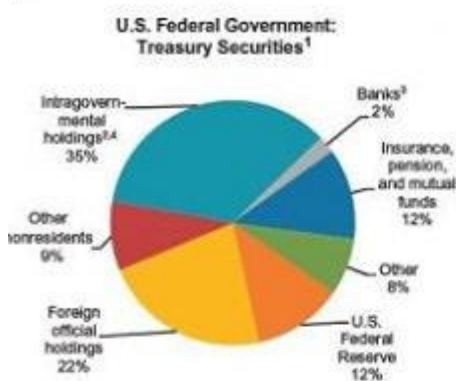

Hungary (where lots of people took out mortgages in Swiss francs!)
So this is still a relevant distinction.

See this 2010 ASEAN Summary Report (by Institute for International Monetary Affairs) of ^œ["Ways to promote foreign trade settlements denominated in local currencies in East Asia"](#) as a means of insulating ASEAN countries from the consequences of using external currencies for more on all this. As the report says:

Using a regional currency in invoicing and settlement brings the following benefits to the region:

- i. trade competitiveness of Asian companies would be less impacted by the fluctuations of non-regional currencies (i.e., the dollar, euro);
- ii. trade finance would become easier, as the impacts from liquidity conditions of non-regional currencies would become less; and
- iii. settlement risk (such as [Herstatt risk](#)) would be reduced.

Holders of Government Debt (Percent of total outstanding)

Sources: Country authorities; Japan Post Bank; Currency Composition of Official Foreign Exchange Reserves (COFER) database; and IMF staff estimates.
Note: Data as of 2011:Q2 for Greece, Ireland, and the United States, 2011:Q1 for Japan and the United Kingdom, and 2010:Q4 for Portugal.

¹Includes marketable and nonmarketable debt.

²Holdings by general government institutions.

³For the United States, refers to depository institutions; for Greece, Portugal, and the United Kingdom, refers to monetary financial institutions excluding the central bank; for Ireland, refers to monetary financial institutions and national central bank; and for Japan, includes depository institutions, securities investment trusts, and securities companies and excludes Japan Post Bank.

⁴Includes Government Account Series securities held by government trust funds, revolving funds, and special funds, and Federal Financing Bank securities.

⁵Includes bonds, T-bills, and other short-term notes.

⁶Includes Fiscal Investment and Loan Program (FILP) bonds and does not include T-bills.

⁷Includes Japan Post Insurance and excludes public pensions.

⁸Includes public pensions.

³⁹¹ See Stephen Foley, [“What price the new democracy? Goldman Sachs conquers Europe”](#) (*The Independent*, 18 November 2011) for an example of this. As the article explained:

... Simon Johnson, the former International Monetary Fund economist, in his book *13 Bankers*, argued that Goldman Sachs and the other large banks had become so close to government in the run-up to the financial crisis that the US was effectively an oligarchy. At least European politicians aren't "bought and paid for" by corporations, as in the US, he says. "Instead what you have in Europe is a shared world-view among the policy elite and the bankers, a shared set of goals and mutual reinforcement of illusions."

This is The Goldman Sachs Project. Put simply, it is to hug governments close. Every business wants to advance its interests with the regulators that can stymie them and the politicians who can give them a tax break, but this is no mere lobbying effort. Goldman is there to provide advice for governments and to provide financing, to send its people into public service and to dangle lucrative jobs in front of people coming out of government. The Project is to create such a deep exchange of people and ideas and money that it is impossible to tell the difference between the public interest and the Goldman Sachs interest.....

392 David Sanger of the *New York Times* described the scene in 1997,

BY the time they make it from the airport to the hotel, first-time visitors to the "tiger economies" of Southeast Asia almost all blurt out the same question: Where did all the money come from?

In Kuala Lumpur, the Malaysians are putting the finishing touches on the world's tallest twin towers, and the national car, the Proton, competes for space with Mercedes on the streets below. Bangkok, once known as the Venice of Asia for its tree-lined canals, has filled every watery inch with concrete to support office towers that stretch into the polluted mist. Even the Philippines, once Asia's basket case, finally has its act together.

So the financial crisis that has shaken the region in recent weeks - huge currency devaluations, the International Monetary Fund sweeping in to prop up the Philippines and virtually take over the central bank of Thailand - naturally raises the question of how much of this phenomenal growth is a chimera. Are the tigers just large house cats? Have they caught Japan disease, letting their banks get ahead of their brains, lending money with abandon for multibillion-dollar projects no one needed?

(^œDavid Sanger, *New York Times* August 3, 1997)

393 (25/04/16) These 'experts' seem to suffer from a disorder common in the realm of economics: idiot-savantism. They are able to master the intricacies (and necessary complexities aimed at achieving/maintaining an elusive internal consistency) of the ideological frames [which constitute the reality in which they live](#), but are unable to see the frame which limits their understanding. The blinkers they wear seem to [exclude awareness of wider implications of their formulations and predictions](#).

Those - unfortunately few - capable of seeing the ideological frame within which they are required to operate, may or may not bother to master its ideologically induced intricacies. However, they will recognize the frame for what it is and are able to see possibilities which lie beyond its boundaries.

(27/04/16) (14/05/16) If they find themselves trapped within the realm of the 'experts', having to limit their expressed understanding to the possibilities of the ideological frame which constitutes 'reality' for their 'peers' ("with their sober demeanors, credentials from think tanks or prestigious universities, and the measured, almost soporific testimony they deliver to congressional committees"), the weaker will accept that they are mistaken and simply stop seeing that wider reality and the stronger will either find something else to do with their lives or become increasingly frustrated. It is hard to live in [a reality defined by fachidiots](#) !

As Mike Lofgren said:

English unfortunately doesn't have a precise word for the German "œFachidiot," a narrowly specialized person accomplished in his own field but a blithering idiot outside it.

(Mike Lofgren, œ[GOP and the Rise of Anti-Knowledge](#), *Consortiumnews.com*, October 29, 2015)

In a follow up to 'The Rise of Anti-Knowledge' Lofgren has provided a brutally frank assessment of the anti-knowledge of many 'very serious people' in the US:

It would be comforting to believe that somewhere in the commanding heights of our permanent government, there are important players who are serious grownups who know what they are doing. That, at least, is the impression they seek to convey with their sober demeanors, credentials from think tanks or prestigious universities, and the measured, almost soporific testimony they deliver to congressional committees.

Think of Robert Gates, Ashton Carter, Timothy Geithner or Eric Holder. On the surface, they seem the very antithesis of the Tea Party fanatic, gibbering about ISIS training camps in America. The preferred pose of these establishment personages is that of the politically neutral technocrat offering well-considered advice based on their profound expertise.

That pose is nonsense. They are deeply dyed in the hue of the official ideology of the governing class, an ideology that is neither specifically Democrat nor Republican. Domestically, whatever they might privately believe about essentially diversionary social issues ("rube bait") like abortion or gay marriage, they almost invariably believe in the "Washington Consensus": financialization, outsourcing, privatization, deregulation and the commodification of labor.

(Mike Lofgren, œ[The 'Anti-Knowledge' of the Elites](#), *Consortiumnews.com*, October 31, 2015)

For a study examining an example of this problem, see *How smart managers make dumb decisions and why shareholders encourage them*.

As the study says:

From Enron in the United States to Satyam in India, there are plenty of examples of corporate managers lying about their companies' earnings and ultimately hurting themselves and the businesses they work for.

Why do they do it?

A limited capacity to see the whole picture - known as "bounded rationality" - combined with a faulty ethical compass are two big reasons....

(University of Toronto, Rotman School of Management. "œ[How smart managers make dumb decisions and why shareholders encourage them](#) ", *ScienceDaily*, 14 November 2011)

³⁹⁴ Ronald Reagan, US president (1981-9), summed up the US post-1970s commitment to privatization in 1987:

Today I am announcing my intention to appoint the 13 members of my Commission on Privatization. The Commission will help fulfill the commitment I made in my Economic Bill of Rights to end unfair government competition and return government programs and assets to the American people. Privatization follows in the great

tradition of free enterprise and private ownership of property that has long been a part of American history, from the initial sale of government lands under the Northwest Ordinance to the homestead program that brought the pioneers to the American West over 100 years ago.

There are many activities that are not the proper function of the Federal Government and that should simply be left to the private sector. The American people know that in many cases the Government is less efficient than private enterprise in providing certain services. Government agencies do not have the same incentives and interests that allow the private market to provide goods and services more efficiently and effectively.

Privatization programs have the potential for bringing enormous benefits to all members of society.

(Ronald Reagan: "[Statement on the President's Commission on Privatization](#)", September 3, 1987. Online by Gerhard Peters and John T. Woolley, The American Presidency Project.)

As [Thom Hartmann](#) has said:

...[W]hile much of the world moves to emulate the American experiment, contemporary America is moving in the direction of the corporate-state partnership. Executives from regulated industries are heading up the agencies that regulate them. Another symptom of increasing corporate control of the nation is widespread privatization - a euphemism for shifting control of a commons resource (like water supplies) from government agencies to corporations. And corporations and their agents have become the largest contributors to politicians, political parties, and so-called "think tanks" which both write and influence legislation.

The distinction between corporate control and human control is absolutely pivotal: governments that derive their just powers from the governed are responsible to citizens and voters, and their agencies are created exclusively to administer and protect the resources of the commons used by citizens and voters. Corporations are responsible only to stockholders and are created exclusively to produce a profit for those stockholders. When aggressive corporations are in seats of power, the results are predictable.

³⁹⁵ There has been a great deal of discussion about and criticism of 'structural adjustment programs' devised by the International Monetary Fund and World Bank to ensure that the economies of countries requiring financial assistance are 'structurally adjusted' to minimize future problems.

Type the term into any search engine and you will have access to thousands of these.

Bill Mitchell, commenting on a 2011 report prepared by the *Independent Evaluation Office* of the IMF entitled [IMF Performance in the Run-Up to the Financial and Economic Crisis: IMF Surveillance in 2004-07](#), has summed it all up well:

...[T]he IMF is an organisation that goes into the poorest nations and bullies them into harsh policy agendas which the IEO has now found to be based on poor theory and inadequate model implementation.

That makes the IMF more than an incompetent and biased organisation. In my view it makes them culpable. Who is going to pay?

The world is still enduring the crisis that came to realisation in 2008, but was spawned many years before that as the neo-liberal financial and labour market deregulation set up the conditions that would explode sometime later.

As the private debt was building up and the shonky (and criminal) bankers were increasingly defying responsible and ethical business practice, the IMF was part of the cheer squad - urging, no, bullying governments to deregulate further and undermine the working conditions further and to reduce the scope and quality of public services.

They had already inflicted this madness on defenceless less developed countries - pushing huge levels of debt onto them and slashing public services. It is hard to find any evidence that the IMF involvement has improved the lot of the citizens other than that of the top-end-of-town.

It is easy to find evidence of IMF disasters around the world over the last 40 years. First stop in your search might be the experience of Mali in the 1980s under IMF and World Bank structural adjustment programs where poverty and hardship was deliberately exacerbated by privatisation, cuts to government employment and wages, and decimation of its public education system.

IMF austerity was at the forefront of years of political instability and eventually, once the IMF had the 'man' in place who would do their bidding without asking questions, it was declared a model nation by the Washington organisation....

(Bill Mitchell, ^œ[IMF groupthink and sociopaths](#), *Billy Blog*, April 6, 2016;

See also: ^œ[The World Bank should be defunded](#), *Billy Blog*, 30 April, 2018)

Cristina Fróes de Borja Reis and Daniela Magalhães Prates have described the World Bank's assessment of ^œ[the efficiency and equity of public spending in Brazil](#), which, as they explain, endorses austerity in Brazil until 2030:

Antonio Nucifora and Martin Raiser, Lead Country Economist and Director for the World Bank in Brazil, respectively, noted that the report finds that "much of Brazil's public spending benefits the relatively well-off more than the poor, so there is room for serious fiscal adjustment without harming those most in need of government programs."

This raises the obvious question of how the World Bank concluded that the rich benefited more than the poor from public spending. Given that the report also admits that the deterioration of Brazil's fiscal situation is due principally to the recession and not growth in spending, its recommendations cast doubt on whether the Bank considered alternatives to fiscal adjustment, which, in Brazil, has consisted of austerity measures focused on a dramatic reduction of public spending.

The report endorses austerity in Brazil until 2030, praising the cap on public spending growth, a dramatic change in the federal

constitution adopted just after President Rousseff's impeachment in 2016 (see Observer Spring 2018). Public spending growth has been limited to that of inflation; amazingly, the cap's rule does not even consider the trajectory of GDP and population growth. Notwithstanding this obvious flaw, which would result in a decrease in spending per capita or as a percentage of GDP, it also advocated a change in the composition of spending, based on the assumption that social security spending is the main problem in Brazil, calling it the "unpayable bill".

The report takes as its point of departure the highly dubious assumption that fiscal sustainability can only be achieved through austerity, thus ignoring more effective and equitable policies. This in turn not only results in policies that disadvantage the poor and erode gains made in the human rights of the marginalised; it threatens the legitimacy of the Bank's self-professed intellectual and normative leadership.

Paul Krugman, in a *New York Times* article (Nov. 9, 2018) entitled 'œWhat the Hell Happened to Brazil? (Wonkish): How did an up-and-coming economy suffer such a severe slump?', put it well:

Brazil has big long-term solvency problems. But these require long-term solutions. What happened instead was that the Rousseff government decided to impose sharp spending cuts in the middle of a slump. What were they thinking? Incredibly, it seems that they bought into the doctrine of [expansionary austerity](#).

Here is Paul Krugman's assessment of the wisdom driving deregulatory, austerity-based, structural reform programs around the world, commenting particularly about a rating agency's decision to downgrade France's rating:

...[W]hy is France getting downgraded? Because, S&P says, it hasn't carried out the reforms that will enhance its medium-term growth prospects. What does that mean?

OK, another dirty little secret. What do we know - really know - about which economic reforms will generate growth, and how much growth they'll generate? The answer is, not much! People at places like the European Commission talk with great confidence about structural reform and the wonderful things it does, but there's very little clear evidence to support that confidence. Does anyone really know that Hollande's policies will mean growth that is x.x percent - or more likely, 0.x percent - slower than it would be if Olli Rehn were put in control? No.

So, again, where is this coming from?

I'm sorry, but I think that when S&P complains about lack of reform, it's actually complaining that Hollande is raising, not cutting taxes on the wealthy, and in general isn't free-market enough to satisfy the Davos set.

(Krugman, Nov. 8 2013, œIdeological Ratings)

See œ[Growth Forecast Errors and Fiscal Multipliers](#) (IMF Working Paper 13/1, Research Department, Prepared by Olivier Blanchard and Daniel Leigh, January 2013), for a frank assessment of the effectiveness of austerity programs devised and promoted by the IMF for the post-2007 Eurozone (though not of the effectiveness and impact of privatization

policies - I guess those, for ideological reasons, are simply assumed to be effective!). As Mark Whitehouse explained (Jan 5, 2013),

Sharp spending cuts and tax increases have long played a central role in the International Monetary Fund's prescriptions for governments in financial distress - most recently for the struggling members of the euro area. Now, officials at the world's primary arbiter of fiscal prudence are recognizing that such austerity can do a lot more damage than previously thought.

The first major indication of the IMF's change of heart came in October. In its World Economic Outlook, the fund published research showing that back in 2010, when Greece and other European countries embarked on severe austerity programs, its forecasters underestimated the negative impact spending cuts and tax increases would have on the broader economy.

In a paper presented today at the annual meeting of the American Economic Association, two IMF officials - chief economist Olivier Blanchard and economist Daniel Leigh - elaborated on the findings and their implications. The paper contains the boilerplate statement that it "should not be reported as representing the views of the IMF." Nonetheless, given its authors, it provides a good indication of the zeitgeist at the fund.

(^œ[IMF Officials: We Were Wrong About Austerity](#), *Bloomberg*, The Ticker, Jan 5, 2013)

Among the major problems of these programs is the presumption by World Bank officials that fiscal and financial processes should be deregulated; that countries should be reorganized to fit seamlessly into the 'global economy' and can readily be refashioned to Western neoliberal economic understandings and forms of organization and practice. See [Ideology and Reality](#) for more on this.

³⁹⁶ See ^œ[Why 'Third World'?](#) for an explanation of the use of this term

³⁹⁷ Janet Yellen (2007), President and CEO, Federal Reserve Bank of San Francisco, described ^œ[the Asian experience](#):

At the time of the crisis, I was the Chair of President Clinton's Council of Economic Advisers, and, as you may imagine, it was definitely a "front-burner" issue for us. As the crisis spread from country to country, there was deep concern about how big the impact would be on the U.S. economy, and the markets certainly were jittery: that October, the Dow Jones Industrial Average plunged over 500 points.

For the five Asian nations most associated with the crisis - Thailand, Korea, Indonesia, the Philippines, and Malaysia - the toll in both human and economic terms was enormous: in 1998, these countries saw their economies shrink by an average of 7.7 percent and many millions of their people lost their jobs.

More broadly, there was concern that the crisis had revealed new sources of risk in the international financial architecture....

The financial crisis in Asia was in many ways very different from others. For example, earlier in the 1990s, both Mexico and Argentina suffered financial crises, largely stemming from their unsustainably high budget deficits and soaring inflation. By contrast, in most of the affected Asian countries, during the years leading up to the crisis, growth in economic activity was strong, inflation was

relatively tame, investment was robust, and, with their budgets in surplus, their fiscal houses appeared to be in order.

Indeed, these countries had enjoyed extraordinarily fast growth for decades. As their success grew, the international community encouraged them to open their economies to foreign capital and to liberalize their financial sectors, and there was movement in that direction beginning in the late 1980s. With freer capital markets and fewer distortions in the financial sector, foreign capital flooded in, typically as short-term loans to banks; by 1996, capital inflows had grown to \$93 billion.

How, then, did 1997 become the year of the "sudden stop" in East Asia - that is, the year that foreign investors not only stopped flooding these countries with capital, but, in fact, reversed course and pulled capital out, in a dramatic way, as \$93 billion of inflows became over \$12 billion of outflows? ...

In spite of the risky lending practices that prevailed before the crisis, foreign investors poured money into these countries at record rates. Their willingness to do so appears to have stemmed in part from a second area of vulnerability - a perception that the governments of these nations stood ready to intervene to forestall bank failures.

[Accessed 9th May 2010]

³⁹⁸ As banking and investment strategies alter to circumvent the regulations, both become increasingly complex and convoluted. Then, rather than arguing for the reform of both, the focus is directed to the regulations which, it is claimed, stifle free enterprise. To the extent that such arguments are effective, one gets deregulation without reform.

James Greiff, writing on Bloomberg's *The Ticker* blog site provided a neat turn of phrase on all this:

I remember once reading a car review about a beautiful Mercedes in which the author noted that he was able to count something like 48 moving parts in the fold-away ashtray, a sign of the German carmaker's penchant for over-engineering. The author noted that an ashtray with three moving parts would have worked as well and cost less.

The same might be said of U.S. securities markets....

Bats Chief Executive Officer Joseph Ratterman said the software snafus were a symptom of excessive complexity in market regulations. To which one might say, excessive market complexity begets excessively complex regulations.

(James Greiff, ^œ[Why U.S. Securities Markets Should Have Fewer Moving Parts](#), *Bloomberg: The Ticker*, Jan 11, 2013)

Regulators can be left in the unenviable position of having to apply inadequate legislation to excessively convoluted market practice. At times the tangle of practices they find themselves having to unravel can be beyond either their expertise or their resources. Frank Partnoy and Jesse Eisinger explained part of the problem:

Until the 1980s, bank rules were few in number, but broad in scope. Regulation was focused on commonsense standards. Commercial banks were not permitted to engage in investment-banking activity, and were required to set aside a reasonable amount of capital. Bankers were prohibited from taking outside risks. Not every

financial institution complied with the rules, but many bankers who strayed were judged, and punished.

Since then, however, the rules have proliferated, the arguments about compliance have become ever more technical, and the punishments have been minor and rare. Not a single senior banker from a major firm has gone to prison for conduct related to the 2008 financial crisis; few even paid fines. The penalties paid by banks are paltry compared with their profits and bonus pools. The cost-benefit analysis of such a system tilts in favor of recklessness, in large part because of the complex web of regulation: bankers can argue that they comply with the letter of the law, even when they violate its spirit.

In an important call to arms this past summer, Andrew Haldane, the Bank of England's executive director for financial stability, laid out the case for an international regulatory overhaul. "For investors today, banks are the blackest of boxes," he said. But regulators are their facilitators. Haldane noted that a landmark regulatory agreement from 1988 called Basel I amounted to a mere 18 pages in the U.S. and 13 pages in the U.K. Likewise, disclosure rules were governed by a statute that was essentially one sentence long.

Basel II, the second iteration of global banking regulation, issued in 2004, was 347 pages long. Documentation for the new Basel III, Haldane noted, totals 616 pages. And federal regulations governing disclosure are even longer than that. In the 1930s, a bank's reports to the Federal Reserve might have contained just 80 entries. Yet by 2011, Haldane said, quarterly reporting to the Fed required a spreadsheet with 2,271 columns.

The Glass-Steagall Act of 1933, which Haldane said was perhaps "the single most influential piece of financial legislation of the 20th century," was only 37 pages. In contrast, 2010's Dodd-Frank law was 848 pages and required regulators to create so many new rules (not fully defined by the legislation itself) that it could amount to 30,000 pages of legal minutiae when fully codified. "Dodd-Frank makes Glass-Steagall look like throat-clearing," Haldane said.

(^œ[What's Inside America's Banks?](#) *Atlantic Magazine* January/February 2013)

And now we have ^œ[Implementation of Basel III](#) which runs to 972 pages! As Matthew Klein says,

on Tuesday, the Federal Reserve voted on new rules governing the minimum required ratios of bank equity to bank assets as part of its effort to become compliant with its Basel commitments. The complete document is 972 pages. Few have read the whole thing - I personally gave up after about 100 pages - but summaries prepared by the Fed are ^œ[available here](#) and ^œ[also, here](#). (The Federal Deposit Insurance Corp. and the Office of the Comptroller of the Currency will issue their own rules next week.)

(Matthew C. Klein, *Bloomberg View*, Jul 4, 2013, ^œ[The True Purpose of Bank Capital](#))

The Volker Alliance, in a report entitled *Reshaping The Financial Regulatory System: Long Delayed, Now Crucial* has provided an overview of the state of regulation in the United States in 2015:

THE SYSTEM FOR REGULATING FINANCIAL INSTITUTIONS in the United States is highly fragmented, outdated, and ineffective. A

multitude of federal agencies, self-regulatory organizations (SROs), and state authorities share oversight of the financial system under a framework riddled with regulatory gaps, loopholes, and inefficiencies. Never coherently designed, the regulatory framework developed in a piecemeal fashion over the past 150 years, as Congress established a plethora of new agencies and eliminated others primarily in response to financial panics and periods of economic instability. Notably, while the regulatory structure has seen some modification in recent decades, its foundational elements have been in place since the 1930s.

Unlike the regulatory system, however, the financial system has experienced significant transformation in the past few decades. notably:

- Banking system assets have become concentrated in a handful of extremely large, exceedingly complex, globally active, and highly diversified institutions, with huge trading books and even, in some cases, ownership of industrial assets such as coal mines, oil tankers, and power plants;
- The less regulated market outside the traditional banking system, or shadow banking, has emerged as a bigger part of the whole financial system, with increased reliance on potentially unstable forms of short-term funding that create the risk of contagion and fire sales (notably, nonbank financial institutions hold two-thirds of all creditmarket assets);
- Financial products have rapidly and fundamentally changed, becoming exceedingly complex and substantially increasing the opacity of the financial system;
- Alternative investment funds, such as hedge funds and private equity funds, have become highly leveraged, including through the use of derivatives transactions;
- Assets under management have grown dramatically and become concentrated in the largest fund complexes; and
- equities markets have become fragmented, more complex, and less transparent, in part as a result of technological advances, with increasing participation from unregulated entities, such as high-frequency trading firms.

The transformation of the financial landscape placed the outmoded and fragmented regulatory framework under significant strain in the run-up to the financial crisis, exposing its shortcomings.

(Paul A. Volker *et al*, ^œ[*Reshaping The Financial Regulatory System: Long Delayed, Now Crucial*](#), the Volcker Alliance project on Reform of the Federal Financial Regulatory Agencies, New York, 2015, p.1)

³⁹⁹ The following is an excerpt from the history of the first 50 years of the FDIC:

While the agency has grown and modified its operations in response to changing economic conditions and shifts in the banking environment, the mission of the FDIC over the past five decades has remained unchanged: to insure bank deposits and reduce the economic disruptions caused by bank failures.

At the time of its adoption in 1933, deposit insurance had a record of experiments at the state level extending back to 1829. New York

was the first of 14 states that adopted plans, over a period from 1829 to 1917, to insure or guarantee bank deposits or other obligations that served as currency.

The purposes of the various state insurance plans were similar: to protect communities from the economic disruptions caused by bank failures; and to protect depositors against losses. In the majority of cases the insurance plans eventually proved unworkable. By early 1930, the last of these plans had ceased operations.

A total of 150 proposals for deposit insurance or guaranty were made in Congress between 1886 and 1933. Many of these proposals were prompted by financial crises, though none was as severe as the crisis that developed in the early 1930s. The events of that period finally convinced the general public that measures of a national scope were needed to alleviate the disruptions caused by bank failures.

From the stock market crash in the fall of 1929 to the end of 1933, about 9,000 banks suspended operations, resulting in losses to depositors of about \$1.3 billion. The closure of 4,000 banks in the first few months of 1933, and the panic that accompanied these suspensions, led President Roosevelt to declare a bank holiday on March 6, 1933. The financial system was on the verge of collapse, and both the manufacturing and agricultural sectors were operating at a fraction of capacity. ^œ(FDIC 1984)

⁴⁰⁰ In an article entitled 'Labor Unions in the United States' he summed up the post-1st World War experience:

Helped by a sharp post-war economic contraction, employers and state officials ruthlessly drove back the radical threat, purging their workforce of known union activists and easily absorbing futile strikes during a period of rising unemployment....

In Austria, France, Germany, and the United States, labor unrest contributed to the election of conservative governments...

The 1920s was an especially dark period for organized labor in the United States where weaknesses visible before World War I became critical failures. Labor's opponents used fear of Communism to foment a post-war red scare that targeted union activists for police and vigilante violence.

Hundreds of foreign-born activists were deported, and mobs led by the American Legion and the Ku Klux Klan broke up union meetings and destroyed union offices (see, for example, Frank, 1994: 104-5).

Judges added law to the campaign against unions. Ignoring the intent of the Clayton Anti-Trust Act ¹⁰⁰⁸ (1914) they used anti-trust law and injunctions against unions, forbidding activists from picketing or publicizing disputes, holding signs, or even enrolling new union members.

Employers competed for their workers' allegiance, offering paternalist welfare programs and systems of employee representation as substitutes for independent unions. They sought to build a nonunion industrial relations system around welfare capitalism (Cohen, 1990)....

After the promises of the war years, the defeat of postwar union drives in mass production industries like steel and meatpacking

inaugurated a decade of union stagnation and decline. Membership fell by a third between 1920 and 1924.

Unions survived only in the older trades where employment was usually declining. By 1924, they were almost completely eliminated from the dynamic industries of the second industrial revolution: including steel, automobiles, consumer electronics, chemicals and rubber manufacture.

(^œFriedman 2008)

As the following description outlines, unionization came under strong challenge following the First World War:

The revolutionary trade union activism of the Industrial Workers of the World (IWW) began to challenge the reactionary "craft union" traditions of the American Federation of Labor (AFL).

The US joined the First World War in 1917. The AFL fought to dampen down struggle in order to maintain "social peace".

Dissent or protest against the war was banned under new laws. Socialist and union leaders were hounded and imprisoned.

But the Russian Revolution that year also had a huge impact in the US. Strikes and revolt broke out across the country.

Employers and government feared the spread of revolution. The IWW and the left were attacked as Bolsheviks. Conservative politicians demanded that the state suppress all resistance.

In 1919 a dispute by shipyard workers in Seattle grew into a tremendous city-wide general strike of 60,000 workers as 110 local unions struck in solidarity.

The mayor responded by arming the police and encouraging vigilantes to attack the strike. IWW and Socialist Party headquarters were raided and their leaders arrested.

National papers screamed about the threat of revolution in Seattle. Within a few days, the strike was defeated.

A strike by steel workers for union recognition in September 1919 proved to be a turning point. The US Steel Corporation refused to negotiate and 400,000 workers across 50 towns in ten states walked out.

They were met with violent reaction. Meetings were outlawed and groups of more than three people were broken up.

Martial law was declared in Gary, Indiana, and 26 union organizers and strikers were murdered at the hands of company police in Pennsylvania.

The steel strike nevertheless managed to hold out for over three months in the face of sustained attack. But its eventual defeat in January 1920 was a massive blow for the workers' movement.

After the steel strike the "red scare" escalated. The IWW fell victim to repression - and to its own political weaknesses.

Its orientation on the new workforce often led it to abandon the "native" skilled working class, which allowed the AFL to drive a wedge into potential class unity.

Crucially, the IWW's rejection of political parties meant it did not have a strategy for gaining political power or for confronting the state.

The war spurred industrial production, and its expansion continued through the 1920s.

The "Roaring 1920s" were symbolised by the motor car, the telephone and the hedonism of the rich as described by novelists such as F Scott Fitzgerald.

Republican presidents Warren Harding and Calvin Coolidge presided over a period of intense repression of dissent and the enrichment of the few.

J Edgar Hoover's Bureau of Investigation, the forerunner of today's FBI, collected information that led to thousands of suspected radicals being imprisoned or deported.

Repression was savage. A miners' strike in West Virginia in 1921 became an armed uprising known as the "Battle of Blair Mountain". Bosses and state officials worked together, arranging aircraft to drop pipe bombs and tear gas on workers and their families.

There were race riots in Chicago and St Louis as returning soldiers competed for jobs with the many black workers from the South who had migrated north to work in the war industries.

The American Legion was founded to carry out anti-communist propaganda and vigilante violence.

Reaction cleared the way for a massive employers' offensive as unions were smashed across the country.

The combination of an economic boom and a labor movement in retreat saw unionization collapse from five million in 1920 to 3.5 million in 1923.

Employers launched the "American Plan", which combined patriotic propaganda with company welfare plans and social activities to drum loyalty in their workforces.

"Yellow dog" contracts were pushed through, which made workers promise never to join a union. Radicals were blacklisted and could not work.

Meanwhile, the richest 1 percent of the population held a staggering 48 percent of the country's wealth into their hands.

The 1920s was a decade of defeat for US workers.

(^œThe 1920s were a decade of defeat for working people)

⁴⁰¹ The decade would see women's suffrage in the United States and elsewhere in the Western world.

⁴⁰²_(15/06/18) Kent Greenfield has sketched the worker welfare practices refined by Henry Ford during the 1st World War which the Michigan supreme court (Dodge v. Ford Motor Company, 170 N.W. 668 (Mich. 1919)), ruled to be 'an overtly socialist strategy'. As Greenfield explained of the resulting Michigan Supreme Court decision:

The eventual decision was, and still stands for, an iconic statement that corporations have no obligations beyond the bottom line. In one of the most famous passages in the history of corporate law, the Michigan supreme court announced,

A business corporation is organized and carried on primarily for the profit of the stockholders. The powers of the directors are to be employed for that end. The discretion of directors is to be exercised in the choice of means to attain that end, and does not

extend to a change in the end itself, to the reduction in profits, or to the nondistribution of profits among stockholders in order to devote them to other purposes.

Courts, then and now, follow something called the "business judgment rule" - meaning that they did not, and still do not, typically overturn the considered decisions of corporate managers. But Ford's rhetoric of worker and customer protection was so radical that it moved the court to rule such motivation out of bounds. Dodge v. Ford was a pivotal moment in the development of corporate law. It defined the core purposes of corporations as being distinct from - even contrary to - the interests of workers, customers, and society. The case remains, a century later, as one of the first opinions law students read in their introductory business law course. It is corporate law's original sin. (Kent Greenfield ^œ[SIDEBAR: Corporate Law's Original Sin](#), *Washington Monthly*, January/February 2015)

For further commentary on the nature and importance of *Dodge v. Ford Motor Company*, 170 N.W. 668 (Mich. 1919), see Macey, Jonathan R., ^œ[A Close Read of an Excellent Commentary on Dodge v. Ford](#) " (2008). Yale Law School Legal Scholarship Repository, Faculty Scholarship Series. Paper 1384 (Pp. 13).

Max Ehrenfreund has spelt out the danger for both companies and communities of that 'original sin': that corporations exist to make money for their shareholders:

This is how most Americans think the stock market works: corporations exist to make money for their shareholders...

[S]ome economists and legal experts have long argued that the principle of shareholder value is mistaken or at least an oversimplification. These critics blame all kinds of societal ills on shareholder value, from the erosion of middle-class wages to the seeming stagnation of technological process...

In the decades after World War II, many corporate executives felt a duty to improve society as a whole, not just to earn profits for their shareholders. Friedman argued that on the contrary, according to the logic of capitalism by which the pursuit of self-interest contributes to the greater good, the best thing that executive officers could do for society was to maximize profits.

The problem, some say, is that while the heads of corporations focus on immediate profits, they ignore their companies' prospects for expansion and vitality in the long term, whether by declining to pay for employees' training, neglecting research and development, or refraining from building new plants and factories. Over the decades, the results would be an economy that is less robust all around.

"We need a corporate sector that is investing decades ahead - investing in infrastructure, investing in research, and investing in its employees," said Lynn Stout, a law professor at Cornell University and a prominent critic of the theory of shareholder value. (Max Ehrenfreund, ^œ[The fringe economic theory that might get traction in the 2016 campaign](#), *Washington Post*, Wonkblog, March 2, 2015)

J. W. Mason, in a study of the post-Roosevelt era benign 'welfare capitalist' model of corporate governance and the post-1970s abandonment of that model in favor of 'corporate law's original sin',

...provides evidence that the strong empirical relationship of corporate cash flow and borrowing to productive corporate investment has disappeared in the last 30 years and has been replaced with corporate funds and shareholder payouts. Whereas firms once borrowed to invest and improve their long-term performance, they now borrow to enrich their investors in the short-run. This is the result of legal, managerial, and structural changes that resulted from the shareholder revolution of the 1980s. Under the older, managerial, model, more money coming into a firm - from sales or from borrowing - typically meant more money spent on fixed investment. In the new rentier-dominated model, more money coming in means more money flowing out to shareholders in the form of dividends and stock buybacks.

These results have important implications for macroeconomic policy. The shareholder revolution - and its implications for corporate financing decisions - may help explain why higher corporate profits in recent business cycles have generally failed to lead to high levels of investment. And under this new system, cheaper money from lower interest rates will fail to stimulate investment, growth, and wages because, as we show here, additional funds are funneled to shareholders through buybacks and dividends.

Key Findings:

- In the 1960s and 1970s, an additional dollar of earnings or borrowing was associated with about a 40-cent increase in investment. Since the 1980s, less than 10 cents of each borrowed dollar is invested.
- Since the 1980s, shareholder payouts have nearly doubled; in the second half of 2007, aggregate payouts actually exceeded aggregate investment. Today, there is a strong correlation between shareholder payouts and borrowing that did not exist before the mid-1980s.
- This change in corporate finance, associated with the "shareholder revolution", means there is good reason to believe that the real economy benefits less from the easier credit provided by macroeconomic policy than it once did. (^œ[Disgorge the Cash: The Disconnect Between Corporate Borrowing and Investment](#), *Roosevelt Institute*, February 25, 2015)

Steven Pearlstein in a *Washington Post* article entitled *Beware the 'mother of all credit bubbles'*, has spelt out the consequences of Mason's observation that corporations, in 2018, 'now borrow to enrich their investors in the short-run'.

Let's recall those heady days of 2006 when home prices were rising 10, 15, even 20 percent a year, allowing millions of homeowners to refinance mortgages and collectively take out more than \$300 billion in cash from the increased value of their properties. Some spent the money on furniture, appliances, cars and vacations, adding fuel to an already roaring economy. Others reinvested it in the already booming real estate and stock markets. When it finally

occurred to everyone that those houses and those stocks weren't really worth what the debt-fueled market said they were, markets crashed, banks flirted with insolvency, and the economy sank into a deep global recession.

Now, 12 years later, it's happening again. This time, however, it's not households using cheap debt to take cash out of their overvalued homes. Rather, it is giant corporations using cheap debt - and a one-time tax windfall - to take cash from their balance sheets and send it to shareholders in the form of increased dividends and, in particular, stock buybacks.

As before, the cash-outs are helping to drive debt - corporate debt - to record levels. As before, they are adding a short-term sugar high to an already booming economy. And once again, they are diverting capital from productive long-term investment to further inflate a financial bubble - this one in corporate stocks and bonds - that, when it bursts, will send the economy into another recession....

Finally, there is the debt that investors large and small take on to buy stocks, bonds, derivatives and other securities. That's also at an all-time high.

As Stephen Blumenthal of CMG Capital sees it, this is the "mother of all credit bubbles." And with the Federal Reserve and central banks now bringing the supply and cost of credit back to normal levels, and with demand for credit continuing to soar, heavily indebted businesses, governments and households will soon be hit with big increases in interest payments. As interest payments begin to crowd out spending on other things, the economy will slow. We've seen this self-reinforcing downward cycle before, and it invariably leads to market sell-offs, loan defaults, bankruptcies, layoffs and, quite likely, recession....

(Steven Pearlstein, ^œ[Beware the 'mother of all credit bubbles'](#), *The Washington Post*, June 8, 2018)

⁴⁰³ See "^œ[A Company Town Faces Starvation during the Pullman Strike](#) " (accessed 9th October 2011), from the ^œ[City University of New York, HERB database](#), for a description of the ways in which company towns could degenerate into exploitative traps for low-paid workers.

⁴⁰⁴ Employees were provided with commodities or paid in company tokens which were redeemable in company stores. Wikipedia has an excellent description of the system:

While this system had long existed in many parts of the world, it became widespread in the 18th and 19th centuries, as industrialization left many poor, unskilled workers without other means to support themselves and their families. The practice has been widely criticised as exploitative and similar in effect to slavery, and has been outlawed in many parts of the world. Variations of the truck system have existed worldwide, and are known by various names.

The practice is ostensibly one of a free and legal exchange, whereby an employer would offer something of value (typically goods, food, or housing) in exchange for labor, with the result being the same as if the laborer had been paid money and then spent the money on these necessities. The word truck came into the English language within this context, from the French *troquer*, meaning 'exchange' or 'barter'. A truck system differs from this kind of open barter or

payment in kind system by creating or taking advantage of a closed economic system in which workers have little or no opportunity to choose other work arrangements, and can easily become so indebted to their employers that they are unable to leave the system legally. The popular song "Sixteen Tons" dramatizes this scenario, with the narrator telling Saint Peter (who would welcome him to Heaven upon his death) " ...I can't go; I owe my soul to the company store."

(^œ[Wikipedia 2010](#))

405 Similar forms of human enslavement have, over the past decades, been grouped under the term 'human trafficking'. The practices are growing in frequency and number. As a Wikipedia entry puts it,

Human trafficking is the illegal trade in human beings for the purposes of commercial sexual exploitation or forced labor: a modern-day form of slavery. It is the fastest growing criminal industry in the world, tied with the illegal arms industry as the second largest, after the drug-trade.

(^œ[Wikipedia 2010](#))

In the 21st century, the clearly illegal versions of such practices are the tip of an iceberg. Its bulk comprises millions of people caught in a trap of low wages, appalling work conditions and sub-standard accommodation.

Indenture is a form of exploitation which can, superficially, sound benign. However, it lends itself to serious abuse of vulnerable people. The following letter from an English youth named Richard Frethorne who was indentured to the Virginia Company, written to his parents in 1623, gives a vivid picture of the kinds of conditions experienced by indentured laborers,

Loveing and kind father and mother my most humble duty remembered to you hoping in God of your good health, as I my selfe am at the making hereof, this is to let you understand that I your Child am in a most heavie Case by reason of the nature of the Country is such that it Causeth much sicknes [including scurvy and "the bloody flux"] ... and when wee are sicke there is nothing to comfort us; for since I came out of the ship, I never at anie thing but pease, and loblollie (that is water gruell)[.] as for deare or venison I never saw anie since I came into this land there is indeed some foule, but Wee are not allowed to goe, and get yt, but must Worke hard both earelie, and late for a messe of water gruell, and a mouthfull of bread, and beife[.] a mouthfull of bread for a pennie loafe must serve for 4 men which is most pitifull if you did knowe as much as I, when people crie out day, and night, Oh that they were in England without their lymbes and would not care to loose anie lymbe to bee in England againe, yea though they beg from doore to doore....

I have nothing at all, no not a shirt to my backe, but two Ragges nor no Clothes, but one poore suite, nor but one paire of shooes, but one paire of stockins, but one Capp, but two bands, my Cloke is stollen by one of my owne fellowes, and to his dying hower would not tell mee what he did with it [although some friends saw the "fellowe" buy butter and beef from a ship, probably purchased with Frethorne's cloak]. ... but I am not halfe a quarter so strong as I was in England, and all is for want of victualls, for I doe protest unto

you, that I have eaten more in a day at home than I have allowed me here for a Weeke....

O that you did see may daylie and hourelie sighes, grones, and teares, and thumpes that I afford mine owne brest, and rue and Curse the time of my birth with holy Job. I thought no head had beene able to hold so much water as hath and doth dailie flow from mine eyes.

(Richard Frethorne, "Letter to his Parents, March 20, April 2, 3, 1623," in *The Records of the Virginia Company of London*, vol. IV, ed. Susan M. Kingsbury.)

⁴⁰⁶ The 21st century version of this would be "[I owe my soul to the Credit Card company](#)". Fifteen+ percent interest rates are truly an obscene exploitation of the vulnerable among us. Yet, in the neoliberal, globalized, free-market world of the 21st century, there is no shortage of apologists for such exploitation.

Norbert Michel, in a defense of high interest rates and payday lending practices, put the neoliberal, deregulatory case clearly:

The 2010 Dodd-Frank Act authorized the Consumer Financial Protection Bureau (CFPB) to impose new regulations on payday lenders and other short-term credit providers, and these rules will likely harm millions of consumers. The act compounded this regulatory burden by effectively creating a variety of taxpayer-subsidized alternatives to private lenders in this market. Supporters of Dodd-Frank argue that these changes are necessary because private short-term lenders tend to "trap" consumers in high-cost debt. This view is fundamentally flawed, and the federal government has no need to regulate short-term lenders, all of whom are currently regulated by state governments.

Payday Lenders Provide Valuable Services

Advocacy groups have campaigned against payday (and other short-term) lenders for years, claiming that these companies systematically "trap" people in high-cost debt. Since Dodd-Frank passed in 2010, federal regulators are basing new regulations on this flawed premise. For instance, the director of the CFPB recently stated, "Too many short-term and longer-term loans are made based on a lender's ability to collect and not on a borrower's ability to repay." However, if lenders build their business on collecting money from people who cannot make good on their debts, they will soon find themselves out of business.

Furthermore, the CFPB's own complaint database does not support the claim that there is a systematic problem in this industry. From July 2011 to August 2015, consumers lodged approximately 10,000 complaints against payday lenders. Ignoring the fact that these are unverified complaints, the figure pales in comparison to the more than 12 million people per year using payday loan services. Certainly, some customers have legitimate complaints, but four years of raw complaint totals represent less than one tenth of one percent of the number of annual payday loan customers.

...One common criticism of the industry is that payday lenders gouge customers by charging a high annual percentage rate (APR) - sometimes "upwards of 390%." This criticism is misplaced, in part because it misuses the APR concept. Properly used, the APR represents the actual rate of interest someone pays over the course

of a year due to compounding, the process whereby interest is added to unpaid principal. However, in a typical case, payday loan customers do not borrow for a full year, and the interest charges do not compound. Thus, there usually is no APR on a payday loan.

For example, if a customer borrows \$100 for two weeks, for a fee of \$15, then the only way to appropriately express this fee as a rate would be 15 percent (\$15 divided by \$100). When a payday loan customer rolls over a loan at payday, he has to pay a new \$15 fee and is then responsible for repaying a total of \$130; the fee could then be expressed as a rate of 30 percent, and so on. Thus, interest costs cannot "explode" exponentially as they can, for example, with a home mortgage, since there is no compounding.

(Norbert J. Michel, ^œ[Dodd-Frank and the Consumer Financial Protection Bureau Put Squeeze on Private Payday Lenders](#), *The Heritage Foundation*, Issue Brief #4479 on Economy, November 4, 2015)

However, Michel's defense, above, seems somewhat disingenuous (ideology is indeed blinkered!). The US Federal Trade Commission, in a preamble to its website providing detailed information on payday lending practices, 'Payday Lending', explains:

Many consumers who need cash quickly turn to payday loans - short-term, high interest loans that are generally due on the consumer's next payday after the loan is taken out. The annual percentage rate of these loans is usually very high - i.e., 390% or more. In recent years, the availability of payday loans via the Internet has markedly increased. Unfortunately, some payday lending operations have employed deception and other illegal conduct to take advantage of financially distressed consumers seeking these loans.

The FTC enforces a variety of laws to protect consumers in this area. The agency has filed many law enforcement actions against payday lenders for, among other things, engaging in deceptive or unfair advertising and billing practices in violation of Section 5 of the FTC Act; failing to comply with the disclosure requirements of the Truth In Lending Act; violating the Credit Practices Rule's prohibition against wage assignment clauses in contracts; conditioning credit on the preauthorization of electronic fund transfers in violation of the Electronic Fund Transfer Act; and employing unfair, deceptive, and abusive debt collection practices. The FTC has also filed recent actions against scammers that contact consumers in an attempt to collect fake "phantom" payday loan debts that consumers do not owe. Further, the FTC has filed actions against companies that locate themselves on Native American reservations in an attempt to evade state and federal consumer protection laws.

(^œ[Payday Lending](#), *Federal Trade Commission*, Consumer Finance (accessed November 10 2015))

⁴⁰⁷ In a blog post sub-titled ^œ['Welfare capitalism is dying. We're going to miss it'](#), Daniel Gross has provided an excellent summary of the emergence of welfare capitalism in the early 20th century:

Welfare capitalism is a term used by historians and economists to define the distinctive style of capitalism that emerged in the 20th century. Until the turn of the 20th century, fringe benefits, insurance, retirement plans, and health benefits - the perks we

have come to define as essential to employment - simply didn't exist. Employers had compensated employees solely with wages.

But that changed with the onset of industrial capitalism. In Europe, governments responded to industrialism by developing state-run systems of unemployment insurance, health care, and pensions. But - in yet another example for American exceptionalism - the private sector took the lead in the United States. After the age of the robber barons and various bitter strikes, forward-looking companies began to take action on their own. They were influenced by a range of factors: noblesse oblige, paternalism, and the emerging fields of industrial psychology and human resource management.

Henry Ford led the way. In January 1914, Ford Motor Co. instituted the \$5 day. Over the next several years, Ford took steps to ensure that its employees remained healthy, loyal, and above all, efficient. It opened an infirmary and established the "Sociological Department" to both keep tabs on and look after the welfare of its workers. In 1922, Ford cut the work week from six days to five.

In the roaring 1920s, when other highly profitable companies began to emulate Ford, welfare capitalism began in earnest. Companies built cafeterias and health clinics, sponsored baseball and bowling leagues, and granted days off for the opening of deer season. Corning Glass Works began providing health insurance in 1923. The same year, U.S. Steel slashed its workday from 12 hours to eight. In 1927, International Harvester began offering two-week paid vacations. All this was all done without government mandates and largely without the influence of unions.

Welfare capitalism proved a phenomenal success - socially, economically, and politically. America's industrial complex was ultimately unionized, but with relatively little upheaval. Even with the rise of the welfare state in the '30s, corporations continued to assume responsibility for the well-being of their employees. It was part of a grand bargain between labor, capital, and government that allowed for remarkable growth, innovation, and rising standards of living for decades. It also served as a bulwark against socialism. By endowing labor with dignity, welfare capitalists made industrial work a ticket to the middle class.

But just as the New Deal Coalition started to fray in the 1960s, so too did welfare capitalism. American businesses - and workers - increasingly began to face competition from all over. They began to have difficulty competing with companies from countries where more robust welfare states bore the burden of providing pensions and health insurance (like Germany and Japan). They began to have difficulty competing with low-wage competitors in countries where welfare capitalism had yet to take hold, like Mexico, China, and India. And they began to face competition from newer domestic companies that never bought into the ideas of welfare capitalism.

In the 1920s, competitive pressures led companies to become more paternalistic to unskilled workers. But now, the pressure is all in the other direction. With each passing year, more and more retailers have to compete with Wal-Mart, and more and more manufacturers have to compete with China. Even enlightened employers like Starbucks can't ever hope to offer the sort of programs that International Harvester and Ford did back in the 1920s. And so welfare capitalism is slipping away. Health care insurance has

increasingly become decoupled from work. According to this Kaiser Family Foundation study, 61 percent of workers are covered by employers' health insurance, down from 65 percent in 2001. And pension plans, which guaranteed a retirement income to employees, are being replaced by 401(Ks), which offer no such certainties.

408 These became beliefs which have been perpetuated amongst employers, right wing political organizations and conservative middle and working class people to the present.

Of course, the strong growth in urban wages was primarily due to President Coolidge's (and Hoover's) liberalization of investment regulation - which led to the explosion in speculative investment and consequent financial collapse. A Wikipedia entry has summarized US federal policies well:

...With the exception of favoring increased tariffs, Coolidge disdained regulation, and carried about this belief by appointing commissioners to the Federal Trade Commission and the Interstate Commerce Commission who did little to restrict the activities of businesses under their jurisdiction. The regulatory state under Coolidge was, as one biographer described it, "thin to the point of invisibility."

and

...Coolidge's taxation policy was that of his Secretary of the Treasury, Andrew Mellon, the ideal that "scientific taxation", lower taxes, actually increase not decrease government receipts. Congress agreed, and the taxes were reduced in Coolidge's term. In addition to these tax cuts, Coolidge proposed reductions in federal expenditures and retiring some of the federal debt. Coolidge's ideas were shared by the Republicans in Congress, and in 1924 Congress passed the Revenue Act of 1924, which reduced income tax rates and eliminated all income taxation for some two million people. They reduced taxes again by passing the Revenue Acts of 1926 and 1928, all the while continuing to keep spending down so as to reduce the overall federal debt. By 1927, only the richest 2% of taxpayers paid any federal income tax.

(*Wikipedia*, ^œ[Calvin Coolidge](#) [accessed 13 July, 2014])

The lowering of the prices of manufactured consumables was a consequence of both the assembly-line organization and electrification of industry, driven by wartime necessity. Once productive enterprise was refocused to peace-time needs, this resulted in mass production of cheap consumer goods.

The welfare capitalism of the period was funded by the boom conditions. Once those conditions collapsed, so did welfare capitalism.

Very similar sets of taxation and deregulatory policies were enacted in most Western nations from the 1980s and a similar fall in the price of consumer goods occurred with the globalization of labor-intensive production. As production moved to low-wage areas, the costs of consumables manufacturing dropped. This was quickly reflected, through competition, in retail prices in Western countries.

Even without any increase in wages, Western people found themselves able to afford previously luxury goods. It seemed in the 1980s that deregulation had indeed resulted in prosperity - free markets obviously worked!

409 The Wall Street collapse of 2008 is merely the latest in a long line of burst capitalist bubbles. See 'When the Bubble burst, all of England wound up broke. (South Sea Bubble)' by Robert Wernick (1989) for a description of the 1720 collapse of The South Sea Company and subsequent collapse of credit in Britain. As Wernick described,

At the beginning of September 1720, South Sea stock sagged to Bp830, then to 750, to 575, to 370. By the end of the month it stood at Bp180. Blunt's nephew Charles cut his throat with a razor. Blunt himself - Sir John, as he was now - narrowly escaped with his life when an angry speculator tried to shoot him down in the street. He had taken the precaution of selling out all his stock near the high in August,

The collapse of the South Sea stock led to a collapse of all credit. By October it was clear that a financial crisis had erupted in England. No one wanted paper anymore. The real estate market collapsed. Unemployment, especially in the luxury trades, spread. So did bankruptcies. The government fell.

Everyone who had had any dealings with the South Sea Company, and that meant almost everyone of consequence in Great Britain, was in a rage and a financial fix.

For a 19th Century derisive account of economic bubbles see [Memoirs of Extraordinary Popular Delusions and the Madness of Crowds](#), By Charles Mackay (1852).

For more on the history of the South Sea Company, see Carl Wennerlind (2011). As the author explained in a *Bloomberg Echoes: Dispatches From Economic History* summary ([The Worst Debt-Crisis Solution a Country Ever Concocted](#), Jan 18, 2013),

... arguably no country can match either the ingenuity or despicableness of the British when they tackled their own fiscal woes in the early 1700s. Faced with a ballooning national debt, English policy makers combined a complex debt-for-equity swap with promotion of the trans-Atlantic slave trade.

England pioneered the modern system of finance in the 1690s, by creating the Bank of England, developing a generally circulating credit currency, establishing sophisticated stock and bond markets, and introducing a long-term public debt secured by earmarked future tax receipts.

This system enabled England to prevail in a 20-year military conflict against a more populous, resource-rich and battle-weary France. But by 1710, England's national debt had grown out of control and the new system of finance was stretched to its limit

Much like today, the ruling party's ability to survive in office depended on its capacity to come up with a restructuring plan that would satisfy the bond market. The key was to restore investor confidence in the likelihood that the debt would be adequately serviced and eventually paid off.

Slave Trade

Recognizing that mere palliatives wouldn't suffice, the Tory minister Robert Harley started the South Sea Co. in the spring of 1711. The new company was given the right to create a capital stock of 10 million pounds, which it would issue to the public in return for the deeply discounted unsecured government bonds in circulation. To

make this public-for-private, debt-for- equity swap attractive to bondholders, Harley committed future tax receipts to pay interest on the debt the company absorbed. More importantly, he awarded the company England's monopoly rights to provide Spain's American colonies with African slaves - a contract obtained as a spoil of victory in the war against France.

Harley hoped that investors' dreams of great profits from the Atlantic slave trade would entice them to give up their bonds and accept stock in the South Sea Co.

Credit, as is often forgotten, is nothing more than belief, confidence and imagination. If enough people believe that a certain amount of value will be generated in the future or in a distant place, that value can be used today, either for consumption, investment or debt restructuring. It is this capacity to transfer value through time and space that gives credit an appearance of magic. It is also this capacity, of course, that makes credit precarious and subject to manipulation, well-intentioned and otherwise.

Harley's Tories and the Whig opposition clearly recognized that for the South Sea scheme to work a favorable perception of the slave trade was necessary. To move public opinion in the right direction, each side employed a series of authors to write propaganda journalism. While the Whig writers sought to undermine confidence in the scheme, Harley's side hired scribblers, including the novelists Daniel Defoe and Jonathan Swift, who extolled the plan's virtues and promises.

(Carl Wennerlind, *Casualties of Credit: The English Financial Revolution, 1620-1720*, 2011-11-30, Harvard University Press, 360 pages)

⁴¹⁰ Economists have a wonderful talent for mystifying the mundane and coining euphemisms. Instead of 'creating credit' we now have 'quantitative easing'!

⁴¹¹ And, in the first decade of the 21st century, we did it all over again! See this piece by Barry Ritholtz (*Washington Post* November 20, 2011) '[Examining the big lie: How the facts of the economic crisis stack up](#)' for a depressing picture of the consequences of unregulated capitalism:

► Nonbank mortgage underwriting exploded from 2001 to 2007, along with the private label securitization market, which eclipsed Fannie and Freddie during the boom. Check the mortgage origination data: The vast majority of subprime mortgages - the loans at the heart of the global crisis - were underwritten by unregulated private firms.

These were lenders who sold the bulk of their mortgages to Wall Street, not to Fannie or Freddie. Indeed, these firms had no deposits, so they were not under the jurisdiction of the Federal Deposit Insurance Corp or the Office of Thrift Supervision. The relative market share of Fannie Mae and Freddie Mac dropped from a high of 57 percent of all new mortgage originations in 2003, down to 37 percent as the bubble was developing in 2005-06.

► Private lenders not subject to congressional regulations collapsed lending standards. Taking up that extra share were nonbanks selling mortgages elsewhere, not to the GSEs. Conforming mortgages had rules that were less profitable than the newfangled loans.

Private securitizers - competitors of Fannie and Freddie - grew from 10 percent of the market in 2002 to nearly 40 percent in 2006. As a percentage of all mortgage-backed securities, private securitization grew from 23 percent in 2003 to 56 percent in 2006

These firms had business models that could be called "Lend-in-order-to-sell-to-Wall-Street-securitizers." They offered all manner of nontraditional mortgages - the 2/28 adjustable rate mortgages, piggy-back loans, negative amortization loans. These defaulted in huge numbers, far more than the regulated mortgage writers did.

Consider a study by [McClatchy](#): It found that more than 84 percent of the subprime mortgages in 2006 were issued by private lending. These private firms made nearly 83 percent of the subprime loans to low- and moderate-income borrowers that year. And McClatchy found that out of the top 25 subprime lenders in 2006, only one was subject to the usual mortgage laws and regulations.

A [2008 analysis](#) found that the nonbank underwriters made more than 12 million subprime mortgages with a value of nearly \$2 trillion. The lenders who made these were exempt from federal regulations.

A [study by the Federal Reserve](#) shows that more than 84 percent of the subprime mortgages in 2006 were issued by private lending institutions. The study found that the government-sponsored enterprises were concerned with the loss of market share to these private lenders - Fannie and Freddie were chasing profits, not trying to meet low-income lending goals

⁴¹² The following table from the U. S. Bureau of the Census (1975): Table 1.3 Unemployment in the United States 1929-1939 shows the extent of the unemployment problem during the decade of the 1930s.

Table 1.3 Unemployment in the United States 1929-1939

(In thousands of persons 14 years old and over. Annual averages)

Year	Unemployed	% of civilian labor force	Unemployed (1929=100)
1929	1,550	3.2	100.0
1930	4,340	8.9	280.0
1931	8,020	16.3	517.4
1932	12,060	24.1	778.1
1933	12,830	25.2	827.7
1934	11,340	22.0	731.6
1935	10,610	20.3	684.5
1936	9,030	17.0	582.6
1937	7,700	14.3	496.8
1938	10,390	19.1	670.3
1939	9,480	17.2	611.6

Source: Historical Statistics, Series D8-D9.

U.S. Bureau of the Census (1975)

This table does not include the millions involved in New Deal employment programs which were, during the period, not included in employment statistics. See Harry Kelber, ^{oe}[How Labor and the New Deal in the 1930s Were Able to Change the Face of America](#), *The Labor Educator*, May 4-16, 2008 for more on this.

⁴¹³ As [Josh Bivens has argued](#), both job guarantee (JG) programs and universal basic income (UBI) programs should be developed within all truly democratic capitalist societies. And, where 'work' is the focus, that work should contribute to the health and wellbeing of communities of people and of the nation as a whole.

Workers employed under the umbrella of programs of the US New Deal Emergency Conservation Work (EWC) Act of 1933, soon known as the Civilian Conservation Corps (CCC), found themselves involved in just such work. These were *never* 'make work' jobs. As the *Civilian Conservation Corps Legacy* site has explained:

The 1932 Presidential election was more a desperate cry for help than it was an election. Accepting the Presidential nomination on July 1, 1932, New York Governor Franklin D. Roosevelt planned to fight against soil erosion and declining timber resources by utilizing unemployed young men from large urban areas.

In what would later be called "The Hundred Days," President Roosevelt revitalized the faith of the nation by setting into motion a "New Deal" for America. One of these New Deal programs was the Emergency Conservation Work (EWC) Act, more commonly known as the Civilian Conservation Corps. With this action, he brought together two wasted resources: young men and land.

The President wasted no time. He called the 73rd Congress into Emergency Session on March 9, 1933, to hear and authorize the program. He proposed to recruit thousands of unemployed young men, enroll them in a peacetime army, and send them into battle against destruction and erosion of our natural resources. Before the CCC ended, over three million young men engaged in a massive salvage operation described as the most popular experiment of the New Deal.

The strongest reaction to the proposed CCC program came from organized labor. Union leaders feared a loss of jobs that could be filled with union members. Also, they were alarmed at the involvement of the Army and believed this might lead to regimentation of labor.

Emergency Conservation Work legislation passed on March 31, 1933

President Roosevelt promised if granted emergency powers he would have 250,000 men in camps by the end of July, 1933. The speed with which the plan moved through proposal, authorization, implementation and operation was a miracle of cooperation among all branches and agencies of the federal government. It was a mobilization of men, material and transportation on a scale never before known in time of peace. From FDR's inauguration on March 4, 1933, to the induction of the first enrollee on April 7, only 37 days had elapsed.

Senate Bill S. 598 was introduced on March 27, passed both houses of Congress and was on the President's desk to be signed on March 31, 1933.

(*Civilian Conservation Corps Legacy* site, ^œ[CCC Brief History](#), accessed 09 July 2018)

(Lambert Strether has provided an interesting discussion of ^œ[The Jobs Guarantee, "Make-Work," and FDR's Civilian Conservation Corps \(CCC\)](#) on the *Naked Capitalism* site.)

⁴¹⁴ This, too, is a consequence of the rhetoric of the 1920s and 1930s. The gutting of union power in the early 1920s was largely claimed to be not a

move against labor but a move against socialist revolution. As Friedman (2008) explained,

Labor's opponents used fear of Communism to foment a post-war red scare that targeted union activists for police and vigilante violence.

Opposition to the New Deal was couched in very similar terms. Even from within the Democratic Party, opposition was expressed in these terms. A Wikipedia entry on the American Liberty League explains it:

The American Liberty League was an American pressure group formed in 1934 by conservative Democrats to oppose the liberalism of President Franklin D. Roosevelt's New Deal. The League stated that it would work to "defend and uphold the Constitution" and to "foster the right to work, earn, save and acquire property." In its opinion, the Roosevelt Administration was leading the U.S. toward socialism, bankruptcy and dictatorship.
(^œWikipedia 2010)

⁴¹⁵ Of course this is illusory. The vast bulk of Western legislation relates to economic issues of one kind or another, primarily spelling out 'legitimate' and 'illegitimate' forms of organization, behavior and intent. Once one learns the maze, the rules appear invisible.

⁴¹⁶ See [The Discovery of Natural Man](#) for more on this.

⁴¹⁷ For a discussion of the *Summum Bonum* see [In Search of the 'Greatest Good'](#).

⁴¹⁸ It would seem that, logically, contrary to common practice among US conservative evangelical Christians, evangelical Christians should reject the relevance of Aquinas's logic for the market place.

Since most forms of Christianity hold that human nature was warped through 'The Fall' in the Garden of Eden, the expression of unredeemed human nature should *not* produce the *Summum Bonum*. Those who rely on the metaphysical presumption that the expression of uninhibited human nature will produce the *Summum Bonum* must be assuming either that human beings are redeemed through the market place or that unredeemed human nature has not been warped.

⁴¹⁹ Staughton Lynd, in 1974, described the early, stuttering attempts by the new Roosevelt administration to work out what to do! It took most of their first term in office to develop a full-fledged response. Even then, there were many trial-and-error steps which had to be retraced and rethought. After all, Roosevelt inherited a catastrophic meltdown of the US economy and, instead of 'playing it safe' he and those advising him, decided to invent a New Deal which would provide a blueprint for Western nations in years to come. As Lynd says,

It is important to recall that despite Roosevelt's great popularity when first inaugurated and again after the "second New Deal" of 1935-1937, in 1934 and 1935 there was much disillusionment with New Deal labor policy. The National Recovery Administration to which working people had enthusiastically responded in 1933 was renamed the "National Run Around".
(Staughton Lynd, ^œ[The United Front in America: a Note, Radical America](#), July-August 1974.)

See ^œ[FDR's Statements on Social Security](#)
(www.socialsecurity.gov/history) for succinct explanations of Roosevelt's

'New Deal' vision. As he said, in his Presidential Statement Signing The Social Security Act on August 14, 1935,

We can never insure one hundred percent of the population against one hundred percent of the hazards and vicissitudes of life, but we have tried to frame a law which will give some measure of protection to the average citizen and to his family against the loss of a job and against poverty-ridden old age.

This law, too, represents a cornerstone in a structure which is being built but is by no means complete. It is a structure intended to lessen the force of possible future depressions. It will act as a protection to future Administrations against the necessity of going deeply into debt to furnish relief to the needy. The law will flatten out the peaks and valleys of deflation and of inflation. It is, in short, a law that will take care of human needs and at the same time provide the United States an economic structure of vastly greater soundness.

It has become fashionable to dwell on the New Deal's flaws. Of course there were flaws! This was the first time in Western history that a government had attempted to both regulate capitalism and provide a comprehensive safety net for vulnerable people. And it was being undertaken during and in reaction to an economic crisis of unprecedented dimensions.

To dismiss the New Deal because it was flawed seems a remarkably nescient reaction to its flaws. What the New Deal has always required has been intelligent review and shaping.

It is indeed sad that over the past forty years US politicians and planners have all-too-often seen fit to use the existence of perceived policy and implementation imperfection as reason enough for dismantling rather than shaping the measures introduced by Roosevelt and his team.

See this footnote for some of the sliding taxation consequences of Roosevelt's New Deal policies through the 1950s-1970s: [Taxation consequences of The New Deal](#).

⁴²⁰ I must confess that the ease with which political opportunists are able to reinvent history (even the history of six months earlier) and then successfully convince Western electorates of the 'truth' of their fables bemuses me. It must, surely, reflect on the quality of our educational institutions that people can so easily be misled.

⁴²¹ Demonstrating, once again, the truth of the adage 'There's nothing new under the sun' - see [Free Markets Work!](#)

⁴²² See [Natural Law and Perfection](#) for the origin of the western European belief that human beings have a duty to discover 'natural law' through understanding the 'nature' of human beings and to live by that inbuilt law once discovered.

⁴²³ See [Social Exchange Theory](#) for more on this.

Of course, these presumptions are highly questionable and open to challenge. However, even accepting the premises, the presumption that uninhibited individualistic competitive activity as expressed in the marketplace will result in social good requires a remarkable leap of faith. There seems to be no evidence from either history or a study of trade dynamics that this is so.

See [∞][Divided We Stand: Why Inequality Keeps Rising](#) for an OECD overview of growing income inequalities in OECD countries. As the report says,

In the three decades prior to the recent economic downturn, wage gaps widened and household income inequality increased in a large majority of OECD countries. This occurred even when countries were going through a period of sustained economic and employment growth. This report analyses the major underlying forces behind these developments.

((December 2011) See also [∞][An Overview of Growing Income Inequalities in OECD Countries: Main Findings](#))

As the physicists J. R. Iglesias and R. M. C. de Almeida have shown, ([∞][Entropy and equilibrium state of free market models](#), *The European Physical Journal B - Condensed Matter and Complex Systems*, Volume 85 (2012), Number 3, 85-95), unregulated market exchange does not lead to fairer outcomes for all:

...all the available wealth is concentrated among only a few agents. This is represented by a tail-shaped graph that confirms previous studies showing that wealth distribution follows a power law. As a result, the free market is stalled with no subsequent possible exchanges of wealth, even if wealth were distributed evenly from the start.

The authors concluded that regulations for the rules of wealth exchange are necessary to avoid concentration of wealth and stalling of market exchange. For example, systems in which regulations and taxes give the poorest agent a probability of wealth gain of over 50 percent may prevent wealth concentration and decrease inequalities.

([∞][Market exchange rules responsible for wealth concentration](#))

In an earlier version of the study ([∞][Entropy and equilibrium state of free market models](#), published by arxiv.org 29 Aug. 2011), the authors concluded:

Numerical results, as well as some analytical calculations, indicate that a frequent outcome in these models is *condensation*, i.e. concentration of all available wealth in just one or a few agents. This final state corresponds to a kind of equipartition of poverty: All agents (except for a set of zero measure) possess zero wealth while one, or a few ones, concentrate all available resources. In any case the final configuration is a stationary state of "equilibrium", since agents with zero wealth cannot participate in further exchanges.

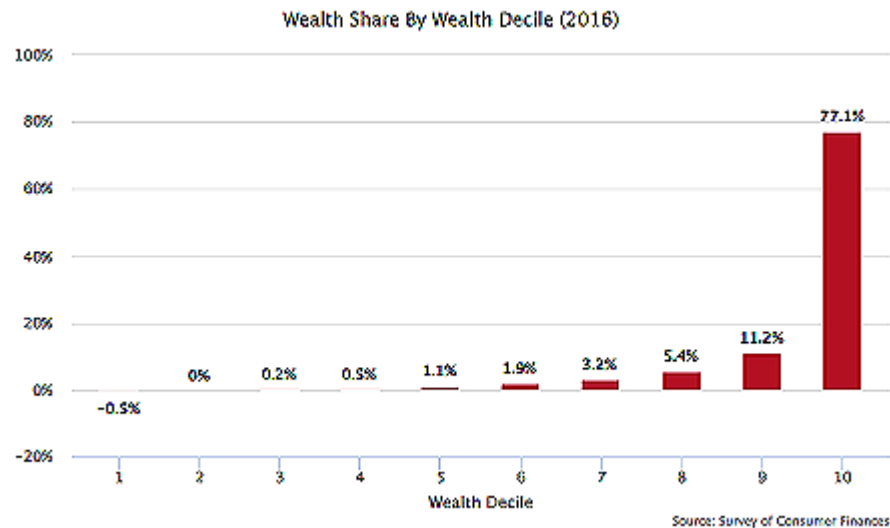

Jake Johnson has summarized results of a 2016 survey of US wealth distribution by the *People's Policy Project* (3P):

...An [∞][analysis](#) by the People's Policy Project (3P) published Wednesday found that the top 10 percent of the income distribution now owns a "stunning" 77 percent of America's wealth while those in the bottom ten percent are "net debtors," owning -0.5 percent of the nation's wealth.

In response to the analysis, conducted by 3P president Matt Bruenig, Sen. Bernie Sanders (I-Vt.) wrote on Twitter: "Meanwhile, the Walton family of Walmart has a net worth of \$144 billion. This is what a rigged economy looks like."

"We do not live in a democracy. We live in an oligarchy," added the progressive group Digital Left.

3P's examination of newly released Federal Reserve data also found that "[t]he bottom 38 percent of American families have an average net worth of \$0." By contrast, the top one percent - set to ^œbenefit massively from Trump's tax agenda - owns 38.5 percent of the nation's wealth. In 1989, that number was 29.9 percent.

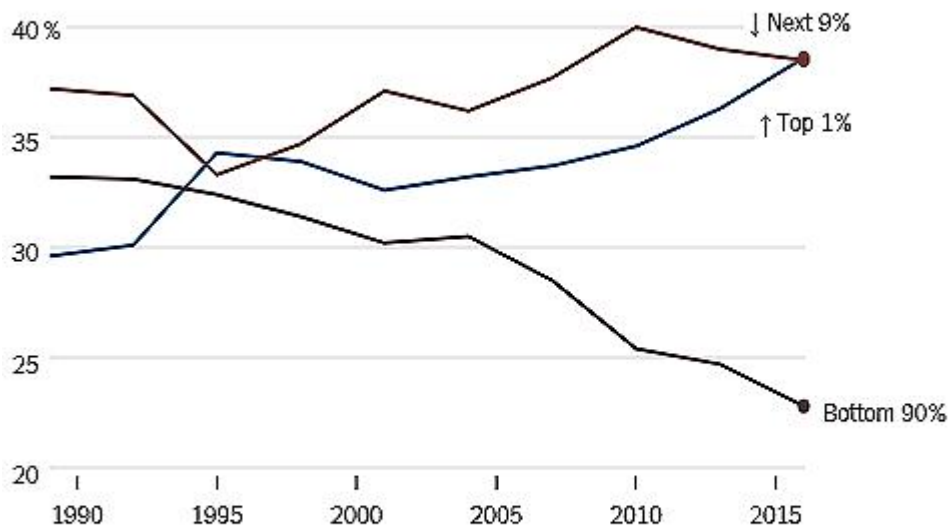

(Jake Johnson, staff writer, ^œ'What a Rigged Economy Looks Like': Top 10% Now Own 77% of American Wealth, *Common Dreams*, September 28, 2017)

And this graph, adapted from data provided by the *Federal Reserve* ^œSurvey of Consumer Finances by ^œBen Casselman for the *New York Times*, Sept. 27, 2017:

The Richest Control More Wealth

Share of total wealth held by percentile.

Source: Survey of Consumer Finances

Ben Casselman, 'Feel That Post-Recession Bounce? The Rich Feel It the Most' *New York Times*, Sept. 27, 2017

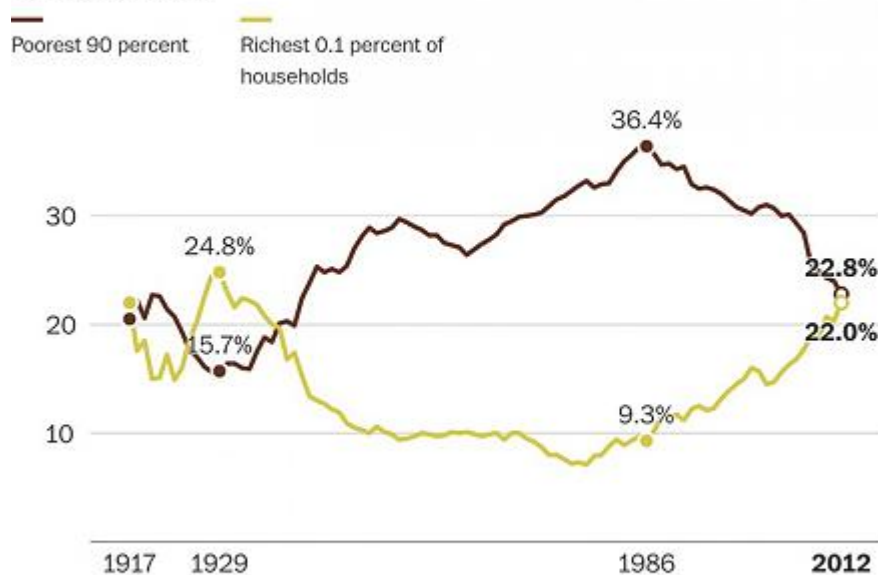

In a study which "combines income tax with Flow of Funds data to estimate the distribution of household wealth in the United States since 1913", Saez and Zucman (2014) explained that:

...wealth inequality has considerably increased at the top over the last three decades. By our estimates, almost all of this increase is due to the rise of the share of wealth owned by the 0.1% richest families, from 7% in 1978 to 22% in 2012, a level comparable to that of the early twentieth century (Emmanuel Saez and Gabriel Zucman, ^æ[Wealth Inequality in The United States since 1913: Evidence from capitalized income tax data](#), NBER Working Paper Series, Working Paper 20625, October 2014)

Max Ehrenfreund, in a *Washington Post* article, provided a graphic illustration of the different fortunes of the top 0.1% of the United States population relative to the bottom 90% of the population:

The rich are getting richer

After decades in which the middle class claimed an expanding share of the nation's wealth, a small group of rich families now owns nearly as much as 90 percent of the country combined.

Share of total U.S. household wealth

Source: Emmanuel Saez and Gabriel Zucman

THE WASHINGTON POST

As Ehrenfreund has explained:

As shown in the chart above, wealth was not always so unevenly distributed in the United States, but since the middle of the Reagan administration, wealth has gradually become concentrated in the hands of a few.

Saez and Zucman write that the concentration has increased both because salaries have skyrocketed for a small group of Americans, and because that group has been able to earn more in interest and returns on their investments. The richest 0.1 percent of families today now own nearly as much as that same class did in 1929, on the eve of the Great Depression, when they controlled nearly a quarter of the nation's wealth.

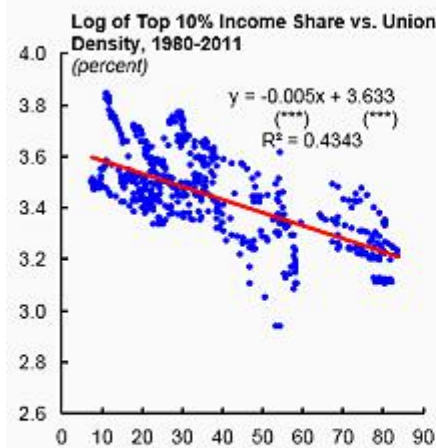

(Max Ehrenfreund, ^æ[Bernie Sanders is right: The top 0.1 percent have as much as the bottom 90 percent](#), *Washington Post*, Wonkblog, November 19, 2015)

Florence Jaumotte and Carolina Osorio Buitron, in a study of the role of labor unions in minimizing inequality in 'Advanced Economies' (i.e.

Western nations plus Japan) provided a description of the growth in inequality between 1980 and 2010. As they say,

The most novel aspect of our paper is the discovery of a strong negative relationship between unionisation and top earners' income shares (Figure 2). Although causality is always difficult to establish, the influence of union density on top income shares appears to be largely causal, as evidenced by our instrumental variable estimates. The set of instruments used for union density captures the fact that, although unionisation tends to decline in periods of high unemployment, the effect is weaker in countries where unemployment benefits are managed by unions (i.e. the Ghent system) or where collective bargaining is more centralised...

Figure 2. Top 10% income share and union density in advanced economies

Sources: OECD; and World Top Incomes Database.

Note: *** denote significance at the 1 percent level, ** at the 5 percent level, and * at the 10 percent level. Advanced Economies = USA, AUT, CAN, DNK, FIN, FRA, DEU, IRL, ITA, JPN, NLD, NZL, NOR, PRT, ESP, SWE, CHE, and GBR.

The magnitude of the effect is also significant; the decline in union density explains about 40% of the average increase in the top 10% of income share in our sample countries.

(Florence Jaumotte and Carolina Osorio Buitron, [Union power and inequality](#), VOX, CEPR's Policy Portal, 22 October, 2015)

(see [The Working Poor](#); [Neoliberalism](#) for more)

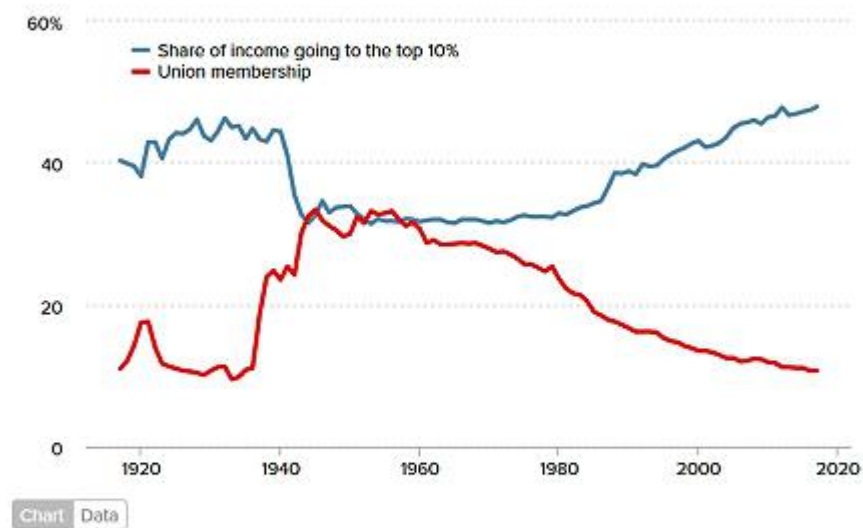

Lynn Rhinehart and Celine McNicholas, in a research study subtitled 'How workers and their unions build power and set standards for their industries', explain the US relationship between share of income going to the top 10% and strength of labor unions from 1917 to 2017:

The National Labor Relations Act (NLRA or Act) - the primary law establishing organizing rights in the private sector - has as its premise a lofty and admirable goal: "encouraging the practice and procedure of collective bargaining" between workers and their employers.¹ Since the Act's passage in 1935, millions of working men and women have won higher pay, better health care and retirement benefits, stronger health and safety protections on the job, and other important improvements through forming unions and using their collective strength in bargaining with their employers.² Historically, strong unions have helped ensure that income growth is distributed broadly and not just to the richest households (see Figure A).

FIGURE A

As union membership declines, income inequality rises

Union membership and share of income going to the top 10%, 1917–2017

⁴²⁴ See [Open-ended and Closed Utilization of the Material Environment](#) for more on this.

⁴²⁵ see [Reciprocity and Exchange](#) for more on this.

⁴²⁶ or of the means for obtaining these - through accumulating money or resources which can directly or indirectly be converted into cash income.

⁴²⁷ How much richer our lives would be if we could divest ourselves of the drive to self-promotional productivity and consumption but retain our will to cooperate in a quest for understanding and knowledge. The Writer of *The Proverbs* put it well:

Wisdom is supreme; therefore get wisdom. Though it cost all you have, get understanding...

How much better to get wisdom than gold, to choose understanding rather than silver!

(Proverbs 4:7; 16:16 [New International Version of the Bible])

As it is, our creativity becomes harnessed to the capitalist drive to accumulation and consumption and directed not by the creative and the inquiring, but by the self-promoting accumulators and consumers in Western communities.

(see ^œ[Engineering Efficient Technology Transfer](#), *Science Translational Medicine* 23 November 2011: Vol. 3, Issue 110, p. 110, for a depressingly common view of the need for "Tighter Ties between Universities and the Corporate World".)

⁴²⁸ See [Teaching The Poor to Work; Teaching 'The Native' to work](#) for more on this. Also, for a description of contemporary closures of 'The Commons' in non-Western regions of the world, see this EurekaAlert summary (1-Feb-2012) of studies presented by the *Rights and Resources*

Initiative (RRI), ^œ[Warning of unrest, new study shows millions risk losing lands in Africa](#). As the authors say:

"The new land rush increasingly looks like a final enclosure of the world's common lands," said panel moderator Fred Pearce, environment writer and author of the upcoming book, *The Landgrabbers: The New Fight Over Who Owns the Earth*.

"Throughout the developing world, traditional rights to land and resources are being steamrollered in the name of a warped and outdated view of economic development."

⁴²⁹ One wonders how Thomas More would have described the consequences of the sub-prime mortgage fiasco in the US.

And, of course, that other Thomas - Jefferson. If he could write of late 18th century Western Europe that,

...they have divided their nations into two classes, wolves and sheep. I do not exaggerate. This is a true picture of Europe. ...man is the only animal which devours his own kind; for I can apply no milder term to the governments of Europe, and to the general prey of the rich on the poor.

(Thomas Jefferson, 1787)

how would he have described the past several years, from 2007, in Western nations?

⁴³⁰ See [Alienation of Property](#)

⁴³¹ See [Emergence of commodified relationships in western Europe](#)

As Marx claimed:

The Roman slave was held by fetters: the wage-laborer is bound to his owner by invisible threads. The appearance of independence is kept up by means of a constant change of employers, and by the *fictio juris* of a contract.

(Marx 1867, vol. 1, pt 7, ch. 23)

⁴³² See [The Virtuous Capitalist, The Poor and the Wasteland](#) for more on this.

⁴³³ As Marx explained:

To become a free seller of labor-power, who carries his commodity wherever he finds a market, he must ... have escaped from the regime of the guilds, their rules for apprentices and journeymen, and the impediments of their labor regulations.

Hence, the historical movement which changes the producers into wage-workers, appears, on the one hand, as their emancipation from serfdom and from the fetters of the guilds, and this side alone exists for our bourgeois historians.

But, on the other hand, these new freedmen became sellers of themselves only after they had been robbed of all their own means of production, and of all the guarantees of existence afforded by the old feudal arrangements. And the history of this, their expropriation, is written in the annals of mankind in letters of blood and fire.

(Marx 1867, vol. 1, pt 8, ch. 26)

See [Thomas More \(1516\)](#) for a 16th Century account of the consequences of that expropriation

⁴³⁴ The text is as follows:

We rarely hear, it has been said, of the combinations of masters, though frequently of those of workmen. But whoever imagines, upon this account, that masters rarely combine, is as ignorant of the world as of the subject. Masters are always and everywhere in a sort of tacit, but constant and uniform combination, not to raise the wages of labor above their actual rate.

To violate this combination is everywhere a most unpopular action, and a sort of reproach to a master among his neighbors and equals. We seldom, indeed, hear of this combination, because it is the usual, and one may say, the natural state of things, which nobody ever hears of.

Masters, too, sometimes enter into particular combinations to sink the wages of labor even below this rate. These are always conducted with the utmost silence and secrecy, till the moment of execution, and when the workmen yield, as they sometimes do, without resistance, though severely felt by them, they are never heard of by other people.

Such combinations, however, are frequently resisted by a contrary defensive combination of the workmen; who sometimes too, without any provocation of this kind, combine of their own accord to raise the price of their labor.

Their usual pretences are, sometimes the high price of provisions; sometimes the great profit which their masters make by their work. But whether their combinations be offensive or defensive, they are always abundantly heard of.

In order to bring the point to a speedy decision, they have always recourse to the loudest clamour, and sometimes to the most shocking violence and outrage. They are desperate, and act with the folly and extravagance of desperate men, who must either starve, or frighten their masters into an immediate compliance with their demands.

The masters upon these occasions are just as clamorous upon the other side, and never cease to call aloud for the assistance of the civil magistrate, and the rigorous execution of those laws which have been enacted with so much severity against the combinations of servants, laborers, and journeymen.

Also Victoria Tauli-Corpuz and Parshuram Tamang (^œ2007 (MSWord Document)) for 'the impact of commercial tree plantations and monocropping on indigenous peoples' lands and communities'.

- 439 Since Western Europe had expanded into the world and now directly controlled more than 80% of the earth's surface, the available workforce in Western Europe was significantly reduced by the expansion of the armed forces and colonial administrations they required to ensure their control. This made labor scarce and gave workers' organizations increasing power to negotiate wages and conditions.
- 440 We must, of course, remember what this term refers to in economic parlance. It refers to the *removal of social restrictions* on the exploitation of labor and the deregulation of competitive exchange.
- 441 While production expanded during the period, consumption, which required an expanding base of consumers, lagged. This resulted in a period of readjustment as wages increased and people's needs and wants grew with their increasing purchasing power. In the lag-time, the economies of Western Europe experienced a period of over-production and consequent slow-down.
- 443 This is not competition within 'classes', since class, as a means of evaluating comparative social status is becoming less important as capitalism becomes the ideological lodestone of increasing numbers of people in Western communities. Class designation is the last of the feudal designations, warped by changes from co-operative to competitive hierarchical relationships, to succumb to the individualising forces of Western capitalism.
- 444 Discretionary income is income which is surplus to the provision of 'necessities'. The growth in perceived 'necessities' in Western communities tends to absorb discretionary income. When individuals find that there is a regular surplus income, they tend to commit that surplus to expenditure which becomes a part of future 'need provision'. If, at a later time, a person is no longer able to fund such a commitment, that person feels a genuine sense of deprivation, of impoverishment.

⁴⁴⁵ See [And... No Charity!](#) for more on this.

⁴⁴⁶ It needs to be remembered that any business, in order to ensure competitiveness, will, by definition, challenge any costs, attempting to reduce or eliminate them in the drive to competitive pricing and increased profit.

Challenges to 'social costs' are not, in fact, based on attempts to lower standards of living for community members, but on attempts to lower product prices and increase profits.

One need not assume some kind of conspiracy between 'owners of the means of production' to profit at the expense of less fortunate community members. That might be a consequence of the drive to lower costs, but it is not the purpose of that drive. Rather, attempts to lower or remove social costs of production are a consequence of the nature of 'free markets'. They are effects of the system, not evidence of class conspiracy.

⁴⁴⁷ It has been common for critics to claim that the New Deal did not successfully tackle the problems of the Depression period. However, it is seldom acknowledged that it took the Roosevelt administration years to get its legislation ratified so that it could begin to grapple with the problems of the 1930s. The bulk of legislation was not passed until 1935 - for implementation from 1936 on - and the crucial *Fair Labor Standards Act* was not finalized until 1938, just before the outbreak of the 2nd World War.

See this speech for more on Supreme Court opposition to Roosevelt's New Deal programs. As Roosevelt explained:

...Congress passed a statute which, in 1803, the Court said violated an express provision of the Constitution. The Court claimed the power to declare it unconstitutional and did so declare it. But a little later the Court itself admitted that it was an extraordinary power to exercise and through Mr. Justice Washington laid down this limitation upon it: "It is but a decent respect due to the wisdom, the integrity and the patriotism of the legislative body, by which any law is passed, to presume in favor of its validity until its violation of the Constitution is proved beyond all reasonable doubt."

But since the rise of the modern movement for social and economic progress through legislation, the Court has more and more often and more and more boldly asserted a power to veto laws passed by the Congress and State Legislatures in complete disregard of this original limitation.

In the last four years the sound rule of giving statutes the benefit of all reasonable doubt has been cast aside. The Court has been acting not as a judicial body, but as a policy-making body.

When the Congress has sought to stabilize national agriculture, to improve the conditions of labor, to safeguard business against unfair competition, to protect our national resources, and in many other ways, to serve our clearly national needs, the majority of the Court has been assuming the power to pass on the wisdom of these Acts of the Congress - and to approve or disapprove the public policy written into these laws.

(^œ[Franklin D. Roosevelt: "Fireside Chat - 46", March 9, 1937](#) (Online by Gerhard Peters and John T. Woolley, *The American Presidency Project*))

For a contemporary account of the implementation of the New Deal through the 1930s, see ^œ[Since Yesterday: The 1930s in America: September 3, 1929 - September 3, 1939](#), Frederick Lewis Allen (1939). A contemporary account of the implementation of FDR's New Deal.

Of course, opposition to Roosevelt's attempts at regulation have been echoed since 2008 in opposition to US Administrative attempts to reregulate financial activity in the United States. As Matt Taibbi (2012) explained in examining the fate of the *Dodd-Frank Wall Street Reform and Consumer Protection Act* :

This was supposed to be the big one. At 2,300 pages, the new law ostensibly rewrote the rules for Wall Street. It was going to put an end to predatory lending in the mortgage markets, crack down on hidden fees and penalties in credit contracts, and create a powerful new Consumer Financial Protection Bureau to safeguard ordinary consumers. Big banks would be banned from gambling with taxpayer money, and a new set of rules would limit speculators from making the kind of crazy-ass bets that cause wild spikes in the price of food and energy. There would be no more AIGs, and the world would never again face a financial apocalypse when a bank like Lehman Brothers went bankrupt.

...Two years later, Dodd-Frank is groaning on its deathbed. The giant reform bill turned out to be like the fish reeled in by Hemingway's Old Man - no sooner caught than set upon by sharks that strip it to nothing long before it ever reaches the shore.

...The fate of Dodd-Frank over the past two years is an object lesson in the government's inability to institute even the simplest and most obvious reforms, especially if those reforms happen to clash with powerful financial interests. From the moment it was signed into law, lobbyists and lawyers have fought regulators over every line in the rulemaking process. Congressmen and presidents may be able to get a law passed once in a while - but they can no longer make sure it stays passed. You win the modern financial-regulation game by filing the most motions, attending the most hearings, giving the most money to the most politicians and, above all, by keeping at it, day after day, year after fiscal year, until stealing is legal again. "It's like a scorched-earth policy," says Michael Greenberger, a former regulator who was heavily involved with the drafting of Dodd-Frank. "It requires constant combat. And it never, ever ends."

(Matt Taibbi, May 10, 2012, ^œ[How Wall Street Killed Financial Reform](#), *Rolling Stone*, Politics)

For more on this, see Ben Protess, *New York Times*, September 28, 2012, ^œ[Judge Strikes Down a Dodd-Frank Trading Rule](#). As Protess put it:

Wall Street posted another victory in the battle over regulation on Friday after a federal judge struck down a central piece of the Obama administration's financial overhaul.

The court decision dealt the latest blow to the Dodd-Frank Act, the regulatory crackdown passed in response to the financial crisis. The decision on Friday, aimed at the Commodity Futures Trading Commission's so-called position limits rule, is the second time a Dodd-Frank rule has suffered legal defeat....

The case stems from a lawsuit that two Wall Street trade groups filed last year. The Securities Industry and Financial Markets Association and the International Swaps and Derivatives Association complained that the agency erred in writing the rule, saying it would have had the unintended effect of causing wild price swings.

In a joint statement, the groups said they were "pleased with today's ruling" but are "committed to working with the commission and other regulators to promote safe, efficient markets."

The ruling is sure to embolden Wall Street as it shifts the attack on Dodd-Frank from piecemeal lobbying to broader legal challenges. Industry groups are currently challenging another futures commission rule, while others are weighing lawsuits against the so-called Volcker Rule, a still-uncompleted plan to stop banks from trading with their own money.

Companies have already seen some success. A federal appeals court last summer struck down the Securities and Exchange Commission's proxy access rule, a Dodd-Frank policy that would have empowered shareholders to oust company directors. The court, which also would hear an appeal to the position limits rule, is friendly turf for Wall Street, tossing out S.E.C. rules six times in seven years.

The Commodity Futures Trading Commission, fearful of legal challenges, delayed its position limits rule on multiple occasions. It also tamed parts of the plan to accommodate concerns from traders.

But the concessions failed to placate Wall Street....

See ^œ[The Speculators Win a Round](#), (*New York Times*, October 14, 2012) for more on all this. As the writer says,

If allowed to stand, the ruling will leave the economy exposed to continued distortions because derivatives are easily deployed as tools for vast speculation. When the bets pay off, the result is lush bank profits. When they crater, as they did during the financial crisis, the result is bailouts. Either way, Wall Street wins and everyone else loses....

The defeat is also disturbing because it will embolden banks to challenge other new rules. Commodity derivatives are a relatively small part of Wall Street's derivatives business. Rules to regulate financial derivatives, like credit default swaps, have yet to be completed.

Also, ^œ[Despite Its Problems, Dodd-Frank Is Better Than the Alternatives](#), (*New York Times*, October 16, 2012); and ^œ[Volcker Rule](#), (*New York Times*, May 10, 2012) for another example of successful opposition to regulatory measures. As the article explains:

The "Volcker Rule," a measure named for Paul A. Volcker, the former Federal Reserve chairman who proposed it, would restrict the ability of banks whose deposits are federally insured from trading for their own benefit.

In January 2010, President Obama proposed that the Volcker rule be a part of a general financial regulatory reform push. Big losses by banks in the trading of financial securities, especially mortgage-backed assets, precipitated the credit crisis in 2008 and the federal bailout. Members of a House-Senate conference committee approved a final revision of the measure on June 24, 2010.

The measure has been fiercely opposed by banks and large Wall Street firms, who view it as a major incursion on some of their most profitable activities.

The measure's aim is to keep highflying traders and other gamblers inside banks from getting their hands on or putting at risk the federally-insured deposits of average banking customers. A main element of the plan would bar banks from making proprietary trades - using their own money to place directional market bets that are unrelated to serving customers. Another change would prevent institutions from investing their own money in hedge funds or private equity operations.

How sad that opposition to measures aimed at ameliorating the problems of the age could be so vigorously and successfully opposed despite the heartache and suffering being endured by so many!

⁴⁴⁸ David Cooper and Teresa Kroeger have described some key features and the subsequent history of the Act:

The Fair Labor Standards Act (FLSA), enacted in 1938, established the basic protections that have governed work in the United States since the Great Depression. With regard to pay, the FLSA "put a floor under wages and a ceiling over hours" through the creation of the federal minimum wage and provisions for overtime pay - i.e., a limit on the hours per week employees may work without receiving additional compensation (Roosevelt 1938). Over the years, the law has been periodically updated to strengthen protections or expand coverage to new classes of workers - such as the 1966 amendments to the FLSA that extended coverage to service sector and hospitality workers, and the Department of Labor's extension of FLSA protections to home care workers in 2016.

Unfortunately, over the past several decades, updates to the FLSA have been inadequate or too infrequent to keep pace with changes in the economy and employment. For example, as explained in ^œCooper (2015), the failure of federal lawmakers to adequately raise the federal minimum wage has left millions of workers being paid 25 percent less in inflation-adjusted terms than their counterparts almost 50 years ago. Similarly, ^œEisenbrey and Kimball (2016) describe how neglect of federal overtime rules has drastically reduced the share of the workforce that is eligible for overtime pay.

Additionally, in recent decades, employers have increasingly adopted business practices that have weakened the scope of protection afforded by the law.

(David Cooper and Teresa Kroeger, ^œEmployers steal billions from workers' paychecks each year, *Economic Policy Institute*, Report No. 125116, May 10, 2017)

⁴⁴⁹ President Franklin Roosevelt of the US summarized the New Deal objectives in a speech before the US Congress in 1941:

...[T]here is nothing mysterious about the foundations of a healthy and strong democracy. The basic things expected by our people of their political and economic systems are simple. They are:

- Equality of opportunity for youth and for others.
- Jobs for those who can work.

- Security for those who need it.
- The ending of special privilege for the few.
- The preservation of civil liberties for all.
- The enjoyment of the fruits of scientific progress in a wider and constantly rising standard of living.

These are the simple, basic things that must never be lost sight of in the turmoil and unbelievable complexity of our modern world. The inner and abiding strength of our economic and political systems is dependent upon the degree to which they fulfill these expectations.

(^{oe}[Franklin Roosevelt's Annual Message to Congress](#) on the State of the Union, January 6, 1941)

He spelt out the objectives of his New Deal in a 1944 speech outlining his vision of an 'Economic Bill of Rights' for the American people:

... the American people are resolved that when our men and women return home from this war, they shall come back to the best possible place on the face of this earth - to a place where all persons, regardless of race, color, creed or place of birth, can live in peace, honor and human dignity - free to speak, and pray as they wish - free from want - and free from fear.

Last January, in my Message to the Congress on the state of the Union, I outlined an Economic Bill of Rights on which a new basis of security and prosperity can be established for all - regardless of station, race or creed:

I repeat them now:

- The right of a useful and remunerative job in the industries, or shops or farms or mines of the nation;
- The right to earn enough to provide adequate food and clothing and recreation;
- The right of every farmer to raise and sell his products at a return which will give him and his family a decent living;
- The right of every business man, large and small, to trade in an atmosphere of freedom from unfair competition and domination by monopolies at home or abroad;
- The right of every family to a decent home;
- The right to adequate medical care and the opportunity to achieve and enjoy good health;
- The right to adequate protection from the economic fears of old age, sickness, accident and unemployment;
- The right to a good education.

All of these rights spell security. And after this war is won we must be prepared to move forward, in the implementation of these rights, to new goals of human happiness and well-being.

... This Economic Bill of Rights is the recognition of the simple fact that, in America, the future of the worker and farmer lies in the well-being of private enterprise; and that the future of private enterprise lies in the well-being of the worker and farmer.

(Franklin D. Roosevelt, ^œ[Campaign Address on the "Economic Bill of Rights." October 28, 1944](#))

⁴⁵⁰ Free marketeers and those who believe 'that government is best which governs least' have vehemently opposed the inclusion of social costs as part of the base costs of production. However, there seems no logical reason why they should not be included. Such an inclusion does not herald the arrival of 'socialism'. *The economy remains in private hands.*

Social costs are of the same order as all other costs of extraction and processing borne by business. Once built into cost structures they become invisible and the economy continues as before.

I well remember the panic which ensued in Western countries with the first massive oil price increases of the early 1970s. Many were the dire predictions of imminent economic collapse and long-term damage. Yet, within three years of the rise, the new, unavoidable costs of petroleum based products became built into the economies of the world through a period of rapid inflation. Once that settled, everything proceeded as before¹⁰⁰⁹.

The major effect of an inclusion of social costs into the base price of production is that the circulation of money through the society becomes far more broadly based. The economy becomes less insulated from the rest of social organization and activity (see [Differences between increases in oil prices and increases in social welfare costs](#) for more on this).

It seems that this is what perturbs free market promoters. They sense that 'the economy' is no longer being kept separate from other social environments and instinctively react to protect their primary ideological understandings. (See [Ideology and Reality](#) for more on this.)

⁴⁵¹ See [Private Enterprise](#) for more on this.

⁴⁵² While there are many problems in a Marxist understanding of reality (not least being its rather naive social evolutionary model), neo-Marxists have developed a clear explanation of the relation between capitalist and co-existing forms of community organization and activity.

In Marxist terms, pre-capitalist 'modes of production' supported the new capitalist 'mode of production'.

Workers from non-capitalist communities had all their social welfare needs met by the non-capitalist community from which they came (including family, old age and subsistence support and various needs of the communities within which they lived). This allowed businesses to exclude the non-employment needs of workers and the social requirements of the communities within which they operated in their calculation of production costs.

As those non-capitalist modes were eroded and displaced by capitalism, businesses rejected community demands for inclusion of their welfare and other costs as part of the costs of production.

They did not see themselves as intrinsic to the community within which they existed, as its means of supplying community needs and wants. They considered themselves external to it, living alongside it, and in competition with it as a supplier of the labor they employed.

Prominent community leaders were, almost inevitably, also prominent capitalists. In their felt need to keep business costs from rising, they accepted this separation of the economic environment from the

community in which it was placed. This led to a constantly diminishing community capacity to ensure the social welfare of its members.

⁴⁵³ see [Ideology and Reality](#) for more on this.

⁴⁵⁴ It is somewhat depressing to find that those who are most influential in molding public opinion at the start of the 21st century (whether on the 'left', 'right', in the 'center' or on one of the 'lunatic fringes') are, almost to a person, still deeply convinced that '[the economy](#)' is a [self-contained, self-correcting, self-justifying, objectively existing environment](#). They remain as [convinced as their 18th and 19th century counterparts](#) that 'the perfect accordance of the mind with the [economic] law is the supreme condition of the *Summum Bonum*'.¹⁰¹⁰

So, even when they attempt to tackle the destructive social consequences of deregulated and internationalized economic organization and activity, they believe that these problems arise, not because the model is both amoral and asocial but because of inappropriate intervention and interference in its organization and activity. From their perspectives, one can only deal with such consequences through revisiting and better understanding the relevant economic laws and constructs.

With Kant, they continue to assert that

All the culture and art which adorn humanity, the most refined social order, are produced by that unsociability which is compelled by its own existence to discipline itself, and so by enforced art to bring the seeds implanted by Nature into full flower.
(Kant 1784 p. 147)

[Their disputations](#) perpetuate and strengthen such presumptions.

This mindset arises because Western people (and those who have learned their 'economics' in Western institutions) now intuitively accept that 'the economy' is indeed an isolable entity, an independently existing construct, designed by 'nature' or a deity to enable human progress, in an 'objective reality'.

Of course, it is not! It is a human construct which exists only because we believe that it does and have constructed our worlds to require it! If we organize our worlds around such an entity we should also realize that we have a responsibility to set the bounds and limitations within which it exists and the ways in which it is tied into and contributes to the rest of life. The 'nature' of the economy is determined by [the ways in which it is or is not organized](#) (by us) to contribute to the *Summum Bonum*.

(Yes, I know, I am suggesting something which requires that people are able to step back and see the contrived nature of the apparently objective realm they have committed their lives to serving - rather like asking believers to see their god(s) and the bulwarking ideologies they have developed as figments of their own imaginations! - but what else is a disillusioned earthling to do?)

For the origins of this deep, unquestioning belief in and commitment to a self-contained, self-justifying economic environment see [The Economy: A New Environment](#).

⁴⁵⁵_(05/09/17) In most communities, what capitalist nations assume to be an independent environment - The Economy - is, [as Polanyi argued](#), integrated into communal life. It is an *aspect* of communal life, not a separate area of life. So, very few communities have ever formally distinguished economic activity from other forms of communal activity.

However, with the Western formalization of economics in the 18th century, it became increasingly philosophically possible to argue that economic activity could be insulated from activity in other social 'environments' (see [The Economy as a Separate Environment](#) for more on this). This justified businesses in considering social costs as externally imposed, avoidable costs.

Economic activity assumes a bedrock of costs which must, always, inescapably, be included in production costs. In a drive to profit, businesses will always attempt to reduce these inescapable costs. Unfortunately, given the history of the relationship between capitalist activity and medieval communities¹⁰¹¹, businesses have always seen social costs as externally imposed, avoidable costs.

In a very real sense, relativity not only relates to the physical universe, it relates just as certainly to economic pricings¹⁰¹².

(14/09/17) Provided all nations and communities do so, there is no reason why communally determined and legislated [base wage rates](#) and all community responsibilities and costs related to education, health care, and all the pensions and annuities which any community might consider desirable, should not be built into the base costings of economic activity (as they were in most Western nations in the post-New-Deal period - [safe-guarded through 'protectionist' policies](#)).

Once they have been applied and the initial inevitable inflation of costs has been built into the economy they should have little effect on the ongoing inflation rates of economies (provided they are kept stable). Of course, businesses would have to accept that these basic costings are not avoidable in the interests of increased profitability or competitiveness.¹⁰¹³

My personal view is that in the current neoliberal world of politics and economics the taxes and charges through which communally required funds (for health, education, pensions, annuities and other public expenditures) are collected should be levied as a direct cost on all transactions (both those of productive enterprise and those of financial institutions - providing means of generating community income from [funds accumulating within various 'investment' portfolios](#) and otherwise no longer accessible to fund community needs). Claims of "double dipping" can be addressed by adjusting the levies in various environments - as is currently done, often inequitably, in the various 'user pays' VAT, GST and similar retail taxation regimes (which could largely be displaced in favor of transaction taxation).

Since it is inevitable that various nations and communities will have different requirements, all forms of international trade could (as in the post 2nd World War era in Western countries) be subjected to charges in the receiving countries rather than in the exporting countries. Once again, fine tuning could be undertaken to ensure that internal economic activity remains competitive.

This would, of course, require a return of variations on the theme of 'protectionism'. To ensure that no countries are disadvantaged in this new era and that international trade is not impeded, the current WTO could be refocused to ensure equity between nations, while allowing each nation to set its own internal pricings. I'm sure that the complexities involved would be no greater than those currently accepted as 'necessary' by international trade and commerce.

456 This has often been called a 'developmentalist' approach to economic activity. The government sets in place legislation to channel economic activity in directions thought to be appropriate to the needs of the community and to furthering the viability of business in order to ensure long-term social welfare.

In the light of the somewhat absurd insistence by many inhabitants in the United States that this amounts to 'socialism', the obvious needs to be restated.

Inclusion of social costs in the costs of production is *not* socialism! Economic ownership and management remains in private hands. One could privatize every responsibility of government and yet have social costs built into the basic costs of production. I apologise for this reiteration of the obvious!

457 (08/12/16)(20/01/18)

(13/10/19) In order to understand the [rationale for progressive taxation policies](#) we need to clearly understand the [nature of 'credit' and 'wealth'](#) in *democratically organized* capitalist societies. This, in turn, requires an exploration of the nature of 'public' responsibility for ensuring the adequate and equitable availability of credit in sustaining optimal 'private' economic activity.

For more on all this see [The Nature and Importance of Public and Private Credit](#)

In democratically organized capitalist societies, taxation is not simply about withdrawing credit from the private sector (and certainly not about 'raising revenue' at the sovereign government level). It is, far more importantly, about ensuring an equitable redistribution of wealth through the society: quite literally taking from the rich and redistributing the wealth through the society to ensure continued credit circulation and consequent 'economic health'.

Progressive taxation policies, in the 2019 United States of America, have been dismantled. David Leonhardt, in a *New York Times* article (Oct. 6, 2019) entitled ["The Rich Really Do Pay Lower Taxes Than You"](#), has explained 2019 US taxation realities:

Almost a decade ago, Warren Buffett made a claim that would become famous. He said that he paid a lower tax rate than his secretary, thanks to the many loopholes and deductions that benefit the wealthy.

His claim sparked a debate about the fairness of the tax system. In the end, the expert consensus was that, whatever Buffett's specific situation, most wealthy Americans did not actually pay a lower tax rate than the middle class. "Is it the norm?" the fact-checking outfit [Politifact](#) asked. "No."

Time for an update: It's the norm now.

For the first time on record, the 400 wealthiest Americans last year paid a lower total tax rate - spanning federal, state and local taxes - than any other income group, according to newly released data.

Fred Glass, in an essay subtitled: 'Five years ago, an eight-minute cartoon delightfully demolished all the conventional rationales for grand concentrations of private wealth', explained the rationale for reintroducing [progressive taxation in the non-sovereign US state of California](#). The animated cartoon provides an excellent, simplified

explanation of the rationale for progressive taxation at the state level within a sovereign nation such as the United States. As he explains:

In 2009 my union, the California Federation of Teachers, started a movement for progressive taxation to counter the terrible impact of the Great Recession. California was then suffering a spiraling budget deficit, 12 percent unemployment, and one of the nation's highest rates of home foreclosure.

Our push for fair taxes had many moving parts, including opinion research, member education, public outreach and media work, coalition building with labor and community organizations, and finally a statewide ballot measure, Proposition 30, that passed by a 55-45 margin in 2012.

Prop 30 imposed the highest income tax rates on top earners in the Golden State since World War II, raising some \$7-8 billion a year through bumps of 1, 2, and 3 percent on family incomes of \$500,000, \$600,000, and \$1 million.

The state's voters extended this temporary tax increase in 2016 for twelve years. It won't sunset until 2030. In the meantime - and defying the dire predictions of anti-tax opponents that a Prop 30 victory would have all the "job creators" leaving California and taking all the jobs with them - California's public sector has recovered alongside its private sector, the state has thousands more millionaires and two million more jobs, and schools, public services, and the general welfare are in demonstrably better shape than in any of the tax-cutting Republican states like Kansas.

One small moving part in all this: an eight-minute animated cartoon I wrote and directed, ["Tax the Rich: An Animated Fairy Tale"](#), that my union released a month after Prop 30 passed.

(Fred Glass, ["The Tax-the-Rich Animation that Riled the 1%'s Most Fervent Cheerleaders"](#): Five years ago, an eight-minute cartoon delightfully demolished all the conventional rationales for grand concentrations of private wealth. *Inequality*, Research & Commentary, January 19, 2018)

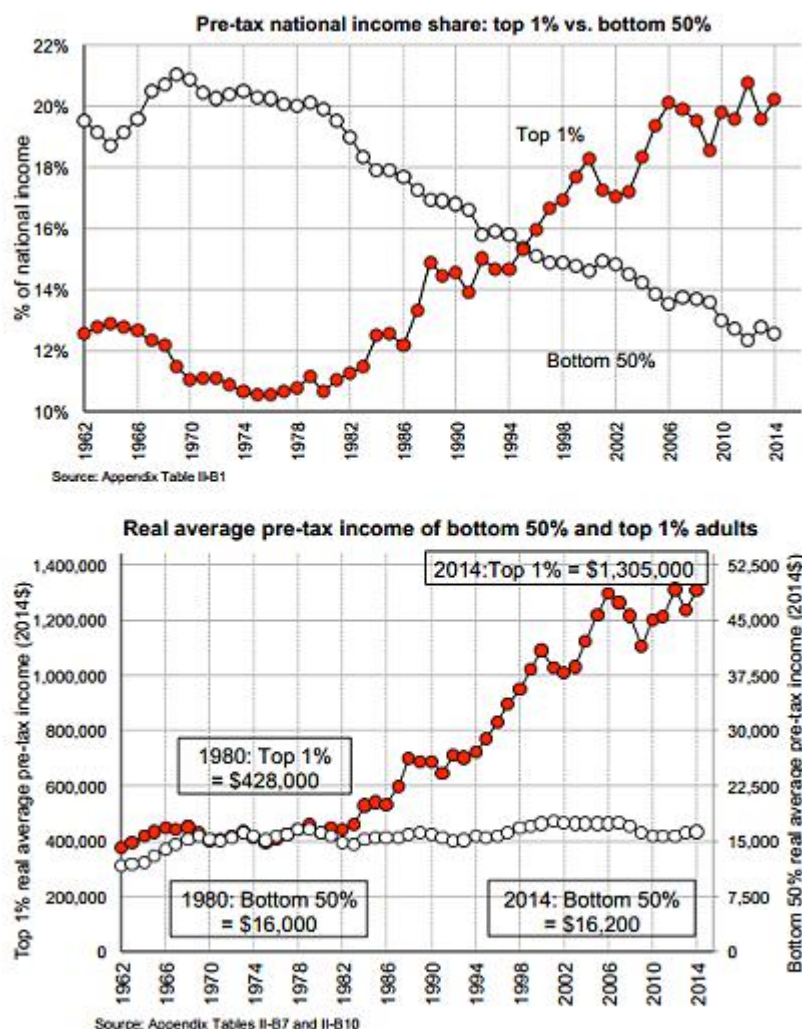

As Iglesias and de Almeida suggest:

...in a large class of exchange models, the system converges to a very unequal condensed state, where one or a few agents concentrate all the wealth of the society while the wide majority of agents shares zero or almost zero fraction of the wealth. So, in those economic systems a minimum entropy state is attained... To avoid condensation and the thermal death of markets some regulation, or some minimum allowance is necessary....

(Entropy and equilibrium state of free market models, *The European Physical Journal B - Condensed Matter and Complex Systems*, Volume 85 (2012), Number 3, 85-95)

Thomas Piketty, Emmanuel Saez and Gabriel Zucman, in a study of the *Distributional National Accounts: Methods and Estimates for the United States* (2016), have examined the evolution, in the US, of the pre-tax national income share of the top 1% versus the bottom 50%:

Figure 5: Bottom 50% vs. Top 1%

Notes: The figure contrasts the evolution of the top 1% vs. the bottom 50%. The top panel plots the top 1% pre-tax income share and the bottom 50% pre-tax income share since 1962. The bottom panel plots the top 1% real average pre-tax income (on the left y-axis) and the bottom 50% real average pre-tax income (on the right x-axis). The unit is the individual adult and incomes within married couples are split equally.

As they explain:

The analysis of our US distributional national accounts yields a number of striking findings. First, our data show a sharp divergence in the growth experience of the bottom 50% and of the rest of the economy.

The average pre-tax income of the bottom 50% has stagnated since 1980 at about \$16,000 per adult (in constant 2014 dollars, using the national income deflator), while average national income has grown by 60% to \$64,500 in 2014. As a result, the bottom 50% income share has collapsed from about 20% in 1980 to 12% in 2014.

In the meantime, the average pre-tax income of top 1% adults rose from \$420,000 to about \$1.3 million, and their income share increased from about 12% in the early 1980s to 20% in 2014. The two groups have basically switched their income shares, with 8 points of national income transferred from the bottom 50% to the top 1%.

The top 1% income share is now almost twice as large as the bottom 50% share, a group by definition 50 times more numerous.

In 1980, top 1% individuals earned on average 27 times more than bottom 50% individuals before tax while they earn 81 times more today.

(Thomas Piketty, Emmanuel Saez and Gabriel Zucman,
^œ[Distributional National Accounts: Methods and Estimates for the United States](#), December 2, 2016)

Thomas Hungerford, in a report to the US Congress (September 14, 2012), examined the effects of the sliding taxation scales of the post-New Deal period and addressed 'whether or not there is an association between the tax rates of the highest income taxpayers and economic growth' in post-1940s United States. As he explained, failure to tax accumulations of capital and redistribute the proceeds to stimulate economic activity results in a reduction in both the GDP growth rate and GDP per capita:

Throughout the late-1940s and 1950s, the top marginal tax rate was typically above 90%; today it is 35%. Additionally, the top capital gains tax rate was 25% in the 1950s and 1960s, 35% in the 1970s; today it is 15%.

The real GDP growth rate averaged 4.2% and real per capita GDP increased annually by 2.4% in the 1950s. In the 2000s, the average real GDP growth rate was 1.7% and real per capita GDP increased annually by less than 1%.

There is not conclusive evidence, however, to substantiate a clear relationship between the 65-year steady reduction in the top tax rates and economic growth. Analysis of such data suggests the reduction in the top tax rates have had little association with saving, investment, or productivity growth. However, the top tax rate reductions appear to be associated with the increasing concentration of income at the top of the income distribution.[[see graphs here](#)]

The share of income accruing to the top 0.1% of U.S. families increased from 4.2% in 1945 to 12.3% by 2007 before falling to 9.2% due to the 2007-2009 recession. The evidence does not suggest necessarily a relationship between tax policy with regard to the top tax rates and the size of the economic pie, but there may be a relationship to how the economic pie is sliced.

(Thomas L. Hungerford ^œ[Taxes and the Economy: An Economic Analysis of the Top Tax Rates Since 1945](#) September 14, 2012 Congressional Research Service 7-5700 www.crs.gov R42729)

For an examination of international correlations between top tax rates and economic performance, see ^œ[Optimal Taxation of Top Labor Incomes: A Tale of Three Elasticities](#) (Thomas Piketty, Emmanuel Saez, Stefanie Stantcheva, NBER Working Paper No. 17616, November 2011 [updated version (*American Economic Journal* : Economic Policy 2014, 6(1): 230 - 271) ^œ[available here](#)]). As the authors say:

The macro-evidence from 18 OECD countries shows that there is a strong negative correlation between top tax rates and top 1% income shares since 1960, implying that the overall elasticity is large. However, top income share increases have not translated into higher economic growth.

For information on the relationship between cutting tax rates on corporate profits and job growth, see Scott Klinger, Katherine McFate *et al*, ^œ[The Corporate Tax Rate Debate: Lower Taxes on Corporate Profits](#)

Not Linked to Job Creation , Center for Effective Government, Washington D. C., Dec. 2013 (www.foreffectivegov.org).

Warren Buffett (*New York Times*, November 25, 2012), ^œ[A Minimum Tax for the Wealthy](#), has explained some of the consequences of Roosevelt's New Deal policies through the 1950s-1970s and consequences of the neoliberal post-1970s years (and given a more realistic summation of the true wealth of those at the top in the 1950s-60s than given by *Fortune Magazine*, as paraphrased below by Paul Krugman). As Buffett says,

Between 1951 and 1954, when the capital gains rate was 25 percent and marginal rates on dividends reached 91 percent in extreme cases, I sold securities and did pretty well. In the years from 1956 to 1969, the top marginal rate fell modestly, but was still a lofty 70 percent - and the tax rate on capital gains inched up to 27.5 percent. I was managing funds for investors then. Never did anyone mention taxes as a reason to forgo an investment opportunity that I offered.

Under those burdensome rates, moreover, both employment and the gross domestic product (a measure of the nation's economic output) increased at a rapid clip. The middle class and the rich alike gained ground.

So let's forget about the rich and ultrarich going on strike and stuffing their ample funds under their mattresses if - gasp - capital gains rates and ordinary income rates are increased. The ultrarich, including me, will forever pursue investment opportunities.

And, wow, do we have plenty to invest. ^œ[The Forbes 400](#), the wealthiest individuals in America, hit a new group record for wealth this year: \$1.7 trillion. That's more than five times the \$300 billion total in 1992. In recent years, my gang has been leaving the middle class in the dust.

A huge tail wind from tax cuts has pushed us along. In 1992, the tax paid by the 400 highest incomes in the United States (a different universe from the Forbes list) averaged 26.4 percent of adjusted gross income. In 2009, the most recent year reported, the rate was 19.9 percent. It's nice to have friends in high places.

The group's average income in 2009 was \$202 million - which works out to a "wage" of \$97,000 per hour, based on a 40-hour workweek. (I'm assuming they're paid during lunch hours.) Yet more than a quarter of these ultrawealthy paid less than 15 percent of their take in combined federal income and payroll taxes. Half of this crew paid less than 20 percent. And - brace yourself - a few actually paid nothing.

This outrage points to the necessity for more than a simple revision in upper-end tax rates, though that's the place to start. I support President Obama's proposal to eliminate the Bush tax cuts for high-income taxpayers. However, I prefer a cutoff point somewhat above \$250,000 - maybe \$500,000 or so.

Additionally, we need Congress, right now, to enact a minimum tax on high incomes. I would suggest 30 percent of taxable income between \$1 million and \$10 million, and 35 percent on amounts above that. A plain and simple rule like that will block the efforts of lobbyists, lawyers and contribution-hungry legislators to keep the ultrarich paying rates well below those incurred by people with

income just a tiny fraction of ours. Only a minimum tax on very high incomes will prevent the stated tax rate from being eviscerated by these warriors for the wealthy.

For more on some of the consequences of Roosevelt's New Deal policies, see Paul Krugman, ^œ[The Twinkie Manifesto](#) (*New York Times*, November 18, 2012). As he says,

... in the 1950s incomes in the top bracket faced a marginal tax rate of 91, that's right, 91 percent, while taxes on corporate profits were twice as large, relative to national income, as in recent years. The best estimates suggest that circa 1960 the top 0.01 percent of Americans paid an effective federal tax rate of more than 70 percent, twice what they pay today.

Nor were high taxes the only burden wealthy businessmen had to bear. They also faced a labor force with a degree of bargaining power hard to imagine today. In 1955 roughly a third of American workers were union members. In the biggest companies, management and labor bargained as equals, so much so that it was common to talk about corporations serving an array of "stakeholders" as opposed to merely serving stockholders.

Squeezed between high taxes and empowered workers, executives were relatively impoverished by the standards of either earlier or later generations. In 1955 *Fortune* magazine published an essay, "How top executives live," which emphasized how modest their lifestyles had become compared with days of yore. The vast mansions, armies of servants, and huge yachts of the 1920s were no more; by 1955 the typical executive, *Fortune* claimed, lived in a smallish suburban house, relied on part-time help and skippered his own relatively small boat.

... Strange to say, however, the oppressed executives *Fortune* portrayed in 1955 didn't go Galt and deprive the nation of their talents. On the contrary, if *Fortune* is to be believed, they were working harder than ever. And the high-tax, strong-union decades after World War II were in fact marked by spectacular, widely shared economic growth: nothing before or since has matched the doubling of median family income between 1947 and 1973.

As Adam Smith explained in 1776:

... the rate of profit does not, like rent and wages, rise with the prosperity and fall with the declension of the society. On the contrary, it is naturally low in rich and high in poor countries, and it is always highest in the countries which are going fastest to ruin. (Adam Smith, *Wealth of Nations*, Book 1, CHAPTER XI, Conclusion of the Chapter)

⁴⁵⁸ US corporations, since the 1960s, have, through their lobbyists and main stream media representatives, successfully managed to convince the US population that the vast majority of US citizens are strongly opposed to the progressive taxation regimes which emerged in the New Deal and post-New Deal periods.

Daniel Chomsky has explained:

Over the last four decades, substantial majorities of Americans have consistently favored higher taxes when specifically asked whether businesses or the wealthy pay too little, too much, or the right amount. In contrast, the number favoring higher taxes on the

middle class has never reached even 10 percent. Yet, over the same time period, tax policy has moved decisively in the other direction, with lower taxes for businesses and the wealthy, and higher taxes on everyone else to make up for some of the lost revenue.

In my new INET paper, "[A Distorting Mirror: Major Media Coverage of Americans' Tax Policy Preferences](#)," I examine the representation of public attitudes in two national newspapers, the *New York Times* and *USA Today*. I count all references to public preferences with respect to taxes in front page articles. And I concentrate on years associated with major tax policy change.

While the *Times* predictably devoted more attention to tax policy than *USA Today*, practices at both newspapers were otherwise nearly identical. Both newspapers highlighted public opposition to taxes. Both downplayed public support for higher taxes on businesses and the wealthy. And both privileged official and other elite sources over ordinary people. The persistent media misrepresentation of public preferences has effectively excluded the public from political discussion of tax policy and may contribute to the failure of democratic responsiveness on this issue.

The newspapers also reinforced the efforts of policy makers. As officials moved to reduce taxes, the national newspapers emphasized public support for tax cuts even more strongly. The *New York Times* advertised public opposition to taxes in 92 separate front page articles during 1981 as the Reagan tax cuts were debated and passed in 1981. In contrast, newspaper references to public support for progressive taxes vanished toward zero. (Daniel Chomsky, "[Why Americans' Hatred of Taxes Is Fake News](#)," *Institute for New Economic Thinking*, April 13, 2018)

⁴⁵⁹ Sebastian Mallaby on the ways in which 'crises can drive change, but sometimes it takes two crises to cement a transformation'

Crises can drive change, but sometimes it takes two crises to cement a transformation. Alone, the Great Depression ushered in the New Deal, roughly tripling U.S. federal spending as a share of output. But it took World War II to push federal spending much higher, solidifying the role of the state in the U.S. economy. If federal interventions such as the creation of the interstate highway system felt natural by the mid-1950s, it was the result of two compounding shocks, not a single one.

American history offers many such examples. Alone, the Vietnam War might have triggered a decline of trust in the government. It took the compounding shock of Watergate to make that decline precipitous. Alone, the collapse of the Soviet Union would have enhanced U.S. power. It took the strong performance of the U.S. economy in the 1990s to spark talk of a "unipolar moment." Alone, technological advances would have fueled inequality in the first decade of this century. Globalization reinforced that fracturing.

Today, the United States and other advanced countries are experiencing the second wave of an especially powerful twin shock. Taken individually, either the global financial crisis of 2008 or the global pandemic of 2020 would have been enough to change public finances, driving governments to create and borrow money freely. Combined, these two crises are set to transform the spending power

of the state. A new era of assertive and expansive government beckons. Call it the age of magic money.

The twin shocks will change the balance of power in the world, because their effects will vary across countries, depending on the credibility and cohesion of each country's economic institutions. Japan, with a long history of low inflation and a competent national central bank, has already shown that it can borrow and spend far more than one might have predicted given its already high levels of public debt. The United Kingdom, which has a worrisome trade deficit but strong traditions of public finance, should be able to manage an expansion of government spending without adverse consequences. The eurozone, an ungainly cross between an economic federation and a bickering assemblage of proud nation-states, will be slower to exploit the new opportunities. Meanwhile, emerging economies, which weathered the 2008 crisis, will enter a hard phase. Weaker states will succumb to debt crises.

(Sebastian Mallaby, [“The Age of Magic Money: Can Endless Spending Prevent Economic Calamity?”](#) *Foreign Affairs*, May 29, 2020)

⁴⁶⁰ Thom Hartmann has given a free-wheeling, readable historical account of 'free trade' and 'protectionism'. As he says,

For about 200 years, we understood well the benefits of tariffs, subsidized exports and protectionist policies in the United States. Had the fathers of the United States like Abraham Lincoln, George Washington, Andrew Jackson or Ulysses Grant applied for IMF loans, they would have been denied: All of them believed in high tariffs and a heavy control of foreign investment, and considered "free trade" to be absurd.

([“Picking Apart One of the Biggest Lies in American Politics: 'Free Trade': It just enriches huge companies at everyone else's expense,”](#) Thom Hartmann, *AlterNet*, August 19, 2015)

Douglas Irwin has summarized US protectionist history well: "For most of U.S. history, the United States imposed fairly substantial barriers to imports in an effort to protect domestic producers from foreign competition."

⁴⁶¹ Since the mid 1970s this 'protectionism' has been blamed by neoliberal commentators for most of the economic problems facing businesses, since it made business 'internationally uncompetitive'.

Of course, that was precisely the point of the legislation. The argument for 'international competitiveness' was, in fact, an argument for the removal of social costs as basic production costs.

⁴⁶² See [“Russell](#) (1916 page 81) for a short history of the first run on a bank in England in 1667 and the subsequent establishment of the Bank of England in 1694.

⁴⁶³ As Barry Eichengreen ([“Why No Glass-Steagall II?”](#) *Project Syndicate*, Jan. 10, 2013) has described,

... the Pecora Commission [[“January 1933 - June 1934](#)] featured many sensational revelations about the practices that led to the 1930's financial crisis. More than that, the Commission's investigation led to far-reaching reform - most famously, the Glass-Steagall Act, which separated commercial and investment banking. But Glass-Steagall didn't stop there. It created federal insurance for bank deposits. With unit banking (in which all operations are carried

out in self-standing offices) viewed as unstable, banks were now permitted to branch more widely. Glass-Steagall also strengthened regulators' ability to clamp down on lending for real-estate and stock-market speculation.

The hearings also led to passage of the Securities Act of 1933 and the Securities Exchange Act of 1934. Securities issuers and traders were required to release more information, and were subjected to higher transparency standards. The notion that capital markets could self-regulate was decisively rejected.

... Ultimately, the explanation for the passage of far-reaching financial reform can only be the severity of the crisis. In the 1930's, the Great Depression brought the entire economy to its knees. The need for root-and-branch reform was undeniable. After 2008, by contrast, policymakers succeeded in preventing the worst, which ruled out the sense of urgency that surrounded the Pecora Commission hearings. The ultimate irony is that this very success led to less reform.

The Pecora Commission Final Report (1934) summed up its findings in this way:

In the field of banking, three major principles have been dealt with in recent legislation, namely, the separation of monetary policy from banking, the creation of deposit insurance, and the separation of investment banking and the securities business from commercial banking. There remain for our immediate consideration, however, vital matters relating to the conduct and management of banking institutions such as truthful and adequate financial statements, nature and diversification of loans and security, proper banking reserves, trust function of banks, effective governmental examination of banks, employment of bank examiners, window-dressing activities of banking officers and other similar problems.

Investment trusts conducted in accordance with the underlying principles responsible for their creation, diversification of investment with the view to investment return rather than capital appreciation may have a place in our investment system. The facility of perverted uses of these companies requires that these trusts be circumscribed with protective safeguards. The record indicates that it may be necessary to simplify the capital structure of investment trusts to prevent the organizers from usurping control and a disproportionate part of the equity and yield of these trusts; to limit and prescribe the concentration of securities in a particular industry to prevent the diversion of these trusts from their normal channels of diversified investment to the abnormal avenues of control of industry; to prohibit pyramiding of investment trusts; to completely divorce investment trusts from investment banking; to eliminate the conflict of interest between investment managers and the public; to compel full and complete disclosure of the organization, capital structure, and management of the conduct of investment trusts.

The magnitude of a corporation is no justification for its existence or propagation, nor reason for its abolition or curtailment. Holding companies serving no productive function, but organized merely to pervert the use of controlled companies and to evade their legal limitations are detrimental to the public welfare. Holding companies are a major problem meriting immediate consideration and action. (*Stock Exchange Practices: Report of the Committee on Banking*

464^(27/11/17) Paul Krugman has provided a brief summary of the impact of New Deal measures (and their post-1970s erosion) on global financial crises:

For a generation after World War II, the world financial system was, by modern standards, remarkably crisis-free - probably because most countries placed restrictions on cross-border capital flows, so that international borrowing and lending were limited. In the late 1970s, however, deregulation and rising banker aggressiveness led to a surge of funds into Latin America, followed by what's known in the trade as a "sudden stop" in 1982 - and a crisis that led to a decade of economic stagnation.

Latin America eventually returned to growth (although Mexico had a nasty relapse in 1994), but, in the 1990s, a bigger version of the same story unfolded in Asia: Huge money inflows followed by a sudden stop and economic implosion. Some of the Asian economies bounced back quickly, but investment never fully recovered, and neither did growth.

Most recently, yet another version of the story has played out within Europe, with a rush of money into Greece, Spain and Portugal, followed by a sudden stop and immense economic pain.

As I said, although the outline of the story remains the same, the effects keep getting worse...

(^œ[Talking Troubled Turkey](#), *New York Times*, January 30, 2014)

Bill Mitchell has dealt with the consequences of private borrowing denominated in foreign currencies:

...Australia's net foreign debt has risen significantly over the last few decades... Most of it is non-government and the private banks have been at the forefront of the increase as they have been racking up loans from foreign wholesale funding markets....

...When does the private sector, which is holding most of the debt find the rising interest burden to be a problem?

The answer is when the economy enters a recession or a significant slowdown and the capacity of the private sector to repay the debt becomes impaired.

If the non-government, foreign debt is denominated in a foreign currency, then the problem is extended and requires export growth to continue.

Argentina encountered its debt crisis in late 2001 because a significant portion of its debt was denominated in foreign currencies (particularly US dollars) and repayment was reliant on export revenue to generate stockpiles of these foreign currencies.

The peg against the dollar exacerbated matters and further drained foreign currency reserves.

(Bill Mitchell, ^œ[A credit rating agency spinning its usual nonsense](#), *Billy Blog*, June 1, 2017)

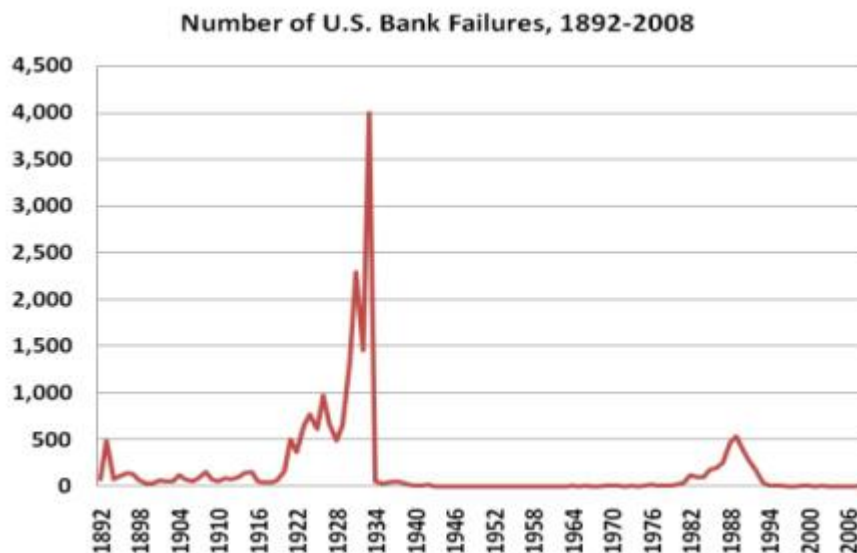

As Krugman has explained, in the post-New Deal era of strong bank regulation which included restrictions on cross-border capital flows so that international borrowing and lending were limited, the world financial system was, by modern standards, remarkably crisis-free.

Unquestionably, private speculators, indulging in foreign exchange borrowing to fund speculation, should *never* be bailed out by sovereign governments. Speculators must accept the consequences of their conduct and, if their borrowings prove unsustainable, they should be allowed to fail.

Sovereign governments should take responsibility for regulating cross-border capital flows and [should not become the guarantors of private speculation in foreign currencies and markets](#).

Gary Gorton (2009), has described and graphically illustrated the post-1934 "Quiet Period" in U.S. banking and the post-1970s erosion of bank regulation which led to the 2007-9 crisis. As he says,

The period from 1934, when deposit insurance was enacted, until the current crisis is somewhat special in that there were no systemic banking crises in the U.S. It is the "Quiet Period" in U.S. banking. See the figure below. The figure shows the Great Depression very dramatically, but this event was very special, as discussed below. Looking at the figure, the Quiet Period in banking following the Great Depression is also clear. This Quiet Period led to the view that banking panics were a thing of the past.

([Slapped in the Face by the Invisible Hand: Banking and the Panic of 2007](#), May 9, 2009, (Prepared for the Federal Reserve Bank of Atlanta's 2009 Financial Markets Conference: Financial Innovation and Crisis, May 11-13, 2009))

The post 1934 'quiet period' was an era of well-regulated bank stability across the 'developed' world. Here is a graph showing the percentage of all independent countries during 1900-2008 having a banking crisis in any given year. The tally weighs countries by their share of global GDP. As the authors observed:

Since the early 1970s, financial and international capital account liberalization took root worldwide. So, too, have banking crises.

Figure 1

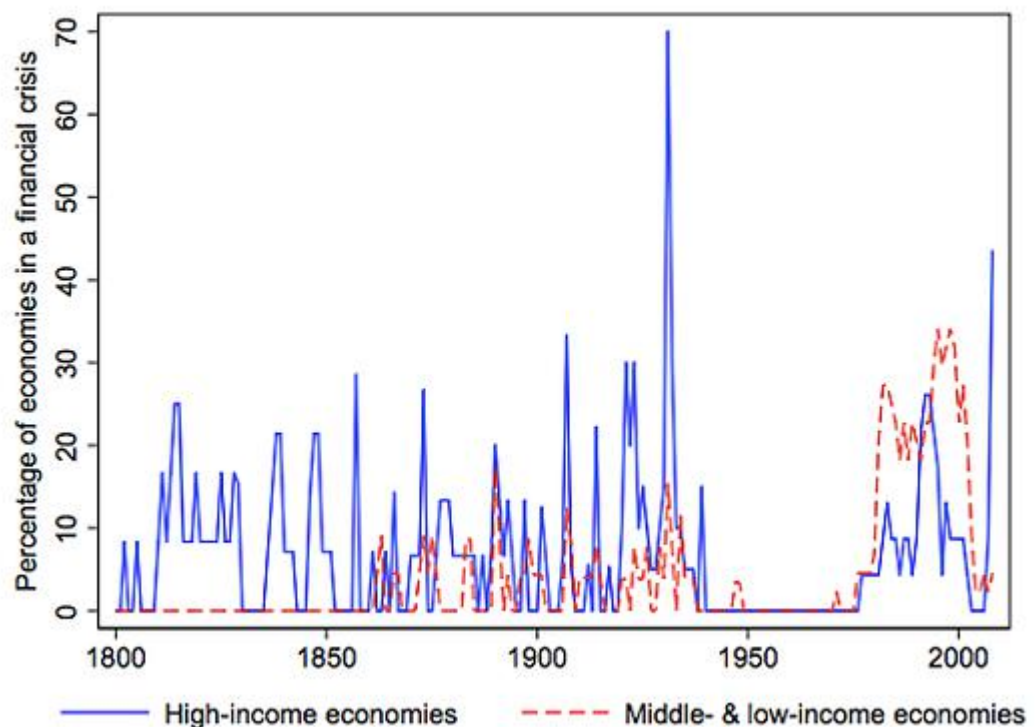

(see [∞][Banking Crises: An Equal Opportunity Menace](#) (Carmen M. Reinhart and Kenneth S. Rogoff, NBER Working Paper No. 14587, December 2008) for more on this.)

Paul Krugman, in a *New York Times* article entitled 'Voodoo Too: The GOP Addiction to Financial Deregulation', has underscored the necessity for proper financial regulation in a modern capitalist economy. Though, one should not assume that this is a partisan political issue in the United States. [Deregulation has been a central neoliberal mantra](#) (a sacred incantation needing no justification) for over half a century.

Here is his version of an illustration of the 'Quiet Period' resulting from reasonable regulation, and the surrounding instability caused by 'a combination of free-market ideology and big money (with the latter helping to feed the former):

Figure 1 The Frequency of Banking Crises

[From: Alan M. Taylor. [∞][Credit, financial stability and the macroeconomy](#), National Bureau of Economic Research, Working Paper 21039, March 2015]

Think about it: what would it take to persuade the right that financial deregulation is a bad idea, and some kinds of regulation are very good for the economy?

Modern financial regulation came about in the aftermath of the Great Depression, and - as you can see from the figure - the era of effective regulation was also an era of historically unprecedented financial stability. Did this stability come at the expense of economic growth? Hardly: the era of effective regulation was also the era of the great postwar boom in America, the thirty glorious years in Europe.

Nonetheless, by the 1970s a combination of free-market ideology and big money (with the latter helping to feed the former) produced a widespread belief among policymakers that those old regulations were pointless and harmful. Regulations were lifted, and, maybe even more important, malign neglect allowed unregulated shadow banking to expand rapidly. (The Trump Treasury department wants global regulators to stop using the term "shadow banking", which it says conveys the impression that there is something wrong with such institutions. Funny how causing the worst crisis since the 1930s can give you a bad reputation.)

Anyway, at this point the results of the great rise of deregulatory ideology are all too clear: banking crises returned with a vengeance, culminating (so far) in the 2008 crisis. And it's not as if 2008 came out of nowhere: we'd already had the S&L crisis of the 80s, the Long-Term Capital Management/Asian crisis of the 1990s, both of which were clear signals of the growing risks. Add in 2008, and you have a remarkable record of disaster.

Why has financial deregulation been, literally, such a bust?...
(Paul Krugman, 'œVoodoo Too: The GOP Addiction to Financial Deregulation', *New York Times*, Opinion Pages, November 26, 2017)

Ayhan Kose and Eswar Prasad (2004) described and graphically illustrated the post-1970s erosion of bank regulation which ultimately led to the 2007-9 crisis,

As the forces of globalization advance, it becomes harder for countries to maintain closed capital accounts. Increasing openness to international trade expands opportunities for the avoidance of capital account restrictions through under-and overinvoicing of trade transactions. And the increasing sophistication of investors and global financial markets makes it much easier to move capital around under different guises.

Fewer restrictions

Industrial countries have scrapped capital controls, and developing countries are opening up.

(fraction of countries with capital account restrictions)

Source: IMF staff estimates.

(^œ[Liberalizing Capital Account Restrictions](#), *Finance & Development* September 2004. See Eswar S. Prasad, Kenneth Rogoff, Shang-Jin Wei, and M. Ayan Kose, ^œ[Effects of Financial Globalization on Developing Countries: Some Empirical Evidence](#), Occasional Paper 220, 2003, International Monetary Fund, for greater detail.)

See, also, Kenji Aramaki & Shunji Karikomi, ^œ[Capital Account Liberalization and International Capital Flows: Cases of Korea, Thailand, and Indonesia](#) (June 12, 2007, Policy Research Institute, Ministry of Finance, Japan) for an examination of the

consequences of capital account liberalization by investment type in 3 crisis countries (Korea, Thailand, and Indonesia) from mid-1980's to mid-1990's, to identify crucial regulatory changes that might have created favorable regulatory environments for the massive inflow of volatile capital, in the period leading to the [1997-1999] crisis, which later acted as a major factor causing the crisis..

For a discussion of the relation between bank deregulation and capital account liberalization (in this context, of course, 'liberalization' is a euphemism for 'deregulation'), see this Wikipedia article: ^œ[Capital Control](#). As Peter Henry explained in 2007:

Capital account liberalization was once seen as an inevitable step along the path to economic development for poor countries. Liberalizing the capital account, it was said, would permit financial resources to flow from capital-abundant countries, where expected returns were low, to capital-scarce countries, where expected returns were high. The flow of resources into the liberalizing countries would reduce their cost of capital, increase investment, and raise output (Fischer, 1998; Summers, 2000). The principal policy question was not whether to liberalize the capital account, but when- before or after undertaking macroeconomic reforms such as inflation stabilization and trade liberalization (McKinnon, 1991). Or so the story went.

In recent years intellectual opinion has moved against liberalization. Financial crises in Asia, Russia and Latin America have shifted the focus of the conversation from when countries should liberalize to if they should do so at all. Opponents of the process argue that capital account liberalization does not generate greater efficiency. Instead,

liberalization invites speculative hot money flows and increases the likelihood of financial crises with no discernible positive effects on investment, output, or any other real variable with nontrivial welfare implications (Bhagwati, 1998; Rodrik, 1998; Stiglitz 2002).

(Peter Blair Henry, *Capital Account Liberalization, the Cost of Capital, and Economic Growth*, CDDRL Working Papers (Stanford), Number 75, January 2007.

See [Debt-Equity Conversion Programs - Swapping the Family Farm!](#).)

For an introduction to the debate on capital controls, explanation of the purposes and costs of controls and advocacy for their reintroduction, see Christopher J. Neely, ^œ[An Introduction to Capital Controls](#), *Federal Reserve Bank of St. Louis Review*, November/December 1999, pp. 13-30.

See ^œ[The Lender of Last Resort: Lessons from the Fed's First 100 Years](#) for responses of the Federal Reserve to financial crises over the past 100 years. As the authors explain (p. 13),

Several pieces of New Deal legislation modified the structure and authority of the Federal Reserve System, and the environment in which it operated. The Banking Acts of 1933 and 1935 gave the Fed new powers to regulate banks and credit flows, and consolidated many existing System authorities within the Federal Reserve Board. (Mark A. Carlson and David C. Wheelock, Federal Reserve Bank Of St. Louis, Working Paper 2012-056B, November 2012, Revised February 2013)

See ^œ[The History of the FDIC](#) for more on post-1933 US bank regulation.

⁴⁶⁵ As a Wikipedia entry entitled '^œ[Fixed exchange-rate system](#) ' explains:

A fixed exchange-rate system (also known as pegged exchange rate system) is a currency system in which governments try to maintain their currency value constant against one another. In a fixed exchange-rate system, a country's government decides the worth of its currency in terms of either a fixed weight of gold, a fixed amount of another currency or a basket of other currencies. The central bank of a country remains committed at all times to buy and sell its currency at a fixed price. The central bank provides foreign currency needed to finance payments imbalances.

(Accessed 23 December 2013)

One of the aims in controlling currency exchange rates was to limit the commoditization of national currencies and consequent possibilities of speculative manipulation. (See Paul Krugman, ^œ[Balance Sheets, the Transfer Problem, and Financial Crises](#) (*International Tax and Public Finance*, 6, 459-472 (1999)) for a discussion of a "world of high capital mobility" where "the threat of speculative attack becomes a central issue...".)

For a picture of the kind of speculative activity this control was aimed at limiting, see Eugene Linden, *Time Asia* November 3, 1997 Vol. 150 No. 18, pp. 26-7 ^œ[How to Kill a Tiger: Speculators Tell the Story of Their Attack against the Baht, The Opening Act of an Ongoing Drama](#) '. The currency speculation which precipitated the 1997 Asian economic crisis

was not an isolated event. Similar speculation has occurred on numerous occasions since the 1970s.

Linden described the speculative attack on the Thai baht,

Currency speculators love a bubble economy because bubbles always pop. The billion-dollar question is When?...

Sensing that their prey had been cornered by their own venality, the wolves began to circle in early 1997. ... Drawing from multibillion-dollar war chests, hedge-fund operators ... intensified their attack on the baht.

One way the speculators bet against the currency was by entering into contracts with dealers who would give dollars in return for an agreement to repay a specific amount of bahts some months in the future. If the baht rose in value, the seller of the contract made money; but if it fell, the buyer profited because he could repay the contract with cheaper bahts.

Demand for such contracts started to drive up interest rates, and the Bank of Thailand began issuing many of these so-called forward contracts itself. This action turned out to be a fatal misstep that placed in the hands of speculators the perfect weapon with which to attack the currency.

"It's as though an unarmed gunslinger walked into town and the sheriff handed him a pistol," remarked a beneficiary of the central bank's unintended largesse. Now speculators had access to an estimated \$15 billion in forward contracts issued in February and March that they would not have to cover for as much as a year. An estimated 80% to 90% of these forward contracts ended up in the hands of speculators....

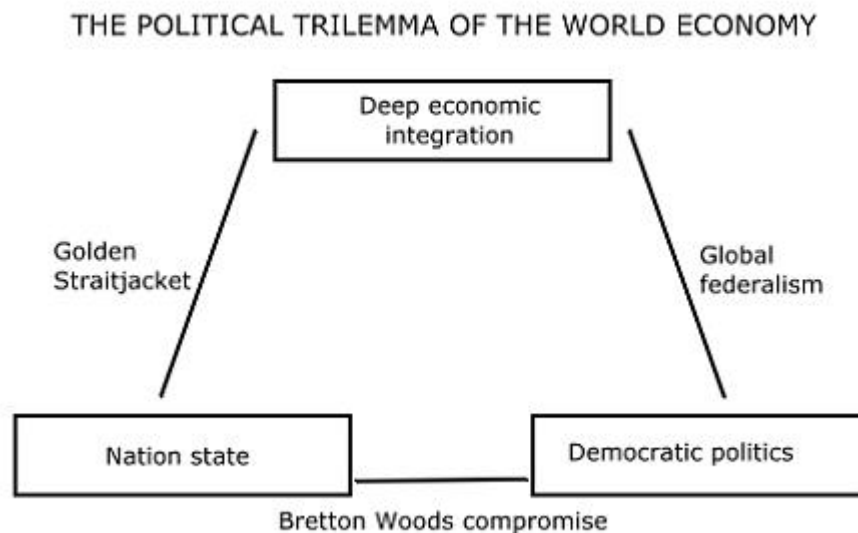

Sensing blood, traders began moving in for the kill and in mid-May flooded the market with orders to sell bahts... And on July 2, the baht was devalued, setting off a chain reaction throughout the region's currency markets and then, last week, around the world's stock exchanges. While no hard number is available, the wolves who started all this turmoil were very well fed, probably with profits in excess of \$3 billion.

(see ^œ[How to kill a Tiger](#) for the full text of the article with article image of the original)

(19/02/16) Dani Rodrik, in a 2007 blog posting, summed up the problem:

Sometimes simple and bold ideas help us see more clearly a complex reality that requires nuanced approaches. I have an "impossibility theorem" for the global economy that is like that. It says that democracy, national sovereignty and global economic integration are mutually incompatible: we can combine any two of the three, but never have all three simultaneously and in full.

Here is what the theorem looks like in a picture:

To see why this makes sense, note that deep economic integration requires that we eliminate all transaction costs traders and financiers face in their cross-border dealings. Nation-states are a fundamental source of such transaction costs. They generate sovereign risk, create regulatory discontinuities at the border, prevent global regulation and supervision of financial intermediaries, and render a global lender of last resort a hopeless dream. The malfunctioning of the global financial system is intimately linked with these specific transaction costs.

So what do we do?

One option is to go for global federalism, where we align the scope of (democratic) politics with the scope of global markets. Realistically, though, this is something that cannot be done at a global scale. It is pretty difficult to achieve even among a relatively like-minded and similar countries, as the experience of the EU demonstrates.

Another option is maintain the nation state, but to make it responsive only to the needs of the international economy. This would be a state that would pursue global economic integration at the expense of other domestic objectives. The nineteenth century gold standard provides a historical example of this kind of a state. The collapse of the Argentine convertibility experiment of the 1990s provides a contemporary illustration of its inherent incompatibility with democracy.

Finally, we can downgrade our ambitions with respect to how much international economic integration we can (or should) achieve. So we go for a limited version of globalization, which is what the post-war Bretton Woods regime was about (with its capital controls and limited trade liberalization). It has unfortunately become a victim of its own success. We have forgotten the compromise embedded in that system, and which was the source of its success.

So I maintain that any reform of the international economic system must face up to this trilemma. If we want more globalization, we must either give up some democracy or some national sovereignty. Pretending that we can have all three simultaneously leaves us in an unstable no-man's land.

(Dani Rodrik, ^œ[The inescapable trilemma of the world economy](#), Dani Rodrik's weblog, June 27, 2007)

Bill Mitchell provides a cautionary critique of Rodrik's 'trilemma'. He cogently argues that,

The trilemma has been skillfully sold as a narrative by right-wing think tanks and others who serve the interests of capital. The so-called progressive politicians have fallen into the trap and have shifted their political parties closer and closer to their right-wing opponents, such that now it is hard to distinguish between the major parties in most nations. The reality is that while the impossibility theorem beguiles the Left - its applicability as a binding constraint on government is limited...

...[I]n fact, this trilemma is just a notional construct. The actual reality that we face is that we still can elect politicians in most countries (mass politics), these politicians still have legislative capacity to restrict economic activity across borders, and global capitalism still requires local markets to realise the surplus value they produce within these global productive processes.

The actual challenge is not to cede national sovereignty to some mythical state of international economic integration but to resist the corruption of the national policy-making process by shifts to technocracies and to ensure that the voting systems, both by citizens for their elected representatives and by the representatives themselves in the legislative domain, is not corrupted by lobbyists working in the interests of specific capital elites.

...[T]he currency-issuing government with the power to enforce legislative decisions can act broadly in the interests of the well-being of all citizens and can stand tall against the powerful capitalist interests that are continually attempting to skew the power of such a government in their favour.

The fact that billions are pumped into the lobbying industry each year by the major industrial and financial capitalist interests and that these efforts are supported by massive funding of think tanks and marketing agencies, which are designed to skew the opinions of ordinary voters, is testament that global capital, however concentrated, understands the power of the elected nation-state.

The problem is that the stupidity of the Left politicians has bought the myth that international economic integration is so advanced and inevitable that they had to abandon the traditional progressive goals and, instead, serve the interests of capital. Their differentiating narrative is the implausible claim that they somehow will maintain that policy position to deliver fairer outcomes. It's laughable really. (Bill Mitchell, ^œ[The impossibility theorem that beguiles the Left](#), *Billy Blog*, February 17, 2016)

⁴⁶⁶ Comments included in a ^œ[Naked Capitalism \(February 10, 2024\) discussion](#) of a blog posting by Desai and Hudson on the nature and 'dangers' of *digital currencies* put it very well:

Eclair

Thank you, Radhika and Michael! So much to think about...

JonnyJames

Wow, a lot to process here. Thank you for posting.

One thing I noticed that profs Desai and Hudson seem to disagree on central bank digital currencies. When Desai starts to talk about it, Hudson says " ok, next topic". My gut reaction is to oppose digital currencies in general, but I have no expertise on this, it would be great to explore this aspect further

korual

My impression is that this gut reaction is common to those who get the huge potential of a CBDC [Central Bank digital currency], but then recoil at the idea of trusting their government with that. The corollary, though, is that this power remains in the hands of privatized banks. If you can't trust your government with fiscal and monetary policy then you have a political problem, not a technical problem.

This is, of course, the 'Catch-22' situation in which Western populations find themselves in the 21st Century.

In a neoliberal world, the private realm is in control with public authorities safeguarding private dominance. Any attempt to make the private realm servant to the public realm will, therefore, be opposed by both the private and the public sectors. Any attempt to change the focus of private activity to ensure its obligations to society will be opposed by the public realm. And, any attempt to change the focus of the public realm will be opposed by the private realm.

The *status quo* is, in all societies, safeguarded against disruption!

⁴⁶⁷ See Feinman (1993) [Reserve Requirement: History, Current Practice, and Potential Reform](#) for a description of U.S. FDIC monetary policy; Meltzer (2003) for a history of U.S. monetary policy to 1951

⁴⁶⁸ While Western nations had imposed protectionist legislation to safeguard their own economies from unfair competition, they had little compunction about accepting resource imports from Third World countries without such protection. So, even if Third World governments had wanted to provide similar welfare provisions to those emerging in Western countries, they would not have been able to do so.

⁴⁶⁹ Although with booming economic conditions, this did not prevent the development of immigration programs which brought low-skilled, low-paid labor into Western countries to provide workers for those positions considered menial by Western people.

⁴⁷⁰ (20/04/16) The 2012 woes of Greece are a consequence of entering into partnership with a Eurozone which is travelling down the path of deregulation¹⁰¹⁴, erosion of working/ living conditions and reduction of welfare provisions to the lowest common denominators of member states (see [Germany and lowest common denominators for more](#)). Greece has attempted to retain its protection era commitments in a post-protection era. The consequences of such an attempt can be grim. As Michael Birnbaum (2012), in a *Washington Post* article, described:

...many Greeks question whether the terms of the bailout [will do much to help their economy](#) in the coming years, and the "troika" of the International Monetary Fund, European Union and European Central Bank acknowledged that the recession would worsen in the short run, even as unemployment has already spiked to 21 percent - 49 percent for those younger than 25 - and the economy contracted by 7 percent in the third quarter of 2011.

Europe has demanded that the public sector shrink by 150,000 people, that the minimum wage be lowered by 22 percent, that pensions be cut and that Greece do more to sell off its publicly owned companies, among other measures that filled a 50-page booklet.

When the Greek parliament started implementing them last week, 43 of the deputies in the ruling coalition rebelled, and rioters in [Athens](#) set dozens of buildings on fire.

(See Michael Birnbaum, ^œ[Deal reached on \\$170 billion Greek bailout](#), *Washington Post*, February 21 2012)

⁴⁷¹ (18/08/17) (24/06/20) Lewis Powell, in 1971, spelt out what he considered to be an anti-business attack on 'free enterprise' in a memo to the Director of the U.S. Chamber of Commerce entitled ^œ[Confidential Memorandum: Attack of American Free Enterprise System](#), which began:

No thoughtful person can question that the American economic system is under broad attack. This varies in scope, intensity, in the techniques employed, and in the level of visibility.

There always have been some who opposed the American system, and preferred socialism or some form of statism (communism or fascism). Also, there always have been critics of the system, whose criticism has been wholesome and constructive so long as the objective was to improve rather than to subvert or destroy.

But what now concerns us is quite new in the history of America. We are not dealing with sporadic or isolated attacks from a relatively few extremists or even from the minority socialist cadre. Rather, the assault on the enterprise system is broadly based and consistently pursued. It is gaining momentum and converts.

The Powell Memo, now often called the 'Powell Manifesto', spelt out what he considered to be the responsibilities of corporate executives and Free Enterprise organizations to not merely counter this attack but, to mount a counter-offensive in order to 'reclaim' the United States for free enterprise. As he wrote,

...It is long overdue - for the wisdom, ingenuity and resources of American business to be marshalled against those who would destroy it.

The catch-cry of neoliberalism has, for more than fifty years, been '[let's deregulate!](#)'. Regulation, it is argued, is government acting as 'Big Brother'; straitjacketing the natural entrepreneurial instincts of the populace and imposing its own self-interested agenda on a people who yearn to be 'free'. From the mid-1970s, this 'free market' agenda became the rationale for political 'reform' within Western nations.

In the comments attached to a ^œ[Naked Capitalism](#) posting (August 14, 2017), a number of commenters, starting with Yves Smith, have discussed the deregulatory activities of US Democratic president, Jimmy Carter (1977-81). [As in other Western countries](#), both sides of US politics became infected by those neoliberal ideological understandings which have dominated Western economic and political discourse and practice over the past fifty and more years¹⁰¹⁵.

One of the commenters, pseudonymed *Nonclassical*, has provided a link to an excellent summation by George Monbiot of the 20th century fashioning of neoliberalism. As Monbiot says,

The ideology that dominates our lives has, for most of us, no name. Mention it in conversation and you'll be rewarded with a shrug. Even if your listeners have heard the term before, they will struggle to define it. Neoliberalism: do you know what it is?

...So pervasive has neoliberalism become that we seldom even recognise it as an ideology. We appear to accept the proposition that this utopian, millenarian faith describes a neutral force; a kind of biological law, like Darwin's theory of evolution. But the philosophy arose as a conscious attempt to reshape human life and shift the locus of power.

Neoliberalism sees competition as the defining characteristic of human relations. It redefines citizens as consumers, whose democratic choices are best exercised by buying and selling, a process that rewards merit and punishes inefficiency. It maintains that "the market" delivers benefits that could never be achieved by planning.

Attempts to limit competition are treated as inimical to liberty. Tax and regulation should be minimised, public services should be privatised. The organisation of labour and collective bargaining by trade unions are portrayed as market distortions that impede the formation of a natural hierarchy of winners and losers. Inequality is recast as virtuous: a reward for utility and a generator of wealth, which trickles down to enrich everyone. Efforts to create a more equal society are both counterproductive and morally corrosive. The market ensures that everyone gets what they deserve.

We internalise and reproduce its creeds. The rich persuade themselves that they acquired their wealth through merit, ignoring the advantages - such as education, inheritance and class - that may have helped to secure it. The poor begin to blame themselves for their failures, even when they can do little to change their circumstances.

Never mind structural unemployment: if you don't have a job it's because you are unenterprising. Never mind the impossible costs of housing: if your credit card is maxed out, you're feckless and improvident. Never mind that your children no longer have a school playing field: if they get fat, it's your fault. In a world governed by competition, those who fall behind become defined and self-defined as losers....

(George Monbiot, [Neoliberalism - the ideology at the root of all our problems](#), *The Guardian*, Friday 15 April 2016)

Michael Hudson, in an article entitled 'We Need a New Political Vocabulary', has explained the all-encompassing nature of neoliberalism in this 21st century. The vocabularies of the New Deal period have been coopted to serve the interests of 'free marketeers'. In doing so, vocabularies which emerged to address all the concerns of the New Deal and post-New Deal periods have been warped to articulate and address various neoliberal factional interests.

Those who attempt to articulate a reality outside of neoliberalism are pejoratively dismissed as supporting and promoting 'far-left' or 'far-right' dogmas, dangerous and delusional ideologies threatening peace and security around the world:

The July 4 landslide defeat of the neoliberal pro-war British Conservatives by the neoliberal pro-war Labour Party poses the

question of just what the media mean when they describe the elections and political alignments throughout Europe in terms of center-right and center-left traditional parties challenged by nationalist neo-fascists.

Political differences between Europe's centrist parties are marginal, all supporting neoliberal cutbacks in social spending in favor of rearmament, fiscal stringency and the deindustrialization that support of U.S.-NATO policy entails. The word "centrist" means not advocating any change in the economy's neoliberalism.

Hyphenated-centrist parties are committed to maintaining the pro-U.S. post-2022 status quo.

That means letting U.S. leaders control European politics via NATO and the European Commission, Europe's counterpart to America's Deep State. This passivity is putting its economies onto a war footing, with inflation, trade dependence on the United States and European deficits resulting from U.S.-sponsored trade and financial sanctions against Russia and China. This new status quo has shifted European trade and investment away from the Eurasia to the United States.

Voters in France, Germany and Italy are turning away from this blind alley. Every incumbent centrist party has recently lost - and their defeated leaders all had similar pro-U.S. neoliberal policies. As Steve Keen describes the centrist political game: "The Party in power runs Neoliberal policies; it loses the next election to rivals who, when they get in power, also run neoliberal policies. They then lose, and the cycle repeats." European elections, like this November's one in the United States, are largely a protest vote - with voters having nowhere else to go except to vote for the populist nationalist parties promising to smash this status quo. This is continental Europe's counterpart to Britain's Brexit vote.

The AfD in Germany, Marine le Pen's National Rally in France and Georgia Meloni's Brothers of Italy are depicted as smashing and breaking the economy - by being nationalist instead of conforming to the NATO/EU Commission, and specifically by opposing the war in Ukraine and European isolation from Russia. That stance is why voters are supporting them. We are seeing a popular rejection of the status quo. The centrist parties call all nationalist opposition neo-fascist, just as in England the media describe both the Tories and Labour as centrists but Nigel Farage as a far right populist.

There Are No "Left-Wing" Parties in the Traditional Meaning of the Political Left

The former left parties have joined the centrists, becoming pro-U.S. neoliberals. There is no counterpart on the old left to the new nationalist parties, except for Sara Wagenknecht's party in East Germany. The "left" no longer exists in the way that it did when I was growing up in the 1950s. Today's Social Democratic and Labor parties are neither socialist nor pro-labor, but pro-austerity. The British Labour Party and German Social Democrats are no longer even anti-war, but support the wars against Russia and Palestinians, and have put their faith in neoliberal Thatcherite/Blairite Reaganomics and an economic break from Russia and China.

The social democratic parties that were on the left a century ago are imposing austerity and cutbacks in social spending. Eurozone rules

limiting national budget deficits to 3% mean in practice that its shrinking economic growth is to be spent on military rearmament - 2% or 3% of GDP, mainly for U.S. weapons. That means falling exchange rates for eurozone countries.

This is not really conservative or centrist. It is hard-right austerity, squeezing labor and government spending that the left-wing parties supported long ago. The idea that centrism means stability and preserves the status quo thus turns out to be self-contradictory. Today's political status quo is squeezing wages and living standards, and polarizing economies. It is turning NATO into an aggressive anti-Russia and anti-China alliance that is forcing national budgets into deficit, leading social welfare programs to be cut back even further....

(Yves Smith, ^œ[Michael Hudson: We Need a New Political Vocabulary, *Naked Capitalism*, July 6, 2024](#))

The discussion generated in the Comments section of this posting are informative.

⁴⁷² [Neoliberally oriented 'experts'](#), like Anne Krueger, a former *World Bank* chief economist and former first deputy managing director of the *International Monetary Fund*, have, since the 1970s, displayed a wanton blindness to the [social and ecological](#) consequences of the neoliberally driven [remaking of the capitalist world](#).

Little has changed in the understanding of 'free marketeers' since [Thomas Huxley's 19th century description](#) of their position.

Here is Krueger's assessment of the wondrous consequences of 'free market' policies inflicted on the world since the 1970s:

According to today's populists, "good jobs" in US manufacturing have been "lost" to competition from imports and preferential trading arrangements. But this narrative does not fit the facts, because imports create jobs, too.

For starters, many jobs are directly connected to trade. Think of the longshoremen who load and unload cargo, the pilots and crews who transport goods by air, the truckers who do so by land, and the wholesale and retail workers who stock and sell those goods.

Second, imports often provide cheaper inputs than what is available in the United States, which enables American manufacturers to compete better with foreign firms in export markets, and to maintain their share of domestic markets. Third, foreign direct investment (FDI) helps American companies acquire some inputs at less cost, while engaging in more research and development and other activities.

Last but not least, exporting to the US gives foreigners more income with which to buy imports from the US and other countries. Because export-industry jobs usually require more valuable skills, and thus pay more than jobs in industries that compete with imports, the additional exports generated by imports create better jobs overall.

Without imports, many jobs that exist today would disappear. According to some estimates, the jobs that service an imported consumer good account for more than half of its retail price. Many imports require local service facilities with American workers.

Foreign automobiles, for example, would not be sold if the parts and mechanics for servicing them were unavailable.

For any manufactured good or line of goods, the production process typically involves several steps. Some steps require considerable engineering and technical skills, and others entail relatively low-skilled employment. Because the US labor force is highly skilled overall, American companies have an advantage over their foreign competitors.

But US firms that rely on components produced by unskilled labor must either make those components themselves, or buy them from high-cost domestic sources. This can put them at a cost disadvantage if they are competing with companies in other industrial countries that can import the same inputs for less, or with companies in countries where unskilled labor is cheaper.

On the other hand, when US firms can import low-skill inputs for less than it would cost to produce those inputs themselves, they can reduce the price of their final product. This allows them to fend off foreign competitors at home and compete more effectively abroad. Germany and Japan have expensive skilled labor forces, but their firms are able to compete in world markets precisely because they can outsource high-cost, low-skill production stages.

Low-cost imports, rather than "destroying" Americans' jobs, actually sustain them. And when companies can expand as a result of their improved competitiveness at home and abroad, they create even more jobs. But if firms must purchase higher-cost domestic inputs, they will have to reduce their profits or raise the price of their products. With reduced profits, they will be less likely to expand and hire more workers; and if they lose money, they may have to shed workers. But raising prices is likely to mean losing market share, implying fewer employees to meet demand.

(Anne Kreuger, ^œ[How Imports Boost Employment](#), *Project Syndicate*, February 25, 2017)

⁴⁷³ Unfortunately, costs related to maintaining the integrity of the environment from which raw materials are extracted have usually also been excluded from consideration. The environmental deterioration has far-too-often been accepted as 'collateral damage' of capitalist enterprise.

Costs related to maintaining the integrity of the community from which labor is drawn and within which capitalist enterprise is conducted are similarly ignored in the interests of 'profitability' and 'competitive advantage'.

It is only possible to do this if 'the economy' and 'economic activity' are considered entirely separate from other 'environments', an independently existing, self-regulating domain (see [People and recognized Environments](#)).

⁴⁷⁴ As Rubén Hernández-Murillo and Christopher Martinek explained in 2009:

Milton Friedman, in particular, doubted that CSR [Corporate Social Responsibility] was socially desirable at all. He maintained that the only social responsibility of a business is to maximize profits (conducting business in open and free competition without fraud or deception). He argued that the corporate executive is the agent of

the owners of the firm and said that any action by the executive toward a general social purpose amounts to spending someone else's money, be it reducing returns to the stockholders, increasing the price to consumers or lowering the wages of some employees.

Friedman pointed out that the stockholders, the customers or the employees could separately spend their own money on social activities if they wished to do so. Friedman, however, also noted that there are many circumstances in which a firm's manager may engage in actions that serve the long-run interest of the firms' owners and that also have indirectly a positive social impact. (Rubén Hernández-Murillo and Christopher J. Martinek, [Corporate Social Responsibility can be Profitable](#), *The Regional Economist*, (www.stlouisfed.org) April 2009, Pp. 4, 5)

⁴⁷⁵ Jonathan Macey (2008) has explained it well:

...*Dodge v. Ford* still has legal effect, and is an accurate statement of the form, if not the substance, of the current law that describes the fundamental purpose of the corporation. By way of illustration, the American Law Institute's ("ALI") [Principles of Corporate Governance](#) ("*Principles*"), considered a significant, if not controlling, source of doctrinal authority, are consistent with *Dodge v. Ford*'s core lesson that corporate officers and directors have a duty to manage the corporation for the purpose of maximizing profits for the benefit of shareholders. Specifically, section 2.01 of the *Principles* makes clear that "a corporation should have as its objective the conduct of business activities with a view to enhancing corporate profit and shareholder gain."

Significantly, the *Principles* specify that the goal of the corporation is shareholder wealth maximization. According to Professor Mel Eisenberg, Reporter for the ALI's Principles of Corporate Governance Project, shareholder wealth maximization is used because "the market is usually more accurate" and is less susceptible to manipulation than other measures of corporate performance. Moreover, the ALI expressly emphasizes shareholder wealth rather than corporate wealth, and specifically excludes labor interests as something that should be maximized....

The Principles contain only three rather minor exceptions to the shareholder wealth maximization norm. Corporations can ignore shareholder wealth maximization in order to: (1) comply with the law; (2) make charitable contributions; and (3) devote a "reasonable amount of resources to public welfare, humanitarian, [educational](#), and [philanthropic](#) purposes." (Macey, Jonathan R., [A Close Read of an Excellent Commentary on Dodge v. Ford](#)" (2008). *Yale Law School Faculty Scholarship Series*. Paper 1384)

⁴⁷⁶ British Prime Minister Margaret Thatcher, talking to *Women's Own* magazine, October 31 1987:

I think we've been through a period where too many people have been given to understand that if they have a problem, it's the government's job to cope with it. 'I have a problem, I'll get a grant.' 'I'm homeless, the government must house me.' They're casting their problem on society. And, you know, there is no such thing as society. There are individual men and women, and there are families. And no government can do anything except through

people, and people must look to themselves first. It's our duty to look after ourselves and then, also to look after our neighbour. People have got the entitlements too much in mind, without the obligations. There's no such thing as entitlement, unless someone has first met an obligation.

477 As we observed [elsewhere](#), under capitalism, the logic of the marketplace effectively emasculates (or spays) morality. It also guts 'society' and inclusive, caring communities.

Just as the end result of [Aquinas's model](#) was the secularization of western European populations, so the end result of Adam Smith's model has been the dismembering of society and self-interested individualization of populations (see [The Economy: A New Environment](#) for more on this).

Keynes (1930), seeing the post-1929 consequences of rampant free-market capitalism, provided an interesting, if unrealistically optimistic, vision of a post-capitalist Western future where old fashioned morality, at last, triumphs over the asocial and amoral logic of the capitalist free-market:

When the accumulation of wealth is no longer of high social importance, there will be great changes in the code of morals. We shall be able to rid ourselves of many of the pseudo-moral principles which have hag-ridden us for two hundred years, by which we have exalted some of the most distasteful of human qualities into the position of the highest virtues.

We shall be able to afford to dare to assess the money-motive at its true value. The love of money as a possession -as distinguished from the love of money as a means to the enjoyments and realities of life -will be recognised for what it is, a somewhat disgusting morbidity, one of those semicriminal, semi-pathological propensities which one hands over with a shudder to the specialists in mental disease.

All kinds of social customs and economic practices, affecting the distribution of wealth and of economic rewards and penalties, which we now maintain at all costs, however distasteful and unjust they may be in themselves, because they are tremendously useful in promoting the accumulation of capital, we shall then be free, at last, to discard.

(Keynes (1930) [∞][Economic Possibilities for Our Grandchildren](#) (pp.5-6), in John Maynard Keynes (1963) *Essays in Persuasion*, W. W. Norton & Co., New York, pp. 358-373)

Little wonder that free-market capitalists consider Keynesian economics a threat!

478 (03/07/16)(05/12/16) My introduction to the realities of the neoliberal future into which we were all heading was demoralizing. I had been immersed in anthropological research in a non-Western community for some years in the early 1980s and returned to Australia in 1984. Shortly after my return I heard a knock at my front door and on opening it found a middle aged acquaintance standing there. He was a simple man with no educational achievements to his name but had successfully held down a job as a sweeper at a Ford Motors factory for the previous decade. Now, with tariff barriers being lowered and deregulation gathering steam, he had been informed that he was being 'let go'. His union could (or would)

do nothing about it and he vainly hoped that perhaps I would be able to do something to help him.

(22/07/16) I have seldom felt so impotent as I did that afternoon. The prime minister of Australia, responsible for overseeing Australia's neoliberal reorganization, had been president of the Australian Council of Trade Unions for 10 years prior to moving into politics. I knew that, with most politicians convinced of both the inevitability and desirability of deregulation and 'opening up' Australia to international competition, there was no point in appeals to the company, to the trade union movement or to members of parliament. This friend was just one sad example of a burgeoning unemployment disaster which was being treated as an 'unfortunate' but 'necessary' consequence of [the evolutionary changes taking place](#). Herbert Spencer (1884) had put it in a sociopathic nutshell:

The state of transition will of course be an unhappy state. Misery inevitably results from incongruity between constitutions and conditions. All these evils which afflict us, and seem to the uninitiated the obvious consequences of this or that removable cause, are unavoidable attendants on the adaptation now in progress.

Humanity is being pressed against the inexorable necessities of its new position - is being molded into harmony with them, and has to bear the resulting unhappiness as best it can. The process must be undergone, and the sufferings must be endured.

No power on earth, no cunningly-devised laws of statesmen, no world-rectifying schemes of the humane, no communist panaceas, no reforms that men ever did broach or ever will broach, can diminish them one jot.

In the long-run, apparently, we would all be better off!

(06/01/17) As [Thomas Carlyle](#) wrote of the Poor in the aftermath of the 1834 revision of the Poor laws:

The New Poor-Law is an announcement, sufficiently distinct, that whosoever will not work ought not to live. Can the poor man that is willing to work, always find work, and live by his work?

... A man willing to work, and unable to find work, is perhaps the saddest sight that Fortune's inequality exhibits under this sun.

(08/07/16) Graham never found another job. And, sadly, [there have been thousands of others just like him!](#)

(22/12/16) Across the neoliberal Western World, they and their dependents number in their millions. People with [shattered dreams](#) and broken lives, [sacrificed](#) on tear- ([and all-too-often blood-](#)) stained alters of neoliberalism by men in fine-woven suits and matching ties, the sociopathic priests and aficionados of neoliberal capitalism. There are no gulags, no concentration camps, no piles of rotting corpses, just [millions of dispossessed](#), discarded, desperate human beings sacrificed to [that perennial neoliberal bottom line!](#)¹⁰¹⁶

The Economic Policy Institute's ^œ[State of Working America Data Library](#) gives a breakdown of wage changes and share of employment by education level from 1973-2011:

Hourly wages by education, 1973–2011 (2011 dollars)

	Less than high school	High school	Some college	College degree
<i>Real hourly wage</i>				
1973	\$14.93	\$17.11	\$18.43	\$24.96
1979	14.85	16.67	17.82	23.36
1989	12.69	15.47	17.37	24.36
1995	11.46	15.15	16.93	25.16
2000	11.92	16.04	18.23	27.99
2007	12.34	16.24	18.31	28.65
2011	11.82	15.89	17.57	27.99
<i>Annual percent change</i>				
1973–1979	-0.1%	-0.4%	-0.6%	-1.1%
1979–1989	-1.6	-0.7	-0.3	0.4
1989–2000	-0.6	0.3	0.4	1.3
1989–1995	-1.7	-0.3	-0.4	0.5
1995–2000	0.8	1.1	1.5	2.2
2000–2007	0.5	0.2	0.1	0.3
2007–2011	-1.1	-0.5	-1.0	-0.6
<i>Share of employment</i>				
1973	28.5%	38.3%	18.5%	10.1%
1979	20.1	38.5	22.8	12.7
1989	13.7	36.9	26.0	15.6
2000	10.3	31.9	29.8	18.8
2007	9.8	29.6	29.6	20.9
2011	8.4	28.0	30.4	21.9

Source: Authors' analysis of Current Population Survey Outgoing Rotation Group microdata

The share of employment by workers with less than High School education in the US fell from 28.5% to 8.4%. As Dean Baker has said,

...While the impact of automation over a long enough period of time certainly swamps the impact of trade, over the last 20 years there is little doubt that the impact of the exploding trade deficit has had more of an impact on employment. To make this one as simple as possible, we currently have a trade deficit of roughly \$460 billion (@ 2.6 percent of GDP). Suppose we had balanced trade instead, making up this gap with increased manufacturing output.

Does the NYT want to tell us that we could increase our output of manufactured goods by \$460 billion, or just under 30 percent, without employing more workers in manufacturing? That would be pretty impressive. We currently employ more than 12 million workers in manufacturing, if moving to balanced trade increase employment by just 15 percent we would be talking about 1.8 million jobs. That is not trivial...

The average hourly wage of men with just a high school degree was 13 percent less in 2000 than in 1973. For workers with some college it was down by more than 2.0 percent. In fact, stagnating wages for men without college degrees is not something new and different, it has been going on for more than forty years.

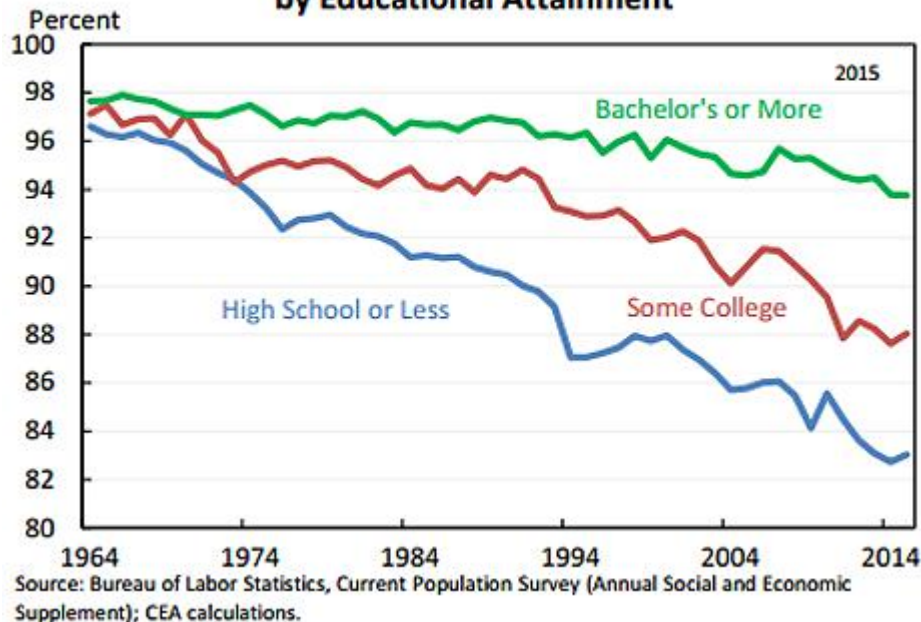

(Dean Baker, ^{oe}[What's Different About Stagnating Wages for](#)

[Workers Without College Degrees?](#), *Beat the Press*, 21 December 2016)

An anodyne US White House report on ^œ[The Long-term Decline In Prime-age Male Labor Force Participation](#) (US White House, June 2016) in the United States has illustrated the labor force participation decline for prime-age male workers with high school or less between 1964 and 2015:

In 1964 participation rates were similar for different education levels - with 98 percent of primeage men with a college education participating in the workforce as compared to 97 percent of prime-age men with a high school degree or less, as shown in Figure 9. In 2015, every education group had lower participation rates than in previous decades, but the decline was modest for more-educated workers. In contrast, those with a high school degree or less saw their participation rates fall to 83 percent, a 14 percentage point reduction from 1964.

Figure 9: Prime-Age Male Labor Force Participation by Educational Attainment

⁴⁷⁹ See [The Growth in Third World Debt](#) for more on this.

⁴⁸⁰ Oxfam International, in 2016, claimed that:

Across the world, impoverished countries are being forced to repay debts far bigger than original loans, instead of spending precious cash on essentials like schools and hospitals.

Bangladesh, for example, has to make crippling debt repayments, when it desperately needs to use money to pay for better health care and education - especially for the 50 million Bangladeshis who survive on under a dollar a day.

(See also: ^œ[No country should be forced to choose between paying back debts or providing health care](#), Oxfam International (accessed 06 January 2023))

The United Nations Development Programme, in a Policy Note on Heavily Indebted Poor Countries (HIPC) in 2003 claimed:

There are 42 HIPC countries - 34 in Sub-Saharan Africa, 4 in Latin America, 3 in East Asia and 1 in the Middle East. Thirty-one of them

are among the 59 countries identified as priority countries in the 2003 Human Development Report...

Countries with unsustainable external debt are those whose 'net present value' of external debt exceeds 150 per cent of the export revenues...

The World Bank has identified severely indebted low-income countries (SILIC) as countries whose 'net present value' of external debt is higher than 220 per cent of exports and/or more than 80 per cent of gross national income.

At the end of 2001 (latest year for which data are available), the SILIC countries not included in the HIPC list include Indonesia, Kyrgyz Republic, Moldova, Nigeria, Pakistan and Tajikistan. Jubilee Research claims that there is arbitrariness to the picking of countries for inclusion in the HIPC list.

(^œ[Heavily Indebted Poor Countries \(HIPC\) Initiative](#), UNDP Policy Note October 2003; updated January 11, 2018)

⁴⁸¹ See [Import Substitution in Third World Countries](#) for more on this.

⁴⁸² Like genies in bottles, it's so much easier to deregulate than to regulate! The recent attempts to re-regulate banking and investment practices in a globalized economic world show how difficult it is to coordinate legislation and re-establish any genuinely effective controls.

⁴⁸³ Groups committed to *laissez faire* economics or more simply to getting back to the way things were in the 1920s. These groups had long sought effective arguments for the dismantling of the 'welfare state' and reestablishment of 1920s economic conditions.

⁴⁸⁴ A commenter on a blog posting by Dean Baker put it succinctly:

In modern economies demand comes from mass consumption by the 99%, not the 1% buying yachts and hiring servants. How could the increasing inequality in income and wealth not reduce aggregate demand? Does the medieval, aristocratic economy really represent overall efficiency?

When corporations take advantage of low-cost foreign labor this raises profits, reduces domestic wages directly and affects the power of unions. As we have been seeing recently, a "free market" in labor does not ensure that workers get what they consider to be fair wages, despite what are claimed to be labor shortages. Workers need to act collectively to get improvements in wages and benefits. (skeptonomist, commenter on Dean Baker, ^œ[No One Told Greg Mankiw About the Great Recession](#), *Beat The Press*, 06 October 2018)

⁴⁸⁵ Steven Greenhouse and Julfikar Ali Manik have summed up the international drivers of hyperglobalization which lead to constant downward pressure on wages and conditions 'as individual production stages are located where the costs of production are lowest':

...[F]actory closings can have immediate economic impact. Some factory owners worry about losing large and profitable orders to other companies and countries, and garment workers themselves fear losing their jobs. In one of the first closings after an Accord inspection, workers took to the streets in a raucous demonstration, protesting that their wages might not be paid...

Worsening tensions, the Bangladeshi commerce minister and the head of the Bangladesh Garment Manufacturers and Exporters Association accused Bangladeshi union leaders this week of undermining the nation's image and garment industry by asserting that some labor leaders and pro-union workers have been tortured, beaten and harassed...

The remediation process, garment industry experts say, could lead to clashes between the Bangladeshi factory owners and the Western brands about who should pay for needed safety improvements - especially because many factory owners are expected to say they cannot afford to make the repairs.

(Steven Greenhouse and Julfikar Ali Manik, ^œ[Stalemate Over Garment Factory Safety in Bangladesh](#), *New York Times*, June 25 2014)

See [Globalization, Free Trade Zones and Definitions of Employment](#) for more on all this.

Arvind Subramanian and Martin Kessler, in a paean to the process of hyperglobalization, have described the growing intensity of this shift:

The period between 1914 and the end of World War II witnessed the Great Reversal of globalization... World trade plunged to a low of 5.5 percent of world GDP just before World War II began (O'Rourke and Williamson 1999; Frieden 2006; Irwin 2011).

A third era, starting after World War II, saw the restoration of world trade, aided by declines in transport costs and trade barriers. Only by about the mid- to late 1970s did world trade revert to the peaks seen before World War I.

The world is now in a fourth era, of hyperglobalization, in which world trade has soared much more rapidly than world GDP.

Merchandise exports-to-GDP ratios soared from 15 percent to 26 percent, and goods and services exports to about 33 percent, over the course of the last two decades. This rapid increase is somewhat surprising, because transport costs do not appear to have declined as rapidly as in earlier eras

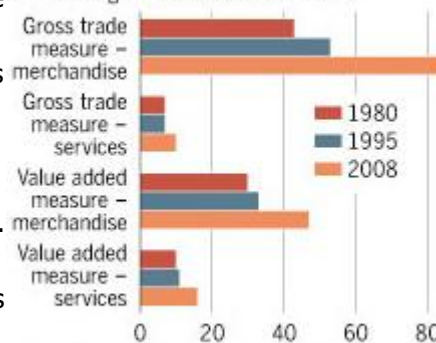

(Hummels, Ishii, and Yi 2001; Baldwin 2011a). The cost of information and communications did decline significantly, however.

Part of the increase in trade reflects the fragmentation of manufacturing across borders - the famous slicing up of the value-added chain - as individual production stages are located where the costs of production are lowest. This phenomenon, whereby technology no longer requires that successive stages of manufacturing production be physically contiguous or proximate, has been dubbed the "second unbundling" (Baldwin 2011a)

(Arvind Subramanian and Martin Kessler, ^œ[The Hyperglobalization of Trade and Its Future](#), Working Paper Series 13-6, p. 4, July 2013, Peterson Institute for International Economics)

Global tradeability of goods and services

As a % of global sectoral value added

Sources: Unctad; Arvind Subramanian and Martin Kessler, "The Hyperglobalization of Trade and its Future"

A UN Food and Agriculture Organization (FAO) report described some of the problems in Third World countries and a few of the reasons why Western nations lowered protectionist barriers:

The reality of global interdependence was called to the attention of policy-makers by the oil crises of 1973 and 1979 and the debt crises [in 3rd World countries] of the 1980s. The debt problem, not yet resolved despite numerous debt relief and reduction initiatives, has deleterious implications for food security.

Debt-servicing obligations reduce the ability to import food, as well as other items that could increase domestic food production and consumption, and constrain resources for development and social welfare. The most recommended cure consisted of macroeconomic stabilization, enacting structural reforms (liberalization and privatization) and an increasing emphasis on international trade.

A combination of policies, inter alia, reforming exchange rates, privatizing state-owned enterprises, reducing the public payroll and public spending generally, dampening inflation and cutting subsidies, was employed.

In the process of adjustment the inward-oriented industrialization strategies of the 1960s and 1970s were replaced by more outward-looking ones. At the same time, a new institutional structure for trade was being constructed. The Uruguay Round of the General Agreement on Trade and Tariffs (GATT) negotiations, dedicated to reducing protection according to a predefined schedule, were concluded [in 1994] and the World Trade Organization (WTO) was founded.

(^œFAO 1996, p. 2)

⁴⁸⁶ Thomas Palley has given a clear, concise account of "mainstream economics' celebratory stance toward globalization" and the theoretical gymnastics through which 'mainstream economists' attempt to justify their enthusiasms:

Prior to the 2008 financial crisis there was much debate about global trade imbalances. *Prima facie*, the imbalances seem a significant problem. However, acknowledging that would question mainstream economics' celebratory stance toward globalization. That tension prompted an array of theories which explained the imbalances while retaining the claim that globalization is economically beneficial. This paper surveys those new theories. It contrasts them with the structural Keynesian explanation that views the imbalances as an inevitable consequence of neoliberal globalization. The paper also describes how globalization created a political economy that supported the system despite its proclivity to generate trade imbalances.

(Thomas Palley (Policy Advisor, AFL-CIO Washington DC, August 2014) ^œ[The theory of global imbalances: mainstream economics vs. structural Keynesianism](#), *Review of Keynesian Economics*, 2015, vol. 3, issue 1, 45-62)

The curiously naive principles underlying moves to 'free' international trade from the disadvantages of 'protectionism' are well spelt out in the World Trade Organization (WTO) statement of purpose:

The economic case for an open trading system based upon multilaterally agreed rules is simple enough and rests largely on commercial common sense. All countries, including the poorest,

have assets-human, industrial, natural, financial-which they can employ to produce goods and services for their domestic markets or to compete overseas.

'Comparative advantage' means that countries prosper by taking advantage of their assets in order to concentrate on what they can produce best. This happens naturally for firms in the domestic market, but that is only half the story. The other half involves the world market.

Most firms recognize that the bigger the market the greater their potential-in terms of achieving efficient scales of operation and having access to large numbers of customers. In other words, liberal trade policies which allow the unrestricted flow of goods, services and productive inputs multiply the rewards that come with producing the best products, with the best design, at the best price ...

The alternative of import protection and perpetual government subsidies leads to bloated, inefficient companies supplying consumers with outdated, unattractive products. Ultimately, factories close and jobs are lost despite protection and subsidies. If other governments pursue such policies overseas, markets contract and world economic activity is reduced.

One of the objectives of the WTO is to prevent such a self-defeating and destructive drift into protectionism.
(^œ[WTO](#))

⁴⁸⁷ See [The Economy: A New Environment](#) for more on this.

⁴⁸⁸ This is, of course, a nonsense. The material resource base upon which communities rely for *all* their needs is, by definition, subsumed within 'the economy'.

⁴⁸⁹ Dennis Snower, in an optimistic (dare one say marginally heretical?) paper entitled '^œ[A Copernican Revolution in Economics](#)', claims that:

This is probably the most exciting and fruitful time ever to become an aspiring economist. Why? Because economics is reaching its Copernican Moment - the moment when it is finally becoming clear that the current ways of thinking about economic behavior are inadequate and a new way of thinking enables us to make much better sense of our world. It is a moment fraught with danger, because those in power still adhere to the traditional conventional wisdom and heresy is suppressed.

Yves Smith, in a comment on the paper, more realistically, gives a succinct summation of the purpose and focus of mainstream economics, influenced by the 'Cold War' concerns of the post-1950s, and the likelihood of the imminent arrival of that 'Copernican Moment' (after all, the delusions of mainstream economics are obvious for those not trapped in ideological confusion):

The purpose of mainstream economics is to defend free enterprise against Communism by depicting market economies as generating full employment if left alone. That's obviously false but the essential political role means that the notion that conventional economics is on its last legs is wildly overstated.

(Yves Smith, ^œ[Economist Dennis Snower Says Economics Nears a New Paradigm, NakedCapitalism](#), January 2, 2021)

A commenter ^œ[pseudonymed 'Ping'](#) has put it very well:

Alarms have long been sounded about the glaring travesty of Ivory Tower economics. The global financial system is a black box enabling massive corruption, impossible for the citizen to discern, and dependent on wholesale environmental destruction. Our political establishment is owned wholesale by sinister special interests whose unofficial slogan is IBG-YBG - I'll be gone You'll be gone. - by the time the Sh** hits the fan as they imagine then sequestering in some idyllic location untouched by collapse.

What about "true cost economics"? A simple concept that cost to the environment must be factored into production. Of course it's cheaper to treat the environment like a waste dump and produce copious amounts of non-essential "forever" plastics and forever war for toxic weaponry production.

490 Economic efficiency arguments are usually based on a presumption of the separation of an economic environment from other 'social' environments. The 'welfare' generated through economic activity is assumed to be a consequence of activity within this insulated environment.

The definition of economic efficiency is usually spelt out as the situation in which (with the given state of technology) it is impossible to generate a larger welfare total from the available resources. In other words, the situation where some people cannot be made better-off by reallocating the resources or goods, without making others worse-off. Also called allocative efficiency, it indicates that a "just the right balance between pain and gain" has been achieved.

This 'balance between pain and gain' is usually explained through reference to the *Pareto Optimum*: "a state of allocation of resources in which it is impossible to make any one individual better off without making at least one individual worse off". Any attempt to improve the lot of workers through redistribution of wealth from elites renders those elites 'worse off': the *Pareto Optimum* is breached and 'economic efficiency' is threatened.

Any move to build a welfare component into cost structures is regarded as a move to economic inefficiency.

All this is based, of course, on a presumption that human beings are all, at heart, pre-social, independent, self-interested, self-promoting, competitive and acquisitive beings, intent on conserving and expanding their possessions and furthering their own well-being and independence, if necessary, at the expense of others around them (see [Independent individualism](#)).

The real issue in considering social welfare, however, is not the equitable reallocation of resources within the economy (the Pareto Optimum), but the expansion of the circulation of money. Either circulation is limited to activity within 'the economy' (a strict neoliberal approach) or it is [expanded to include community requirements](#).

491 A willingness to mindlessly [pillage the environments of non-Western communities](#) has long been central to the activities of Western governments and corporations. Nor is there any indication that Western capitalism is any more willing to accept responsibility for the [looming environmental consequences](#) of unregulated capitalism in the 21st century. Donald Trump, newly elected president of the United States of America, in a budget blueprint for the 2017 fiscal year has decided to slash the US Environmental Protection Agency's budget by 31 percent.

As a *New York Times* commentary on Trump's budget priorities has explained,

The E.P.A. is, arguably, the hardest-hit agency under Mr. Trump's budget proposal: He wants to cut spending by nearly a third - \$2.6 billion from its current level of \$8.2 billion, according to a person who had been briefed on the proposal but was not authorized to speak publicly about it.

That would take the budget down to about \$5.7 billion, its lowest level in 40 years, adjusted for inflation. In an initial draft, the White House had proposed cutting about \$2 billion from the agency's budget, taking it down to just over \$6 billion, according to an aide familiar with the plan.

The E.P.A. administrator, Scott Pruitt, who has himself spoken out against some of the core missions of the agency he leads, went to the White House to request a smaller cut after the White House budget office first presented him its preferred spending level. He pressed for about \$7 billion, according to the person. Instead, the White House slashed his budget down even further, to about \$5.7 billion.

Mr. Trump's proposed cuts to the E.P.A. are a magnitude greater even than those envisioned by congressional Republicans, many of whom forcefully oppose the agency's regulatory agenda.

(Glenn Thrush and Coral Davenport, ["Donald Trump Budget Slashes Funds for E.P.A. and State Department,"](#) *New York Times*, March 15, 2017)

⁴⁹² Effectively, money is removed from general circulation, accumulating within various 'investment' portfolios. Vast sums are employed in securities, derivatives, currency and equities trading, entering an illusory realm of internationalized electronic wealth creation and manipulation, decoupled from the realities of the stimulation and maintenance of both employment and social welfare; much of it no longer accessible to fund community needs.

As a Wikipedia entry on the ["Size of the global fund management industry"](#) in 2010 explained:

Conventional assets under management of the global fund management industry increased by 10% in 2010, to \$79.3 trillion. Pension assets accounted for \$29.9 trillion of the total, with \$24.7 trillion invested in mutual funds and \$24.6 trillion in insurance funds. Together with alternative assets (sovereign wealth funds, hedge funds, private equity funds and exchange traded funds) and funds of wealthy individuals, assets of the global fund management industry totalled around \$117 trillion. Growth in 2010 followed a 14% increase in the previous year and was due both to the recovery in equity markets during the year and an inflow of new funds. (Accessed 8 June 2012)

A great deal of that asset accumulation is a consequence of an inevitable concentration of wealth and stalling of market exchange resulting from apparently equitable market exchanges.

Many current models of wealth generation and flow assume a cyclic process, with created wealth invested to fund new productive growth, ensuring both employment and social welfare. An unregulated system however, appears more closely to resemble a spiral than recyclic model.

Wealth injected into the system spirals upward to pool within global fund management portfolios. The recycling which occurs at this level is, far-too-often, a process which remains trapped within the global fund management industry.

Wealth exchange and growth become insulated within a kaleidoscopic virtual realm, creating a world of virtual wealth manipulation with its own experts, entrepreneurs, risk and profit takers, far removed from the mundane world of productive material enterprise, employment and social welfare.

Since, in most recyclic models of wealth generation and flow, no distinction is made between the health of such global funds and the health of productive enterprise, it is easy to confuse the two, assuming that, in order to ensure the health of productive enterprise, one must ensure the health of global fund management portfolios¹⁰¹⁷.

This has resulted in massive bailouts of the global fund management industry, with the funds absorbed into that realm having a marginal or negative impact on employment and social welfare conditions. Under these conditions, the injected 'quantitative easing' funds by-pass their intended targets and move directly into the global fund management pool.

It seems essential, in order to ensure a true recycling of funds from the global fund management industry back into the real-world realms of employment and social welfare, that processes be established through which wealth can be redirected back into both employment and community needs.

See John Fullerton, ^œ[Why We Need a Financial Transactions Tax](#) (*Huff Post: Business*, 25 August 2011) for a discussion of

... high frequency trading and other "quant" trading strategies that now comprise an astonishing 70 percent of vastly bloated trading volume. The truth is simple: A modest financial transactions tax of less than 1 percent would serve as a remarkably efficient tool to achieve needed reform....

The financial markets are responding to short-term speculative financial interests rather than the long-term fundamental interest of real economic investment essential for creating productive jobs in the real economy. ...

More money, improved market resiliency we desperately need, and a reallocation of capital to productive long-term investment that fuels sustainable growth, creates jobs, and in the process reduces government deficits makes a financial transactions tax a win-win-win.

As Iglesias and de Almeida (2012) suggest: "To avoid condensation and the thermal death of markets some regulation, or some minimum allowance is necessary...".

All this has been explained by [Iglesias and de Almeida](#) in a study of the ^œ[Entropy and equilibrium state of free market models](#), (*The European Physical Journal B - Condensed Matter and Complex Systems*, Volume 85 (2012), Number 3, 85-95):

...in a large class of exchange models, the system converges to a very unequal condensed state, where one or a few agents concentrate all the wealth of the society while the wide majority of

agents shares zero or almost zero fraction of the wealth. So, in those economic systems a minimum entropy state is attained.....

Numerical results..., as well as some analytical calculations..., indicate that a frequent outcome in these models is *condensation*, i.e. concentration of all available wealth in just one or a few agents. This final state corresponds to a kind of equipartition of poverty: all agents (except for a set of zero measure) possess zero wealth while one, or a few ones, concentrate all available resources. In any case the final configuration is a stationary state of "equilibrium", since agents with zero wealth cannot participate in further exchanges.

...Making a parallel between physics and markets, if the second law of thermodynamics, when applied to the whole universe, has as a corollary the "thermal death of the universe", the concentration - or condensation - of wealth leads to a "thermal death of markets", since markets need exchanges, or flux of capital, to survive.

If all agents, with a few exceptions, have zero wealth, there are no exchanges.... What seems to be a fair exchange rule has the implication of spreading misery.

To avoid condensation and the thermal death of markets some regulation, or some minimum allowance is necessary to favor the poorer agents. Even the introduction of a risk-aversion factor, as discussed in the introduction does not impede the condensation. When there are no regulations and/or when no one can win more than he has, the dynamics leads to a condensed state and to a frozen economy.

(2012, pp. 85, 87, 90-93)

See ^œ[Capitalism: Sovereign Debt, Quantitative Easing \(QE\) and the Vortex Economy](#) for more on this.

⁴⁹³ This has been clearly demonstrated in the shift in taxation towards income and away from business through the last thirty years in Western countries. 'User Pays' taxation schemes, including

- moves to lower business tax rates (consumption taxes have usually been removed from business costs);
- toward flat personal income tax rates;
- and to broad based 'consumption' taxes such as 'value added' (VAT) and 'goods and services' (GST) tax regimes

all focus on individualising social costs, shifting 'social welfare' costs to personal incomes and advantaging those who are economically successful.

⁴⁹⁴ This naive view of the difference between 'politics' and 'economics' assumes that special interest groups do not form and sustain themselves and each other in economic activity. This is something which Adam Smith readily acknowledged two hundred and fifty years ago,

We rarely hear, it has been said, of the combinations of masters, though frequently of those of workmen. But whoever imagines, upon this account, that masters rarely combine, is as ignorant of the world as of the subject. Masters are always and everywhere in a sort of tacit, but constant and uniform combination, not to raise the wages of labor above their actual rate. To violate this combination is

everywhere a most unpopular action, and a sort of reproach to a master among his neighbors and equals.

We seldom, indeed, hear of this combination, because it is the usual, and one may say, the natural state of things, which nobody ever hears of.

(1776, pp. 84-5)

For an example of this kind of collusion, see Laura Macomber (Okapi Productions, May 30, 2013, ^œ[Tracking the ALEC Law-Making Machine](#)). As Macomber explains,

Last year, Moyers & Company aired the "^œ[United States of ALEC](#)," a report on the American Legislative Exchange Council, a corporate-backed political powerhouse that's bringing profit-driven legislation to a statehouse near you. ALEC brings together lobbyists and state legislators to create "model legislation" that could benefit corporate interests - laws, for example, that would serve to weaken collective bargaining rights, limit corporate liability and increase the populations at for-profit prisons. And it all takes place behind closed doors. The goal is to get ALEC legislators to pass versions of model laws in their home states. And pass them they do - ALEC boasts that some 200 of its bills become law each year.

⁴⁹⁵ (15/02/16) Dean Baker has summed up the consequences of President Clinton's (1993-2001) policies for the US:

...There were many positive things that can be said about the economy in President Clinton's second term, but the problem was that it was not sustainable. The stock bubble that generated the demand that made low unemployment possible would inevitably burst. There is a limit to the number of fools with the money to pay billions of dollars for the stock of companies that will never make a profit.

When the bubble did burst in the years 2000-2002 it gave us a recession, which was very severe from the perspective of the labor market. We didn't get back the jobs lost in the downturn until January of 2005. Until the collapse of the housing bubble this was the longest period without net job growth since the Great Depression.

It is important to note that the problem was on the demand side. There was no evidence of serious supply side constraints when the unemployment rate fell to 4.0 percent in 2000. In other words, there is no reason to think that if we got enough demand in the economy, we could not again see the sort of strong and broadly shared growth of the late 1990s.

However it is precisely on this issue of generating demand that Clinton left us with an enormous problem. When he was Clinton's Treasury Secretary, Robert Rubin explicitly advocated a high dollar. This was a sharp departure from his predecessor as Treasury Secretary, Lloyd Bentsen, who was willing to let the dollar fall as a way of reducing the trade deficit. A lower dollar, and therefore a lower trade deficit, was supposed to be one of the fruits of Clinton's deficit reduction program.

The dollar did in fact rise after Rubin became treasury secretary, but really took off following the East Asian financial crisis. Robert Rubin and the rest of the Clinton team directed the bailout from the crisis

through the I.M.F. Instead of requiring debt write-downs by creditors (i.e. banks), they demanded that the crisis countries repay their loans in full.

The route to repayment involved a sharp devaluation of their currencies against the dollar, which allowed them to run large trade surpluses with the United States. Several other developing countries also began to rapidly accumulate foreign exchange reserves (i.e. dollars) to avoid ever being in the same position as the East Asian countries. The result was a sharp rise in the value of the dollar and an explosion in the size of the trade deficit. It went from just over 1.0 percent of GDP in the mid-1990s to almost 4.0 percent of GDP by the end of the Clinton administration (\$720 billion a year in today's economy).

The U.S. has had a large and persistent trade deficit ever since Clinton left office. This deficit creates a huge gap in demand in the economy since it amounts to demand that is being generated by the United States in other countries rather than the United States. The stock bubble filled this demand gap in the 1990s. The housing bubble filled the demand gap until it burst in 2007-2009.

(Dean Baker, ^œ[Ross Douthat Has Trouble Remembering the 1990s](#), *Center for Economic and Policy Research*, *Beat the Press*, 14 February 2016)

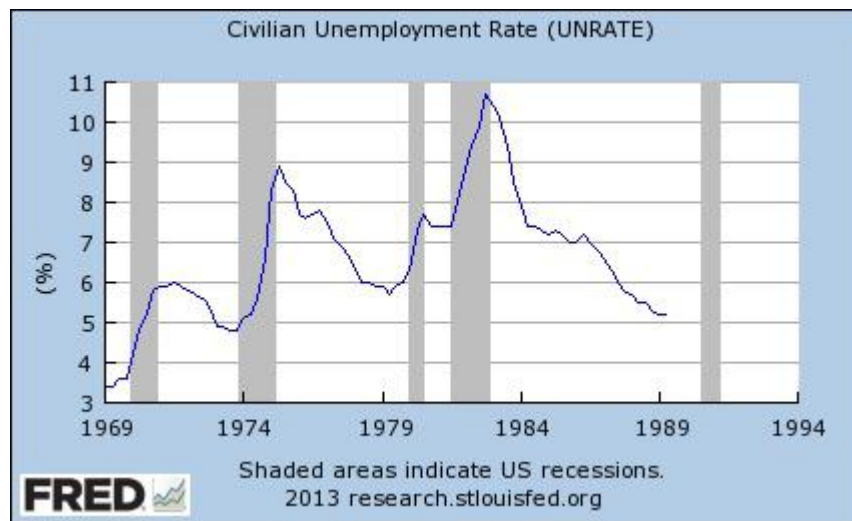

⁴⁹⁷ Bill Mitchell has addressed the ways in which concepts of 'full employment' have been revised within both economics and in mainstream media 'explanations' of the issue. Focusing on unemployment in Australia in 2016, he explains,

...[O]ver the years ... mainstream economists have revised the concept of full employment. We now read that Australia, for example, is at "full employment" when its official unemployment rate is 5.7 per cent (1.7 per cent above its previous low in February 2008), underemployment is 8.4 per cent, and the participation rate is still a full 1 percentage below its November 2010 peak (meaning some 190 thousand workers have dropped out of the labour force). By any stretch, the total labour underutilisation rate (that is, idle but willing labour) is in excess of 16 per cent. But to some smug journalists who cannot even get their facts straight, that is 'full employment'. Mainstream economics - [detaching language from meaning](#) and misleading a nation as a result.

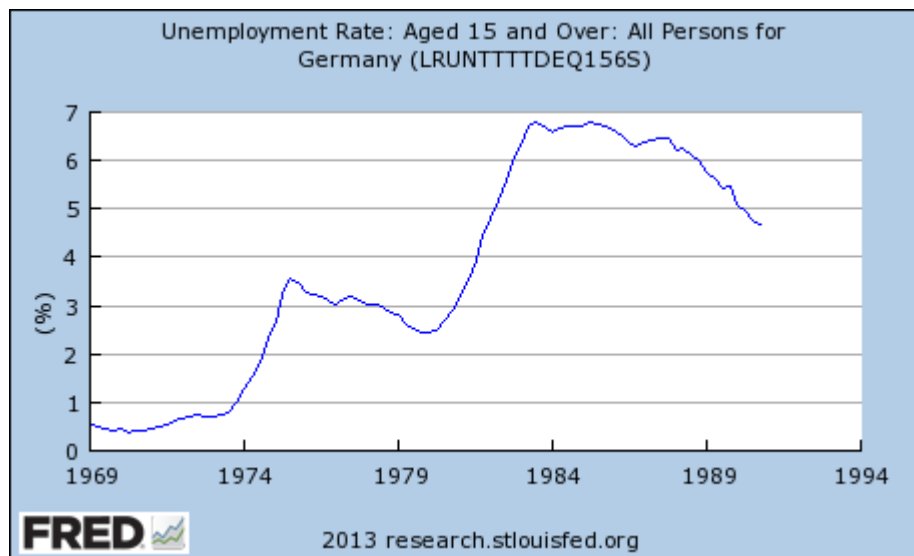

We have many examples in the recent past of this capacity to detach language from meaning...

(Bill Mitchell, ^œ[Full employment = mass idle labour - detaching language from meaning](#), *Billy Blog*, June 20, 2016)

One needs to be very careful about comparisons in unemployment rates in different periods. The definition of unemployment in the post-1980 period varies from the definitions used both earlier in the post WW2 period and in the 1920s and 30s. With that caution in mind, here is a US Bureau of Labor Statistics graph of unemployment rates between 1969 and 1989:

And the unemployment rate for Germany 1969-1990

See [US and International Unemployment Rates and Employment Indexes](#), *Federal Reserve Economic Data, St Louis*, for information on other regions.

Phineas Baxandall (*Constructing Unemployment: The Politics of Joblessness in East and West*. Hoboken, NJ, John Wiley & Sons, Inc., 2004) provides a detailed examination of the issues. As he explained:

The following pages are both an in-depth study of the reinvention of unemployment, as well as a broader inquiry into the politics of joblessness and the social construction of constraints on policy-making. The American and West European cases provide the original inspiration and insight for this analysis. ...

Unemployment is a socially-constructed benchmark for evaluating the competency of economic rule. In different places and in different times the category of "unemployment" has included different kinds of joblessness and excluded others. It has implied different kinds of commitments or accountability by the state.

New Meanings of unemployment are more than a byproduct of economic change. They are the result of changing politics and changing policy.

(2004, p. 4)

Jack Reardon has given a brief review of the book. As he says, Baxandall:

... argues that since its construction more than one hundred years ago, unemployment has been continuously re-conceptualized and redefined by governments-socialist and capitalist alike-to further their own interests. Although Baxandall concedes that "the basic definition of unemployment is almost universally accepted and standardized," it nevertheless obfuscates an understanding of the evolving nature of unemployment and prevents devising efficacious solutions.

(^œ[Defining unemployment...](#) *Monthly Labor Review Online*, July 2011, Vol. 134, No. 7)

For discussions on the problems of definition see:

- ^œ[Unemployment \(Wikipedia\)](#);
- ^œ[ILO Department of Statistics: Main statistics \(annual\) - Unemployment](#);
- ^œ[ILO-Comparable annual employment and unemployment estimates](#).

⁴⁹⁶ Robert Skidelsky has described the process:

...In our own time, the emigration of capital has led to the emigration of jobs, as technology transfer has made possible the reallocation of domestic production to foreign locations - thus compounding the potential for job losses.

The economist Thomas Palley sees the reallocation of production abroad as the distinguishing feature of the current phase of globalization. He calls it "barge economics." Factories float between countries to take advantage of lower costs. A legal and policy infrastructure has been built to support offshore production that is then imported to the capital-exporting country. Palley rightly sees offshoring as a deliberate policy of multinational corporations to weaken domestic labor and boost profits.

The ability of companies to allocate jobs globally changes the nature of the discussion about the "gains from trade." In fact, there are no longer guaranteed "gains," even in the long run, to those countries that export technology and jobs.

(Robert Skidelsky, ^œ[Protectionism for Liberals](#), *Project Syndicate*, Aug 14, 2018)

⁴⁹⁸ Michael Hudson (MH) explained the early 21st century consequences of all this in an interview with Ross Ashcroft (RA):

...[In 2008] The banks were saved, not the economy. Tim Geithner, who was a protégé of Robert Rubin, was moved on behalf of Citibank into the Treasury, and he bailed out the banks - [leaving all the debts in place](#), not writing them down. Banks stopped lending mortgage money, and began to call in their credit card loans by about 100 billion dollars, from one trillion to about 900 [billion]. Mortgages were not written off, so homeowners had to pay so much money to pay off the debts that had been built up during the bubble economy that they didn't have enough income left to buy goods and services.

RA: You make a distinction between the real economy and Wall Street or the financialized economy and when you say that the debt has built up since World War II, year on year. Are you're saying that

when the real economy can no longer service that debt, we have a financial crisis?

MH: That's when you have a crisis.

...It is inevitable. The magic of compound interest means that interest grows and the debt accumulates. When you [add in new money creation](#), debts grow faster than the economy at large. So the situation that existed in 2008 remains the case today: Debt in almost every country is equal to the entire GDP, the entire national income. Now, if debt is equal and the interest rate on debt that people have to pay is 4 percent, then if economies only grow at 1 or 2 percent (as they are today), then all their economic growth has to be devoted to paying the financial sector.

...On interest alone - not mentioning the repayments of principal to pay down the debt. This is the phenomenon of debt deflation that was discussed in the 1930s. It's a phenomenon that is inherent in the mathematics of compound interest. In fact, this should be the focus of the economic curriculum.

...If you're teaching economics, you should begin with the relationship between finance and the economy - between the buildup of debt and the ability to pay. That should be the starting point if you realize that the problem of our time is how can society cope with the debt buildup that has occurred. That is what is keeping the economy from recovering.

... I taught money in banking at the New School for Social Research in the 60s and 70s. Bob Heilbroner, the department chairman, wanted to conform to the mainstream and teach the Chicago School monetarism that treats the economy as if it operates on barter. If you look at almost any economic textbook, all the way through the Ph.D., they treat the economy as being barter. They then factor in money creation as if money ... directly affects prices proportionally - and claim that this doesn't change basic relationships, even between debtors and creditors.

This kind of tunnel vision led people to call the bubble economy's lead-up stage "the Great Moderation." It was a Great Moderation in the sense that the banks were able to lend homeowners and companies and [governments enough money](#) to pay the interest. There has been the [largest increase in credit creation in history](#) since 2008, with almost no increase in consumer prices or wages. All the money creation has gone to buy stocks and bonds into the financial sector.

RA: So just let's define the Great Moderation. Which years would you put the great moderation between?

MH: About 1995 to 2008. As Alan Greenspan explained it, he said that it was moderate because labour didn't complain. [Productivity was soaring and wage rates did not go up](#) in the American economy. He explained this before the Senate committee, as what has been called the "Traumatized Worker Effect." He said that workers are so deeply in debt that they're afraid to strike. They're afraid to complain about working conditions, because they could be walked out the door, and if they are fired, if they don't have a job, then suddenly the interest rates they pay on their credit cards go up to 29 percent. They're one month away from insolvency, one month

away from homelessness." So Greenspan said, in effect, "We've hooked them. We've got them."

RA: And his view is that's the optimum state for workers, why?

MH: Because that's what he calls a "free market." It's a free market where the 1% get to smash the 99% without any ability of the 99% to fight back. A free market in which people do what they're told. That is the opposite of what Adam Smith and John Stuart Mill and other classical economists meant by a free market. They meant a market free from rentiers, free from landlords, free from banks - so that where everybody got only what they deserved and produced. But under Greenspan and modern economics, a market is "free" from government regulation, free from throwing the bankers in jail when they commit crime, free from any kind of policymaking by government, by labor unions, or by society. So a free market today is a centrally planned economy, but it's not planned by government. The planning is shifted out of government to the banks.

(^œ[Michael Hudson: Economists' Deadly but Innocuous-Seeming Proclamations](#), Yves Smith, *Naked Capitalism*, December 10, 2016)

⁴⁹⁹ As Paul Roberts concludes:

...[D]uring the first decade of the 21st century "the US lost 54,621 factories, and manufacturing employment fell by 5 million employees. Over the decade, the number of larger factories (those employing 1,000 or more employees) declined by 40 percent. US factories employing 500-1,000 workers declined by 44 percent; those employing between 250-500 workers declined by 37 percent, and those employing between 100-250 workers shrunk by 30 percent. These losses are net of new start-ups. Not all the losses are due to offshoring. Some are the result of business failures"....

In other words, to put it in the most simple and clear terms, millions of Americans lost their middle class jobs not because China played unfairly, but because American corporations betrayed the American people and exported their jobs. "Making America great again" means dealing with these corporations, not with China. When Trump learns this, assuming anyone will tell him, will he back off China and take on the American global corporations?

(Paul Craig Roberts, ^œ[How Long Can The Federal Reserve Stave Off the Inevitable?](#) *Institute for Political Economy*, June 28, 2018)

⁵⁰⁰ James Mittleman described the 1980s-1990s scene:

In the early and mid-20th century, industrial organization in the USA and other Western countries centered on mass production and the assembly line staffed by semi-skilled workers who could easily be replaced.

In the last decades of the 20th century, the Fordist system of mass production and mass consumption has tended to give way to another structure. Post-Fordism entails a more flexible, fragmented and often geographically dispersed labor force. The new model is based on greater specialisation - batch production in small firms linked through dense networks and niche marketing.

Accompanying the movement from Fordism to post-Fordism is a shift from vertical integration of production to vertical disintegration, especially as enterprises seek to establish distinct niches ...

An integral part of this restructuring process is the weakening of trade unions based in the old Fordist industries. The strength of organized labor has clearly declined in the West, and workers are docile in some other regions, notably so in East Asia ...

Whereas capital is forming large unregulated markets, Labor is less capable of transnational reorganization. Capital is increasingly globalized, but Labor unions and the collective rights of workers still primarily delimit their reference point as the nation-state. The changing relations between capital and labor - the one clearly on the ascent and the other markedly defensive - are linked to the tension between the economic globalization trend and the Westphalian territorial mode of political organization.

(Mittleman 1994, pp. 283-4)

Michael Spence and Sandile Hlatshwayo (2011) have provided a description of employment trends in the US from 1990-2008. The growth in employment since the 1980s has come through an expansion in government-related services. As they explained, 'Government at all levels is the largest employer in the nontradable sector':

In the global economy, some goods and services trade internationally and some do not. The tradable sector consists of the goods and services that can be produced in one country and consumed in another, or, as in tourism or education, consumed by people from another country. The nontradable sector is the set that must be produced and consumed in the same country...

When a certain kind of activity declines in our economy, normally it does not just disappear from the global economy, but instead moves to another location. These powerful market forces operate directly on the tradable sector, and indirectly on the nontradable portion through wage and price effects and shifting opportunities in labor markets...

Between 1990 and 2008, jobs have seen a net increase of 27.3 million on a base of 121.9 million in 1990...

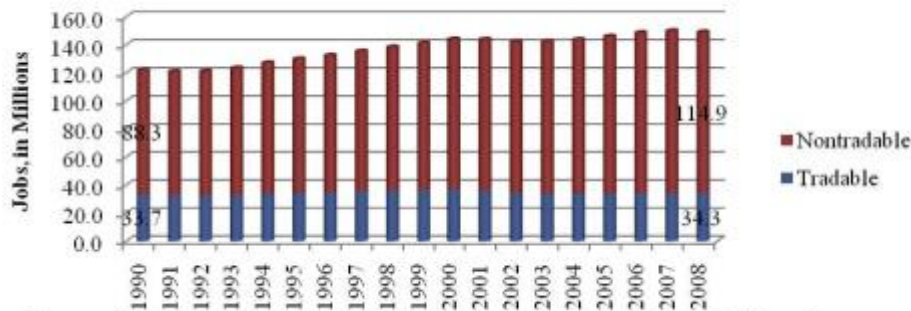

Almost all of those incremental jobs (26.7 of 27.3 million) were created in the nontradable sector. In the aggregate, tradable sector employment growth was essentially flat: some industries grew and others declined. Within the period considered, employment rose for about a decade and then fell back to its 1990 starting level. As is clear in figure 4, the nontradable sector is large, and, in terms of share of total employment, became larger over time...

The large nontradable sectors are government, health care, retail, accommodation/food service (i.e., hotels, restaurants, and hospitality), and construction (see figure 6). In 2008, these accounted for 73.5 million jobs, 64 percent of employment in the nontradable sector and just under 50 percent in the whole economy. Together, the top five nontradable sectors contributed 65 percent of the total increment in jobs from 1990 to 2008.

Government at all levels is the largest employer in the nontradable sector and accounts for more than 22.5 million jobs in 2008. Health care is a close second, with an end of period total of 16.3 million. In terms of increments, health care's growth of 6.3 million jobs tops the list and the government's addition of 4.1 million comes in second. These two increments combined produced almost 40

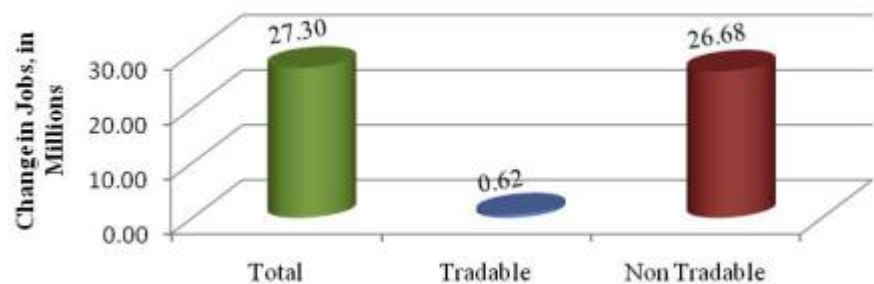

percent of the total net incremental employment in the economy since 1990.

(Michael Spence and Sandile Hlatshwayo, ^{oe}[The Evolving Structure of the American Economy and the Employment Challenge](#), Working Paper 13, The Council on Foreign Relations, March 2011, pp. 9, 12-13)

⁵⁰¹ Josh Bivens has explained how job losses through both automation and globalization proliferate through communities and why workers oppose trade agreements:

In textbook trade models, using policy levers (lower tariffs, for example) to boost trade with poorer countries will indeed cause total national income in the United States to rise. But these same textbooks also predict that the resulting expansion of trade will redistribute far more income than it creates. And the direction of this redistribution is upward. So it is perfectly possible to have policy efforts to expand trade lead to higher national income yet leave the majority of workers worse off. Importantly, the losers in these textbook models are not just workers directly displaced by imports - they're all the workers in the entire economy who resemble the trade-displaced in terms of education and credentials.

To put it simply, landscapers might not lose their jobs to rising imports, but their wages are hurt if they have to compete for jobs with workers who were laid-off from apparel factories as imports

replaced domestic clothing. In the end, for many trade flows (particularly, say, trade flows between the United States and countries like Mexico and China) the common formulation is exactly backwards. The losers are the majority of American workers who still lack a 4-year college degree, while the winners are the minority of workers who do have these degrees.

In the NPR story, Arnold and MIT's David Autor provide some intuition behind the effects of trade. Their example has two countries (France and the United States) and two goods (cars and cheese). What it's missing is two kinds of workers - those with and those without substantial human capital (think a 4-year college degree). After all, if there is only one kind of worker, then worrying about redistribution makes no sense. With two kinds of workers, the intuition gets clearer.

Take another example, one that swaps out cars and cheese for two goods that will sharpen the intuition a bit. In this example, the United States produces and exports more human capital-intensive goods (say airplanes) and imports more labor-intensive goods (say apparel). By focusing on what we're relatively better at producing (capital-intensive airplanes) and trading this extra output for what our trading partners are relatively better at producing (labor-intensive apparel), we can see total national incomes rise in both countries. This specialization in the United States requires shifting resources (i.e., workers and capital) out of apparel production and into airplane production. But each \$1 in apparel production lost requires more labor and less capital than the \$1 in airplane production gained - causing an excess supply of labor and an excess demand for capital. Capital's return rises while labor's wage falls.

What's particularly striking in so many of these trade-explainer articles are the claims that wage pressures stemming from policy efforts to expand trade are some huge surprise. They shouldn't be - again, textbook economics says clearly that the likely outcome of efforts to expand trade with lower-wage nations should be a redistribution of income to highly credentialed workers from the rest...

(Josh Bivens, ["It's not a puzzle if American workers oppose trade agreements"](#), *Economic Policy Institute*, Working Economics Blog, April 19, 2016)

⁵⁰²_(09/04/17) Didem Tüzemen and Jonathan Willis have discussed job polarization in the US. As they say,

Over the past three decades, the share of middle-skill jobs in the United States has fallen sharply. Middle-skill jobs are those in which workers primarily perform routine tasks that are procedural and repetitive. The decline in the employment share of middle-skill jobs has been associated with a number of sweeping changes affecting the economy, including advancement of technology, outsourcing of jobs overseas, and contractions that have occurred in manufacturing. As the share of middle-skill jobs has shrunk, the share of high-skill jobs has grown, and that trend has drawn considerable attention. Less well known is the fact that the share of low-skill jobs has also risen. This employment phenomenon where job opportunities have shifted away from middle-skill jobs toward high- and low-skill jobs is called "job polarization."

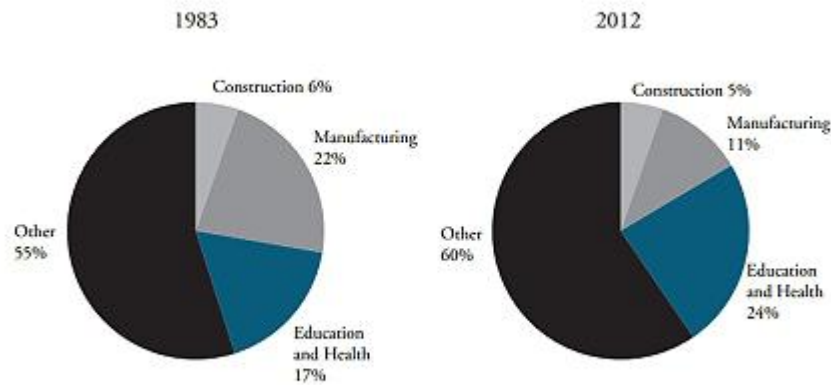

(["The Vanishing Middle: Job Polarization and Workers' Response to](#)

the Decline in Middle-Skill Jobs (*Economic Review*, Federal Reserve Bank of Kansas City, First Quarter 2013 pp. 5-32))

They provide graphic illustration of the changes:

Chart 3

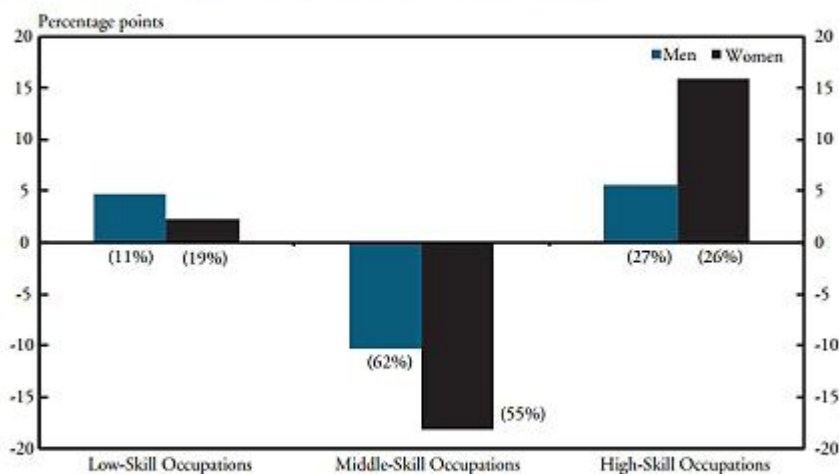

EMPLOYMENT SHARES BY SECTOR

Note: Data are restricted to workers ages 16 to 64 who are not self-employed and are not employed in military or agricultural occupations.
Source: Current Population Survey and authors' calculations.

Chart 5

CHANGES IN EMPLOYMENT SHARES BY SKILL LEVEL AND GENDER BETWEEN 1983 AND 2012

Note: The chart reports the percentage point change in the employment share for each skill group, where employment shares are computed separately for each respective gender. Data are restricted to workers ages 16 to 64 who are not self-employed and are not employed in military or agricultural occupations. For each group, the employment share in 1983 is shown in parentheses.
Source: Current Population Survey and authors' calculations.

Nir Jaimovich and Henry Siu (2012) examined the relationship between job polarization and jobless recoveries. As they explained:

In the past 30 years, the US labor market has seen the emergence of two new phenomena: "job polarization" and "jobless recoveries." Job polarization refers to the increasing concentration of employment in the highest- and lowest-wage occupations, as job opportunities in middle-skill occupations disappear. Jobless recoveries refer to periods following recessions in which rebounds in aggregate output are accompanied by much slower recoveries in aggregate employment. We argue that these two phenomena are related.

(⁹⁸The Trend is the Cycle: Job Polarization and Jobless Recoveries, Federal Reserve Bank, St Louis, August 14, 2012)

A Pew Research Center report entitled *Digital Life in 2025: AI, Robotics, and the Future of Jobs* focused on "advances in artificial intelligence (AI)

and robotics, and their impact on jobs and employment". Their summary:

Key Findings

The vast majority of respondents to the 2014 Future of the Internet canvassing anticipate that robotics and artificial intelligence will permeate wide segments of daily life by 2025, with huge implications for a range of industries such as health care, transport and logistics, customer service, and home maintenance. But even as they are largely consistent in their predictions for the evolution of technology itself, they are deeply divided on how advances in AI and robotics will impact the economic and employment picture over the next decade.

We call this a canvassing because it is not a representative, randomized survey. Its findings emerge from an "opt in" invitation to experts who have been identified by researching those who are widely quoted as technology builders and analysts and those who have made insightful predictions to our previous queries about the future of the Internet. (For more details, please see the section "About this Canvassing of Experts.")

Key themes: reasons to be hopeful

1. Advances in technology may displace certain types of work, but historically they have been a net creator of jobs.
2. We will adapt to these changes by inventing entirely new types of work, and by taking advantage of uniquely human capabilities.
3. Technology will free us from day-to-day drudgery, and allow us to define our relationship with "work" in a more positive and socially beneficial way.
4. Ultimately, we as a society control our own destiny through the choices we make.

Key themes: reasons to be concerned

1. Impacts from automation have thus far impacted mostly blue-collar employment; the coming wave of innovation threatens to upend white-collar work as well.
2. Certain highly-skilled workers will succeed wildly in this new environment-but far more may be displaced into lower paying service industry jobs at best, or permanent unemployment at worst.
3. Our educational system is not adequately preparing us for work of the future, and our political and economic institutions are poorly equipped to handle these hard choices.

(Pew Research Center, August 2014, "AI, Robotics, and the Future of Jobs" Available at:

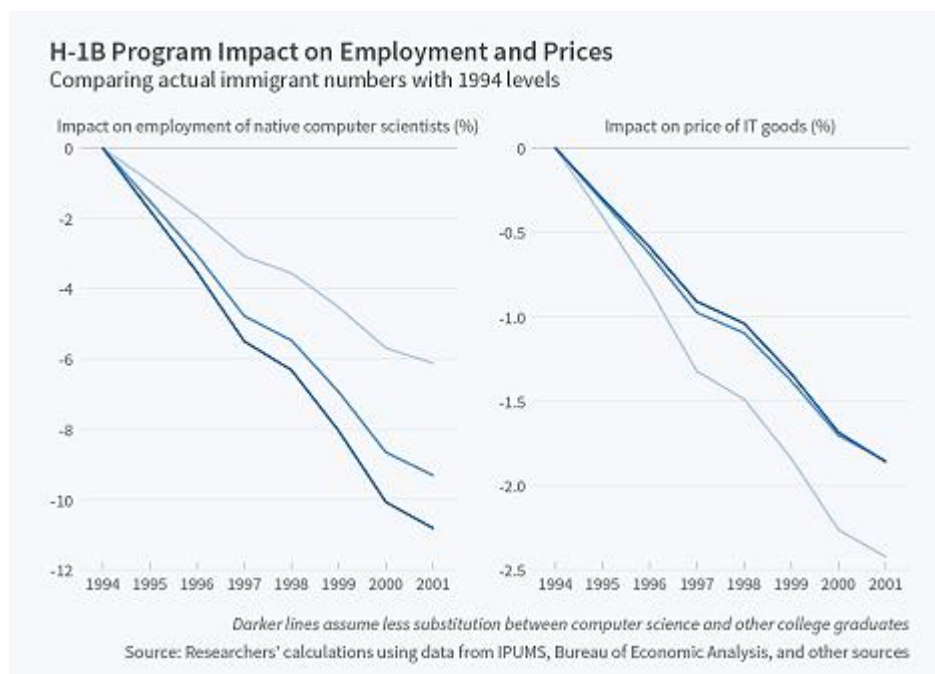

<http://www.pewinternet.org/2014/08/06/future-of-jobs/>)

It is easy to forget that a change in the percentage of high-skill jobs does not necessarily equate with increased remuneration. The most striking aspects of this shift have been that:

- as skill requirements have increased, relatively high-skill jobs have become more numerous;
- increasing numbers of people have been urged to 're-skill' to take advantage of this shift;
- 'Skilled Worker' immigration and 'non-immigrant temporary foreign worker' schemes have proliferated;
- and wage rates for such jobs have come under increasing pressure.

Steve Maas has summarized an NBER Working Paper examination of the 'Winners and Losers from the US H-1B Visa Program':

Who are the winners and losers in the special visa program that enables U.S. companies to employ high-skilled foreign workers on a temporary basis in specialized occupations? In *Understanding the Economic Impact of the H-1B Program on the U.S.* (NBER Working Paper No. 23153 [February 2017]), John Bound, Gaurav Khanna, and Nicolas Morales explore how the availability of such workers has affected the welfare of domestic workers, firms, and consumers.

Based on their model, the researchers calculate that the influx of foreign-born computer scientists enabled by the H-1B program had a positive effect on the U.S. IT sector, and consequently the U.S. economy, but had significant distributional effects. They estimate that absent the influx of foreigners, U.S. computer scientists would have earned between 2.6 and 5.1 percent more in 2001.

Moreover, some U.S. workers switched to other occupations, lowering the number of domestic computer scientists by between 6 and 11 percent. The picture is brighter in other respects: Foreign scientists were found to be strong contributors to innovation and productivity. That translated into wage and job gains in related fields, and into more choice and lower prices for consumers. The research focuses on the Internet boom years, when workers in computer-related occupations became the largest share of H-1B visa holders.

(Steve Maas, ^{oe}[Winners and Losers from the H-1B Visa Program](#), *NBER Digest*, April 2017)

Julia Preston, in a *New York Times* Op Ed described the process. As she explains,

... about 250 Disney employees were told in late October that they would be laid off. Many of their jobs were transferred to immigrants on temporary visas for highly skilled technical workers, who were brought in by an outsourcing firm based in India. Over the next three months, some Disney employees were required to train their replacements to do the jobs they had lost.

"I just couldn't believe they could fly people in to sit at our desks and take over our jobs exactly," said one former worker, an American in his 40s who remains unemployed since his last day at Disney on Jan. 30. "It was so humiliating to train somebody else to take over your job. I still can't grasp it."...

... the layoffs at Disney and at other companies, including the Southern California Edison power utility, are raising new questions about how businesses and outsourcing companies are using the temporary visas, known as H-1B, to place immigrants in technology jobs in the United States. These visas are at the center of a fierce debate in Congress over whether they complement American workers or displace them.

According to federal guidelines, the visas are intended for foreigners with advanced science or computer skills to fill discrete positions when American workers with those skills cannot be found. Their use, the guidelines say, should not "adversely affect the wages and working conditions" of Americans. Because of legal loopholes, however, in practice, companies do not have to recruit American workers first or guarantee that Americans will not be displaced.

Too often, critics say, the visas are being used to bring in immigrants to do the work of Americans for less money, with laid-off American workers having to train their replacements.

"The program has created a highly lucrative business model of bringing in cheaper H-1B workers to substitute for Americans," said Ronil Hira, a professor of public policy at Howard University who studies visa programs and has testified before Congress about H-1B visas...

(Julia Preston, [Pink Slips at Disney. But First, Training Foreign Replacements](#), *New York Times*, June 3, 2015)

Ronil Hira, in a hearing before The Judiciary Committee, U.S. Senate, March 17, 2015, summarized the problem in the US (replicated in many high-wage regions around the world) in a paper entitled [Immigration Reforms Needed to Protect Skilled American Workers](#):

Congress and multiple Administrations have inadvertently created a highly lucrative business model of bringing in cheaper H-1B workers to substitute for Americans. There are mainframesized loopholes built into the H-1B program's design - the statutory law, regulations, administrative law, and policy guidance - and a complete disinterest on the part of multiple Administrations in enforcing the current rules, however weak they may be. Some of these loopholes are intentional, some are not, but they all add up to a system that encourages employers to exploit the H-1B program for cheap labor. Given the extraordinarily high profits involved in using guestworkers instead of Americans, it should surprise no one

that many employers are taking advantage of this business model and lobbying to expand it.

Daniel Costa and Ron Hira expanded on this theme in a blog entry on the consequences of "TiSA: A Secret Trade Agreement That Will Usurp America's Authority to Make Immigration Policy":

... the competitive advantage foreign companies will get from TiSA is the ability to provide cheaper services by importing much cheaper labor to supplant American workers. They'll do this by paying their workers the much lower salaries they would earn in their home countries (as they often already do in the L-1 and B-1 visa programs), and the United States might even be prohibited in future from imposing minimum or prevailing wage standards (at present, neither the L-1 or B-1 visa program has a minimum or prevailing wage rule).

('œTiSA: A Secret Trade Agreement That Will Usurp America's Authority to Make Immigration Policy ' (*Economic Policy Institute*, Working Economics Blog, Posted June 11, 2015))

As [Jefferson described](#) for the early 19th century:

... those of great dexterity only can keep their ground, while those of less must sink into the class of paupers. Nor is it manual dexterity alone, but the acutest resources of the mind also which are impressed into this struggle for life; and such as have means a little above the rest, as the master-workmen, for instance, must strengthen themselves by acquiring as much of the philosophy of their trade as will enable them to compete with their rivals, and keep themselves above ground

Hence the industry and manual dexterity of [England's] journeymen and day-laborers, and the science of their master-workmen, keep them in the foremost ranks of competition with those of other nations...

See [Adam Davidson](#) (*New York Times*, November 20, 2012), 'œIt's the Economy: Skills Don't Pay the Bills for a picture of the downward pressure on skilled wages and conditions in the US in the first decade and more of the 21st century.

Paul Beaudry, David Green and Ben Sand (2013) have explored rather different forces at work in the US since 2000. As they explain:

...we argue that in about the year 2000, the demand for skill (or, more specifically, for cognitive tasks often associated with high educational skill) underwent a reversal. Many researchers have documented a strong, ongoing increase in the demand for skills in the decades leading up to 2000. In this paper, we document a decline in that demand in the years since 2000, even as the supply of high education workers continues to grow. We go on to show that, in response to this demand reversal, high-skilled workers have moved down the occupational ladder and have begun to perform jobs traditionally performed by lower-skilled workers. This deskilling process, in turn, results in high-skilled workers pushing low-skilled workers even further down the occupational ladder and, to some degree, out of the labor force all together.

(Paul Beaudry, David A. Green, Benjamin M. Sand, 'œThe Great Reversal in the Demand for Skill and Cognitive Tasks, NBER Working Paper No. 18901, Issued in March 2013, updated November 2013)

503 While Just-in-Time organizational processes might superficially appear benign, they rely not only on the minimization of material inventories but also on the manipulation of employees' work times and durations. Employees become cogs in an industrial complex which makes little distinction between the manipulation of employees and other 'production inputs'. As a report by Lambert, Henly and Haley-Lock (2010) explains,

Hourly workers - the majority of the wage and salary workforce - are especially susceptible to reduced, irregular and fluctuating hours, and the myriad of challenges associated with them.
(see [Hourly Workers](#) for more on this).

David Wessel (*Wall Street Journal* July 27, 2011) put it succinctly:

Over the past 10 years:

- The U.S. economy's output of goods and services has expanded 19%.
- Nonfinancial corporate profits have risen 85%.
- The labor force has grown by 10.1 million.
- But the number of private-sector jobs has fallen by nearly two million.
- And the percentage of American adults at work has dropped to 58.2%, a low not seen since 1983.

What's wrong with the American job engine? As United Technologies Corp. Chief Financial Officer Greg Hayes put it recently: "Sales have come back, but people have not."

That's largely because the economy is growing much too slowly to absorb the available work force, and industries that usually hire early in a recovery - construction and small businesses - were crippled by the credit bust.

Then there's the confidence factor. If employers were sure they could sell more, they would hire more. If they were less uncertain about everything from the durability of the recovery to the details of regulation, they would be more inclined to step up their hiring.

Something else is going on, too, a phenomenon that predates the recession and has persisted through it: Changes in the way the job market works and how employers view labor.

Executives call it "structural cost reduction" or "flexibility."

Northwestern University economist Robert Gordon calls it the rise of "the disposable worker," shorthand for a push by businesses to cut labor costs wherever they can, to an almost unprecedented degree. ([What's Wrong With America's Job Engine? Wary Companies Rely on Temps, Part-Timers, Hire Overseas](#), *Wall Street Journal* July 27, 2011)

Cesar Perez and Alix Gould-Werth spell out the 2019 conditions endured by US retail and food workers in a paper entitled 'How U.S. workers' just-in-time schedules perpetuate racial and ethnic inequality':

In an attempt to minimize labor costs, employers in today's U.S. economy saddle workers with last-minute and low-quality schedules. These schedules, sometimes referred to as "just-in-time schedules," are unpredictable, unstable, and often provide workers with an insufficient number of hours. Today, sociologists Kristen

Harknett at the University of California, San Francisco and Daniel Schneider at the University of California, Berkeley released ^œ[new analyses](#) drawing from surveys with 30,000 retail and food workers at 120 of the largest retail and food service companies in the United States to show who suffers from these schedules, and how. (Cesar Perez and Alix Gould-Werth, ^œ[How U.S. workers' just-in-time schedules perpetuate racial and ethnic inequality](#), *Washington Center for Equitable Growth*, October 16, 2019)

504 In the early 21st century, the process has become refined. Dan Lyons has described conditions at a software company at which he was employed:

At HubSpot, the software company where I worked for almost two years, when you got fired, it was called "graduation." We all would get a cheery email from the boss saying, "Team, just letting you know that X has graduated and we're all excited to see how she uses her superpowers in her next big adventure." One day this happened to a friend of mine. She was 35, had been with the company for four years, and was told without explanation by her 28-year-old manager that she had two weeks to get out. On her last day, that manager organized a farewell party for her.

It was surreal, and cruel, but everyone at HubSpot acted as if this were perfectly normal. We were told we were "rock stars" who were "inspiring people" and "changing the world," but in truth we were disposable.

Many tech companies are proud of this kind of culture. [Amazon keeps getting called out](#) for its bruising environment, most notably in a ^œ[long exposé](#) in this newspaper last year. On Tuesday, Jeff Bezos, the founder of Amazon, said that people who didn't like the company's grueling environment were free to work elsewhere. "We never claim that our approach is the right one - just that it's ours - and over the last two decades, we've assembled a group of like-minded people," he wrote in ^œ[a letter to shareholders](#).

Some viewed the statement as a sign that Mr. Bezos at least seems to recognize that it's not normal for employees to cry at their desks. But it was also a defiant message that he had no intention of letting up.

(Dan Lyons, ^œ[Congratulations! You've Been Fired](#), *New York Times*, Sunday Review, April 9, 2016)

505 Davidson gives a clear description of a few of the pressures being brought to bear on skilled employment in this new 'flexible' world of stripped-down, ultimately self-defeating, profiteering. As he explains of the apparent 'skills shortage' of the early 21st century:

The secret behind this skills gap is that it's not a skills gap at all. I spoke to several other factory managers who also confessed that they had a hard time recruiting in-demand workers for \$10-an-hour jobs. "It's hard not to break out laughing," says Mark Price, a labor economist at the Keystone Research Center, referring to manufacturers complaining about the shortage of skilled workers. "If there's a skill shortage, there has to be rises in wages," he says. "It's basic economics." After all, according to supply and demand, a shortage of workers with valuable skills should push wages up. Yet according to the Bureau of Labor Statistics, the number of skilled jobs has fallen and so have their wages.

In a recent study, the Boston Consulting Group noted that, outside a few small cities that rely on the oil industry, there weren't many places where manufacturing wages were going up and employers still couldn't find enough workers. "Trying to hire high-skilled workers at rock-bottom rates," the Boston Group study asserted, "is not a skills gap."

The study's conclusion, however, was scarier. Many skilled workers have simply chosen to apply their skills elsewhere rather than work for less, and few young people choose to invest in training for jobs that pay fast-food wages. As a result, the United States may soon have a hard time competing in the global economy. The average age of a highly skilled factory worker in the U.S. is now 56. "That's average," says Hal Sirkin, the lead author of the study. "That means there's a lot who are in their 60s. They're going to retire soon." And there are not enough trainees in the pipeline, he said, to replace them.

(Adam Davidson, ["Skills Don't Pay the Bills"](#) (*New York Times*, November 20th 2012))

⁵⁰⁶ As the Alberta Labor Report explained:

Increasing use of temporary workers has been a major change in the workplace. Temporary workers may be hired on a contract, through a temporary agency or they may be placed on a company's payroll.

They are different from other employees in that companies make no commitment to these employees; they are expendable. This 'contingent workforce' includes part-time employees, temps, contract employees and freelancers.

Traditionally temporary workers filled mainly low-skilled jobs; these days skilled technical, professional and executive positions may also be filled on a temporary basis. Many sources estimate that 20 to 25 per cent of the U.S. workforce are contingent workers. The Canadian situation is similar. Most predict that this trend towards relying on temporary workers will grow, forecasting that up to one half of all workers could be employed on this basis by the year 2000.

The largest private employer in the U.S., by number of employees, is Manpower Inc. with 500,000 workers. Manpower Inc. supplies other companies with temporary workers. Several factors have contributed to this significant change in human relations practices.

A key factor is the corporate downsizing of the past ten years. Many companies including blue chip firms have laid off staff. Some companies have had several rounds of layoffs. Even as business improves companies remain reluctant to hire on more employees in case the recovery is temporary. For some companies it makes more sense to operate with a core group of regular employees whose skills are critical to the business, and then expand and contract the work force as needed.

(Alberta Labor 1994, pp.3-4)

⁵⁰⁷ In 2015, the growth of 'digital job platforms' has led to an exponential growth in the 'contingent workforce'. Laura Tyson and Lenny Mendonca have explained:

...[D]igital platforms are emerging, linking workers with customers or companies for specific tasks or services. Such platforms play a growing role in the market for "contingent" or "on-demand" workers, broadly defined as workers whose jobs are temporary and who do not have standard part-time or full-time contracts with employers. Well-known digital platforms that link contingent workers directly to customers include Lyft, TaskRabbit, Uber, and Angie's List. Freelancer.com and Upwork are examples of platforms that help companies find and hire contingent workers for a range of specialized tasks such as software or website development. Freelancer.com has more than 17 million users worldwide.

The trouble is that even as these sites provide new opportunities for workers and companies, they are bypassing the traditional channels through which the US and many countries deliver benefits and protections to their workforce. In the US, in particular, the "social contract" has long relied on employers to deliver unemployment insurance, disability insurance, pensions and retirement plans, worker's compensation for job-related injuries, paid time off, and protections under the Fair Labor Standards Act. Although the Affordable Care Act has made it easier for workers to acquire health insurance on their own, most workers continue to receive health insurance through their employers

With the proliferation of digital job platforms, the social safety net for workers in the US - threadbare to begin with - is at risk of unraveling for a growing share of the workforce. This is because most individuals who find work through digital job platforms operate as independent contractors, leaving them without the benefits and protections provided in standard employment contracts for full-time and part-time workers. The difference between the cost of a full-time employee with benefits and an independent contractor can be 30% or more, so there is a strong incentive for companies to replace workers on standard full-time employment contracts with independent contractors as long as companies can attract the talent they need.

Digital job platforms also make it easier for businesses to hire and fire workers on temporary contingent contracts. This creates the potential for a race to the bottom, with employers competing on labor costs through regulatory arbitrage.

(Laura Tyson and Lenny Mendonca, ^œ[Worker Protection in the Gig Economy](#), *Project Syndicate*, November 28, 2015)

Erin Hatton (^œ[The Rise of the Permanent Temp Economy](#), *New York Times*, January 26, 2013) explained the problem at the start of 2013:

Politicians across the political spectrum herald "job creation," but frightfully few of them talk about what kinds of jobs are being created. Yet this clearly matters: According to the Census Bureau, one-third of adults who live in poverty are working but do not earn enough to support themselves and their families.

A quarter of jobs in America pay below the federal poverty line for a family of four (\$23,050). Not only are many jobs low-wage, they are also temporary and insecure. Over the last three years, the temp industry added more jobs in the United States than any other, according to the American Staffing Association, the trade group representing temp recruitment agencies, outsourcing specialists and the like.

Low-wage, temporary jobs have become so widespread that they threaten to become the norm. But for some reason this isn't causing a scandal. At least in the business press, we are more likely to hear plaudits for "lean and mean" companies than angst about the changing nature of work for ordinary Americans.

... By peddling products like the "Semi-Permanent Employee," the "Never-Never Girl" and more, temp industry leaders promoted a model in which permanent employees were a "costly burden," a "headache" that needed relief. "Stop paying help you don't use," Western Services advised in 1969. It even urged employers to convert their own permanent employees to temps, as in a 1971 advertisement in *The Personnel Journal*: "Just say goodbye... then shift them to our payroll and say hello again!"

According to the temp industry, workers were just another capital investment; only the product of the labor had any value. The workers themselves were expendable.

The following is one of dozens of similar explanations of the activities of businesses which manage the contingent workforce requirements of other companies:

Procuring and managing your contingent workforce (temporary workers, contractors and consultants) needn't be costly and time consuming.

In this increasingly complex and regulated world, some things seem daunting. ...We have been designing, deploying and managing complex multi-location, multi-geography, multi-worker category, Contingent Workforce Sourcing & Management Programmes for over a decade.

Our approach

It might not be surprising to learn that AMS solutions are ever-evolving and are bespoke for each client, carefully taking into consideration your short, medium and long term needs and desired outcomes.

For some it's a one-off health-check to assess and assure their existing model, recommending changes and highlighting areas of risk. For others, it's a multi-geographic, online enablement of their entire non-permanent workforce, introducing visibility, control, efficiency where required and regulatory compliance for peace of mind.

To compliment our bespoke approach there are some elements we never ever compromise on - risk and compliance are at the core of those.

Our approach to tenure management, co-employment risks, contractual protection for our clients and workers, liability and insurance levels, legislative compliance, background checking and screening is unwavering.

These elements are core to our proposition, are shared between our clients and via AMS's network of Global Customer Service centers, are replicable and repeatable which delivers certainty and assurance to all AMS's clients

(^{oe}[Alexander Mann Solutions](#))

⁵⁰⁸ Jonas Prising (Chairman and CEO of *ManpowerGroup*), is a prominent player in the management of corporate contingent workforce

requirements worldwide. In the lead-up to the Davos *World Economic Forum Annual Meeting* (20-23 January 2016, Davos-Klosters, Switzerland), he has given an optimistic summation of where this has led the world in the past four decades.

...Rather than attempting to hang on to a job for life, the goal today is to remain employable - to develop the skills, experience, and expertise necessary to move on or up, regardless of the employer.

As a result, [wages and opportunities are increasingly being dictated by skills](#), rather than tenure. Those with sought-after talents have more bargaining power, are better able to manage their careers, and command higher salaries. [Those without in-demand skills are struggling and feel disposable](#).

So far, this abundance of choice has discouraged companies from spending resources on training employees, who might, after all, soon decide to join a competitor. However, as talent shortages loom, the need to retain employees could tip the balance back toward greater investment in professional development. Employers that provide learning opportunities will become a destination for talent.

The third trend reshaping labor markets is rapid technological change. Few industries are safe from disruption. Automation, facilitated by better artificial intelligence, is poised to have a major impact on jobs. Up to 47% of the jobs that existed in the US in 2010 are highly likely to be computerized out of existence in the next two decades. If history is a guide, new industries and opportunities will replace those that are lost; nonetheless, the transition will be painful and could last decades.

And yet, there is reason for optimism. Even as technology sweeps away industries, it is facilitating the emergence of new models that could help solve some of the problems in the labor market.

PricewaterhouseCoopers estimates that the five main sectors of [the sharing economy](#) - peer-to-peer finance, online staffing, peer-to-peer accommodation, car sharing, and music video streaming - could grow from around \$15 billion in revenue today to \$335 billion by 2025. To be sure, the industry is small. But it has nonetheless unleashed a torrent of creativity focused on the basic question of how better to align supply and demand for labor in a faster-paced world.

A fourth global trend evident in today's labor market is the rapid embrace among technologically sophisticated employers of data-based approaches to human resources. Talent management has gone from being an art to a science, as organizations have applied big data and supply-chain techniques to recruiting and retention. With the proliferation of so-called people analytics - behavioral and intelligence tests, digital performance scorecards, and better information systems - companies know their workers like never before. It is easier to see where the best talent resides within a company, or where the gaps might be.

Companies are using these data to think more strategically about how to source talent. For example, given the difficulty of staying up to speed with changing technology, firms are increasingly outsourcing information-technology management to third-party experts. This, in turn, creates new efficiencies, allowing cyber-security providers to monitor attacks against a wide range of clients

and share strategies and solutions. Recruitment is another area in which companies are turning to outsourcing in order to obtain expertise and increase efficiency.
(Jonas Prising, ^œ[Reshaping the Labor Landscape](#), *Project Syndicate*, January 18, 2016)

As one of the commenters on the article has said:

A very nice analysis. But this column reflects the vision of Davos people. The working people (non Davos) could be selected, "reshaped", worked over, finished and polished and put in the exact place in the mechanisms which produce enrichment of the Davos people. The Romans used to call slaves ...talking tools. Today Davos people call modern slaves thinking tools.
(portocala mechanica, JAN 18, 2016)

⁵⁰⁹ I first became acutely aware of this problem in the late 1980s. I was sitting at the hospital bedside of a friend who was dying of cancer. On the other side of the bed sat a workmate of his from the Ford Motors automotive plant (since closed and moved to East Asia). Our friend was drifting in and out of consciousness as a large dose of morphine took effect.

More for something to fill the silence than anything, I asked him whether he was working any overtime. He replied that he was but that it was unpaid work. When I asked why he would do this, he replied that he was worried about losing his job and believed that if he could show himself committed to the company he would be less likely to be 'let-go' at the next downturn in the economy.

Twenty years earlier, no union would have allowed this to happen. By the late 1980s, with their authority seriously undermined and in the face of threats of plant closure, they were powerless to do anything about it.

As Miana, González-Morales *et al* (2011) explained,

Insecurity at work is directly and negatively linked to satisfaction in work and life, as well as affecting performance and commitment....the feeling that one is going to lose their job worsens satisfaction levels in other areas of life, such as family, health, financial circumstances and the work-free time balance.

As the fear of unemployment increases "the level of work insecurity rises, people are less satisfied with their personal, work and family lives and they are less committed to their work"

(Beatriz Sora Miana, M. Gloria González-Morales, Amparo Caballer y José M. Peiró. "Consequences of Job Insecurity and the Moderator Role of Occupational Group". *The Spanish Journal of Psychology*. 2011. 14, (2), 820-831 - Here is a *EurekaAlert* (23-Feb-2012) summary of the findings: [Fear of job loss causes dissatisfaction and a lack of commitment at work](#))

⁵¹⁰ This form of surveillance, of course, is merely a 21st century upgrading of Jeremy Bentham's (1748-1832) pernicious plans for a panopticon. As a ^œ[CARTOME description](#) puts it:

The Panopticon ("all-seeing") functioned as a round-the-clock surveillance machine. Its design ensured that no prisoner could ever see the 'inspector' who conducted surveillance from the privileged central location within the radial configuration. The prisoner could never know when he was being surveilled - mental uncertainty that in itself would prove to be a crucial instrument of discipline.

To quote Bentham himself from a "series letters written in the year 1787, from Crecheff in White Russia to a friend in England". The Panopticon was:

A new mode of obtaining power of mind over mind, in a quantity hitherto without example:... No matter how different, or even opposite the purpose... whether it be applied to the purposes of perpetual prisons in the room of death, or prisons for confinement before trial, or penitentiary-houses, or houses of correction, or work-houses, or manufactories, or mad-houses, or hospitals, or schools.

It is obvious that, in all these instances, the more constantly the persons to be inspected are under the eyes of the persons who should inspect them, the more perfectly will the purpose X of the establishment have been attained. Ideal perfection, if that were the object, would require that each person should actually be in that predicament, during every instant of time. This being impossible, the next thing to be wished for is, that, at every instant, seeing reason to believe as much, and not being able to satisfy himself to the contrary, he should conceive himself to be so.

(Bentham, Jeremy, ^{ae}*The Panopticon Writings*. Ed. Miran Bozovic (London: Verso, 1995). p. 29-95)

In such a climate, as Sewell and Wilkinson described of a British factory in the early 1990s:

... the operators at Kay work in the knowledge that their basic work activity is subject to constant scrutiny, a factor which, when combined with the certainty of immediate public humiliation which will accompany the exposure of their divergences, invokes a powerful disciplinary force ...

Up to the point when a member finally absents themselves [sic] from the shop floor at Kay they are, at least tacitly, acceding to being constantly subjected to close surveillance of an *Electronic Panopticon* which has the ability to penetrate to the very core of an individual's work activities, providing a mechanism of *Power/Knowledge* which can bring out the minutest distinctions between individuals.

Thus, in attending work, members simultaneously submit themselves to 'the direction of their tasks, their nature, method, pace and quality of work [by management] ... [and] a system of worker evaluation, punishment and reward'.

(Sewell & Wilkinson 1992, pp. 283-4, 287)

New technologies have given employers increasingly sophisticated surveillance tools through the 21st century. Hannah Kuchler (2014) has sketched the direction in which surveillance techniques are moving:

...More than half of human resources departments around the world report an increase in the use of data analytics compared with three years ago, according to a recent survey by the Economist Intelligence Unit. But many employees are still blissfully unaware of how information they may deem private is being analysed by their managers.

For its part, Evolv analyses more than half a billion "employee data points" from across 13 countries, seeking to identify patterns across companies and industries. These data points range from how often

employees interact with their supervisor to how long it takes a worker to get to the office.

Evolv's clients use them to help guide their hiring decisions, as well as to evaluate an employee's performance throughout his or her career.

The company has so far focused on customer-facing industries such as retailers and call centres. One client is Kelly, an employment agency. It says it has seen a 7 per cent improvement in employee efficiency across the board by incorporating Evolv's insights into its hiring policy.

(Hannah Kuchler, ^œ[Data pioneers watching us work](#), *Financial Times* /Management, February 17, 2014)

Simon Head has sketched staff management practices at Amazon's center at Rugeley, England in 2014:

In a fine piece of investigative reporting for the London Financial Times, economics correspondent Sarah O'Connor describes how, at Amazon's center at Rugeley, England, Amazon tags its employees with personal sat-nav (satellite navigation) computers that tell them the route they must travel to shelve consignments of goods, but also set target times for their warehouse journeys and then measure whether targets are met.

All this information is available to management in real time, and if an employee is behind schedule she will receive a text message pointing this out and telling her to reach her targets or suffer the consequences. At Amazon's depot in Allentown, Pennsylvania (of which more later), Kate Salasky worked shifts of up to eleven hours a day, mostly spent walking the length and breadth of the warehouse. In March 2011 she received a warning message from her manager, saying that she had been found unproductive during several minutes of her shift, and she was eventually fired. This employee tagging is now in operation at Amazon centers worldwide...

(Simon Head, ^œ[Worse than Wal-Mart: Amazon's sick brutality and secret history of ruthlessly intimidating workers](#), *Salon*, Sunday, Feb 23, 2014)

⁵¹¹ As Adam Smith explained of the motivations of 'Merchants and master manufacturers':

Merchants and master manufacturers are... the two classes of people who commonly employ the largest capitals, and who by their wealth draw to themselves the greatest share of the public consideration. ...

As their thoughts, however, are commonly exercised rather about the interest of their own particular branch of business, than about that of the society, their judgment, even when given with the greatest candour (which it has not been upon every occasion) is much more to be depended upon with regard to the former of those two objects than with regard to the latter. Their superiority over the country gentleman is not so much in their knowledge of the public interest, as in their having a better knowledge of their own interest than he has of his.

It is by this superior knowledge of their own interest that they have frequently imposed upon his generosity, and persuaded him to give

up both his own interest and that of the public, from a very simple but honest conviction that their interest, and not his, was the interest of the public. The interest of the dealers, however, in any particular branch of trade or manufactures, is always in some respects different from, and even opposite to, that of the public.

To widen the market and to narrow the competition, is always the interest of the dealers. To widen the market may frequently be agreeable enough to the interest of the public; but to narrow the competition must always be against it, and can serve only to enable the dealers, by raising their profits above what they naturally would be, to levy, for their own benefit, an absurd tax upon the rest of their fellow-citizens.

The proposal of any new law or regulation of commerce which comes from this order ought always to be listened to with great precaution, and ought never to be adopted till after having been long and carefully examined, not only with the most scrupulous, but with the most suspicious attention. It comes from an order of men whose interest is never exactly the same with that of the public, who have generally an interest to deceive and even to oppress the public, and who accordingly have, upon many occasions, both deceived and oppressed it.

(Adam Smith, 1776, ^œ[*An Inquiry Into the Nature and Causes of the Wealth of Nations*](#), Book 1, Chapter XI, Conclusion of Chapter)

⁵¹² See Dew-Becker and Gordon (2005) for more on the divergence between productivity gains and both employment numbers and incomes in Western countries (and, of course, everywhere else) over the past forty years. As the authors explain:

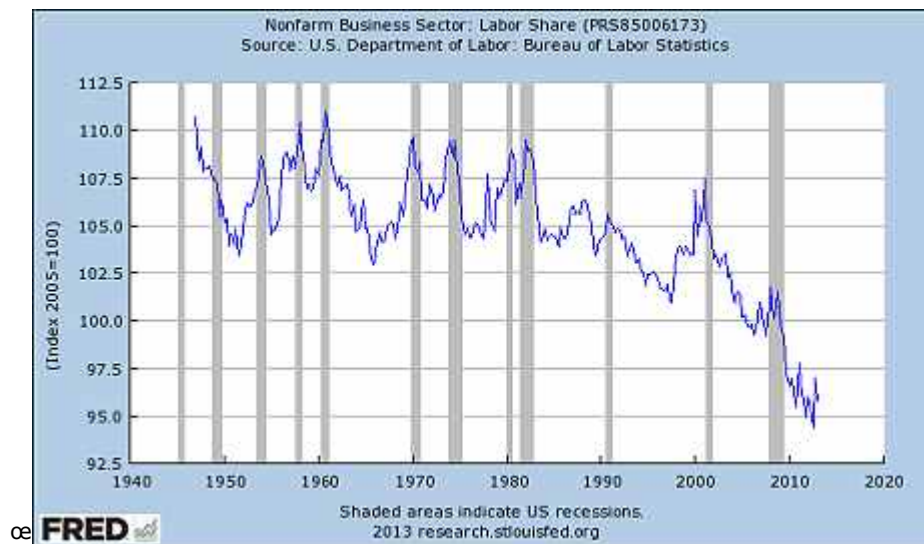

A basic tenet of economic science is that productivity growth is the source of growth in real income per capita. But our results raise doubts by creating a direct link between macro productivity growth and the micro evolution of the income distribution.

We show that over the entire period 1966-2001, as well as over 1997-2001, only the top 10 percent of the income distribution enjoyed a growth rate of real wage and salary income equal to or above the average rate of economy-wide productivity growth.

Growth in median real wage and salary income barely grew at all while average wage and salary income kept pace with productivity growth, because half of the income gains went to the top 10 percent of the income distribution, leaving little left over for the bottom 90 percent. Half of this inequality effect is attributable to gains of the 90th percentile over the 10th percentile; the other half is due to increased skewness within the top 10 percent.

(Ian Dew-Becker and Robert J. Gordon ^œ[*Where Did the Productivity Growth Go? Inflation Dynamics And The Distribution Of Income*](#), (NBER Working Paper Series, Working Paper 11842, National Bureau Of Economic Research, December 2005))

Here is a US Bureau of Labor Statistics graph of the labor share in the nonfarm business sector 1947-2013:

The original chart can be found in an essay by Susan Fleck, John Glaser, and Shawn Sprague, ^œ[The compensation-productivity gap: a visual essay](#), (US Bureau of Labor Statistics *Monthly Labor Review*, January 2011, p. 63 - ^œ[updated charts and associated data can be found here](#)). As they explain:

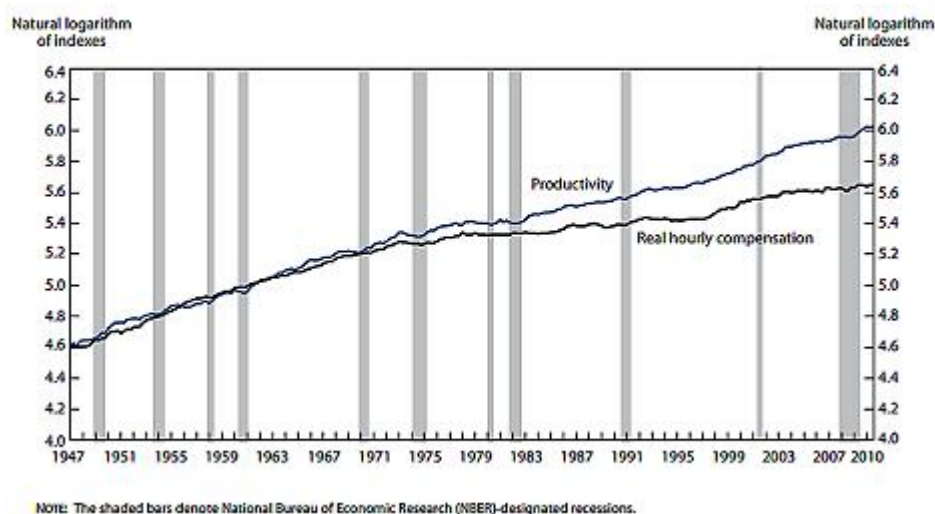

Labor share is the portion of output that employers spend on labor costs (wages, salaries, and benefits) valued in each year's prices. Nonlabor share-the remaining portion of output-includes returns to capital, such as profits, net interest, depreciation, and indirect taxes.

Labor share averaged 64.3 percent from 1947 to 2000. Labor share has declined over the past decade, falling to its lowest point in the third quarter of 2010, 57.8 percent. The change in labor share from one period to the next has become a major factor contributing to the compensation-productivity gap in the nonfarm business sector.

(see Paul Krugman, ^œ[Human Versus Physical Capital](#), *New York Times*, December 11, 2012 for more on this)

Also, for a comparison of labor productivity and real hourly compensation in the US, see this graph and accompanying explanation:

1. Productivity and real hourly compensation, nonfarm business sector, first quarter 1947-third quarter 2010

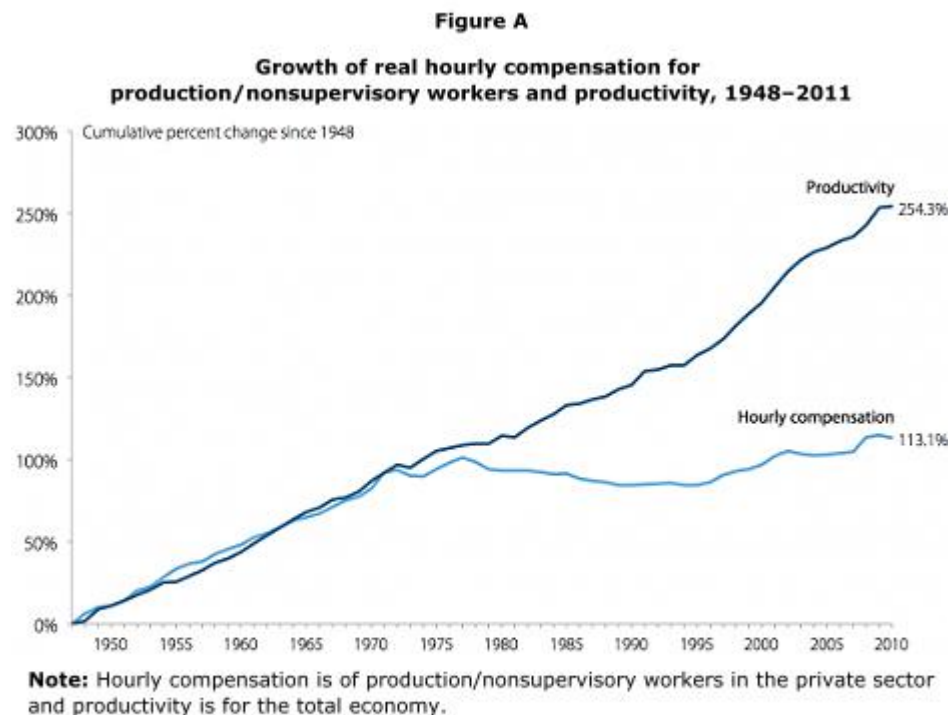

(Labor productivity is output, adjusted for price changes, divided by hours worked at all jobs. Productivity in the U.S. nonfarm business

sector grew an average of 2.2 percent per year over the past 63 years, despite a pro-longed slowdown from 1973 to 1995.

Real hourly compensation is the hourly cost to businesses, adjusted for price changes, of wages, salaries, and benefits paid to workers. Real hourly compensation grew at an average annual rate of 1.7 percent over the 63-year period. Since the 1970s, real hourly compensation has grown more slowly than productivity.)

(^œ[Monthly Labor Review January 2011 p. 59](#))

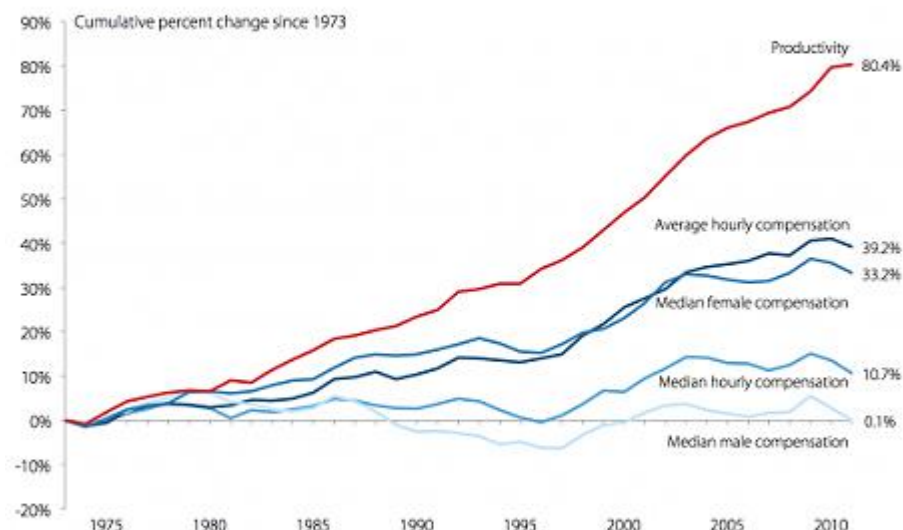

See Lawrence Mishel, ^œ[The wedges between productivity and median compensation growth](#) (*Economic Policy Institute*, Issue Brief #330, April 26, 2012) for more on this:

Source: Author's analysis of unpublished total economy data from Bureau of Labor Statistics, Labor Productivity and Costs program and Bureau of Economic Analysis, National Income and Product Accounts public data series

Figure B

Growth of hourly productivity, real average hourly compensation, and real median hourly compensation (overall and by gender), 1973–2011

Note: Compensation is for production/nonsupervisory workers in the private sector, and productivity is for the total economy.

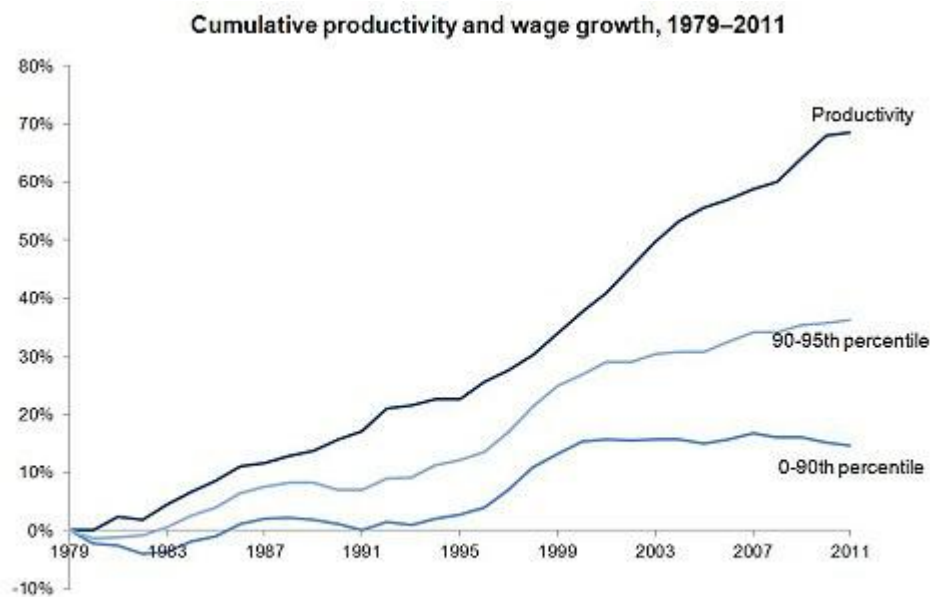

Source: Author's analysis of unpublished total economy data from the Bureau of Labor Statistics, Labor Productivity and Costs program and Bureau of Economic Analysis, National Income and Product Accounts public data series

As Mishel explains:

Income inequality has grown over the last 30 years or more driven by three dynamics: rising inequality of labor income (wages and compensation), rising inequality of capital income, and an increasing share of income going to capital income rather than labor income. As a consequence, examining market-based incomes one finds that "the top 1 percent of households have secured a very large share of all of the gains in income-59.9 percent of the gains from 1979-2007, while the top 0.1 percent seized an even more disproportionate share: 36 percent. In comparison, only 8.6 percent of income gains have gone to the bottom 90 percent" (Mishel and Bivens 2011).

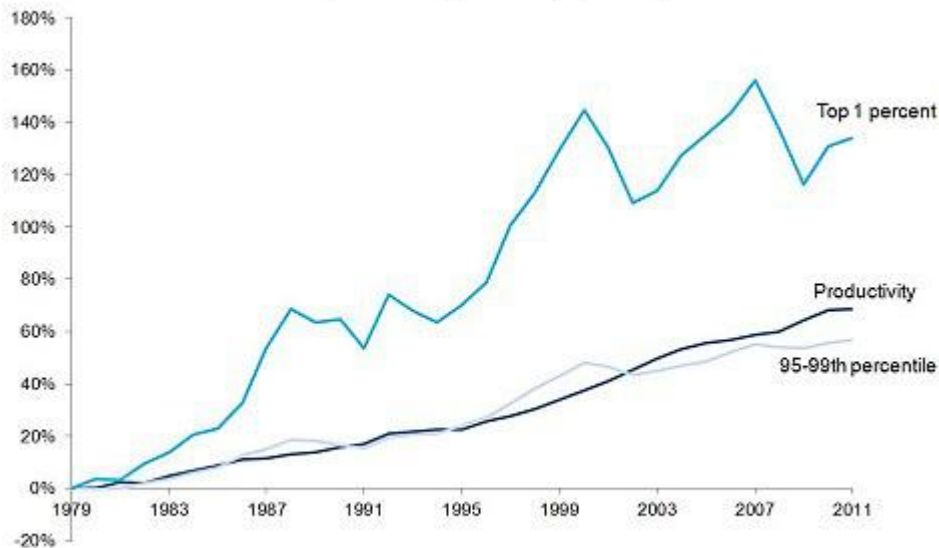

... the experience of the vast majority of workers in recent decades has been that productivity growth actually provides only the potential for rising living standards: Recent history, especially since 2000, has shown that wages and compensation for the typical worker and income growth for the typical family have lagged tremendously behind the nation's fast productivity growth.

Josh Bivens, ^{oe}[The Compensation/Productivity Link Is Indeed Broken for the Vast Majority of American Workers](#) (*Economic Policy Institute*, Blog, July 19, 2013) provides a further breakdown:

Source: Author's analysis of unpublished Total Economy Productivity data from the Bureau of Labor Statistics (2012) and Kopczuk, Saez, and Song (2010) and Social Security Administration wage statistics

Cumulative productivity and wage growth, 1979–2011

Source: Author's analysis of unpublished Total Economy Productivity data from the Bureau of Labor Statistics (2012) and Kopczuk, Saez, and Song (2010) and Social Security Administration wage statistics.

Josh Bivens and Lawrence Mishel have provided an updated version of the above graphs. As they explain:

This paper updates and explains the implications of the central component of the wage stagnation story: the growing gap between overall productivity growth and the pay of the vast majority of workers since the 1970s. A careful analysis of this gap between pay and productivity provides several important insights for the ongoing debate about how to address wage stagnation and rising inequality.

First, wages did not stagnate for the vast majority because growth in productivity (or income and wealth creation) collapsed. Yes, the policy shifts that led to rising inequality were also associated with a slowdown in productivity growth, but even with this slowdown, productivity still managed to rise substantially in recent decades. But essentially none of this productivity growth flowed into the paychecks of typical American workers.

Second, pay failed to track productivity primarily due to two key dynamics representing rising inequality: the rising inequality of compensation (more wage and salary income accumulating at the very top of the pay scale) and the shift in the share of overall national income going to owners of capital and away from the pay of employees.

Third, although boosting productivity growth is an important long-run goal, this will not lead to broad-based wage gains unless we pursue policies that reconnect productivity growth and the pay of the vast majority.

Ever since EPI first drew attention to the decoupling of pay and productivity (Mishel and Bernstein 1994), our work has been widely cited in economic analyses and by policymakers. It has also attracted criticisms from those looking to deny the facts of inequality. Thus in this paper we not only provide an updated analysis of the productivity-pay disconnect and the factors behind it, we also explain why the measurement choices we have made are the correct ones. As we demonstrate, the data series and methods

we use to construct our graph of the growing gap between productivity and typical worker pay best capture how income generated in an average hour of work in the U.S. economy has not trickled down to raise hourly pay for typical workers.

(Josh Bivens and Lawrence Mishel, ^œ[*Understanding the Historic Divergence Between Productivity and a Typical Worker's Pay: Why It Matters and Why It's Real*](#) (Economic Policy Institute, Briefing Paper #406, September 2 2015))

(See also Lawrence Mishel and Kar-Fai Gee ^œ[*Why Aren't Workers Benefiting from Labour Productivity Growth in the United States?*](#) *International Productivity Monitor*, No. 23, Spring 2012 pp. 31-43)

⁵¹³ *The Independent Commission for the Reform of International Corporate Taxation*, in a statement of principles, has addressed the problems of nation-state exploitation and tax evasion which are at the root of these developments:

1. States must reject the artifice that a corporation's subsidiaries and branches are separate entities entitled to separate treatment under tax law, and instead recognize that multinational corporations act as single firms conducting business activities across international borders.
2. States should develop model bilateral and multilateral agreements to enable participating jurisdictions to apportion revenues and costs attributable to a multinational corporation operating in those jurisdictions.
3. Instead of attributing income from the control or ownership of intellectual property to a low tax jurisdiction, the income should be apportioned to the jurisdictions where the intellectual property was developed or, if sold, apportioned according to objective economic factors such as sales and employment.
4. States should treat a company affiliate of a resident multinational corporation that carries out business activity in a jurisdiction as a presumptive permanent establishment with tax nexus in that jurisdiction.
5. States should revise the permanent establishment rules to provide that when a corporation sells or provides downloads of products from the internet to customers in a jurisdiction, exceeding a specified threshold, that business activity creates a permanent establishment.
6. In the long term, the system for taxing a multinational corporation's subsidiaries as separate entities should be replaced by a system of taxing multinational corporations as single and unified firms, using formulary apportionment based upon objective factors, such as sales and employment, and with adequate consideration of the source principle.
7. International cooperation for reform must go beyond the current OECD's BEPS initiative and begin to research and negotiate the specific elements of an international consolidation and apportionment system, including what rules would apply to determine the tax base and apportion profits among countries where multinational firms operate, and how to avoid the vertical disintegration to which it may give rise.

(The Independent Commission for the Reform of International Corporate Taxation, ^œ[Declaration: of the Independent Commission for the Reform of International Corporate Taxation, Statement of Principles](#), June 2015; see: George Turner, ^œ[Fixing the international tax system, the Tax Justice Network](#), November, 2017, for more on all this)

See Joseph E. Stiglitz, ^œ[America in the Way](#) (*Project Syndicate*, August 6, 2015) for discussion of some of the related issues.

⁵¹⁴ For more on foreign direct investment (FDI) flows and cross-border mergers and acquisitions (M & As) over the past three decades, see this United Nations Conference on Trade and Development (UNCTAD) site: ^œ[Research on FDI and TNCs](#).

⁵¹⁵ In the 21st century, hyper-globalization has led to increasingly complex multi-national and multi-continental management requirements in major industrial conglomerates. A commenter on an article entitled 'Boeing Might Represent the Greatest Indictment of 21st-Century Capitalism' has explained it well:

...The reality is that I see more and more engineers with poor management and people skills, and this is why it becomes difficult to manage these teams as systems become more complex and engineers require more technical skill, but increasingly lack the corresponding necessary parallel improvement in interpersonal skills...

When one works on multi-continent teams, it also takes a special dedication: you are working on a 24 hour cycle, regularly doing midnight/2am conference calls, working on your vacation days, and to be frank, not having a family around becomes a necessity. A lot of the guys I work with live with their family on the weekends and fly into a work location during the week and don't see them. Six years ago I was working in San Francisco for a guy that lived in Georgia on the weekend and flew across the country on Monday morning to make the weekly commute. It just takes this level of intensity and commitment to the vision of your project to do it. (Which is worse - bankers or terrorists, Commenter on Marshall Auerback, ^œ[Boeing Might Represent the Greatest Indictment of 21st-Century Capitalism](#), *Naked Capitalism*, April 27, 2019)

And, a comment on this comment by 'a different chris':

"...that lived in Georgia on the weekend and flew across the country on Monday morning to make the weekly commute. It just takes this level of intensity and commitment to the vision of your project to do it."

You talk "intensity and commitment". I see a tired person very likely to make mistakes. Because a human only has so much to give before they crash, and if much of that is devoted to flying across the US weekly and living away from your family, then that's not going to doing your job.

Can't you see somebody at Boeing, technically accomplished and maybe respected enough to change or call halt on the 737 Max re-work, being too tired to actually see that it was necessary? Nominally with the skill set, but too tired to see the forest for the trees he is harvesting?

⁵¹⁶Dani Rodrik (2015) has described some of the problems associated with agreements such as the Trans-Pacific Partnership (TPP), Transatlantic Trade and Investment Partnership (TTIP) and the Trade in Services Agreement (TiSA):

Perhaps most worrisome are the Investor-State Dispute Settlement (ISDS) provisions of the two agreements. These provisions establish a separate judicial track, outside a country's own legal system, that allows firms to sue governments for apparent violations under trade treaties. Proponents defend ISDS by saying that it will not have much consequence for countries, such as the US, where there is good rule of law, and that it will promote investment in countries, such as Vietnam, where there is not. In that case, it is unclear why ISDS provisions are needed for the TTIP, which covers the advanced economies of North America and Europe.

In all of these areas, the TPP and TTIP seem to be about corporate capture, not liberalism.

(Dani Rodrik, ^œ[The Muddled Case for Trade Agreements](#), *Project Syndicate*, June 11 2015)

(For more information on the nature and possibilities of Investor-State dispute settlement (ISDS) mechanisms see ¹⁰¹⁸.)

For the composition of "The Obama administration's corporate-heavy network of official trade advisers" involved in the TPP negotiations, see this *Washington Post* breakdown. As the authors illustrate:

Private industry and trade groups represent the lion's share of committee members - 480, or 85% of the total [566]

...The industry make-up of each of the 28 advisory committees differs as well. But most committees are devoted primarily or exclusively to business interests and related trade associations.

(Christopher Ingraham and Howard Schneider, ^œ[Industry voices dominate the trade advisory system](#), *The Washington Post*, Feb. 27, 2014)

For an introduction to the debate on the nature and importance of the Trans-Pacific Partnership, see Joseph Stiglitz and Adam Hersh, ^œ[The Trans-Pacific Free-Trade Charade](#) (*Project Syndicate*, October 2, 2015) and the associated comments on the pros and cons of the TPP. The authors set the tone for this debate:

You will hear much about the importance of the TPP for "free trade." The reality is that this is an agreement to manage its members' trade and investment relations - and to do so on behalf of each country's most powerful business lobbies. Make no mistake: It is evident from the main outstanding issues, over which negotiators are still haggling, that the TPP is not about "free" trade.

As one of the commenters, Douglas Ungredda, put it:

...[T]he question at the end of the day, it seems to me, is: can I trust the government of my country to defend MY interests when they are in conflict with others within the polis? And if the answer to that is no - and most of the comments below seem to offer that answer - then TPP is (or in my view ought to be) the least of the common citizen's worries.

While the TPP and TTIP negotiations have attracted attention, of possibly great importance for the future of democracy is the Trade in Services Agreement (TiSA), currently being negotiated.

Lambert Strether has re-stressed the dangers of complacency. The *apparent* demise of the Trans-Pacific Partnership following US President Trump's 2017 decision not to ratify the agreement does not signal the demise of its intentions; nor has it significantly affected the continued development of The Trade in Services Agreement (TiSA):

Trade activists may regard the defeat of TPP - its (no doubt feigned) rejection by Democrat candidate Clinton, and its deep-sixing by President Trump on his third day in office - as a victory, and they're not wrong.

But it's a mistake to regard the defeat of a deal as the defeat of the deal-makers: The forces and drivers behind the deal, which, if unchecked, will simply emerge with a [cough] new deal serving the same objectives.

In this post I want to look briefly at the state of play in "trade," and then begin to look at the Trade in Services Agreement (TiSA) - that lowercase "i" gets me every time; I suppose it's meant to make the acronym seem friendlier - because, unlike the regional TPP, TiSA is a global agreement, because it's far less undead than TPP, and because it provides great insight into the future world our globalist elites would like us to live in.

(Lambert Strether, ["Sleeping Monster: The Trade in Services Agreement \(TiSA\) and the Supply Chain, Naked Capitalism, July 19, 2017"](#))

WikiLeaks, in 2015, provided a timely introduction to the framing of the Trade in Services Agreement (TISA):

Since 2013, 51 nations have been conducting closed-door negotiations on a Trade in Services Agreement (TISA) whose text has been kept secret, despite that the pact, as proposed, would impose binding constraints on a broad swath of domestic safeguards, including financial regulations.... On July 2, 2015, leaked copies of several draft TISA texts, including an Annex on Financial Services, were posted online.

The leaked TISA texts reveal the dangers of sweeping, so-called "trade" agreements that are negotiated outside of public scrutiny, providing a cautionary tale for the controversial Trans-Pacific Partnership and Trans-Atlantic Free Trade Agreement that are also being negotiated in secret. As governments around the world implement the lessons of the 2008 financial crisis by re-regulating financial firms to prevent another crisis, the leaked TISA rules could require countries - including the world's largest financial centers - to halt and even roll back financial regulations.

Indeed, the leaked TISA Annex on Financial Services makes clear that TISA restrictions on financial regulations would apply to virtually the entire financial sector - including derivatives, banking, stocks and bonds, foreign exchange, life and non-life insurance, credit cards, financial data processing, credit-rating, reinsurance and other financial services (Annex, Art. X.2(a))...

(Ben Beachy, Public Citizen's Global Trade Watch, ["TISA Leak Reveals 10 Key Threats to Commonsense Financial Regulations"](#), PublicCitizen, July 2, 2015)

(See WikiLeaks ["Trade in Services Agreement"](#) for more information on TiSA negotiations.)

Don Quijones, an editor at *Wolf Street*, has provided a summary of some of the key issues being addressed in TISA negotiations:

...[T]hanks to whistle blowing sites like WikiLeaks, the Associated Whistleblowing Press and Filtrala, crucial details have seeped to the surface. Here's a brief outline of what is known to date...:

1. ***TiSA would "lock in" the privatization of services*** - even in cases where private service delivery has failed - meaning governments can never return water, energy, health, education or other services to public hands.
2. ***TiSA would restrict signatory governments' right to regulate stronger standards in the public's interest***. For example, it will affect environmental regulations, licensing of health facilities and laboratories, waste disposal centres, power plants, school and university accreditation and broadcast licenses.
3. ***TiSA would limit the ability of governments to regulate the financial services industry***, at a time when the global economy is still struggling to recover from a crisis caused primarily by financial deregulation. More specifically, if signed the trade agreement would:

- Restrict the ability of governments to place limits on the trading of derivative contracts - the largely unregulated weapons of mass financial destruction that helped trigger the 2007-08 Global Financial Crisis.
- Bar new financial regulations that do not conform to deregulatory rules. Signatory governments will essentially agree not to apply new financial policy measures which in any way contradict the agreement's emphasis on deregulatory measures.
- Prohibit national governments from using capital controls to prevent or mitigate financial crises. The leaked texts prohibit restrictions on financial inflows - used to prevent rapid currency appreciation, asset bubbles and other macroeconomic problems - and financial outflows, used to prevent sudden capital flight in times of crisis.
- Require acceptance of financial products not yet invented. Despite the pivotal role that new, complex financial products played in the Financial Crisis, TISA would require governments to allow all new financial products and services, including ones not yet invented, to be sold within their territories.

4. ***TiSA would ban any restrictions on cross-border information flows and localization requirements for ICT service providers***. A provision proposed by US negotiators would rule out any conditions for the transfer of personal data to third countries that are currently in place in EU data protection law. In other words, multinational corporations will have carte blanche to pry into just about every facet of the working and personal lives of the inhabitants

(Don Quijones, ["Uruguay Does Unthinkable, Rejects Global Corporatocracy"](#), *Wolf Street*, September 22, 2015)

⁵¹⁷ (11/02/16) Jeronim Capaldo and Alex Izurieta, provide an assessment of projected benefits of the TPP agreement claimed in a number of existing

analyses¹⁰¹⁹ :

According to its proponents, the TPP will generate higher economic growth throughout the area by eliminating tariffs and other obstacles to international trade and investment.

With its coverage of a large share of the world economy, potential implications for several policy areas and a fairly large membership, the TPP bears a close resemblance with the Trans-Atlantic Trade and Investment Partnership (TTIP) discussed by the European Union and the United States. As with its trans-Atlantic homologue, much political emphasis has been placed on the TPP's prospective economic effects.

Several analyses have highlighted potential advantages and risks of the TPP for trade flows, industrial output, wages, international investment and financial stability. Calculating the net effects of these factors on economic growth, employment and income distribution requires making assumptions about how economies adjust to external shocks. Different theories exist to explain these processes. The standard model assumes full employment and invariant income distribution, ruling out the main risks of trade and financial liberalization. Subject to these assumptions, it finds positive effects on growth. An important question, therefore, is how this conclusion changes if those assumptions are dropped.

In this paper, we review existing projections of the TPP and propose alternative ones based on more realistic assumptions about economic adjustment and income distribution. We start from the trade projections put forward in the main existing study and explore their macroeconomic consequences using the United Nations Global Policy Model.

We find negative effects on growth in the United States and in Japan. We also find increasing inequality and job losses in all participating economies. Overall, we project the loss of 770,000 jobs, with the largest losses occurring in the United States. Furthermore, we project negative effects on growth and employment in non-TPP countries. This increases the risk of global instability and a race to the bottom, in which labor incomes will be under increasing pressure.

This paper takes no position on the overall desirability of the TPP, and makes no policy recommendation. Instead, it seeks to provide policymakers with the most realistic projections of how the TPP would impact macroeconomic performance.

(Jeronim Capaldo and Alex Izurieta with Jomo Kwame Sundaram, ^œ[Trading Down: Unemployment, Inequality and Other Risks of the Trans-Pacific Partnership Agreement](#), *Global Development and Environment Institute*, Tufts University, Working Paper No. 16-01, January 2016, pp. 1-2)

Public Citizen website has provided a ^œ[summary of key features](#) of the released Trans-Pacific Partnership text, slanted toward United States concerns. Many of the issues they raise are of importance to all partners in the negotiated agreements. In a preamble to their findings, entitled *Secret TPP Text Unveiled: It's Worse Than We Thought, With Limits on Food Safety and Controversial Investor-State System Expanded, Rollback of Bush-Era Medicine Access and Environmental Terms*, they say:

Today's long-awaited release of the text of the Trans-Pacific Partnership (TPP) reveals that the pact replicates many of the most controversial terms of past pacts that promote job offshoring and push down U.S. wages while further expanding the scope of the controversial investor-state system and rolling back improvements on access to affordable medicines and environmental standards that congressional Democrats forced on the George W. Bush administration in 2007.

"Apparently, the TPP's proponents resorted to such extreme secrecy during negotiations because the text shows that the TPP would offshore more American jobs, lower our wages, flood us with unsafe imported food and expose our laws to attack in foreign tribunals," said Lori Wallach, director of Public Citizen's Global Trade Watch. "When the administration says it used the TPP to renegotiate NAFTA, few expected that meant doubling down on the worst job-killing, wage-suppressing NAFTA terms, expanding limits on food safety and rolling back past reforms on environmental standards and access to affordable drugs."...

Today's text release confirms concerns about the TPP that were based on earlier leaks and reveals ways in which the TPP rolls back past public interest reforms to the U.S. trade model and expands anti-public interest provisions demanded by the hundreds of official U.S. corporate trade advisers:

Worse anti-public-interest provisions relative to past U.S. trade pacts

- The TPP Intellectual Property Chapter would roll back the "May 2007" reforms for access to medicines.
- The TPP Environment Chapter would roll back the "May 2007" reforms by eliminating most of the seven Multilateral Environmental Agreements that past pacts have enforced.
- The TPP Investment Chapter would expand the scope of policies that can be challenged and the basis for such challenges, including for the first time ever allowing investor-state dispute settlement (ISDS) enforcement of World Trade Organization intellectual property terms and new challenges to financial regulations.
- With Japanese, Australian and other firms newly empowered to launch ISDS attacks against the United States, the TPP would double U.S. ISDS exposure with more than 9,200 additional subsidiaries operating here of corporations from TPP nations newly empowered to launch ISDS cases against the U.S. government. (About 9,500 U.S. subsidiaries have ISDS rights under ALL existing U.S. investor-state-enforced pacts.)
- The TPP E-Commerce chapter would undermine consumer privacy protections for sensitive personal health, financial and other data when it crosses borders by exposing such policies to challenge as a violation of the TPP limits on regulation of data flows.
- TPP "Sanitary and Phytosanitary" chapter terms would impose new limits on imported food safety relative to past pacts. This includes new challenges to U.S. border inspection systems that can be launched based on extremely subjective

requirements that inspections must "limited to what is reasonable and necessary" as determine by a TPP tribunal. New language that replicates the industry demand for a so-called Rapid Response Mechanism that requires border inspectors to notify exporters for every food safety check that finds a problem and give the exporter the right to bring a challenge to that port inspection determinations - meaning new rights to bring a trade challenge to individual border inspection decisions (including, potentially, laboratory or other testing) that second-guesses U.S. inspectors and creates a chilling effect that would deter rigorous oversight of imported foods.

Anti-public interest provisions that are the same as past U.S. pacts

- The TPP Investment Chapter would eliminate many of the risks and costs of relocating American jobs to low-wage countries, incentivizing more American job offshoring.
- The TPP procurement chapter would offshore our tax dollars to create jobs overseas instead of at home by giving firms operating in any TPP nation equal access to many U.S. government procurement contracts, rather than us continuing to give preference to local firms to build and maintain our public libraries, parks, post offices and universities.
- Contrary to Fast Track negotiating objectives, the TPP would grant foreign firms greater rights than domestic firms enjoy under U.S. law and in U.S. courts. One class of interests - foreign firms - could privately enforce this public treaty by skirting domestic laws and courts to challenge U.S. federal, state and local decisions and policies on grounds not available in U.S. law and do so before extrajudicial ISDS tribunals authorized to order payment of unlimited sums of taxpayer dollars.
- There are no new safeguards that limit ISDS tribunals' discretion to issue ever-expanding interpretations of governments' obligations to investors and order compensation on that basis. The text reveals the same "safeguard" Annexes and terms that were included in U.S. pacts since the 2005 Central America Free Trade Agreement (CAFTA) that have failed to rein in ISDS tribunals. CAFTA tribunals have simply ignored the "safeguard" provisions that are replicated in the TPP, and as with past pacts, in the TPP such tribunal, conduct is not subject to appeal.
- The TPP would ban the use of capital controls and other macroprudential financial regulations used to prevent speculative bubbles and financial crises.
(Nick Florko and Valerie Holdford, ^œ[Secret TPP Text Unveiled: It's Worse Than We Thought](#), *Public Citizen*, November 5, 2015)

⁵¹⁸ Thom Hartmann, in an important and insightful essay, has described the fragility of democratic government and the importance of never-failing vigilance as a prerequisite for its survival:

We think of our civilization as having a democratic heritage, but that's a mirage. For most of these thousands of years, kings, emperors, Caesars, Popes, and warlords have ruled the lives of ordinary people. Democracy was tried for just 185 years, from 507 BCE to 322 BCE, on the Greek island of Athens; the experiment came to a bloody end with the conquest of the area by warlord Alexander the Great.

The idea lay dormant for two thousand years. The rule of kings and warlords resumed, until the American experiment birthed it again - in the midst of an economic crisis. There have been just three of these 75-year economic cycles in our history, and both of the previous ones threatened the very foundations of human liberty.

Yet as rare as democracy is in history, the concept is immensely compelling to the human spirit, and American expressions of the ideal have been the beacon that has lit the path. From the French Revolution in 1789 to the people's uprising in Beijing in 1989, people around the world have used language and icons from the pen of Thomas Jefferson and his peers. The Greek-Roman-Masonic-Iroquois-American idea of a government "deriving its just powers from the consent of the governed" is one of the most powerful and timeless ideas in the world - even if we didn't quite get it right at first (it was only true for propertied white males), and even if it's been strained since its inception....

But while much of the world moves to emulate the American experiment, contemporary America is moving in the direction of the corporate-state partnership. Executives from regulated industries are heading up the agencies that regulate them. Another symptom of increasing corporate control of the nation is widespread privatization - a euphemism for shifting control of a commons resource (like water supplies) from government agencies to corporations. And corporations and their agents have become the largest contributors to politicians, political parties, and so-called "think tanks" which both write and influence legislation.

The distinction between corporate control and human control is absolutely pivotal: governments that derive their just powers from the governed are responsible to citizens and voters, and their agencies are created exclusively to administer and protect the resources of the commons used by citizens and voters. Corporations are responsible only to stockholders and are created exclusively to produce a profit for those stockholders. When aggressive corporations are in seats of power, the results are predictable.

We have recently seen, all too often, the strange fruits borne by placing a corporate sentry where a public guardian should stand: for instance, we now know that the California energy crisis was manipulated into existence by Enron and a few other Texas energy companies. The cost to humans, for this corporate plunder, was horrific; but who was accountable, and who will go on trial? And more to the point, how did it come to be that corporations had the ability to do such things while the public protested vigorously?

It turns out, says the Supreme Court, that they have human rights. In several different decisions, all grounded in an 1886 case, the Court has ruled that corporations are entitled to a voice in Washington, the same as you and me.

But that is a peculiar thought. Our nation is built on equal protection of people (regardless of differences of race, creed, gender, or religion), and corporations are much bigger than people, much more able to influence the government, and don't have the biological needs and weakness of people. And therein lies the rub - a subtle shift that happened 136 years ago, which put us on this road.

The path from government of, by, and for the people to government of, by, and for the corporations was paved largely by an invented legal premise that corporations are, in fact, people - a premise called "corporate personhood." This states not just that people make up a corporation, but that each corporation, when created by the act of incorporation, is a full-grown "person" - separate from the humans who work for it or own stock in it - with all the rights granted to persons by the Bill of Rights.

This idea would be shocking to the Founders of the United States. James Madison, often referred to as "the father of the Constitution," wrote, "There is an evil which ought to be guarded against in the indefinite accumulation of property from the capacity of holding it in perpetuity by...corporations. The power of all corporations ought to be limited in this respect. The growing wealth acquired by them never fails to be a source of abuses."...

(Thom Hartmann, [Democracy and Economic Cycles](#), *Thom's Articles*, November 2, 2007)

519 (05/04/16) Edward Morris has provided a clear explanation of the reasons for the fiscal and financial regulations developed during the 1930s in the US and the consequences of the repeal of those regulations in the post-1970s neoliberal age. In an article entitled 'Why Bernie's right about Glass-Steagall', he explains:

Bernie Sanders is advocating a reprise of the 1933 Glass-Steagall Act, specifically that section of the Depression-era act that had prohibited commercial banks and investment banks from operating under the same roof. Sanders believes that the repeal of Glass-Steagall in 1999 led to the formation of banks that became "too big to fail," contributed to the financial crisis in 2008 - and will lead to another crisis without corrective legislation...

Sanders has a strong argument, one that can be effectively made using Citigroup, the two-century old bank that, along with other Wall Street banks, has a history of wreaking havoc on itself and the economy when it mixes commercial banking with investment banking

The first instance occurred in the 1920s when Charles "Sunshine" Mitchell became president of what was then National City Bank. The bank was the largest in the U.S. and its securities affiliate, under his aggressive management, had also become the country's largest investment operation, with sixty-nine sales offices in fifty-eight cities. Much of National City Bank's growth, however, was at the expense of its growing clientele of unwary investors, who became victims of shoddy securities offerings the bank originated and, most famously, the notorious investment pools the bank sponsored in the Roaring Twenties.

In 1933, long after the 1929 stock market crash and in the depth of the Great Depression, Mitchell was brought before the Senate Banking and Currency Committee to explain how investment pools

worked and how National City Bank played a role. First, it turned out, the bank loaned money to a "pool manager" to facilitate the purchase of a selected "story stock" by a small group of initial investors. Then the pool manager planted rumors and bogus news accounts to entice the general public to purchase the stock at ever increasing prices. National City's investment affiliate further aided the pool manager in its efforts by authorizing the payment of "premium" commissions to tout the targeted stock. When the stock's price reached some level judged unsustainable by the pool manager, the early investors quietly bailed out, leaving smaller and less informed investors holding the bag. If those chump investors had purchased their stock on margin, they likely owed large sums of money in addition to holding the deflated stock.

And buying stocks on margin was a practice greatly encouraged by National City Bank, a major supplier of "broker loans." When the Federal Reserve tried to tamp down stock market speculation in 1929 by limiting the amount of margin debt, Mitchell - himself a member of the Fed's board of governors - instructed National City to go directly counter to the central bank's wishes by increasing the high volume of broker loans it was already providing. During the Senate hearings on the collapse of the stock market, Senator Carter Glass (the Glass in Glass-Steagall) proclaimed that Mitchell "more than forty others is responsible for the present situation."
(Edward Morris, ^œ[Why Bernie's Right About Glass-Steagall](#), *History News Network*, April 3, 2016)

By the 1990s, in the US, Glass-Steagall and other New Deal legislation was under siege by those who believed in the virtues of free markets, globalization and the removal of 'obstacles' which prevented American banks from growing larger so that they could "better compete on the world stage".

Peter Conti-Brown, in a discussion of Bank of England proposals "to provide a ring-fence of protection and business continuity for retail banking units of large banks, effectively shielding them from problems their investment banking arms may face", spelt out the process by which Glass-Steagall legislation was progressively dismantled over the years:

Enacted as a response to the Great Depression of the 1930s, Glass-Steagall originally also sought separation of banking activities, but was progressively watered down before being repealed in 1999. "[Former Federal Reserve chairman] Alan Greenspan hated Glass-Steagall and he subjected it to 10,000 cuts in terms of regulatory waivers and loopholes and such," Black said. "By the time it was effectively repealed in 1999 under Bill Clinton, there wasn't a whole lot left of Glass-Steagall."

(^œ[Can the Bank of England's New 'Ring-fencing' Rules Work?](#), *Knowledge@Wharton*, The Wharton School, University of Pennsylvania, Oct 20, 2015)

As President Obama summed it all up in 2008:

"By the time the Glass-Steagall Act was repealed in 1999, the \$300 million lobbying effort that drove deregulation was more about facilitating mergers than creating an efficient regulatory framework," Mr. Obama said in a speech on the economy at Cooper Union in New York in March 2008. "Instead of establishing a 21st century regulatory framework, we simply dismantled the old one," thereby encouraging "a winner take all, anything goes environment

that helped foster devastating dislocations in our economy."
(Cyrus Sanati, ^œ[10 Years Later, Looking at Repeal of Glass-Steagall](#),
New York Times, November 12, 2009)

Simon Johnson has provided a compelling case for a 21st century version of Glass-Steagall legislation. As he says,

The best argument for a modern Glass-Steagall act is the simplest. We should want a lot more loss-absorbing shareholder equity. And, to reinforce this, we should want to make the largest banks simpler and more transparent, with "strong structural firewalls" as Dennis Kelleher, of Better Markets, puts it. Of course, in that context, we should ensure that various activities by "shadow banks" (structures that operate with bank-like features, as Lehman Brothers did) are properly regulated.

Building support for legislation to simplify the biggest banks would greatly strengthen the hand of those regulators who want to require more shareholder equity and better regulation for the shadows. These policies are complements, not substitutes.
(Simon Johnson, ^œ[Resurrecting Glass-Steagall](#), *Project Syndicate*, October 29, 2015)

⁵²⁰ Martin Baily and Susan Lund (^œ[Financial Globalization in Reverse?](#), *Project Syndicate*, Apr. 12, 2013) have summed up the scene in the early 21st century:

New information technologies made it possible to conduct transactions halfway around the world in the blink of an eye. Savers gained the ability to diversify, while the largest borrowers could tap global pools of capital. As national financial markets grew more intertwined, cross-border capital flows rose from \$0.5 trillion in 1980 to a peak of \$11.8 trillion in 2007.

But the 2008 crisis exposed the dangers, with the globalized financial system's intricate web of connections becoming a conduit for contagion. Cross-border capital flows abruptly collapsed. Almost five years later, they remain 60% below their pre-crisis peak.

This pullback in cross-border activity has been accompanied by muted growth in global financial assets (despite the recent rallies in stock markets around the world). Global financial assets have grown by just 1.9% annually since the crisis, down from 7.9% average annual growth from 1990 to 2007.

Summing up the 1980s, Strange concluded:

No one who knows anything about international finance is in any doubt that it has grown rather phenomenally in the last quarter century. There is, however, the problem of measurement and, connected with it, the problem of definition. The numbers that are available are only rough indicators, not precise indices. Here are a few of them:

Transactions in the Eurocurrency markets had risen to over US\$ 1,000 billion - 1 trillion - in the year 1984, compared with US\$75 billion in 1970 and only US\$3 billion in the early 1960s.

Trading in the foreign exchange markets worldwide in the late 1980s amounted to over US\$600 billion *a day*, no less than 32 times the volume of international commercial transactions worldwide.

Between the mid-1960s and the mid-1980s, international banking grew at a compound rate of 26 per cent a year on average, compared with an average growth in output of a little over 10 per cent.

The issue of bonds is a credit instrument traditionally associated with international finance since the last century. Equal in value to 2 per cent of world exports in 1980, their total value had risen to 9 per cent of world exports by 1985 and they have continued to grow in popularity since. ECU-dominated bond issues, which totalled ECU 1.9 billion in 1982, totalled nearly ECU 17 billion in 1988.

Transnational trading in shares was comparatively rare even by 1980. Most national stock exchanges dealt only in the shares of nationally registered companies within the state. By 1989, more than 18 per cent of all share trading was in the shares of foreign corporations-only the major multinationals. Among the significant numbers, we should also note the growth of trading in futures and options in some of the main international financial centers like London, Paris, and Frankfurt.

(Strange 1994, pp. 233-4)

521 As Robert Guttman described:

Deregulation of money has turned many Americans into investors (see especially the role of pension plans and mutual funds), and has allowed the middle class to join the rentier class (the 'money class'). This change in class composition is reinforced by aging baby boomers going from being debtors in the 1970s (favoring inflation) to becoming savers (favoring low inflation and high 'real' interest rates). This gives the Federal Reserve a political constituency for the 'hard money' course of the last fifteen years, which favors financial investors.

Deregulation of money has also led to much more volatile interest rates and exchange rates, which in turn have dramatically accelerated the use of hedging and speculative investments for capital gains as the new profit-centre of MNCs and TNBs, and with a concomitant wave of innovations to facilitate this activity (e.g., financial futures and other derivatives).

The trend toward the dominance of a new kind of financial capital, which I characterise as *fictitious capital*, has also been profoundly deepened by the rapid *securitization* of credit (as a now more attractive form of financial capital for both sides, as opposed to the traditional loan capital mediated by commercial banks), which has helped to promote securities trading as a profitable, high-risk activity. This leads to an unprecedented combination of financial explosion and industrial stagnation, with ST-oriented shareholder capital combining with international competition battles and the labor-saving information revolution to enforce global 'downsizing'.

Electronic money is entirely global in nature, composed of an unregulated worldwide Euro-banking network, global investment portfolios, and interconnected financial markets.

(Guttman 1995)

522 Joseph Stiglitz (2011), summed up the consequences in the early 21st century:

It's no use pretending that what has obviously happened has not in fact happened. The upper 1 percent of Americans are now taking in nearly a quarter of the nation's income every year.

In terms of wealth rather than income, the top 1 percent control 40 percent. Their lot in life has improved considerably. Twenty-five years ago, the corresponding figures were 12 percent and 33 percent. One response might be to celebrate the ingenuity and drive that brought good fortune to these people, and to contend that a rising tide lifts all boats. That response would be misguided. While the top 1 percent have seen their incomes rise 18 percent over the past decade, those in the middle have actually seen their incomes fall.

For men with only high-school degrees, the decline has been precipitous-12 percent in the last quarter-century alone. All the growth in recent decades-and more-has gone to those at the top. In terms of income equality, America lags behind any country in the old, ossified Europe that President George W. Bush used to deride. Among our closest counterparts are Russia with its oligarchs and Iran. While many of the old centers of inequality in Latin America, such as Brazil, have been striving in recent years, rather successfully, to improve the plight of the poor and reduce gaps in income, America has allowed inequality to grow.

Economists long ago tried to justify the vast inequalities that seemed so troubling in the mid-19th century-inequalities that are but a pale shadow of what we are seeing in America today. The justification they came up with was called "marginal-productivity theory." In a nutshell, this theory associated higher incomes with higher productivity and a greater contribution to society. It is a theory that has always been cherished by the rich. Evidence for its validity, however, remains thin.

The corporate executives who helped bring on the recession of the past few years-whose contribution to our society, and to their own companies, has been massively negative-went on to receive large bonuses. In some cases, companies were so embarrassed about calling such rewards "performance bonuses" that they felt compelled to change the name to "retention bonuses" (even if the only thing being retained was bad performance).

Those who have contributed great positive innovations to our society, from the pioneers of genetic understanding to the pioneers of the Information Age, have received a pittance compared with those responsible for the financial innovations that brought our global economy to the brink of ruin.

(Of the 1%, by the 1%, for the 1% *Vanity Fair*, May 2011)

The following excerpt from George Soros' self-promoting book *The Crash of 2008*, gives a picture of what happens when speculators, presuming public underwriting of their 'commercial paper', are left to their own devices:

The bankruptcy of Lehman Brothers on Monday, September 15, 2008, was a game-changing event. As I have noted, until then, whenever the financial system came close to a breakdown, the authorities intervened. This time they did not. The consequences were disastrous. CDSs (credit default swaps) went through the roof, and American International Group (AIG), which carried a large short

position in CDSs, was facing imminent default. By the next day, Tuesday, Treasury Secretary Henry Paulson had to reverse himself and come to the rescue of AIG, albeit on extremely punitive terms. But worse was to come.

Lehman was one of the main market-makers in commercial paper and a major issuer. An independent money market fund held Lehman paper, and, since it had no deep pocket to turn to, it had to "break the buck" - stop redeeming its shares at par. This caused panic among depositors, and by Thursday a run on money market funds was in full swing. The panic spread to the stock market. The Federal Reserve had to extend a guarantee to all money market funds, short selling of financial stocks was suspended, and the Treasury announced a \$700 billion rescue package for the banking system. This provided some temporary relief to the stock market. (Soros 2009 p. 161)

523 Steven Rattner addressed the problem in the US between 2000 and 2015:

A few days ago, I visited the shiny headquarters of the Peterson Institute for International Economics on "think tank row" in Washington - basically, the locker room of the Team Globalization and Free Trade cheering squad....

...I emphasized that I had paid attention in economics class and understood that globalization incontrovertibly has benefited not only the world but also the United States. That's in part because trade permits Americans to buy goods at lower prices; the added purchasing power helps our economy expand faster.

But I soon pivoted to my experience working in the Obama administration on the auto rescue, an experience that had seared into me the sense that intermingled among the many winners from globalization were a substantial number of losers.

So far, so good. Then I went rogue and uttered two blasphemous words: "Ross Perot." He had a point, I said heretically, when he campaigned in 1992 against the landmark North American Free Trade Agreement, saying that it would result in a "giant sucking sound" of jobs headed south to Mexico.

A cool breeze drifted toward me.

As I looked out at my audience, I realized that the room was filled with winners - folks who, from all appearances, earned their livings from intellectual labor. Neither their jobs nor their wages were in jeopardy as countries ranging from Vietnam to Colombia became more competitive with us.

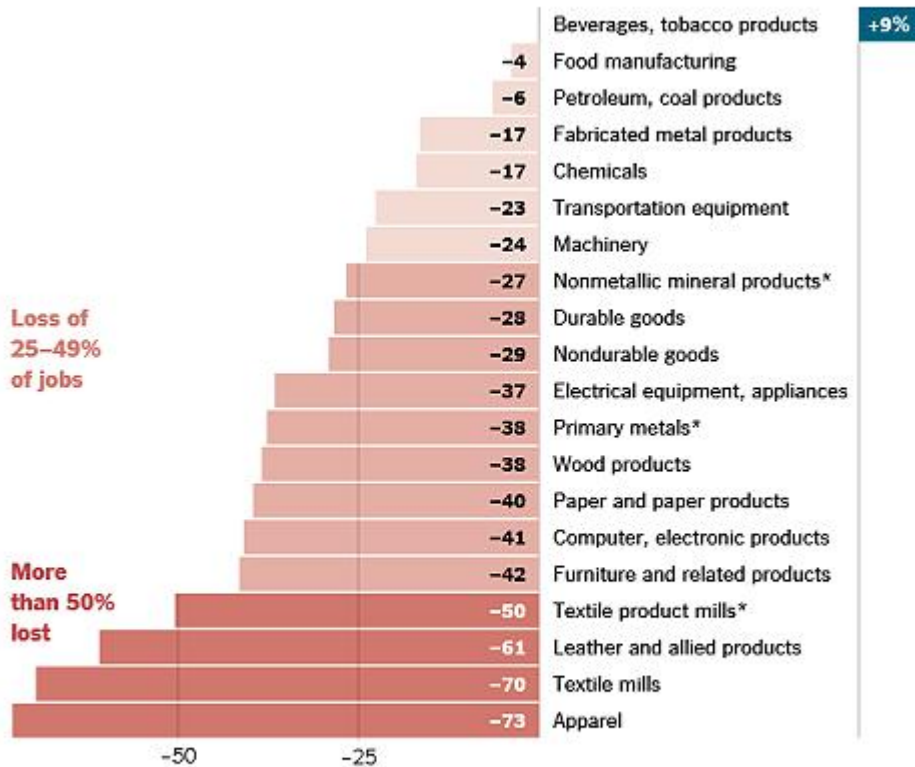

I pressed on.

Last year, according to the recent figures, our nation added 2.65 million new jobs. [Just 30,000 of them were in manufacturing](#). So much for the widely trumpeted renaissance of Made in America.

At first glance, the automobile industry looks to be in better shape. From the depths of the crisis in 2009 through 2013, employment in the auto manufacturing sector in the United States rose by 23 percent, to 690,000 from 560,000.

Manufacturing Jobs Draining Away

Percent change in the number of U.S. employees in each industry, 2000 to 2015.

Source: Bureau of Labor Statistics

By The New York Times

...My central argument was not that we should close our borders or retreat from the world; it was that we need to be sensitive to the losers and try to help. The point - well illustrated in Steve's book - is that globalization is not only an economic matter but also a moral one.

Presently, the institute's blunt director, Adam Posen, used his final moments to shut me down, declaring that the "fetishization" of any industry was "immoral." The problem of manufacturing is technology, he declared flatly.

Blaming technology is a common refrain from economists who hate the thought that globalization is not the world's unambiguous salvation.

(Steven Rattner, [What's Our Duty to the People Globalization Leaves Behind?](#) *New York Times*, Opinion Pages, Jan. 26, 2016)

Autor, Dorn and Hanson (2012) explained the consequences for the US in a study sub-titled 'Local Labor Market Effects of Import Competition in the United States':

We analyze the effect of rising Chinese import competition between 1990 and 2007 on local U.S. labor markets, exploiting cross-market variation in import exposure stemming from initial differences in industry specialization while instrumenting for imports using changes in Chinese imports by industry to other high-income countries.

Rising exposure increases unemployment, lowers labor force participation, and reduces wages in local labor markets. Conservatively, it explains one-quarter of the contemporaneous aggregate decline in U.S. manufacturing employment. Transfer

benefits payments for unemployment, disability, retirement, and healthcare also rise sharply in exposed labor markets.
(David H. Autor, David Dorn, Gordon H. Hanson, ^œ[The China Syndrome: Local Labor Market Effects of Import Competition in the United States](#), NBER Working Paper No. 18054, May 2012)

For a recent updating and expansion of these issues see: David H. Autor, David Dorn, Gordon H. Hanson, ^œ[The China Shock: Learning from Labor Market Adjustment to Large Changes in Trade](#), NBER, Working Paper No. 21906, January 2016; David Autor, David Dorn, Gordon Hanson, Kaveh Majlesi, ^œ[Importing Political Polarization? The Electoral Consequences of Rising Trade Exposure](#), NBER Working Paper No. 22637, September 2016, updated: December 2016.

As [Mishel and Bivens \(2011\)](#) show, while the richest 5 percent of households obtained roughly 82 percent of all the nation's gains in wealth between 1983 and 2009; the bottom 60 percent of households actually had less wealth in 2009 than in 1983, meaning they did not participate at all in the growth of wealth over this period.

See ^œ[The high price of losing manufacturing jobs](#) (*EurekAlert* 23-Feb-2012) for an assessment of the impact of the removal of tariff barriers in the 1980s on U.S. manufacturing jobs in the 21st century. As the report explains:

In the study, published as a working paper by the *National Bureau of Economic Research*, Autor, along with economists David Dorn and Gordon Hanson, examined the effect of overseas manufacturing competition on 722 locales across the United States over the last two decades....

"Trade tends to create diffuse beneficiaries and a concentration of losers," Autor says. "All of us get slightly cheaper goods, and we're each a couple hundred dollars a year richer for that." But those losing jobs, he notes, are "a lot worse off." For this reason, Autor adds, policymakers need new responses to the loss of manufacturing jobs: "I'm not anti-trade, but it is important to realize that there are reasons why people worry about this issue."

⁵²⁴ See Alice H. Amsden and Rolph Van Der Hoeven, ^œ[Manufacturing output, employment and real wages in the 1980s: labour's loss until the century's end](#). *Journal of Development Studies*, April 1, 1996 for more on this. As the authors explained:

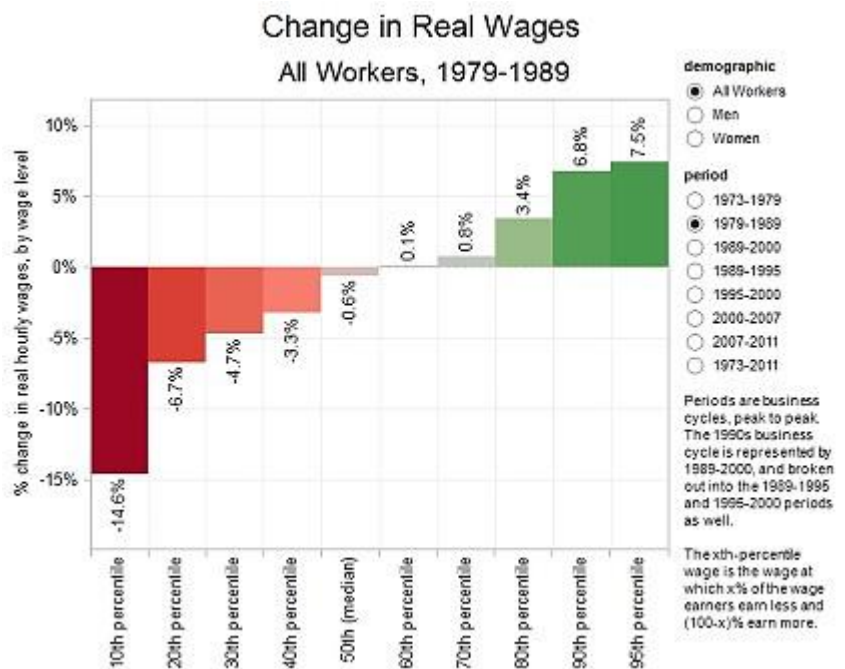

... there is a stark difference between growth in GDP and growth in manufacturing wages in the 1960s and the 1980s: whereas in the 1960s, for all countries with reliable information, growth in real manufacturing wages was, on average, equal to growth in real GDP per capita, growth in real wages started to lag behind GDP growth per capita in the 1970s and was considerably lower than it in the 1980s. We observe also that, in the 1980s, real wages rose more slowly (or fell faster) than GDP per capita growth for all groups of countries whatever their per capita growth, while in the 1960s and the 1970s wages grew faster in slow-growing countries and were more or less equal to GDP growth in the moderate- and fast-growing countries in the 1960s.

Lawrence Mishel and Colin Gordon provide excellent graphic illustration of the changes: ^œ[Real hourly wage growth: The last generation](#), *The Economic Policy Institute Blog*, Posted October 10, 2012.

Here are 3 graphs of changes in real wages for the period: the first for all workers; the second for men only; the third for women only, obtained from their *Tableau* data set (Economic Policy Institute, [State of Working America 2012](#), tables 4.4, 4.5, and 4.6; Colin Gordon, updated June 2013).

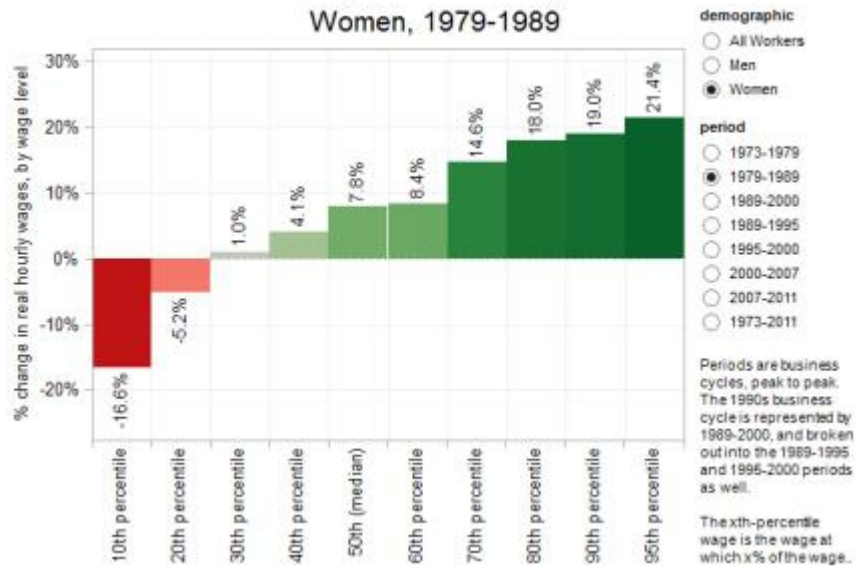

The increase in women's wage rates over the period should be balanced against the decrease in men's wage rates. This was a period of 'equal opportunity': a period when lower women's wage rates could be used to justify decreasing men's wage rates through competition (see: *Median Earnings of Full-Time, Year-Round Workers 15 Years and Older by Sex: 1960 to 2012*, below, for more on this).

(From p.11 of: DeNavas-Walt, Carmen, Bernadette D. Proctor, and Jessica C. Smith, U.S. Census Bureau, Current Population Reports, P60-245, *Income, Poverty, and Health Insurance Coverage in the United States: 2012*, U.S. Government Printing Office, Washington, DC, 2013.)

⁵²⁵ In 2018 the growth in inequality in the US shows no signs of slowing down. Lawrence Mishel and Julia Wolfe have documented the continued growth in US wage inequality:

Newly available ^œwage data for 2017 show that annual wages grew far faster for the top 1.0 percent (3.7 percent) than for the bottom 90 percent (up only 1.0 percent). The top 0.1 percent saw the fastest growth, up 8.0 percent - far faster than any other wage group. This fast wage growth for the top 0.1 percent reflects the sharp ^œ17.6 percent spike upwards in the compensation of the CEOs of large firms: executives comprise the largest group in both the top 1.0 and top 0.1 percent of earners. The fast wage growth of the top 1.0 percent in 2017 brought their wages to the highest level ever, \$719,000, topping the wage levels reached before the Great Recession of \$716,000 in 2007. The wages of the top 0.1 percent reached \$2,757,000 in 2017, the second highest level ever, roughly only 4 percent below their wages in 2007.

Paul Volker, former Chairman of the Federal Reserve put it well:

...[T]here is something more worrisome affecting policy than fear... Money....

The central issue is we're developing into a plutocracy. We've got an enormous number of enormously rich people that have convinced themselves that they're rich because they're smart and constructive. And they don't like government, and they don't like to pay taxes.

(Andrew Ross Sorkin, [“Paul Volcker, at 91, Sees 'a Hell of a Mess in Every Direction',”](#) *DealBook*, *New York Times*, October 22, 2018)

Chuck Collins and Josh Hoxie, in an *Institute for Policy Studies* report entitled [“Billionaire Bonanza 2018: Inherited Wealth Dynasties in the 21st-Century United States](#) (October 2018), summarized it:

Key Findings

Wealth in the United States is concentrating into fewer and fewer hands, a trend we tracked in two previous *Billionaire Bonanza* reports in 2015 and 2017. This year's edition focuses primarily on "dynastic" wealth that has passed from one generation to another within families. Our analysis is based on the *Forbes* magazine list of the 400 wealthiest individuals in the United States and the Federal Reserve Survey of Consumer Finances.

- Three dynastic wealth families - the Waltons, the Kochs, and the Mars - have seen their wealth increase nearly 6,000 percent since 1982. Meanwhile, median household wealth over the same period went down by 3 percent.
- These three wealth dynasties own a combined fortune of \$348.7 billion. That's more than four million times the median wealth of U.S. families.
- The dynastic wealth of the Walton family grew from \$690 million in 1982 (or \$1.81 billion in 2018 dollars) to \$169.7 billion in 2018, a mind-numbing increase of 9,257 percent.
- Three individuals - Jeff Bezos, Bill Gates, and Warren Buffett - still own more wealth than the bottom half of the country combined.
- A third of the members of the Forbes 400 own fortunes derived from companies that were founded by earlier generations.
- The 15 wealthiest multi-generational dynastic families on the Forbes 400 own a combined \$618 billion. Their parents or other ancestors founded all of the companies from which their wealth is derived.
- The Forbes 400 combined own \$2.89 trillion dollars, more than the combined wealth of the bottom 64 percent of the United States. It's also more than the GDP of Britain, the 5th-largest economy in the world. Just 45 individuals own half of this wealth.
- The median family in the United States owns just over \$80,000 in household wealth. The richest person in the United States (and the world), Jeff Bezos, has accumulated a fortune nearly 2 million times that amount.
- The Bezos fortune expanded by \$78.5 billion just in the last year to \$160 billion. Even at the recently increased wage of \$15/hour, a full-time Amazon worker would need to toil for 2.5 million years to generate this much money.

526 (07/06/16)(18/09/16) It needs to be remembered that 'economic efficiency' and 'social equity' are not necessarily linked. As I suggest elsewhere, unless democratic capitalist societies pursue effective redistributive policies, they inevitably, over time, [devolve from democracy to plutocracy](#).

It is perfectly possible to have great inequality in social/economic outcomes across a society and yet have a well-tuned, 'efficient' economy. Increasing inequality might, in the long-term, lead to social unrest but, in the absence of effective political outcomes, it is equally likely to lead to resignation and acceptance of the *status quo*. One needs to be cautious about assuming that economic stability somehow equates with social equity. Alexis de Tocqueville (1835) described the nature of 19th century capitalism after his visit to Manchester:

...[H]ere is the slave, there the master; there the wealth of some, here the poverty of most; there the organized effort of thousands produce, to the profit of one man, what society has not yet learned to give. Here the weakness of the individual seems more feeble and

helpless even than in the middle of a wilderness; here the effects, there the causes...

From this foul drain the greatest stream of human industry flows out to fertilise the whole world. From this filthy sewer pure gold flows. Here humanity attains its most complete development and its most brutish; here civilization works its miracles, and civilized man is turned back into a savage.

(^œ1958 p. 107)

The conditions outlined in de Tocqueville's description were not those of a brief period in Western European history. They had existed through most of the 18th century and would persist through most of the 19th.

Historically determined presumptions of what is 'socially equitable', held by the effective social and political hegemonies of communities, determine economic, and consequent social, conditions. That is, social equity is not economically, but socially and politically determined and cannot be achieved through manipulating economic factors. Such manipulation merely preserves the *status quo*. As Keynes explained,

I am now no longer of the opinion that the concept of a 'natural' rate of interest, which previously seemed to me a most promising idea, has anything very useful or significant to contribute to our analysis. It is merely the rate of interest which will preserve the *status quo*; and, in general, we have no predominant interest in the *status quo* as such.

(*The General Theory of Employment, Interest, and Money*, 1936, Chapter 17, [The Essential Properties Of Interest And Money](#), Section 6)

Jefferson described [conditions in England](#) through the 1700s and early 1800s:

The population of England is composed of three descriptions of persons (for those of minor note are too inconsiderable to affect a general estimate). These are,

1. The aristocracy, comprehending the nobility, the wealthy commoners, the high grades of priesthood, and the officers of government.
2. The laboring class.
3. The eleemosynary class, or paupers, who are about one-fifth of the whole.

The aristocracy, which have the laws and government in their hands, have so managed them as to reduce the third description below the means of supporting life, even by labor; and to force the second, whether employed in agriculture or the arts, to the maximum of labor which the construction of the human body can endure, and to the minimum of food, and of the meanest kind, which will preserve it in life, and in strength sufficient to perform its functions.

(20/09/16)(24/09/16) Through the 20th century, conditions for the 'laboring' and 'eleemosynary' populations of Western democracies steadily improved (this was, of course, not true for most Third World peoples). Largely as a consequence of the New Deal, Western economies were reorganized to ensure the welfare of Western populations.

(12/06/17) Then, since memories are sadly short, from the mid-1960s neoliberalism reared what can only be described as its ugly head and began to attack the safeguards and communal empowerments of the post-New Deal period.

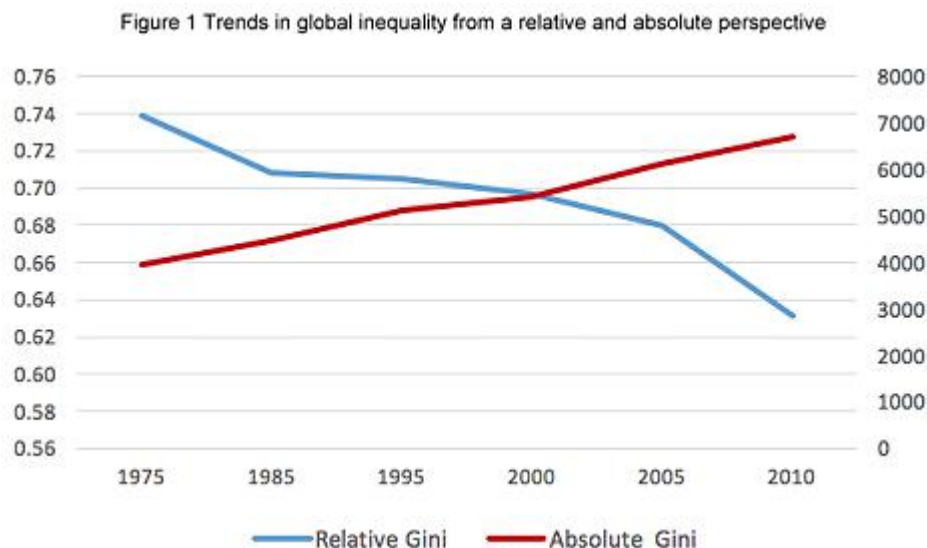

Miguel Niño-Zarazúa, Laurence Roope and Finn Tarp have examined income inequality in a globalizing world. As they say:

Since the turn of the century, inequality in the distribution of income, together with concerns over the pace and nature of globalisation, have risen to be among the most prominent policy issues of our time...

So what has actually happened to global inequality? Has global income inequality gone up (or down) in recent decades?

...[R]elative global inequality, as measured by the Gini coefficient, declined steadily over the past few decades from 0.739 in 1975 to 0.631 in 2010 (Niño-Zarazúa et al. 2016). The relative Gini takes the value zero for a society where all are equal, and the value of one for a society where all income goes to one person.

The fall over the past 35 years (i.e. the blue line in Figure 1) was driven primarily by declining inequality between countries, arising from the extraordinary economic progress observed in fast developing countries such as China and India. And this overall trend was achieved despite an increasing trend of inequality within countries. In contrast, absolute inequality, as measured by the absolute Gini coefficient, which is based on absolute changes in income, and depicted by the red line in Figure 1, has increased dramatically since the mid-1970s.

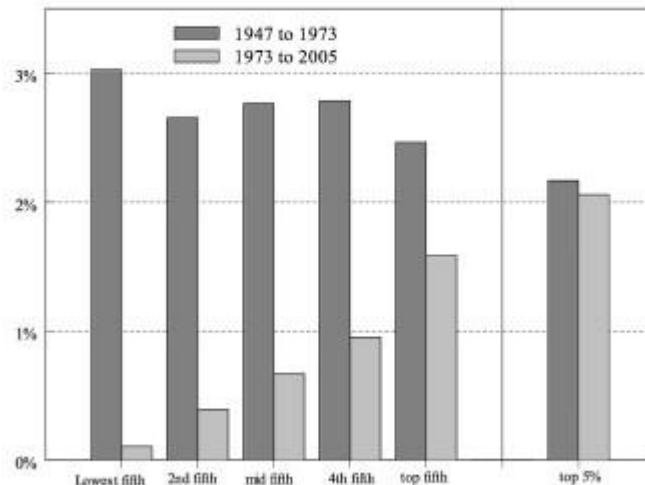

(Miguel Niño-Zarazúa, Laurence Roope, Finn Tarp, ^œ[Income inequality in a globalising world](#), Vox, 20 September 2016)

It has taken fifty years for the consequences to become inescapably obvious (despite the deliberate distortion of evidence and denial of those consequences by neoliberally oriented ideologues¹⁰²⁰). Without determined [political and social revolution](#), neoliberal forces [will continue to dismantle](#) those New Deal and post-New Deal structures and supports. The future, without revolution, is indeed written into Western European history!

Zachary Goldfarb has provided a graphic illustration of growing inequality in economic outcomes in the US between 1973 and 2005. As he explained,

Obama came of age when something dramatic was changing in the U.S. economy. During his grandparents' generation - a period for which he has expressed deep nostalgia - incomes at all levels of the economy grew at roughly the same pace. But around the time Obama moved to Chicago to start his adult life, the prospects of the top earners and most Americans had started to wildly diverge. Here's a chart documenting the trend from Harvard professor Lawrence Katz.

**Growing Together (1947-73) vs. Growing Apart (1973-2005):
Annual Growth Rate of Real Income Across the Family
Income Distribution**

Source: Census Bureau. From Lawrence Katz, Harvard professor

(Zachary A. Goldfarb *Washington Post* November 28 2012, [Obama's economic philosophy, in 8 charts](#))

Richard Reeves has described (and many of the reader comments on his description illustrate) the self-serving 21st century myopia of the beneficiaries of that upward redistribution of wealth in the self-proclaimed 'classless' United States:

...[I]magine my horror at discovering that the United States is more calcified by class than Britain, especially toward the top. The big difference is that most of the people on the highest rung in America are in denial about their privilege. The American myth of meritocracy allows them to attribute their position to their brilliance and diligence, rather than to luck or a rigged system. At least posh people in England have the decency to feel guilty.

In Britain, it is politically impossible to be prime minister and send your children to the equivalent of a private high school. Even Old Etonian David Cameron couldn't do it. In the United States, the most liberal politician can pay for a lavish education in the private sector. Some of my most progressive friends send their children to \$30,000-a-year high schools. The surprise is not that they do it. It is that they do it without so much as a murmur of moral disquiet.

Beneath a veneer of classlessness, the American class reproduction machine operates with ruthless efficiency. In particular, the upper middle class is solidifying. This favored fifth at the top of the income distribution, with an average annual household income of \$200,000, has been separating from the 80 percent below. Collectively, this top fifth has seen a \$4 trillion-plus increase in pretax income since

1979, compared to just over \$3 trillion for everyone else. Some of those gains went to the top 1 percent. But most went to the 19 percent just beneath them.

The rhetoric of "We are the 99 percent" has in fact been dangerously self-serving, allowing people with healthy six-figure incomes to convince themselves that they are somehow in the same economic boat as ordinary Americans, and that it is just the so-called super rich who are to blame for inequality.

Politicians and policy wonks worry about the persistence of poverty across generations, but affluence is inherited more strongly. Most disturbing, we now know how firmly class positions are being transmitted across generations. Most of the children born into households in the top 20 percent will stay there or drop only as far as the next quintile. As Gary Solon, one of the leading scholars of social mobility, put it recently, "Rather than a poverty trap, there seems instead to be more stickiness at the other end: a 'wealth trap,' if you will."

(Richard V. Reeves, ["Stop Pretending You're Not Rich,"](#) *New York Times*, Sunday Review, Opinion, June 10, 2017)

Pavlina Tcherneva has provided a clear illustration of the changing fortunes of the lower 90% of the US population over the past sixty years. As she explained:

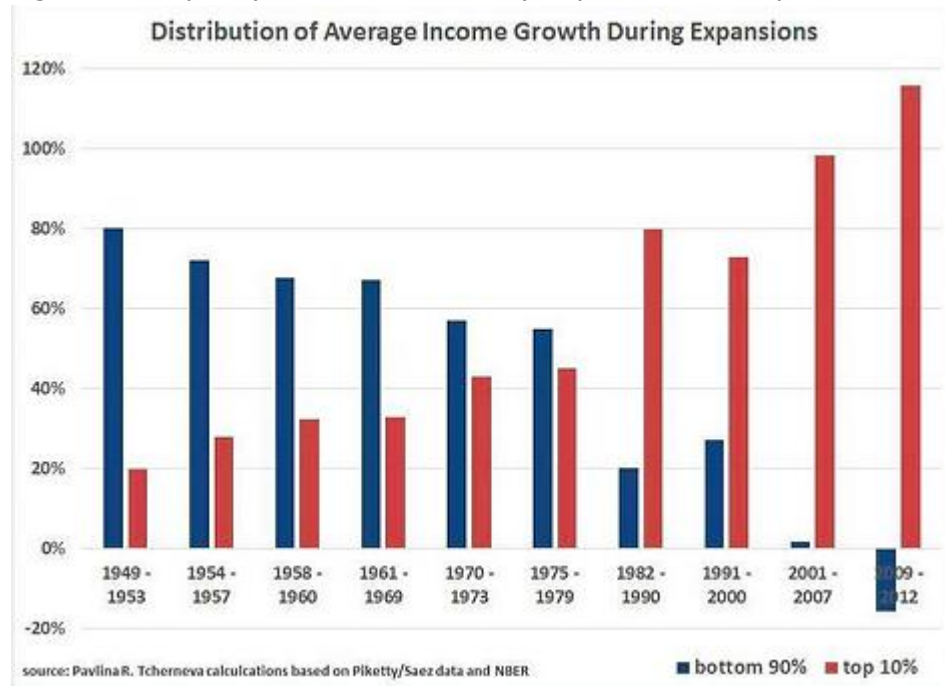

An examination of average income growth during every postwar expansion (from trough to peak) and its distribution between the wealthiest 10% and bottom 90% of households reveals that income growth becomes more inequitably distributed with every subsequent expansion during the entire postwar period (Figure 2).

Only during the 1950-53 expansion did the bottom 90% capture all of the average income growth in the economy. Since then, the top 10% of households have been capturing greater and greater share of the income growth and, in the first two expansions of the 21st century, they have captured all of the income growth.

Note that income distribution still eroded during the "Golden Age" of American economy, at a time when the government heavily relied on conventional pump priming methods to stabilize the business cycle. With the advent of supply-side fiscal measures, income inequality worsened much faster, and in the age of New Consensus fiscal policy stabilization, the economy has witnessed the largest transfer of income to the top in American history (ibid).

(Pavlina R. Tcherneva, ["Reorienting Fiscal Policy: A Critical Assessment of Fiscal Fine-Tuning,"](#) Working Paper No. 772, Levy Economics Institute of Bard College, August 2013, pp. 13-14)

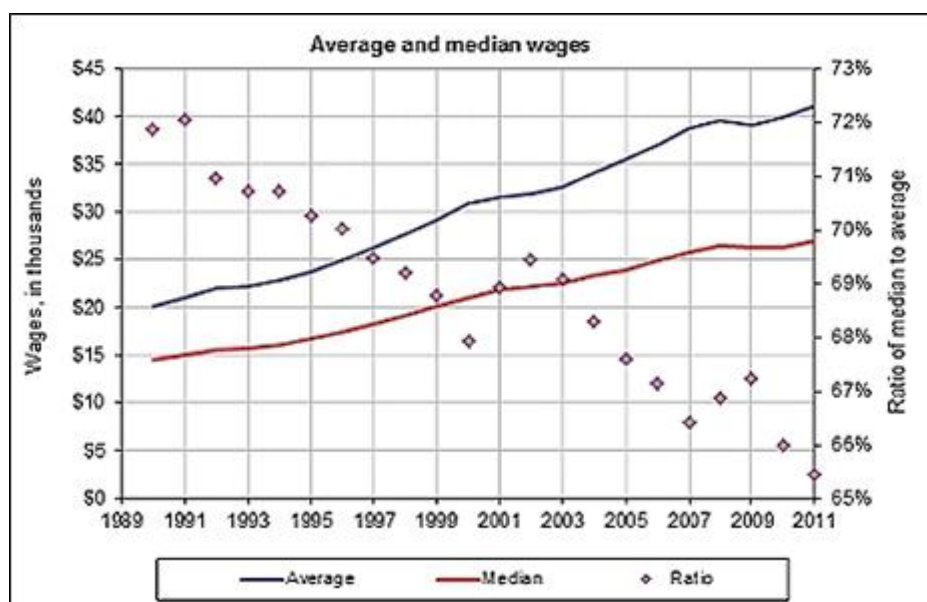

Figure 2 Inequality worsens with every expansion in the postwar era

Another way to illustrate the shift in income between low wage earners and middle and high wage earners is to examine the difference between average and median net wage compensation through time. Here is such a comparison for the United States between 1989 and 2011 provided by the US Social Security Administration (similar results can be shown for most Western communities over the same period). As they explain:

An average is just one measure of central tendency for any set of data. Another measure is a median. For our wage data, the median wage (or net compensation) is the wage "in the middle." That is, half of the workers earned below this level. The table below shows that the median wage is substantially less than the average wage. The reason for the difference is that the distribution of workers by wage level is highly skewed.

Average and median net compensation are shown in the graph below. Also shown is the ratio of median to average amounts:

(U. S. Social Security Administration, ^{ae}Measures of Central Tendency for Wage Data, 16th October 2012)

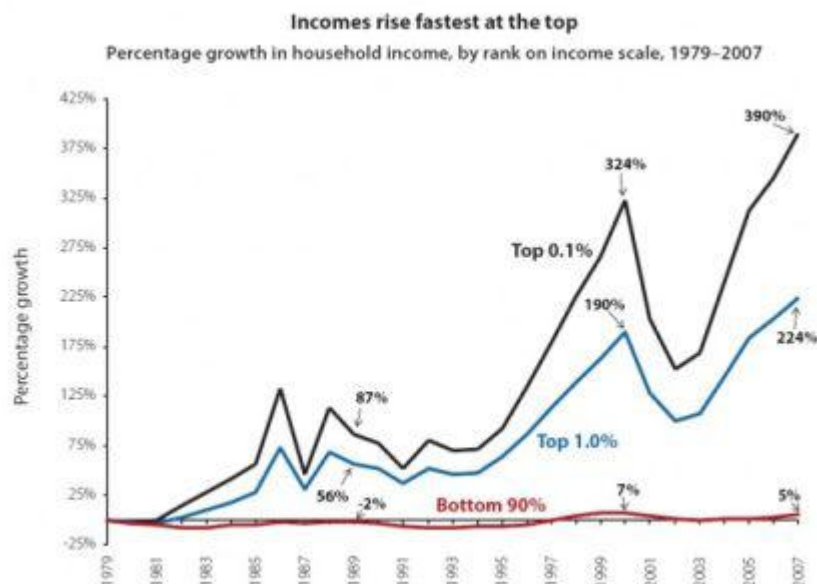

For an example of the use of median and mean values in determining Changes in U.S. Family Finances between 2010 and 2013, see this US Federal Reserve Bulletin: September 2014 Vol 100, No 4, [*Changes in U.S. Family Finances from 2010 to 2013: Evidence from the Survey of Consumer Finances*](#).

For a discussion of the widening income gap between the top 10% and the rest in the US see Mishel and Bivens (2011). As they explain:

In the long period before the current recession, from 1979 to 2007, inflation-adjusted average annual incomes of the highest-income 1 percent of households grew by 224 percent.... Those even better off, the top 0.1 percent (the highest-income one one-thousandth of households), saw their incomes grow by 390 percent.

In contrast, incomes of the bottom 90 percent grew just 5 percent between 1979 and 2007-and all of that growth occurred in the unusually strong income growth that occurred from 1997 to 2000, a period followed by declining income from 2000 to 2007.

These data include all sources of market-based incomes such as wages and salaries, dividend and interest income, and realized capital gains, but do not include government transfer income (such as Social Security income or unemployment benefits).

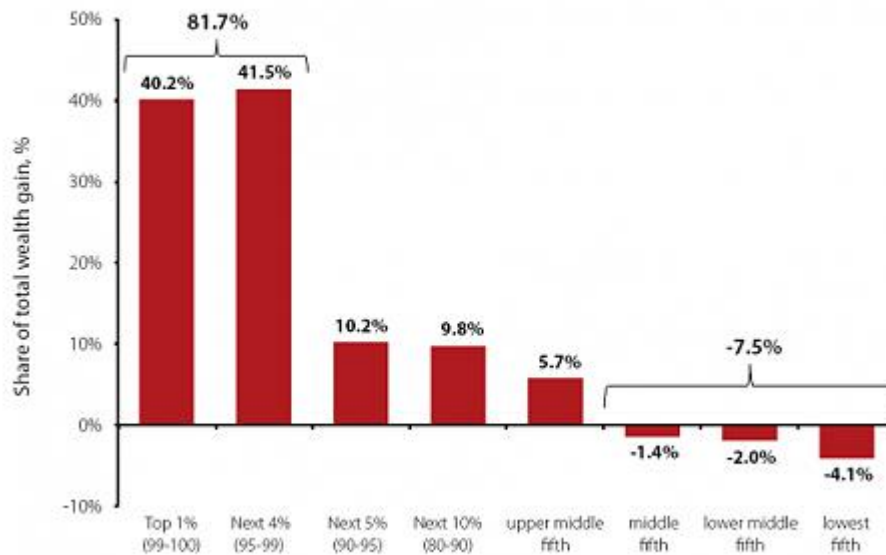

SOURCE: Economic Policy Institute analysis of data from Piketty and Saez (2010).

... Perhaps more startlingly, more than 94 percent of the gains in wealth from 1983 to 2009 accrued to the top fifth of wealthiest households, with 40.2 percent of the gains going to the wealthiest 1 percent and 41.5 percent going to the next wealthiest 4 percent of households (Figure L). This translated to gains among the wealthiest 1 percent of \$4.5 million per household and gains among the next wealthiest 4 percent of roughly \$1.2 million per household.

Figure L

The rich gain most of the growth in wealth

Share of total wealth gain, by percentile rank in wealth, 1983-2009

SOURCE: Economic Policy Institute analysis of Wolff in Allegretto (2010).

In other words, the richest 5 percent of households obtained roughly 82 percent of all the nation's gains in wealth between 1983 and 2009. The bottom 60 percent of households actually had less wealth in 2009 than in 1983, meaning they did not participate at all in the growth of wealth over this period.

(Mishel, Lawrence and Josh Bivens. 2011. ["Occupy Wall Streeters are Right About Skewed Economic Rewards in the United States."](#) Economic Policy Institute Briefing Paper No.331)

See: Arthur F. Jones Jr. and Daniel H. Weinberg, ["The Changing Shape of the Nation's Income Distribution 1947-1998,"](#) (June 2000, P60-204, Current Population Reports, Demographic Programs, U.S. Census Bureau) for an examination of changing US household income distributions between 1967 and 1998. As they explained and illustrated:

Whereas the data on household income inequality between 1967 and 1980 are ambiguous, it is clear that the household income distribution became increasingly unequal beginning in 1981...

these changes signified the beginning of a period marked by rising household income inequality. The 1980s have been widely characterized as a period of rising income inequality. While true, some of the measures presented here suggest that the rise in inequality started earlier-in the mid-1970s.

Figure 3A.
Change in Share of Aggregate
Income for Households: 1967-1980

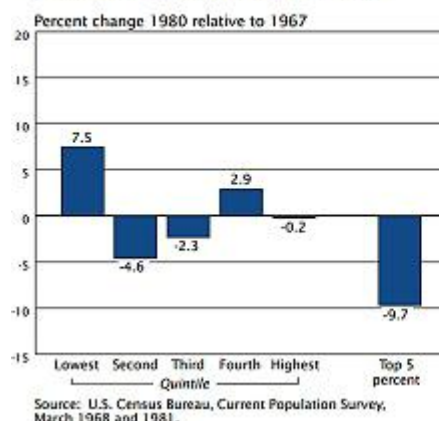

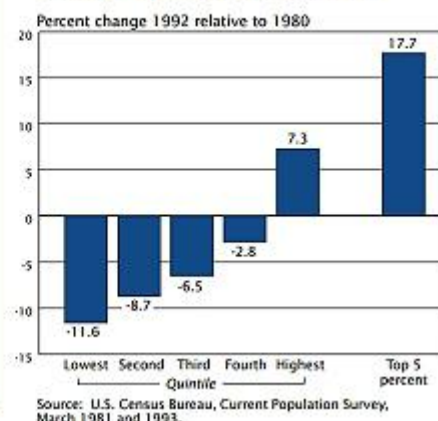

Figure 3B.
Change in Share of Aggregate
Income for Households: 1980-1992

For a comparative set of graphs on these issues, see this set of 'charts prepared for a speech by Alan B. Krueger, Chairman of the Council of Economic Advisers, on January 12, 2012 at the Center for American Progress': ["The Rise and Consequences of Inequality in the United States: charts"](#).

For Krueger's explanation of the significance of the charts he presents, see: ["The Rise and Consequences of Inequality in the United States"](#), Alan B. Krueger.

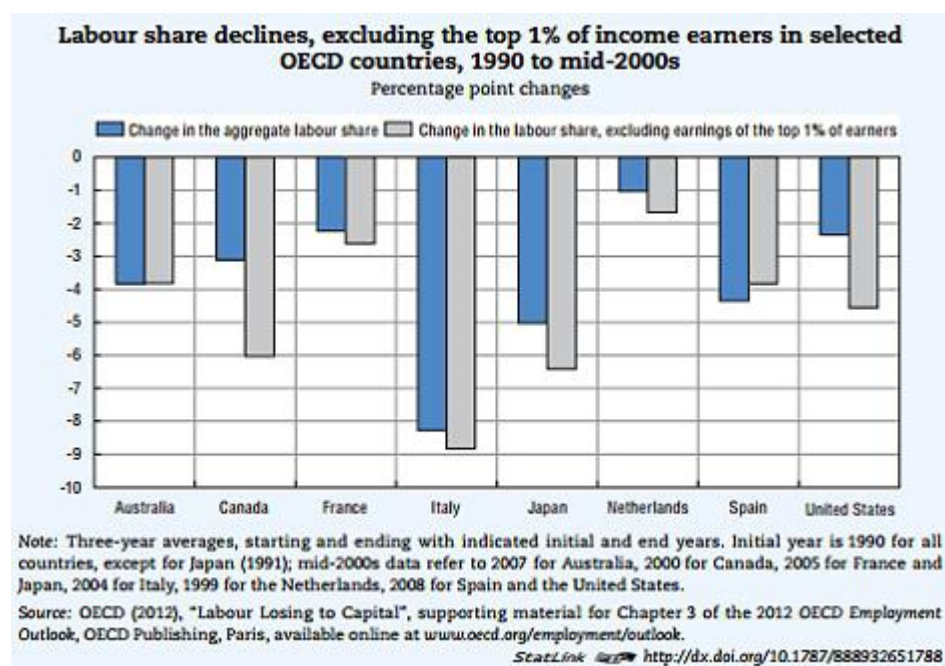

See also: ["Trends in the Distribution of Household Income Between 1979 and 2007"](#), The Congress of the United States, Congressional Budget Office, October 2011.

For the picture in OECD countries from 1990 to the mid 2000s, see ["OECD Employment Outlook 2012"](#) (OECD (2012), OECD Publishing. http://dx.doi.org/10.1787/empl_outlook-2012-en). As the report explains:

Box 3.1. Trends in the labour share excluding top-income earners
[pp.115-6]

In recent years, long time series on income of top earners have become available for many countries (see e.g. Atkinson et al., 2011). This evidence shows a general upward trend for the share of top income earners on total income. For example, in OECD countries for which data are available, the share of the top 1% of earners has increased on average from 6.7% to 10.3% between the mid-1970s and the mid-2000s. This stylised fact has fuelled much of the recent debate on inequality (see OECD, 2011a)...

Therefore, subtracting [the labour share of the top 1% of income earners] from the aggregate labour share yields an estimate of the labour share of the bottom 99% of earners (see OECD, 2012, for more details). The results from this exercise are summarised in the chart below.

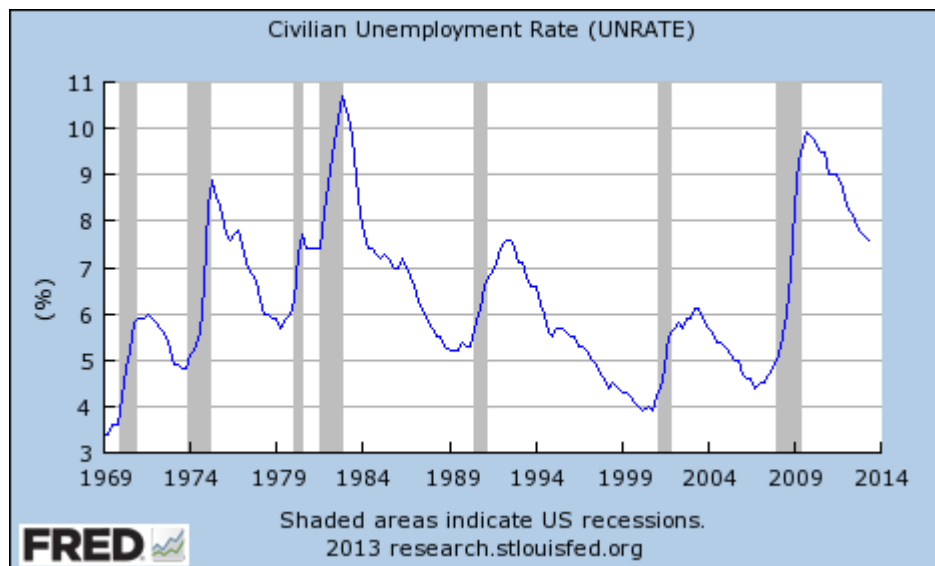

Once top earners' income is excluded from the computation of the wage bill, the drop of the labour share appears somewhat greater, especially in Canada and the United States. In 1990s and 2000s, the decline in the adjusted labour share in these two countries (6 and 4.5 percentage points, respectively) was substantially greater

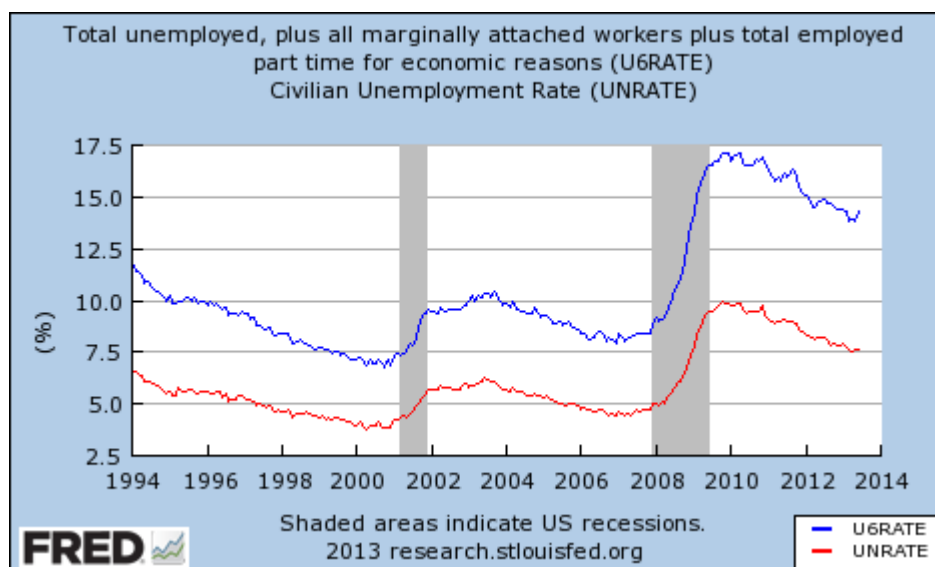

than that of the unadjusted labour share, due to an increase in the share of wage income in total income of top earners (2.9 and 2.2 percentage points in Canada and the United States, respectively; see OECD, 2012). In most other countries, the difference is smaller: on average, the cumulated labour income of the bottom 99% of earners expressed as a fraction of national income decreased by 0.9 percentage points more than the unadjusted aggregate labour share. Conversely, the top 1% of earners saw their labour share increasing by the same amount.* The only exception is Spain, where the adjusted labour share fell less than the unadjusted one, mostly due to a minor decrease in the share of labour income in top earners' income.

* Note that, as the labour share of the top 1% of earners is about 5% on average, this implies that the labour income of the top 1% of earners as a percentage of national income has increased by about 20% on average.

527 The graph below shows the US unemployment rates (by %) for the 1969-2013 period:

The next graph compares both unemployed and underemployed for the period 1994-2013 (the earliest available information for this selection):

(One needs to treat graphs of this kind, which compare 'unemployment rates' through time, with some caution. Official definitions of 'unemployment' have varied, often considerably,

through time (see [Definition of Unemployment](#) for more). See ^œUS BLS Labor Force Statistics from the Current Population Survey for details of US unemployment rates.)

528 (26/02/16) (28/04/16) By the early 1980s, neoliberals were able to point to the early consequences of their policies in Thatcher's Britain. This resulted in a large number of converts, including politicians who had come out of the labor movement.¹⁰²¹

They seemed [not to understand](#) the income redistribution and threat to government welfare programs implied in the changes.

In Australia, the move to deregulation in the 1980s was undertaken by the Labor government under Bob Hawke - who had come out of the labor movement. He had been president of the Australian Council of Trade Unions (ACTU) for ten years before moving into parliament and becoming prime minister of Australia.

Labor leaders, in many Western regions, are now very often conspicuously 'middle class' in their attitudes and lifestyles - which sometimes seems to result in an ambivalence toward 'working class' issues.

Many previously 'working class' people in Western regions, in the post-Second World War era, were transformed into a new '[middle class](#)' with, as American politicians are wont to put it, "middle class aspirations". See the US report *Middle Class In America* for an explanation of what this means in the United States. As the report says:

Most Americans consider themselves middle class. This raises the question, what does it mean to be middle class?
([Middle Class In America](#), Office of the Vice President of the United States Middle Class Task Force, January 2010)

The 'middle classes', in Western countries, traditionally identified with managers and their staff - who negotiated with labor unions but did not belong to unions themselves. The newly transformed, upwardly mobile, 'working class' people of the 1950s and 1960s, now seeing themselves as 'middle class', similarly identified themselves with that managerial group and so felt that they had 'outgrown' unionization. Many people also felt that they had outgrown the need for the guarantees of the New Deal!

The most obvious consequence of this shift has been the loss of a coherent 'center' in US political life. As Ezra Klein ([There's no such thing as 'the center'](#), July 25 2013, *Washington Post*) has put it, 'the concept of "the center" has been completely hollowed out'. The 'working class' constituency to which Roosevelt appealed in the 1930s, when he promised the US population a 'New Deal' (see [FDR's New Deal](#)), has largely evaporated. Anyone attempting a similar set of reforms in the early 21st century would be hard-pressed to gain an electoral majority in support of the legislation.

Daniel Gross (2004) ([Goodbye, Pension. Goodbye, Health Insurance. Goodbye, Vacations. Welfare capitalism is dying. We're going to miss it](#)) described the process through which the former 'working classes' became members of the 'middle class'. As he says, "welfare capitalists made industrial work a ticket to the middle class".

529 Neil Irwin, in an essay on the validity of the Phillips Curve in determining US Federal Reserve policies on interest rate moves, raised the question of its applicability in the post 1980s world:

Next week, when Federal Reserve officials meet to decide whether to raise interest rates for the first time in nine years, one question will be front and center: How much faith should be placed in a line on a graph first drawn by a New Zealand economist nearly six decades ago, based on data on wages and employment in Britain dating to the 1860s?

That would be the Phillips curve, one of the most important concepts in macroeconomics. It shows how inflation changes when unemployment changes and vice versa. The intuition is simple: When joblessness is low, employers have to pay ever higher wages to attract workers, which feeds through into higher prices more broadly. And inflation is particularly prone to rise when the unemployment rate falls below the "natural rate" at which pretty much everybody who wants a job either has one or can find one quickly.

As the Fed's chairwoman, Janet L. Yellen, put it in a [2007 speech](#), the Phillips curve "is a core component of every realistic macroeconomic model."...

Except it doesn't work. Or at least, it hasn't worked very well in the last few decades in the United States. And it has proved particularly problematic to try to use that historical relationship to predict where inflation is going.

(Neil Irwin, ^œ[The 57-Year-Old Chart That Is Dividing the Fed](#), *New York Times*, Upshot: Monetary Policy, October 24, 2015)

The Phillips Curve, of course, relies on a relatively closed system, with wage rates negotiated between employees and employers, based on changing bargaining power as unemployment falls or rises. A naive acceptance of employment/unemployment statistics can lead to misleading presumptions about the consequences of increasing 'labor participation rates'. [Phineas Baxandall](#) (2004) explained the problem:

Unemployment is a socially-constructed benchmark for evaluating the competency of economic rule. In different places and in different times the category of "unemployment" has included different kinds of joblessness and excluded others. It has implied different kinds of commitments or accountability by the state.

New Meanings of unemployment are more than a byproduct of economic change. They are the result of changing politics and changing policy.

Disguised unemployment decreases workers' bargaining power¹⁰²². Further, as labor organization is undermined and enabling legislation gutted, it becomes possible for employers to move (or threaten to move) offshore when wage demands rise.

Disguised unemployment, [globalization](#) and deregulation all undermine the preconditions for successful Phillips Curve predictions. The Phillips Curve then becomes decreasingly reliable as a predictor of likely wage shifts and consequent inflation rates. In such conditions, it becomes "particularly problematic to try to use that historical relationship to predict where inflation is going". As Irwin put it,

... [T]his month, two Fed governors, Lael Brainard and Daniel K. Tarullo, argued against a rate move. Ms. Brainard said that the Phillips curve relationship was "at best, very weak at the moment." Mr. Tarullo said that it was "probably wise not to be counting so

much on past correlations, things like the Phillips curve, which haven't been working effectively for 10 years now."

It's only a slight exaggeration to say that the Fed's rate decision this year will be based on whether its leaders really believe that the Phillips curve is useful in describing how the economy works in 2015.

530 Since welfare costs had been excluded from basic production costs, this was an inevitable consequence of neoliberal policies.

531 *Investopedia* has summed it up:

"There is no alternative," often abbreviated "TINA," is a phrase that originated with the Victorian philosopher Herbert Spencer and became a slogan of British Prime Minister Margaret Thatcher in the 1980s. Today it is often used by investors to explain a less-than-ideal portfolio allocation, usually to stocks, since other asset classes offer even worse returns. Such decisions by investors can lead to the "Tina Effect," in which stocks rise only because investors have no viable alternative....

Herbert Spencer, who lived from 1820 to 1903, was a British intellectual who strongly defended classical liberalism. He believed in laissez-faire government and positivism - the ability of technological and social progress to solve society's problems - and thought Darwin's theory of "survival of the fittest" should apply to human interactions. To critics of capitalism, free markets and democracy, he frequently responded, "There is no alternative."

Margaret Thatcher, a Conservative, served as Britain's prime minister from 1979 to 1990. She used the phrase in a similar way to Spencer, responding to critics of her market-oriented policies of deregulation, political centralization, spending cuts and a rollback of the welfare state. Alternatives to this approach abounded, from the policies advocated by Labour to those in place in the Soviet Union. To Thatcher, though, free-market neoliberalism had no alternative. (*Investopedia*, ^{oe}[TINA: There Is No Alternative](#) [accessed 24-02-2018])

532 (23/12/16) It has been fashionable over recent years to suggest that minimum wages should be dictated by market forces, with government providing a 'tax credit' (a neoliberal rendition of 'let them eat cake'¹⁰²³) or some other wage readjustment to ensure a living wage. We should, however, never forget the 19th century consequences of allowing wage rates to be driven solely by 'market forces'. The 1795 [Speenhamland decrees](#), which topped up inadequate wages from the 'public purse', resulted in the 1834 Poor Law Amendment which made the, now woefully inadequate, market wage the only income and reduced hundreds of thousands to destitution.

The argument that increasing the minimum wage would make businesses less competitive and so cost jobs is, of course, inevitably true in an internationalized free market. But, such an argument is based on the inevitability of an international race to the bottom, in which the lowest wage becomes the necessary wage. As [Arvind Subramanian and Martin Kessler \(2013\)](#) have described

The world is now in a fourth era, of hyperglobalization, in which world trade has soared much more rapidly than world GDP... Part of the increase in trade reflects the fragmentation of manufacturing

across borders - the famous slicing up of the value-added chain - as individual production stages are located where the costs of production are lowest. This phenomenon, whereby technology no longer requires that successive stages of manufacturing production be physically contiguous or proximate, has been dubbed the "second unbundling"

One need look no further than [Thomas Jefferson's description of England in 1814](#) for the consequences of such a race.

Paul Krugman¹⁰²⁴ (1998), in a review of the book *The Living Wage: Building a Fair Economy* (Robert Pollin and Stephanie Luce, The New Press, 1998), spelt out the common case for favoring subsidy over minimum wage adjustment (though he has modified his view since then):

Now to me, at least, the obvious question is, why take this route [of a higher minimum wage]? Why increase the cost of labor to employers so sharply, which...must pose a significant risk of pricing some workers out of the market, in order to give those workers so little extra income? Why not give them the money directly, say, via an increase in the tax credit?

One answer is political: What a shift from income supports to living wage legislation does is to move the costs of income redistribution off-budget. And this may be a smart move if you believe that America should do more for its working poor, but that if it comes down to spending money on-budget it won't. Indeed, this is a popular view among economists who favor national minimum-wage increases: They will admit to their colleagues that such increases are not the best way to help the poor, but argue that it is the only politically feasible option.

But I suspect there is another, deeper issue here-namely, that even without political constraints, advocates of a living wage would not be satisfied with any plan that relies on after-market redistribution. They don't want people to "have" a decent income, they want them to "earn" it, not be dependent on demeaning handouts.

(quoted in a [Washington Monthly](#) blog posting (February 14, 2013) by Ed Kilgore

See Matthew Yglesias, [Paul Krugman on the Minimum Wage](#) (*Slate*, Feb. 14 2013) for the text of the review.)

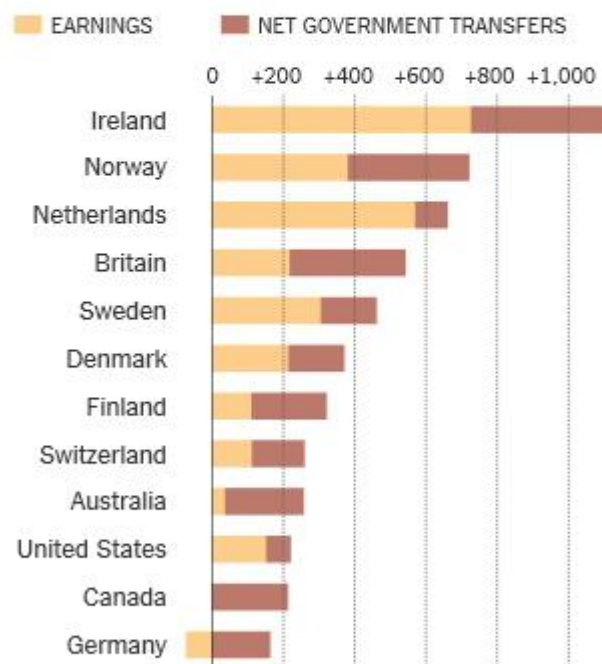

For a discussion of why "the job market - that most critical institution of capitalist societies, the principal vehicle to distribute the nation's wealth among its people - is not working properly", see Eduardo Porter, 'Big Mac Test Shows Job Market Is Not Working to Distribute Wealth' (*New York Times*, April 21, 2015). As he illustrates, "Government transfers have become a bigger source of income for working families in many industrialized nations, as earnings from the labor market have slowed":

The Labor Market Falters

Government transfers have become a bigger source of income for working families in many industrialized nations, as earnings from the labor market have slowed.

Change in labor market earnings and government transfers, for households in the second-from-bottom quarter of earners

Average change in dollars per year, 1979-2007

Source: Analysis of Luxembourg Income Study data by Lane Kenworthy, University of California, San Diego

By The New York Times
Eduardo Porter, ECONOMIC SCENE, APRIL 21, 2015

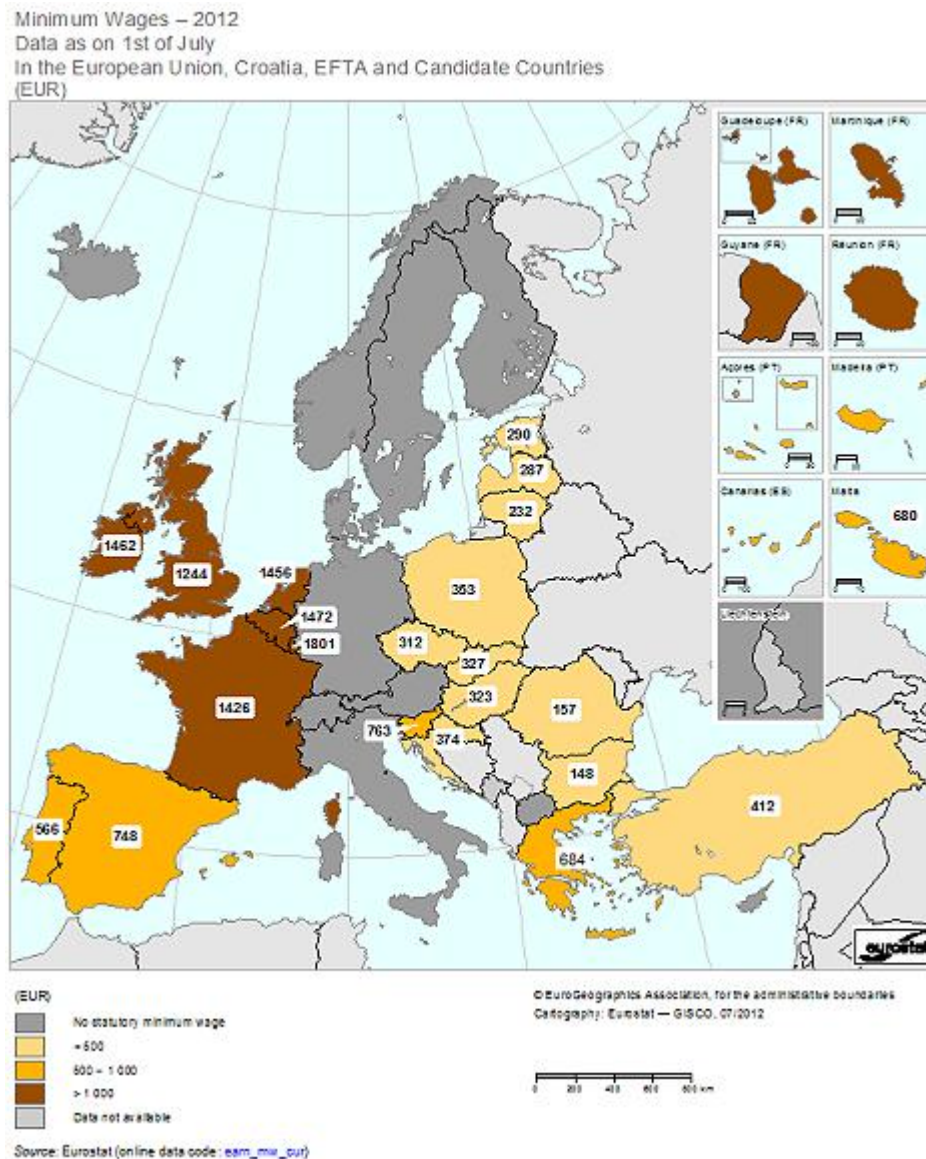

(26/12/16) As Lane Kenworthy's analysis of ⁹²[Luxembourg Income Study Data](#) (above) has illustrated, the European Union brings countries with very different wage policies into 'partnership'. In such circumstances, those with 'more competitive' wage profiles gain an edge in intra-European trade.

The European Commission report [Eurostat, Minimum wage statistics](#) provides a clear picture of the mismatch between minimum wage rates in various European Union countries and the US (see Rosner 2012, below, for a graphic illustration of this mismatch). As van Treeck and Sturn (2012, see below) show, "nominal unit labour costs stagnated completely in Germany before the Great Recession". All that is required for real wage reduction is that nominal unit labor costs stagnate over time, with wage increases failing to match inflation. The report lists countries not covered by the minimum wage data collection:

Germany, Cyprus and the Former Yugoslav Republic of Macedonia have statutory minimum wages that do not apply to all or the large majority of employees but are restricted to specific groups which are defined e.g. by sectors or by professions. These are excluded from the data collection. Also excluded are countries where there

are no statutory national minimum wages: Denmark, Italy, Austria, Finland, Sweden, Iceland, Norway and Switzerland. In these countries, wages are either determined by negotiations between the social partners, at company level or at the level of each individual contract.

As the map below shows, Germany, Italy and a number of other 'competitive' countries in the EU have no statutory minimum wage.

An article in *The Economist* (Nov. 5th 2011) gave a picture of what this means for Germany in the early 21st century:

Germany is one of the few European countries to lack a statutory minimum wage. Unions and employers negotiate wages sector by sector. In ten sectors agreed minimums apply to all. But jobs are growing in fragmented services not in manufacturing.

Just over half of workers in western Germany are now covered by central agreements; in the east it is only a third. In 2007, 3.7m workers earned under €7 (\$9) an hour and 1.2m under €5.

Some reader comments on the minimum wage appended to the above article seem sadly in tune with similar comments made by middle ranking Western Europeans in the 18th and 19th centuries.

See *The Virtuous Capitalist*, *The Poor and the Wasteland* for more on this.

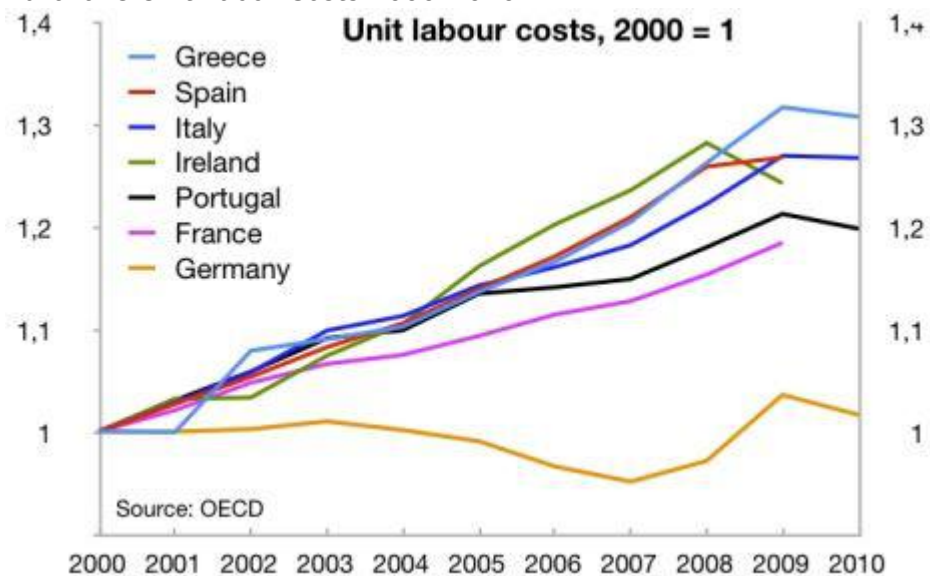

(28/05/17) Joshua Rosner (^œ[Graham Fisher & Co, July 17 2012](#)) summed up German experience since 2000:

Past Eurozone growth, particularly in Germany, did not come from meaningful improvements in productivity, but rather on the back of household wage reductions and industry friendly reforms to the labor market - the Hartz reforms - which transferred wealth from the people to the banking and export driven sectors of the economy....

Under Hartz's leadership the commission redefined the German workforce, reducing traditional full-time employment and introducing the concept of "minijobs." These so-called "minijobs" provided German companies with the ability to hire short-term workers without restrictions on hours worked and who were terminable at will.

While "minijob" workers did not pay taxes on earnings; the earnings maxed out at a meager €400.... From 2002 to 2005, the German public and private sectors embarked on a series of massive Hartz reform austerity measures focused on using the high levels of unemployment to extract meaningful wage reductions from public and private labor.

Eurozone Unit Labor Costs 2000-2010

Unfortunately for the German population, while German business profited handsomely, and German Banks exported capital to the rest of the world, the costs were borne by German workers who faced wage pressure. German households never reaped the fruits of their labor. The imbalances that Delors warned about were being built into the very structure of the Eurozone by the German government's sole focus on protecting domestic business interests at the expense of their own population....

The German population has been led to believe, over the past decade, that they are frugal and that frugal is good. Germans are indeed frugal, but not entirely by choice. This is a perverse spin on the real situation, the German people have been deprived of wage increases and therefore of consumption of goods.

John Miller has given an account of German wage policies and practice since 1990:

Following the adoption of the euro, Germany instituted a set of "labormarket flexibility" policies intended to further improve its international competitiveness. Known as the "Agenda 2010 Reforms," the new policies reduced pensions, cut medical benefits, and slashed the duration of unemployment benefits from nearly three years to just one. They made it easier to fire workers, while encouraging the creation of parttime and short-term jobs. The Organisation for Economic Co-operation and Development (OECD) reports that, from the mid-1990s to 2008, the incomes of the poorest 30% of Germans actually declined in real (inflation-adjusted) terms. Germany's repressive labor policies kept a lid on wage growth. In every year from 2000 through the onset of the financial crisis in 2009, German compensation per employee increased more slowly than the eurozone average, and less even than in the United States.

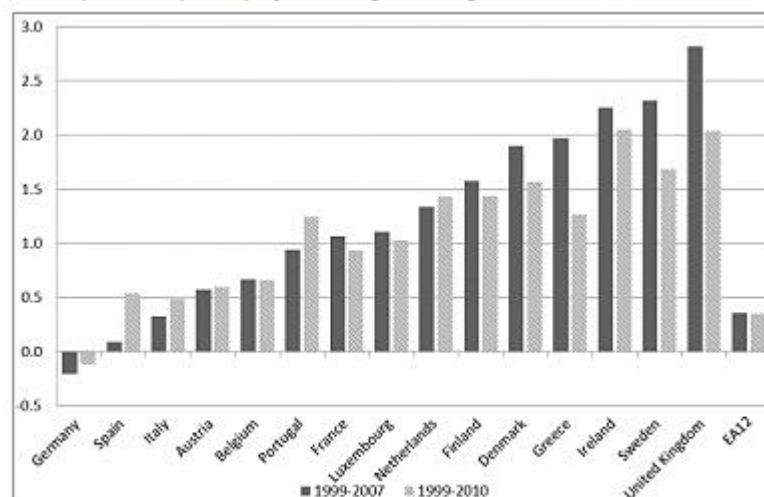

(John Miller, [German Wage Repression: Getting to the Roots of the Eurozone Crisis](#), *TripleCrisis*, 21 August, 2015)

Till van Treeck and Simon Storn explained the problem for countries which are economically tied into a union with Germany:

[p. 46]... as nominal unit labour costs stagnated completely in Germany before the Great Recession, firms were able to increase their profit margins, resulting in a strong decline in real compensation per employee (Figure 40), which in turn depressed private consumption.

ILO ([Global Employment Trends 2012. Preventing a Deeper Jobs Crisis](#)], p. 46) argues that the wage deflation policies in Germany during the 2000s have contributed in an important way to the rising inequality and weak domestic demand in Germany and put pressure on the other member countries of the European Monetary Union which "increasingly see only even harsher wage deflation policies as a solution to their lack of competitiveness."

Figure 40: Real compensation per employee, average annual growth rate, selected countries

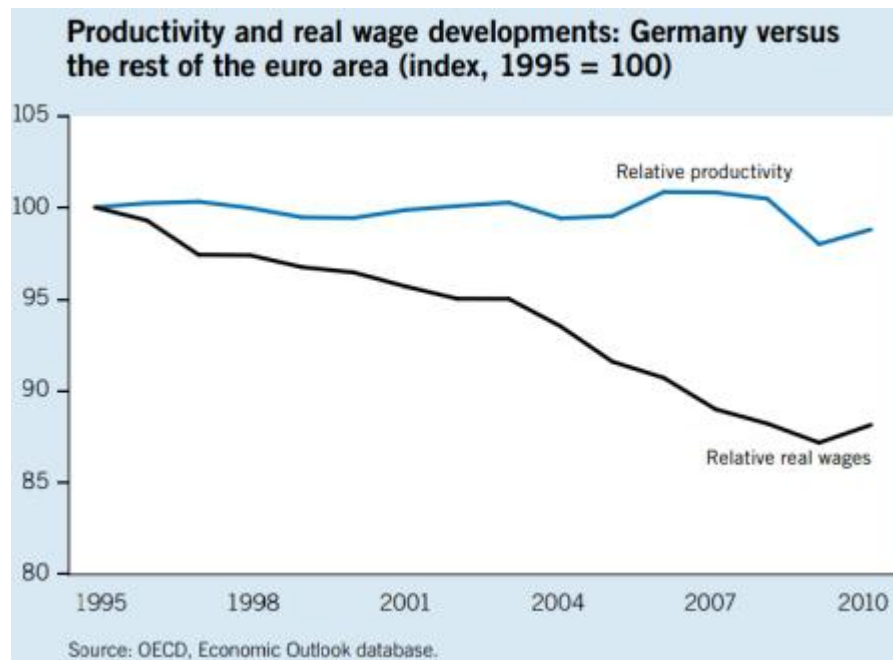

Note: Deflated with price deflator for private final consumption expenditure.

(Till van Treeck and Simon Storn, [Conditions of Work and employment](#) , series no. 39, International Labour Organization 2012)

Here is an ILO graph, showing a comparison of both productivity and real-wage developments in Germany relative to the rest of Europe since 1995. As Rosner (2012) argued, Germany has been practicing a particularly unpleasant form of wage austerity for the past 18 years or

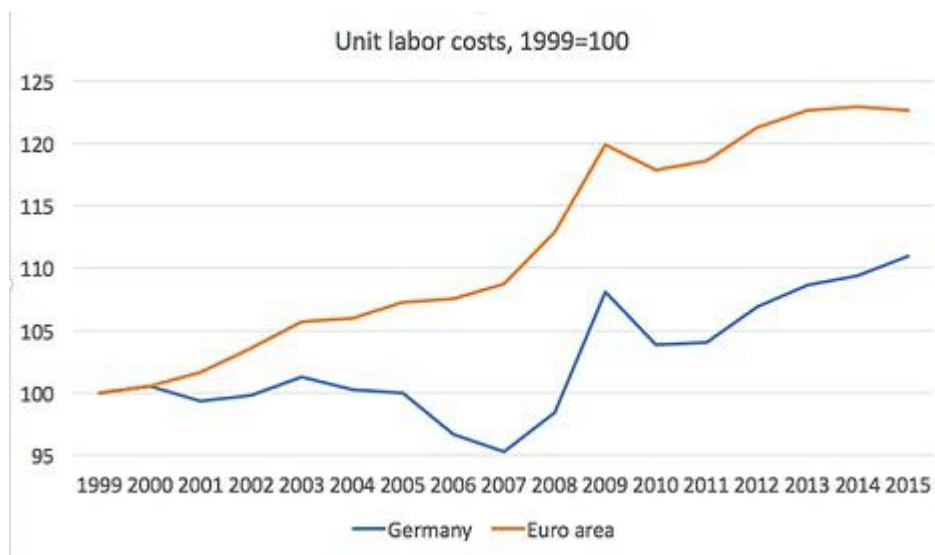

more. Its status as the 'economic powerhouse' of Europe is built "on the back of household wage reductions and industry friendly reforms to the labor market".

Ekkehard Ernst *et al* 2012, p. 46 ([Global Employment Trends 2012](#). Preventing a Deeper Jobs Crisis ILO, Geneva)

Paul Krugman, providing yet another example of the fairy dust of [expansionary austerity](#) (with more than a hint of cynical plutocratic self-interest involved in what happened), has summed it all up:

The basic story is illustrated by the following chart, of unit labor costs since the creation of the euro:

Here's what happened: during the era of euphoria, when capital rushed into supposedly safe southern European economies, those economies experienced moderate inflation, allowing Germany to gain a big competitive advantage without actually having to deflate. Then confidence and capital flows collapsed, and what was needed was strong German reflation that would in effect return the favor - let southern Europe regain competitiveness without grinding deflation and the debt problems that go along with such a strategy.

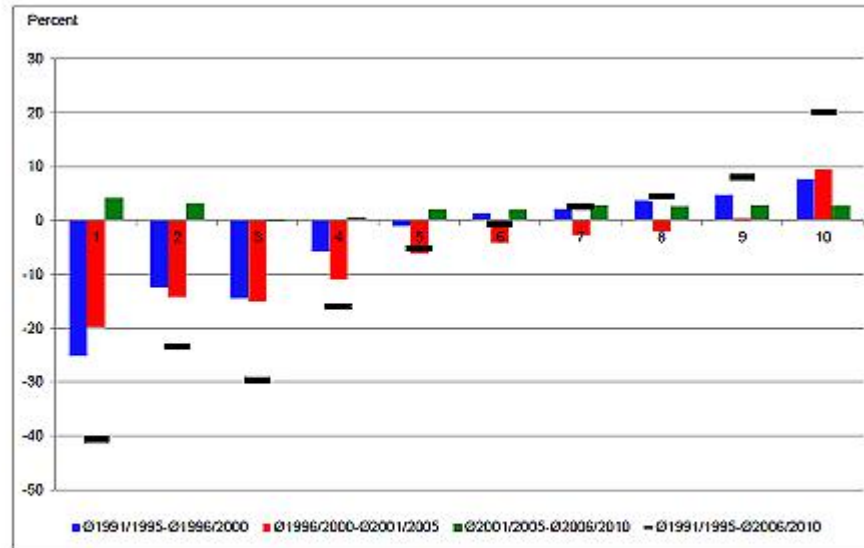

But Germany hasn't. It has practiced its own austerity, unforced - in the face of negative interest rates! - and harassed the ECB as it attempts to boost overall EZ inflation. The result is that the

competitive gap that opened up after 1999 has barely closed, producing both huge German surpluses and a deadly drag on the rest of the euro area.

(Paul Krugman, ^{ae}[Germany's Real Sin](#), *New York Times*, Opinion Pages, May 27, 2017)

See Kai Daniel Schmid and Ulrike Stein (2013) for further detail. As the authors illustrate and explain,

Figure 4.1 Change of 5-year Average of Market Equivalized Income by Income Decile Groups

Note: This figure illustrates the change of 5-year average incomes between selected time periods by income decile groups. Income changes are plotted on the vertical axis in percent. Income is reported in real terms in 2010 prices.

Sources: SOEP, own calculations.

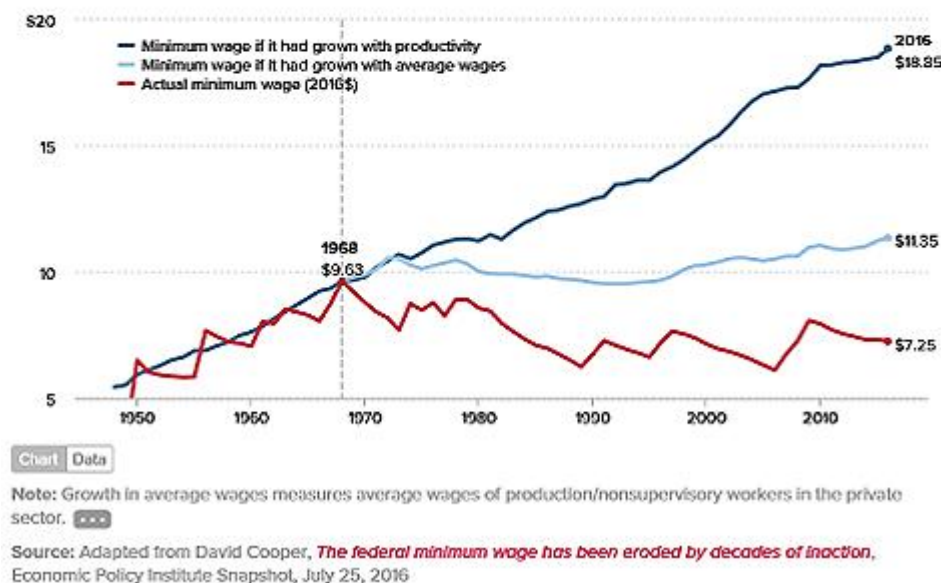

...The black lines show the overall change of average income between 1991 and 2010. In the second half of the 2000s, incomes in the lower half of the income distribution are between 5 percent and 40 percent lower than in the first half of the 1990s. In contrast, the average income in the highest income decile increased by 20 percent during the same period.

(Kai Daniel Schmid and Ulrike Stein, [Explaining Rising Income Inequality in Germany, 1991-2010](#), Macroeconomic Policy Institute (IMK), Düsseldorf, Germany, September, 2013, p. 16.)

The US *Economic Policy Institute* has neatly summarized US minimum wage realities between 1948 and 2016:

The minimum wage would be much higher if it had kept up with a growing economy

The inflation-adjusted minimum wage, and hypothetical minimum wage values if it had grown with average wages and productivity since 1968

As they explain,

The federal minimum wage is meant to ensure a fair wage for the nation's lowest-paid workers. But it hasn't done that since 1968. Since the inception of the federal minimum wage in 1938, Congress has periodically raised it, ostensibly so that its real (inflation-adjusted) value would reflect changing economic circumstances. Before 1968, the real value of the federal minimum wage grew at roughly the same pace as the growth in labor productivity - i.e., the rate at which the average worker can produce income from each hour of work. This makes sense: if the economy as a whole can produce more income per hour of work, it means there is capacity for wages across the distribution to grow at a similar rate. But after 1968, when the real value of the minimum wage in today's dollars was \$9.63, the minimum wage stopped rising at the same pace as productivity. As the top line in the graph shows, had the minimum wage kept pace with rising productivity, it would be nearly \$19 per hour today. Not \$7.25.

(^{oe}[The top charts of 2016](#): 13 charts that show the difference between the economy we have now and the economy we could have, Economic Policy Institute Report * December 22, 2016)

Annette Bernhardt *et al* (2009) [Broken Laws, Unprotected Workers: Violations of Employment and Labor Laws in America's Cities](#) have examined some of the consequences of poor regulation of wages and conditions in the US. As they say in their Executive Summary,

This report exposes a world of work in which the core protections that many Americans take for granted-the right to be paid at least the minimum wage, the right to be paid for overtime hours, the right to take meal breaks, access to workers' compensation when injured, and the right to advocate for better working conditions-are failing significant numbers of workers. The sheer breadth of the problem, spanning key industries in the economy, as well as its profound impact on workers, entailing significant economic

hardship, demands urgent attention.

(See [National Employment Law Project](#) for more on all this.)

533 In 2017, neoliberal policies are still potent in challenging those New Deal provisions. President Macron's reforms of the French labor code are the latest move to weaken remaining union powers and workers' rights in a determination to give 'more flexibility to companies to adapt to the marketplace' and empower the Government to '[balance the budget](#)' in the name of 'economic responsibility'.

Philippe Aghion and Benedicte Berner, true believers in the need to oppose 'socialist tendencies' and promote essential '[economic freedoms](#)' and [efficiencies](#), have spelt it out. As they explain,

First, capital income is too heavily taxed in France, compared to other developed countries, which discourages innovation and entrepreneurship. Second, public money is not invested in the most cost-effective and growth-enhancing way. Third, France suffers from a multiplicity of administrative layers, which generates inefficiencies and redundancies in the provision of public services. Finally, France remains a highly corporatist country, with a multiplicity of health, pension, and family subsidy systems; in an innovation-driven economy where individuals are likely to change jobs and sectors repeatedly over their lifetime, this bureaucratic thicket becomes a source of inefficiency and risk.

So, in order to ensure 'innovation and entrepreneurship' and tackle that 'bureaucratic thicket' which promotes economic 'inefficiency and risk' in France,

The French government has just announced the guidelines for a new labor code, its first major reform to boost France's economy, by giving more flexibility to companies to adapt to the marketplace. The second major reform sought by President Emmanuel Macron's cabinet - an overhaul of the French state - is set to follow.

The changes to the labor code have four goals. First, direct negotiations between employers and employees in small and medium-size firms (accounting for 55% of the workforce) would be facilitated by allowing such companies to negotiate with elected representatives not mandated by the trade unions. Second, social dialogue within larger firms would be simplified by merging separate workers' committees (for hygiene, health, safety, and so on) into a central body. Third, collective bargaining over wages and employment would be decentralized from national to sectoral and/or firm level. Finally, laying off employees would become easier and more predictable, in particular with the introduction of upper and lower levels on payouts issued by labor courts.

The reform of the labor code will soon be accompanied by reforms of the unemployment insurance and job training systems. On the former, the government will take over from the unions, in order to provide unemployment benefits to all categories of workers, including the self-employed and those who voluntarily quit their current job to search for a new one. The cost of reforming unemployment insurance, however, is estimated at €3-5 billion (\$3.6-6 billion), which may prove difficult to square with 2018 budget plans, which foresee a €20 billion cut in spending.

Altogether, the labor market reform is intended to reconcile more flexibility for firms to hire and shed workers - which is needed in an

economy where growth is driven by innovation and creative destruction - with more income security and more training for the unemployed. The French labor market currently suffers from a huge divide between qualified workers under long-term contracts and low-skill workers who shuttle constantly between unemployment and short-term jobs. The government's reform is meant to close this divide by increasing social mobility.

The second pillar of Macron's economic program, reform of the state, has two major components: a revamp of fiscal policy and an overhaul of the public spending system....

(Philippe Aghion and Benedicte Berner, [œThe Two Pillars of French Economic Reform](#), *Project Syndicate*, September 1, 2017)

534 In an article entitled 'Emmanuel Macron's 'Extreme Centrism' Is a Threat to Democracy: Hiding behind appeals to 'rationalism,' the French leader seeks to 'fix' the French economy by cozying up to a tiny, binge-eating wealthy elite', Juliette Legendre has documented French president Emmanuel Macron's promotion of neoliberalism:

...As a former investment banker at Rothschild, Macron envisions the transformation and revitalization of France through a Silicon-Valley-style neoliberalism, which embraces the "creative destruction" theory of Austrian economist Joseph Schumpeter. And, as a graduate student of the elite National School of Administration and a former finance minister, he also envisions governance through the lens of a French technocrat, who believes in the verticality and centralization of power.

Both perspectives reflect a thin conception of representative democracy - one that puts the supposed needs of the market over popular deliberation and participation.

(Juliette Legendre, [œEmmanuel Macron's 'Extreme Centrism' Is a Threat to Democracy](#): Hiding behind appeals to 'rationalism,' the French leader seeks to 'fix' the French economy by cozying up to a tiny, binge-eating wealthy elite, *Inequality*, Blogging Our Great Divide, July 02, 2018)

535 These incentives remain important in many (if not all) countries, both Western and non-Western, in the first decades of the 21st century. A *New York Times* report (December 1, 2012), part of a series examining business incentives and their impact on jobs and local economies, described the scene in the United States:

A Times investigation has examined and tallied thousands of local incentives granted nationwide and has found that states, counties and cities are giving up more than \$80 billion each year to companies. The beneficiaries come from virtually every corner of the corporate world, encompassing oil and coal conglomerates, technology and entertainment companies, banks and big-box retail chains.

The cost of the awards is certainly far higher. A full accounting, The Times discovered, is not possible because the incentives are granted by thousands of government agencies and officials, and many do not know the value of all their awards. Nor do they know if the money was worth it because they rarely track how many jobs are created. Even where officials do track incentives, they acknowledge that it is impossible to know whether the jobs would have been created without the aid.

"How can you even talk about rationalizing what you're doing when you don't even know what you're doing?" said Timothy J. Bartik, a senior economist at the ^œ[W.E. Upjohn Institute for Employment Research](#) in Kalamazoo, Mich.

The Times analyzed more than 150,000 awards and created a [searchable database of incentive spending](#). The survey was supplemented by interviews with more than 100 officials in government and business organizations as well as corporate executives and consultants.

A portrait arises of mayors and governors who are desperate to create jobs, outmatched by multinational corporations and short on tools to fact-check what companies tell them. Many of the officials said they feared that companies would move jobs overseas if they did not get subsidies in the United States.

Over the years, corporations have increasingly exploited that fear, creating a high-stakes bazaar where they pit local officials against one another to get the most lucrative packages. States compete with other states, cities compete with surrounding suburbs, and even small towns have entered the race with the goal of defeating their neighbors.

While some jobs have certainly migrated overseas, many companies receiving incentives were not considering leaving the country, according to interviews and incentive data.

... For local governments, incentives have become the cost of doing business with almost every business. The Times found that the awards go to companies big and small, those gushing in profits and those sinking in losses, American companies and foreign companies, and every industry imaginable.

Workers are a vital ingredient in any business, yet companies and government officials increasingly view the creation of jobs as an expense that should be subsidized by taxpayers, private consultants and local officials said.

Even big retailers and hotels, whose business depends on being in specific locations, bargain for incentives as if they can move anywhere. The same can be said for many movie productions, which almost never come to town without local subsidies.

(Louise Story, ^œ[As Companies Seek Tax Deals, Governments Pay High Price](#), *New York Times*, December 1, 2012)

⁵³⁶ See a Bloomberg report (by Bob Ivry, Bradley Keoun and Phil Kuntz - Nov 28, 2011) ^œ[Secret Fed Loans Gave Banks \\$13 Billion Undisclosed to Congress](#) for the extent of the Federal bailout of private financial institutions during the 2007-9 financial crisis. As the report says,

The amount of money the central bank parceled out was surprising even to Gary H. Stern, president of the Federal Reserve Bank of Minneapolis from 1985 to 2009, who says he "wasn't aware of the magnitude." It dwarfed the Treasury Department's better-known \$700 billion Troubled Asset Relief Program, or TARP. Add up guarantees and lending limits, and the Fed had committed \$7.77 trillion as of March 2009 to rescuing the financial system, more than half the value of everything produced in the U.S. that year.

⁵³⁷ See [Transnational Companies in the Third World](#) for more on this.

538 Russia, in the eyes of Western Europeans, has long been regarded as the 'wild east' of Europe, a wild, threatening frontier of 'Western Civilization'. A vast region, full of resource promise and semi-civilized inhabitants which looms, threatening chaos, on the borders of the civilized world.

'Russia' has been the enduring prototype of the United States' 'Wild West': a region of semi-civilized 'barbarians' and semi-degenerate, morally suspect 'almost' Europeans; a region from which, for centuries, hordes of barbarians have invaded and ravaged the 'civilized world' of Europe.

And, if one reads 19th century Russian novels, one gets the impression that European-Russian upper middle classes have long seen Western European 'cultural' centers as 'the civilized world' which they aspire to emulate and the hinterland of Russia as the realm of gulags and of what Western Europeans over the past several centuries have called barbarians.

The world many of those novels presented to readers was one in which, for Western Europeans, time had stood still: a feudal world which had resisted the 'march of civilization' into a capitalist future. For Western capitalists, such a world was ripe for capitalist reorganisation - there needed to be a 'revolution' to displace the feudal with capitalist elites.

Feudal estates needed to be transformed to 'realize their potential'; the commons needed to be 'privatized'; and the peasantry reorganized into a cheap-labor workforce.

But, for all their 'backwardness', those peasants seemed all-too-easily mobilized and motivated to support their 'enslaved' condition. The interdependent populations of 'Russia' seemed determined to resolutely resist attempts to 'free' them to independent capitalist 'prosperity'.

The upper levels of that feudal world might readily identify with the 'middle classes' which controlled the capitalist world of Western Europe, but their support base was feudal, not capitalist.

Western European middle classes saw those privileged Russians who visited them not as fellow members of the capitalist revolution which aimed to overthrow feudally justified hierarchies but as the upper-middle ranks of feudal Russia: people who admired the 'freedom' and affluence of Western European middle classes and wished to be accepted by them but who, nonetheless, were ultimately legitimized by their hierarchical position within a feudal world

Nor has this admiration for all things 'Western' - and therefore, 'civilized' - diminished in the 21st century. John Helmer, in a blog posting entitled [German Neutrality Was More Important Than NATO Expansion - A New History Book Explains Why Gorbachev Gave It Away For Nothing](#) on the blogsite *Dances with Bears*, describes 21st century Russian upper-middle-class 'cultural cringe': "In Russia the wish to be loved by Americans is known as liberal reform".

While not, perhaps, in a permanent state of 'war' with Russia, as Assad suggests, Western Europe has indeed considered it a threatening cultural outlier (despite its major contributions to Western Europe's 'cultural' heritage). An attitude perhaps reinforced by a conscious or subconscious awareness of that Russian 'cultural cringe' which Helmer describes - a morally and culturally suspect region to be reclaimed and reorganized by the West.

For The West, the Russian transition from feudalism to socialism in the early 20th century was aberrant. As US President Reagan put it in the late 1980s, The Union of Soviet Socialist Republics was 'the focus of evil in the modern world'. Russia 'needed' capitalism.

The West 'knows' that it is justified in pursuing a 'civilizing' mission. To successfully enter the modern world as a truly 'developed' nation, Russia needed (and needs) to be opened to the market forces and entrepreneurs of The Western world. This is the West's responsibility - even if Russians can't appreciate what is being offered.

539 A comment on a *Naked Capitalism* posting by someone pseudonymed 'hunkerdown' summed it up well:

Rule of law is a deceptive term that erases the men who write the laws to subordinate others to their private will. It's not meant to be an argument for law, but an argument for the imposition of human will as if it were a force of nature.

('hunkerdown', ^œ[comment on 'Dictatorship Never Again': Massive Pro-Democracy Protests Sweep Brazil](#), posted on *Naked Capitalism*, August 12, 2022)

540 Caitlin Johnstone has addressed the 21st Century expression of US hegemonic power well. As she explains:

So many empire apologist arguments depend on pretending the US empire doesn't exist; pretending the US is just a normal country sitting there minding its own business. If you do that, it really does look like Russia and China are picking on Ukraine and Taiwan completely unprovoked.

If you act like the US isn't the hub of an empire that is projecting power all over the globe, then the fact that it has a hand in every major international conflict becomes obscured and it just looks like evil barbaric foreigners doing evil things for no good reason. Take the empire out of the equation and Assad wasn't reacting to a western-backed regime change proxy war, he was just killing his own people because he likes killing people. China isn't responding to US encirclement, it's just being aggressive to its neighbors because it is evil.

Because the globe-spanning power structure loosely centralized around the United States is an unacknowledged, unofficial empire that doesn't look like the empires of old, its apologists can just insist that it doesn't exist, like mob lawyers used to do with the mafia. By doing that, they can assign others responsibility for the empire's crimes.

(Caitlin Johnstone, ^œ[China Threatens The US Empire, Not The US Itself: Notes From The Edge Of The Narrative Matrix](#), August 15, 2022)

Mark Leonard has addressed the possible displacement or weakening of the United States position as the 21st century center of Western hegemony in an article entitled 'The Real End of Pax Americana: Germany and Japan Are Changing - and So Is the Postwar Order'.

While he presents a convincing case for his thesis he seems to be committing that all-too-common Western error of thinking of the West as the fundamentally unchallengeable hegemonic center of world power.

The post-World War II international order is often described as a product of American strength. Together with its allies, a victorious

United States imposed its will on the rest of the world, crafting institutions and norms that served its interests and assured its primacy. But to an often underappreciated degree, that order is also a product of the artificial weakness of Germany and Japan. For three-quarters of a century after 1945, both countries consciously eschewed great-power status and pursued pacifist approaches to foreign policy. At the heart of the postwar order, in other words, is the unique status of the world's third- and fourth-largest economies. Although that order has come to seem natural to many in the West, it is predicated on an arguably unnatural condition: the forced pacification of two countries that - owing to geography, demography, and history - had predictably become regional hegemony in the prewar modern era.

Russia's invasion of Ukraine - and the growing antagonism between the United States and China - is threatening to upend that status quo and with it Pax Americana, which has held since the end of World War II. In response to Moscow's aggression, Germany has fundamentally reoriented its foreign policy, pledging to radically increase defense spending and taking a hawkish line on Ukraine. And Japan, wary of China's quest for regional hegemony, seems closer than ever to a similar transformation...

(Mark Leonard, ["The Real End of Pax Americana: Germany and Japan Are Changing - and So Is the Postwar Order,"](#) *Foreign Affairs*, June 13, 2022)

⁵⁴¹ By imposing sanctions on shipping and insurance in 2022 aimed at disrupting both Russia's and China's supply lines, the United States has inadvertently disrupted its own supply lines, resulting in domestic shortages, price inflation¹⁰²⁵ and consequent bizarre/ inept attempts at controlling that inflation through Federal Reserve interest rate rises.

When will Western nations finally realize that their hegemon is asleep at the wheel - trying to correct self-inflicted, sanction driven, supply chain problems through adjusting interest rates?

There seems to be a remarkable lack of competence among those driving the US war on Russia and China!

⁵⁴² Syrian President Bashar al-Assad, in an interview with RT Arabic (10th June, 2022)

Interviewer:

Mr. President, I propose to start with the most significant topic in the international arena and, perhaps, here too.

I will ask the question that RT Arabic website visitors ask: "Why did Damascus support the Russian special military operation in Ukraine?"

Assad:

Russia is an ally of Syria.

A war has been unleashed against Russia, which I do not associate with the theme of the expansion of the NATO bloc, as some people think.

This war did not stop even before communism and the First World War.

This is a permanent war, and Russia has the main role here as part of the global balance of power.

We can consider Russia from two points of view: as an ally who, if he wins the battle or his political position in the international arena becomes stronger, then this is to our advantage.

Or from another point of view: one can say that the strength of Russia today contributes to the return of the lost international balance, even if this return is partial.

And this balance, which we so much want, is reflected primarily in small states, and Syria is one of them.

Interviewer:

The Russian leadership says that this is a battle for a new world order.

Mr. President, do you consider this the last obstacle on the path to a multipolar world, or is there still a long road ahead through American hegemony?

Assad:

Some talk about this war in the context of the end of the unipolar world, which they assume began after the fall of the Soviet Union.

Such a statement is not accurate, but there is some truth in it: if we are talking about two blocs - Warsaw and NATO - and about the absence of one of the blocs, if we are talking in a political sense, if we say that the Security Council is controlled by Western countries headed by United States.

But in fact, the unipolar order began after the Second World War, after the Bretton Woods Conference, the dollar became the dominant currency in the world.

Now more important than the military aspect, or perhaps equal in importance, not to exaggerate, saying what is more important, the economic results of the current war (against a unipolar world), and above all the position of the dollar.

If the dollar continues to dominate the global economy despite the outcome of this war, nothing will change.

Interviewer:

"Many people say that with the help of the US dollar they are blackmailing the world and those who do not agree with their point of view.

How do you feel about this economic war of the West against Moscow?

Can it be compared with the economic blockade that Syria was subjected to?

Assad:

The topic of the dollar is not blackmail, but theft.

America promised after World War II that the dollar would have a gold equivalent.

In the early 1970s, during the Nixon era, the United States decided to separate the dollar from gold, so it became a priceless paper.

However, the US has been able to buy whatever it wants around the world for pieces of paper that have no price.

This is theft, and this theft is happening all over the world.

⁵⁴³ By the 1960s, the US and its European allies were displaying a clear lack of awareness of the [New Deal understanding of the fiat nature of sovereign currency](#). This led to a great deal of confusion about the consequences of the increased international demand for reserve currency US dollars including concern over the amount of gold held by the US to [underwrite its currency obligations](#).

US internal credit and currency had been removed from the gold standard by FDR on June 5, 1933; Nixon, on August 15, 1971, finally ^œ[enacted a plan that addressed the international dilemma of a looming gold run](#) by ending dollar convertibility to gold, which soon brought an end to the Bretton Woods System.

The gold standard consequences for a reserve currency US dollar had been examined by Robert Triffin in the 1960s who presented a 'fearful situation analysis' arguing that 'the vast redistribution of net reserves from the United States to the rest of the world... could not continue indefinitely without eventually undermining confidence in the dollar itself'

Carol Connell, in a 2011 article entitled 'Why the Triffin Plan was Rejected and the Alternative Accepted? - A Heterodox Analysis', has given an account of the dilemma faced by the US as provider of the international reserve currency in the [Gold Standard period](#) which, in the early 1970s, led to the move from fixed to flexible exchange rates. As she recounts,

Whatever the value of hindsight provided by ex-post analysis, there is no question that many policy makers and academic economists in the US and Europe perceived a potential crisis for the dollar by 1960. Presidents Dwight Eisenhower, John F Kennedy and Lyndon Johnson considered US payments deficits a problem as critical to US security as the nuclear threat. Kennedy calculated that the US payments deficit in 1962 was equal to the cost of maintaining US troops in Europe and weighed the advantages of eliminating the deficit by recalling the troops or negotiating with the French as the US had with Germany to pay for the troops via US armaments purchases, thus allowing the US to use the cash received to retire the deficit... Cold War Presidents were concerned that the Soviet Union might pursue an alliance with Germany or that France might pursue an alliance with Germany, pushing the US out of European affairs.

European policy makers feared restrictions on or termination of all sales of gold by the US monetary authorities; restrictions on international payments through the introduction of foreign exchange controls and prohibitions of capital transfers; import restrictions of all sorts; the blocking of deposits of foreign nationals; the end of convertibility; elimination of key-currencies from the official reserves of central banks and consequently a drastic reduction in "liquidity" everywhere and, ultimately, reductions in production and employment resulting from import restrictions and export reduction ...

No one offered a more fearful situation analysis than Robert Triffin, Belgian monetary economist, Yale professor and architect of the European Payments Union created to deal with Europe's trade and payments problems. Triffin argued that the growth of foreign countries' reserves had taken place in recent years largely as a result of a vast redistribution of net reserves from the United States to the rest of the world and that such a movement could not

continue indefinitely without eventually undermining confidence in the dollar itself...

(Carol M Connell, ^œ[Why the Triffin Plan was Rejected and the Alternative Accepted? - A Heterodox Analysis](#), *World Journal of Social Sciences*, Vol. 1. No. 5. November 2011. Pp. 28-35)

As a *Wikipedia* entry has summarized:

The Triffin dilemma or Triffin paradox is the conflict of economic interests that arises between short-term domestic and long-term international objectives for countries whose currencies serve as global reserve currencies. This dilemma was first identified in the 1960s by Belgian-American economist Robert Triffin, who pointed out that the country whose currency, being the global reserve currency, foreign nations wish to hold, must be willing to supply the world with an extra supply of its currency to fulfill world demand for these foreign exchange reserves, thus leading to a trade deficit.

The use of a national currency, such as the U.S. dollar, as global reserve currency leads to tension between its national and global monetary policy. This is reflected in fundamental imbalances in the balance of payments, specifically the current account, as some goals require an outflow of dollars from the United States, while others require an overall inflow.

(^œ[Triffin dilemma](#), *Wikipedia*, accessed 4 September, 2018)

Robert Wolff, in a comment on a self-serving *Project Syndicate* article by Lawrence Summers, provided additional comment on all this:

...[T]he dollar as the main reserve currency for the world makes the richest richer but hurts working Americans, creates US trade deficits, causes continuing increases in US public and private debt, the concentration of US power in ridiculous wealthy class, and the "Buying of America" by foreigners.

The dominance of the dollar as world transaction and reserve currency has created an additional 15% profits/GDP all earned by Wall Street international banks and their owners with no additional US production. That means more trade deficits and more wealth concentration.

(Robert Wolff, Comment on article by Lawrence Summers, ^œ[Setting the Record Straight on Secular Stagnation](#), *Project Syndicate*, September 03, 2018)

⁵⁴⁴ The US Administration, in 2019, seems not to have understood the need to separate its political and strategic interests and ambitions from its efficient management of the reserve currency. Paul Krugman has summed up US President Trump's 2019 difficulties in successfully advancing his 'trade war' with China (perhaps Krugman has been influenced by Iranian President [Rouhani's assessment](#) of the US President's abilities):

About Trump's views: His incoherence is on view almost every day, but one of his recent tweets was a perfect illustration. Remember, Trump has been complaining nonstop about the strength of the dollar, which he claims puts America at a competitive disadvantage. On Monday he got the Treasury Department to declare China a currency manipulator, which was true seven or eight years ago but isn't true now. Yet the very next day he wrote triumphantly that "massive amounts of money from China and other parts of the

world is pouring into the United States," which he declared "a beautiful thing to see."

Um, what happens when "massive amounts of money" pour into your country? Your currency rises, which is exactly what Trump is complaining about. And if lots of money were flooding out of China, the yuan would be plunging, not experiencing the trivial (2 percent) decline that Treasury condemned.

Oh well. I guess arithmetic is just a hoax perpetrated by the deep state.

Still, even if Trump isn't making sense, will China give in to his demands? The short answer is, "What demands?" Trump mainly seems exercised by China's trade surplus with America, which has multiple causes and isn't really under the Chinese government's control.

(Paul Krugman, ["China Tries to Teach Trump Economics: But he doesn't seem to be learning,"](#) *New York Times*, Opinion, August 8, 2019)

Neil Irwin has outlined a Trump-manufactured (and unintended exacerbation of his perceived trade deficit 'problem') paradox:

There is... a paradox for President Trump. Because of the dollar's unique role as the global reserve currency, when panic sets in overseas, money tends to flow into United States Treasury bonds, which are viewed as the safest assets on earth. But that movement tends to prop up the value of the dollar and push overseas currencies lower.

In other words, the more chaos he injects into the global economy by trying to pressure China, Europe and others not to depreciate their currencies, the more upward pressure there will be on the dollar, undermining those efforts.

That is potentially the worst of both worlds. When the dollar rises on currency markets because the United States economy is booming, it may be hard on American export industries, but at least it takes place in the context of strong growth.

But for the dollar to surge because of... global economic troubles, it means exporters suffer at the same time that the overall economy is under pressure. A particularly extreme example of this happened in the fall of 2008, when the United States economy was in free fall and yet the dollar rose because of the global financial crisis.

A habit of the Trump administration has been to link seemingly unrelated items in its dealings with other countries - using tariff threats to try to influence Mexican immigration policy, for example.

If the Trump administration continues down the path of using currency policy to try to bludgeon China over trade, technology and national security issues, it will signal a remarkable expansion into a policy area that has been a source of stability in recent decades.

(Neil Irwin, ["What's at Risk if the U.S. Stumbles Into a Currency War:"](#) It could wind up undermining the central role the United States has played in the international financial system, *New York Times*, TheUpshot, Aug. 7, 2019)

⁵⁴⁵ Simon Tilford and Hans Kundnani have asked whether issuing the world's reserve currency comes at too high a price for the US. As they argue:

The benefits of dollar primacy accrue mainly to financial institutions and big businesses, but the costs are generally borne by workers. For this reason, continued dollar hegemony threatens to deepen inequality as well as political polarization in the United States....

...[I]t creates winners and losers within the United States. The main winners are the banks that act as the intermediaries and recipients of the capital inflows and that exercise excessive influence over U.S. economic policy. The losers are the manufacturers and the workers they employ. Demand for the dollar pushes up its value, which makes U.S. exports more expensive and curtails demand for them abroad, thus leading to earnings and job losses in manufacturing.

The costs have been borne disproportionately by swing states in regions such as the Rust Belt - a consequence that in turn has deepened socioeconomic divisions and fueled political polarization. Manufacturing jobs that were once central to the economies of these regions have been offshored, leaving poverty and resentment in their wake. It is little surprise that many of the hardest-hit states voted for Trump in 2016.

The domestic costs of accommodating large capital flows are likely to increase and become more destabilizing for the United States in the future. As China and other emerging economies continue to grow and the United States' slice of the global economy continues to shrink, capital inflows to the United States will grow relative to the size of the U.S. economy. This will amplify the distributional consequences of dollar hegemony, further benefiting U.S. financial intermediaries at the expense of the country's industrial base. It will likely also make U.S. politics even more fraught.

Given these mounting economic and political pressures, it will become increasingly difficult for the United States to create more balanced and equitable growth while remaining the destination of choice for the world's excess capital, with the overvalued currency and deindustrialization this implies. At some point, the United States may have little alternative but to limit capital imports in the interests of the broader economy - even if doing so means voluntarily giving up the dollar's role as the world's dominant reserve currency.

(Simon Tilford and Hans Kundnani, ^œ[It Is Time to Abandon Dollar Hegemony](#), *Foreign Affairs*, July 28, 2020)

⁵⁴⁶ The myopic 2022 US use of its position at the hub of international trade to sanction Russia over the conflict in Ukraine has led to dramatic changes. As Elena Fabrichnaya and Samuel Shen explained:

...While the yuan, or renminbi, has been making gradual inroads into Russia for years, the crawl has turned into a sprint in the past nine months as the currency has swept into the country's markets and trade flows, according to a Reuters review of data and interviews with 10 business and finance players.

Russia's financial shift eastwards could boost cross-border commerce, present a growing economic counterweight to the dollar and limit Western efforts to pressure Moscow by economic means. (Elena Fabrichnaya and Samuel Shen, ^œ[The yuan's the new dollar as Russia rides to the redback](#), *Reuters*, November 29, 2022)

Carla Mozée has provided further insight into the dramatic shift from dollar to yuan trading in a *Business Insider* report entitled ^œ[Russia](#)

reportedly wants to further cut its dependence on the US dollar by buying up Chinese yuan on the currency market (*Markets Insider*, December 23, 2022)

⁵⁴⁷ Yu Yongding, in a discussion entitled '¹⁰⁰[Decoding China's "Dual Circulation" Strategy](#)', has discussed the Chinese strategy for protecting its internal economy from externalities aimed at opening it to external economic forces.

Yves Smith has illustrated the problem for sovereign nations intent on protecting their populations from global predatory forces well:

...Capitalism in Japan, where entrepreneurs are revered for creating employment, not for getting rich, performed well until the US forced rapid deregulation on its banks to make the world safer for American investment bankers. Even in Japan's bust, large companies further narrowed the already-not-large by Western standard gap between entry-level and executive pay to preserve employment levels, the opposite of what you see here. Similarly, the Nordic model also delivered high levels of social services and low levels of inequality until neoliberals had increasing success in eroding it.

(Yves Smith, ¹⁰⁰[How Capitalism's Dogged Defenders and Propagandists Shield It From Criticism](#), *nakedcapitalism*, January 21, 2021)

Arvind Subramanian and Josh Felman explained the Western attitudes and consequent demands well: 'Chinese authorities must commit to keeping capital controls lifted, so that investors can be confident that they will always be able to move their money out of the country'. In an opinion piece entitled 'The Year of the Renminbi?', they explain:

After years of poor policy and political tumult in the United States, it is not unreasonable to ask whether China's currency will soon be in a position to challenge the greenback. While neither country has been doing itself any favors in the currency pageant, it is worth remembering that history is not on America's side....

Like a beauty pageant, the contest for reserve-currency status is one of relative attractiveness. International traders and investors must decide which among the currencies available to them is most convenient to use, is supported by the strongest financial system, and - perhaps most important - enjoys the backing of a trustworthy sovereign. What is new today is that both of the world's major sovereigns also seem to be competing to reduce their own trustworthiness.

Relative attractiveness is difficult to quantify. But underlying this concept is one factor that can be measured precisely: the size of the issuing country's economy. As the economist Paul Krugman explained in a 1984 paper, "the currency of a country which is important in world markets will be a better candidate for an international money than that of a smaller country." In other words, a globally dominant economy is the "hardware" for an international reserve currency.

China, clearly, has the necessary hardware. It been the world's largest trader since 2013, its economy is now larger than that of the United States in purchasing power parity terms, and soon it will pull ahead in terms of market exchange rates, too. For these reasons,

one of us (Subramanian) pointed out a decade ago that the renminbi would come to rival and eventually eclipse the dollar.

Since then, China has made great progress in boosting the renminbi's relative attractiveness. Its economy has continued to grow much more rapidly than US GDP and emerged more resilient from the COVID-19 crisis. Its central bank has started developing and testing a digital currency. And its "Belt and Road" clients across the developing world are beginning to use the renminbi in their growing trade and financial transactions with China.

But the dollar has proved stubbornly resistant. As Gita Gopinath, the International Monetary Fund's chief economist, and her colleagues have shown, an overwhelming preponderance of trade continues to be invoiced in dollars, and the dollar still plays a prominent role in cross-border funding as well.

A key reason for the dollar's resilience vis-à-vis the renminbi is that America's economic hardware is complemented by powerful software: all of the intangible qualities that underpin investor confidence - not least a strong banking system backed by a reliable sovereign. China still has a long way to go in these areas.

To build trust in its financial system, China needs to shore up its highly leveraged, overextended banks. After that, it should remove its capital controls and ensure greater transparency so that investors can enter Chinese financial markets with confidence that they know what they are buying. Chinese authorities then must commit to keeping capital controls lifted, so that investors can be confident that they will always be able to move their money out of the country. None of this can be accomplished quickly, and convincing investors that the changes are irreversible will take even longer still.

Next comes the task of building confidence in the sovereign. China will need to convince other countries that it is and will remain a reliable economic partner. This will require even more time and effort, especially given that the Chinese government has been moving in the wrong direction. China may have helped negotiate the recently agreed Regional Comprehensive Economic Partnership, but it has also used trade sanctions as a form of political punishment against one of its main trading partners, Australia.

(Arvind Subramanian and Josh Felman, ⁵⁴⁸[The Year of the Renminbi?](#), *Project Syndicate*, January 19, 2021)

⁵⁴⁸ Jamsheed Choksy and Carol Choksy have described the 2020 scene:

For the last four years, the administration of U.S. President Donald Trump has meted out punishment to Iran rather than pursuing a foreign policy. The United States withdrew from the 2015 Iran nuclear deal and unilaterally imposed multiple rounds of sanctions. A new administration under President-elect Joe Biden may hope to reverse the damage and renew constructive engagement, but it will find Iran much changed.

Iran did not sit still the last four years, passively awaiting the nuclear deal's resumption. Rather, the Islamic Republic has joined forces with the People's Republic of China and the Russian Federation to improve its military position and shore up its economy. China and Russia are now integrally involved in Iran's affairs, from its oil and port infrastructure to its defense capabilities.

The result of this deepening collaboration has been to make Iran far less susceptible than it once was, either to Trump's campaign of "maximum pressure" or to Biden's hoped-for engagement.

CHINA ENTERS THE GULF

Back in 2016, Tehran and Beijing laid the ground work for what would become the 25-Year Comprehensive Partnership, part of China's Belt and Road Initiative. But the relationship between the two countries goes back further, to the time when Iran lay at the center of the Silk Road. Today, Iran's leaders see in China not only a means of loosening the noose of Washington's sanctions but also a source of financial, technological, and military aid that could help countervail against American pressure.

China has styled itself a defender of national sovereignty, a cause that it has advanced by criticizing U.S. sanctions policy toward Iran. Zhang Jun, China's permanent representative to the UN, has written that U.S. sanctions on Iran are "devoid of any legal, political, or practical effect." The Chinese Foreign Ministry has accused the United States of having "repeatedly violated international law" and has urged Washington "to stop clinging to the wrong path" regarding Iran. In October, the U.S. Treasury added sanctions on still more Iranian banks. China responded by hosting Iranian Foreign Minister Mohammad Javad Zarif for talks the very next day. (Jamsheed K. Choksy and Carol E. B. Choksy, ["China and Russia Have Iran's Back: Tehran May Be Less Open Than Ever to Threats or Persuasion,"](#) *Foreign Affairs*, November 17, 2020)

⁵⁴⁹ Paul Krugman has provided some historical context to Trump's willingness to tear up trade agreements and impose tariffs on other nations:

... Until the 1930s, U.S. trade policy was both dirty and dysfunctional. It wasn't just that overall tariffs were high; who got how much tariff protection was determined through a free-for-all of horse-trading among special interests....

...[T]he game changed in 1934, when F.D.R. introduced the Reciprocal Trade Agreements Act. Henceforth, tariffs would be negotiated via deals with foreign governments, giving export industries a stake in open markets. And these deals would be subject to up-or-down votes, reducing the ability of interest groups to buy themselves special treatment.

This U.S. innovation became the template for a global trading system, culminating in the creation of the World Trade Organization. And tariff policy went from being famously dirty to remarkably clean.

Now, the creators of this trading system knew that it needed some flexibility to remain politically viable. So governments were given the right to impose tariffs under a limited set of circumstances: to give industries time to cope with import surges, to respond to unfair foreign practices, to protect national security. And in the U.S. the power to impose these special-case tariffs was vested in the executive branch, on the understanding that this power would be used sparingly and judiciously.

Then came Trump.

So far, Trump has imposed tariffs on about \$300 billion worth of U.S. imports, with tariff rates set to rise as high as 25 percent. Although Trump and his officials keep claiming that this is a tax on foreigners, it's actually a tax hike on America. And since most of the tariffs are on raw materials and other inputs into business, the policy will probably have a chilling effect on investment and innovation.

But the pure economic impact is only part of the story. The other part is the perversion of the process. There are rules about when a president may impose tariffs; Trump has obeyed the letter of these rules, barely, but made a mockery of their spirit. Blocking imports from Canada in the name of national security? Really?

(Paul Krugman, [∞][Making Tariffs Corrupt Again](#): Trump has perverted the process and undermined U.S. credibility, *New York Times*, September 20, 2018)

Veronique de Rugy has explained the 2018 impact on US producers and consumers of increased tariffs on US imports imposed by the Trump administration:

If there is a silver lining to the recent trade insanity, it's the bright light that it shines on the victims of President Trump's tariffs. These victims include construction companies, equipment manufacturers and the many American producers whose costs are increasing. Workers in these industries as well as ordinary American consumers pay higher prices for automobiles, washers and dryers, and the other goods whose prices are artificially hiked by the tariffs.

Because of the president's hyperactive use of his trade authority, the scale of this pain is unusually high. But the reality is that this disregard for the consequences inflicted on buyers in the industries downstream from tariffs is nothing new. In fact, thanks to the handiwork of interest groups who benefit from the tariffs and the politicians who serve them, it's embedded in our trade system, sometimes even in the legislation itself.

Consider how easy it was for Mr. Trump to get a 25 percent tariff on steel imports. His administration simply concocted a fanciful national-security narrative about why the steel industry needed protection from foreign steel imports - this despite the industry's enjoying a 70 percent share of the United States steel market and despite the Department of Defense finding no national-security harm from global steel imports.

Why is such a half-baked justification so easy to spin? In large part, it has to do with the Commerce Department, which is responsible for measuring a given tariff's impact. A department report on a tariff measures the direct impact on an industry - say, steel manufacturers - as well as steel-consuming industries and the economy more broadly.

However, while it has the data, the Department of Commerce is not required by law to consider the impact on the industries in the cross hairs of a tariff in its recommendation to impose the penalty - even though the impact can be brutal.

For example, for the projected impact of the steel tariffs, numbers produced by the Commerce Department show that they may increase employment in the metals industry by 14,000 jobs. But the report also says that a significantly larger number of jobs will be

destroyed, as a result of these tariffs, in industries downstream from metal production...

(Veronique de Rugy, ^œ[How Special Interests Hide the True Costs of Tariffs](#), *New York Times*, Opinion, August 29, 2018)

Mary Lovely has described the consequences of the US 'trade war' with China in the second decade of the 21st century:

...The health of China's economy depends on exporting to the United States, so, the thinking goes, the Chinese government will capitulate to American demands.

This strategy is certain to backfire.

First, about 60 percent of China's exports to the United States are produced at factories owned by non-Chinese companies. Many of them produce customized inputs for American manufacturers, such as computer routers, LED fixtures and boat motors. That means the tariffs imposed by the Trump administration that are directed at China actually affect many American (and European) companies that own factories in China.

These companies cannot immediately respond to tariffs by quickly moving their operations out of China. Instead, they will absorb the import tax or pass it along to American consumers in the form of higher prices. This is already happening: a 20 percent tariff on washing machines imposed in February was followed by a 16.4 percent spike in consumer prices for these products. So most of the revenue raised by the tariffs is coming out of the pockets of American consumers, not Chinese companies.

Reduced American demand for Chinese products does hurt China. American merchandise imports account for about 3 percent of Chinese manufacturing revenue. That's a large enough share for tariffs to do a bit of damage, but certainly not catastrophic.

Moreover, much of what the United States imports from China contains value created in other locations, including America. Much of the value in an iPhone imported from China, for example, includes displays from South Korea, chips from Japan and design and programming from America. So each dollar of sales lost by a Chinese company actually has a less-than-\$1 impact on the Chinese economy. In computers and electronics, which account for the largest share of China's exports to the United States, the Chinese value added in each dollar of imports is about 50 cents. Consequently, the negative effect of tariffs on Chinese manufacturing is unlikely to be large enough to have much of an impact on China's trade practices...

...[W]hen the next round of tariffs hits, American households will face higher prices on computers, clothing and thousands of other products. [But] China, not the United States, will improve its standing in the world as a place to make and build the future (Mary E. Lovely, ^œ[How China Wins the Trade War](#), *New York Times*, Opinion, August 8, 2018)

⁵⁵⁰ As Krugman elaborated:

Trump obviously believes that trade is a game in which he who runs the biggest surplus wins, and that America, which imports more than it exports, therefore has the upper hand in any conflict. That's also why Peter Navarro predicted that nobody would retaliate

against Trump's tariffs. Since that's actually not how trade works, we're already facing plenty of retaliation and the strong prospect of escalation.

But here's the thing: Trump's tariffs are badly designed even from the point of view of someone who shares his crude mercantilist view of trade. In fact, the structure of his tariffs so far is designed to inflict maximum damage on the U.S. economy, for minimal gain. Foreign retaliation, by contrast, is far more sophisticated: unlike Trump, the Chinese and other targets of his trade wrath seem to have a clear idea of what they're trying to accomplish....

In the modern world economy... a large part of trade is in intermediate goods - not cars but car parts. Put a tariff on car parts, and even the first-round effect on jobs is uncertain: maybe domestic parts producers will add workers, but you've raised costs and reduced competitiveness for downstream producers, who will shrink their operations.

So in today's world, smart trade warriors - if such people exist - would focus their tariffs on final goods, so as to avoid raising costs for downstream producers of domestic goods. True, this would amount to a more or less direct tax on consumers; but if you're afraid to impose any burden on consumers, you really shouldn't be getting into a trade war in the first place.

(Paul Krugman, [How to Lose a Trade War](#), *New York Times*, July 7, 2018)

A commenter (pseudonym 'Cathy') on the article summed it all up:

The trade war is the result of both stupidity and a vast belief in super simplistic answers to super complex problems. We are weighted down with a [White House] that is narcissistic, uncritical and simplistic, all at once. They don't have the capacity to even guess at how much damage they can do without trying

551 As new peer challengers have arisen, threatening the dominance of 'The Collective West', Western propagandists have, perhaps believing their own paranoid rhetoric, worked overtime to ensure that 'The world' accepts that those peer challengers are quite deliberately building their collective military strengths in preparation for a military challenge to the 'recognized, legitimate World Order'.

Consequently the collective West has no alternative. It must, however reluctantly and however unprepared, both ensure its own internal coherence and cohesion and its own economic, scientific, technological, and military power.

And it must, simultaneously, do whatever is necessary to weaken the internal cohesion and possibility of such development in those emerging challengers (hence, of course, legitimizing internal interference in the affairs of those belligerent nations).

Robert Gates provides a clear example of this propagandizing of the dire threat confronting an underprepared West:

The United States now confronts graver threats to its security than it has in decades, perhaps ever. Never before has it faced four allied antagonists at the same time' - Russia, China, North Korea, and Iran' - whose collective nuclear arsenal could within a few years be nearly double the size of its own. Not since the Korean War has the United States had to contend with powerful military rivals in both

Europe and Asia. And no one alive can remember a time when an adversary had as much economic, scientific, technological, and military power as China does today.

The problem, however, is that at the very moment that events demand a strong and coherent response from the United States, the country cannot provide one. Its fractured political leadership' - Republican and Democratic, in the White House and in Congress' - has failed to convince enough Americans that developments in China and Russia matter. Political leaders have failed to explain how the threats posed by these countries are interconnected. They have failed to articulate a long-term strategy to ensure that the United States, and democratic values more broadly, will prevail.

Chinese President Xi Jinping and Russian President Vladimir Putin have much in common, but two shared convictions stand out. First, each is convinced that his personal destiny is to restore the glory days of his country's imperial past. For Xi, this means reclaiming imperial China's once dominant role in Asia while harboring even greater ambitions for global influence. For Putin, it means pursuing an awkward mixture of reviving the Russian Empire and recapturing the deference that was accorded the Soviet Union. Second, both leaders are convinced that the developed democracies' - above all, the United States' - are past their prime and have entered an irreversible decline. This decline, they believe, is evident in these democracies' growing isolationism, political polarization, and domestic disarray.

Taken together, Xi's and Putin's convictions portend a dangerous period ahead for the United States. The problem is not merely China's and Russia's military strength and aggressiveness. It is also that both leaders have already made major miscalculations at home and abroad and seem likely to make even bigger ones in the future. Their decisions could well lead to catastrophic consequences for themselves' - and for the United States. Washington must therefore change Xi's and Putin's calculus and reduce the chances of disaster, an effort that will require strategic vision and bold action. The United States prevailed in the Cold War thanks to a consistent strategy pursued by both political parties through nine successive presidencies. It needs a similar bipartisan approach today. Therein lies the rub.

The United States finds itself in a uniquely treacherous position: facing aggressive adversaries with a propensity to miscalculate yet incapable of mustering the unity and strength necessary to dissuade them. Successfully deterring leaders such as Xi and Putin depends on the certainty of commitments and constancy of response. Yet instead, dysfunction has made American power erratic and unreliable, practically inviting risk-prone autocrats to place dangerous bets' - with potentially catastrophic effects....

(Robert M. Gates, ⁵⁵²[The Dysfunctional Superpower: Can a Divided America Deter China and Russia?](#) *Foreign Affairs*, September 29, 2023)

⁵⁵² On February 16 2023 *Democracy Now!* published an interview with Seymour Hersh entitled '⁵⁵²[Reporter Seymour Hersh on "How America Took Out the Nord Stream Pipeline": Exclusive TV Interview \(YouTube Video\)](#)'. Their introductory summary:

When the Nord Stream pipelines carrying natural gas from Russia to Germany were damaged last September, U.S. officials were quick to suggest Russia had bombed its own pipelines. But according to a new report by the legendary investigative journalist Seymour Hersh, it was the U.S. Navy that carried out the sabotage, with help from Norway.

Citing a source "with direct knowledge of the operational planning," Hersh writes on his Substack blog that planning for the mission began in December of 2021. The White House and the Norwegian government have since denied the claims. Hersh joins us for an in-depth interview to discuss his report and says the U.S. decision to bomb the pipelines was meant to lock allies into support for Ukraine at a time when some were wavering. "The fear was Europe would walk away from the war," he says.

Hersh won a Pulitzer Prize in 1970 for his reporting on the My Lai massacre. His reporting on CIA spying on antiwar activists during the Vietnam War era helped lead to the formation of the Church Committee, which led to major reforms of the intelligence community, and in 2004, he exposed the Abu Ghraib prisoner abuse scandal in Iraq.

Alternative sites to *YouTube* (given that it has required content editing of this interview):

∞[Seymour Hersh:substack](#); ∞[Democracy Now!](#)

A *CGTN* ∞[interview of Jeffrey Sachs by the talented Liu Xin](#) (*YouTube* video (27 February 2023)) has also insightfully addressed the question of who was behind the Nord Stream pipeline explosions.

553 Or, perhaps, to Lisbon! Gilbert Doctorow sketched the possibility:

Russian tanks reach the Atlantic near Lisbon...

The "fake news" title to this article provides a vision of where current U.S. and EU foreign and military policy towards Russia may be taking us if we do not think things through and make a course correction.

My point in this article is that no one in leadership positions on this side of the New Iron Curtain seems capable of seeing beyond one move in the grand chess game of the Great Powers now proceeding before the eyes of the world....

(Gilbert Doctorow, ∞[Russian tanks reach the Atlantic near Lisbon...](#), *Gilbert Doctorow: International relations, Russian affairs*, May 25, 2023)

554 Fighting to the last Ukrainian!

The mission is impossible and the troops are dwindling, but we will support you for as long as you stay committed to our vision of the future and your troops can/will do the fighting for us!

"We are committed to supporting Ukraine for as long as it takes to defend its sovereignty and territorial integrity" And, remember, provided you do what we want, one day you might even be able to join our club!

The United States and the European Union remain unwavering in our long-term political, financial, humanitarian, and military support to Ukraine and its people as they defend themselves against Russia's illegal and unprovoked war of aggression. We stand together in calling for Russia to end its brutal war and to withdraw

its military forces and proxies and military equipment immediately, completely, and unconditionally from the entire internationally recognized territory of Ukraine. We are committed to achieving the widest possible international support for the key principles and objectives of Ukraine's Peace Formula. Any initiative for a comprehensive, just, and lasting peace in Ukraine must be based on full respect for Ukraine's independence, sovereignty, and territorial integrity, within its internationally recognized borders and uphold all the purposes and principles of the United Nations Charter.

We are committed to supporting Ukraine for as long as it takes to defend its sovereignty and territorial integrity. We recognize the urgency of ensuring that Russia does not succeed in collapsing the Ukrainian economy and of intensifying our efforts to help ensure assistance meets Ukraine's highest priority needs. As co-chairs, along with Ukraine, of the Multi-agency Donor Coordination Platform, we are working together with Ukraine as it develops its Ukraine Plan, embedded in its European path, to incorporate a common set of near-term priority economic, rule-of-law, and democratization reforms and a prioritized and well-coordinated approach to recovery and reconstruction assistance and investment. The United States and the European Union, together with other international donors, will continue to provide Ukraine with financing to help achieve these objectives, including to defend, repair, and rebuild its energy sector aligned with EU standards. We acknowledge Ukraine's commitment and progress in their reform efforts, and underline the strategic importance of its EU accession process...(US White House, ^œ[U.S.-EU Summit Joint Statement](#), *White House Briefing Room Statements and Releases*, October 20, 2023)

Ukraine would do well to remember the very similar assurances given to those the United States has already left to their fate!

⁵⁵⁵ Richard Haass and Charles Kupchan, in a propaganda driven (one hopes that is all it is - after all neither author is an idiot) essay entitled ^œ[The West Needs a New Strategy in Ukraine: A Plan for Getting From the Battlefield to the Negotiating Table](#) (*Foreign Affairs*, April 13, 2023) have demonstrated the consequences of strait-jacketing one's understanding to the demands of propaganda.

In a belief that The West must ensure that Russia's intention of conquering Ukraine enroute to the rest of Europe does not succeed they inform us that:

...The best path forward is a sequenced two-pronged strategy aimed at first bolstering Ukraine's military capability and then, when the fighting season winds down late this year, ushering Moscow and Kyiv from the battlefield to the negotiating table. The West should start by immediately expediting the flow of weapons to Ukraine and increasing their quantity and quality. The goal should be to bolster Ukraine's defenses while making its coming offensive as successful as possible, imposing heavy losses on Russia, foreclosing Moscow's military options, and increasing its willingness to contemplate a diplomatic settlement. By the time Ukraine's anticipated offensive is over, Kyiv may also warm up to the idea of a negotiated settlement, having given its best shot on the battlefield and facing growing constraints on both its own manpower and help from abroad.

Bhadrakumar summed it up well:

Fundamentally, Haas and Kupchan hail from another planet. They cannot comprehend that Russia will never accept a scenario where the conflict ends with a ceasefire but the NATO will continue to beef up Ukraine's military capabilities and steadily integrate Kiev into the alliance.

Why would Russia want to play another game of musical chairs while the West formalises Ukraine's NATO membership - that is, acquiesce in a replay of the grotesque interregnum between Minsk Agreements of 2015 and Russia's special military operations? (M. K. Bhadrakumar, ^œ[Ukraine: Stalemate in an attritional war?](#), *Indian Punchline*, April 20, 2023)

Assuming that It or They exist, May that Benign Supra-Human Intelligence upon which so much of the world depends save us from such asinine propaganda-driven nonsense!

⁵⁵⁶ The reasons underlying the anomalous inclusion of Crimea within the Ukraine Soviet Socialist Republic by Khrushchev in 1954 have been long-debated but it is indisputable that, historically, Crimea has been 'Russian'. Sergei Moshkin explained:

On February 19, 1954, the Presidium of the Supreme Soviet of the USSR issued the Decree 'On transfer of Crimean Region from the RSFSR to the UkSSR'.

Note the statement of reason in this resolution: 'Considering the common economies, the adjacent territories and the close economic and cultural links between Crimean Region and the Ukrainian SSR, the Presidium of the Supreme Soviet the RSFSR [the Russian Soviet Federative Socialist Republic] hereby resolves that...'.

It was the economic reasoning that prompted Khrushchev's decision.

On April 26 of the same year, the Supreme Soviet of the USSR approved the decree of its Presidium and made the respective amendments to the Constitution of the USSR. From now on, the Council of Ministers of the UkSSR [Ukraine Soviet Socialist Republic] was fully responsible for the construction of the North Crimean Canal named after the Komsomol of Ukraine (that was the name given to the Canal), as well as for any other improvements in Crimea including the previously unprecedented construction of the multi-kilometer mountain trolleybus line Simferopol-Alushta-Yalta.

The first phase of the Canal was commissioned on October 17, 1963; the ceremony was attended by N.S.Khrushchev himself. The construction was completed after his death, in 1975.

Hence, it appears that Khrushchev's decision to transfer Crimea to Ukraine has not been dictated by the international feeling of friendship between peoples (although one cannot deny that, either), nor by his guilt complex towards the Ukrainian people, and certainly not by the romantic desire to make a luxury gift to his Ukrainian wife, as it was then rumored.

The destiny of Crimea in 1954 was determined by a pragmatic and seemingly simple economic decision to build a canal between the two Union republics that were at that time friends.

(Sergei V. Moshkin, ^œ[Why did Khrushchev transfer Crimea to Ukraine?](#), *Baltic Rim Economies Review*, April 28, 2022)

The 2014 Crimea Referendum, undertaken by the Crimean regional government, overwhelmingly endorsed the annexation of Crimea by Russia. ^œ[There was no Russian invasion of Crimea](#). The Russian Black Sea Fleet, in a continuation of the Soviet arrangement, was stationed there and a free and open referendum, scrutinized by a group of international observers, clearly demonstrated the will of the population. As ^œ[Wikipedia says](#),

The official result from the Autonomous Republic of Crimea was a 97 percent vote for integration of the region into the Russian Federation, with an 83 percent voter turnout, and from Sevastopol there was also a 97 percent vote for integration with Russia, with an 89 percent voter turnout.

⁵⁵⁷ ^œ[Ukraine was ready to sign peace deal with Russia but gave up under US pressure - Patrushev](#) (TASS June 08, 2023);

^œ[Putin shows initialed draft agreement with Ukraine to African leaders](#) (TASS June 17, 2023);

⁵⁵⁸ On June 30, 2023, Lavrov explained why meaningful peace talks to end hostilities in Ukraine were unlikely to occur:

Russian Foreign Minister Sergey Lavrov has called US Secretary of State Antony Blinken's statement about ending the conflict in Ukraine through "diplomacy" and "negotiation" strange against the backdrop of the West's constant speculations about the need to defeat Russia first.

"It's a strange statement, I've heard about it," Lavrov said in response to a TASS request for a comment.

"This is all being said almost simultaneously with statements by the very same Secretary of State, Blinken, the very same leaders of the US National Security Council and the very same European Union and NATO functionaries, who keep saying: Ukraine must first win and carry out a successful counteroffensive, and only then will we decide to negotiate," Lavrov explained. "This is a schizophrenic situation: they say that everything will be ended by negotiations, but first we have to defeat Russia."

He also drew attention to the basis on which the West wished to negotiate.

"The United States, together with NATO members and with the European Union, has stated firmly, repeatedly and uncompromisingly that the sole basis for negotiations is the notorious [Ukrainian President Vladimir] Zelensky peace formula, which consists of ten points," Lavrov pointed out. "There are some neutral things there. Trivial, I should say."

"It is unclear why they were included there," he noted, naming food and energy security among such things. "These are the very same things that have been undermined by the West's sanctions."

"But the main thing about the prospects for a peace treaty is that first Russia is to withdraw beyond the 1991 borders, the Russian leadership is to be put on trial, and Russia must pay reparations. Only after these preconditions have been met, will peace be made. This is what the West has in mind when it speaks of the need for negotiations and a peace settlement," Lavrov explained. He remarked that "this split personality disorder does not help to correctly navigate the situation."

Real aims

"The way I see it, they are trying to temporarily freeze this conflict, to achieve some kind of cease-fire and buy time to beef up Ukraine's military muscle again, to create a new military infrastructure, and to supply it with new lethal long-range weapons," Lavrov pointed out, adding that this scenario "is being advanced by US political scientists."

He cited a recent article in Foreign Affairs magazine that promotes "exactly this type of scenario."

"Make peace, take a breather. Yes, Russia will also get a break, but the entire West is behind Ukraine, so we (the Western countries - TASS) will make it much stronger and then [will] continue to press ahead for the same aims mentioned in Zelensky's plan."

"Demagoguery has never hindered diplomacy in achieving certain aims, but that's what diplomats are for: to distinguish some contrived moves from reality," Lavrov concluded.

(^œ[West's ideas about how to end crisis in Ukraine 'schizophrenic' - Lavrov, TASS, June 30, 2023](#))

- 559 Various nations, concerned about the loss of lives and destruction which are inevitable consequences of armed conflict, have proposed peace plans to end the Russian Special Military Operation in Ukraine. The Russian news agency TASS has described these and presented Russia's minimum requirements of any such plan:

Russia's position

Russia's position was outlined during the talks in Belarus, and later during talks in Turkey in February-April, 2022; it includes Ukraine's neutral, non-bloc status, cemented in its constitution, as well as Ukraine's refusal to have its own nuclear arsenal. Russia demands the demilitarization and denazification of Ukraine, resolution of the language issue, as well as recognition of the independence of DPR and LPR, and recognition of Russia's sovereignty over Crimea and Sevastopol. By late April, however, the talks stalled: Ukraine did not respond to Russia's project with clearly formulated peace agreement language.

Meanwhile, Russia repeatedly noted that it welcomes efforts of all states, aimed at peaceful resolution of the Ukrainian crisis, but it expects specific proposals - including from Indonesia, the Vatican and South Africa. Moscow also underscored that no peace plan can exist, if it does not include the accession of the four new regions to Russia.

However, Putin pointed out that China's plan can be considered as the basis for the peace treaty, when the West and Kiev become ready for it.

(^œ[Ceasefire and security guarantees: key points on peace plans for Ukraine, TASS, 6 June, 2023](#))

- 560 Leader and Russian State Duma Foreign Affairs Committee Chairman Leonid Slutsky explained the problem for Ukrainian troops:

Kiev is trying to show some semblance of military success ahead of a NATO summit but its only option is "to throw troops into the fire," Leonid Slutsky, leader of Russia's Liberal Democratic Party and head of the State Duma (the lower house of parliament) Committee on International Affairs, said on Friday.

"The Kiev regime is trying to demonstrate at least some success on the battlefield in order to justify the investment of its Western sponsors, particularly ahead of the NATO summit. However, the junta's efforts have been futile as the counter-offensive is failing and stalling. This is why Kiev has no choice but to literally throw troops into the fire," Slutsky told TASS.

According to him, Kiev continues to act like this even after "absolutely unambiguous statements" from the NATO and US leadership that "no one wants Ukraine to join the alliance and there is no way for it to get equal membership."

"Notably, NATO also needs the counter-offensive to provide the leaders of Western countries with an opportunity to make excuses for empty military depots. However, there can be only one outcome, with all the much-praised equipment meeting its ignominious end in the steppes of Donbass," Slutsky stressed.

(^œ[Kiev sacrificing its troops to prove mettle ahead of NATO summit - Russian lawmaker, TASS, July 07, 2023](#))

Seymour Hersh summed up US Secretary of State Antony Blinken's June 2023 response to proposed peace initiatives.

"Now, over the coming weeks and months," Blinken explained, "some countries will call for a ceasefire. And on the surface, that sounds sensible - attractive, even. After all, who doesn't want warring parties to lay down their arms? Who doesn't want the killing to stop? But a ceasefire that simply freezes current lines in place and enables Putin to consolidate control over the territory he's seized, and then rest, re-arm, and re-attack - that is not a just and lasting peace. It's a Potemkin peace. It would legitimize Russia's land grab. It would reward the aggressor and punish the victim."...

Blinken concluded his speech: "when a free people like the Ukrainians have at their backs the support of free nations around the world - nations who recognize their fates and freedom - their rights and security are inextricably bound together, the force they possess is not merely immense. It is unstoppable."

His real message might be put more bluntly: *I hate the Russians and let the blood flow.*

(Seymour Hersh, ^œ[Blinken's Battle Hymn: Biden's favorite hawk calls for no end to the bloodshed in Ukraine, seymourhersh.substack.com, 7 June 2023](#))

⁵⁶¹ Carter Malkasian on the Korean War (the reader is left to change Malkasian's United States' centric perspective - casting China and the USSR as the belligerents - to reflect the view of China and the Soviet Union that the United States was the belligerent):

In the middle of August 1952, Chinese Premier Zhou Enlai traveled nearly 4,000 miles to Moscow to meet with the Soviet dictator Joseph Stalin. Zhou was acting as an emissary for the leader of China, Mao Zedong. The two Communist powers were allies at the time, but it was not a partnership of equals: the Soviet Union was a superpower, and China depended on it for economic assistance and military equipment. Two years earlier, Mao and Stalin had embarked on a joint venture of sorts, giving their blessing to the North Korean leader Kim Il Sung when he invaded South Korea. Their hopes had been high; even though the United States immediately rushed to South Korea's aid, Stalin telegrammed Kim in the wake of the

invasion to tell him that he had "no doubt that in the soonest time the interventionists will be driven out of Korea with ignominy."

Things had not gone according to plan. In the fall of 1950, as troops led by U.S. General Douglas MacArthur advanced through North Korea, China directly intervened. By the middle of 1951, a bloody stalemate had set in along the 38th parallel, the line that had delineated North from South Korea before the invasion. Negotiations between the opposing sides began in July of that year. Their purpose was to reach an armistice and set the stage for discussions about Korea's future. The talks had deadlocked, however, over the details of exchanging prisoners of war.

When Zhou traveled to Moscow in the summer of 1952, the situation was looking grim for the Communists. Airstrikes had destroyed the North's industrial facilities and heavily damaged every city. Food was short. In February, Kim told Mao that he had "no desire to continue the war." Around five months later, Kim pleaded with Stalin to bring about "the soonest conclusion of an armistice." But Stalin did nothing. Like Stalin, Mao was determined to stand fast in the face of U.S. demands, and he was less worried than Kim was about the battlefield. Like Kim, however, Mao knew that his country was suffering.

(Carter Malkasian, ["The Korea Model: Why an Armistice Offers the Best Hope for Peace in Ukraine,"](#) *Foreign Affairs*, June 20, 2023)

The Korean demilitarized zone had been ^œ[established by the United States](#) in 1945:

38th parallel, popular name given to latitude 38° N that in East Asia roughly demarcates North Korea and South Korea. The line was chosen by U.S. military planners at the Potsdam Conference (July 1945) near the end of World War II as an army boundary, north of which the U.S.S.R. was to accept the surrender of the Japanese forces in Korea and south of which the Americans were to accept the Japanese surrender. The line was intended as a temporary division of the country, but the onset of the Cold War led to the establishment of a separate U.S.-oriented regime in South Korea under Syngman Rhee and a communist regime in North Korea under Kim Il-Sung.

⁵⁶² The story of Greece's descent into a privatized world based on IMF brokered 'structural adjustment' and 'debt management' strategies is far from told.

(see [Debt-Equity Conversion Programs - Swapping the Family Farm!](#); ^œ[Press Release No.10/177](#), IMF Managing Director Dominique Strauss-Kahn, May 2, 2010; ^œ[IMF Executive Board Completes Fourth Review Under Stand-By Arrangement for Greece and Approves €3.2 Billion Disbursement](#) IMF Press Release No. 11/273 July 8, 2011 for more on this).

Here are a few indications of where it is headed:

★ ATHENS/BRUSSELS (Reuters [Mon Feb 13, 2012 2:31pm EST]) - Europe gave [Greece](#) until Wednesday to convince skeptical international creditors that it would stick to the punishing terms of a multi-billion-euro rescue package, endorsed by parliament as rioters torched downtown Athens.

Lawmakers backed drastic cuts in wages, pensions and jobs on Sunday as the price of a 130 billion euro (\$170 billion) bailout by the European Union and International Monetary Fund to avert a messy default that would send shockwaves through the [euro zone](#).

Scenes of running battles between police and rioters and flames engulfing cinemas, shops and banks underscored a sense of deepening turmoil in the country after more than four years of recession and two of punishing austerity.

The EU warned on Monday that the consequences of failure would be "devastating."

It gave the fragile ruling coalition of Prime Minister Lucas Papademos until Wednesday, when euro zone [finance](#) ministers are expected to meet, to specify how 325 million euros of the 3.3 billion euros demanded in budget savings will be achieved.

By the same deadline, Greek political leaders must give a written commitment to implement the terms of the deal, a Greek government spokesman said, reflecting fatigue among EU leaders who say they have heard enough broken promises.

The spokesman said Greece would hold an election in April, when deep public anger over the second round of austerity could drive voters further to the left and right and test Greece's commitment to the programme.

Euro zone paymaster [Germany](#) said ahead of the vote that it was losing patience with throwing money into the "bottomless pit" of Greece's debt crisis. Official reaction from Berlin on Monday was muted.

"Now we need to wait and see what comes after the legislation," Economy Minister and deputy Prime Minister Philipp Roesler said on German television.

"We have taken one step in the right direction but we are still far from the goal," he said.

Greece needs the international funds before March 20 to meet debt repayments of 14.5 billion euros.

EU Economic and Monetary Affairs Commissioner Olli Rehn said a disorderly default would have devastating consequences for Greek society.

"I am quite confident that the other conditions, including the identification of concrete measures of 325 million euros, will be completed by the next meeting of the Eurogroup, which would then decide on the adoption of the programme," he said.

(^œ[Greece still to convince Europe over rescue deal](#))

★ See Michael Birnbaum, ^œ[Deal reached on \\$170 billion Greek bailout](#), *Washington Post*, February 21 2012 for more on this. As Michael Birnbaum (2012), has explained:

...unemployment has already spiked to 21 percent - 49 percent for those younger than 25 - and the economy contracted by 7 percent in the third quarter of 2011.

Europe has demanded that the public sector shrink by 150,000 people, that the minimum wage be lowered by 22 percent, that pensions be cut and that Greece do more to sell off its publicly

owned companies, among other measures that filled a 50-page booklet.

⁵⁶³ See [The 'Development' Business](#) for more on this.

⁵⁶⁴ Jonathan Stevenson has given an excellent outline of Rostow's influence through the 1960s and 1970s in an article entitled 'œ[The Cold Warrior Who Never Apologized](#)' (*New York Times*, September. 8, 2017):

A Yale Ph.D. and a Rhodes scholar, Rostow left his academic perch at M.I.T. to join the State Department under John F. Kennedy; he was later Lyndon Johnson's national security adviser during the center-cut of American involvement in Vietnam, from April 1966 to January 1969. More than anyone else, he epitomized the overweening confidence of the civilian strategists of the era - he was the best and the brightest of "the best and the brightest."

One of the commenters on the article, Alan Haigh, summed it all up well,

The severely ambitious are often delusional and even high intelligence is no vaccine for the stupidity of excess hubris and unconditional love of ones own theories and ideology, even when disputed by results on the ground.

⁵⁶⁵ This figure appears to be plucked out of the air - no rationale is given for using it. With characteristic, if unrealistic, optimism, Rostow assumed, in 1961, that 80% of the world's people were already involved in "self-sustaining" economic growth, allowing them to "enjoy the blessings and choices opened up by the march of compound interest".

His assessment of the ease with which the world's populations could transition into "self-sustained economic growth" has fuelled the optimism of Third World Development specialists and their programs ever since.

⁵⁶⁶ See [Capitalism and its Colonies; The Decay of Western Influence](#) for more on this.

⁵⁶⁷ Type the term "failing states" into any search engine and you will get a deluge of opinions on what should be done - very few accept the legitimacy of this last option.

⁵⁷² See œ[9 Billion?](#) (*Science* 29 July 2011: Vol. 333 no. 6042 pp. 540-543) for a brief description of population statistics over the past century, with projections through to the year 2100.

In population statistics, as in all statistical description, we need always to remember that correlation is *not* explanation.

The following internet address provides access to international population statistics: œ<https://www.census.gov/programs-surveys/international-programs/about/idb.html>.

⁵⁷³ The alienation of land and displacement of indigenous communities has gathered momentum through the early decades of this century. Seaquist, Johansson and Nicholas (2014) have produced a report on global land acquisitions in the 21st century. As they summarize:

Global land acquisitions, often dubbed 'land grabbing' are increasingly becoming drivers of land change. We use the tools of network science to describe the connectivity of the global acquisition system. We find that 126 countries participate in this form of global land trade. Importers are concentrated in the Global North, the emerging economies of Asia, and the Middle East, while exporters are confined to the Global South and Eastern Europe.

A small handful of countries account for the majority of land acquisitions (particularly China, the UK, and the US), the cumulative distribution of which is best described by a power law. We also find that countries with many land trading partners play a disproportionately central role in providing connectivity across the network with the shortest trading path between any two countries traversing either China, the US, or the UK over a third of the time.

The land acquisition network is characterized by very few trading cliques and therefore characterized by a low degree of preferential trading or regionalization. We also show that countries with many export partners trade land with countries with few import partners, and vice versa, meaning that less developed countries have a large array of export partnerships with developed countries, but very few import partnerships (disassortative relationship).

Finally, we find that the structure of the network is potentially prone to propagating crises (e.g., if importing countries become dependent on crops exported from their land trading partners). This network analysis approach can be used to quantitatively analyze and understand telecoupled systems as well as to anticipate and diagnose the potential effects of telecoupling.

(J W Seaquist, Emma Li Johansson and Kimberly A Nicholas, [Architecture of the global land acquisition system: applying the tools of network science to identify key vulnerabilities](#), *Environmental Research Letters*, Vol. 9 (2014) 114006 (12pp))

See *Rights and Resources 2011-2012*, [What future for forest peoples and resources in the emerging world order?](#) (Rights and Resources Initiative, Washington, D.C.) for an examination of some of the current trends in forcing land change on non-Western peoples. As the report says,

While infrastructure investment is a potent catalyst of change in remote regions, its land-take has been eclipsed in recent years by landgrabbing by agri-businesses, often funded and organized from abroad. Land-grabbing has become recognized as a global phenomenon. In 2011, both *Oxfam* and the *International Land Coalition* estimated that more than 200 million hectares had been bought or leased by agri-businesses since 2001-more than four times a previous estimate by the World Bank.

Responding to growing alarm, in October the United Nations Committee on World Food Security discussed voluntary guidelines to protect communities. To the anger of human rights campaigners, however, it postponed a decision until 2012..

Land-grabbing has been triggered by concerns about food security, coupled with the lure of rising world food prices. Most of the grabs have been for state lands, including pastures, forests, and wetlands, most of which are the customary property of communities.

Two-thirds of the reported land grabs have been in Africa, where nearly 700 million people live on land that is customarily owned but has insecure tenure under statutory law. Most of this land is deemed-falsely-by governments to be "empty" or "underused".

574 Weiqi Yao *et al* have explained:

The geological record contains many examples in which the earth system was out of equilibrium and large parts of the ocean were inhospitable to life.... Current data suggest that in the PETM [Paleocene-Eocene Thermal Maximum (~55 Ma)] the atmosphere had to accommodate about 2500-4500 Gt of carbon released within 4000 years.

This is an increase of the same order of magnitude as the ^{ae}IPCC RCP8.5 emission scenario [temperature change of 2.6°C to 4.8°C by 2100], which projects a cumulative anthropogenic CO₂ release of 2000 GtC by 2100. Although the carbon dioxide release rate during the PETM was about 10 times slower, it is our best analog to study non-linear feedbacks and consequences of the anthropogenic carbon cycle perturbation.

The geochemical cycles of carbon and sulfur are linked through microbial sulfate reduction (MSR), where the electron transfer from sulfate to sulfide provides the energy to respire organic matter (OM) back to CO₂. Combined, these cycles constitute the dominant control on atmospheric oxygen. Due to their drastically different residence times (0.1 Myrs versus 10 Myrs), they are rarely considered together. Our data suggest however that MSR is able to alter the redox state of the marine sulfur reservoir on timescales which are comparable to that of the carbon cycle. This has three important implications:

1. Unlike oxic respiration MSR also produces H₂S [hydrogen sulfide], which is toxic to most life forms even at low concentrations;
2. If we accept the premise that the PETM is a model for the present day oceans, the timescales of the observed changes in the redox state of marine sulfur suggest that similar processes could affect the oceans in the near future;
3. The development of oxygen free waters creates a sizable but intermittent reservoir in the global sulfur cycle, with fluxes exceeding traditional weathering/burial flux estimates.

...Modeling predictions exploring the effects of anthropogenic climate change suggest that measurable oxygen loss from the subarctic North Pacific will occur by 2030-2040 and that the total volume of suboxic ocean water will expand by 50% by 2100. Once local oxygen concentrations drop below 4 μM, sulfate reduction will commence, resulting in the production of H₂S [hydrogen sulfide], which is toxic at levels as low as 4 μg/l.

This will:

- A) Create an ocean internal reservoir of reduced sulfur;
- B) Create an ocean which is no longer well mixed with respect to sulfate;

C) Compress the eco-zones of fish species which venture in the mesopelagic and bathypelagic zones and change their ecosystem structure which could jeopardize 10-50% of worldwide pelagic predator diversity with unknown consequences for global fish stocks.

(Weiqi Yao, Adina Paytan, Ulrich G. Wortmann, ^œ[Large-scale ocean deoxygenation during the Paleocene-Eocene Thermal Maximum](#), *Science*, 19 Jul 2018)

⁵⁷⁵ As they continue:

When will we ever learn?

What went wrong? The continuing Indian farmer protests, despite the COVID-19 resurgence, highlight the problematic legacy of its Green Revolution (GR) in frustrating progress to sustainable food security.

Many studies have already punctured some myths of India's GR. Looking back, its flaws and their dire consequences should have warned policymakers of the likely disappointing results of the GR in Africa.

Hagiographic accounts of the GR cite 'high-yielding' and 'fast-growing' dwarf wheat and rice spreading through Asia, particularly India, saving lives, modernising agriculture, and 'freeing' labour for better off-farm employment.

Many recent historical studies challenge key claims of this supposed success, including allegedly widespread yield improvements and even the number of lives actually saved by increased food production.

Environmental degradation and other public health threats due to the toxic chemicals used are now widely recognized. Meanwhile, water management has become increasingly challenging and unreliable due to global warming and other factors.

Ersatz GR2.0 for Africa

Half a century later, the technology fetishizing, even deifying AGRA initiative seemed oblivious of Asian lessons as if there is nothing to learn from actual experiences, research and analyses.

Worse, AGRA has ignored many crucial features of India's GR. Importantly, the post-colonial Indian government had quickly developed capacities to promote economic development.

Few African countries have such 'developmental' capacities, let alone comparable capabilities. Their already modest government capacities were decimated from the 1980s by structural adjustment programmes demanded by international financial institutions and bilateral 'donors'.

(Timothy A. Wise and Jomo Kwame Sundaram, ^œ[Another False Start in Africa Sold with Green Revolution Myths](#), *Inter Press Service*, April 20 2021)

A reposting of this article on the ^œ[NakedCapitalism blog site](#) provides a set of comments on it.

⁵⁷⁶ The satirical website *the Onion*, in a piece entitled 'Contractor Informs Biden It'd Be Cheaper To Just Tear Down U.S. And Start Over', described the US scene as depicted by a 'local contractor Randy Alonzo' whose assessment seems closer to reality than satire:

WASHINGTON - Shaking his head and sighing while poking around various rotting, dilapidated sections of the 3.8-million-square-mile country, local contractor Randy Alonzo looked President Joe Biden in the eye Friday and told him that it would be cheaper just to tear down the United States and start over. "Yeah, no, I'll be honest, this whole friggin' place, from California to New York, all the way down to the tip of Florida, is a mess, and if I were you, I'd just consider shit-canning the whole thing and building back from the ground up,"...

(*the Onion*, ^œ[Contractor Informs Biden It'd Be Cheaper To Just Tear Down U.S. And Start Over](#), June 25, 2021)

⁵⁷⁷ Wikipedia, in an article entitled '^œ[Belt and Road Initiative](#)' has provided an excellent and fairly detailed explanation of the nature of this initiative.

The Chinese vision is a comprehensive one, including both:

a regional integration of the infrastructural development of East, South-East, South Asian and northern 'Silk Road' Asian nations into what essentially becomes a 'United Asian Economic, Social and Political Bloc', with each nation's sovereignty not merely recognized but guaranteed by all participants,

and, as part of that overall development,

the extension of both maritime routes (the 'One Belt' part of the initiative) and Asian land routes (the 'One Road' part of the initiative) into both African and European nations and beyond, into the 'rest of the world'.

The only way such an initiative could possibly succeed (it entails, of course, an inevitably truly long-term developmental process spanning decades) would be if *all* participating nations really did perceive involvement as being to their long-term advantage.

A pact among equals to both guarantee and pursue universal reciprocal responsibility for each others' welfare.

Amongst the most strongly emphasized features of this bloc, in Chinese explanations, is the *equality* of all participant nations, without regard to varying geographical or population sizes. It is to be a cooperative bloc of independent nations, a 'win-win' bloc of nations committed to the support and infrastructural development of each nation, and so of all nations.

There is no mention of, and apparently no intention to develop, military 'cooperation' of any kind. Such a bloc would not give primacy to military integration or domination. Neither does it envision a preferred political organization or process of political convergence. This truly is a noble vision of cooperative development of equals in every sense.

It is a vision of a truly integrated world of independent equals wholly focused on the wellbeing of all through the wellbeing of each.

If this were to be the future of 'capitalism' it would, indeed, be an inspiring future. One can only hope and pray that it succeeds as envisioned and is able to survive and flourish through the environmental storm clouds we can all see building on humanity's horizon.

⁵⁷⁸ This is a [prime purpose of exports in capitalist nations](#), driven by the need to access needed resources (or commodities) of other nations.

Capitalist enterprises, entrepreneurs, developers, 'aid workers' and fellow travelers have intruded into the environments of communities and

appropriated their material resources to expand the resource base upon which capitalist nations rely to meet their constantly expanding material 'needs'.

Cecil Rhodes is reputed to have expressed it eloquently:

We must find new lands from which we can easily obtain raw materials and at the same time exploit the cheap slave labor that is available from the natives of the colonies. The colonies would also provide a dumping ground for the surplus goods produced in our factories.

In doing so, they have obscured the material constraints of 'capitalist development'.¹⁰²⁶

Michael Kalecki, in 1943, explained the rationale:

1. A solid majority of economists is now of the opinion that, even in a capitalist system, full employment may be secured by a government spending programme, provided there is in existence [an] adequate plan to employ all existing labour power, and **provided adequate supplies of necessary foreign raw-materials may be obtained** in exchange for exports. If the government undertakes public investment (e.g. builds schools, hospitals, and highways) or subsidizes mass consumption (by family allowances, reduction of indirect taxation, or subsidies to keep down the prices of necessities), and if, moreover, this expenditure is financed by borrowing¹⁰²⁷ and not by taxation (which could affect adversely private investment and consumption), the effective demand for goods and services may be increased up to a point where full employment is achieved. Such government expenditure increases employment, be it noted, not only directly but indirectly as well, since the higher incomes caused by it result in a secondary increase in demand for consumer and investment goods.
2. It may be asked where the public will get the money to lend to the government if they do not curtail their investment and consumption. To understand this process it is best, I think, to imagine for a moment that the government pays its suppliers in government securities. The suppliers will, in general, not retain these securities but put them into circulation while buying other goods and services, and so on, until finally these securities will reach persons or firms which retain them as interest-yielding assets. In any period of time the total increase in government securities in the possession (transitory or final) of persons and firms will be equal to the goods and services sold to the government. Thus what the economy lends to the government are goods and services whose production is 'financed' by government securities. In reality the government pays for the services, not in securities, but in cash, but it simultaneously issues securities and so drains the cash off; and this is equivalent to the imaginary process described above.

(Michael Kalecki, ^{ae}[Political Aspects of Full Employment](#), *Political Quarterly*, 14/4, 1943, pp. 322-31 [My emphasis])

People in capitalist communities have become convinced that there are, indeed, no limits to the possibilities of material accumulation.

Bill Mitchell has explained the real resource constraints faced by capitalist nations:

[First, a currency-issuing government] can always use its currency-issuing capacity to ensure that all available productive resources that are for sale in that currency, including all idle labour, can be productively engaged.

That is, such a government can always, without exception, ensure there is full employment.

There is no financial constraint on such a government who desires to achieve that desirable policy goal.

While that might sound salutary, and, by comparison with the ambitions of most governments in this neo-liberal era, is light years ahead on any well-being index, it somewhat evades a further question as to whether achieving this desirable goal moves a nation out of poverty.

So, second, here is another totally general statement to complement the first. The worst-case scenario for a nation, irrespective of its government's currency-issuing capacity, is defined by the real resources that such a nation can access.

If a nation can only access limited quantities of real resources relative to its population, then no matter what capacities the government might have, that nation, in all likelihood, will be poor.

The ultimate constraint on prosperity is the real resources a nation can command, which includes the skills of its people and its natural resource inventory.

Thus, even if the government productively deploys all the resources a nation has available, it will still be poor if its resource base is limited.

Clearly, productively deploying all resources is a necessary condition for prosperity. And that remains the responsibility of the currency-issuing government after all of the non-government sector spending decisions have been made. But it is not a sufficient condition. A nation has to have sufficient resources to be prosperous.

The problem in this neo-liberal era is that currency-issuing governments use the myth that they are financially constrained to avoid fulfilling the responsibility to achieve full employment no matter how resource rich the nation might be.

So we have the obscene situation where even resource rich nations are succumbing to elevated levels of mass unemployment and increasing poverty rates amidst the 'plenty' because the ideological currents at the moment that has spawned an obsessive neo-liberal Groupthink are intent on shifting national income distribution in favour of those at the top end at the expense of everyone else.

(Bill Mitchell, ^œ[Ultimately, real resource availability constrains prosperity](#), Bill Mitchell - *Billy Blog*, Posted on Thursday, February 11, 2016)

⁵⁷⁹ Or, as in the case of the Maya of Mexico, changes in climate. As Douglas Kennett et al, ^œ[Development and Disintegration of Maya Political Systems in Response to Climate Change](#) (*Science* 9 November 2012, Vol. 338 no. 6108; pp. 788-791) explain:

The interval from 1535 to 1542 C.E. was particularly dry. Historical accounts link this drought to reduced agricultural productivity, famine, disease, death, and population relocation. Some estimates

suggest that drought-related agricultural disaster caused nearly a million deaths in Mexico in 1535 C.E., illustrating how meteorologically dry conditions presage agricultural drought with severe effects scaled to population density and level of agricultural intensification.

580 The often quoted Greek invention of a steam-powered piston and its use as a toy is an example of this. The technological developments in non-Western communities reflected their utilization of their environments. The Western presumption that the sophistication of a community can be judged by its mastery of sophisticated technologies is ethnocentric. That is only likely to apply if community technologies are being driven by expanding material needs and wants.

(Of course, human beings, driven by intellectual curiosity, have often developed technologies to facilitate intellectual exploration - as in the case of the Greek steam piston. This, however, has seldom (if ever) resulted in technologies designed to cater to mass production of consumer goods and services.)

581 Gustave Speth, Administrator of the ^{ae}United Nations Development Program, in 1994 (repeating a description he gave in a World Bank address (^{ae}Speth 1993)), outlined some of the massive problems confronting the world a decade ago (and confronting us even more starkly today),

Today, the average person among the 4 billion in the developing countries consumes about 2,500 calories of food each day. The average person consumes 3,400 calories per day in Western Europe and more than 3,600 in the United States...

[A]ccording to recent estimates by the world's leading soil scientists, an area of about 1.2 billion hectares - about the size of China and India combined - has experienced moderate to extreme soil deterioration since World War II as a result of human activities.

Over three-fourths of that deterioration has occurred in the developing regions, most of it in arid and semi-arid regions from such causes as overgrazing, deforestation, land clearing, unwise agricultural practices, and increased soil salinity and waterlogging, largely from irrigation.

Other environmental threats to the agricultural resource base include loss of water through contamination; loss of genetic resources, habitats, and species: adverse impacts of pesticides, and greater resistance of plant diseases, weeds and insects...

When combined with other environmental threats to the agricultural resource base - loss of water and generic resources, loss of cultural resources, and climate change, both local and global - the situation is disturbing indeed.

582 A summary of key statistics is provided in the release:

By the Numbers - Key Statistics and Facts from the Report

General

- 75%: terrestrial environment "severely altered" to date by human actions (marine environments 66%)
- 47%: reduction in global indicators of ecosystem extent and condition against their estimated natural baselines, with many

continuing to decline by at least 4% per decade

- 28%: global land area held and/or managed by Indigenous Peoples , including >40% of formally protected areas and 37% of all remaining terrestrial areas with very low human intervention
- +/-60 billion: tons of renewable and non-renewable resources extracted globally each year, up nearly 100% since 1980
- 15%: increase in global per capita consumption of materials since 1980
- >85%: of wetlands present in 1700 had been lost by 2000 - loss of wetlands is currently three times faster, in percentage terms, than forest loss.

Species, Populations and Varieties of Plants and Animals

- 8 million: total estimated number of animal and plant species on Earth (including 5.5 million insect species)
- Tens to hundreds of times: the extent to which the current rate of global species extinction is higher compared to average over the last 10 million years, and the rate is accelerating
- Up to 1 million: species threatened with extinction, many within decades
- >500,000 (+/-9%): share of the world's estimated 5.9 million terrestrial species with insufficient habitat for long term survival without habitat restoration
- >40%: amphibian species threatened with extinction
- Almost 33%: reef forming corals, sharks and shark relatives, and
- >33% marine mammals threatened with extinction
- 25%: average proportion of species threatened with extinction across terrestrial, freshwater and marine vertebrate, invertebrate and plant groups that have been studied in sufficient detail
- At least 680: vertebrate species driven to extinction by human actions since the 16th century
- +/-10%: tentative estimate of proportion of insect species threatened with extinction
- >20%: decline in average abundance of native species in most major terrestrial biomes, mostly since 1900
- +/-560 (+/-10%): domesticated breeds of mammals were extinct by 2016, with at least 1,000 more threatened
- 3.5%: domesticated breed of birds extinct by 2016
- 70%: increase since 1970 in numbers of invasive alien species across 21 countries with detailed records
- 30%: reduction in global terrestrial habitat integrity caused by habitat loss and deterioration
- 47%: proportion of terrestrial flightless mammals and 23% of threatened birds whose distributions may have been

negatively impacted by climate change already

- >6: species of ungulate (hoofed mammals) would likely be extinct or surviving only in captivity today without conservation measures

Food and Agriculture

- 300%: increase in food crop production since 1970
- 23%: land areas that have seen a reduction in productivity due to land degradation
- >75%: global food crop types that rely on animal pollination
- US\$235 to US\$577 billion: annual value of global crop output at risk due to pollinator loss
- 5.6 gigatons: annual CO₂ emissions sequestered in marine and terrestrial ecosystems - equivalent to 60% of global fossil fuel emission
- +/-11%: world population that is undernourished
- 100 million: hectares of agricultural expansion in the tropics from 1980 to 2000, mainly cattle ranching in Latin America (+/-42 million ha), and plantations in Southeast Asia (+/-7.5 million ha, of which 80% is oil palm), half of it at the expense of intact forests
- 3%: increase in land transformation to agriculture between 1992 and 2015, mostly at the expense of forests
- >33%: world's land surface (and +/-75% of freshwater resources) devoted to crop or livestock production
- 12%: world's ice-free land used for crop production
- 25%: world's ice-free land used for grazing (+/-70% of drylands)
- +/-25%: greenhouse gas emissions caused by land clearing, crop production and fertilization, with animal-based food contributing 75% to that figure
- +/-30%: global crop production and global food supply provided by small land holdings (<2 ha), using +/-25% of agricultural land, usually maintaining rich agrobiodiversity
- \$100 billion: estimated level of financial support in OECD countries (2015) to agriculture that is potentially harmful to the environment

Oceans and Fishing

- 33%: marine fish stocks in 2015 being harvested at unsustainable levels; 60% are maximally sustainably fished; 7% are underfished
- >55%: ocean area covered by industrial fishing
- 3-10%: projected decrease in ocean net primary production due to climate change alone by the end of the century
- 3-25%: projected decrease in fish biomass by the end of the century in low and high climate warming scenarios, respectively

- >90%: proportion of the global commercial fishers accounted for by small scale fisheries (over 30 million people) - representing nearly 50% of global fish catch
- Up to 33%: estimated share in 2011 of world's reported fish catch that is illegal, unreported or unregulated
- >10%: decrease per decade in the extent of seagrass meadows from 1970-2000
- +/-50%: live coral cover of reefs lost since 1870s
- 100-300 million: people in coastal areas at increased risk due to loss of coastal habitat protection
- 400: low oxygen (hypoxic) coastal ecosystem 'dead zones' caused by fertilizers, affecting >245,000 km²
- 29%: average reduction in the extinction risk for mammals and birds in 109 countries thanks to conservation investments from 1996 to 2008; the extinction risk of birds, mammals and amphibians would have been at least 20% greater without conservation action in recent decade
- >107: highly threatened birds, mammals and reptiles estimated to have benefitted from the eradication of invasive mammals on islands

Further statistical information and the full summary can be found here: [^œMedia Release: Nature's Dangerous Decline 'Unprecedented'; Species Extinction Rates 'Accelerating'](#)

⁵⁸³ The 'value' of objects is culture specific.

Accounts of the period include numerous comments on the 'generosity' or, alternatively, profligacy of 'simple' 'primitive' peoples who seemed unaware of the true 'value' of objects in their possession. Stories also abounded of their willingness to casually discard 'valuable' possessions they were given, often in an attempt to 'do the right thing' and 'pay' for the 'valuables' received from them.

⁵⁸⁴ As a 1990 editorial in *The Ecologist* put it:

History", wrote the French philosopher Voltaire, "is a fable upon which we are all agreed". So far as the colonial period goes, the fable would have us believe that the colonial powers were primarily motivated by a desire to bring "progress" and "civilization" to their colonies. Whilst this may indeed have been true of the missionaries who trail-blazed Europe's colonial expansion, it was far from the minds of the main architects of colonial rule.
(*Ecologist* Vol 20 No 6 1990 p. 202)

⁵⁸⁵ See ^œ[King Leopold II and the Belgian Congo](#) for one of the more extreme examples of this reorganization in central Africa.

⁵⁸⁶ See [The mono-agricultural re-organization of Africa](#) for more on this.

⁵⁸⁷ See this ^œ[International Institute for Tropical Agriculture \(IITA\) and the Center for International Forestry Research \(2011\)](#) report for a typical Western solution to a problem driven by the imposition of mono-agricultural production for Western markets on small-holdings. Indigenous people, caught in the trap of constant downward pressures on income as production increases are blamed for the problems this creates:

Cocoa production in West Africa is an important commercial sector and a source of livelihoods for about two million households in the region. For the last 20 years Côte d'Ivoire has been the largest producer both in terms of output and numbers of producers, followed by Ghana, Nigeria, and Cameroon with these four countries now accounting for 70% of global cocoa supply.

According to the study, cocoa production in West Africa's Guinean Rainforest region doubled between 1987 and 2007, but most of this increase was fueled by clearing forest areas resulting in large losses of biodiversity and high carbon emissions.

The Guinean Rainforest (GRF) of West Africa, identified over 20 years ago as a global biodiversity hotspot, had reduced to 113,000 km² at the start of the new millennium, which was 18% of its original area, according to the report. The principal driver of this environmental change has been the expansion of low-input smallholder agriculture that depends on environmentally destructive practices like slash-and-burn and land clearing.

Researchers at IITA found that increasing fertilizer use on cocoa-timber farms would have spared roughly 2 million hectares of tropical forest from being cleared or severely degraded. On average, farmers are using less than 4kg of total nutrients per hectare in the region.

The study suggests that farmers could have achieved the same outputs without rampant deforestation through the intensified use of fertilizer and agrochemicals coupled with improved crop husbandry. According to IITA, by doing so farmers would have doubled their incomes and helped to avoid deforestation and degradation on 2.1 million hectares and in the process, this would have generated a value of over 1,600 million dollars on 1.3 billion tons of CO₂ emissions that would not have come from deforestation.

(^œ[EurekAlert 7-Apr-2011](#))

Alex Renton, in an article in the ^œ[Sunday Independent 2nd January 2011](#) entitled *India's hidden climate change catastrophe: Over the past decade, as crops have failed year after year, 200,000 farmers have killed themselves* provides a description of the kind of problems this creates:

Mr Sainath is an award-winning expert on rural poverty in India, a famous figure across India through his writing for The Hindu newspaper. I spoke to him at a screening of Nero's Guests, a documentary film about the suicide epidemic and some of the more eye-popping inequalities of modern India.

"Poverty has assaulted rural India," he said. "Farmers who used to be able to send their children to college now can't send them to school. For all that India has more dollar billionaires than the UK, we have 600 million poor. The wealth has not trickled down."

Almost all the bereaved families report that debts and land loss because of unsuccessful crops were among their biggest problems.

The causes of that poverty are complex. Mr Sainath points to the long-term collapse of markets for farmers' produce. About half of all the suicides occur in the four states of India's cotton belt; the price of cotton in real terms, he says, is a twelfth of what it was 30 years

ago. Vandana Shiva, a scientist-turned-campaigner, also links failures of cotton farming with the farmer suicides: she says the phenomenon was born in 1997 when the Indian government removed subsidies from cotton farming. This was also when genetically modified seed was widely introduced.

"Every suicide can be linked to Monsanto," says Ms Shiva, claiming that the biotech firm's modified Bt Cotton caused crop failure and poverty because it needed to be used with pesticide and fertilisers. The Prince of Wales has made the same accusation. Monsanto denies that its activities are to blame, saying that Indian rural poverty has many causes.

Beyond any argument - though no less politically charged - is the role of the weather in this story. India's climate, always complicated by the Himalayas on one side and turbulent oceans on the two others, has been particularly unreliable in recent years. In Rajasthan, in the north-west, a 10-year drought ended only this summer, while across much of India the annual monsoons have failed three times in the past decade.

India's 600 million farmers and the nation's poor are often the same people: a single failed crop tends to wipe out their savings and may lead to them losing their land. After that, there are few ways back. The drought, following a failed monsoon, that I saw in Andhra Pradesh in 2009 was the tipping point that drove Mr Naik to suicide.

Such tragedies and even the selling of children for marriage or as bonded labor - a common shock-horror news story in India - are the most dramatic results. But far more common is the story of rural families migrating, in tens of millions, to India's cities, swelling the ranks of the urban poor and leaving holes in the farming infrastructure that keeps India fed. ...

I visited an idyllic village, Surah na Kheda, last month in the limerick-worthy district of Tonk, Rajasthan. We arrived to find the rows of whitewashed mud-walled houses gleaming in the rising sun, while inside the courtyards women in bright saris were stirring milk to make yogurt and butter for the day's meals. Their daughters kneaded dough for the breakfast chapattis.

But there was an odd thing: a distinct lack of people. There were the old and the very young - but virtually no one of working age. Half the village, some 60 adults and many children, had gone to Jaipur, the state capital, to look for work. Even though the Diwali holiday fell the following week, no one expected their neighbors and relatives back. Times were too hard.

Prabhati Devi, 50, said four of her seven children had joined the exodus. "They had to go," she said. "Twenty years ago, we could grow all we needed, and sell things too. Now we can't grow wheat, we can't grow pulses, we can't even grow carrots, because there is not enough rain. So we go to the cities, looking for money."

⁵⁸⁸ See [From Indolent Subsistence to Labor-pool Worker](#) for more on this.

⁵⁸⁹ These constantly escalating demands have not lessened in the 21st century. As long as Western social templates are centered on competitive material accumulation and consumption, attempts at 'sustainable development' must, by definition, fail.

Sustainability requires a stable demand for material goods. This can only happen when the social templates of communities are focused on something other than competitive, individual material accumulation and consumption. Of course, to hold consumption and accumulation at present levels is already an unsustainable proposition.

Unless the social templates of Western countries and their accumulative and consumptive demands are reduced to genuinely sustainable levels, and the status systems of other communities are not warped through competition with the West and through the stimulation of material needs and wants by promotional agencies, 'sustainable development' is an oxymoron.

⁵⁹⁰ The populations of Third World communities are, indeed, out of control. However, we need to ask when they began this uncontrolled growth. It seems that in almost all Third World countries the take-off into uncontrolled population growth coincided with the commencement of the 'development' drive of the post-Second World War period.

Kevin Noone has summed up the post-WW2 'great acceleration' in 'development' well:

Indeed, around 1950, the world seems to have reached a tipping point, with practically every factor that heightens humanity's impact on the planet - population, GDP, fertilizer use, the proliferation of telephones, and paper consumption, to name only a few - beginning to increase rapidly. During this period, which the scientist Will Steffen dubbed the "Great Acceleration," the human population became sufficiently large and connected, with high enough consumption, to become a major global force.

(Kevin J. Noone, *Project Syndicate*, Oct. 2, 2013, Problem Solving in the Anthropocene)

It is contended that the rapid increase in population growth is largely a consequence of the disruption of communities, through attempting to reorganize them to Western requirements. Communal controls on population have been disrupted, and people are socially disoriented and confused.

Population growth is no longer driven by the needs and requirements of communities, and individuals have not been reoriented to Western forms of individualized population control based on material cost calculations.

As I have argued elsewhere ([Ideology and reality](#)), Western belief that people can easily be reoriented to Western assumptions and Western drives is naive. The more vigorously such attempts are pursued, the more disrupted communities become and therefore the less effective population control measures become.

⁵⁹¹ See [Capitalism and Work: The white Man's Burden; Capitalism and its Colonies](#)

⁵⁹² See [Capitalism and its Colonies](#) for more on this.

⁵⁹³ A cynical observer might say that colonial powers had found a way to retain the advantages and avoid the disadvantages of empire.

They handed political control/ responsibility to colonial politicians, ducking the problems of independence movements and political unrest, while retaining most of the economic advantages of empire.

In doing so, they could require post-colonial countries to purchase the requirements of government (including weapons, infrastructural

equipment of various sorts, and pay for expertise) while retaining privileged access to their resources.

⁵⁹⁴ Where post-colonial nations attempted to break free from the control of Western colonial powers, focusing on internal development, as in [Lumumba's Democratic Republic of Congo](#), [Nkrumah's Ghana](#) or Nyerere's *ujamaa* movement in Tanzania from 1964-85, they found themselves under very strong First World pressure to conform. Any move away from the *status quo*, in the Cold War climate of the period, was construed as a move to socialism and communism. This, inevitably invoked very similar political pressures to those experienced in Chile and elsewhere (see ^œ[Church Committee \(1975\). Covert Action in Chile: 1963-1973](#) (PDF) for a frank official explanation and assessment of its involvement in coup activity in Chile).

⁵⁹⁵ There was, of course, an element of truth in this (the best excuses are those which appear to be corroborated). See [Corruption](#) for more on this.

⁵⁹⁶ They did not appear to have seriously hampered economic development in the East Asian 'tiger' nations.

⁵⁹⁷ Patric Hamm, Lawrence P. King and David Stuckler ("Mass Privatization, State Capacity, and Economic Growth in Post-Communist Countries", *American Sociological Review*, Vol. 77, No. 2 (April 2012), pp. 295-324) spelt out the [consequences of the mass privatization programs](#), devised by private economists and both the IMF and World Bank, for former Soviet Union members in the early 1990s. A EurekAlert summary summed it up:

Devised principally by western economists, mass privatization was a radical policy to rapidly privatize large parts of the economies of countries such as Russia during the early 1990s. The policy was pushed heavily by the International Monetary Fund, the World Bank, and the European Bank for Reconstruction and Development (EBRD). Its aim was to guarantee a swift transition to capitalism, before Soviet sympathizers could seize back the reins of power.

Instead of the predicted economic boom, what followed in many ex-Communist countries was a severe recession, on par with the Great Depression of the United States and Europe in the 1930s. The reasons for the economic collapse and skyrocketing poverty in eastern Europe, however, have never been fully understood. Nor have researchers been able to explain why this happened in some countries, like Russia, but not in others, such as Estonia.

Some economists argue that mass privatization would have worked if it had been implemented even more rapidly and extensively. Conversely, others argue that although mass privatization was the right policy, the initial conditions were not met to make it work well. Further still, some scholars suggest the real problem had more to do with political reform.

In their new study, Lawrence King, a Reader in sociology at the University of Cambridge, David Stuckler, a Lecturer in sociology at the University of Cambridge, and Patrick Hamm, a doctoral candidate in sociology at Harvard University, test for the first time the idea that implementing mass privatization was linked to worsening economic outcomes, both for individual firms, and entire economies. The more faithfully countries adopted the policy, the more they endured economic crime, corruption, and economic failure. This happened, the study argues, because the policy itself

undermined the state's functioning and exposed swathes of the economy to corruption.

The report also carries a warning for the modern age: "Rapid and extensive privatization is being promoted by some economists to resolve the current debt crises in the West and to help achieve reform in Middle Eastern and North African economies," said King. "This paper shows that the most radical privatization program in history failed the countries it was meant to help. The lessons of unintended consequences in Russia suggest we should proceed with great caution when implementing untested economic reforms." (Mass privatization put former communist countries on road to bankruptcy, corruption: Western economists advocated the policy after Soviet Union's Fall, Eurekaalert 29-Mar-2012)

⁵⁹⁸ Milton Friedman's views were hardly original. As we have already seen, similar views were forcefully promoted through the 19th century (see 19th Century Free-Marketeers).

In a review of Nancy MacLean's (2017), *Democracy in Chains: The Deep History of the Radical Right's Stealth Plan for America*, George Monbiot has described the origins of Public Choice Theory well:

...[James] Buchanan, in collaboration with business tycoons and the institutes they founded, developed a hidden programme for suppressing democracy on behalf of the very rich. The programme is now reshaping politics, and not just in the US.

Buchanan was strongly influenced by both the neoliberalism of Friedrich Hayek and Ludwig von Mises, and the property supremacism of John C Calhoun, who argued in the first half of the 19th century that freedom consists of the absolute right to use your property (including your slaves) however you may wish; any institution that impinges on this right is an agent of oppression, exploiting men of property on behalf of the undeserving masses.

James Buchanan brought these influences together to create what he called "public choice theory". He argued that a society could not be considered free unless every citizen has the right to veto its decisions. What he meant by this was that no one should be taxed against their will. But the rich were being exploited by people who use their votes to demand money that others have earned, through involuntary taxes to support public spending and welfare. Allowing workers to form trade unions and imposing graduated income taxes were forms of "differential or discriminatory legislation" against the owners of capital.

Any clash between "freedom" (allowing the rich to do as they wish) and democracy should be resolved in favour of freedom. In his book "The Limits of Liberty", he noted that "despotism may be the only organisational alternative to the political structure that we observe." Despotism in defence of freedom.

His prescription was a "constitutional revolution": creating irrevocable restraints to limit democratic choice. Sponsored throughout his working life by wealthy foundations, billionaires and corporations, he developed a theoretical account of what this constitutional revolution would look like, and a strategy for implementing it.

He explained how attempts to desegregate schooling in the American south could be frustrated by setting up a network of state-sponsored private schools. It was he who first proposed privatising universities, and imposing full tuition fees on students: his original purpose was to crush student activism. He urged privatisation of social security and many other functions of the state. He sought to break the links between people and government, and demolish trust in public institutions. He aimed, in short, to save capitalism from democracy.

(George Monbiot, ["A despot in disguise: one man's mission to rip up democracy"](#), *The Guardian*, Australian Edition, US politics, Opinion, 19 July, 2017)

See Boston (1991) for a discussion of the emergence of the theoretical arguments.

⁵⁹⁹ See [Third World Debt](#) for more on this.

⁶⁰⁰ See [The Triumph of Neoliberalism](#) for more on this. James Galbraith has spelt out the major presumptions of the post 1960s neoliberal movement:

What was monetarism? Friedman famously defined it as the proposition that "inflation is everywhere and always a monetary phenomenon." This meant that money and prices were tied together. But more than that, Friedman believed that money was a policy variable - a quantity that the Central Bank could create or destroy at will. Create too much, there would be inflation. Create too little, and the economy might collapse. There followed from this that the right amount would generate the right result: stable prices at what Friedman came to call the natural rate of unemployment.

The intent and effect of this line of reasoning was to defend a core proposition about capitalism: that free and unfettered markets are intrinsically stable. In Friedman's gospels government is the lone serpent in Eden, while the task of policy is to stay out of the way. Just as this was the vulgar lesson of "Free to Choose" so it turns out it was also the deep lesson of the larger structure of Friedman's thought. Friedman and Schwartz's *Monetary History* for all its facts and statistics carried a simple message: the market did not fail; the government did.

(James K. Galbraith, [The Collapse of Monetarism and the Irrelevance of the New Monetary Consensus](#), 25th Annual Milton Friedman Distinguished Lecture at Marietta College, Marietta, Ohio March 31, 2008)

It is, perhaps, worth reminding ourselves of the rationale underpinning neoliberal forms of 'Third World development'.

Fundamental to the neoliberal creed is the presumption that Government should not interfere in the functioning of national or international market exchange, either through regulations which attempt to straitjacket market activity or through the supply of goods and services to the community.

It is there as an arbiter of disputes among suppliers and consumers, and its most important role is in the maintenance of those rules and regulations which will ensure that economic activity - the production, exchange, and consumption of goods and services - remains equitable

This requires two important forms of legislation.

- ★ The first is aimed at ensuring that those involved in a transaction are 'free' from coercion to be involved in, or to settle the transaction to their disadvantage. That is, the state should ensure that economic activity takes place on a 'level playing field'.

As Milton Friedman, a neoliberal theorist, explained, governments are responsible to ensure

the protection of individuals in the society from coercion whether it comes from outside or from their fellow citizens. Unless there is such protection, we are not really free to choose.

(Friedman & Friedman 1980, p. 29)

- ★ Secondly, the state should ensure that the market remains truly competitive. That is, it should ensure that there is no collusion on the part of suppliers or purchasers to fix prices or to gain a monopoly in any area of trade. This is because the most efficient economy is that which is most competitive.

Unfettered competition will ensure that prices are kept low, that quality is constantly improved and that supply is similarly constantly improved. It will also ensure that the reach of markets is constantly expanded as competitors strive to remain viable through expanding sales. This will result in the internationalization of business activities.

It is good that major multinational firms are entering the economies of Third World countries.

Companies should be strongly encouraged to operate across national borders, and a prime responsibility of government is to make such internationalization possible through removing legislative obstacles. Unfettered competition will also ensure that suppliers are forced to be innovative in improving and diversifying their product ranges so that they might keep ahead of the inevitable saturation of the market by particular products.

This constant emphasis on innovation, it is argued, results in human beings continually exploring their environments, searching for new ways in which to profit. In the process they expand their horizons, thus ensuring fuller development of the human potential.

These requirements of government preclude it from involvement in economic activity. One cannot allow the referee to start playing because if the government is a player, it will also be a biased arbiter. Further, since those who work for the government are not primarily focused on material profit, but on the provision of services in the absence of competition, they will, by definition, be less efficient than private enterprise.

Public enterprise (including the various 'social services') should be privatized to improve efficiency. There must be a clear and unequivocal separation of the public realm of government from the private realm of economic activity. The primary responsibility of the public realm is to ensure that private players abide by the rules of fair trading.¹⁰²⁹

The rules of fair trading and economic development require two fundamental principles to be maintained. The first is that no individual could be compelled to enter into a transaction with another individual.

The second is that self-interested accumulative activity, provided it does not infringe the first principle, should be rewarded.

If multinational companies made large profits from their Third World activities, this demonstrated the validity of neoliberal principles.

The person/ corporation who, playing the game by the rules, is able to accumulate property of one kind or another is not only entitled to that property, but should be recognized as having substantially contributed to the public good in the act of accumulation ¹⁰³⁰.

Unless such people/corporations are directly, materially able to benefit from their activity they will put less effort into it. This, in turn, will result in economic stagnation. On the other hand, if those who generate profits are allowed to retain them, they, through reinvesting those profits, will generate increased economic activity.

It is assumed that since human nature is the distillation of millions of years of evolutionary experience, human beings as individuals will be adapted innately (through natural selection) to make the best of their natural and social environments. (Of course, there are many who do not accept an evolutionary explanation, preferring to rely on the 'natural law' argument ¹⁰³¹ as justification for their belief in the primacy of independent and competitively opposed individuals.)

Effectively, therefore, if one removes all social inhibitions aimed at channeling and distorting human behavior, human beings, in any community, will be freed to real self-development which, inevitably, will most satisfactorily be expressed in involvement in market exchange.

So, human communities are best served, and individuals will benefit most, if they are empowered to engage in the uninhibited, competitive exchange of goods and services. All human beings, it is claimed, are naturally and individually competitively opposed to each other and intent on accumulation. ¹⁰³²

These principles, naively presumed to be universally valid, have driven Third World economic development advice since the 1970s. That advice has been mandated through the demands of international agencies as Third World countries have found themselves unable to meet their international financial 'responsibilities'.

⁶⁰¹ It has taken a further 20 years of neoliberal control within the 'developed' world for policies similar to those imposed on Third World nations to be imposed, with similar force, on Western nations. [Greece is, arguably, the first in line to experience similar treatment](#) at the hands of 'creditors' and international organizations such as the IMF. (Argentina has experienced similar treatment at the hands of international creditors and institutions over the past thirty years.)

It is not alone. Portugal, Spain, Ireland have been subjected to similar demands. The major difference between Greece and those nations is that, in 2015, it has opted for a government which rejected the 'austerity' demands of the European and IMF technocrats and has consequently been labeled 'leftist' - a government which must be brought to heel lest its rebellion become contagious.

Paul Krugman has summarized Greek experience in recent years well:

... the campaign of bullying - the attempt to terrify Greeks by cutting off bank financing and threatening general chaos, all with the almost open goal of pushing the current leftist government out of office - was a shameful moment in a Europe that claims to

believe in democratic principles. It would have set a terrible precedent if that campaign had succeeded, even if the creditors were making sense.

What's more, they weren't. The truth is that Europe's self-styled technocrats are like medieval doctors who insisted on bleeding their patients - and when their treatment made the patients sicker, demanded even more bleeding...

(Paul Krugman, ^œ[Ending Greece's Bleeding](#), *New York Times*, The Opinion Pages, July 5, 2015)

Sadly, Greece's story is far from told. While its populace has voted not to accept the austerity demands of the 'European Troika' (the International Monetary Fund (IMF), European Commission (EU) and European Central Bank (ECB)), rejecting austerity demands of neoliberal technocrats has seldom worked in Third world nations. It will indeed be surprising if European neoliberal technocrats quietly accede to Greek demands. As Krugman concludes:

In the failed negotiations that led up to Sunday's referendum, the central sticking point was Greece's demand for permanent debt relief, to remove the cloud hanging over its economy. The troika - the institutions representing creditor interests - refused, even though we now know that one member of the troika, the International Monetary Fund, had concluded independently that Greece's debt cannot be paid. But will they reconsider now that the attempt to drive the governing leftist coalition from office has failed?

I have no idea ...

⁶⁰² Simon Johnson (2014) has summed up IMF influence around the world:

The IMF is founded on the premise that it represents cooperation between all of the countries of the world. The reality is that it stands for and operationalizes US power, in cooperation with America's closest allies.

Anyone who doubts that should review a recent letter orchestrated by the Bretton Woods Committee, addressed to Congressional leaders on behalf of an impressive array of former Republican and Democratic cabinet secretaries. The first paragraph reads, "The IMF has always been a valuable tool for advancing US national interests globally."

The US does not dictate what happens at the IMF, but it does have a disproportionate influence. Given the Fund's origins in helping to rebuild Europe after World War II, European countries are also very well represented on its executive board and in terms of ownership shares (and thus voting weight on important decisions).

(Simon Johnson, ^œ[The Importance of Being Boring](#), *Project Syndicate*, March 27, 2014)

Barry Riddell, examining the implementation of SAPs in Third World countries in the late 1980s, concluded that:

... the I.M.F. has imposed 'conditionalities' in sub-Saharan Africa as integral elements of Structural Adjustment Programs (S.A.P.s) that affect not only the lives of all the inhabitants, but also the nature and landscapes of the nations concerned - their very geographical composition ...

Although the specifics of S.A.P.s differ, four basic elements are always present:

- currency devaluation,
- the removal/ reduction of the state from the workings of the economy,
- the elimination of subsidies in an attempt to reduce expenditures,
- and trade liberalization

... at the same time, the countries themselves are altered in certain fundamental ways. These involve the organization of the state, the character of the environment, the supply of food, the meaning of development, urban-rural interaction, and distinctly different future prospects for the several areas that make up the Third World [¹⁰³³]
...

The debt crisis dominates national life: unemployment is increasing, food and fuel are in short supply, availability of services has deteriorated, and standards of living are falling. It is more than a matter of export earnings not meeting the financial obligations of debt servicing and the costs of imports, for the situation is exacerbated by rapid population growth, environmental deterioration, over-urbanization, unemployment, and AIDS. ...

Chinua Achebe wrote *Things Fall Apart* (London 1958) in order to describe disasters which befell African society and economy with the onset of colonialism. Financial stringency is leading to similar results again almost a century later. The exigency means that the economies of the newly independent states are in decline, with little or no hope for the immediate future despite the rhetoric of international institutions.
(Riddell 1992, pp. 53-55)

⁶⁰³ Third world nations have inherited a wide range of difficulties and problems stemming from both their own [pre-colonial historical backgrounds](#) and the naive presumptions which all-too-often underpinned their [formation as 'post-colonial' nation states](#).

Their difficulties have been compounded through the past 50 years through the Western imposition of neoliberal restructuring. The disastrous consequences of Western imposed structural adjustment programs have been well summarized by Bill Mitchell:

The evidence shows that the so-called structural adjustment program (SAPs) that the IMF and World Bank typically impose on poor nations struggling with balance-of-payments problems - based upon fiscal austerity, elimination of food subsidies, increase in the price of public services, wage reductions, trade and market liberalisation, deregulation, privatisation of state-owned assets, etc. - have had a disastrous social, economic and environmental impact wherever they have been applied.

Not only have they kept millions in persistent poverty but they also foisted unsustainable levels of external debt on these nations, which were then used to justify the imposition of destructive export-led production strategies that in many cases devastated the existing subsistence systems and led to large-scale environmental ruin (for example, massive deforestation in Mali).

Though masqueraded as development programs, SAPs have actually acted as giant siphons, sucking out wealth and resources from these countries and pumping it into the pockets of the rich elites and corporations in the US, Europe and elsewhere.

To add insult to injury, in many instances these policies also wrecked the borrowing countries' local productive sectors, thus creating increased import and debt dependencies.

Clearly, the IMF and the World Bank have outgrown their original purpose and have ceased to play any positive role in the management of world affairs.

Rather, their interventions have undermined prosperity and impoverished millions of people across the world, and continue to do so - mostly, but not exclusively, in the developing world (as the Fund's participation in Greece's bailout program testifies).

(Bill Mitchell, ^œ[If Africa is rich - why is it so poor?](#), *Billy Blog*, June 19, 2017)

⁶⁰⁴ Jeremy Grimm, in a comment on terms used when dealing with the 'Covid-19 Crisis,' has put the process of dehumanizing people well:

I finally figured out what so bothered me about the idea of 'herd immunity'. On its face the idea is ridiculous. What herdsman would let herd immunity resolve a disease killing and weakening the cattle in his herd? We have "over 100,000 coronavirus cases in 24 hours" but who in the Power Elite finds this news sufficiently "sobering" to take any action to remedy the pandemic or ease the economic destruction it has wreaked on the Populace?

Regard the word "herd" now so blithely applied to Populace. Long ago Populace was at least regarded as a flock, tended by a good shepherd. Populace in the US has diminished from "We the people" to 'the masses' to 'consumers' to 'customers' to a herd. Herds are driven to market. But even herdsman have more regard for the members of their herd. Much of the herd is only valued for the glue and hides they yield to the tender mercies of our Medical Industrial Complex.

Perhaps the language used, the words used, determine or influence thinking. I am skeptical of those ideas. But I believe the word "herd" clearly communicates how our Power Elite thinks about the Populace.

(Jeremy Grimm, *NakedCapitalism* ^œ[Comment on 'U.S. reports over 100,000 coronavirus cases in 24 hours for the first time ever. Smashes all time record.'](#), October 31, 2020)

⁶⁰⁵ See [Reciprocity and Exchange](#) for a discussion on the nature of social exchange.

⁶⁰⁶ I have never found anyone who could satisfactorily explain why this presumption was (and is) held.

⁶⁰⁷ Siphoning of funds into patron-client networks was, of course, a feature of both government and business organization in many Third World countries. See Biersteker (1987) and Robison (1990) for descriptions of the relationship between government and private enterprise in Nigeria and Indonesia.

Of course, [corporate funding of politicians and lobbyists](#) has become an art form in the US and most Western nations over the past half century.

608 The Secretary-General of UNCTAD, in 1996, explained:

International trade and production have not expanded at the same rate as international financial transactions, but production by transnational corporations has grown faster than trade. More importantly, trade and the internationally integrated production of TNCs have acted both separately and in interplay with each other to increase interdependence of economies in terms of production activities, lending a qualitative dimension to globalization that distinguishes it from its earlier variants ...

The principal driving force in the globalization process today is the search of both private and publicly-owned firms (and more generally, producers and asset holders) for profits worldwide.

Their efforts are made possible or facilitated by advances in information technology and by decreasing transport and communication costs. To maintain or increase market share and maximize profits in a world economy with rapid technological change, converging consumer tastes and liberalised flows of goods, services, capital and technology across national boundaries, firms are pursuing strategies that allow them to exploit all available sources of competitive strength, combining their own, firm-specific assets with assets that are specific to particular locations.

They minimize transaction costs and maximize efficiency and profits through appropriate choice of modes of international transactions and distribution of assets and of international production activity ...

As firms increasingly see transnational production as necessary for their competitiveness and profitability, they are exerting more and more pressures on Governments to provide conditions that will allow them to operate worldwide. This involves not only further liberalization of international trade but also freedom of entry, right of establishment and national treatment, as well as freedom for international financial transactions, deregulation and privatization ...

Macroeconomic forces have, meanwhile, exerted other pressures on firms and Governments. Slow growth of demand, stagnant wages and persistently high unemployment in the developed countries over the past 20 years have resulted in pressures from firms and workers that have influenced these countries' policies.

The slow growth of domestic demand and the related squeeze on profits in developed countries has led firms there to intensify their search for growth and profits in other markets; in so doing, they also apply pressure on their home Governments to demand greater openness of foreign markets.

(^{ae}UNCTAD 1996, ch. 1, pp 15-16,20-21)

609 See [Inflation of the Material Requirements of Status Positions](#) for more on this.

610 Briones and Zosa (1994) described the situation in the Philippines:

... for more than two decades, external debt accumulation in the Philippines has been characterised by an accelerating trend. These are monetary and non-monetary liabilities incurred by both the public and the private-sector from foreign entities such as commercial banks, multilateral organizations, the International Monetary Fund, the private bond market, foreign government and bilateral agencies, and other foreign institutions ...

The Philippines external debt increased almost ninefold between 1972 and 1982 ...

This illustrates the policy of development financing during the period - a policy where development projects were financed by borrowings from external sources, particularly from the international financial system, which was awash with recycled petrodollars ...

Investment and international financial resources flowed into their economies. Unfortunately, global finance innovations also facilitated the outflow of these resources in larger amounts through capital flight, which resulted from the unsettling political and social events prevailing at the time. The outcome was the 1983 debt crisis where debtor economies like the Philippines had to declare a series of moratoria on debt service payments ...

Even after the debt crisis, the Philippine external debt continued to rise. This was accounted for mainly by net availment of foreign loans, foreign exchange fluctuations, and capitalised interest on debt service payments after the debt reschedulings following the moratoria ...

Again, shift in the international financial and monetary systems played a major role in the structure of the Philippine external debt. With the capitalisation of unpaid interest after the moratoria, debt stocks rose and correspondingly bloated debt service payments.

This necessitated the need for more loans and financial assistance, which the international financial community provided at increasingly higher costs financially, economically, and politically. The access enjoyed by developing countries to Eurocurrency credit markets in the 1970s and 1980s made these debtor nations more vulnerable to foreign exchange fluctuations.

(Briones & Zosa 1994, pp. 253-5)

⁶¹¹ See ^œ[Center for the Study of Democracy \(1995\)](#) for an exploration of the options available to Bulgaria as it struggled to handle a debt crisis in the mid 1990s.

See Chapter 2 of that study for an economic advisor's description of the rationale for such programs: ^œ[Rationale for a Debt Conversion Program](#) and Chapter 3: ^œ[Debt for Equity Conversion Models](#) for the implementation models of such schemes in a variety of Central and South American countries. As the writer explained,

Debt Conversion Programs are no panacea for a country's debt or development problems. They should be viewed as useful but limited vehicle for debt reduction and for the attraction of new investments. However, in certain circumstances, they can make a substantial contribution both by encouraging foreign capital inflows at a time when it is scarce and in alleviating the debt service burden. Some countries have used these programs as an incentive for capital flight reversal.

⁶¹² Briones and Zosa described a few of the problems faced by the Philippines in the early 1990s:

The Philippines has reduced around \$3.4 billion of external debt through the above-mentioned schemes, including its debt buy-back of US \$1.3 billion.

It is important to stress that, although these voluntary debt reduction schemes may ease cash-flow payments, they are clearly inadequate to reduce overall debt stocks. Furthermore, these schemes are expensive and require foreign exchange resources to implement.

For example, the cash buy-back of US \$1.3 billion (which involved purchasing the debt papers at 50 cents in the dollar) had to be supported by an official loan of US \$650 million from multilateral and bilateral creditors as the Philippines did not have the reserves to support the buy-back.

Thus, what was gained in reduction of commercial bank debt was lost in terms of an increase in official loans.

Furthermore, debt-equity programs and other debt schemes also create undue inflationary pressure. These, too, link the debt problem to investments in debtor economies like the Philippines.

As scarce capital deters local investors, the premium enjoyed by investors in debt-equity programs and debt-for-note/debt programs favor foreign investors and accords them the opportunity of availing themselves of the assets/resources in the economy at 'sweet-heart' prices.

The hold of transnationals in key industries and sectors of the Philippine economy remains a burning issue. In the medium and long-term, the pressure on foreign exchange reserves brought about by profit remittances will also have to be addressed.

(Briones & Zosa 1994, pp. 269-270)

⁶¹³ Rajeev Chandrasekhar has described the phenomenon for India and China in the 21st century:

The movement of the rural poor to large cities is one of the exemplary narratives of the modern era. And governments, which typically focus on crude measures of economic performance, encourage rapid urbanization.

In China, for example, the relaxation of migration controls in the 1980's and the opening of the economy led to the spectacular growth of the country's eastern cities. More than 50% of Chinese live in urban areas today, up from 25% in 1990, and the proportion is expected to reach 70% by 2035.

While the majority of Indians still live in rural areas, this, too, is changing fast. From 1970 to 2010, India's urban population grew by 250 million. The next quarter-billion will be added in half that time. By 2030, 70% of India's GDP will come from its cities.

But cities are simply unable to cope with the influx of migrants on the current scale. The fast-growing metropolises of India, China, Brazil, and other major emerging economies offer plenty of jobs, but basic amenities are lacking; as a result, many of the urban poor live in slums, without adequate health care, water supplies, or electricity.

The problems are legion. Municipalities, often owing to corruption or poor management, are unable or unwilling to impose rigorous planning regulations. Infrastructure spending is either inadequate or poorly targeted. Workers come home from their jobs to homes that are dark, dank, and depressing. They feel unsafe on poorly-lit streets, and have little access to parks or recreational facilities.

Mornings and evenings are lost to long commutes on polluted highways.

(^{ae}[Civilizing the City](#), *Project Syndicate*, May 4, 2013)

In Western regions, the movement into urban areas commenced in the 16th century, with land consolidation and the dispossession of millions of small land holders. It continues to the present.

In non-Western regions, the problems of consolidation began with the economic reorganization of colonial regions to feed the factories of Europe. Urbanization was kept in check through laws and regulations controlling the movement of people from 'traditional' reserves.

Following the 2nd World War, those legal restrictions were challenged as 'anti-democratic' and people began to move to possible employment centers (see [The Right of Individuals to Freedom of Movement and Self-expression](#) for more on this).

With the globalization of economic activity over the past forty years, the [problem has grown even more serious](#). As Un-Habitat's, *The Challenge of Slums: Global Report on Human Settlements 2003* explained:

The locus of poverty is moving from the countryside to cities, in a process now recognized as the "urbanization of poverty." The absolute number of poor and undernourished in urban areas is increasing, as are the numbers of urban poor who suffer from malnutrition.

Kennedy Odede has described his own experience and that of millions of others around the world:

My mother, like her mother, her grandmother, and so on, was born into poverty in the rural village of Rarieda, Kenya. I, too, was born in the village, and lived there until it was struck by a brutal famine when I was two years old. With no food, money, or opportunities, my mother did what thousands of African villagers do every day: she moved us to the city in search of a better life. But, given the lack of jobs and housing in Nairobi, we ended up in Kibera, one of Africa's largest slums.

Located just a couple of miles from downtown Nairobi, Kibera is a heavily polluted, densely populated settlement composed of informal roads and shacks with corrugated tin roofs. Kenya's government does not recognize Kibera, there is no sewage system or formal power grid. Its residents, estimated to number anywhere from a few hundred thousand to more than a million, do not officially exist.

Kibera is just one example of the consequences of the rapid urbanization that is gaining momentum worldwide. More than 44% of developing-country residents already live in cities. The Population Reference Bureau estimates that by 2050, only 30% of the global population will remain in rural areas. But few have stopped to consider this shift's implications for families like mine.

When people think of Africa, they often focus on the hardships of village life - a perception reflected in iconic images of African women on their daily excursions to fetch water. But an increasing number of people - already nearly 300 million - are facing the harsh reality of the urban slum, where resources are scarce and economic opportunities are elusive. More than 78% of the urban population in the world's least-developed countries, and one-third of the global

urban population, lives in slums.

(Kennedy Odede, ^œ[Africa's Urban Challenge](#), *Project Syndicate*, Aug. 1, 2013)

⁶¹⁴ As Charmes described:

Estimates of the informal sector as comprising between 20 and 60 per cent of urban or non-agricultural employment are now accepted truths, and the wide margin is taken as evidence that the lower level of development of a country, the larger its informal sector ...

(Charmes 1990, p. 17)

Perhaps the most important point to remember in considering informal economic activity in Third World countries is that people are involved in supplying their subsistence and status-related needs and wants in ways which are acceptable to people in their own communities. They are organizing activity in ways which 'fit' the requirements of the social templates which underwrite all communal organization and activity.

The forms of productive exchange and consumptive organization and activity which emerge are likely to reflect more closely forms from the community's own past than formal economic organization and activity. For this reason, a great deal of the activity will only coincide poorly with the requirements for involvement in Western economic activity, that is in 'formal' economic activity.

Attempts by well-meaning development agencies to 'harness the informal sector' in promoting formal economic development are inappropriate since they are attempts to refashion such activity to fit the presumptions and requirements for involvement in Western social template activity. The social engineering implications of such attempts are enormous, though seldom recognized by those who promote such refashioning.

⁶¹⁵ As Dharam Ghai explained:

The establishment of colonial rule in the 19th and early 20th century in most parts of Africa set in motion a series of developments with profound implications for the environmental balance.

The principal mechanisms disturbing the equilibrium were expropriation of land for settlement and plantations, assumption of state sovereignty over natural resources, commercialisation of agriculture, development projects and policies and population growth ...

These developments not only disrupted the long established systems of shifting cultivation and nomadic pastoralism but also confined indigenous populations to restricted areas often of low agricultural potential ...

The situation varied by regions and colonial authorities but the general trend was towards increasing central control and growing disenfranchisement of local communities ... The process continued after independence from colonial rule ...

The search for profits brought an ever increasing area of land under cultivation. Some of the earlier practices of crop rotation, intercropping, mixed farming and shifting cultivation were either abandoned or restricted ...

The growth of export commodities such as cotton and groundnuts reduced soil fertility and increased its vulnerability to erosion. This

was especially the case with continuous mono-cropping. The deleterious effects on soil fertility have also been observed with continuous mono-cropping of food crops such as maize even when fertilisers are used.
(Ghai 1993, p. 65)

⁶¹⁶ See [Just-in-Time and Total-Quality-Control](#) for more on this.

⁶¹⁷ John Borrego described their experience in the 1990s:

The spatio-temporal unity of the polity and economy, characterising the earlier phases of capitalist development, has been fractured. The State's capacity to mediate between market and society has been weakened.

In particular, global capitalism has substantially reduced the local, regional and national State's control over its economic and non-economic environments (Ross & Trachte, 1990). Post-Fordist firms seek settings with 'good business environments'.

While this concept can suggest qualities such as a skilled labor force and highly developed and maintained infrastructure, it can also mean low wages, weak unions, and lax regulation of the work place and environment which disempower people and communities.

In this setting, States use tax abatements and various other subsidies to attract or simply hold businesses. 'Economic development' often means States encouraging competitive rollbacks in all these areas which force communities into 'placewars' in order to attract globally mobile capital (Mingione, 1991; Donald Haider, 1992: 127-134).

(Borrego 1995, pp. 37-8)

⁶¹⁸ See [Moves to Automation](#) for more on this.

⁶¹⁹ It is easy for people who still have adequate housing and reasonably paid employment and conditions (fewer than there were five years ago) to forget that, in the history of capitalism, the conditions they enjoy are an 80 year long exception to a far harsher rule.

For most of the past four hundred years, Alexis de Tocqueville's description of Manchester in the 1830s has not been exceptional:

Thirty or forty factories rise on the tops of the hills I have just described. Their six stories tower up; their huge enclosures give notice from afar of the centralisation of industry.

The wretched dwellings of the poor are scattered haphazard around them. Round them stretches land uncultivated but without the charm of rustic nature and still without the amenities of a town ...

Some of [the] roads are paved, but most of them are full of ruts and puddles into which foot or carriage wheel sinks deep ... Heaps of dung, rubble from buildings, putrid, stagnant pools are found here and there amongst the houses and over the bumpy, pitted surfaces of the public places ...

Amid this noisome labyrinth from time to time one is astonished at the sight of fine stone buildings with Corinthian columns ...

But who could describe the interiors of those quarters set apart, home of vice and poverty, which surround the huge palaces of industry and clasp them in their hideous folds?

On ground below the level of the river and overshadowed on every side by immense workshops, stretches marshy land which widely spaced muddy ditches can neither drain nor cleanse. Narrow twisting roads lead down to it. They are lined with one-storey houses whose ill-fitting planks and broken windows show them up, even from a distance, as the last refuge a man might find between poverty and death. Nonetheless the wretched people reduced to living in them can still inspire jealousy of their fellow beings. Below some of their miserable dwellings is a row of cellars to which a sunken corridor leads; twelve to fifteen human beings are crowded pell-mell into each of these damp, repulsive holes.
(^œ1958, pp.105-6)

Here is a (2005) description of one of the slums in Mumbai, see ^œ[Denis Gruber et al \(2005\)](#):

The settlement unit 'Bharantinga Nagar Ekta' close to Kurla station was founded about 65 years ago. Like Dharavi, it is located close to a railway line and station, which guarantees access to transport and work in more distant places of Bombay (Desai 1995:149).

The slum is surrounded by apartment blocks (so-called shawls) of the former workers' class. Outside the slum are huge heaps of rubbish and a ditch that replace a sewerage system. A gangplank crossing the main ditch allows reaching the huts and houses. Here only Muslims live.

Therefore, this slum reflects a very homogenous social composition. As the slum population has no legal right to stay although many of them settled before 1995, and there are administrative plans for building a huge bridge in this area, the people are afraid of eviction and demolition of their houses and working places, what is very common in India and has recently (late 2004, early 2005) in Maharashtra experienced a new height that has even caused international protest. According to our question, concerning political activities in order to attain a legal sanction people regretted that there is no time for a political engagement, since they are mainly concerned with making their survival.
(2005 p. 7)

See [Who's to blame for their degrading circumstances; organizing the Working Poor; The Breakdown and Revitalization of Communities](#) for more on this.

⁶²⁰ See [The Granting of Monopolies](#) for more on this.

⁶²¹ In the second decade of the 21st century, [globalization, economic deregulation and the disenfranchisement of 'democratic' communities](#) have produced their inevitable consequences. Dambisa Moyo has addressed 'the inequality puzzle' which has emerged (the comments on Moyo's article contextualize it well). As she has explained:

Over the past decade, income inequality has come to be ranked alongside terrorism, climate change, pandemics, and economic stagnation as one of the most urgent issues on the international policy agenda. And yet, despite all the attention, few potentially effective solutions have been proposed. Identifying the best policies for reducing inequality remains a puzzle.

To understand why the problem confounds policymakers, it is helpful to compare the world's two largest economies. The United

States is a liberal democracy with a market-based economy, in which the factors of production are privately owned. China, by contrast, is governed by a political class that holds democracy in contempt. Its economy - despite decades of pro-market reforms - continues to be defined by heavy state intervention.

But despite their radically different political and economic systems, the two countries have roughly the same level of income inequality. Each country's Gini coefficient - the most commonly used measure of income equality - is roughly 0.47.

In one important way, however, their situations are very different. In the US, inequality is rapidly worsening. In 1978, the top 1% of the US population was ten times richer than the rest of the country. Today, the average income of the top 1% is roughly 30 times that of the average person in the remaining 99%. During the same period, inequality in China has been declining.

This poses a challenge for policymakers. Free market capitalism has proved itself to be the best system for driving income growth and creating a large economic surplus. And yet, when it comes to the distribution of income, it performs far less well.

Most democratic societies have attempted to address the problem through left-leaning redistributive policies or right-leaning supply-side approaches. But neither seems to be particularly effective. In the US, income inequality has steadily widened under both Democratic and Republican administrations. China's success in this arena points to the possible advantages of its heavy-handed system - a conclusion that makes many Western policymakers uncomfortable.

(Dambisa Moyo, ⁶²²[The Inequality Puzzle](#), *Project Syndicate*, February 18, 2016)

Robert Bruce, in a comment on Moyo's article, addressed the erosion of national borders and 'parochial' legislatures which has emerged in the pursuit of genuinely deregulated, internationalized free markets. He endorses the [disenfranchising of national governments](#) in favor of 'a new "Global Economic Community" with the mandate to regulate Global trade and enforce new minimum standards for the benefit of all'. As he explains, for him, and for most of those committed to globalization, the problem is:

...the elephant in the room - which is a crisis of Global governance. The need to remain Globally competitive now overrides all national government policy. Any country that tries to increase marginal tax rates in isolation will simply see wealth moved off-shore to lower tax competitors. Just today Greece has been criticised in *The Economist* for raising corporation tax to the outrageous level of 29% ! They point out that Greece is now loosing business to neighbours such as Cyprus (12.5%) and Bulgaria (10%). We will never be able to tackle wealth inequality until we can set minimum marginal rates for taxation which must apply to any country wishing to trade in the Global single market. The best way to achieve this is through a new "Global Economic Community" with the mandate to regulate Global trade and enforce new minimum standards for the benefit of all.

⁶²²The world is in the throes of an [unprecedented expansion](#) of major internationalized conglomerates. Christine Chemnitz has detailed the

seemingly unstoppable drive toward internationalized monopolization which is occurring in the agricultural sphere:

The industrial-agriculture sector has long faced criticism for practices that contribute to climate change, environmental destruction, and rural poverty. And yet the sector has taken virtually no steps to improve quality and sustainability, or to promote social justice.

This is not surprising. Although there are more than 570 million farmers and seven billion consumers worldwide, just a handful of companies control the global industrial-agriculture value chain - from field to shop counter. Given the high profits and vast political power of these companies, changes to the status quo are not in their interest.

Moreover, market concentration in the agriculture sector is on the rise, owing to increased demand for the agricultural raw materials needed in food, animal feed, and energy production...

The biggest players in these sectors have been buying out their smaller competitors for years. But now they are also buying out one another, often with financing provided by investors from completely different sectors.

Consider the seed and agrochemical sector, where Bayer, the second-largest pesticide producer in the world, is in the process of acquiring Monsanto, the largest seed producer, for €66 billion (\$74 billion). If the United States and the European Union approve the deal, as seems likely, just three conglomerates - Bayer-Monsanto, Dow-DuPont and ChemChina-Syngenta - will control over 60% of the global seed and agrochemical market. "Baysanto" alone would be the proprietor of almost every genetically modified plant on the planet.

(Christine Chemnitz, ^œ[The Rise of the Food Barons](#), *Project Syndicate*, 15 June 2017)

In an article in the *Washington Monthly* (March/April 2010), subtitled "^œ[Why creeping consolidation is crushing American livelihoods](#)", Barry Lynn and Phillip Longman suggest that the term to be used should be 'monopolization':

... while the mystery of what killed the great American jobs machine has yielded no shortage of debatable answers, one of the more compelling potential explanations has been conspicuously absent from the national conversation: monopolization. The word itself feels anachronistic, a relic from the age of the Rockefellers and Carnegies. But the fact that the term has faded from our daily discourse doesn't mean the thing itself has vanished-in fact, the opposite is true. In nearly every sector of our economy, far fewer firms control far greater shares of their markets than they did a generation ago.

Wikipedia provides a base definition for understanding the nature of conglomerate business organization in the 20th century:

A conglomerate is a combination of two or more corporations engaged in entirely different businesses together into one corporate structure, usually involving a parent company and several (or many) subsidiaries.

(^œ[Wikipedia accessed 28-06-2010](#))

Over the past thirty years conglomerate organization has become more refined, mitigating many of the perceived problems encountered in the 1960s and 1970s (when regulatory protections were still effective in Western regions). The model which best applies to current practice is a modified and Westernized (and also less focused) version of the Japanese keiretsu (see Wikipedia's entry for the ^œ[Keiretsu outside Japan](#) (accessed 28-06-2010) for a preliminary description).

The emphasis in conglomerate organization is now less on the incorporation of 'entirely different businesses' than on the relatively loose interconnection of more focused business interests, coordinating the activities of businesses with complementary interests and strengths. This provides monopoly or cartel-like advantages and strengths while circumventing legal limitations on cartel and monopoly activities.

Praful Bidwai (2010) has provided a sketch of some of the features of conglomerate dealings in India. His description could be replicated in any of the major Western and Third World centers of government.

Corporate lobbyists have become important mediators - and sometimes active players - in business-government relations in a number of areas, including

- the infrastructure (highways, ports and huge projects under the Jawaharlal Nehru National Urban Renewal Mission in 63 cities),
- energy (including gas, oil and energy),
- telecom (where the 3G auction bids show that the earlier 2G-spectrum were sold at a fraction of the market price),
- and mining (where global conglomerates have developed stakes running into billions of dollars in India's tribal heartland).

Not to be ignored is the clout that lobbyists wield in military contracts, agribusiness, seeds, civil aviation, and opening up retail trade to organized business, including multinational hypermarket chains like Metro, Carrefour and Wal-Mart.

Corporate lobbying has become the highest embodiment of crony capitalism in India. It has developed into a formidable industry, with at least 30 major firms based in New Delhi alone. Each of them appoints dozens of "facilitators", "account executives", point-persons and lawyers, all dedicated to securing sweetheart deals and licences for their clients, and just as importantly, ensuring that their clients' rivals don't get them.

(^œ[Bidwai May 2010](#))

623 (21/01/16)(18/01/17)(11/05/18)

A documentary entitled ^œ[The Spider's Web; Britain's Second Empire](#) explains the history of the institutional underpinnings of gross accumulations of 'wealth' in the early 21st century. It provides an intriguing picture of 'the most peculiar, the oldest, the least understood, and perhaps one of the most important institutions in the menagerie of global finance: the [City of London Corporation](#)'; a medieval city corporation, globally metastasizing in the 21st century.

To update and expand [Bacon's \(1625\) metaphor](#):

Gross accumulations of 'wealth' are like putrefying piles of dung whose noxious fumes are suffocating the world. And, atop those polluting piles, thriving in their noxious vapors, repose the mega-wealthy.

Eli Clifton, in an essay entitled 'Follow the Money: Three Billionaires Paved Way for Trump's Iran Deal Withdrawal', has described the kinds of 'influence' wielded by mega-wealth in the United States of America:

...Trump appears absolutely determined to undo as much of what Barack Obama accomplished as possible. In addition, the sheer perversity of his personality may well explain today's action. But it may also be useful to follow the apocryphal advice that Watergate's famous "Deep Throat" offered to Bob Woodward and Carl Bernstein in *All the President's Men*, particularly in the unbelievably corrupt swamp of the Trump era.

Indeed, today's unpopular announcement may have been exactly what two of Trump's biggest donors, Sheldon Adelson and Bernard Marcus, and what one of his biggest inaugural supporters, Paul Singer, paid for when they threw their financial weight behind Trump...

(Eli Clifton, ^{oe}[Follow the Money: Three Billionaires Paved Way for Trump's Iran Deal Withdrawal](#), *Lobe Log*, 08 May, 2018)

As Bacon explained in the 17th century:

...[M]oney is like muck [manure], not good except it be spread. This is done, chiefly by suppressing, or at least keeping a strait [strict] hand, upon the devouring trades of usury, ingrossing [accumulating] great pasturages, and the like.

Peter Goodman, in a *New York Times* Op-Ed entitled 'Davos Elite Fret About Inequality Over Vintage Wine and Canapés', sets the scene:

DAVOS, Switzerland - You have perhaps noticed that in many countries, history-altering numbers of people have grown enraged at the economic elite and their tendency to hog the spoils of globalization. This wave of anger has delivered Donald J. Trump to the White House, sent Britain toward the exit of the European Union, and threatened the future of global trade.

The people gathered here this week in the Swiss Alps for the annual World Economic Forum have noticed this, too. They are the elite - heads of state, billionaire hedge fund managers, technology executives.

They are eager to talk about how to set things right, soothing the populist fury by making globalization a more lucrative proposition for the masses. Myriad panel discussions are focused on finding the best way to "reform capitalism," make globalization work and revive the middle class.

What is striking is what generally is not discussed: bolstering the power of workers to bargain for better wages and [redistributing wealth from the top to the bottom](#).

"That agenda is anathema to a lot of Davos men and women," said Joseph E. Stiglitz, a Nobel laureate economist and author of numerous books on globalization and economic inequality. "More rights to bargain for workers, that's the part where Davos man is going to get stuck. The stark reality is that globalization has

reduced the bargaining power of workers, and corporations have taken advantage of it."

Davos is - at least rhetorically - consumed with worries about the shortcomings of globalization...

Yet the solutions that have currency seem calculated to spare corporations and the wealthiest people from having to make any sacrifices at all, as if there is a way to be found to tilt the balance of inequality while those at the top hang on to everything they have.

(Peter S. Goodman, ^œ[Davos Elite Fret About Inequality Over Vintage Wine and Canapés](#), *New York Times*, Deal Book, News Analysis, January 18, 2017)

As *Oxfam* has documented in ^œ[reports over the past several years](#) to *World Economic Forum* Annual Meetings, the world is in the throes of an unprecedented and snowballing concentration of wealth.

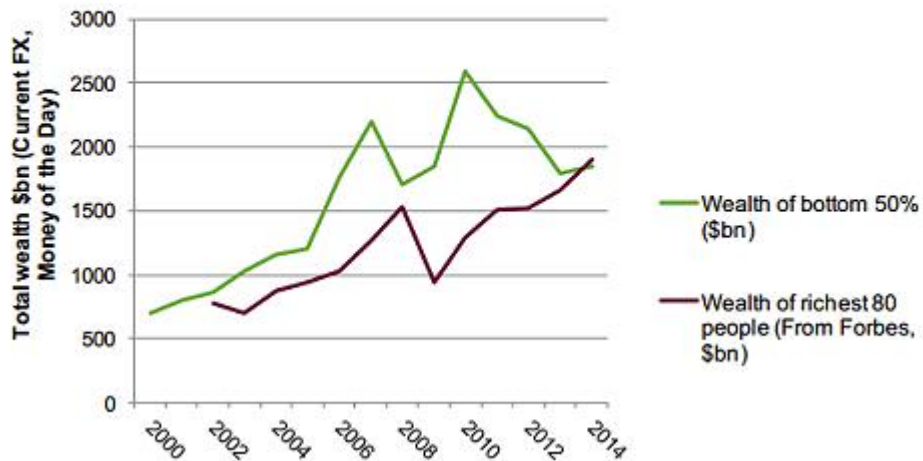

In most economic modeling this takes the form of 'pooling' - as Iglesias and de Almeida put it: "the system converges to a very unequal condensed state, where one or [a few agents concentrate all the wealth of the society](#)". Physicists J. R. Iglesias and R. M. C. de Almeida, in a study of models of trade dynamics, described the seemingly inevitable consequences of unregulated market exchange:

Numerical results, as well as some analytical calculations, indicate that a frequent outcome in these models is *condensation*, i.e. concentration of all available wealth in just one or a few agents. This final state corresponds to a kind of equipartition of poverty: All agents (except for a set of zero measure) possess zero wealth while one, or a few ones, concentrate all available resources. In any case the final configuration is a stationary state of "equilibrium", since agents with zero wealth cannot participate in further exchanges. (^œ[Entropy and equilibrium state of free market models](#), published by arxiv.org 29 Aug. 2011)

Deborah Hardoon provided a clear summary of the absurd growth in wealth among the very richest in the world over the five years between 2010 and 2015. As she has explained:

In 2010, the richest 80 people in the world had a net wealth of \$1.3tn. By 2014, the 80 people who top the Forbes rich list had a collective wealth of \$1.9tn; an increase of \$600bn in just 4 years, or 50% in nominal terms...

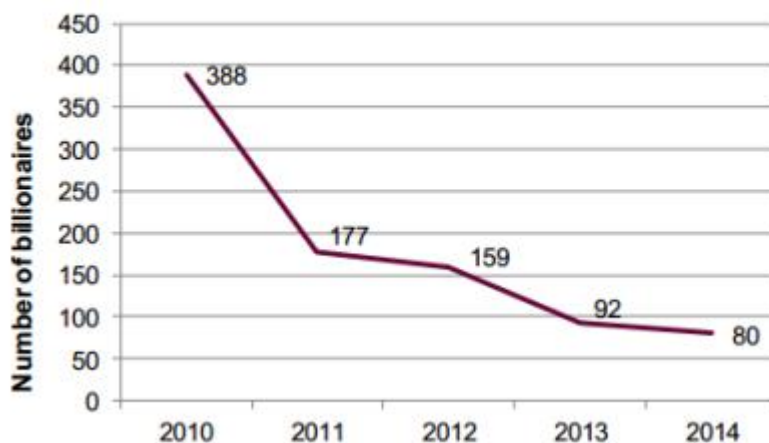

Figure 3: Wealth of the 80 richest people³ in the world has doubled⁴ in nominal terms between 2009 and 2014, while the wealth of the bottom 50% is lower in 2014 than it was in 2009.

The wealth of these 80 individuals is now the same as that owned by the bottom 50% of the global population, such that 3.5 billion people share between them the same amount of wealth as that of these extremely wealthy 80 people. As the wealth of everyone else has not been increasing at the same rate as that for the top 80, the share of total wealth owned by this group has increased and the gap between the very rich and everyone else has also been increasing.

As a result, the number of billionaires who have the same amount of wealth as that of the bottom half of the planet has declined rapidly over the past five years. In 2010, it took 388 billionaires to equal the wealth of the bottom half of the world's population; by 2014, the figure had fallen to just 80 billionaires (see Figure 4).

Figure 4: Number of billionaires it takes to have accumulated the same amount of wealth as the bottom 50% of the global population

(Deborah Hardoon, [Wealth: Having It All and Wanting More](#), Oxfam Issue Briefing: January 2015)

In an update of Hardoon's summary, prepared for the *World Economic Forum* Annual Meeting (20-23 January 2016, Davos-Klosters, Switzerland), Oxfam shows that the concentration of wealth around the world has continued apace:

AN ECONOMY FOR THE 1%

The gap between rich and poor is reaching new extremes. Credit Suisse recently revealed that the richest 1% have now accumulated more wealth than the rest of the world put together. This occurred a

year earlier than Oxfam's much publicized prediction ahead of last year's World Economic Forum. Meanwhile, the wealth owned by the bottom half of humanity has fallen by a trillion dollars in the past five years. This is just the latest evidence that today we live in a world with levels of inequality we may not have seen for over a century.

'An Economy for the 1%' looks at how this has happened, and why, as well as setting out shocking new evidence of an inequality crisis that is out of control.

Oxfam has calculated that:

- In 2015, just 62 individuals had the same wealth as 3.6 billion people - the bottom half of humanity. This figure is down from 388 individuals as recently as 2010.
- The wealth of the richest 62 people has risen by 44% in the five years since 2010 - that's an increase of more than half a trillion dollars (\$542bn), to \$1.76 trillion.
- Meanwhile, the wealth of the bottom half fell by just over a trillion dollars in the same period - a drop of 41%.
- Since the turn of the century, the poorest half of the world's population has received just 1% of the total increase in global wealth, while half of that increase has gone to the top 1%.
- The average annual income of the poorest 10% of people in the world has risen by less than \$3 each year in almost a quarter of a century. Their daily income has risen by less than a single cent every year.

Growing economic inequality is bad for us all - it undermines growth and social cohesion. Yet the consequences for the world's poorest people are particularly severe.

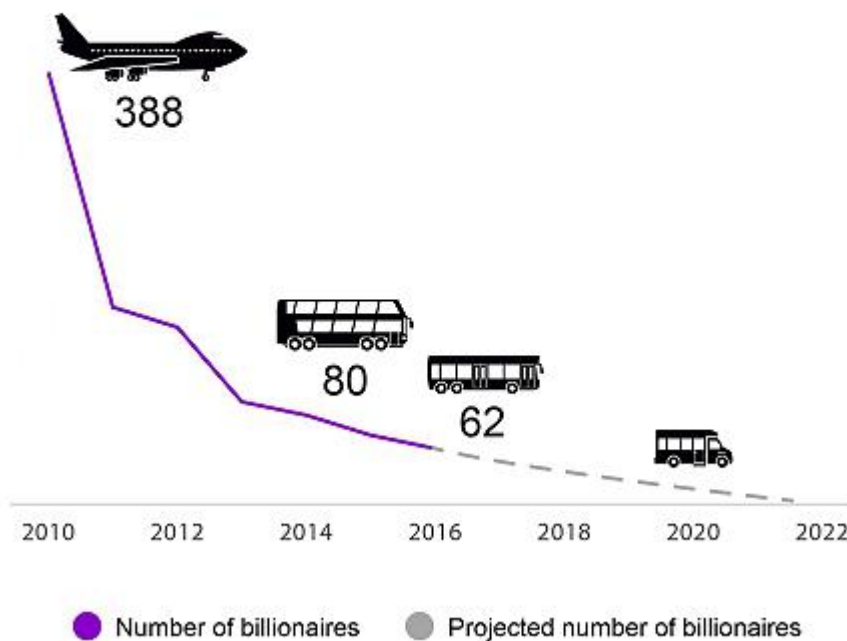

(D. Hardoon, R. Fuentes-Nieva, S. Ayele, [An Economy for the 1%: How Privilege and Power in the Economy Drive Extreme Inequality and How This can be Stopped](#), 210 Oxfam Briefing Paper, 18 January 2016, Summary)

And the absurdity grows.

Oxfam shows that, a year later, in January 2017, [8 men now own the same as the poorest half of the world](#). As they illustrate:

Billionaires who own the same wealth as half the world

And what transport they would fit on

They summarize it all in their January 2017 Oxfam Briefing Paper:

New estimates show that just eight men own the same wealth as the poorest half of the world. As growth benefits the richest, the rest of society - especially the poorest - suffers. The very design of our economies and the principles of our economics have taken us to this extreme, unsustainable and unjust point. Our economy must stop excessively rewarding those at the top and start working for all people. Accountable and visionary governments, businesses that work in the interests of workers and producers, a valued environment, women's rights and a strong system of fair taxation, are central to this more human economy.

AN ECONOMY FOR THE 99%

It is four years since the World Economic Forum identified rising economic inequality as a major threat to social stability, and three years since the World Bank twinned its goal for ending poverty with the need for shared prosperity. Since then, and despite world leaders signing up to a global goal to reduce inequality, the gap between the rich and the rest has widened. This cannot continue. As President Obama told the UN General Assembly in his departing speech in September 2016: 'A world where 1% of humanity controls as much wealth as the bottom 99% will never be stable'.

Yet the global inequality crisis continues unabated:

- Since 2015, the richest 1% has owned more wealth than the rest of the planet.
- Eight men now own the same amount of wealth as the poorest half of the world.
- Over the next 20 years, 500 people will hand over \$2.1 trillion to their heirs - a sum larger than the GDP of India, a country of 1.3 billion people.

- The incomes of the poorest 10% of people increased by less than \$3 a year between 1988 and 2011, while the incomes of the richest 1% increased 182 times as much.
- A FTSE-100 CEO earns as much in a year as 10,000 people working in garment factories in Bangladesh.
- In the US, new research by economist Thomas Piketty shows that over the last 30 years the growth in the incomes of the bottom 50% has been zero, whereas incomes of the top 1% have grown 300%.
- In Vietnam, the country's richest man earns more in a day than the poorest person earns in 10 years.

Left unchecked, growing inequality threatens to pull our societies apart. It increases crime and insecurity, and undermines the fight to end poverty. It leaves more people living in fear and fewer in hope. (Oxfam Briefing Paper, [AN ECONOMY FOR THE 99%: It's time to build a human economy that benefits everyone, not just the privileged few](#), 16 January 2017)

Rachel Ehrenberg (2011) has discussed "the international web of relationships among companies" which has resulted, over the past fifty years, in a serious concentration of wealth in the hands of a small number of companies, apparently independent of each other, but tightly networked. As she has explained:

Conventional wisdom says a few sticky, fat fingers control a disproportionate slice of the world economy's pie. A new analysis suggests that the conventional wisdom is right on the money.

Diagramming the relationships between more than 43,000 corporations reveals a tightly connected core of top economic actors. In 2007, a mere 147 companies controlled nearly 40 percent of the monetary value of all transnational corporations...

The analysis is a first effort to document the international web of relationships among companies and to examine who owns shares - and how many - in whom. Tapping into the financial information database Orbis, scientists from ETH Zurich in Switzerland examined transnational companies, which they defined as having at least 10 percent of their holdings in more than one country. Then the team looked at upstream and downstream connections, yielding a network of 600,508 economic actors connected through more than a million ownership ties.

This network takes on a bowtie shape, with a large number of diffuse actors in the wings and a few major players tangled up in the tie's knot. So while it's true that ownership of publicly held corporations is broadly distributed, says complex systems scientist James Glattfelder, a coauthor of the new work, "take a step back and it's all flowing into the same few hands."

While any man on the street may have predicted this outcome, the economic literature portrays markets as so dynamic that they lack hot spots of control, Glattfelder says.

(Rachel Ehrenberg, August 15th, 2011, ["Financial world dominated by a few deep pockets: Economic "superentity" controls more than one-third of global wealth"](#) *Science News*)

See Stefania Vitali, James B. Glattfelder, Stefano Battiston, 2011, ^œ[The network of global corporate control](#) for the original Cornell University published study. As the authors explain:

We present the first investigation of the architecture of the international ownership network, along with the computation of the control held by each global player. We find that transnational corporations form a giant bow-tie structure and that a large portion of control flows to a small tightly-knit core of financial institutions. This core can be seen as an economic "super-entity" that raises new important issues both for researchers and policy makers.
(Stefania Vitali, James B. Glattfelder, Stefano Battiston, [The network of global corporate control](#), *PLoS ONE* 6(10), e25995 (2011) (arXiv:1107.5728 [q-fin.GN]))

Foster *et al* (2011) have examined the growth in monopolization around the world since the 1970s. As they graphically illustrate and explain,

...what we have been witnessing in the last quarter century is the evolution of monopoly capital into a more generalized and globalized system of monopoly-finance capital that lies at the core of the current economic system in the advanced capitalist economies-a key source of economic instability, and the basis of the current new imperialism.
(John Bellamy Foster, Robert W. McChesney and R. Jamil Jonna, ^œ[Monopoly and Competition in Twenty-First Century Capitalism](#), *Monthly Review*, 2011, Volume 62, Issue 11 (April))

Robert Lenzner (*Forbes - Mon*, Nov 21, 2011), in an article entitled ^œ[The Top 0.1% Of The Nation Earn Half Of All Capital Gains](#)', explains the widening gap between the richest and the rest in the US:

Capital gains are the key ingredient of income disparity in the US - and the force behind the winner takes all mantra of our economic system. If you want [to] even out earning power in the U.S, you have to raise the 15% capital gains tax.

Income and wealth disparities become even more absurd if we look at the top 0.1% of the nation's earners - rather than the more common 1%. The top 0.1% - about 315,000 individuals out of 315 million - are making about half of all capital gains on the sale of shares or property after 1 year; and these capital gains make up 60% of the income made by the ^œ[Forbes 400](#).

It's crystal clear that the Bush tax reduction on capital gains and dividend income in 2003 was the cutting edge policy that has created the immense increase in net worth of corporate executives, Wall St. professionals and other entrepreneurs.

The reduction in the tax from 20% to 15% continued the step-by-step tradition of cutting this tax to create more wealth. It had first been reduced from 35% in 1978 at a time of stock market and economic stagnation to 28% . Again 1981, at the start of the Reagan era, it was reduced again to 20% - raised back to 28% in 1987, on the eve of the October 19 th - 23% crash in the market. In 1997 Clinton agreed to reduce it back to 20%, which move was an inducement for the explosion of hedge funds and private equity firms - the most "rapidly rising cohort within the top 1 per cent."

Make no mistake; the battle that is to be fought over the coming attempt to reverse this reduction in capital gains will be bloody and

intense. The facts are clear according to the Congressional Budget Office more than 80% of the increase in income inequality was the result of an increase in the share of household income from capital gains. In fact, you can go so far as to claim that "Capital Gains income is the most unevenly distributed - and volatile - source of household income," according to Laura D'Andrea Tyson, University of California business professor and former chairwoman of the Council of Economic Advisers under President Clinton.

No wonder the super wealthy plutocrats obtained the largest share of national income - 25% of the nation's wealth- greater than any other industrial nation in the period of 1979 to 2005. Make no mistake; after unemployment - this disparity between the 1% - 3 million - or the 0.1% - the 300,000 - and the other 312 million citizens of the U.S. has become the major theme of the Occupy Wall Street movement - and an important national debate.

624 The depressing reality is that year after year the self-proclaimed elites of the capitalist world claim that they want to make globalization work and revive the middle class but self-righteously conclude that the only way to do so is to increase their own wealth. The world's premier hoarders of capital believe in Trickle-Down.

Davos' so-called 'elites' are more convinced than ever that Greed is Good. Joseph Stiglitz has summed it up well:

I've been attending the World Economic Forum's annual conference in Davos, Switzerland - where the so-called global elite convenes to discuss the world's problems - since 1995. Never have I come away more dispirited than I have this year.

...To be sure, here at Davos, CEOs from around the world begin most of their speeches by affirming the importance of values. Their activities, they proclaim, are aimed not just at maximizing profits for shareholders, but also at creating a better future for their workers, the communities in which they work, and the world more generally. They may even pay lip service to the risks posed by climate change and inequality.

But, by the end of their speeches this year, any remaining illusion about the values motivating Davos CEOs was shattered. The risk that these CEOs seemed most concerned about is the populist backlash against the kind of globalization that they have shaped - and from which they have benefited immensely.

...No, the CEOs at Davos were licking their lips at the tax legislation that Trump and congressional Republicans recently pushed through, which will deliver hundreds of billions of dollars to large corporations and the wealthy people who own and run them - people like Trump himself. They are unperturbed by the fact that the same legislation will, when it is fully implemented, lead to an increase in taxes for the majority of the middle class - a group whose fortunes have been in decline for the last 30 years or so.

...[T]he message hasn't changed: "Greed is good." What depresses me is that, though the message is obviously false, so many in power believe it to be true.

(Joseph E. Stiglitz, ^œ[Post-Davos Depression](#), *Project Syndicate*, Feb 1, 2018)

625 The Corporate Europe Observatory (CEO) have summarized their findings:

- i. Corporate interests, including EU and national-level trade associations as well as multinational corporations, are really dominant in lobbying member states on EU decision-making and they have numerous successes to show for it.
 - ° Elite corporate lobbies target the European Council of member state leaders, with access that NGOs and trade unions cannot match. For example the regular meetings of the European Round Table of Industrialists bring together 50 bosses of major European multinational companies with the leaders of France, Germany, and the Commission President.
 - ° Rotating presidencies of the Council of the EU provide a key target for corporate lobbies. This report shows, for example, how the 2016 Dutch Presidency promoted both the interests of the arms industry, and the corporate-designed concept of the 'innovation principle' in EU decisionmaking which undermines precautionary approaches. Additionally, corporate sponsorship of rotating presidencies now appears to be standard.
 - ° The EU's complex and opaque committee structure benefits corporate lobbies with the resources and capacity to influence the final outcomes. The decision-making on the licence renewal of the pesticide glyphosate and the safety of the whitening agent titanium dioxide both demonstrate the reach and staying power of the chemicals'
 - ° Brussels-based lobby consultancy firms provide specific services to corporate lobbies aimed at influencing member states, such as Fleishman-Hillard's annual gas forum for member state officials, organised for trade association GasNaturally, a lobby forum for major gas companies such as Shell, Total, and RWE.
 - ° Where data is available, corporate interests held the clear majority of lobby meetings with officials working at the permanent representations of member states. The Dutch Permanent Representation's officials held over 500 lobby meetings between June 2017 and 2018 and 73 per cent of these were with business interests, and only 15 per cent with NGOs or trade unions.
- ii. As a consequence, there is a massive asymmetry of influence on member states' EU decisionmaking as civil society groups cannot match the privileged access and far greater lobbying capacity and resources of the corporate sector.
- iii. Member states and national corporate lobbies have developed a symbiotic relationship whereby the national corporate interest has - wholly wrongly - become synonymous with the national public interest as presented by the relevant government in EU fora. Extreme examples include the influence of the car industry on the German political establishment (and the negative impact of this on EU climate and emissions' regulations); Spanish telecoms giant Telefónica, whose closeness to the Spanish Government ensured its demands were absorbed and promoted; the state-owned coal industry which leads the Polish Government to be such a climate pariah; and the City of London, which can count on the UK

Government to back its demands for the lowest possible financial regulation.

- iv. At the EU level, member states have collectively absorbed some corporate agendas and adopted them as part of the EU-wide agenda, such as on economic governance (strict fiscal rules and austerity) and investors' protection in trade treaties (allowing corporations to sue states for billions in compensation when governments act to protect their people and the planet).
- v. Some member states proactively reach out to corporate lobbies. Rotating presidencies represent a particular opportunity for a member state to actively champion a pet project, issue, or national industry. The recent Austrian Presidency organised a high profile event for EU ministers at the premises of its key national steel producer Voestalpine, even launching an initiative to promote 'green hydrogen' (which will most likely give a boost to fossil fuel gases) signed by member state ministers.
- vi. A number of commissioners from the Juncker Commission appear to have a bias towards corporate interests from their own member states when it comes to lobby meetings, providing business with another potential 'national' channel, on EU decision-making. Commissioners Oettinger, Hill (who left the Commission in July 2016), Cañete, Hogan, and Vestager have all held a disproportionately large number of meetings with corporate lobbies from their own country.
- vii. Complex EU decision-making procedures, a lack of transparency, exclusion of citizens in decision-making at national level on EU matters, and generally weak national parliamentary mechanisms, have combined to create an accountability and democratic deficit, which corporate lobbies are happy to take advantage of. As just one example of the transparency problem surrounding the way in which member states participate in EU affairs, only 4 out of 19 permanent representations (Finland, Ireland, the Netherlands, Romania) provided some transparency regarding their meetings with lobbyists. The others remain totally non-transparent.
(Corporate Europe Observatory, ^œ[Captured states: when EU governments are a channel for corporate interests](#), Executive Summary, February 6, 2019)

Bill Mitchell, in a blog entry entitled ^œ['The EU is neoliberal to its core and captured by corporate interests'](#) has provided an excellent summary and commentary on it all.

⁶²⁶ Chuck Collins has described the fate of billionaires in the Covid-19 riven 2020 world:

October 8, 2020 Update: US Billionaire Wealth Up \$850 billion Since March 18th

Global billionaires up \$1.5 trillion

The combined wealth of U.S. billionaires increased by \$850 billion since March 18th, 2020, the beginning of the pandemic, an increase of over 28 percent.

On March 18, 2020, U.S. billionaires had combined wealth of \$2.947 trillion. By October 8th, their wealth has surged to \$3.8 trillion (\$3.798 billion to be exact).

(Chuck Collins, Updates: ["Billionaire Wealth, U.S. Job Losses and Pandemic Profiteers, Inequality"](#), October 08, 2020)

The following report provides a fuller treatment of this subject: Chuck Collins, Omar Ocampo And Sophia Paslaski, ["Billionaire Bonanza 2020: Wealth Windfalls, Tumbling Taxes, and Pandemic Profiteers"](#), *Institute for Policy Studies*, April 23, 2020.

⁶²⁷ Not only has "Corporate lobbying... become the highest embodiment of crony capitalism in India", as Praful Bidwai claims, the intermeshing of corporate and government interests has become commonplace throughout the neoliberal global economic world. Lee Fang has summarized the prevailing attitude within major corporations to staff involvement in government service:

Many large corporations with a strong incentive to influence public policy award bonuses and other incentive pay to executives if they take jobs within the government. CitiGroup, for instance, ["provides an executive contract"](#) that awards additional retirement pay upon leaving to take a "full time high level position with the U.S. government or regulatory body." Goldman Sachs, Morgan Stanley, JPMorgan Chase, the Blackstone Group, Fannie Mae, Northern Trust, and Northrop Grumman are among the ["other firms"](#) that offer financial rewards upon retirement for government service. (Lee Fang, ["Obama Admin's TPP Trade Officials Received Hefty Bonuses From Big Banks"](#), *Republic Report*, February 17, 2014)

Cora Currier, in an article entitled ["Charting the Cozy Connections between JP Morgan and the Senate Banking Committee"](#) (*ProPublica*, June 13, 2012) has provided an example of the 'revolving door' policies through which JP Morgan insulated itself from serious investigation of a series of losses described by Jamie Dimon, the CEO as "complex and hard-to manage risks". Currier provides "a picture of connections between the company and the committee" and concludes:

... through campaign contributions and well-connected staff, JP Morgan appears to have already taken its own accounting of the Banking committee.

Subsequent events, have borne out Currier's observations. Joshua Rosner, in a comprehensive report entitled ["JPMorgan Chase: Out of Control"](#) (*Graham Fisher & Co.* March 12, 2013, pp.27, 28) gives a clear explanation:

In a recent interview with Jamie Dimon, Andrew Ross Sorkin told Dimon, "You have an army of lobbyists like every other institution in the country." The reality is that JPM's political efforts are not like "every other" firm's. Their army is more comparable to the U.S. government's, which spends more on defense than the next dozen or so countries combined.

JPMorgan may be without peer in its spending on direct and indirect lobbying and PR. Its effort to capture legislators, neuter regulators and influence policymakers are reminiscent of Fannie Mae before it as the firm has retained, employed or had revolving door relationships with more former legislators, legislative staff and executive branch employees than perhaps any other financial firm in history.

As of mid-2012, the firm had the second-largest corporate political action committee and employed at least 48 lobbyists, including at

least 14 in-house lobbyists who are former congressional and federal staffers or legislators. Its lobbying power is not only direct but also the result of domination of several of the largest industry trade associations... When discussing the firm's lobbying [Dimon] clearly understands, as George Orwell pointed out, "All animals are equal, but some animals are more equal than others."

In an article entitled ⁶²⁸"The Guys From 'Government Sachs'" (*New York Times*, October 17, 2008), Julie Creswell and Ben White described the "power and influence that Goldman wields at the nexus of politics and finance":

THIS summer, when the Treasury secretary, Henry M. Paulson Jr., sought help navigating the Wall Street meltdown, he turned to his old firm, Goldman Sachs, snagging a handful of former bankers and other experts in corporate restructurings.

In September, after the government bailed out the American International Group, the faltering insurance giant, for \$85 billion, Mr. Paulson helped select a director from Goldman's own board to lead A.I.G.

And earlier this month, when Mr. Paulson needed someone to oversee the government's proposed \$700 billion bailout fund, he again recruited someone with a Goldman pedigree, giving the post to a 35-year-old former investment banker who, before coming to the Treasury Department, had little background in housing finance.

Indeed, Goldman's presence in the department and around the federal response to the financial crisis is so ubiquitous that other bankers and competitors have given the star-studded firm a new nickname: Government Sachs.

The power and influence that Goldman wields at the nexus of politics and finance is no accident. Long regarded as the savviest and most admired firm among the ranks - now decimated - of Wall Street investment banks, it has a history and culture of encouraging its partners to take leadership roles in public service.

⁶²⁸ Stephen Gill suggested that what has happened through most of the world is an extension of the kind of disorder experienced in the old Soviet Union in the wake of Gorbachev's policy of *perestroika* in the final years of the USSR. As he explained:

Robert Cox (1992) has coined the phrase 'global perestroika' to describe this process. Thus, rather than being simply explicable in terms of conscious political decisions and the direct use of political power, global perestroika (that is, the process beyond the former USSR) has produced a type of institutionalized chaos that is propelled by the restructuring of global capitalism.

Of importance here are accelerating changes in production, finance, and knowledge that have given rise to a relatively coherent, interrelated pattern. In this pattern there has been a cumulative if uneven rise in the structural power of internationally mobile capital (Gill & Law 1988, 1989), a rise that has brought with it certain limitations and contradictions.

This emerging world order, then, can be contrasted with the one that prevailed in the metropolitan nations in the 1950s and 1960s.

From the vantage point of the early 1990s, it appears to be characterised by deepening social inequalities, economic depression

for most parts of the world, and a reconfiguration of global security structures.

These changes are strengthening the strong, often at the expense of the weak. The principle of distributive justice that is increasingly associated with this order is, to paraphrase the Book of Matthew, 'to him that hath shall be given, to him that hath not shall be taken away'. This is what I mean by 'patterned disorder'.

(Gill 1994, pp. 170-1)

⁶²⁹ For a List of bilateral and multilateral free trade agreements, see this Wikipedia article: ^œ[List of free trade agreements](#). As the article says,

Every customs union, trade common market, economic union, customs and monetary union and economic and monetary union has also a free trade area.

Most of these multilateral agreements are signed between neighboring countries, but there are exceptions like the worldwide WTO agreements and the TPP agreement that is regional by some definitions, but not neighboring. The rest of the non-regional agreements are concluded between two groups of neighboring states (or between a single group and a third country) and thus are not included in the multilateral list (EFTA-SACU, EU-ACPs and others).

(accessed 3rd Jan. 2013)

See ^œ[Bilateral and Regional Trade Agreements](#) (Productivity Commission 2010, Research Report, Canberra). for an overview of such agreements.

See ^œ[Meyer, N. et al. \(2010\)](#) for a discussion of the effects and necessity for such agreements among African countries.

As they say,

...domestic regulation and standards are essential for protecting economies from unscrupulous business practices that bring harm to humans, plant and animal life, the environment, national security and infant industries.

⁶³⁰ See [Global Capitalism, Western Realities](#)

⁶³¹ The topics addressed in this chapter are, by their nature and by the ideological propensities of the 'experts' involved, at times difficult to comprehend for those not already versed in them. I would suggest, should you find the various digressions proffered in the text confusing or difficult to handle, that you first read the chapter without following those leads. Then, should you need further clarification, reread the chapter following those digressions which might enable a deeper understanding of the issues addressed.

⁶³² (10/01/16)(17/06/16)(05/08/16) The Gold Standard was always a *fictitious standardization* of credit values across sovereign nations. One decided on a 'fixed' value for a unit of gold against a unit of a currency and then claimed that the currency's value was determined by the value of a unit of gold.

Of course, as with any controlled exchange rates (whatever the justificatory coupling of the currency with a commodity, 'basket of commodities', 'basket of currencies' or anything else), the value of a unit of gold was initially determined by either the existing market 'price' of the unit of gold or by a 'price' which a sovereign government determined

against a unit of its currency, effectively freezing the existing relative currency values between nations.

The inevitable consequence of this process is that the exchange rates between the currencies of participating sovereign governments are fixed through internal 'price' setting and acceptance of value equivalences between currencies based on those internal prices. From this point on, whether or not one interpolates 'gold' into the process is irrelevant. The process has established fixed rates of exchange between participating 'Gold Standard' currencies.

The 'value' of a unit of gold is, at some point in time, anchored to the value of a unit of currency. Then, in a sleight-of-hand, the value of the currency is claimed to be anchored to that contrived gold value. One could achieve the same fixed exchange rate result without any reference to gold or any other commodity. Human beings are truly adept at convincing themselves of the 'objective' reality (and therefore unassailability) of their own, often dubiously justifiable, conventions!

As Bill Mitchell explains (below),

...under fixed exchange rates, a nation running a current account deficit faces a chronic bias toward recession and elevated unemployment levels.

This provided superficial justification for the post-1960s neoliberal fixation on 'balanced budgets' and deficit reduction.

They seemed not to realize that they were dealing with countries involved in two very different systems. The first, were post-2nd-World-War countries involved in the Bretton Woods system of *fixed* but adjustable parities; the second were (and are) nations with *floating* exchange rate regimes.

Pierre-Olivier Gourinchas has described some of the strains and tensions which emerge when disparate nations enter into standardized currency value regimes as in the Bretton Woods regime, negotiated in the aftermath of the 2nd World War:

Back in those days, the international monetary system was relatively simple. Market economies pegged their currencies to the U.S. dollar. In turn, the United States maintained the value of its dollar at \$35 per ounce of gold. With the assistance of the International Monetary Fund, countries could obtain liquidity to deal with "temporary" imbalances, but it was incumbent upon them to implement a fiscal and monetary policy mix that would be consistent with a stable dollar parity or, infrequently, to request an adjustment in their exchange rate.

The United States faced no such constraint. The requirement to maintain the \$35 an ounce parity had only minimal bite on U.S. monetary authorities, as long as foreign central banks were willing, or could be convinced, to support the dollar. By design then, the system was asymmetric and dependent on the U.S., a situation that reflected the country's economic and political strengths in the immediate aftermath of World War II.

Not everyone was happy about this state of affairs. Some objected to the special role of the dollar. In 1965, France famously requested the conversion of its dollar reserves into gold, while its minister of finance complained loudly about the United States' "exorbitant privilege." The Bretton Woods regime allowed the U.S. to acquire

valuable foreign assets, so the argument went, because the dollar reserves required to maintain the dollar parity of foreign countries amounted to automatic low-interest, dollar-denominated loans to the U.S.

Others worried about the long-term sustainability of the system. As the world economy grew rapidly in the 1950s and 1960s, so did the global demand for liquidity and the stock of dollar assets held abroad. With unchanged global gold supplies, something had to give. This is the celebrated "Triffin dilemma." In 1968, Triffin's predictions came to pass: Faced with a run on gold reserves, the U.S. authorities suspended dollar-gold convertibility. Shortly thereafter, the Bretton Woods system of fixed but adjustable parities was consigned to the dustbin of history.

(Pierre-Olivier Gourinchas, ["The Structure of the International Monetary System"](#), *NBER Reporter*, 2016, Number 1, pp.13-17)

Douglas Irwin has examined *The Missing Bretton Woods Debate over Flexible Exchange Rates*. As he explains,

The collapse of the gold standard in the 1930s sparked a debate about the merits of fixed versus floating exchange rates. Yet the debate quickly vanished: there was almost no discussion about the exchange rate regime at the Bretton Woods conference in 1944 because John Maynard Keynes and Harry Dexter White agreed that exchange rate stability through fixed but adjustable pegs was the right approach.

In light of the difficult macroeconomic tradeoffs experienced under the gold standard a decade earlier, the outright rejection of floating exchange rates seems surprising. This paper explores the views of leading economists about the exchange rate provisions in the Bretton Woods agreement and examines why arguments for floating exchange rates were so quickly dismissed.

(Douglas A. Irwin, ["The Missing Bretton Woods Debate over Flexible Exchange Rates"](#), NBER Working Paper No. 23037, January 2017)

Bill Mitchell has provided a summation of the relative merits of fixed and flexible exchange rate systems:

The Tobin Tax was outlined by the late James Tobin, a mainstream economist in this paper - ["A Proposal for International Monetary Reform"](#) - which was published in the *Eastern Economic Journal*, Volume 4, 1978.

However, as the paper notes, he first proposed the idea in 1972 as a way of dealing with the breakdown of the Bretton Woods system of fixed exchange rates and the fears that global capital flows would damage economies with the new floating exchange rates.

He actually considered the issue not to be whether the exchange rate was floating or fixed...

He said:

I believe that the basic problem today is not the exchange rate regime, whether fixed or floating. Debate on the regime evades and obscures the essential problem. That is the excessive international - or better, inter-currency - mobility of private financial capital. The biggest thing that happened in the world monetary system since the 1950s was the establishment of *de*

facto complete convertibility among major currencies, and the development of intermediaries and markets ... to facilitate conversions. Under either exchange rate regime the currency exchanges transmit disturbances originating in international financial markets. National economies and national governments are not capable of adjusting to massive movements of funds across the foreign exchanges, without real hardship and without significant sacrifice of the objectives of national economic policy with respect to employment, output, and inflation. Specifically, the mobility of financial capital limits viable differences among national interest rates and thus severely restricts the ability of central banks and governments to pursue monetary and fiscal policies appropriate to their internal economies.

While attempting to neutralise the issue about the type of exchange rate regime, Tobin failed to mention that trade imbalances on the current account were much harder to deal with under fixed exchange rate systems than under flexible rate systems, where they are effectively irrelevant.

Domestic policy choices are constrained for a nation with a current account deficit operating under fixed exchange rates (such as the Bretton Woods system) because the central bank has to increase interest rates to offset (via the capital account) the downward pressure on the currency arising from the excess supply of the domestic currency into the foreign exchange markets (to facilitate the excess of imports over exports).

Further, fiscal policy for such a nation has to be restrictive to reduce national income and suppress import expenditure to achieve the same purpose.

So under fixed exchange rates, a nation running a current account deficit faces a chronic bias toward recession and elevated unemployment levels.

Thus, the choice of exchange rate regime does matter...
(Bill Mitchell, ^œ[ATTAC should drop the ATT part!](#), *Billy Blog*, May 17, 2016)

⁶³³ As Kathleen Tyson has explained, mature cross-nation transactions should be based on cooperation, not debt.

In a clear, concise youtube presentation she explains 'why nations are using other currencies over the US dollar for trade, and why she thinks a development model based on cooperation rather than debt could lead to better outcomes for poorer countries':.

^œ[Director's cut: Kathleen Tyson](#).

⁶³⁴ Gold reserves might provide an alternative means of storing accumulated external credit for nations with large credit trade balances (**but they do not legitimize fiat currency creation!**). Such stores are simply hard assets similar to any other such assets used to protect accumulated credit from the ravages of inflation. They are not necessary to legitimizing sovereign fiat currency systems.

Sovereign fiat currency systems are legitimized through their sovereign governments' **track record of responsible currency management**: the [public underwriting, supervision and regulation of credit creation and distribution](#).

Fiat currencies are **not** legitimized through the accumulation of 'œhard assets'

635 For an historical sketch of the creation and evolution of the US Central Banking system see Kevin Granville and Binyamin Appelbaum, 'œAmerica's Endless War Over Money' (*New York Times*, April 7, 2015). As they explain, the current structure and tensions are a result of:

... a conflict as old as the nation, between those who argue that a strong central bank improves economic stability, and those who see an overbearing government engaged in harmful meddling.

For an explanation of a variety of theories of banking which have been held over the past century (and more) in capitalist societies, see Richard Werner (2015) "A lost century in economics: three theories of banking and the conclusive evidence". Of course, unlike the subject matter of the 'physical' sciences, the 'environment' addressed by these theories is a human construct and the subject matter prone to mutation as human understandings alter.

636(30/04/18) Governmental Sovereignty is compromised in many ways and any attempt to arrange a classification of sovereignty whether of governments or of currencies, based on 'real world' characteristics of either, will result in a very confusing picture of sovereignty - conflating hegemonic and/or ideological processes with internal governmental forms and responsibilities.

As we have seen, through the past three hundred years, many communities have been subjected to enforced or 'voluntary' acceptance of colonial or 'protectorate' status by Western nations. In the post-colonial era increasing numbers of communities have become embroiled in IMF and World Bank instigated and controlled 'debt financing' through which those nations have, to one degree or another, surrendered their sovereignty to those international institutions and their 'controllers'.

Cristina Fróes de Borja Reis and Daniela Magalhães Prates, in an examination of a World Bank report on fiscal adjustment in Brazil, concluded that:

...most of the changes in public policies recommended by the report offer profitable opportunities for a small number of powerful and rich national and international companies that compete in oligopolistic markets under weak regulatory frameworks. At the same time, it leaves workers and the poor unprotected, seriously jeopardising the redistributive ability of fiscal policy.

Thus, the report is far from promoting an equitable model. It is rather an undemocratic ideological commitment to the interests of Brazilian elites and of international capital represented in the current government. Given that we are supposedly in a post-neoliberal era and in light of the Bank's rhetorical focus on 'equitable growth', perhaps we were naïve in expecting better from the report.

(Cristina Fróes de Borja Reis and Daniela Magalhães Prates, 'œWorld Bank report on fiscal adjustment in Brazil: questionable analysis; unfair policies', *The Bretton Woods Project*, 27 March 2018)

As explained elsewhere, both the International Monetary Fund (IMF) and the World Bank have been repurposed over the past fifty years and more to enable the continuation of Western domination of vulnerable states. In the process the inherent sovereignty of those nations has been usurped

by the invading Western powers and/or institutions redesigned for this purpose.

As former 'dependencies' have gained 'independence', Western powers have contrived, in most cases, to maintain influence over both their economies and politics. So, for these nations, sovereignty is almost always illusory, a way for dominating Western political and/or economic powers to shift responsibility for internal difficulty away from themselves and onto indigenous 'leaders'.

Within Western nations the exercise of sovereignty is strongly influenced by the secondary ideological presumptions of those wielding power and/or authority. As we outline in this chapter, neoliberal understandings presume governmental abdication of authority to economic forces, with government being reduced to capitalism's police force. In such circumstances governmental sovereignty is forfeited to dominating plutocracies. As [Franklin Roosevelt explained](#), echoing both Thomas Jefferson and Abraham Lincoln's Gettysburg Address,

the liberty of a democracy is not safe if the people tolerate the growth of private power to a point where it becomes stronger than their democratic state itself. That, in its essence, is Fascism - ownership of Government by an individual, by a group, or by any other controlling private power.

637 (10/08/16)(14/08/16)(15/11/16) Central banks are *state institutions*, charged with both the creation and management of credit and official currency supply for their sovereign governments. They are essential capitalist institutions. As *Investopedia* explains,

A central bank, or monetary authority, is a monopolized and often nationalized institution given privileged control over the production and distribution of money and credit. In modern economies, the central bank is responsible for the formulation of monetary policy and the regulation of member banks...

Central banks are inherently non-market-based or even anticompetitive institutions. Many central banks, including the Fed, are often touted as independent or even private. However, even if a central bank is not legally owned by the government, its privileges are established and protected by law.

The critical feature of a central bank - distinguishing it from other banks - is legal monopoly privilege for the issuance of bank notes and cash; privately owned commercial banks are only permitted to issue demand liabilities, such as checking deposits.

(œ[Central Bank](#), *Investopedia*, accessed 8 August, 2016)

In the above explanation *Investopedia* draws attention to perhaps ***the most important misunderstanding promoted by devotees of neoliberalism***. It asserts that 'In modern economies, the central bank is responsible for the formulation of monetary policy'.

This is what neoliberal 'scholars' would have the world believe!

Monetary policy, for neoliberals, must be overseen by an independent central bank which makes decisions based on the needs and demands of 'the marketplace'. It must behave as though it was completely separate from the sovereign government for which it is supposed to 'manage' the 'credit' and money supply of the nation.

This is, of course, for all those not infected by neoliberalism, both absurd and nonsensical!.

Central Banks, in 21st Century sovereign nations are **administrative departments** within the administrative structure of government - in exactly the same way as 'education departments' and 'health departments' are divisions within the Sovereign government's administration - **under the control and direction of the Sovereign government.**

They should **never** 'formulate monetary policy'. That is the Government's responsibility.

As explained below, the 'treasury' or 'ministry of finance' and the 'Central Bank' are **two departments in the same government**. The purpose of the Central Bank is to **create** and supply the credit and currency *requisitioned* by the treasury and administer government policy related to the creation and management of the nation's money supply

Such credit and currency is **never** a sovereign government **debt** and **never** contributes to a sovereign government **deficit**.

As Bill Mitchell explains below,

If you understand this literature you soon realize that it is just another ideological front in the political fight against discretionary macroeconomic policy interventions by elected governments.

[Randall Wray explained this](#) of the US Federal Reserve, "...the Fed is not a private institution but rather is a creature of Congress and no more independent of government than is the Treasury...".

Bill Mitchell has summed it up:

There has been a huge body of literature emerge to support this agenda over the last 30 odd years. The argument for so-called 'central bank independence' is always clothed in authoritative statements about the optimal mix of price stability and maximum real output growth and supported by heavy (for economists) mathematical models.

If you understand this literature you soon realise that it is just another ideological front in the political fight against discretionary macroeconomic policy interventions by elected governments.

The mathematical models that are used to 'prove' the worth of 'independence' are not at all useful in describing the real world. They have no credible empirical content and are designed to hide the fact that the proponents do not want governments to do what we elect them to do - that is, advance general welfare.

The central bank 'independence' agenda is also tied in with the growing demand for fiscal rules which will further undermine public purpose in policy.

(Bill Mitchell, [Trump might do us a favour - expose the myth of central bank independence](#), *Billy Blog*, November 14, 2016)

(12/08/16)(22/02/17) There are two large macroeconomic levers available to any sovereign government in ensuring economic wellbeing, and, ideally, the two should operate in tandem:

- the *treasury* (or 'ministry of finance') responsible for **implementing fiscal policy** ('spending' and 'taxing');
- and the *central reserve authority* (central bank) responsible for **implementing monetary policy** (issuing and sequestering credit and official currency).

Of course, as Sir Humphrey Appleby, fictional head of the British Department for Administrative Services, claimed, when being quizzed by a parliamentary committee on activity within his government department (in that delightful fictional television series *Yes Minister*):

It's not for me to comment on Government Policy, you must ask the Minister.

(24/08/16) Government policy is *set* by parliamentary (political) committees/ agents, it is *implemented* by Government departments, institutions and agencies. The treasury does not decide government policy; nor does (or should) the central reserve authority. They exist to carry out the intentions of *politically determined* policies.¹⁰³⁴

As in the US, neither The Treasury nor the Federal Reserve Board can (or should) determine the policies they are responsible for implementing. Those are determined by the US President and Congress. The effectiveness of Government departments, institutions and agencies can only be judged in terms of *implementation of the policies* which set the bounds and focuses of their activity. The framing of those policies is a Congressional responsibility. Given the confused commentaries one finds on US Federal Reserve responsibilities and activities, this distinction needs to be stressed.

(30/08/16) So, if the treasury and central reserve authorities are to work in tandem, *government policies* must enable this. This is why it is essential that legislators understand both the *source and nature of credit*. This cannot remain an esoteric discussion amongst 'professionals', politicians must get their heads around the issue if they are to frame adequate fiscal and monetary policy.¹⁰³⁵

(03/09/16) If it is assumed that credit originates in the private marketplace (*the laissez faire presumption* favored by those professionals since the 1970s), then, governments are limited in what they can accomplish by the amount of debt they incur in 'borrowing' necessary funds from the private sector (or from Central Banks, presumed to be *independent entities, which 'lend' to governments*). So concerns grow about mounting deficits; burgeoning sovereign debt; and the need to 'rein in spending'.

If, on the other hand, it is assumed, as the Roosevelt Administration did, that 'Federal Reserve Bank credit... does not consist of funds that the Reserve authorities "get" somewhere in order to lend, but constitutes funds that they are empowered to create', then *nothing is 'lost' or 'owed' by the government* when it issues currency and other forms of credit through its central reserve authority.

The question, of course, is how 'professional' counsellors and educators can *escape the intellectual straitjacket* into which neoliberal pragmatic literalists have contorted themselves and the institutions over which they have gained control in the past half century. A great deal of the responsibility for this must rest with the *ideologically driven* self-proclaimed economic 'experts' - including all those '*Nobel prize in economics*' recipients - *whose simplistic models* have resulted in the early 21st century problems we seem unable to escape.

(21/08/16) If legislators, and those counselling and educating them, simplistically assume that it is unnecessary to 'explain' the origin of credit, as far too many politicians (and economists) in Western nations have over the past half century, that credit and 'money' are 'just there', *sprung from 'economic activity'*, the result is almost certain to be highly confused, and often contradictory, fiscal and monetary policy. In many

nations around the world, this has resulted in long-run economic confusion with millions suffering the consequences (as in the 'peripheral' Euro Zone nations since 2011).

Paul Krugman has illustrated this confusion well in discussing the 'peculiar circumstances that have brought negative interest rates to much of the advanced world':

...[I]t's surely relevant that the two big advanced economies - the US and the eurozone - both have fiscal policy paralyzed by political gridlock, leaving the central banks as the only game in town.

In the U.S., it's House Republicans who block spending on anything except weapons; they won't even allocate funds for Zika! In Europe, nothing fiscal can happen without action by Germany, which is both self-satisfied with its situation and living in its own intellectual universe.

It's true that the UK has some room for maneuver, yet under Cameron/Osborne it went all in for austerity, at least in rhetoric. On the other hand, that may be seen as a political maneuver to discredit the previous government by accusing it of profligacy, and may change quite a lot now that the disastrous duo are out and Theresa May is in.

Japan is, I think, an interesting case, because whatever else it may suffer from, it hasn't faced US or EZ-type gridlock. It's not as clean a case as I would like - Abe allowed himself to be talked by the Serious People into fiscal tightening early on, putting the whole burden on Kuroda. But if you look at the longer-term story since the 1990s, Japan actually has had a combination of deficit spending and relatively cautious monetary policy...

(Paul Krugman, ^œ[The Gridlock Economy](#), *New York Times*, Opinion Pages, August 20, 2016)

I must confess to being less optimistic than Krugman about the likely consequences of May's influence on British fiscal and monetary policy. May seems a more pragmatic version of her predecessors, steeped in the same neoliberal marinade, but aware that the Brexit vote signaled a disenchantment with current conservative policies.

The "original sin" of the EU single-currency project was, and is, as Anatole Kaletsky has explained, the Maastricht Treaty's prohibition of "monetary financing" of government deficits by the European Central Bank (ECB). Its 'internal rebalancing' options have been severely curtailed by the flawed political structure/ policies of the euro area.

As Bill Mitchell has explained of Japan in 2016, there should be "harmony between the Japanese Ministry of Finance (fiscal policy) and the Bank of Japan (monetary policy)". As he says,

...[T]he combination of aggressive fiscal stimulus supported by a very easy monetary stance has given Japan a labour market outcome that any nation would be envious of - notwithstanding all the claims about 'lost decades', 'ageing population', 'excessive government debt', 'sclerotic society'.

(Bill Mitchell, ^œ[Time for fiscal policy as we learn more about monetary policy ineffectiveness](#), *Billy Blog*, August 9, 2016)

⁶³⁸ (23/06/16) Those who recognize that banks do, indeed, *create* credit 'out of thin air' - whether [within central banks](#) or within private banks and similar organizations - will seldom find wide support for, or

understanding of, policies and practices based on such understanding. While there seems little doubt that, as Jakab and Kumhof (2015) put it: "banks provide financing through money creation", this works because very few people believe that value *is* conjured out of thin air.

Most Western people (*including far too many 'economic experts'*) take it as a given that "banks accept deposits of pre-existing real resources from savers and then lend them to borrowers". They need to believe that their worlds are substantive, that they plant their feet on solid ground! To suggest that credit and 'money' is - or can be - created out of thin air is construed as an attack on 'common sense', on capitalism and on the capitalist world. It is subversive.

(23/07/16) This is why neoliberal understandings of the world so readily supplanted the New Deal understandings from the mid to late 1960s. Their *cartoon capitalist* understanding of 'the economy' appealed to what most people saw as 'common sense'. Their explanations provided reassurance to people who 'knew' that credit, money and value were 'real'; that 'government deficits' and 'public debt' were millstones around the necks of drowning nations; that *government budgets were 'just like' household budgets*.

New Deal understandings, which assumed that sovereign governments had *final freedom* from the money market in meeting their financial requirements; that "the public purpose which is served should never be obscured in a tax program under the mask of raising revenue", did not 'make sense'.

For neoliberal pragmatic literalists, *Margaret Thatcher's 'explanation'* of the nature of 'money' makes nonsense of such claims:

If the State wishes to spend more it can do so only by borrowing your savings or by taxing you more. It is no good thinking that someone else will pay - that "someone else" is you. There is no such thing as public money; there is only taxpayers' money

The claim that credit withdrawn from the private realm into the public realm *does not accumulate there* but 'disappears' or 'evaporates', to be replaced with 'new' credit, distributed, at the government's discretion, to actors within the private realm, is obviously absurd: evidence of 'government malfeasance'; a *Ponzi* scheme which, like all such schemes, must inevitably result in long-term disaster!

(07/10/16) Capitalism works, for neoliberal pragmatic literalists and fellow travelers, because they 'know' that money is "real"; that credit and value are 'substantial', not conjured out of thin air; that taxes 'fund' government spending; and that 'big government' is parasitic on 'private business', funding the 'wealth takers' at the *expense of the 'wealth makers'* ¹⁰³⁶ ; that:

If the government borrows a dollar from you, that is a dollar that you do not spend, or that you do not lend to a company to spend on new investment. Every dollar of increased government spending must correspond to one less dollar of private spending.

(*Cochrane (2009)*)

Undermine those beliefs and their faith in capitalism is shaken. And, as we are daily reminded through various market reports - without faith in the markets, capitalism doesn't work!¹⁰³⁷

Capitalists are, of course, not unique in this pragmatic, felt need for simplicity and tangibility. Even our understanding of material reality

results from faith in its substantiality (I'd be in trouble if I could no longer be certain that my surroundings were 'really' there when I swung my feet out of bed in the morning!). Experience tells us that matter does not "flit into and out of existence" - but, apparently, it does! Adrian Cho, in an article in *Science*, called 'Probing the proton', put it rather well:

In the cartoon view, the positively charged proton and the uncharged neutron both consist of trios of particles called up quarks and down quarks. (Two ups and a down make a proton; two downs and an up make a neutron.) But earlier experiments have shown that those "valence" quarks are just a small part of the story. A nucleon - a proton or neutron - is really a pullulating mass of countless quarks, antiquarks, and gluons, particles that convey the strong nuclear force that holds quarks together. A proton or neutron is so messy that physicists can't say exactly how its most basic properties, such as its mass and spin, emerge from the tangle.

...[T]he quarks within the nucleon cling to one another by exchanging massless particles called gluons, which carry the strong force.

But the strong force is far more complex than the electromagnetic force. Unlike the passive photons, gluons themselves exchange gluons - lots of them. Moreover, a nucleon's three valence quarks aren't the only ones inside it. Untold quark-antiquark pairs also flit into and out of existence. Those fleeting "sea" quarks need not be up and down quarks, but can be heavier strange and charm quarks, too. Thus, each valence quark is shrouded by a cloud of quarks and gluons in which "what you see depends on the scale at which you look," says Michael Pennington, chief theorist at Jefferson Lab.

That complexity makes calculating anything involving the strong force nearly impossible. For example, most of a nucleon's mass comes not from the valence quarks, but from the energy of the quark-gluon cloud (thanks to Einstein's equivalence of mass and energy).

(Adrian Cho, ["Probing the proton: A newly upgraded accelerator explores the seething maelstrom at the heart of matter,"](#) *Science*, Vol 347 Issue 6220, 23 January 2015, Pp.363-5)

⁶³⁹ Bernie Sanders, 2016 US presidential candidate, described the US version of a common problem in an early 21st century neoliberal world:

The sad reality is that the Federal Reserve doesn't regulate Wall Street; Wall Street regulates the Fed. It's time to make banking work for the productive economy and for all Americans, not just a handful of wealthy speculators. And it begins by making the Federal Reserve a more democratic institution, one that is responsive to the needs of ordinary Americans rather than the billionaires on Wall Street.

(Bernie Sanders, ["To Rein In Wall Street, Fix the Fed,"](#) *New York Times*, December 23, 2015)

⁶⁴⁰ Sam Pizzigati spelt out the inevitable consequences of putting 'profit' before the commonweal:

The United States ended the 20th century on a roll - for the rich. Between 1973 and 2000, the nation's most prosperous 1 percent tripled their incomes, after taking inflation into account.

The even more prosperous top tenth of that 1 percent did quite a bit better. Their incomes more than quintupled between 1973 and 2000, rising an amazing 414.6 percent.

And what about Americans of less exalted means, those stuck in the nation's bottom 90 percent? Between 1973 and 2000, their incomes rose all of . . . 2.6 percent.

Something, in other words, went horribly wrong over the last quarter of the 20th century. And what has happened so far in century 21? Our decision makers in Washington have done their best to make things even worse...

(Sam Pizzigati, ^œ[A Sweet New Century for America's Most Privileged](#): America's elected leaders haven't ignored inequality since 2000. They've made it spectacularly worse, *Inequality*, Blogging Our Great Divide, July 12, 2018)

⁶⁴¹ As Skidelsky continues:

A little history may help. By the 1980s, a consensus had emerged among policymakers that the main macroeconomic problem was inflation. Governments' "Keynesian" efforts to push unemployment below its "natural rate" made them unreliable guardians of the value of money.

Governments therefore outsourced inflation control to "nonpolitical" central bankers. In 1997, the UK's new Labour government, acutely aware of the party's reputation for profligate spending, gave the BOE a mandate to meet an inflation target of 2.5% (later lowered to 2%). The power to set the official interest rate (Bank Rate) was transferred from the Treasury to the BOE's Monetary Policy Committee.

The expectation was that the newly empowered BOE would raise its interest rate when inflation was trending above 2%, and lower it when inflation (or the price level) fell. Moreover, the medium-term nature of the inflation target gave the BOE some wiggle room to adjust interest-rate policy to reflect economic activity. This monetary regime, adopted by most rich-country central banks, was credited with maintaining price stability during the so-called "Great Moderation" that lasted until 2008. But low commodity prices, conservative fiscal policy, and China's integration into the global economy were almost certainly more important factors than the technocratic calibrations of independent central bankers.

In the 2008 global financial crisis, however, central banks went beyond their traditional role as lender of last resort and bailed out bankrupt commercial banks deemed to be "too big to fail." As the banking crisis turned into a severe economic downturn, and official interest rates fell to near-zero, fulfilling the inflation mandate was thought to require additional monetary-policy tools. Enter quantitative easing (QE), or "unconventional monetary policy," which meant flooding the economy with money to offset the effects of business contraction.

Central banks tasked with controlling inflation were thus now using monetary policy to stave off economic collapse - something for which they had no mandate. Amid the ensuing confusion about the nature of their role, monetary policymakers claimed that their massive purchases of government debt - amounting to hundreds of billions of dollars, euros, and pounds between 2009 and 2016 -

were intended to "raise the inflation rate to target." But everyone knew that inflation was the last thing they had in mind as their economies plunged.

Had central banks openly proclaimed their role as rescuers of last resort, most people would have said that this was the government's responsibility, and with good reason. As John Maynard Keynes had pointed out 80 years earlier, it is the spending, not the printing, of central-bank money that is crucial for economic activity.

Central banks never satisfactorily answered the question of how their massive monetary injections were supposed to increase real economic activity, or raise prices for that matter. As economies continued to stagnate, the best they could do was to argue that things would have been worse without QE....

...[T]he important question is not the extent to which the BOE's expanded mandate undermines its anti-inflationary credentials, but rather the degree to which it blurs the responsibilities of the government and the central bank for the conduct of economic policy. The current regime assumes that central bankers should control the quantity of money, while allocation of money (or capital) through the budget would remain in the hands of democratically elected governments....

(Robert Skidelsky, ^œ[Should Central Banks Have a Green Mandate?](#) *Project Syndicate*, Jul 19, 2021)

⁶⁴² As he continued:

[Historically, Congress set financial rules](#) and the Federal Reserve - along with other regulators - decided on implementation. In the decades leading up to the crisis of 2008, there was a broad bipartisan consensus in favor of allowing large financial firms to do as they saw fit. That included borrowing more and running up their debt relative to the size of their shareholder equity. The reasoning, which was fully endorsed at the Fed, was that such large firms - with assets in the trillions of dollars - employed smart people who could figure out how to manage highly leveraged balance sheets safely.

In September 2008, the wave of failures and near-failures at global banks (and insurance companies and mutual funds) demonstrated that this view was deeply mistaken. But the political system's overall response was paradoxical. Instead of stripping powers from central banks, the Federal Reserve - as well as the Bank of England and the European Central Bank - became much more powerful.

There were two reasons for this outcome. First, central banks had the tools - cheap credit and expansionary monetary policy - necessary to avert a deeper crisis. Second, modern finance is far too complex and evolves too fast for any piece of legislation to address fully. Someone has to be in charge of oversight in a more detailed way. The crisis damaged the Fed's reputation, but all plausible alternative regulators looked worse. So the Dodd-Frank legislation ended up granting even more power to the Fed, making it in effect the Supreme Court of Finance...

What we have now... is an extreme delegation of authority that precludes transparency and accountability. The Fed can substantially change the details of how resilient the banks are without any further congressional action. Congressional intent does matter - and the

Republicans have clearly indicated that the needle should point toward letting the bigger banks do what they want.

That is a shortsighted approach, and shifting the political burden of pursuing it to an unelected body is extremely dangerous. The next time a crisis erupts, the legitimacy of the Fed - and other central banks - will be called directly into question.

(Simon Johnson, ^œ[Controlling the Supreme Court of Finance](#), *Project Syndicate*, May 31, 2018)

⁶⁴³ Orsola Costantini, has provided an example of this warping in a paper entitled *The Cyclically Adjusted Budget: History and Exegesis of a Fateful Estimate*. As she summarizes:

This paper traces the evolution of the concept of the cyclically adjusted budget from the 1930s to the present. The idea of balancing the budget over the cycle was first conceived in Sweden in the 1930s by the economists of the Stockholm School and was soon reinterpreted and incorporated into the fiscal program of the American political coalition supporting the New Deal, especially by the Committee for Economic Development during and after World War II.

In the 1960s, Keynesian economists associated with the Kennedy and Johnson administrations reformulated the notion. Despite their claims at the time, their version differed only in degree from the earlier CED approach, the transformation being largely conditioned by changing political circumstances.

In the 1980s, however, the concept changed substantially. Methods for calculating it transformed dramatically, as the notion became a device to limit and direct governments' fiscal policies in a wide sense, that is, including institutional (or "structural") reforms. The final section of the paper considers the shifting uses of the notion in the European Growth and Stability Pact.

(Orsola Costantini, ^œ[The Cyclically Adjusted Budget: History and Exegesis of a Fateful Estimate](#), Institute for New Economic Thinking, Working Paper No. 24, October 2015)

⁶⁴⁴ As Karl Evers-Hillstrom and Brendan Quinn continue:

Even after the November election was called for Biden, Trump continued to solicit donations to fund a wave of lawsuits contesting the results in battleground states. Much of the money he has raised has been routed to his new leadership PAC, which is not an official campaign committee but could begin to lay the groundwork for a potential 2024 bid.

Further down the ballot, candidates for House and Senate also pulled in record figures. Races for Senate became nationalized in a way never seen before, with candidates pulling in millions from out-of-state donors and shattering fundraising records.

In fact, nine of the 10 most expensive Senate races of all time happened in 2020. So did four of the 10 most expensive House races. Much of this money flowed to candidates challenging high-profile office holders, including Sens. Mitch McConnell (R-Ky.) and Lindsey Graham (R-S.C.) and Rep. Ilhan Omar (D-Minn.). Fueled by small donors, these candidates pulled in millions for what mostly proved to be unsuccessful bids. Despite these expensive and high-

profile losses, however, 88 percent of congressional races were won by the candidate who spent the most.

More so than ever before, candidates, parties and outside groups spent money on digital advertising as they sought to reach new donors and voters. The digital space also made political donations easier (especially for small donors) as much of the country went virtual. Women also continued to increase their political clout, both as candidates and as donors. Meanwhile corporations, while being barred from directly contributing to candidates, used corporate PACs to boost the campaigns of candidates aligned with their financial goals.

As the candidates pulled in record figures, super PACs, "dark money" nonprofits and other outside groups pulled out all the stops in hopes of ensuring victory. Throughout the cycle, party-tied groups and other partisan actors such as The Lincoln Project spent hundreds of millions of dollars on independent expenditures. For the first time, spending by outside groups exceeded \$3 billion.

(Karl Evers-Hillstrom and Brendan Quinn, ^œ[OpenSecrets looks back at 2020, a \\$14 billion year](#), *OpenSecrets.org*, December 22, 2020)

⁶⁴⁵ Deborah D'Souza addressed the sources of Biden's funding and provided a list of top donors in an *Investopedia* article entitled 'Top Donors to Biden 2020 Campaign':

President-elect Joe Biden announced he was running for president in April 2019 and has raised a total of \$1.3 billion so far, according to OpenSecrets. This amount includes donations to his official campaign committee and outside groups like single-candidate super PACs and hybrid PACs or Carey Committees.

Where Does the Big Money Go?

Very large donations in U.S. presidential elections are directed toward super PACs (Political Action Committees), or hybrid PACs because of the \$5,600 limit on how much an individual can give to a candidate's official campaign committee per election cycle.

Priorities USA Action, a liberal, hybrid PAC in its fifth election cycle, has received the most money of any pro-Biden, single-candidate organization. Millions of dollars have come into the PAC from the affiliated Priorities USA nonprofit, but since it doesn't disclose donors, it's known as a "dark money" group and we can't be certain who contributed to it. Biden supporters may also give to joint fundraising committees set up for the presidential campaign and the Democratic National Committee like the Biden Victory Fund and Biden Action Fund.

(Deborah D'Souza, ^œ[Top Donors to Biden 2020 Campaign](#), *Investopedia*, January 8, 2021)

From the perspective of many - if not most - US corporate donors, party affiliation is less important than political amenability. The purpose of funding, after all, is not usually to promote a particular party but corporate agenda.

The qualification for funding is less likely to be a politician's ideology than reliability and usefulness in support of corporate objectives and interests. And, of course, party apparatchiks - whose main objective is ensuring their parties' financial viability - are cognizant of this in supporting and promoting political aspirants.

The exponential growth in US corporate political financing over the past half-century and more may be seen as a feature - not as an unfortunate byproduct of political competition! The more money political aspirants require for election the less likely they are to be able to bypass corporate funding of their campaigns

Once political parties are captive to corporate financing they will, inevitably, weed out (or house-train) any who have successfully funded their campaigns without resort to corporate funding. Private donors will require it and party apparatchiks will willingly oblige. As an old and well-worn aphorism has it:

Once you've got them by the balls, their hearts and minds will follow!

⁶⁴⁶ (21/04/24) This is not simply a question of semantics. The political reality within the United States of America determines the nature of its interventions around the world. If, as Frances Brown and Thomas Carothers claim, the US: supports 'democracy globally', then the nature and purpose of that 'support' will be directly determined by the realities of the US polity:

Biden and his team have taken up the increasingly common view in the broader U.S. policy community that countering China and Russia is central to supporting democracy globally. As the president said in February, "American leadership must meet this new moment of advancing authoritarianism, including the growing ambitions of China to rival the United States and the determination of Russia to damage and disrupt our democracy." ...

(Frances Z. Brown and Thomas Carothers, ^œ[Washington's Democracy Dilemma: Crafting a Democracy Strategy in an Age of Great-Power Politics](#), *Foreign Affairs*, July 23, 2021)

What forms of intervention and 'pressure' should China and Russia anticipate during a Biden presidency? That is, what form of polity do President Biden and his 'team of immaculate professionals' represent?

In 2020, for a 3rd time in the last 90 years, US Democrats faced a clear fork in the road ahead: One road led toward primacy of the community over the marketplace; the other continues down the neoliberal highway of the past half-century - the primacy of the marketplace over the community¹⁰³⁸.

It's government of the people, by the people, for the people; or it's government of the people by robber barons and their minions¹⁰³⁹: it's Government for the 99% or government [for the mega-wealthy](#).

In 1932 US Democrats chose a presidential candidate who refused to settle for tinkering with a broken system; someone with a clear vision of a future [focused on the health and wellbeing of the 99%](#).

In 1944, Party insiders ensured that Roosevelt style progressive politics would not become the 'new normal' for the US Democratic Party¹⁰⁴⁰. As Marjorie Cohn has recounted:

... [T]he Democratic National Committee (DNC) ensured that socialist Henry Wallace would not succeed Franklin D. Roosevelt (FDR) as president...

Wallace, who held many of the same political positions as Sanders, was one of the architects of the New Deal. He served as FDR's agriculture secretary, vice president and commerce secretary. But the ailing FDR's 1944 bid to select Wallace as his vice president for

what would be his final presidential term was derailed by the corporate party bosses who made sure that Harry Truman would follow FDR as president instead of Wallace.

(Marjorie Cohn, ["Is the DNC Once Again Orchestrating the Defeat of a Socialist Candidate?"](#) *Truthout*, March 16, 2020)

2020 was, almost certainly, the Democratic Party's final opportunity to change direction, to reject the rapidly maturing neoliberal, plutocratic future which has been gathering momentum through the past half century in both the United States and the rest of the world - a last chance to fulfil Lincoln's vision of a [nation governed by the people, for the people](#) ¹⁰⁴¹.

[Getting oneself into perspective](#) can be very difficult. It is so much easier to see the flaws in others than to realize the flaws in oneself and Western nations, for more than 500 years, have amply demonstrated this.

Kenneth Roth has delightfully illustrated this universal human failing:

Over the past decade, autocrats around the world have perfected the technique of "managed" or "guided" democracy. In Belarus, Egypt, Russia, Uganda, Venezuela, and elsewhere, authoritarian leaders have held periodic elections to enhance their legitimacy but monopolized the media, restricted civil society, and manipulated state institutions and resources to ensure that they remained in power.

Such methods are never foolproof, however, and their effectiveness has diminished as citizens have wised up and learned to operate within rigged systems. A growing number of autocrats have thus been forced to rely on ever starker forms of repression: they still hold periodic elections since their people have come to expect them, but they do not even pretend that these empty rituals are free or fair. The result has been the proliferation of what might be called "zombie democracies" - the living dead of electoral political systems, recognizable in form but devoid of any substance.

Just as autocrats have moved from managed to zombie democracy, so too must supporters of human rights evolve. Whereas they could once counter managed democracy by attacking particular autocratic techniques - restrictions on civil society, say, or arrests of journalists - they must now fight zombie democracy with a more frontal approach, one that deprives autocrats of the legitimacy they seek from electoral charades.

(Kenneth Roth, ["The Age of Zombie Democracies: Why Autocrats Are Abandoning Even the Pretense of Democratic Rituals,"](#) *Foreign Affairs*, July 28, 2021)

We in Western communities are indeed, in this 21st century, living in rapidly maturing '[Zombie Democracies](#)'. Outwardly ornamental, 'grand democracies': but, look closer, and you'll find hollowed out, lifeless shells, hijacked by some alien life form, predatory on the original builders and inhabitants.

It is always difficult to see one's own flaws: far less challenging to identify them at a distance and roundly condemn them in others! Russia's President Putin (in a June, 2021 exchange with US President Biden) put it well: "We have a saying: 'Don't be mad at the mirror if you see ugly'".

Jesus summed it up:

Do not judge, or you too will be judged. For in the same way you judge others, you will be judged, and with the measure you use, it will be measured to you. Why do you look at the speck of sawdust in your brother's eye and pay no attention to the plank in your own eye? How can you say to your brother, "Let me take the speck out of your eye," when all the time there is a plank in your own eye? You hypocrite, first take the plank out of your own eye, and then you will see clearly to remove the speck from your brother's eye. (^œ[Matthew Ch. 7, V. 1-5](#), NIV)

Cohn described the US predicament:

At the March 15 debate with Biden, Sanders asked the rhetorical question: Where is the power in America? He then answered, "Who owns the media? Who owns the economy? Who owns the legislative process? Why do we give tax breaks to billionaires and not raise the minimum wage? Why do we pump up the oil industry while a half a million people are homeless in America?" (Marjorie Cohn, ^œ[Is the DNC Once Again Orchestrating the Defeat of a Socialist Candidate?](#) *Truthout*, March 16, 2020)

With political parties captive to corporate financing, 'democracy' becomes a hollow word. The reality is that, whatever policies politicians might promise to support during their electoral campaigns, actual policy delivery will reflect corporate, not democratic, wishes. And, in a nation which has gutted its non-military industrial base, relocating it 'offshore', major policy implementations will reflect the wishes of those who control that corporatist US government, including the, still-resident, corporate military-industrial base.

The only real difference between 'totalitarian' or 'authoritarian' nations, so loudly condemned by US politicians, and the actual US political scene has become the transparency of real political control within the nation. Citizens need to ask themselves:

'Which is more acceptable: invisible control by unelected financial and military-industrial power-brokers; or visible control by the nation's effective power-brokers?'

Rana Mitter, in attempting to explain the 'New Characteristics for Chinese Socialism', has given a synopsis of the Chinese Communist Party's explanation of its approach to governance ¹⁰⁴²:

During the communist era in East Germany, the ruling elite adopted a song with the uncompromising line *Die Partei, die Partei, die hat immer recht* ("The Party, the Party, which is always right"). Today's Chinese Communist Party is not quite so blunt. A resolution on China's history issued by the CCP in November strikes a more nuanced note: "The Party is great not because it never makes mistakes, but because it always owns up to its errors, actively engages in criticism and self-criticism, and has the courage to confront problems and reform itself."

(Rana Mitter, ^œ[New Characteristics for Chinese Socialism? How a CCP Resolution Connects Xi to China's Marxist Past](#), *Foreign Affairs*, December 20, 2021)

The United States of America to which Sanders alluded in the debate is a consequence of both Democrat and Republican corporatist politics over the past fifty and more years. Sanders (having just endorsed Biden as the Democratic Party's presidential candidate), optimistically, argued

'that many in our country are now beginning to rethink the basic assumptions underlying the American value system':

If there is any silver lining in the horrible pandemic and economic collapse we're experiencing, it is that many in our country are now beginning to rethink the basic assumptions underlying the American value system.

Should we really continue along the path of greed and unfettered capitalism, in which three people own more wealth than the bottom half of the nation, and tens of millions live in economic desperation - struggling to put food on the table, pay for housing and education and put a few dollars aside for retirement? Or should we go forward in a very new direction?

In the course of my presidential campaign, I sought to follow in the footsteps of President Franklin Delano Roosevelt, who, in the 1930s and 40s, understood that in a truly free society, economic rights must be considered human rights. That was true 80 years ago and it remains true today.

Now I will do everything in my power to bring this country together to help Joe Biden defeat the most dangerous president in modern American history. And I will continue to make the vigorous case that we must address the inequalities that contributed to the rise of Donald Trump, whose cruelty and incompetence have cost American lives during this pandemic.

Simply opposing Mr. Trump will not be enough - we will need to articulate a new direction for America.

(Bernie Sanders, ^{ae}[The Foundations of American Society Are Failing Us](#), *New York Times*, April 19, 2020)

Having endorsed a *status quo* democrat as the 2020 Democratic Party's presidential candidate Sanders found himself on the horns of a dilemma:

- It was, indeed, true that Trump, particularly in his [militarized space and nuclear ambitions](#), is the 'most dangerous president in modern American history';
- It was (and is) equally true that the Democrat alternative is wedded to a neoliberal, plutocratic future.

As 2021 unfolded, the US mainstream media, taking its cue from the Biden Administration's promotion of the president's 'FDR-like policies and ambitions', began the inevitable process of convincing the population that Biden was in the process of ushering in a New Deal for the American electorate¹⁰⁴³

When it comes to the *implementation* of pronounced policies in the US, [there's many a slip between cup and lip!](#)

A commenter pseudonymed 'Ashburn' summed up Biden's performance in the first half of 2021:

Most of Biden's power to act independent of a shaky congressional majority lies in the realm of foreign policy. If he had wanted to:

- He could have already withdrawn troops from Afghanistan, Iraq, and Syria.
- He could have forced an immediate end to the humanitarian catastrophe in Yemen with one phone call to MBS.

- He could have lifted the siege sanctions on Venezuela and Cuba, and
- had a renewal of the JCPOA with Iran.
- He could have objected to the new Space Force and instead proposed a new treaty banning such militarization of space with China and Russia.
- He could have also endorsed a similar treaty proposed by Putin to ban certain types of cyber attacks against other countries' infrastructure.

Instead he's kept faith with Trump by leaving all this in place.
(Ashburn, Commenter on ^œ[Why Biden Is Not a Transformational President](#), Posted on *Naked Capitalism*, May 26, 2021 by Yves Smith)

[We do, indeed, live in a New Speak world!](#)

Matt Taibbi explained:

The news is like high school. One day, one kid comes in wearing Dior sneakers and Nike X Ambush pants, and two days later, that's all you see in the halls. The "Biden-as-FDR" stories raced around News High, with headlines like "With nods to FDR, JFK and LBJ, Biden goes big on infrastructure plan" (Yahoo!) and "Can Biden achieve an FDR-style presidency? A historian sees surprising parallels" (Washington Post). Even the New Yorker's naysayingtake, "Is Biden Really the Second Coming of F.D.R. and L.B.J.?" read at first glance like an affirmation.

That this high-flown language came on the heels of Biden's people whispering F.D.R. comparisons in the ears of reporters for weeks, and Biden himself calling his plan "a once-in-a-generation investment in America," seemed not to bother anyone. We live in a time when a president can be said to have "sharply cut poverty" the moment he signs a relief bill, so why not say, as CNN editorialists Stephen Collison and Caitlin Hu did, that this new bill's passage would immediately allow Biden to "lay claim to a spot in the Democratic pantheon alongside Franklin Roosevelt and Lyndon Johnson?"

(Matt Taibbi, ^œ[The Two Faces of Joe Biden](#): The press is building an image of a "radical" progressive hero, while reality looks a lot like the same corporate Democrat, *TK News*, April 10, 2021)

Although Sanders - true to his record - wanted the US to 'go forward in a very new direction', collaboration in a Biden presidency was, of course, a [most unlikely way to achieve this](#)

⁶⁴⁷ Harry Boyte has neatly summed up the perennial confrontation between democracy and plutocracy in the US in an article subtitled "One side pits winners and losers against each other in a race for the American Dream, while the other wonders what might be possible if we work together to form communities, build schools and create a culture of mutual respect":

Since the beginning, two narratives have warred for the soul of America. One is the "We're Number One" America, in which the American Dream is a competition with few winners and others who bask in their reflected glory. This is the America of land grabs, robber barons and get-rich-quick schemes.

The alternative is the story of democracy in which America is a place of cooperative endeavor where people form associations, build schools, congregations, libraries and towns and fight for "liberty and justice for all."

The novelist Marilynne Robinson was getting at this alternative in her conversation with President Obama last September in Iowa, reprinted in the *New York Review of Books*. "Democracy," she said, "was something people collectively made." Making democracy created a culture of mutual respect.

I learned this understanding of democracy as a young man working for Martin Luther King's Southern Christian Leadership Conference (SCLC) in the civil rights movement. In *Hope and History*, King's friend and sometime speechwriter Vincent Harding described the movement as "a powerful outcropping of the continuing struggle for the expansion of democracy in the United States." It showed "the deep yearning for a democratic experience that is far more than periodic voting."

Today there are new outcroppings of the democracy story but they do not yet merge into a narrative of democracy as a way of life. "We're Number One" America dominates, coming especially from Republican candidates. It has antecedents...

(Harry Boyte, ^œ[The Fight For America's Soul](#), *Moyers & Co*, December 16, 2015)

(20/02/16) Ann Jones, in an article subtitled 'A crash course in social democracy', described the world which has, over the past forty years, been dismantled in the name of [neoliberal 'free markets', globalization, economic deregulation and the disenfranchisement of 'democratic' communities](#) ¹⁰⁴⁴. Most people who live in the Western 'free market' democracies of the 21st century would have lived in such a world had the spirit of the 'New Deal' Roosevelt reforms, [e pluribus unum](#), driven the evolution of both communities and their governments:

What Scandinavians call the Nordic model is a smart and simple system that starts with a deep commitment to equality and democracy. That's two concepts combined in a single goal because, as far as they're concerned, you can't have one without the other.

Right there, they part company with capitalist America, now the most unequal of all the developed nations, and consequently a democracy no more. Political scientists say it has become an oligarchy, run at the expense of its citizenry by and for the superrich. Perhaps you've noticed that.

In the last century, Scandinavians, aiming for their egalitarian goal, refused to settle solely for any of the ideologies competing for power - not capitalism or fascism, not Marxist socialism or communism. Geographically stuck between powerful nations waging hot and cold wars for such doctrines, Scandinavians set out to find a middle path. That path was contested - by socialist-inspired workers on the one hand, and by capitalist owners and their elite cronies on the other - but in the end, it led to a mixed economy. Thanks largely to the solidarity and savvy of organized labor and the political parties it backed, the long struggle produced a system that makes capitalism more or less cooperative, and then redistributes equitably the wealth it helps to produce. Struggles like this took place around the world in the 20th century, but the Scandinavians alone managed

to combine the best ideas of both camps while chucking out the worst.

In 1936, the popular US journalist Marquis Childs first described the result to Americans in the book *Sweden: The Middle Way*. Since then, all the Scandinavian countries, and their Nordic neighbors Finland and Iceland, have been improving upon that hybrid system. Today in Norway, negotiations between the Norwegian Confederation of Trade Unions and the Confederation of Norwegian Enterprise determine the wages and working conditions of most capitalist enterprises, public and private, that create wealth, while high but fair progressive income taxes fund the state's universal welfare system, benefiting everyone. In addition, those confederations work together to minimize the disparity between high-wage and lower-wage jobs. As a result, Norway ranks with Sweden, Denmark, and Finland as among the most income-equal countries in the world, and its standard of living tops the charts.

So here's the big difference: In Norway, capitalism serves the people. The government, elected by the people, sees to that. All eight of the parties that won parliamentary seats in the last national election - including the conservative Høyre party now leading the government - are committed to maintaining the welfare state. In the United States, however, neoliberal politics puts the foxes in charge of the henhouse, and capitalists have used the wealth generated by their enterprises (as well as financial and political manipulations) to capture the state and pluck the chickens.

They've done a masterful job of chewing up organized labor. Today, only 11 percent of American workers belong to a union. In Norway, that number is 52 percent; in Denmark, 67 percent; in Sweden, 70 percent. Thus, in the United States, oligarchs maximize their wealth and keep it, using the "democratically elected" government to shape policies and laws favorable to the interests of their foxy class. They bamboozle the people by insisting, as Hillary Clinton did at that debate, that all of us have the "freedom" to create a business in the "free" marketplace, which implies that being hard up is our own fault.

In the Nordic countries, on the other hand, democratically elected governments give their populations freedom from the market by using capitalism as a tool to benefit everyone. That liberates their people from the tyranny of the mighty profit motive that warps so many American lives, leaving them freer to follow their own dreams - to become poets or philosophers, bartenders or business owners, as they please.

(Ann Jones, ^œ[After I Lived in Norway, America Felt Backward. Here's Why](#): A crash course in social democracy, *The Nation*, January 28, 2016)

⁶⁴⁸ (09/07/17) *Laissez faire* capitalism is the ideological home of the 'born again' Christian religious right (both in the US and other Western capitalist nations). The religious revivals of the 18th and 19th centuries [launched a religiously and emotionally committed community of capitalists](#) who were, and have remained, deeply convinced:

➤ that 'the economy' is a self-existent, self-sustaining environment, with its own peculiar characteristics and

principles of organization and behavior, established by God to ensure human progress;

- that commitment to the 'natural laws' of the economy will, inevitably, result in the *Summum Bonum*;
- and that people who challenge those laws, [challenge God](#) and threaten the wellbeing of people everywhere.

(14/07/17) Just as many Western social philosophers came to accept the validity of [a quest for an attainable utopia](#) without acknowledging its implicit religious underpinnings, so, many Western conservatives (including economists) appear unaware of the religious origins of their [deeply held commitment to building a *laissez faire* reality](#), convinced that without it the *Summum Bonum* will not be realized.

(26/03/16) (21/06/16) For neoclassical and neoliberal devotees, 'the economy' is an autonomous entity, an objectively existing 'environment' subject to immutable 'natural laws'. Communal 'interference' in the workings of the economy threaten economic wellbeing.

It is in the context of necessary commitment to the 'natural laws' of the economy that one should understand esoteric discussions amongst economists of the 'models' through which economic processes are to be understood. One such discussion focuses on the reasons for, and means of counteracting 'wage stickiness'.

- If one presumes that such matters are 'economic' concerns and that wages are (or should be) solely driven by 'economic' considerations, then one sees, and attempts to address, 'the problem of wage stickiness'. *Investopedia* has succinctly described this:

Stickiness is a theorized condition in the market, and can apply to more areas than wages alone. Stickiness, simply put, is a condition wherein a nominal price resists change. While it can often apply to wages, stickiness may also often be used in reference to prices within a market, which is also often called price stickiness. Prices, however, are generally thought of as not being as sticky as wages are, as the prices of goods often change easily and frequently in response to changes in supply and demand.

([∞][Sticky Wage Theory](#), *Investopedia*, accessed June 2, 2016)

- Equally, if one considers the 'problems' of employment to be fundamentally 'economic', then one assumes that a clearer understanding of the 'forces' at work in determining wage rates (and the floor (if any) below which wages should not be allowed to fall) can be gained. If one can determine that all relevant economic drivers are accounted for in the models employed in determining wage rates, then one can better derive the 'real' rates (and floor) which should apply in the 'labor market' and 'labor force'.

Peter Dorman adopts this approach to determining the 'model' which should be used in such deliberations. As he claims, in a blog entry entitled 'Why You Should Never Use a Supply and Demand Diagram for Labor Markets',

S&D is simply the wrong model, based on a failure to distinguish between offers and transactions. Fortunately, there's a better model out there, search theory, with fairly straightforward intuitions and tons of available data.

Anyone who waves an S&D model at me and makes claims about the labor market is simply advertising that they know less about economics than they think they do.

(Peter Dorman, ^œ[Why You Should Never Use a Supply and Demand Diagram for Labor Markets](#), published in *Angry Bear*, July 7, 2017)

➤ If, on the other hand, one sees 'wages' as **determined by communities**, and *required* of economies (which, of course, for neoclassical and neoliberal devotees, violates the principle of the autonomy of 'the economy'), then **they are a consequence of communal regulation of economic activity**.

Base wage rates are determined by communities which require these rates to be [built into the base costings of economic activity](#). That is, human beings are not like "commodities", and wages are not like "prices".¹⁰⁴⁵

(06/02/16) This requires democratically organized capitalist communities with *communally established* processes of wage rate negotiation - usually within labor unions - and is one of the reasons why President Franklin Roosevelt of the US [insisted on the need for well organized, legislatively protected, union movements](#) during the New Deal period.

Dwight Eisenhower, wooing US voters who were already committed to New Deal principles, put the prevailing sentiments succinctly in a 1952 electioneering speech:

I have no use for those - regardless of their political party - who hold some foolish dream of spinning the clock back to days when unorganized labor was a huddled, almost helpless mass.

... Today in America unions have a secure place in our industrial life. Only a handful of unreconstructed reactionaries harbor the ugly thought of breaking unions. Only a fool would try to deprive working men and women of the right to join the union of their choice (^œ[Speech to the American Federation of Labor](#), New York City, 9/17/52)

It also requires a [protected economic environment](#) so that economic pricings, incorporating communally determined base wage rates, can be protected from unfair competition based on pricings which do not include such costs.

In competitive environments where base wage rates act as a floor below which wages cannot fall, wages will inevitably fluctuate as competition between employers leads to above-award-rate wages. However, in a wage-regulated economy there remains a [base rate below which wages cannot fall](#) even if the unemployment rate rises.

New Deal understandings also presumed government responsibility for ensuring an environment which [favored full employment](#).

^œ[Bill Mitchell has explained](#) the prevailing presumptions well,

First of all here is a totally general statement about the capacity of a currency-issuing government that applies to any nation...

...[S]uch a government can **always** use its currency-issuing capacity to ensure that all available productive resources that are for sale in that currency, including all idle labour, can be productively engaged.

That is, such a government can always, without exception, ensure there is full employment.

There is no financial constraint on such a government who desires to achieve that desirable policy goal.

In a later blog posting he has described the [late 1940s arm-wrestling](#) between US New Deal supporters and the descendants of 1920s 'free-market' advocates:

In 1946, with the Second World War at an end, the world governments turned to the question of how to maintain the full employment that the prosecution of the War had brought in the peace. It was clear that governments could choose whatever unemployment level they wanted through the manipulation of fiscal and industry policies and so the only question was the political will to maintain the full employment state.

In the US, the political debate led to the Employment Act 1946, which demonstrated ... the parameters of the conflict between conservative and the more liberal forces over what constituted full employment and what responsibility the currency-issuing government had for maintaining high levels of employment. (Bill Mitchell, ^œ[The conservative opposition to full employment legislation in the US, Billy Blog](#), 13 July, 2017).

Once one accepts the *laissez faire* presumption of the primacy of the deregulated, globalized marketplace, then communal "interference" in the marketplace is illegitimate and human labor becomes just another "resource" to be exploited and to which "prices" can be attached - subject to 'economic laws of supply and demand' - [the Speenhamland solution](#).

Eduardo Porter has described what is happening around the world as [wages are failing to keep pace with living costs](#):

...[T]he job market - that most critical institution of capitalist societies, the principal vehicle to distribute the nation's wealth among its people - is not working properly. This raises a fundamental question: If the job market cannot keep hardworking people out of poverty and spread prosperity more broadly, how will it be done? Is public assistance our future?

Lane Kenworthy, a professor of sociology at the University of California, San Diego, has disentangled the evolution of household incomes over the last three or four decades. The wages from work, he found, are playing a diminishing role for a growing swath of the labor force.

...Between 1979 and 2007, almost one third of the income gains of American households in the bottom half of the income ladder came from government transfers.

A combination of sluggish employment and stagnant wages has forced more families to rely on the public purse in many developed nations.

...After 40 years of stagnant earnings from the middle on down, Professor Kenworthy said, it's hard to sustain the argument that things will be all right in the end. "That's a very long time to be just an aberration," he told me.

... [Lawrence Katz](#), a professor of economics at Harvard, noted how some 40 years ago, the compensation of American workers became decoupled from productivity growth, which continued to advance

even as wages stagnated. "We haven't kept up improving skills as we did before," Professor Katz said. "But it's not all about that."

Globalization, which has moved a large share of industrial jobs to China and other cheap labor markets, has clearly played a role... (Eduardo Porter, ["Big Mac Test Shows Job Market Is Not Working to Distribute Wealth"](#) (*New York Times*, April 21, 2015))

Robert Skidelsky (2015) has addressed the problem of the progressive decoupling of wage rates from productivity growth rates:

...As robots increasingly replace human labor, [humans will need incomes to replace wages from work](#). Whereas tax credits point in the direction of replacement incomes, raising the minimum wage points in the opposite direction, by making income more dependent on jobs. In fact, focusing on the minimum wage would almost certainly speed up the automation process. Previous evidence that minimum-wage legislation does not reduce the demand for labor might not stand up against the rapidly falling cost of automating the production of goods and services.

In short, if Osborne is serious about his pledge to provide a "living income" for all, he should be moving toward the idea of a "basic" or "citizen's" income, independent of the job market. A simple way forward would be to provide all citizens an unconditional tax credit, which could be built up gradually as the rewards from work fall... (Robert Skidelsky, ["Minimum Wage or Living Income?"](#), *Project Syndicate*, July 16, 2015)

As one of the commenters, pessimistically (or, realistically) responded,

In the age we live in this will not happen. Companies donate to political campaigns which serve their own interests - and it is the interest of every company to have an abundance of cheap labour... (Michael Public JUL 16, 2015)

In a deregulated globalized marketplace, jobs don't remain in 'wage sticky' areas, they migrate to where the [inducements are most attractive](#) and costs are lowest - "the famous slicing up of the value-added chain - as [individual production stages are located where the costs of production are lowest](#)".

Paul Krugman has illustrated the *laissez faire* mindset well in a blog discussion piece entitled "Sticky Wages and the Macro Story". His 'explanation' seems to presume that the US has gutted or removed all its wage rate legislation and abandoned its workers to the vagaries of 'free', individualized, employer/employee wage bargaining (FDR must be resting uneasily in the hereafter!):

... If we're looking at the market for, say, wheat, and there's an excess supply - sellers want to sell more than buyers want to buy - we expect to see the price fall rapidly to clear the market. So if there were really a large excess supply of labor, shouldn't we be seeing wages plummeting?

And the answer is no - wages (and many prices) don't behave like that. It's an interesting question why, one that has to be answered in terms of psychology and sociology, but it's simply a fact that actual cuts in nominal wages happen only rarely and under great pressure. So wage stickiness is an essential part of a demand-side story about what's going on with the economy; it's how you answer the question of why wages aren't falling.

649 (01/07/17)(11/06/18)(14/02/19)

(10/03/19) In nations which presume the primacy of the community over the marketplace (or 'economy') the drive to export should be based in the need to access needed resources (or commodities) of the countries toward which exports are focused. Those exports generate credit accounts with the importing country which can be employed within that country to access its resources.

So, the presumption of 'export led growth', which lies at the base of post-1960s neoliberal 'globalization', should be strongly focused on ensuring economic development *within* the exporting country (not so as to increase exports, but so as to increase access to desirable commodities and resources and so ensure internal communal and economic 'development' and wellbeing).

Accumulating credit in countries which lack resources or commodities required by the exporting country would be anomalous¹⁰⁴⁶.

Of course, sometimes the desired 'resource' might well be the credit generated within an importing country which could be used in accessing resources in a third country.

This places a nation which is the *de facto* provider of the international reserve currency in a [privileged position](#). Its own currency becomes a [potential 'export resource'](#) and strong buttress to internal communal and economic 'development' and wellbeing

The 2017 claim by the US president, Donald Trump, that nations with surplus dollar holdings are in some way threatening to the US suggests a failure to understand this privileged position of a reserve currency as an export resource. Binyamin Appelbaum has explained it all:

America's most profitable export product is not oil or medicine or Hollywood movies or Boeing airplanes. It is a small green piece of paper with Benjamin Franklin on the front.

Last year, the United States exported \$65.3 billion of its currency - mostly \$100 bills.

The world needs an international currency, and the dollar is the obvious candidate because the United States, for all its economic troubles, remains the hub of the global economy. [United States government debt](#) is the world's most popular investment, and the bonds can be purchased only with dollars. Oil is the world's dominant trade good, and it also is priced and sold in dollars. Much like Facebook, everybody uses dollars because everybody uses dollars...

Some experts predict the dollar's days of dominance are numbered. But experts have been making that prediction for half a century. Meanwhile, the United States continues to crank the printing presses at its plants in Washington and Fort Worth and to distribute dollars from licensed warehouses in financial centers including London, Frankfurt and Singapore.

Printing dollars, after all, is a very profitable business. Ranked by value, greenbacks finished second on the list of America's most valuable export products, just behind refined petroleum. But exporting money is much more profitable. It costs the federal

government around 14 cents to produce a \$100 bill, and a few more cents to send it overseas.

(Binyamin Appelbaum, ^œ[America's Most Profitable Export: Money](#), *New York Times*, March 9, 2019)

In a democratic, capitalist nation, focused on the 'development' and wellbeing of its people, the reason for exports is not simply to accumulate foreign credit but to ensure a ready access to desired real resources (or commodities) needed or wanted within the exporting country.

If there were no need for resources or commodities from outside the exporting country then export-driven economic activity would be anomalous.

(16/06/18) Bill Mitchell has summed all this up well:

For an economy as a whole, imports represent a real benefit while exports are a real cost.

Exports mean that we have to give something real to foreigners that we could use ourselves - that is obviously an opportunity cost. Imports represent foreigners giving us something real that they could use themselves but which we benefit from having. The opportunity cost is all theirs!

Thus, net imports means that a nation gets to enjoy a higher material living standard by consuming more goods and services than it produces for foreign consumption.

(Bill Mitchell, ^œ[Trade and external finance mysteries](#), *Billy Blog*, 08 May, 2018)

Mitchell has focused on the undeniable fact that, for a sovereign nation which is focused on improving the wellbeing of its populace through accessing foreign real resources, '*exports are a cost and imports are a benefit*'.

However, in a neoliberally organized, deregulated nation, multinational corporations, focused on accumulating external credit *as a possession*, [siphon export profits into tax havens](#). This results in 'tax-haven countries showing ridiculously high levels of profits relative to wages'.

This is, of course, driven by what [Keynes described](#) as 'The love of money as a possession - as distinguished from the love of money as a means to the enjoyments and realities of life'. There is no increase in real resources available to the exporting country as a result of their export activity. The export/import exercise is seen as *foreign credit* accumulation (a virtue in itself) and *sovereign credit* 'loss' to the country which supplies the exporting country with needed or wanted resources. *So, exports are perceived as a benefit and imports are perceived as a cost.*

(07/07/17) In nations which presume the primacy of the marketplace (economic activity for its own sake), exports are driven, not by the need for resources but by the '*need*' to *accumulate 'credit' for its own sake*. As the world has witnessed over the past fifty years, international credit accumulation then results in [absurdly inflated credit accounts in places where the costs of accumulating those credits are lowest](#).

Jim Tankersley, relying on research by Thomas Tørsløv, Ludvig Wier and Gabriel Zucman¹⁰⁴⁷, has explained:

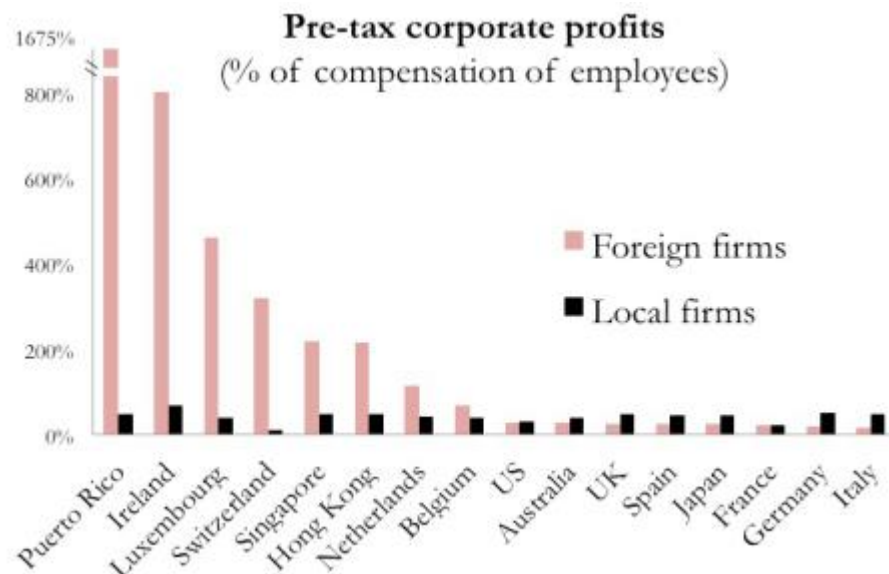

... [A] jarringly large amount of what appears, to policymakers, to be investment pushed abroad by high tax rates is instead an accounting trick - so-called paper profits - which tax cuts will not reverse.

"This idea that if you cut taxes, you'll attract a lot of physical capital, a lot of investment to the United States, I don't think is supported by the evidence," said Gabriel Zucman..., "Paper profits - that doesn't boost wages for workers. What boosts wages is actual factories."

(Jim Tankersley, [Tax Havens Blunt Impact of Corporate Tax Cut](#), *Economists Say*, *New York Times*, 10 June, 2018)

Paul Krugman has illustrated the effects. As he explained,

...[T]ax-haven countries end up showing ridiculously high levels of profits relative to wages, basically because the profits aren't being earned where they're being reported.

(Figure 4: Profitability in Foreign vs. Local Firms, Tørsløv, Wier & Zucman)

(Paul Krugman, [Tax Cuts and Leprechauns](#), *New York Times*, June 15, 2018)

Katy Wright, of Oxfam Great Britain, has summed it up:

... [W]hat specific thing embodies inequality better in today's world than the tax haven? These are secretive, cynical jurisdictions that contribute little to the economy or society than to ensure a greater return to capital.

One estimate is that \$7.6 trillion is stashed by rich individuals in tax havens worldwide. They happen to also come with imagery that speaks of luxury and remote secrecy. They are Davos with palm trees. And like many structures there to benefit the richest, tax havens are also incredibly damaging for the poorest.

(Katy Wright, [How Can We Rouse the Public Against an Abstract Noun?](#) (Tips for fighting inequality from a top Oxfam campaigner), *Inequality.Org*, Research & Commentary, July 05, 2017)

Keynes, in an optimistic 1930 essay, [described this mentality](#) well:

The love of money as a possession... will be recognised for what it is, a somewhat disgusting morbidity, one of those semicriminal, semi-pathological propensities which one hands over with a shudder to the specialists in mental disease.

In such circumstances, the original exporting country sees little or no community and internal economic advantage from the export activity.

As has been [explained elsewhere](#), those whose diseased mentalities presume the virtue of credit accumulation *for its own sake*, 'getting mega-rich', do not have the wellbeing of communities at heart, but the wellbeing of 'bank accounts' and inflation-hedging 'hard assets'. Sam Pizzigati has described the mentality of 2017's US political 'leaders':

We have as President a man of enormous wealth who suggests that individuals of enormous wealth should run the government.

"I just don't want a poor person" in the cabinet, President Trump recently told a rally in Cedar Rapids, Iowa.

The President wants rich people in the cabinet - and he has them. Mega millionaires and a few billionaires make up most of his key top appointments. And that rates as a good thing, the President assures us.

"Somebody said, 'Why'd you appoint rich person to be in charge of the economy,'" he explained in Iowa. "I said, 'Because that's the kind of thinking we want.'"

(Sam Pizzigati, ["Overcoming the 'Politics of Deference', *Inequality Org*](#), June 28, 2017)

The attitude which Pizzigati has described is not one confined to the US president. It is dominant among many of the elected members of both major political parties in the US Congress.

⁶⁵⁰ (24/03/17) As Western nations have been reorganized and refocused to neoliberal understandings of reality through the past half-century, previously publicly owned and organized banks and other financial institutions [have been and are being privatized](#). In the face of this drive toward privatization, there have, for many years, been cogent arguments made for treating all banks as public utilities.

A report by *The New Economics Foundation* in 2012 summed it all up well:

We surveyed data from 65 countries to identify successful alternatives to commercial banks, which we define as banks that have the main objective of maximising shareholder value. Four distinct forms were identified: cooperative banks, credit unions, community development finance institutions (CDFIs), and public interest savings banks. Their common characteristic is the goal of creating value for stakeholders, not just shareholders. Several trends emerge across all four types of bank:

- Greater focus on the needs of customers, including more competitive products, better service, and longer term lending.
- Explicit aim to provide for customers who are underserved by commercial banks.
- Positive impact on local economic development through lending to small and medium businesses, preventing capital drain from regions, and maintaining branch networks.
- Positive impact on financial stability through less volatile returns, higher levels of capital, prudent balance sheets, and expansion of credit provision after the financial crash.

Criticisms that stakeholder banks are inefficient and distort competition are found to be unconvincing. However, lack of access to capital is a constraint on growth, and there are lessons to be learned from those institutions that failed during the financial crisis. We conclude that certain factors are critical to the success of stakeholder banks:

- Maintaining independence of locally focussed and controlled institutions, while collaborating in networks to gain economies of scale, expertise and pooled liquidity and risk through central institutions and infrastructure.
- Favourable regulation that recognises the distinct nature of stakeholder banks, and does not force them to become more like commercial banks.

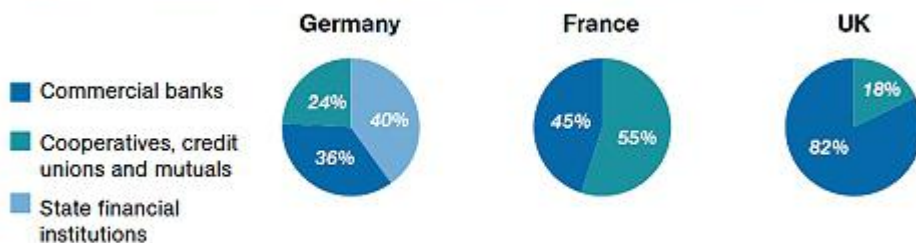

We recommend that banking policy explicitly acknowledges the benefits of banking diversity - including to global financial stability - and seeks to nurture a vibrant stakeholder banking sector (Lydia Prieg and Tony Greenham, [∞][Stakeholder Banks: Benefits of banking diversity](#), *The New Economics Foundation*, December, 2012)

As they explain:

...[W]e... found one unifying theme that set them apart from commercial banks. Instead of having a [single overarching objective of maximising shareholder value](#), they all seek to balance profit with social goals, or in other words to maximise stakeholder value. Hence we refer to them as stakeholder banks.

A summary of market shares of deposits in such banks within 3 major Eurozone countries is informative:

Figure 1 – Market shares of deposits in Germany, France and the UK

Source: World Bank (2011)²

Because of their experiences during the period of Western European colonial empires, many Second and Third World countries developed large state owned banking sectors.

(*The Economist*, 13 May, 2010)

This mix was, inevitably, balanced by a mixture of foreign banking enterprises, usually riding the coat-tails of empire. An article in *The Economist* explained the value of the public option in banking in the wake of the Great Financial Crisis (GFC):

After mid-2008 there was a big divergence, with the state banks (which come in three main flavours: the nationalised banks, State Bank of India and the regional rural banks) keeping credit growing fairly steadily. The private banks more or less ground to a halt. The foreign banks went from expansion to sharp decline, with their share of loans dropping from a peak of 7% to a paltry 5.3% last December.

Most bank executives now also concede that old-fashioned regulation was shown to have its merits. Indian banks are required to hold a big slug of their assets (typically just under a third) in government bonds and at the central bank. Now Western regulators too are considering pushing up liquidity levels. Indian bankers joke that all the fiddly rules they face have become the envy of regulators throughout the world.

(*The Economist*, ⁹[Mutually assured existence: Public and private banks have reached a modus vivendi](#), 13 May, 2010)

Ellen Brown (2011) has addressed the experiences of Western nations:

Publicly owned banks were instrumental in funding Germany's "economic miracle" after the devastation of World War II. Although the German public banks have been targeted in the last decade for takedown by their private competitors, the model remains a viable alternative to the private profiteering being protested on Wall Street today.

One of the demands voiced by protesters in the Occupy Wall Street movement is for a "public option" in banking. What that means was explained by Dr. Michael Hudson, professor of economics at the University of Missouri in Kansas City, in an interview by Paul Jay of the Real News Network on October 6:

[T]he demand isn't simply to make a public bank, but is to treat the banks generally as a public utility, just as you treat electric companies as a public utility.... Just as there was pressure for a public option in health care, there should be a public option in banking. There should be a government bank that offers credit card rates without punitive 30% interest rates, without penalties, without raising the rate if you don't pay your electric bill. This is how America got strong in the 19th and early 20th century, by essentially having public infrastructure, just like you'd have roads and bridges.... The idea of public infrastructure was to lower the cost of living and to lower the cost of doing business.

We don't hear much about a public banking option in the United States, but a number of countries already have a resilient public banking sector. A May 2010 article in *The Economist* noted that the strong and stable publicly owned banks of India, China and Brazil helped those countries weather the banking crisis afflicting most of the world in the last few years.

...[T]here are other Western public banking models that are successful.... Europe has a strong public banking sector; and leading it is Germany, with 11 regional public banks and thousands of municipally owned savings banks. Germany emerged from World War II with a collapsed economy that had degenerated into barter. Today, it is the largest and most robust economy in the eurozone. Manufacturing in Germany contributes 25 percent of gross domestic product, more than twice that in the UK. Despite the recession, Germany's unemployment rate, at 6.8 percent, is the lowest in 20 years. Underlying the economy's strength is its *Mittelstand* - small to medium sized enterprises - supported by a strong regional banking system that is willing to lend to fund research and development.

In 1999, public banks dominated German domestic lending, with private banks accounting for less than 20 percent of the market, compared to more than 40 percent in France, Spain, the Nordic countries and Benelux. Since then, Germany's public banks have come under fire; but local observers say that is due to rivalry from private competitors rather than a sign of real weakness in the sector.

As precedent for a public option in banking, then, the German model deserves a closer look.

(Ellen Brown, [⁶⁵¹The Public Option in Banking: Another Look at the German Model](#), *Truthout*, News Analysis, October 14, 2011)

⁶⁵¹ (20/07/16)(01/03/17) Many post-1960s Western politicians who committed themselves and their constituents to *laissez faire* futures, appeared oblivious to the origin of credit in capitalist societies - it was 'just there', sprung from 'economic activity'. For them, '[money](#)' was presumed to be generated in some undefined way in the private marketplace. As [Richard Werner explained](#), both politicians and the economists who counselled them conspicuously "failed... to make any progress concerning knowledge of the monetary system".

The British prime minister, Margaret Thatcher, was a British conservative in the [tradition of the 'born again' Christian religious right](#), a disciple of [Milton Friedman](#), and contemporary of Ronald Reagan. She demonstrated that lack of understanding in a 1983 speech in which she spelt out the

neoliberal understanding of the origin and nature of 'money' in a capitalist society:

One of the great debates of our time is about how much of your money should be spent by the State and how much you should keep to spend on your family. Let us never forget this fundamental truth: the State has no source of money other than money which people earn themselves. If the State wishes to spend more it can do so only by borrowing your savings or by taxing you more. It is no good thinking that someone else will pay - that "someone else" is you. There is no such thing as public money; there is only taxpayers' money.

Prosperity will not come by inventing more and more lavish public expenditure programmes. You do not grow richer by ordering another cheque-book from the Bank. No nation ever grew more prosperous by taxing its citizens beyond their capacity to pay. We have a duty to make sure that every penny piece we raise in taxation is spent wisely and well. For it is our party which is dedicated to good housekeeping - indeed, I would not mind betting that if Mr. Gladstone were alive today he would apply to join the Conservative Party.

Protecting the taxpayer's purse, protecting the public services - these are our two great tasks, and their demands have to be reconciled. How very pleasant it would be, how very popular it would be, to say "spend more on this, expand more on that." We all have our favourite causes - I know I do. But someone has to add up the figures. Every business has to do it, every housewife has to do it, every Government should do it, and this one will.
(Margaret Thatcher Foundation, ⁹⁵Speech to Conservative Party Conference, Oct 14 1983)

⁶⁵² Stephen Morris, in a comment on a less-than-convincing article by George Soros (2016) entitled 'Open Society Needs Defending', contends that, even assuming the validity of *homo economicus*, given a free choice in their system of government, Western individuals almost invariably vote for genuine Democracy not the plutocratic alternative of elitist "elective" government. As he says:

What this article highlights is the essential flaw in Popper's philosophy of Platonic Paternalism, the belief system embraced by Elites throughout the developed world. We are NOT witnessing a failure of Democracy. We are witnessing the consequences of failing to implement Democracy in the first place.

Democracy is NOT about "electing leaders". That is elitist "elective" government. And as Nobel laureate James Buchanan explains, it is a system all but guaranteed to create the disaster we now see:

[S]uppose that a monopoly right is to be auctioned; whom will we predict to be the highest bidder? Surely we can presume that the person who intends to exploit the monopoly power most fully, the one for whom the expected profit is highest, will be among the highest bidders for the franchise.

In the same way, positions of political power will tend to attract those persons who place higher values on the possession of such power. These persons will tend to be the highest bidders in the allocation of political offices. . . .

Is there any presumption that political rent seeking will ultimately allocate offices to the 'best' persons? Is there not the overwhelming presumption that offices will be secured by those who value power most highly and who seek to use such power of discretion in the furtherance of their personal projects, be these moral or otherwise?

Genuine public-interest motivations may exist and may even be widespread, but are these motivations sufficiently passionate to stimulate people to fight for political office, to compete with those whose passions include the desire to wield power over others?

(James Buchanan and Geoffrey Brennan, ^œ[*The Reason of Rules*](#), Cambridge University Press, 1985, p64)

Under such conditions (and in the absence of true Democracy) it is perfectly reasonable to expect that:

- a) the system will adversely select aggressively narcissistic, machiavellian (and quite possibly psychopathic) political agents who act in their own interests, with minimal regard for the subjects they rule;
- b) such politicians will deliberately misrepresents the state of affairs to the public in their desperate attempts to secure votes;
- c) such politicians will engage in obscene competitions to hand out bread and circuses, each side seeking to outdo the other to secure power; and
- d) such politicians will engage in grubby auctions, buying off special interest groups and powerful lobbies piecemeal with gifts from the public purse . . . and look to receive favours in return, either in the form of support in government or employment in later life.

Real Democracy allows the citizens themselves to choose the system of government THEY prefer for THEIR country or state.

And we know with some confidence what system of government citizens prefer.

To begin with, we know from Game Theory that citizens' consent for non-democratic elective government can not be inferred from their strategy of sullen acquiescence. That would require demonstrating that citizens are not acting under conditions of Prisoners' Dilemma in the face of entrenched political parties and other powerful elite interests opposed to genuine Democracy.

We know from work such as that of Bowler *et al* (^œ[*Enraged or Engaged? Preferences for Direct Citizen Participation in Affluent Democracies*](#)", 2007) that:

- a) in almost all countries a clear majority of respondents agree or strongly agree with the statement "Thinking about politics in [COUNTRY] Referendums are a good way to decide important political questions";
- b) in countries where there is no outright majority support, a strong plurality of respondents agree or strongly agree (with some having no view); and

c) support is STRONGEST in that country (Switzerland) where people have the MOST experience of such decision-making.

We know from the historical record that in the few cases where citizens HAVE been given a free choice in their system of government (half of US states, German lander, a handful of other jurisdictions) they almost invariably vote for genuine Democracy with the right of recall, veto, initiative and referendum.

(Admittedly in the United States, the democratic States must still operate under the anti-democratic provisions of the Federal constitution and its Supreme Court which - in the name of the "Rule of Law" - insists that Money is Speech and overturns attempts to regulate the role of money in the democratic process. But that's hardly a shortcoming of Democracy.)

Finally, and most importantly, we know that where citizens DO enjoy truly democratic rights they NEVER vote to repeal them, even though it's a straightforward process to initiate a referendum for that purpose. (And indeed in some jurisdictions the attempt has been made . . . and defeated at the ballot box!)

Unlike the elitist system of elective government, genuine Democracy demonstrates the ongoing consent of the citizens being governed.

The last great wave of Populism (that's big-P Populism, not the pejorative small-p populism) in the early 20th century had the legacy of introducing Democracy to almost half the US States.

So If you want to address the shortcomings [of] modern government, do not talk about the supposed failure of a "Democracy" which never in fact existed.

Instead, join the campaign to replace the corrupt system of elective government and give genuine Democracy a chance to thrive (Stephen Morris, Comment on: George Soros, ^{ae}[Open Society Needs Defending](#), *Project Syndicate*, December 28, 2016)

⁶⁵³ (26/01/16) Franklin Roosevelt (1938) clearly spelt out the threat of plutocracy for democratically organized capitalist nations. His explanation and warnings are even more urgently relevant today than they were in the 1930s:

Unhappy events abroad have retaught us two simple truths about the liberty of a democratic people.

The first truth is that the liberty of a democracy is not safe if the people tolerate the growth of private power to a point where it becomes stronger than their democratic state itself. That, in its essence, is Fascism - ownership of Government by an individual, by a group, or by any other controlling private power.

The second truth is that the liberty of a democracy is not safe if its business system does not provide employment and produce and distribute goods in such a way as to sustain an acceptable standard of living.

Both lessons hit home.

Among us today a concentration of private power without equal in history is growing.

This concentration is seriously impairing the economic effectiveness of private enterprise as a way of providing employment for labor and capital and as a way of assuring a more equitable distribution of income and earnings among the people of the nation as a whole. (F. D. Roosevelt, ^œ[Message to Congress on Curbing Monopolies](#), April 29, 1938 (Online by Gerhard Peters and John T. Woolley, The American Presidency Project))

Let's not be beguiled by crocodile smiles and misinterpreted tears. Philanthropy is the stalking horse of predation.

Tim Scott has summed up the real aims and ambitions of Western plutocratic philanthropy over the past two hundred and more years:

In the late 19th century many U.S. industrialists - Andrew Carnegie, John Pierpont Morgan, John D. Rockefeller and others - who amassed immense wealth through the exploitation and degradation of workers (including children), began to establish philanthropic trusts and foundations. Oil monopolist John D. Rockefeller (senior) described this social mission as a divinely inspired "business of benevolence." Accordingly, historian Benjamin J. Soskis reports that Rockefeller declared in 1906:

I believe that the power of making money is a gift from God... I believe it is my duty to go on making money and still more money, and to use the money I make for the good of my fellow man according to the dictates of my conscience.

As such, philanthropists of this time channeled charitable gifts to civil society and aid-based organizations charged with facilitating the cultural reproduction of American values derived from the Protestant ethics that sustain U.S. capitalism: individualism, self-reliance, hard work, meritocracy, discipline and obedience. In terms of the benevolent role of philanthropists during this period, Soskis frames it this way:

This conflation of the obligations of business and businessman was encouraged by the concept of stewardship, the dominant means by which Americans understood the responsibilities of wealth in the nineteenth century. By the dictates of stewardship, men could not claim ultimate ownership over their possessions, but held them only as trustees for some higher authority - in the concept's Protestant manifestation...

By bridging the realms of accumulation and redistribution, stewardship linked provisional property rights with the responsibilities that attended those rights. Stewardship provided a bridge between the imperatives of service and self-interest, a causeway over which proponents of corporate philanthropy would make their unsteady way in the decades to come.

Through this doctrine of divine providence, these charitable "Captains of Industry" advanced everything from universal public education, immigrant assimilation and poverty mitigation to the arts, public health and science and medical research.

Naturally, this giving came with a social engineering agenda. For example, as documented in my article "^œ[The Despotism of Public Secondary Education](#)," their financial and political support for universal public education was intended to bolster U.S. hegemony, by furthering U.S. industrial capitalism's imperialist pursuits as tied

to the nation's foundational structures of heteropatriarchy, white supremacy and settler colonialism.

(Tim Scott, ^œ[Impact Investing and Venture Philanthropy's Role in Sowing the Seeds of Financial Opportunity](#), *Dissident Voice*, February 17th, 2017)

When Western communities and nations cede 'social' and 'cultural' funding to their plutocracies they surrender to those 'philanthropists' their futures. As [Thomas Jefferson urged](#):

Preach, my dear Sir, a crusade against ignorance; establish and improve the law for educating the common people. Let our countrymen know that the people alone can protect us against these evils, and that the tax which will be paid for this purpose is not more than the thousandth part of what will be paid to kings, priests and nobles who will rise up among us if we leave the people in ignorance...

Lewis Carroll's cautionary poem, *The Crocodile*, should be required kindergarten learning:

How cheerfully he seems to grin
How neatly spreads his claws,
And welcomes little fishes in,
With gently smiling jaws!

Fred Guerin put it in a nutshell:

A society that genuinely cares for its citizens' well-being has little need for manufactured, top-down charity because such a society builds institutions that democratically enable all citizens to participate in [a shared commons](#), where no one need suffer the indignity of gross injustice, burdensome debt or soul-destroying poverty.

One of the most potent, propagandistic memes advanced by the corporate well-to-do in the United States today has been the projection of themselves as lovers of philanthropy and charity...

The super-wealthy of the world can undoubtedly feel good about their big-heartedness. Some might even see the private accumulation of massive wealth as morally justified, even in the face of profound inequality - that is, justified so long as they can somehow claim that their great individual wealth will inevitably "trickle down" to the have-nots. Of course, very few economists today would have the temerity to defend trickle-down economics. This is why the latter idea has to be reconfigured in more positive terms. Instead of trickle-down economics, we now have the rich speaking openly about "corporate social responsibility" and broadcasting their beneficence through charitable foundations.

In reality, corporations see charity as the perfect means through which they can get their foot in the door of public institutions, universities and other public agencies. In other words, their largesse has a price tag attached to it. Corporate charity typically cashes out for the rich and powerful in the form of decision-making power...

(^œ[The Charitable Society or "How to Avoid the Poor and Perpetuate the Wealth Gap"](#), Fred Guerin, *Truthout*, Sunday, 21 September 2014)

Michael Massing has painted a clear picture of the growth in US plutocratic philanthropy over the past three decades:

As the concentration of wealth in America has grown, so has the scale of philanthropy. Today, that activity is one of the principal ways in which the superrich not only "give back" but also exert influence, yet it has not received the attention it deserves. As I have previously tried to show, digital technology offers journalists new ways to cover the world of money and power in America,¹ and that's especially true when it comes to philanthropy.

Over the last fifteen years, the number of foundations with a billion dollars or more in assets has doubled, to more than eighty. A significant portion of that money goes to such traditional causes as universities, museums, hospitals, and local charities. Needless to say, such munificence does much good. The philanthropic sector in the United States is far more dynamic than it is in, say, Europe, due in part to the tax deductions allowed under US law for charitable giving. Unlike in Europe, where cultural institutions depend largely on state support, here they rely mainly on private donors.

The tax write-offs for such contributions, however, mean that this giving is subsidized by US taxpayers. Every year, an estimated \$40 billion is diverted from the public treasury through charitable donations. That makes accountability for them all the more pressing. So does the fact that many of today's philanthropists are more activist than those in the past. A number are current or former hedge fund managers, private equity executives, and tech entrepreneurs who, having made their fortunes on Wall Street or in Silicon Valley, are now seeking to apply their know-how to social problems. Rather than simply write checks for existing institutions, these "philanthrocapitalists," as they are often called, aggressively seek to shape their operations.

(Michael Massing, ^œ[How to Cover the One Percent](#), *The New York Review of Books*, January 14, 2016)

⁶⁵⁴ Minions and their benefactors come with a wide variety of aptitudes and abilities which are harnessed to the ideological and self-promotional ends they share. Minions are by nature followers, attracted to benefactors from whom they draw strength and self-confidence.

It would be wrong to assume that all plutocratic minions are morally bankrupt sycophants selling their souls for a mess of pottage. Plutocrats come in many ideological shadings and attract minions who share the understandings and enthusiasms of their masters.

True believers seldom experience moral dissonance in promoting the enthusiasms and interests of their chosen benefactors and mentors. So, there is little to be gained from appeals to their 'better natures'; they are already being true to themselves.

⁶⁵⁵ (28/01/16) Lincoln's insight into the lurking danger of an ascendant plutocracy for the future of US democracy should be burned into the consciousness of all who truly believe in 'government of the people, by the people, for the people':

We may congratulate ourselves that this cruel war is nearing its end. It has cost a vast amount of treasure and blood... It has indeed been a trying hour for the Republic; but I see in the near future a crisis approaching that unnerves me and causes me to tremble for the safety of my country.

As a result of the war, corporations have been enthroned and an era of corruption in high places will follow, and the money power of the

country will endeavor to prolong its reign by working upon the prejudices of the people until all wealth is aggregated in a few hands and the Republic is destroyed.

I feel at this moment more anxiety for the safety of my country than ever before, even in the midst of war. God grant that my suspicions may prove groundless.

(^œ[Rick Crawford](#) provides his sourcing of this quotation: The passage appears in a letter from Lincoln to (Col.) William F. Elkins, Nov. 21, 1864. For a reliable pedigree, cite p. 40 of *The Lincoln Encyclopedia: The Spoken and Written Words of A. Lincoln Arranged for Ready Reference*, by Archer H. Shaw (NY, NY: Macmillan, 1950). That traces the quote's lineage to p. 954 of *Abraham Lincoln: A New Portrait*, (Vol. 2) by Emanuel Hertz (New York: Horace Liveright Inc, 1931).)

⁶⁵⁶ The New Deal did not usher in a Utopia - social equity, while much improved, was far from perfect! It needs to be remembered that the free market fundamentalists who had run the 1920s did not go away, they were merely, temporarily, in a political minority ¹⁰⁴⁸, with Roosevelt and his supporters, rather shakily, in control.

[Orsola Costantini](#) provided a description of some of the problems faced by the Roosevelt Administration:

Save for a moment at the start of Roosevelt's first term, most American businessmen perceived the New Deal as a political program bent on transforming the US into a socialist state, reminiscent of the Soviet Union. As a result, most renewed their traditional commitment to the opposing Republican Party while the major general purpose business organizations - the United States Chamber of Commerce and the National Association of Manufacturers (NAM) turned sharply against the New Deal. Especially after the late Spring of 1935, when Roosevelt turned decisively to the left with his so-called "Second New Deal" that included Social Security and the Wagner National Labor Relations Act giving legal protection to labor organizing, much of American business embarked on something resembling a crusade against him. NAM in particular saw its budget and total membership spiral rapidly upwards as major business groups opposed to the New Deal took control and proselytized for wider support...
(Orsola Costantini, 2015, p. 8)

Within a decade, the US financial establishment - that group to which [Geithner proudly referred](#) in his memoir *Stress Test* when he claimed that "I basically restored the New York Fed board to its historic roots as an elite roster of the local financial establishment" - were regathering the reins of the US Federal Reserve. The New Deal architects were being replaced.

What is remarkable is not that social and economic inequity remained, but that, despite persistent, well-organized, [Supreme Court-backed opposition](#), the Roosevelt reforms produced significant long-term change.

Criticisms of what was achieved need to be tempered by awareness of the political realities. As one commenter put it:

Everyone seems to talk about those days as the halcyon days of "wide spread prosperity" - they of course were not and billions suffered. OK, OK you want to limit it to the US maybe 2-300 people

had 65% of wealth and 180 million shared the rest among themselves.

(Krugman Blog, ^œ[The Unwisdom of Crowding Out \(Wonkish\)](#), *New York Times*, The Opinion Pages, Commenter: *me, earth*, November 15, 2014)

⁶⁵⁷ (14/02/16)(05/06/16)(24/01/17) I know that for some who recognize the importance of the principle that sovereign governments create credit, this is a contentious issue. As one commenter on a blog posting by Randy Wray explained:

The Treasury "owes" the money it creates to it's (the government's) creditors... the people who supply the goods and services the government purchases. It's not a future debt. The money wouldn't be issued if the debt were not already incurred (or mandated to be incurred by Congress in some spending bill). No money is created (issued) unless and until there is a debt of the government that needs to be paid. What other use has the government for money? Why issue it at all?

(Commenter, Jamie, December 20 2015, on ^œ[Randy Wray: Debt-Free Money and Banana Republics](#), Posted on December 20, 2015 by Lambert Strether, *Naked Capitalism* Blog Site)

The suggestion seems to be that all sovereign credit creation is based on meeting 'debts' incurred by government for services provided by its creditors. This understanding is, of course, one of the prime reasons why many who accept that sovereign governments *create* credit, still assume that Sovereign bonds are '[public debt instruments](#)'.

However, this unnecessarily limits the creation of credit to debt servicing. As the 'quantitative easing' of the post-2008 period demonstrates, there are reasons for credit creation which do not imply debt servicing. So, it seems inappropriate to insist that sovereign credit creation, for that reason, is 'government debt'.

Let's just agree that credit creation is, as Wray suggests, "an electronic entry on the liability side of the bank's balance sheet" and avoid the possibly obfuscatory term 'debt' which leads to so many shrill demands that governments need to "pay down their deficits".

(Those committed to the use of the term 'debt money' seem to be unnecessarily adding to that confusion by such a restrictive explanation of the purpose of credit creation.)

Wray's explanation, insisting that 'money' is 'debt', too easily constricts understanding by conflating credit creation with 'money' creation (easily confused with official currency creation) and, at the same time, because of this conflation, credit creation becomes limited to debt servicing:

But, folks, it is all "debt money".

"Bank Money" is an electronic entry on the liability side of the bank's balance sheet, and an electronic entry on the asset side of the depositor's balance sheet. (Called double entry book-keeping, the "keystroking" of deposits when a bank makes a loan means there will be four entries - the "note" of the borrower is the bank's asset, and the bank's "deposit" is its liability; the deposit is the borrower's asset, and the note is the borrower's liability.) Depositors can write checks on these deposits to pay down their own debts, including debts to banks.

(L. Randall Wray, ^œ[Debt-free Money: A Non-sequitur In Search Of A Policy](#), *New Economic Perspectives*, July 1, 2014)

We need constantly to remind ourselves that the creation of unsecured credit by private financial institutions is *not the same as credit creation by sovereign central banks*. One is based on an assumption of 'credit-worthiness' backed by presumed access to sovereign credit; the other is the *issuer* of unencumbered sovereign credit.

As observed elsewhere, the *use of profit and loss book-keeping terminologies* for sovereign reserve bank credit creation and dispersal is most unfortunate. What is labelled 'the liability side of the bank's balance sheet' is, in fact, a record of '[Reserve Bank credit \[which\] does not consist of funds that the Reserve authorities "get" somewhere in order to lend, but constitutes funds that they are empowered to create](#)'.

A commenter on a blog posting by Randy Wray put it all both succinctly and diplomatically:

Dr Wray makes an excellent and logical case that taxes are not used to run government operations. I only wish people and politicians would listen and learn. Next he defines money issued by the government as debt but he does it in terms of a method of counting and keeping records of money. His explanation is as clear and understandable as any I have ever read.

However, I do not accept that the way you count something changes its nature and using an accounting method that requires calling issued money debt does not make it debt in the conventional sense of the word. The "debt free" money people talk about would be money spent into the economy in excess of the sum of taxes plus borrowing, money that does not have to be paid back to commercial banks. The government is prevented from doing that by the accounting process that requires spending to equal taxes plus borrowing.

(Charles3000, Commenter, L. Randall Wray, ^œ[The Value of Redemption: Debt-free Money Part 3](#), *New Economic Perspectives*, Posted on February 14, 2016)

The old adage 'Give a dog a bad name and you might as well hang him' applies. Once the term 'liability' is applied to the debit side of the balance sheet it becomes *a simple matter to either ideologically or naively* argue that the naming of one side of the ledger as 'Liabilities' indicates that it refers to 'debt' owed by the Reserve Bank. I must rename my dog "Savage" before someone uses his name as an excuse to hang him! Perhaps "Cuddles" will protect him!

⁶⁵⁸ Macaulay's (1849) description of Britain's road to debt financed greatness:

Such was the origin of that debt which has since become the greatest prodigy that ever perplexed the sagacity and confounded the pride of statesmen and philosophers. At every stage in the growth of that debt the nation has set up the same cry of anguish and despair. At every stage in the growth of that debt it has been seriously asserted by wise men that bankruptcy and ruin were at hand. Yet still the debt went on growing; and still bankruptcy and ruin were as remote as ever.

When the great contest with Lewis the Fourteenth was finally terminated by the Peace of Utrecht, the nation owed about fifty millions; and that debt was considered, not merely by the rude

multitude, not merely by foxhunting squires and coffeehouse orators, but by acute and profound thinkers, as an incumbrance which would permanently cripple the body politic; Nevertheless trade flourished; wealth increased; the nation became richer and richer.

Then came the war of the Austrian Succession; and the debt rose to eighty millions. Pamphleteers, historians and orators pronounced that now, at all events, our case was desperate. Yet the signs of increasing prosperity, signs which could neither be counterfeited nor concealed, ought to have satisfied observant and reflecting men that a debt of eighty millions was less to the England which was governed by Pelham than a debt of fifty millions had been to the England which was governed by Oxford.

Soon war again broke forth; and, under the energetic and prodigal administration of the first William Pitt, the debt rapidly swelled to a hundred and forty millions. As soon as the first intoxication of victory was over, men of theory and men of business almost unanimously pronounced that the fatal day had now really arrived. The only statesman, indeed, active or speculative, who did not share in the general delusion was Edmund Burke.

David Hume, undoubtedly one of the most profound political economists of his time, declared that our madness had exceeded the madness of the Crusaders. Richard Coeur de Lion and Saint Lewis had not gone in the face of arithmetical demonstration. It was impossible to prove by figures that the road to Paradise did not lie through the Holy Land; but it was possible to prove by figures that the road to national ruin was through the national debt.

It was idle, however, now to talk about the road; we had done with the road; we had reached the goal; all was over; all the revenues of the island north of Trent and west of Reading were mortgaged. Better for us to have been conquered by Prussia or Austria than to be saddled with the interest of a hundred and forty millions.

And yet this great philosopher - for such he was - had only to open his eyes, and to see improvement all around him, cities increasing, cultivation extending, marts too small for the crowd of buyers and sellers, harbours insufficient to contain the shipping, artificial rivers joining the chief inland seats of industry to the chief seaports, streets better lighted, houses better furnished, richer wares exposed to sale in statelier shops, swifter carriages rolling along smoother roads. He had, indeed, only to compare the Edinburgh of his boyhood with the Edinburgh of his old age. His prediction remains to posterity, a memorable instance of the weakness from which the strongest minds are not exempt.

Adam Smith saw a little and but a little further. He admitted that, immense as the burden was, the nation did actually sustain it and thrive under it in a way which nobody could have foreseen. But he warned his countrymen not to repeat so hazardous an experiment. The limit had been reached. Even a small increase might be fatal.

Not less gloomy was the view which George Grenville, a minister eminently diligent and practical, took of our financial situation. The nation must, he conceived, sink under a debt of a hundred and forty millions, unless a portion of the load were borne by the American colonies.

The attempt to lay a portion of the load on the American colonies produced another war. That war left us with an additional hundred millions of debt, and without the colonies whose help had been represented as indispensable.

Again England was given over; and again the strange patient persisted in becoming stronger and more blooming in spite of all the diagnostics and prognostics of State physicians. As she had been visibly more prosperous with a debt of a hundred and forty millions than with a debt of fifty millions, so she, as visibly more prosperous with a debt of two hundred and forty millions than with a debt of a hundred and forty millions.

Soon however the wars which sprang from the French Revolution, and which far exceeded in cost any that the world had ever seen, tasked the powers of public credit to the utmost. When the world was again at rest the funded debt of England amounted to eight hundred millions.

If the most enlightened man had been told, in 1792, that, in 1815, the interest on eight hundred millions would be duly paid to the day at the Bank, he would have been as hard of belief as if he had been told that the government would be in possession of the lamp of Aladdin or of the purse of Fortunatus. It was in truth a gigantic, a fabulous debt; and we can hardly wonder that the cry of despair should have been louder than ever. But again that cry was found to have been as unreasonable as ever....

(Thomas Babington Macaulay, ^æ[*The History of England from the Accession of James II. Volume 4*](#), Chapter 19, Pp 327-329, Longman, Green, London 1864)

⁶⁵⁹ Here is their explanation of the varied relationships between central governments and their associated central banks:

Around the world, central banks have a number of different ownership structures. At one end of the spectrum are central banks, like the Bank of England, that are wholly owned by the public sector. At the other end are central banks, like the Banca d'Italia, whose shareholders are wholly private sector entities. And there are central banks, like the Bank of Japan, that lie in-between. But do these differences matter?

In this blog post, we explore the variety of central bank ownership structures, both historically and globally. We also suggest areas for future research on the topic.

The separation of central bank ownership and control

Ownership is a complex concept, a bundle of rights and responsibilities. In ordinary language, if I say I own a bike, then this implies I possess the bike and can use it as I please. Ownership implies control.

However, as Thorstein Veblen, Adolf Berle and Gardiner Means first observed, control is sometimes unbundled from ownership in modern corporations. The owners of corporations (shareholders) are usually abstracted from their day-to-day operations. Instead, control of corporate resources is ordinarily exercised by its management. Therefore, to say that I own shares in a corporation has a much narrower meaning than when I say I own a bike. In the case of a corporation, I am mainly saying that I have a financial interest in the business, specifically, that I am a residual claimant

on the corporation's profits after all other claimants such as employees, creditors and the government (taxes) have been paid.

Veblen, Berle, and Means developed their ideas with for-profit private sector corporations in mind. Yet, the distinction they drew between ownership and control is surprisingly applicable to most modern central banks. The owners of central banks, mostly governments, are ordinarily responsible for making executive appointments, and receive a share of central banks' profits. Day-to-day control of the central bank is delegated to the central bank's senior management and policy committees.

While both modern central banks and modern corporations are often characterised by a separation between ownership and control, there are key differences in their organisational objectives. The purpose of most private sector corporations is the pursuit of profits for shareholders. By contrast, central banks typically have statutory mandates based on economy-wide goals - e.g. price stability, financial stability and market functioning. This is irrespective of whether central banks are wholly owned by government, or, as in a handful of cases detailed below, their residual claimants are private sector entities.

Consequently, the issue of central bank ownership is considered by most scholars of marginal importance. Yet the issue of central bank ownership is a salient topic to revisit at present when the constitutional basis of central banks is receiving renewed attention (Goodhart and Lastra 2017; Tucker 2018). In what follows, we offer a survey of the variety of central bank ownership structures historically and globally.

The nationalisation of central banking

In the early twentieth century, there was a roughly even mix of central banks with private sector and public sector shareholders (Figure 1). That changed mid-century. Some established central banks, like the Bank of England, were nationalised (Figure 2). At the same time, almost all of the central banks created in post-colonial states were established fully state-owned. By the end of the century, just a handful of central banks with private sector shareholders remained.

Figure 1: Ownership model of central banks globally over time, 1900 to the present

Source: Central banks' websites

Figure 2: List of nationalised central banks globally in order of year nationalised

Central Bank	Established	Nationalised
Reserve Bank of New Zealand	1934	1935
Bank of Estonia	1919	1940
Bank of Albania	1925	1945
Bank of France	1800	1946
Central Bank of Argentina	1935	1946
Bank of England	1694	1946
National Bank of Romania	1880	1946
Reserve Bank of India	1935	1949
Bank Indonesia	1826	1953
Central Reserve Bank of El Salvador	1934	1961
Bank of Spain	1782	1962
State Bank of Pakistan	1948	1974
Banco de Portugal	1846	1974
National Bank of Angola	1926	1975
Bank of the Republic of Haiti	1874	1979
National Bank of Tuvalu	1980	1995
National Bank of Austria	1816	2010

(David Bholat and Karla Martinez Gutierrez, ⁶⁶⁰[The ownership of central banks](#), *Bank Underground*, 18 October, 2019)

⁶⁶⁰ US Presidential candidate, Bernie Sanders, in a clearly explained Op-Ed contribution to the *New York Times*, spelt out the problems involved in a US Federal Reserve which Simon Johnson, below, says has a governance structure from another age - antiquated, increasingly problematic, and urgently in need of sensible reform. As Sanders has explained:

WALL STREET is still out of control. Seven years ago, the Federal Reserve and the Treasury Department bailed out the largest financial institutions in this country because they were considered too big to fail. But almost every one is bigger today than it was before the bailout. If any were to fail again, taxpayers could be on the hook for another bailout, perhaps a larger one this time.

To rein in Wall Street, we should begin by reforming the Federal Reserve, which oversees financial institutions and which uses monetary policy to maintain price stability and full employment. Unfortunately, an institution that was created to serve all Americans has been hijacked by the very bankers it regulates...

The recent decision by the Fed to raise interest rates is the latest example of the rigged economic system. Big bankers and their supporters in Congress have been telling us for years that runaway inflation is just around the corner. They have been dead wrong each

time. Raising interest rates now is a disaster for small business owners who need loans to hire more workers and Americans who need more jobs and higher wages. As a rule, the Fed should not raise interest rates until unemployment is lower than 4 percent. Raising rates must be done only as a last resort - not to fight phantom inflation.

What went wrong at the Fed? The chief executives of some of the largest banks in America are allowed to serve on its boards. During the Wall Street crisis of 2007, Jamie Dimon, the chief executive and chairman of JPMorgan Chase, served on the New York Fed's board of directors while his bank received more than \$390 billion in financial assistance from the Fed. Next year, four of the 12 presidents at the regional Federal Reserve Banks will be former executives from one firm: Goldman Sachs.

(Bernie Sanders, ^{oe}[To Rein In Wall Street, Fix the Fed](#), *New York Times*, December 23, 2015)

Simon Johnson has given a clear explanation of the quasi-private nature of the Federal Reserve Banks and consequent influence within them of the major private banks. As he explains:

The US Federal Reserve System is the world's most important central bank. Its decisions about interest rates and financial regulation reverberate through global markets and affect millions of lives. Yet its governance structure is of another age - antiquated, increasingly problematic, and urgently in need of sensible reform...

This regional structure is the result of legislative compromise in 1913, when the Fed was created, and again in the mid-1930s, when its governance was last overhauled. Whereas members of the Fed's Washington-based Board of Governors are nominated by the US president, subject to Senate confirmation, the presidents of the regional Federal Reserve banks are appointed by local boards.

In reality, the New York Fed has always had disproportionate sway; not all regional Fed presidents are created equal. The president of the New York Fed is a permanent voting member and vice chairman of the Federal Open Market Committee, which sets interest rates, whereas other regional Fed presidents are voting members only on a rotating basis.

The New York Fed also has a particularly important role in bank supervision - most of America's "too-big-to-fail" banks are located in its jurisdiction (and most global banks have a presence there). And the New York Fed has long been the Fed System's eyes and ears on Wall Street.

Or perhaps it has become the other way around. At least over the past decade, senior New York Fed officials have consistently sided with the interests of very large banks. (To be clear, I also know many Fed officials who are outstanding public servants). Though Wall Street interests have long been well represented on the board of the New York Fed, under Timothy Geithner, its president from 2003 to 2009, the big players became even more powerful - with some rather unfortunate consequences for the rest of us.

In his recent memoir, *Stress Test*, Geithner says, "I basically restored the New York Fed board to its historic roots as an elite roster of the local financial establishment." His choices included Dick Fuld, CEO of Lehman Brothers, which failed spectacularly in

September 2008, and Stephen Friedman, a Goldman Sachs board member, who resigned as chair of the New York Fed's board after being accused of inappropriately trading Goldman stock during the financial crisis. Geithner also established a tangled web of connections between the New York Fed and JPMorgan Chase, some of which linger to this day.

Some senior Fed officials become angry when pressed about this reality. But the Fed's legitimacy - and its ability to make sensible policy - is not boosted by having major banks represented, directly or indirectly, on a board that chooses and oversees a key policymaker...

(Simon Johnson, ^œ[The Federal Reserve's Escape from New York](#), *Project Syndicate*, Nov. 24, 2014)

⁶⁶¹ As Yves Smith has put it:

[Central Bank Independence] is code for "the management of a country's finances must be in the hands of those who will keep governments from spending too much." The pretext is governments if not constrained by sober conservative ~~bankers~~ adults, will go and spend to buy votes and will create oodles of inflation, leading to a collapse in investment and all sorts of other horrors...

... [T]he independence pretense for central banks is a ruse for keeping them from being democratically accountable. Given their poor performance, both in helping to create the crisis by encouraging financialization (which we also now know leads to lower economic growth) and then by responding to it by favoring banks over the real economy, there should have been widespread demands for a change in their role, or alternatively, much greater transparency (admittedly, Audit the Fed was a step in that direction). But central banks have managed to do such a good job of preserving their secrecy and aura of mystery that they've gotten away without being called to account.

(Yves Smith, ^œ[Richard Murphy: The Debate on the Proper Role of the Bank of England, Continued](#), *Naked Capitalism*, 28 June, 2018)

⁶⁶² (07/02/16)(05/09/16)

(05/12/17) This seems to be a consequence of similar reasoning to that displayed in a [1999 publication by the IMF](#) in which it refers to "credits, advances, or overdrafts to the government by the central bank". Nowhere in the publication is the presumed relationship between a "central bank" and its associated "sovereign government" explained.

It is simply presumed that [central banks are entirely independent entities](#) which "lend" money to governments in ways which are analogous with the lending activities of private banks within the private sphere. We are not told where or how they presume those central banks obtain their funds in order to lend them but there is a distinct permeating impression that the authors subscribe to the "[intermediation of loanable funds \(ILF\)](#)" model of banking fallacy.

Of course, [institutions like the IMF and World Bank have been repurposed](#) over the past half century and more to subvert the sovereignty of client states. A principal weapon in this subversion is the process of financially 'bailing out' sovereign nations and imposing strict 'structural adjustment' regulations on their ability to manage their monetary systems - as [Marjorie Mbilinyi claimed](#), this amounts to little more than disguised colonialism.

Richard Werner, in a paper examining three different theories of banking which have been held over the past century (and more), has given a clear explanation of the nature of each. As he summarizes,

During the past century, three different theories of banking were dominant at different times:

- (1) The currently prevalent financial intermediation theory of banking says that banks collect deposits and then lend these out, just like other non-bank financial intermediaries.
- (2) The older fractional reserve theory of banking says that each individual bank is a financial intermediary without the power to create money, but the banking system collectively is able to create money through the process of 'multiple deposit expansion' (the 'money multiplier').
- (3) The credit creation theory of banking, predominant a century ago, does not consider banks as financial intermediaries that gather deposits to lend out, but instead argues that each individual bank creates credit and money newly when granting a bank loan.

The theories differ in their accounting treatment of bank lending as well as in their policy implications. Since according to the dominant financial intermediation theory banks are virtually identical with other non-bank financial intermediaries, they are not usually included in the economic models used in economics or by central bankers. Moreover, the theory of banks as intermediaries provides the rationale for capital adequacy-based bank regulation. Should this theory not be correct, currently prevailing economics modelling and policy-making would be without empirical foundation.

Despite the importance of this question, so far only one empirical test of the three theories has been reported in learned journals. This paper presents a second empirical test, using an alternative methodology, which allows control for all other factors. The financial intermediation and the fractional reserve theories of banking are rejected by the evidence. This finding throws doubt on the rationale for regulating bank capital adequacy to avoid banking crises, as the case study of Barclays Bank during the crisis illustrates. The finding indicates that advice to encourage developing countries to borrow from abroad is misguided.

The question is considered why the economics profession has failed over most of the past century to make any progress concerning knowledge of the monetary system, and why it instead moved ever further away from the truth as already recognised by the credit creation theory well over a century ago.

(Richard A. Werner, (2015) [A lost century in economics: three theories of banking and the conclusive evidence](#). *International Review of Financial Analysis*, 1-19.
(doi:10.1016/j.irfa.2015.08.014).)

(See, also, R. A. Werner, [Can banks individually create money out of nothing? - The theories and the empirical evidence](#), *International Review of Financial Analysis*, 36 (2014), pp. 1-19;
Richard A. Werner, [How do banks create money, and why can other firms not do the same? An explanation for the coexistence of lending and deposit-taking](#), *International Review of Financial Analysis* Volume 36,

While I agree with Werner that 'the theory of banks as intermediaries provides the rationale for capital adequacy-based bank regulation' and that the theory is incorrect, I would suggest that there is a very real need for sovereign governments to [monitor and regulate the private creation of unsecured credit](#). Whether this is based in ensuring that banks '[have enough loss-absorbing capital](#)' or in other forms of regulatory supervision, the need for public supervision and management of private credit creation remains.

Yves Smith, in a comment on a forgettable article by a number of neoliberal stalwarts, has summed up some of the problems of 'the loanable funds theory':

I know we have to run this sort of thing occasionally to keep an eye on orthodox thinking, but this piece is based on the loanable funds theory, which was challenged by Keynes and debunked definitively by Kaldor in the 1950s. The key assumption here is that if you make the cost of money cheap enough, people will borrow and invest (or spend). But any competent businessman will tell you they don't expand their business for the hell of it, they do so if they see an opportunity. So the cost of money can constrain investment, but making it cheap won't create new markets or more demand. The exception is businesses where the cost of money is one of the biggest business expenses....such as financial speculation and other leveraged investing.

(Yves Smith, [What Else Can Central Banks Do?](#), posted by Lambert Strether, *Naked Capitalism*, September 4, 2016)

⁶⁶³ In recent years, central banks around the world have broadened their ability to create and issue credit through credit swap arrangements with other central banks¹⁰⁴⁹. As the *Council on Foreign Relations* has explained:

Since the financial crisis of 2007, central banks around the world have entered into a multitude of bilateral currency swap agreements with one another. These agreements allow a central bank in one country to exchange currency, usually its domestic currency, for a certain amount of foreign currency. The recipient central bank can then lend this foreign currency on to its domestic banks, on its own terms and at its own risk.

([The Spread of Central Bank Currency Swaps Since the Financial Crisis](#), *Council on Foreign Relations*, Central Banks Currency Swaps, 2015)

The US Federal Reserve has explained the rationale for establishing central bank liquidity swap lines with foreign central banks:

Because bank funding markets are global and have at times broken down, disrupting the provision of credit to households and businesses in the United States and other countries, the Federal Reserve has entered into agreements to establish central bank liquidity swap lines with a number of foreign central banks. Two types of swap lines were established: dollar liquidity lines and foreign-currency liquidity lines.

The swap lines are designed to improve liquidity conditions in dollar funding markets in the United States and abroad by providing foreign central banks with the capacity to deliver U.S. dollar funding

to institutions in their jurisdictions during times of market stress. Likewise, the swap lines provide the Federal Reserve with the capacity to offer liquidity in foreign currencies to U.S. financial institutions should the Federal Reserve judge that such actions are appropriate. These arrangements have helped to ease strains in financial markets and mitigate their effects on economic conditions. The swap lines support financial stability and serve as a prudent liquidity backstop...

In general, these swaps involve two transactions. When a foreign central bank draws on its swap line with the Federal Reserve, the foreign central bank sells a specified amount of its currency to the Federal Reserve in exchange for dollars at the prevailing market exchange rate...

(^œ[Credit and Liquidity Programs and the Balance Sheet](#), *Board of Governors of the Federal Reserve System*, Last update: August 14, 2015)

Of course, in democratically organized capitalist nations, recipient central banks can both lend the received foreign currencies on to their domestic banks and/or also utilize the received funds in financing public works and services. That is, through currency swaps based on credit creation, central banks can, with appropriate regulation and caution, fund both internal and external public expenditures through credit creation. As Beardsley Ruml put it, governments have final freedom from money markets in meeting their financial requirements.

(01/03/16) The development of such inter-central bank credit swaps obviates the need for public borrowing in international money markets. These arrangements are far more appropriately controlled through bilateral central bank swaps than through the intermediation of a 'world central bank' which would, almost inevitably, presume central bank borrowing in the international financial marketplace.

(02/03/16) Arguments in favor of a 'World Central Bank' are usually based in a *laissez faire* presumption that central banks should be independent entities, responsible and responsive to private money markets and that governments should, in economic matters, be subservient to the marketplace. International economic stability is best ensured through the intermediation of a 'world central bank' as "the world's lender of last resort"¹⁰⁵⁰.

Andrés Velasco has argued that, since "the dollar remains the currency of choice for borrowing and lending around the world", the US Federal Reserve should accept that it has a *de facto* responsibility to act as "the world's lender of last resort in dollars":

The Fed's reluctance to serve as the world's lender of last resort, or to acknowledge that exchange-rate movements cannot undo its actions abroad, would seem to condemn it to being a parochial and inward-looking institution.

The Fed's domestic mandate requires it to recognize, in Fischer's words, that "the US economy and the economies of the rest of the world have important feedback effects on each other." And those effects are getting larger....

Recent financial history suggests that the next liquidity crisis is just around the corner, and that such crises can impose enormous economic and social costs. And in a largely dollarized world

economy, the only certain tool for avoiding such crises is a lender of last resort in dollars.

The IMF could have been that lender, but it is not. The Fed is. The sooner the US and the rest of the world fully recognize this, the safer the world economy will be.

(Andrés Velasco, [∞][The World's Reluctant Central Banker](#), *Project Syndicate*, 29 February, 2016)

It is this already powerful default status of the US Federal Reserve as central bank to the world which is being challenged through the emergence of alternative centers of international financing which have the potential to bypass the US Federal Reserve as the "world's lender of last resort".

⁶⁶⁴ The use of open-ended code words is common sophist practice. Everyone 'knows' that 'expenditures' must be 'funded' and must come from 'somewhere'. So, if governments 'spend' then their 'money' must come from somewhere - if not from private money markets then, presumably, from 'the public' or 'future generations'. The code words, either deliberately or naively, steer reasoning toward desired conclusions.

Any who oppose the reasoning find themselves having to challenge the code words, caught up in an apparently endless definitional exercise which leads nowhere and can be dismissed as deliberately diversionary. Attempting to expose the hidden presumptions of ideologically driven reasoning can be frustrating!

James Galbraith described neoclassical economists' means of protecting their frame (and themselves) well:

...[N]eoclassical economics perpetuates itself by replicating a single set of methods in a handful of leading journals to which no dissenters have access. There, the faithful continue to offer analyses that are of no interest to anyone who has grasped the evolutionary methodology common to all the important dissenting schools.

Under neoclassical economics, the subject is defined by what it excludes: the simple fact that things change over time. Its practitioners harbor an affinity for Intelligent Design - the belief in a transcendent celestial harmony that is at odds with the development of actual scientific thought since Charles Darwin's *The Origin of Species* appeared in 1859.

(James K. Galbraith, [∞][Dismal Economics](#), Originally published at *Project-Syndicate*, July 23, 2021)

[Wynne Godley \(1992\)](#) provided an excellent illustration of what happens when ideologues gain the power to shape the world to their [inadequate understandings of reality](#). The consequences, for the rest of us can, as the population of Greece has found, be dire.

It is the nature of ideologies that those whose realities are framed by them will develop rationalizations to validate their core presumptions. The apparently logical justificatory explanations developed through time exist to demonstrate, not challenge, the validity of the presumptions.

Since their rationalizations, as Claude Levi-Strauss (1963, pp. 282) explained, "are not intended to explain the phenomena but to perpetuate them", over time, they become increasingly complex, convoluted and opaque as they are adapted to their purpose. Their purpose, after all, is not to question or clarify but to justify and buttress the presumptions.

This process necessarily results in increasing commitment of both credibility and self-images to the defense of the buttressed ideologies.¹⁰⁵¹

Of course, those involved in such activity do not recognize the ideological nature of their involvement. Those who live comfortably within ideologically defined realities seldom need to address, or even be aware of, the core presumptions which subliminally frame their lives. The presumptions exist as less than conscious limitations to thought and action. When others are encountered whose lives are not similarly framed, they appear less than rational, frustrating evidence that there are people who do not think 'rationally'.

Keynes summed up the nature of ideologically defined realities well in his critique of Ricardo's understanding of the world in which he lived, framed by 'adopting a hypothetical world remote from experience as though it were the world of experience':

...[I]f the quantity of employment and the psychological propensities of the community are taken as given, there is in fact only one possible rate of accumulation of capital and, consequently, only one possible value for the marginal efficiency of capital. Ricardo offers us the supreme intellectual achievement, unattainable by weaker spirits, of adopting a hypothetical world remote from experience as though it were the world of experience and then living in it consistently. With most of his successors common sense cannot help breaking in - with injury to their logical consistency.

(J. M. Keynes, 1936, *The General Theory of Employment, Interest and Money*, Chapter 15: ^œ[Appendix On The Rate Of Interest In Marshall's Principles Of Economics, Ricardo's Principles Of Political Economy, And Elsewhere](#), Section II)

Awareness of the ideological nature of an ideologue's own understandings and activity often leads to self-doubt and questioning of the accuracy of those justificatory explanations. This, inevitably, leads to self-preservatory reactions from others who have committed their lives to the ideologies buttressed by the explanations - heretics and apostates are far more dangerous than unbelievers and punishment almost invariably fits the crime!

Leo Tolstoy (1898) described the ideologue well at the start of Chapter 14 of ^œ[What Is Art? and Essays on Art](#) :

I know that most men - not only those considered clever, but even those who are very clever and capable of understanding most difficult scientific, mathematical, or philosophic, problems - can seldom discern even the simplest and most obvious truth if it be such as obliges them to admit the falsity of conclusions they have formed, perhaps with much difficulty - conclusions of which they are proud, which they have taught to others, and on which they have built their lives.

(Oxford University Press, 1930, trans. Aylmer Maude).

⁶⁶⁵ An excellent Ben Norton video post provides insight into Washington's dawning awareness of the emerging worldwide growth of alternatives to the United States dollar in inter-nation financial interactions:

Ben Norton, ^œ[US Congress plots to save dollar dominance amid global de-dollarization rebellion](#), *Geopolitical Economy Report*, June 20, 2023.

Also,

Tim Sablik, ^œ[Is Dollar Dominance in Doubt?](#): The dollar has been the global currency of choice for nearly a century, but in light of recent U.S.-led financial sanctions, some wonder whether that status will endure, *US Federal Reserve Bank of Richmond, Econ Focus*, Second Quarter 2022.

⁶⁶⁶ That these international institutions have managed to convince so many middle-income countries that they must not *create* the sovereign credit they need but must [raise it on international 'money markets' is unforgivable](#).

As the authors say, the private sector holds more than 80 percent of the so-called 'sovereign debt' in these middle-income countries. They have delivered those countries (for which they should have displayed fiduciary responsibility) into the hands of [amoral and asocial international banks](#) and other parasitical financial organizations.

Michael Hudson has described what is happening in Western nations as the effects of the 2020 Covid-19 crisis financially cripple increasing numbers of people. His description applies equally to those low- and middle-income countries which have been caught in the debt trap of foreign credit borrowing promoted by those predatory, US based, international organizations. As he says, nations in this predatory trap end up looking [like the Greek economy](#) in 2015:

The debts that have been built up are being used as a financial warfare tactic. It is more efficient than military warfare. Debt has been used to strip away the assets of middle-class people, of home owners, of employee pension funds, to suck their savings and property up to the top of the economic pyramid. The pandemic crisis has created a battlefield. Its rules have been written by the financial sector and their lobbyists as an opportunity for the largest property and financial grab since the Great Depression.

The result will be that much of the American and European [and low- and middle-income countries'] economies are going to end up looking like the Greek economy five years ago, when it was unable to pay its euro-debts. You can look at Greece as the future of the United States, catalysed by the coronavirus pandemic....

There is going to be a wave of bankruptcy, and that will be followed by fire sales of real estate. Unemployment is going to lead to lower wage levels, and there also will be cutbacks in public spending for social services, transportation and other normal programs.

Privatisation sell-offs will occur, much like Margaret Thatcher's in England. this is now going to be imposed upon Europe [and, of course, on all those low and middle income countries]. It's possible that the Eurozone will break up if it does not change its rules and create the euro-money to enable Italy and Spain to get by. But at present the Eurozone rules are that all the money, all of the credit that is needed to grow in Europe, should be borrowed from banks at interest.

Banks can create this money on their keyboards electronically. The government could do the same, but relinquishes this privilege to the privatized banking sector. As Modern Monetary Theory explains, a central bank can simply print the money that is needed to fuel economic growth. But the financial sector has captured the hearts and minds of central bankers, from Europe to the United States.

The problem is these banks don't lend money to create means of production or livelihood. They don't lend money to build factories. Banks lend money against assets already in existence, mainly real estate, houses, buildings, and also companies - and to corporate raiders to buy other companies on credit. So, the effect of this bank lending has been to inflate the price of real estate, because a house or a building is worth whatever a bank will lend against it.

The financial sector has become less and less productive, and more predatory. It has prevented European governments from having a central bank that directs deficit spending into the real economy. Only the banks and financial sector, the elite One Percent, are supported, as in the United States. Ten trillion dollars 's put into the economy, mainly into the stock and financial markets, the bond market and the real estate market, but not into production.

(^œ[Michael Hudson on Coronavirus and Debt Winners and Losers](#), *nakedcapitalism*, posted by Yves Smith, June 27, 2020)

⁶⁶⁷ Ihonvbere's (2010) acerbic assessment of the 'African condition today':

If we take a total look at the African condition today, one reality that we cannot accuse African leaders and policy makers of doing in the last six to seven decades is that they promoted any form of development. To be sure, failed policies have "developed" the pockets and bank accounts of a tiny class of political elites and their hangers-on.

For the majority of Africans who are suffering from grinding poverty and hopelessness, what has passed for public policy since so-called political independence has been nothing but pain, hunger, marginalization, exploitation, domination, and deliberate impoverishment. *Death by Government* (R. J. Rumen, *Transaction 2000*) or *death by public policy* has become the outcome of numerous half-baked and poorly thought-out policies as well as outlandish corruption that have been unleashed on Africans.

(Julius O. Ihonvbere, ^œ[Reinventing Africa for the Challenges of the Twenty-First Century](#), Text of the 2010 Annual Public Lecture of the Centre for Black and African Arts and Civilisation (CBAAC), Lagos, 22nd July, 2010)

Julius Ihonvbere has served as a member of the House of Representatives in Nigeria representing the Owan Federal Constituency. A range of his writings can be accessed from his internet site: ^œ[Towards Building a New Nigeria: National Re-Orientation or Transformation?](#), Julius Ihonvbere.com: Where Theory Meets Praxis, 8-9 July, 2011)

⁶⁶⁸ The US has, of course, been involved in 'regime change' activity in Brazil over many years. The FBI and CIA orchestrated and fomented scandal involving left-leaning President Luis Inacio "Lula" da Silva in 2015 and his subsequent illegitimate, political imprisonment are but recent examples of its crimes.

Brian Mier (below) describes the way in which US Department of Justice (DOJ) 'prosecutors' used US laws to reach into Brazil and subvert the political process. Glenn Greenwald and Victor Pougy, in 2019, explained how the so-called 'Car Wash' scandal, 'uncovered' by US DOJ personnel, was used to empower right-leaning prosecutors in delegitimizing the 'Workers' Party':

An enormous trove of secret documents reveals that Brazil's most powerful prosecutors, who have spent years insisting they are

apolitical, instead plotted to prevent the Workers' Party, or PT, from winning the 2018 presidential election by blocking or weakening a pre-election interview with former President Luiz Inácio Lula da Silva with the explicit purpose of affecting the outcome of the election.

The massive archive, provided exclusively to The Intercept, shows multiple examples of politicized abuse of prosecutorial powers by those who led the country's sweeping Operation Car Wash corruption probe since 2014. It also reveals a long-denied political and ideological agenda. One glaring example occurred 10 days before the first round of presidential voting last year, when a Supreme Court justice granted a petition from the country's largest newspaper, Folha de São Paulo, to interview Lula, who was in prison on corruption charges brought by the Car Wash task force.

Immediately upon learning of that decision on September 28, 2018, the team of prosecutors who handled Lula's corruption case - who spent years vehemently denying that they were driven by political motives of any kind - began discussing in a private Telegram chat group how to block, subvert, or undermine the Supreme Court decision. This was based on their expressed fear that the decision would help the PT - Lula's party - win the election. Based on their stated desire to prevent the PT's return to power, they spent hours debating strategies to prevent or dilute the political impact of Lula's interview.

(Glenn Greenwald and Victor Pougny, ["Hidden Plot: Exclusive: Brazil's Top Prosecutors Who Indicted Lula Schemed in Secret Messages to Prevent His Party From Winning 2018 Election,"](#) *The Intercept*, June 10 2019)

All charges against Da Silva were formally dismissed in early March 2021. Brian Mier has given a well-documented account of it all:

The Foreign Corrupt Practices Act or FCPA, originally passed in 1977, is a federal law designed to prohibit overseas bribery by US companies. Twenty years later, it was linked to an international treaty, the OECD Anti-Bribery Convention of 1997, which enables the SEC and DoJ to act in any signatory nation in consort with local authorities. These partnerships enable US authorities to investigate any company that has a US bank account, owns real estate in the US, has stock traded in the US, or that has ever conducted any type of transaction in dollars. It was the FCPA, for example, that enabled FBI agents to raid FIFA headquarters in Zurich in 2015.

The fact that Brazil adheres to the Anti-Bribery Convention enabled the US DoJ to work as an equal partner - some critics argue it took the lead - in Lava Jato, levying billions of dollars in fines on Brazilian companies in civil cases, generally based in the Southern New York Court District.

Indeed, anyone interested could read about the US involvement in Lava Jato in legal blogs as early as 2015, in documents published by US Law firms and on the DOJ's own website starting in 2016, as US Attorney General William Barr pointed out in his reply to a congressional inquiry led by Hank Johnson and 12 other members of Congress into, among other things, whether the US DoJ played a role in Lula's arrest.

(Brian Mier, ["NYT Fails to Examine Its Participation in Brazil's 'Biggest Judicial Scandal',"](#) *FAIR*, March 8, 2021)

⁶⁶⁹ It needs to be remembered that, for sovereign governments, Central Bank 'deficits' are entries on the 'debit' side of the ledger. Unfortunately, this is a consequence of applying profit-and-loss bookkeeping procedures (based on presumptions of 'incomes' and 'expenditures') to Central Bank credit creation. However, the created credit is not 'income'; nor is it a 'deficit', or a 'liability'. It has been conjured out of thin air and is unencumbered credit.

⁶⁷⁰ The British ^{ae}[Exchequer and Audit Departments Act 1866](#) spells this out for Britain:

Payment out of Consolidated Fund: sums authorised by Parliament.

- (1) This section applies in respect of sums **which Parliament has authorised, by Act or resolution of the House of Commons**, to be issued out of the Consolidated Fund.
- (2) The Comptroller and Auditor General shall, **on receipt of a requisition from the Treasury**, grant the Treasury a credit on the Exchequer account at the Bank of England (or on its growing balance).
- (3) Where a credit has been granted under subsection (2) issues shall be made to principal accountants from time to time on orders given to the Bank by the Treasury.
- (4) An order under subsection (3) shall specify the service on account of which the issue is authorised.
- (5) The Bank shall send to the Comptroller and Auditor General a daily account of all issues made from the Exchequer account in pursuance of this section.
- (6) The Treasury shall send to the Comptroller and Auditor General a daily statement specifying the service on account of which each issue was made from the Exchequer account in pursuance of this section.
[my emphasis]

As Neil Wilson says, in a comment on a ^{ae}[Bill Mitchell Blog post point](#),

"They should tell the British people how the Treasury actually spends - that is, that it instructs the Bank of England to type numbers into bank accounts on its behalf"

Note there is no legal option for the Bank to say "no".

⁶⁷¹ There has long been a strange obfuscation of interactions between [sovereign Treasuries \(or ministries of finance\) needing to 'fund' their credit requirements and Central Banks](#). Treasuries are assumed to issue and *sell* ['government debt securities'](#) either directly to Central Banks or within Private Sector bond markets; and Central Banks are presumed to have to 'buy' those 'securities' either directly from Government Treasuries or from private sector bond markets.

But, of course, one of the roles of a Central Bank in a fiat-currency sovereign state is to create and issue unencumbered credit as and when those states require it. That activity is claimed to be triggered by 'purchasing' so-called 'debt securities' issued by the treasuries of those governments.

The reality is that what is strangely labelled as a 'debt security' is, in fact, a *requisition*, instructing the Central Bank to engage in credit

creation on behalf of the Treasury.

The obfuscation of that process is designed to create the illusion that the Treasury and Central Bank are independent of each other, with the Central Bank 'lending' credit to the Treasury and the Treasury 'owing' that credit to the Central Bank (ostensibly creating a 'Sovereign Government Deficit') - an absurd mystification of a straightforward process between *two departments of the same government*.

Kenneth Garbade (2014) provided a succinct explanation of the nature of direct purchases of 'government securities' or 'Government bonds' from the Treasury by the US Federal Reserve:

The original version of the Federal Reserve Act provided a robust safety net because the act implicitly authorized the new Reserve Banks to buy securities directly from the Treasury. The Banks made active use of their "direct purchase authority" during, and for a decade and a half after, World War I. Congress acted to prohibit direct purchases in 1935, but reversed course and provided a limited wartime exemption in 1942. The exemption was renewed from time to time following the conclusion of the war but ultimately allowed to expire in 1981...

A memorandum prepared in response to an inquiry from the House Banking Committee about the source of the Fed's authority to purchase securities directly from the Treasury stated that,

No question was ever raised as to the authority of the Federal Reserve banks, under the provisions of subsection (b) ..., to buy United States bonds directly from the Treasury. The contrasting provisions of [the first sentence of] section 14 and subsection (b) would seem to supply ample legal justification for this fact. Under section 14 Federal Reserve banks could purchase and sell eligible paper only "in the open market"; but their power under subsection (b) to deal in Government bonds was not so limited. Accordingly, the Board at all times assumed that the Federal Reserve Banks had the legal authority to purchase Government bonds directly from the Treasury ...

(Kenneth D. Garbade, ⁶⁷²[Direct Purchases of U.S. Treasury Securities by Federal Reserve Banks](#), *Federal Reserve Bank of New York*, Staff Report No. 684, August 2014, pages 1,2)

The direct purchase of securities from the Treasury was, effectively, the [generation of unencumbered sovereign credit by the Federal Reserve at the request of the US Treasury](#). This 'request' was **not** a transfer of 'debt' from the treasury to the Federal Reserve. It should, rather, be seen as *an authorization* of the Federal Reserve, by the Treasury, to engage in credit creation on behalf of the Treasury.

In the light of the post-1935 interpolation of the irrelevant directive that all such authorizations must be purchased from the private sector bond markets by the Federal Reserve, it is most unfortunate that the term 'buy United States bonds directly from the Treasury' is used in this section of the bill rather than the less loaded term '*request authorizations directly from the Treasury*'¹⁰⁵².

⁶⁷² Bill Mitchell has provided an interesting historical explanation of the reason why the term 'government debt' is so deeply embedded within Western capitalist economic discourse:

To understand the situation now, one has to understand what went before.

During the C18th, so-called commodity currency systems, where a currency might be valued for its intrinsic value. became problematic because there was a shortage of silver and this system steadily gave way to a system where paper money issued by a central bank was backed by gold.

So the idea was that a currency's value can be expressed in terms of a specified unit of gold.

To make this work there had to be convertibility which meant that someone who possessed a paper note would be able to convert it for the relevant amount of gold.

So the - Gold standard - was deployed where the value of currencies around the world was regulated in terms of a certain amount of gold. When the gold standard was in vogue (C19th into the C20th) it was the major way that countries adjusted their money supply.

Britain adopted the gold standard in 1844 and it became the common system regulating domestic economies and trade between them up until World War I. In this period, the leading economies of the world ran a pure gold standard and expressed their exchange rates accordingly.

The monetary authority agreed to maintain the 'mint price' of gold fixed by standing ready to buy or sell gold to meet any supply or demand imbalance. Further, the central bank (or equivalent in those days) had to maintain stores of gold sufficient to back the circulating currency (at the agreed convertibility rate).

Gold was also considered to be the principle method of making international payments. Accordingly, as trade unfolded, imbalances in trade (imports and exports) arose and this necessitated that gold be transferred between nations (in boats) to fund these imbalances. Trade deficit countries had to ship gold to trade surplus countries.

Nations experiencing an inflow of gold could then expand the money supply (issue more notes) because they had more gold to back the currency. This expansion was in strict proportion to the set value of the currency in terms of grains of gold.

The rising money supply would push against the inflation barrier (given no increase in the real capacity of the economy) which would ultimately render exports less attractive to foreigners and the external deficit would decline.

Central banks in nations experiencing a loss of gold reserves were forced to withdraw paper currency which was deflationary - rising unemployment and falling output and prices. The latter improved the competitiveness of their economy which also helped resolve the trade imbalance. But it remains that the deficit nations were forced to bear rising unemployment and vice versa as the trade imbalances resolved.

The proponents of the gold standard focus on the way it prevents the government from issuing paper currency as a means of stimulating their economies.

Under the gold standard, the government could not expand base money if the economy was in trade deficit. It was considered that the gold standard acted as a means to control the money supply and generate price levels in different trading countries which were consistent with trade balance. The domestic economy however was forced to make the adjustments to the trade imbalances.

Monetary policy became captive to the amount of gold that a country possessed (principally derived from trade). Variations in the gold production levels also influenced the price levels of countries.

In practical terms, the adjustments to trade that were necessary to resolve imbalances were slow.

In the meantime, deficit nations had to endure domestic recessions and entrenched unemployment.

A gold standard introduces a recessionary bias to economies with the burden always falling on countries with weaker currencies (typically as a consequence of trade deficits).

This inflexibility prevented governments from introducing policies that generated the best outcomes for their domestic economies (high employment).

As he concludes:

In a fiat currency system, the government does not need to 'finance' its net spending (deficits), in which case the issuing of debt by the treasury has to serve other purposes.

Why then do governments continue to issue public debt when there is no financial need for them to do so?

Conclusion

We have established an important understanding today - that the usual justifications for currency-issuing governments issuing debt are not sustainable.

In Part 2, we will consider some of the other justifications.

We will see that none are sustainable.

(Bill Mitchell, [Why do currency-issuing governments issue debt - Part 1](#), *Modern Monetary Theory Blog*, Monday, June 1, 2020

Also: [Why do currency-issuing governments issue debt? - Part 2](#), *Modern Monetary Theory Blog*, June 2, 2020)

⁶⁷³ Robert Brulle has explained the extent and costings of United States' lobbying activities between 2000 and 2016 with special reference to lobbyist activity in opposing climate change legislation. The quotations come from a summary of his research by the Journal editors of his study:

Climate lobbying is big business. A new analysis shows that between 2000 and 2016, lobbyists spent more than two billion dollars on influencing relevant legislation in the US Congress. Unsurprisingly, sectors that could be negatively affected by bills limiting carbon emissions, such as the electrical utilities sector, fossil fuel companies and transportation corporations had the deepest pockets. Their lobbying efforts dwarfed those of environmental organizations, the renewable energy industry and volunteer groups...

Brulle analyzed data from mandatory lobbying reports made available on the website Open Secrets. In his study, he calculated that the two billion dollars spent between 2000 and 2016 on climate-related issues actually only amounted to 3.9 per cent of the 53,5 billion dollars spent over the same period on lobbying on other issues in the US.

..."The vast majority of climate lobbying expenditure came from sectors that would be highly impacted by climate legislation," Brulle explains. "The spending of environmental groups and the renewable energy sector was eclipsed by the spending of the electrical utilities, fossil fuel, and transportation sectors."

Brulle says that this has important implications for the fate, outcome and nature of future climate legislation, which is largely determined by intra-sector and inter-industry competition. He says that the activities of environmental organizations and non-profit organizations often constitute one-time, short-term mobilization efforts. This is a shortcoming, given the vast expenditures and continuous presence of professional lobbyists.

"Lobbying is conducted away from the public eye. There is no open debate or refutation of viewpoints offered by professional lobbyists meeting in private with government officials," explains Brulle.

"Control over the nature and flow of information to government decision-makers can be significantly altered by the lobbying process and creates a situation of systematically distorted communication. This process may limit the communication of accurate scientific information in the decision-making process.

(Brulle, R. J. (2018). [The Climate Lobby: A Sectoral Analysis of Lobbying Spending on Climate Change in the United States - 2000 to 2016](#), *Climatic Change*, Online: 19 July 2018, DOI: 10.1007/s10584-018-2241-z)

⁶⁷⁴ Bill Mitchell has summed it all up:

We talk a lot about 'fake news' these days. Well mainstream macroeconomics as taught in universities and practiced in international organisations such as the OECD and the IMF and within treasury and central bank departments - is fake knowledge. (Bill Mitchell, [That "old fashioned" MMT predicts well - Grouphink in action](#), *Billy Blog*, February 6 2017)

⁶⁷⁵ (13/02/17) Forgive this statement of the obvious but sometimes it can clarify issues. The reason why many neoliberal devotees presume that bonds issued by sovereign governments 'support government spending' is that they make no distinction between bonds issued by a sovereign government and those issued by lower levels of government.

Since it is 'obvious' that state/ provincial governments, regional/ city councils and local bodies issue bonds because they 'need' the credit raised through bond sales, it is simplistically assumed that this logic applies equally to bonds issued by currency and credit creating/ issuing sovereign governments.

Of course, bonds issued by sovereign governments are the means by which central banks offer risk-free 'savings accounts' to private entities. And, as [Zoltan Jakab and Michael Kumhof \(2015\)](#) explained of similar accounts in private banks, the funds deposited in those savings accounts are **not** then lent to borrowers or used to pay creditors.

On the other hand, bonds issued by *non-sovereign branches of government* or private entities are 'debt certificates' or 'debt issues'. *Investopedia* has explained, and, in the process, demonstrated that confusion in the minds of 'knowledgeable' neoliberally oriented commentators:

A debt issue is a financial obligation that allows the issuer to raise funds by promising to repay the lender at a certain point in the future and in accordance with the terms of the contract. Debt issues include notes, bonds, certificates, mortgages, leases or other agreements between the issuer (the borrower) and lender. Debt issues, such as bonds, are issued by corporations to raise money for certain projects or to expand into new markets; **municipalities, states and U.S. and foreign governments issue debt to finance a variety of projects such as social programs or infrastructure plans.**

(*Investopedia*^œ, [Debt Issue](#), [accessed February 20, 2017. (My emphasis)])

It really is important to understand the difference between bonds issued by sovereign governments and bonds issued by lower levels of government which are not able to create unencumbered sovereign credit as required. Clearly, the contributor of the above *Investopedia* entry has not understood this fundamentally important difference.

So-called 'sovereign' states included within the Eurozone are, of course, *not truly sovereign* at all. They have accepted fiscal and monetary subordination to the European Central Bank (ECB). And, [as we have already seen](#), the European Commission has not accepted responsibility for addressing the consequences of ongoing and vastly different economic circumstances, events and long-term prospects in those member states.

Indeed, many of their publications have betrayed similar confusion to that displayed in the above *Investopedia* explanation. This has been clearly illustrated in a remarkably naive European Central Bank working paper entitled ^œ[Foreign-law bonds: can they reduce sovereign borrowing costs?](#) (Marcos Chamon, Julian Schumacher, Christoph Trebesch, European Central Bank Working Paper 2162, June, 2018). See Bill Mitchell: ^œ[Governments should not issue debt under foreign law](#) (*Billy Blog*, July 3, 2018) for further discussion of issues presented in this paper.

A case could be made for the funding of all lower level government credit requirements through central banks ([freeing them from exorbitant fees and interest charges](#)) but this would have to be accompanied by clear protection of the decision-making autonomy of lower levels of government.¹⁰⁵³

⁶⁷⁶ (14/10/16)(21/10/16)(05/11/16)

(19/11/17) Nancy LeTourneau of the *Washington Monthly* explained how Donald Trump, the 2016 US Republican presidential candidate, would fund infrastructure development:

Donald J. Trump took a step to Hillary Clinton's left on Tuesday, saying that he would like to spend at least twice as much as his Democratic opponent has proposed to invest in new infrastructure as part of his plan to stimulate the United States' economy...

Asked how he would pay for \$800 billion to \$1 trillion in infrastructure spending, Mr. Trump described a strategy that has been favored by liberal economists over the years. He said he would create an infrastructure fund that would be supported by government bonds that investors and citizens could purchase...

Conservative critics of Mr. Trump expressed concern that the idea would put the country deeper in debt and that it sounded alarmingly similar to Mr. Obama's 2009 stimulus program.

(Nancy LeTourneau, ^œ[Quick Takes: Trump Will Accept the Outcome of the Election...If He Wins](#), Political Animal Blog, *Washington Monthly*, October 20, 2016)

(04/11/16) (12/11/16) This is, of course, conventional neoliberal thinking, but it highlights one of the many strange redundancies which litter neoliberal dogma.

Apparently, the US government, under President Trump, will [create public 'debt' through selling 'bonds' to US investors and citizens](#) and then use the proceeds of those sales to fund infrastructural development.¹⁰⁵⁴

(13/11/16) Daniel Thornton, vice president of the US Federal Reserve Bank of St Louis, explained the convoluted means by which the US (and other governments), in this neoliberal age, can 'finance deficit spending':

Governments can finance deficit spending by issuing debt or printing money. In most countries, a government-created central bank controls the money supply - in the United States, this task belongs to the Federal Reserve System. This means that the U.S. Treasury has only one option for financing deficit spending - issuing debt. (The Fed is forbidden by law to purchase government securities directly from the government. The government first sells securities to the private sector and the Fed then purchases securities from the private sector, specifically, government securities dealers.)

Of course, the government could still finance deficit spending if the central bank created money by purchasing government debt. For example, assume the Fed purchased government securities. The Treasury would pay interest on the government securities to the Fed and the Fed could then return the interest income (net of its operational expenses) to the Treasury. The Fed would effectively be financing deficit spending by "printing" money. It would simply be a two-step process: The government would sell debt to the public and the Fed would exchange the public's holdings of government debt for money. Many analysts call this twostep process "monetizing the debt."

(Daniel L. Thornton, ^œ[Monetizing the Debt](#), *Federal Reserve Bank of St Louis, Economic Synopses*, No. 14, May 19, 2010)

(20/12/16) But, why go through this [elaborate charade](#)?¹⁰⁵⁵

(22/10/17) The sleight-of-hand process of relabeling government agencies' unencumbered sovereign credit requirements as 'government debt' seems deliberately designed to enable private financial institutions to impose a private sector 'tax' (disguised as 'interest rates on the country's debt') on government credit channeled into the real economy¹⁰⁵⁶. As [Bryce Covert](#), echoing Paul Krugman and countless other 'knowledgeable' economists, put it:

[I]nterest rates on the country's debt are incredibly low, hovering around 2 percent. That means we could borrow more money at a very low cost.

(17/03/18) While 'the Fed is forbidden by law to purchase government securities directly from the government'¹⁰⁵⁷, those laws are determined by governments. If the laws introduce unnecessary convolutions and redundancies and/or advantage special interests they can be changed.

There is no 'natural law' of financing which requires the interpolation of such redundancies into government financing of their expenditures. Neither is there any 'natural law' which requires the central bank to create money by purchasing 'government debt'.

(29/11/16) Rather than relabeling the unencumbered credit requirements of government departments and agencies as 'government debt' which can be bundled and sold to the central bank as 'government securities', the central bank could straightforwardly issue unencumbered sovereign credit as required to fund government expenditures (and, to ensure that private sector credit supply is not unduly inflated, issue sovereign bonds to [siphon excess credit from the sector](#)). If they did this, the 'purchase of government debt' or 'government securities' by the central bank would be rendered redundant.

(13/12/16) As we have [already seen](#), the creation of unsecured credit by private financial institutions is not the same as credit creation by sovereign central banks.

[Private credit creation is encumbered](#), that is, it is 'debt'. It is based on an assumption of 'credit-worthiness' backed by presumed access to sovereign credit.

Sovereign credit is [unencumbered](#), that is, it is debt-free.¹⁰⁵⁸

It is all a matter of *private sector* created credit being 'encumbered' (being burdened with legal claims on the [presumed sovereign credit holdings](#) of the creator and so being 'debt') and *sovereign government* created credit being 'unencumbered' (it is free and clear of any encumbrances, such as creditor claims or liens), that is, it is *not* 'debt'.

Neoliberal ideologues, presuming that *all* credit is created in the private realm (the [government is merely a user of privately created credit](#)¹⁰⁵⁹), assume that all created credit is 'debt'. But, their ideologically induced confusion does not alter reality, it merely obscures it. In the process, this creates fertile ground for those who consider it important that [governments 'pay down the national debt'](#).

The financial sector, [steeped in neoliberal marinade](#), will, inevitably, argue that the creation of 'debt securities', [sold by sovereign governments to 'secure their debts'](#), is essential and provides the government with credit to fund its activities. *Investopedia* has explained:

A government bond is a debt security issued by a government to support government spending. Federal government bonds in the United States include savings bonds, Treasury bonds and Treasury inflation-protected securities (TIPS). Before investing in government bonds, investors need to assess several risks associated with the country, such as country risk, political risk, inflation risk and interest rate risk, although the government usually has low credit risk.

(*Investopedia*, ^œ[Government Bond](#) (accessed October 3, 2016))

(15/10/16) This is an obfuscatory redundancy ([an unnecessary inclusion](#) intended to obscure reality through distraction or confusion (or a

consequence of reasoning rooted in a superficial misunderstanding of the nature of sovereign credit)). There is no sound logical reason why 'government bonds' or 'debt securities' must be interpolated into sovereign government credit creation and expenditure 'to support government spending'. Not even belief in the [Intermediation of Loanable funds \(ILF\) fallacy](#) could make it a necessary 'support' for government spending.

(30/10/16)(15/12/16) One needs to ask why anyone might consider the conversion of *unencumbered* sovereign credit into *encumbered* privately created credit (through the sale of government bonds) necessary for government spending. Why is it any better than the far simpler and more logically coherent direct funding of government expenditures through sovereign credit creation?¹⁰⁶⁰ The obfuscatory consequences of such redundancy [obscures the nature of sovereign credit creation and expenditure](#). It superficially supports the illusion that Government borrowing in the private marketplace is necessary to funding its activities.

Providing government securities to investors might be desirable as a means of minimizing risk for those investors, or as means of [regulating sovereign credit supply](#) within the private sector, but there is no logical benefit to government derived from such activity. It might better be seen as a welfare service, providing government guaranteed credit security to investors. However, it serves no logical purpose in enabling ([or legitimizing](#)) Government spending.

Investopedia has explained the 'risk-free' nature of such bonds for investors in the US:

Because most government bonds are backed by the credit of the U.S. government, default is unlikely and government bonds are considered essentially risk-free. Thus, government bonds create a benchmark against which riskier securities may be compared.

Alan Longbon has explained the sovereign-bond-holding plutocratic rationale for:

1. Purchasing and holding government bonds;
2. Insisting that government bonds are [interest bearing 'debt securities'](#);
3. Supporting government [austerity](#) programs and;
4. ['Rating agency' policing](#) of government performance:

One thing I keep in mind when reading the mainstream press and seeing politics play out, is that from the perspective of sovereign bond holders the neocon philosophy makes sense.

Imagine that you have immense wealth, your aim is to preserve what you have, take no financial risk, live well and stress free. To do this you need a risk free investment such as a government bond from a monopoly currency supplier, so the myth of governments financing themselves with bond debt is created.

While holding the bond you want it to rise or hold its value until maturity, this is guarded by a rating agency and the mainstream press, whom you own or control.

That a nation's growth and well being is stunted in order to provide immensely wealthy people with a risk free investment and income

does not factor into the equation. From this warped perspective it all makes sense and is logical.

(Alan Longbon, Comment on Bill Mitchell's *Billy Blog*, ^œ[Austerity is the enemy of our grandchildren as public infrastructure degrades](#), December 14, 2016)

⁶⁷⁷ Unfortunately, officials like Greenspan are all-too-often appointed because they endorse the ideological predilections of their political and/or plutocratic patrons, rather than for their clear understanding of the nature of the tasks for which they will be responsible. Their reputations often reflect the diligence with which they pursue their patrons' predilections, not the tasks of their offices.

⁶⁷⁸ The Covid-19 crisis of 2020 has forced sovereign governments to rely on central bank credit creation in order to fund a wide range of economic support programs for populations in 'lock-down'. And, of course, this has resulted in very large 'deficits', reflecting that credit creation.

Australia's treasurer, Josh Frydenberg, preparing the nation for a 'mini-budget' on 23 July, 2020, addressed the 'problem' as viewed from a neoliberal perspective in which either the [government 'borrows' from its Reserve Bank](#) which is assumed to be an independent entity or, alternatively, all central bank credit is '[borrowed' from somewhere else](#) - presumably from the private sector.

Those who perpetuate this confusion seldom spell out what they mean by phrases such as 'Every dollar the government spends is a borrowed dollar'. -One need not presume an intent to deceive in this. As a variation on that well-worn aphorism has it: never ascribe to mendacity what can readily be explained by ignorance (or ineptitude):

Frydenberg:

You will see eye watering numbers around debt and deficit,...

Numbers that Australians have never, ever seen before.

That's the harsh reality of this pandemic. The coronavirus has required the government to spend unprecedented amounts of money to support people in need...

[Every dollar we spend is a borrowed dollar](#), and that's why it will take some time to pay back the debt,

(Jade Gailberger, ^œ[Nation's debt and deficit 'eye-watering'](#), [Treasurer Josh Frydenberg warns](#), NCA NewsWire, *Herald Sun*, July 22, 2020)

Frydenberg is certainly not a lone voice in assuming this. Here is U.S. Senator John Thune's (R-S.D.) version of the same 'problem':

Here in the Senate, we've spent the past few weeks focused on monitoring the implementation of the \$2.4 trillion in aid that Congress has provided.

Our committees are hard at work conducting coronavirus oversight and looking ahead to what else Congress may need to do to combat the virus and get our economy going again.

We're looking at what more funding Congress may need to provide - and what Congress can do that doesn't involve a lot of new spending.

As I said, Congress has provided \$2.4 trillion to fight the coronavirus.

And we will absolutely provide more if needed.

But we need to remember that every dollar we've provided is borrowed money that our children and grandchildren will have to repay.

Our debt was already very large compared to the size of our economy even before this year's coronavirus-related borrowing.

And that's a very concerning reality.

The truth is, we can't just keep borrowing and borrowing ever greater sums without suffering real economic consequences.

And so while we may need to borrow more money to meet our needs before this crisis is over, it's crucial that we keep that borrowing as low as possible and only spend what is absolutely necessary.

That's why the Senate is so focused on conducting oversight of the money we've already provided.

(⁶⁶Thune: [There Are Ways to Help Revive the Economy Without Spending Trillions of Dollars](#), Recent Press Releases, *John Thune, Senate*, June 4, 2020)

Bill Mitchell explained Australia's resulting dilemma:

Today, the Australian Treasurer is out in force telling us that the fiscal situation is dire and that they have to start making cutbacks. Meanwhile in the real world, the unemployment rate continues to rise, businesses continue to fail, and the lowest paid workers, are being forced to continue working in dangerous health situations because they cannot 'afford' to stay at home like the better paid workers and protect their health. It doesn't bear scrutiny. ... The current fiscal stimulus is probably, at least \$A100 billion short of where it should be, yet the government is announcing cuts. It will not turn out well.

(⁶⁷RBA [governor denying history and evidence to make political points](#), *Bill Mitchell - Modern Monetary Theory*, 23 July, 2020)

⁶⁷⁹ Phyllis Bennis has described the US response to the Covid-19 crisis in an article entitled 'Defense Industry CEOs Are Getting Even Richer off Funds That Were Supposed to Go for PPE: The Trump administration took \$1 billion in stimulus money that was supposed to go towards making masks and other protective equipment for the pandemic - and gave most of it to weapons manufacturers'. As she explained:

As the pandemic continues to claim lives across the country, new information keeps coming out about how the Trump administration has made it harder for Americans to protect themselves.

We now know, for example, that early in the pandemic the U.S. Postal Service had planned to deliver five face masks to every U.S. household. It could have made mask-wearing a lot more common a lot earlier - and maybe saved a lot of lives. But the White House scrapped the idea.

Now we also know that the Trump administration took \$1 billion in stimulus funds that were supposed to go towards making masks and other protective equipment for the pandemic - and gave most of it to weapons manufacturers.

Those funds were part of \$10.6 billion in CARES Act money allocated to the Pentagon - a staggering sum, especially since the

bloated military budget already claims 53 cents of every discretionary federal dollar available to Congress.

The Pentagon's CARES money was supposed to help military employees and military families survive the pandemic. (Phyllis Bennis, ^œ[Defense Industry CEOs Are Getting Even Richer off Funds That Were Supposed to Go for PPE: The Trump administration took \\$1 billion in stimulus money that was supposed to go towards making masks and other protective equipment for the pandemic - and gave most of it to weapons manufacturers, *Inequality.Org*, October 02, 2020\)](#)

Sam Pizzigati has described the 2020 Covid-19 scene:

...[T]he biggest winners so far in our pandemic era may well be America's biggest corporations. The nation's 25 largest corporate concerns, Oxfam details, are averaging 11 percent profit margins for the 2020 fiscal year, this at a time when small U.S. firms have seen their quarterly earnings drop by as much as 85 percent.

Many of Corporate America's top 25 have far surpassed that average 11 percent gain. The credit card giant Visa is looking at a 52 percent profit margin for fiscal 2020, with Microsoft, Pfizer, and Intel all reporting annual 2020 profit rates of 30 percent or more. The 17 most profitable of the top 25 are together grabbing over \$85 billion more in 2020 profits than they averaged the previous four years.

Average American workers, meanwhile, have taken quite a corona wallop. One in five have lost hours and wages to layoffs and furloughs.

This striking contrast between worker insecurity and burgeoning corporate bottom-lines, Public Citizen points out, represents nothing new. America's economic rewards have been concentrating "at the top" since the 1980s.

"The induced coma of the pandemic," adds Public Citizen's Bart Naylor, "has ripped the scar off this economic wound, requiring massive aid to newly displaced workers who have no savings to fund more than a few weeks of basic expenses."

(Sam Pizzigati, ^œ[For Egalitarians, a Sudden Sense of Possibility, *Inequality*, July 30, 2020\)](#)

⁶⁸⁰ William Vickrey, in an insightful, posthumously published, research paper entitled 'Fifteen fatal fallacies of financial fundamentalism: A disquisition on demand-side economics', refuted the common neoliberal claim that Deficits represent sinful profligate spending at the expense of future generations. He made this 'Fallacy 1' in his paper: As he explained:

Fallacy 1.

Deficits are considered to represent sinful profligate spending at the expense of future generations, who will be left with a smaller endowment of invested capital. This fallacy seems to stem from a false analogy to borrowing by individuals.

Current reality is almost the exact opposite. Deficits add to the net disposable income of individuals, to the extent that government disbursements that constitute income to recipients exceed that abstracted from disposable income in taxes, fees, and other charges. This added purchasing power, when spent, provides

markets for private production, inducing producers to invest in additional plant capacity, which will form part of the real heritage left to the future. This is in addition to whatever public investment takes place in infrastructure, education, research, and the like. Larger deficits, sufficient to recycle savings out of a growing gross domestic product (GDP) in excess of what can be recycled by profit-seeking private investment, are not an economic sin but an economic necessity. Deficits in excess of a gap growing as a result of the maximum feasible growth in real output might indeed cause problems, but we are nowhere near that level.

Even the analogy itself is faulty. If General Motors, AT&T, and individual households had been required to balance their budgets in the manner being applied to the federal government, there would be no corporate bonds, no mortgages, no bank loans, and many fewer automobiles, telephones, and houses

(William Vickrey, ⁶⁸⁰[Fifteen fatal fallacies of financial fundamentalism: A disquisition on demand-side economics](#), *PNAS*, February 3, 1998 95 (3) 1340-1347)

⁶⁸¹ There has been a sad, intellectually deficient presumption held by Western center-left and left leaning political parties over the past several decades that 'responsible' government requires *both* budget surpluses/ balanced budgets (together with commitment to reducing taxation) *and* the strengthening of social institutions and services through increased funding.

In the process they have opened themselves to accusations of holding contradictory policies which try, simultaneously, to both withdraw credit from the economy and increase credit supply through their support of '[socialist' redistribution of wealth toward the poor](#). This results in neoliberally inspired questioning of how their spending will be financed without increasing budget deficits and/ or increasing taxes.

As Roosevelt realized in the 1930s, this is indefensible. One either jettisons support for budget surpluses/ balanced budgets and reducing taxation or one accepts that maintaining/ increasing social welfare funding is no longer possible.

The Roosevelt administration's solution was, [through Ruml](#) and other like-minded advisors, to proclaim that:

Final freedom from the domestic money market exists for every sovereign national state where there exists an institution which functions in the manner of a modern central bank, and whose currency is not convertible into gold or into some other commodity.

Presumptions that budgets must be balanced were based upon a fundamental misunderstanding of the nature of sovereign credit and sovereign expenditures - a misunderstanding which [advantaged mega-wealth](#) and impoverished and disenfranchised the rest of the population.

⁶⁸² We are, of course, describing the logical consequences of the [New Deal understanding of public creation/control of credit](#). The real situation in the US and most other Western capitalist nations is, however, that, at least since the mid-1970s, those most influential in setting and prosecuting Central Reserve policy and practice have usually employed neoliberal understandings.

In this terminally ideologically straitjacketed world it is believed that: budget surpluses are a virtue; [credit is only created in the private](#)

marketplace; governments have to 'borrow' credit from the private sphere; and "every dollar of increased government spending must correspond to [one less dollar of private spending](#)". And, of course, while neoliberal aficionados insist that this quarantines us all from another World War, in fact, [war is simply 'good business'](#)

The result is that [New-Deal-inspired Central Reserve measures have either been displaced or warped to reflect neoliberal dogmas](#). We are, in the second decade of the 21st century, well on the way to plutocracy!

683 (30/06/16) We need to clearly differentiate between credit creation and official currency creation (printing money). Inflationary forces might be unleashed if sufficient additional money (i.e. *tokenized* credit) is released into the marketplace. However, crediting financial institutions with additional government-guaranteed-credit only leads to such pressures if those institutions decide to increase lending and spending in the marketplace as a consequence of the receipt of such funds.

We need to remember that banks do not have to rely on Federal Bank bank reserves in order to create credit if they wish to increase such lending and spending (i.e. a variation on [the loanable funds](#) fallacy) . They can create credit '[out of thin air](#) '. Increasing the Central Bank 'bank reserves' of financial institutions:

- reinforces marketplace confidence in the ability of those institutions to access sovereign credit ([affirming their solvency](#));
- it also places the discretion for official currency release in the hands of those who control those reserves;
- so, financial institutions have increased leverage in the marketplace;
- but *there is no necessary increase in the availability of tokenized credit* in the marketplace.

As is explained elsewhere, in the economic climate of the second decade of the 21st century bank reserves, at unprecedented levels, are ^œ[not being employed to fund development in the mundane economy](#) of material production and consumption. Instead, they provide interest-bearing, government-guaranteed collateral security for vortex economic activity. The casino style behavior of players in the emergent realm of internationalized electronic wealth manipulation, relocation, redistribution and accumulation is now backed by interest-bearing 'bank reserves at the Fed'.

Seth Carpenter and Selva Demiralp (2010) examined the link between increases in Federal Bank bank reserves and bank lending as a consequence of "The Federal Reserve's implementation of a range of nontraditional monetary policy measures to combat a severe financial crisis and a deep economic recession [which] resulted in a very large increase in the level of reserve balances in the U.S. banking system":

Introduction

A second issue involves the effect of the large volume of reserves created as we buy assets. [. . .] The huge quantity of bank reserves that were created has been seen largely as a byproduct of the purchases that would be unlikely to have a significant independent effect on financial markets and the economy...

The recent rise in reserve balances suggests a need to reassess the link from reserves to money and to bank lending. We argue that the institutional structure in the United States and empirical evidence based on data since 1990 both strongly suggest that the transmission mechanism does not work through the [standard money multiplier model from reserves to money and bank loans](#). In the absence of a multiplier, open market operations, which simply change reserve balances, do not directly affect lending behavior at the aggregate level. Put differently, if the quantity of reserves is relevant for the transmission of monetary policy, a different mechanism must be found.

([∞][Money, Reserves, and the Transmission of Monetary Policy: Does the Money Multiplier Exist?](#), Finance and Economics Discussion Series No 41, 2010, Divisions of Research & Statistics and Monetary Affairs, Federal Reserve Board, Washington, D.C.)

Paul Krugman has given a somewhat different explanation as to why "banks would just sit on all those reserves":

...under current conditions - in a liquidity trap - [the quantity of money is] not even under the indirect control of the Fed. The same impotence of conventional monetary policy that makes open-market purchases of Treasuries useless at boosting GDP also mean that broad monetary aggregates that include deposits are largely immune to Fed influence. The Fed can stuff the banks full of reserves, but at zero rates those reserves have no incentive to go anywhere, and even if they do they can sit in safes and mattresses.

([∞][The Fed Does Not Control the Money Supply](#) (*New York Times* Opinion Pages, May 6 2015).)

(See Paul R. Krugman, [∞][It's Baaack: Japan's Slump and the Return of the Liquidity Trap](#) (*Brookings Papers on Economic Activity*, 2:1998, pp. 137-205) for more on why "banks would just sit on all those reserves".)

Alexander Douglas argues that Krugman's explanation relies on "the cursed '[loanable funds](#)' model, explaining how government deficits 'crowd out' private investment by taking up some of the supply of funds available to private investors":

...Krugman's answer is that the loanable funds model breaks down in a 'liquidity trap'. I am profoundly disturbed by the number of people who claim to reject neoclassical economics as ideological claptrap and then lavish praise on Krugman and other 'left-wing' neoclassicals who propound the 'liquidity trap' analysis. The analysis is based on the very same loanable funds model. All that is thrown in is a stipulation that the demand for loanable funds, in times of extreme recession, falls so low that that the market-clearing interest rate is below zero...

(Alexander Douglas, [∞][Macroeconomic Theory and Operational Reality](#), *Origin of Specious: Philosophy and economics, mostly*, August 3, 2015)

My solution to the 'problem' of private sector debt bequeathed to future generations would be - for heaven's sake, accept that creating such debt was silly, create credit (that is, create a debit entry in the government's accounts and a compensating credit entry in the appropriate private bank accounts - which minimizes the inflationary consequences of such an action) to pay the debt (and accept the short term consequences of the solution) and then vow never to be so stupid again!

684 (04/04/16) (21/05/16) There is no advantage in attempting to accommodate ideologically driven neoliberal terminologies and explanations. The use of the term 'debt' or use of the term 'government liability' by Galbraith and co-authors seems either to be such an attempt at accommodation - an attempt to bridge the divide between their understanding of reality and that held by the vast majority of contemporary 'mainstream' economists - or the result of [using neoliberal jargon](#) as a shortcut to understanding. In either case, it seems far better to simply describe the world obscured by neoliberal dogmas without resorting to neoliberal terminologies.

Newton Finn, in a comment on a blog posting by Bill Mitchell, put it rather well:

Another of Bill's offhand gems: "And for the rest of us we suffer in the real world but reason in this fictional world, which is why it persists." One could spend a lot of profitable time mulling over this single observation. How might we who embrace MMT learn to reason in its real world terms and not in the fictional world terms of neoliberal economics? Should we refuse, at the outset, to even talk about federal spending and budgets (invoking, however inadvertently, the household paradigm) and instead speak only of federal investment and balances? Etc.

(Newton Finn, Commenter on Bill Mitchell - Modern Monetary Theory, ^{ae}[When the idea of a fiscal surplus becomes a talisman](#), Wednesday, October 23, 2019)

Yes, this can be difficult and at times lead to verbosity, but the alternative is that one subconsciously lapses into neoliberal explanation without realizing it. The result can all-too-easily be that, as [Bill Mitchell has described](#), one becomes 'lost in a neo-liberal haze'.

In order to avoid terminological confusion and clarify discussion there is a very real need to develop terminologies which clearly distinguish the bookkeeping activities associated with central bank credit creation and distribution from profit-and-loss bookkeeping. The current terminologies are there because they serve dominant ideological interests; where they do not, they are altered over time to do so. Use of the terminologies, legitimizes and reinforces dominant ideological understandings.

However, new nomenclatures which deviate from those which are current and are only meaningful to initiates are what sects and cults are all about. And, as with sects and cults, those who adopt the terminologies become branded by their language and so are easily excluded from 'serious' discourse.

So (if we decide we need to interact 'on a level playing field' and retain some credibility among mainstream economists - who predominantly subscribe to neoliberal dogmas) we need to be aware of the pitfalls in current language, prepared to point them out, but wary of 'branding' which becomes a shorthand means to dismissal of those who use the alternative terminologies.

Bill Mitchell has explained this well:

Before I start, let me just note that recent statements by commentators about language (for example, using the term 'deficit' to denote the difference between the funds the government puts in the economy and the funds it takes out) are not lost on me. After all, I have written academic articles on the importance of language and have delivered many presentations on the topic.

Regular readers will note I use the term fiscal balance rather than 'budget' balance to avoid conflating the currency-issuing spending and receipts with those that a household, which uses the currency, has to deal with.

How far we go in changing the language that we use is a delicate balance. The ideas I write about in this blog are counter the mainstream and already a 'step too far' for those who are not dedicated to breaking out of the neo-liberal mindset. For those that are they will persist irrespective of the language used.

So it comes down to a balance of keeping people learning new ideas and at the same time developing a completely new nomenclature. The danger is that by doing both at the same time, the language will overwhelm the already difficult to embrace ideas and we get nowhere.

I am constantly assessing that balance in my own work and do not apologise for using the terms 'deficit' or 'receipts' or 'revenue' or 'spending' when dealing with currency-issuing government matters. (Bill Mitchell, ^œ[The CEDA Report - one of the worst ever](#), *Billy Blog*, March 30, 2016)

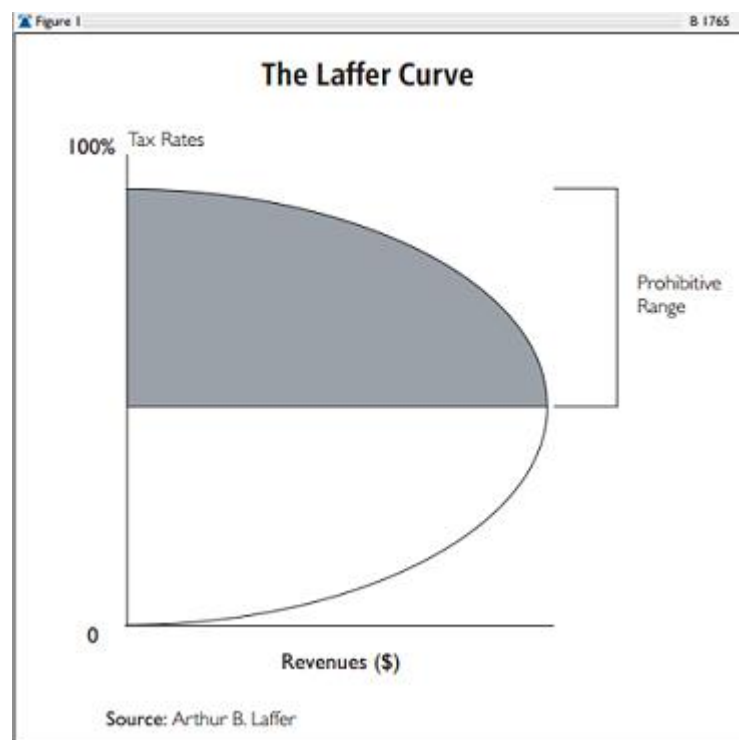

So,

First: the revolution!

Then: new nomenclatures!

(But, remain alert to the confusion in understanding which is implied in the use of current terminologies. There is a fine line between using familiar terms in order to facilitate communication, and being seduced by the language used into accepting neoliberal explanations. There is a reason why neoliberal discourse employs the language it does: it legitimizes and reinforces neoliberal understandings.)

⁶⁸⁵ The ideas implicit in 'scientific taxation' were popularized in 1974 when Arthur Laffer presented his 'curve' as an illustration of 'the trade-off between tax rates and tax revenues'.

(Arthur B. Laffer, ^œ[The Laffer Curve: Past, Present, and Future](#), *Heritage Foundation Backgrounder*, No. 1765, June 1, 2004)

An article on the *Laffer Center* website recounts it:

The Story Behind the Laffer Curve

The Laffer Curve earned its name from a 1978 article by the late Jude Wanniski (then-associate editor of the Wall Street Journal) appearing in *The Public Interest* entitled, "Taxes, Revenues, and the 'Laffer Curve.'" Wanniski recounted a 1974 dinner he attended with Arthur Laffer (the professor at The University of Chicago), Donald Rumsfeld (chief of staff to President Gerald Ford), and Dick Cheney (Rumsfeld's deputy and a former classmate of Laffer's). When the foursome's dinner discussion turned to President Ford's "WIN" (Whip Inflation Now) proposal for tax increases, Dr. Laffer is said to have grabbed his napkin to sketch the curve as an illustration of the tradeoff between tax rates and tax revenues. Wanniski dubbed the tradeoff described as the "Laffer Curve."

As to Wanniski's recollection of the story, Dr. Laffer has said that he cannot remember the details, but he does recall that the restaurant where they ate used cloth napkins and his mother had taught him not to desecrate nice things. He notes, however, that it could well be true because he used the so-called Laffer Curve all the time in classroom lectures and to anyone else who would listen.

Although the Laffer Curve bears his name, the ideas behind it were not new or his alone. In fact, Dr. Laffer likes to point out that the ideas are so straightforward that people knew about it hundreds of years before.

(*The Laffer Center*, ^œ[The Laffer Curve](#) [accessed 27 April, 2017])

Robert Vanderbei summed up the problem with the 'curve':

The original Laffer curve assumes that everyone is selfish. And, even in this case, the curve does not begin to go back down until the tax rate is greater than 50%.

The bottom line is this: cutting taxes when the current effective tax is way below 50% can only decrease revenue.

(Robert Vanderbei, ^œ[The Laughable Laffer Curve](#), *Princeton University*, Operations Research and Financial Engineering)

Peter Baker, writing for *The New York Times*, has explained the 2017 version of all this:

A white cloth napkin, now displayed in the National Museum of American History, helped change the course of modern economics. On it, the economist Arthur Laffer in 1974 sketched a curve meant to illustrate his theory that cutting taxes would spur enough economic growth to generate new tax revenue.

More than 40 years after those scribbles, President Trump is reviving the so-called Laffer curve as he announces the broad outlines of a tax overhaul on Wednesday. What the first President George Bush once called "voodoo economics" is back, as Mr. Trump's advisers argue that deep cuts in corporate taxes will ultimately pay for themselves with an explosion of new business and job creation.

The exact contours of the plan remained murky and Mr. Trump will not produce a fully realized proposal on Wednesday. But what the president has called a tax reform plan is looking more like a tax cut plan, showering taxpayers with rate reductions without offsetting the full cost by closing loopholes or raising taxes elsewhere. In the

short run, such a plan would add many billions of dollars to the national deficit. Mr. Trump contends that it will be worth it in the long run.

"The tax plan will pay for itself with economic growth," Steven Mnuchin, the Treasury secretary and main architect of the plan, told reporters this week.

(Peter Baker, ^œ[Arthur Laffer's Theory on Tax Cuts Comes to Life Once More](#), *New York Times*, April 25, 2017)

See also, ^œ[President Trump's Laughable Plan to Cut His Own Taxes](#), *New York Times*, The Opinion Pages | Editorial, April 26, 2017)

Veronique de Rugy (2003), writing for the ^œ[Cato Institute](#), an American libertarian think tank, provided a clear explanation of the neoliberal rationale for 'scientific taxation' as practiced through the 1920s and reintroduced in the post 1970s United States. One needs to remember that the regulatory state under Coolidge (in the 1920s) was, as one biographer described it, "[thin to the point of invisibility](#) ":

Changes in marginal income tax rates cause individuals and businesses to change their behavior. As tax rates rise, taxpayers reduce taxable income by working less, retiring earlier, scaling back plans to start or expand businesses, moving activities to the underground economy, restructuring companies, and spending more time and money on accountants to minimize taxes. Tax rate cuts reduce such distortions and cause the tax base to expand as tax avoidance falls and the economy grows. A review of tax data for high-income earners in the 1920s shows that as top tax rates were cut, tax revenues and the share of taxes paid by high-income taxpayers soared

The Mellon Tax Cuts

When the federal income tax was enacted in 1913, the top rate was just 7 percent. By the end of World War I, rates had been greatly increased at all income levels, with the top rate jacked up to 77 percent (for income over \$1 million). After five years of very high tax rates, rates were cut sharply under the Revenue Acts of 1921, 1924, and 1926. The combined top marginal normal and surtax rate fell from 73 percent to 58 percent in 1922, and then to 50 percent in 1923 (income over \$200,000). In 1924, the top tax rate fell to 46 percent (income over \$500,000). The top rate was just 25 percent (income over \$100,000) from 1925 to 1928, and then fell to 24 percent in 1929.

Secretary Mellon knew that high tax rates caused the tax base to contract and that lower rates would boost economic growth. In 1924, Mellon noted: "The history of taxation shows that taxes which are inherently excessive are not paid. The high rates inevitably put pressure upon the taxpayer to withdraw his capital from productive business." He received strong support from President Coolidge, who argued that "the wise and correct course to follow in taxation and all other economic legislation is not to destroy those who have already secured success but to create conditions under which every one will have a better chance to be successful."

(Veronique de Rugy, ^œ[1920s Income Tax Cuts Sparked Economic Growth and Raised Federal Revenues](#), *Cato Institute*, Commentary, March 4, 2003)

⁶⁸⁶ (10/06/17) The combination of reliance on the fairy dust of expansionary austerity with the magical effects of tax cuts for the wealthy has reached its truly absurd apogee in US president Donald Trump's first budget¹⁰⁶¹. Robert Greenstein has explained:

President Trump's new budget should lay to rest any belief that he's looking out for the millions of people the economy has left behind. He proposes steep cuts in basic health, nutrition, and other important assistance for tens of millions of struggling, low- and modest-income Americans, even as he calls for extremely large tax cuts for the nation's wealthiest people and profitable corporations.

This disturbing budget would turn the United States into a coarser nation, making life harder for most of those struggling to get by but more luxurious for those at the very top. Most Americans do not seek a new Gilded Age. And the budget is sharply at odds with what the President told voters he would do during his campaign. With this budget, the President betrays many voters who placed their trust in him.

In fact, this stands as the most radical, Robin-Hood-in-reverse budget that any modern President has ever proposed...

Perhaps most stunning, these proposals to impose cuts of unprecedented depth and severity on struggling families and individuals - and to starve various needed public services - are coupled with tax cuts that cost even more than the program cuts save. If the budget had honestly accounted for the tax cut proposals the President released a few weeks ago, the cost of these provisions would be seen to wipe out the savings from all of its deep cuts to NDD [non-defense discretionary] programs, basic assistance for Americans of limited means, and Social Security.

(Robert Greenstein, ^æ[Trump Budget Proposes Path to a New Gilded Age](#), *Center on Budget and Policy Priorities* Statement: May 22, 2017)

⁶⁸⁷ All this suggests that neoliberal ideologues are suffering from acute, [arrested cognitive development](#). Steve Keen has given a delightful, though probably unrealistically optimistic picture of it all:

PRESS RELEASE FROM THE WHO

The WHO today warned of a virulent new virus affecting vulnerable groups in the Mid-West and Eastern USA. The outbreak, which began in the Mid-West's extensive Great Lakes '[Freshwater](#)' river system, has recently jumped the 'Saltwater' barrier, meaning that the entire population of its target species - 'Mainstream' economists - is now at risk.

Speaking on behalf of the WHO, Dr Cahuc explained that the virus works by turning off the one genetic marker that distinguishes this species from the rest of its genus, the Human Race. This is the so-called 'Milton' gene (Friedman 1953), which goes dormant in other Humans as they pass through puberty. Its inactivity reduces their imaginative capacity, making it impossible for them to continue believing in such endearing infantile fantasies as the Tooth Fairy and Santa Claus. While regrettable, this drop in imagination is necessary to prepare Humans for the adult phase of their existence.

'Professor Milton Friedman found a way to re-activate this gene during PhD training, using his "as if" gene splicing technique', Dr

Zylberberg elaborated. 'This enabled a wonderful outpouring of imaginative beliefs by Mainstream Economists, which gave birth to concepts like NAIRU, Money Neutrality, Rational Expectations, and eventually even DSGE models. This wealth of imagination was regarded by Mainstream Economists as a more than sufficient compensation for returning to the child-like phase of the Human species.'

The Milton gene conferred other advantages on Mainstream Economists, which have been highly important to their success in competition against their rival species, the Heterodox Economists. 'Being endowed with a child-like nature, the arguments of Mainstream Economists were treated with the low level of critical evaluation that adult humans normally reserve for conversations with their infant stage', said Dr Cahuc. 'This made their policy recommendations much more likely to be adopted, instead of the more complicated proposals put forward by their niche rivals', he said.

The new virus - named 'Reality' - de-activates the Milton gene once more. 'Consequently', Dr Cahuc warned, 'the very beliefs that define this unique species are at risk. Unless we are very careful, it may become extinct!'. Unfortunately, there is as yet no known cure to this virus. 'The WHO therefore recommends complete avoidance of "Reality" as the only effective strategy for those wishing to remain as Mainstream Economists', Dr Cahuc concluded.

(Steve Keen, ^œ[The WHO warns of outbreak of virulent new 'Economic Reality' virus](#), *Review of Keynesian Economics*, Volume: 5 Issue 1, 01 Jan 2017, Pp:107-111)

⁶⁸⁸ (02/07/16) Straitjacketing sovereign governments in these and other ways leads, inevitably, to escalating deficits (reflecting *private sector borrowing*) and increasingly shrill clamourings for 'deficit reduction' with all its [tail-chasing consequences](#): crumbling infrastructures and services, unsustainable safety nets, and [disenfranchised populations](#). Bill Mitchell has described the scene. His summation:

The neo-liberal Groupthink has led governments to starve public infrastructure development, squeeze public education including research in higher education, force public research bodies (such as CSIRO in Australia, which invented the Wi-Fi protocol) and the like to only pursue 'commercial' rather than pure research, and maintain elevated levels of unemployment so that generations are now missing out of work skill development and essential training.

Imagine what Greece and Spain will be like in 20 years when their youth - 50 odd percent of them unemployed and have been for years now - become the adults that the nations will rely on for productivity growth.

In relation to adjusting to the Brexit decision, British Labour should immediately announce an intention to implement a large-scale public investment program as well as a Job Guarantee.

They will be howled down by the neo-liberals which includes the class traitors masquerading as Labour MPs (The Blairites!).

But time will tell and before long it will become obvious that as public infrastructure collapses (and according to the ALGA report many bridges that link communities in Australia are becoming unusable given their condition) that this neo-liberal obsession that

starves the forces of innovation are to blame.

(Bill Mitchell, ^œ[We starve the state and public infrastructure development at our peril](#), *Billy Blog*, June 30, 2016)

It would be good to be able to endorse his optimistic conclusion but neoliberal politicians, economists and fellow travelers have, over the past fifty years, displayed ingenuity in shifting blame for the consequences of their policies.

As several pamphlets in my mail box this morning (on the eve of the 2016 Australian Federal election) have explained [leaving me with the problem of how to dispose of such toxic waste], the fault for all the increasingly obvious employment; infrastructural; service; welfare; environmental and other problems lies, not at the door of rabid neoliberal policy and practice, but at the door of those who have 'successfully' opposed neoliberal attempts at ensuring Australia's prosperity!

Their arguments and accusations, over the years, have been so successful that many who originally opposed neoliberal drives to deregulation, globalization and weakening of worker organizations and social safety nets now justify their behaviors and plans in neoliberal terms. As Bill Mitchell says of Australian political parties,

...the conservatives (who call themselves liberal but oppose many freedoms) and the Labor Party (who are conservatives in drag these days) - have gone to pains to convince the voters that they will get the fiscal balance back into surplus ...

They preach about how they are committed to 'Jobs and Growth' but oversee labour market developments which yield pathetic employment growth, increased casualisation and precarious work, and low wages growth (even real wage cuts).

⁶⁸⁹ (16/04/16) Any unified currency area will, unavoidably, need to address the consequences of ongoing and vastly different economic circumstances, events and long-term prospects in its various regions. It will, also, need to *institutionalize* required 'internal rebalancing' policies and procedures.¹⁰⁶² Robert Skidelsky has summarized the requirements well in an examination of the problems confronting the Eurozone:

To be sure, the 2008 crisis started with the banking collapse in the US. But most of the rest of the world has recovered, whereas most of Europe has not. To assess why, a recent symposium on the subject at Nuffield College, Oxford, focused on the lack of a sovereign authority able to protect the European economy as a whole from contagious crises starting elsewhere. The missing bits of sovereignty include a fiscal transfer system to respond to asymmetric shocks; a risk-free asset (eurobonds) in which to park redundant money; a single system for supervising banks and capital markets; a central bank able to act as lender of last resort; and the ability to organize an EU-wide stabilization/recovery program.

The eurozone has weakened the nation-states comprising it, without creating a supranational state to replace the powers its members have lost. Legitimacy thus still resides at a level of political authority that has lost those attributes of sovereignty (such as the ability to alter exchange rates) from which legitimacy derives.

(Robert Skidelsky, ^œ[A British Bridge for a Divided Europe](#), *Project Syndicate*, April 15, 2016)

As Anatole Kaletsky has explained, a major flaw in the original establishment of Europe's unified currency area was:

...what could be described as the "original sin" of the single-currency project: the Maastricht Treaty's prohibition of "monetary financing" of government deficits by the ECB and the related ban on mutual support by national governments of one another's debt burdens.

(Anatole Kaletsky, [Why the Greek Deal Will Work](#), *Project Syndicate*, July 22 2015)

Austan Goolsbee, in a discussion with Jim Tankersley on the woes of Greece, spelt out the European Union's 'internal rebalancing' options in its regional, state and local governments¹⁰⁶³ :

...Greece and its fellow Eurozone nations are trapped in a cycle of differential shocks - which is to say, they're seeing what happens when different parts of a unified currency area experience vastly different economic events....

As I look at it, I think there's only four things that you can ever do when you get differential shocks. You can have labor mobility. You can have permanent subsidies. Those are the two things that we have in the U.S., and that's why nobody ever asked after Hurricane Katrina, is Louisiana or Mississippi going to drop out of the dollar? And that's because, there's mobility and there's a fiscal union where they get a big subsidy.

So you could have one of those two, or you could have Germany willing to do four or five percent inflation for a couple of years, to do the equivalent of an exchange rate channel. Or else you could have Greece try to grind down its wages and find some way to get its productivity growth rate faster than Germany's. That's it! Those are the only four things you can do.

The East German unification with West Germany had a similar feature. East Germany came in (to a unified Germany) at an overvalued exchange rate. They made that decision on political grounds, not economic. So overnight they went to having basically West German level wages with Polish productivity.

There was a trillion euros of subsidy, there was a massive amount of labor mobility, there was a national commitment to make it all work. And that said, it's still the case that unemployment rates are higher in East German locations than the former West German ones. Which I think tells you that you should never make light of the difficulties of what they call internal rebalancing.

(Jim Tankersley, [The four ways to end the Greek crisis, from Obama's former top economist](#), *The Washington Post*, Wonkblog, June 29, 2015)

As Paul Krugman has observed,

Europe never had the preconditions for a successful single currency - above all, the kind of fiscal and banking union that, for example, ensures that when a housing bubble in Florida bursts, Washington automatically protects seniors against any threat to their medical care or their bank deposits...

(Paul Krugman, [Greece Over the Brink](#), *New York Times*, Opinion Pages, June 29, 2015)

Of course, more than currency, fiscal and banking union is required for long-term success in such a venture. There also has to be a strong commitment to political and social union - a strong understanding of, and commitment to, [the whole as more than a sum of its parts](#).

This form of commitment presupposes an existing unity or 'nationalism' amongst the populace. Government is aimed at balancing the competing interests of citizens and regions, fulfilling their aspirations at that integrated, sovereign, *Commonwealth* level. However one might label such a union, the most obvious parallels are those of 'nation-states' as [defined by List \(1885\)](#) and others in the 19th century

⁶⁹⁰ And, yes, despite what 'sound' economic commentators of the 1920s and of the neoliberal present have argued, it will positively impact private enterprise activity within the 'real' economy. Bill Mitchell, lamenting the absurdity of the consequences of neoliberal claims that they need to 'run tight fiscal policy biased towards surpluses to avoid forcing the future generations to carry an unfair burden':

The latest - ^œ[EIB Investment Report 2017/2018](#) - published last week by the European Investment Bank tells anyone who cares to take those Europhile Rose Coloured Glasses off for just a second how deep the failure of the European policy making structures are and how long the negative impacts of those failures will resonate. This is the true 'burden for our (their) grand kids' sort of stuff. In claiming they had to run tight fiscal policy biased towards surpluses to avoid forcing the future generations to carry an unfair burden, these European policy makers and leaders have done exactly the opposite, as predicted - they have created an appalling future for their youth and their children to follow.
(Bill Mitchell, ^œ[Massive Eurozone infrastructure deficit requires urgent redress](#), *Billy Blog*, November 27, 2017)

As he has commented in a blog posting entitled 'We are being led by imbeciles':

I was reading John Maynard Keynes recently - circa 1928 [^œ[How to Organize a Wave of Prosperity](#)] - that is, 8 years before the publication of the General Theory with his Treatise on Money intervening. He was railing against the principles and practice of 'sound finance', which he noted had deliberately caused billions of pounds in lost income for the British economy. He urged the Treasury and the Bank of England to abandon their conservative (austerity) approach to the economy and, instead, embark on wide-scale fiscal stimulus to create jobs and prosperity. He concluded that with thousands of workers idling away in mass unemployment that it was "utterly imbecile to say that we cannot afford" to stimulate employment via large-scale public works - building infrastructure etc. He considered the policy makers who opposed such options were caught up in "the delirium of mental confusion". The stark reality is that 88 years later, he could have written exactly the same article and would have been 'right on the money'. We are being led (euphemism) by imbeciles.
(Bill Mitchell, ^œ[We are being led by imbeciles](#), *Billy Blog*, March 1, 2016)

⁶⁹¹ Wolf Richter, in a website posting entitled 'Services Sector Falls off Cliff', has described the scene in 'developed' economies:

In developed economies, the services sector - finance, insurance, health care, professional services such as technology, lawyering, or architects, and many others, including transportation, travel, tourism, restaurants, bars, clubs, etc. - account for 60% to 70% of the economy. What we're now seeing is a sudden fall-off-the-cliff collapse in the services sector in addition to a dizzying downturn in manufacturing. We got the first glimpse today, from the Eurozone where COVID-19 lockdowns were imposed well ahead of those in the US. And the data for the Eurozone released today picked up the effects....

This plunge in activity was "wide-reaching across the Eurozone,".... Germany, France, Italy, and Spain - the four largest economies in the Eurozone - all experienced sharp declines, with the sharpest declines hitting Italy and Spain.

Incoming work fell at a record pace in the data series, after five years of growth, with Italy and Spain getting hit the hardest.

Some other horrid standouts:

- Firms were also increasingly unsure of the long-term impact of the COVID-19 pandemic over the coming year. This led to a sharp and considerable drop in business confidence to a new survey low, with service providers across the whole region pessimistic about the future."
- "Overall, employment declined for the first time in nearly five-and-a-half years and to the greatest degree in the survey history."
- "The data indicate that the eurozone economy is already contracting at an annualized rate approaching 10%, with worse inevitably to come in the near future."

...Similar patterns are now spreading across the US and other parts of the world, where lockdowns started later.

(Wolf Richter, [Services Sector Falls off Cliff: First Data Points from the Eurozone where Lockdowns Started Earlier](#), *Wolf Street*, 03 April, 2020)

Nora Lustig and Nancy Birdsall have given an account of [top-down charity](#) in a 2020 Covid-19 world:

The pandemic has created a new, brutal inequality: between those who have a steady source of income and those who do not. This column provides some examples of how the plight of the latter is inspiring a new kind of informal, people-to-people social protection. While this is not a substitute for a publicly financed social safety, it can fill critical gaps and foster the solidarity and trust that is key to citizens' support for more comprehensive social protection during the next crisis.

As they describe, the current support processes being put in place by most sovereign governments fall short of the real needs of their constituents:

The lockdowns throughout the world are creating a new type of brutal inequality: between those who continue to have a steady source of income and those who do not. The latter group includes not just the already poor but the millions across the world who are now at risk of falling out of the middle class: laid-off workers whose

unemployment checks will not cover the rent, drivers, small business owners, contract workers, performing artists, the child care workers at-home parents don't need and cannot now afford. The latter are those, in the rich and in the emerging market economies at least, that provide the ballast, the invisible glue, that holds societies together.

Governments are implementing new, emergency programmes of social protection, but the traditional approach will not be enough, and cannot happen quickly enough in most countries for most people (e.g. Baldwin and Weder di Mauro 2020). The pandemic calls for new thinking about social protection, beyond what governments, large corporations, large foundations and individual philanthropists can do.

(Nora Lustig and Nancy Birdsall, [The new inequalities and people-to-people social protection](#), VOX, 02 April, 2020)

⁶⁹² In 2020 there is, of course, a neoliberally driven absence of Australian Federal Government enabling policies and so Mitchell has suggested that the Reserve Bank of Australia should act as though it was an independent entity able to formulate and pursue policies of its own. Unfortunately, however, while both RBA officials and Federal Government politicians talk and act as though they believed that the RBA was an independent entity, neither would actually accept that the RBA could independently act on Mitchell's recommendations.

So, as in most Western nations, neither Government nor Reserve Bank is able to take long-term advantage of the flexibilities afforded by a fiat currency in tackling the abnormal conditions of the 2020 Covid-19 crisis.

Before policies such as those Mitchell recommends could be implemented, the Government would have to sort out this confusion and both understand and take responsibility for employing the possibilities of Reserve Bank credit creation in funding 'all state and territory government deficits for the foreseeable future'.

Eoin Higgins, reporting on a video presentation by Vermont Senator Bernie Sanders, provided a set of provisions aimed at addressing the Covid-19 crisis:

According to the Vermont lawmaker's office, Sanders wants the next bill to include six provisions that are aimed at helping working people in the U.S. weather the crisis:

- Addressing the employment crisis by ensuring workers remain employed and paid as well as providing social services for everyone in the country, regardless of citizenship or immigration status
- Guaranteeing a free at point of service Medicare for All single payer healthcare system for everyone in the country
- Immediately using the Defense Production Act to manufacture personal protective equipment (PPE), ventilators, and other needed healthcare equipment for frontline workers dealing with the pandemic
- Providing food for everyone in the country for the duration of the crisis
- \$600 billion in aid to states and cities

- An immediate suspension of collections of rent, mortgage payments, medical debt, and consumer debt for four months and a suspension of student loan payments through the duration of the pandemic

In a video posted to social media, Sanders said the pandemic presents an outright "emergency" for the nation's most vulnerable populations and for all working people, and that drastic measures must be taken to protect people's health and economic wellbeing. (Eoin Higgins, [Bernie Sanders Calls for 'Boldest Legislation in History' to Halt Spiraling Covid-19 Catastrophe](#) "In this unprecedented moment in modern American history, it is imperative that we respond in an unprecedented way.", *Common Dreams*, 04 April, 2020)

⁶⁹³ (01/04/18) The unfortunate and logically absurd presumption that all 'real' investment must come from the 'private sector'; that government is always and only parasitic on private wealth; has led to infrastructural crises in the Western world.

The infrastructures of capitalism require long-term investment and maintenance. They are prerequisites of capitalism but are seldom, in themselves, private wealth producing investments. They are the responsibility of governments and should be *publicly* funded.

They are, indeed, [capitalism's 'commons'](#), which provide the environment within which capitalism is able to develop and mature. They are, and should be *public investments*, publicly funded and publicly owned. They constitute the necessary environment within which the varied responsibilities and interests of communities and the varied entrepreneurial endeavors and economic enterprises of those communities are all supported.

[They are not, and should never be considered as, opportunities for private profit.](#) Since the infrastructures of capitalism are *the commons* of capitalist societies [they should be freely available to all](#), not controlled or owned by private financial interests and developed as 'for profit' private assets but controlled and owned by 'the public'; by government.

It follows, therefore, that public-private partnerships focused on development/ maintenance of societal infrastructures are both unnecessary and problematic since they introduce the profit motive into what should always be considered [necessary environmental features of the commonweal](#).

The 2017 abortive infrastructure 'plans' of the US Trump Administration should be stark warning to all who are truly committed to long-term capitalist development and stability ¹⁰⁶⁴.

As many commentators have explained over the past 30 years, after decades of neoliberal cost-cutting, public utilities, thoroughfares and services, in many Western nations, are in increasingly desperate need of maintenance and upgrading. The infrastructures of the United States are evidence of the inevitable consequences of that neoliberal belief that ['That government is best which governs least'](#). They are in disrepair¹⁰⁶⁵. The American Society of Civil Engineers (ASCE), has explained:

Our nation is at a crossroads. Deteriorating infrastructure is impeding our ability to compete in the thriving global economy, and improvements are necessary to ensure our country is built for the future. While we have made some progress, reversing the trajectory

after decades of underinvestment in our infrastructure requires transformative action from Congress, states, infrastructure owners, and the American people.

(ASCE, [∞][2017 Infrastructure Report Card: Making the Grade](#), *The American Society of Civil Engineers*, 2017)

Thomas Hanna has addressed the 'public option' in funding the desperately needed infrastructure spending:

On the campaign trail, and in his February address to Congress, President Donald Trump promised a \$1 trillion infrastructure plan that would create jobs and "rebuild" the country. In January, labor leaders from several building and construction unions met with Trump at the White House and affirmed their support for such a program. On the surface, this may seem like a bright spot in the Trump policy agenda - but the plan appears seriously flawed.

As Sean McGarvey, president of North America's Building Trades Unions, confirmed after the meeting, the administration's approach to infrastructure involves substantial private sector investment and so-called "public-private partnerships" (PPPs). Once considered an innovative and novel way to finance infrastructure, PPPs have lost their appeal to many experts and policymakers amidst high-profile bankruptcies, extortionary contracts, and spiraling fees, tolls, and rate increases for users....

The traditional alternative of financing infrastructure involves state or local governments issuing bonds to be bought by investors and paid off over time. However, this isn't ideal either - paying off interest on the bonds can sometimes as much as double the cost of a project. According to Brown, there's a much better way: The federal government can finance infrastructure by simply issuing new money.

There are at least two ways to go about this. In one, the Federal Reserve would create money just as it did through its post-financial crisis "quantitative easing" (QE) program, when trillions in new money was pumped into the financial system through the purchase of securities from banks. These funds could then capitalize a national infrastructure bank or a network of state-level infrastructure banks. She calls this "qualitative easing," because the money would be injected into the real economy rather than into the balance sheets of the major Wall Street banks.

The other approach would be for the Treasury, Federal Reserve or Congress to create the money and just directly invest it in infrastructure projects. Whether funneled through a public bank or banks, or invested directly, the funds could be provided at no or very low interest, allowing states and localities to pursue a host of pressing infrastructure projects without levying or raising taxes, tolls and user fees. This isn't so radical as it sounds: As president, Abraham Lincoln printed \$450 million (almost \$11 billion in today's dollars) in "Greenbacks" to help pay for the Civil War, and even Milton Friedman proposed "helicopter money" - a metaphor for "dropping" newly printed money directly into communities - as a way to combat deflation.

Critics will, of course, scream "hyperinflation" and conjure up images of wheelbarrows full of money in Weimar Germany or last decade's worthless Zimbabwean bank notes. But Brown has a

different take. Neither QE (despite the dire predictions of many in the economics profession) nor Lincoln's Civil War money-printing caused hyperinflation. Given the persistence of relatively low inflation (as well as other factors) there is good reason to believe that in the current economic climate, investing new money into the real economy through infrastructure projects would merely provide a much-needed boost.

While Brown's proposal may seem outside the mainstream of contemporary U.S. political discourse, it is exactly what is being proposed by major economic figures and politicians in Europe, ranging from Yanis Varoufakis, the leftist former finance minister of Greece, to Rick Rieder, the Global Chief Investment Officer of BlackRock, the world's largest investment management corporation.

A large-scale commitment to rebuilding America's decaying infrastructure is long overdue. A smart infrastructure policy could directly and indirectly create between 10 and 15 million jobs over the next decade, including good-paying union jobs in some states. It would benefit the economy: Alleviating traffic jams and improving public transit could work wonders for productivity. It would also save people's lives and keep them healthy, and keep the country competitive with others that already are actively and energetically upgrading their infrastructure.

(Thomas Hanna, ^œ[A Better Way To Fund Infrastructure: Trump's investor-friendly plan and other conventional approaches are likely to fail - it's time to try something new](#), *In These Times*, April 5, 2017)

But, of course, the United States has opted for President Trump, the 'president' who has promised to run the nation '[like a business](#)'!

⁶⁹⁴ Michael Hudson has neatly described the nature of the financial parasitism which has emerged within Western capitalism over the past fifty years. This description applies with equal force to the intelligence/ surveillance/ military/ industrial complexes which have [metastasized and spread like cancers](#) within the United States of America:

Economists for the last 50 years have used the term "host economy" for a country that lets in foreign investment. This term appears in most mainstream textbooks. A host implies a parasite. The term parasitism has been applied to finance by Martin Luther and others, but usually in the sense that you just talked about: simply taking something from the host.

But that's not how biological parasites work in nature. Biological parasitism is more complex, and precisely for that reason it's a better and more sophisticated metaphor for economics. The key is how a parasite takes over a host. It has enzymes that numb the host's nervous system and brain. So if it stings or gets its claws into it, there's a soporific anesthetic to block the host from realizing that it's being taken over. Then the parasite sends enzymes into the brain. A parasite cannot take anything from the host unless it takes over the brain.

The brain in modern economies is the government, the educational system, and the way that governments and societies make their economic policy models of how to behave. In nature, the parasite makes the host think that the free rider, the parasite, is its baby,

part of its body, to convince the host actually to protect the parasite over itself.

That's how the financial sector has taken over the economy. Its lobbyists and academic advocates have persuaded governments and voters that they need to protect banks, and even need to bail them out when they become overly predatory and face collapse.

Governments and politicians are persuaded to save banks instead of saving the economy, as if the economy can't function without banks being left in private hands to do whatever they want, free of serious regulation and even from prosecution when they commit fraud. This means saving creditors - the One Percent - not the indebted 99 Percent.

(Transcript of *CounterPunch Radio* - Episode 19 (originally aired September 21, 2015). ^œ[Eric Draitser interviews Michael Hudson](#))

⁶⁹⁵ A report titled: *No Small Fees: LA Spends More on Wall Street than Our Streets*, spelt out the problem for Los Angeles, replicated in states and local authorities across the US:

Key Findings

- More to Wall Street than our streets: The City of Los Angeles last year spent more on Wall Street fees than it did on our streets. It paid Wall Street \$204 million in fees, spending only \$163 million on the Bureau of Street Services. The city also controls \$106 billion in financial and economic power that flows through its financial institutions that can be leveraged to demand better deals from Wall Street.

- Millions in cuts to services: The Wall Street crash reduced revenues and forced a 19% cut in City spending on governmental operations and activities when measured on a per capita basis in 2014 dollars. Basic neighborhood services have been halted or severely curtailed. The city has all but stopped repairing sidewalks, clearing alleys and installing speed bumps.
- Corporations shifting the property tax burden: As revenues have declined over time, debt has increased, while structural revenue problems are not being addressed. Property taxes are

the largest source of LA city revenue and there's been a big shift in who pays them. In 1977, commercial property owners paid 46% of property taxes and residential owners paid 53%. Now, commercial property owners pay only 30% of property taxes, while residential property owners pay 70%. Existing tax loopholes are a big part of the problem. If the loopholes were closed and commercial property was reassessed at market value, Los Angeles would get an additional \$200 million in property tax revenue each year, enough to restore many of the services that were cut.
(^œ[No Small Fees: LA Spends More on Wall Street than Our Streets](#), A Report by the Fix LA Coalition, March 25, 2014)

⁶⁹⁶_(11/05/17) Bill Mitchell, in a blog posting entitled '^œ[British labour lost in a neo-liberal haze](#)', has provided two tables which give an excellent run-down of 'neo-liberal mumbo jumbo' and alternatives to the [delusional presumptions](#) underpinning neoliberal 'household budget' reasoning (the posting, including the comments, is both informative and depressing reading!):

First, the neo-liberal mumbo jumbo:

Table 8.1 Examples of neoclassical macroeconomic metaphors

Focus of Attack	Metaphorical claim	Implied meaning
Government spending	The nation is living beyond its means	Excess spending requires sacrifice Cuts needed immediately
	Nation has maxed out its credit card	Run out of money due to irresponsible spending
	Spending like a drunken sailor	Wanton irresponsibility and delinquent behaviour
Fiscal balance	Budget black hole	Budget beyond human control like the collapse of massive star
	Deteriorating state of the budget	Budget is like a body and is in state of ill health requiring emergency surgery, TINA
	Mushrooming budget deficit	Budget is an organic entity and is out of control
	The nation has run out of money, it is broke	Government budget is like a household budget; the economy is like us
Public Debt	The nation is bankrupt	Nation is a badly managed insolvent firm
	The public debt mountain	Debt is dangerous and insurmountable
	Burdening our grandchildren	Debt threatens fundamental unit of society and undermines future prosperity
	Mortgaging the future	Current government debt compromises future spending
Income support	Welfare dependency	Welfare net is like a drug for the populace, encouraging ill health and addiction
	Dole Bludgers, Skivers	Unemployed are lazy and undeserving

Next, explanations based in the reality obscured by neoliberal dogmas:

Table 8.2 Examples of MMT macroeconomic metaphors

Focus of Attention	Metaphorical claim	Implied meaning
Government spending	Government spending puts money in our pockets.	Government spending increases non government's income.
	Government invests in the productive capacity of our nation.	Government spending increases our capacity to provide for the needs of our population.
	Government cannot run out of money; the true constraint is our nations' resources.	There is no financial constraint although there could be a resource constraint.
Fiscal balance	Government deficits allow us to save.	Government deficits equal non government surpluses.
	Government surpluses equal non government deficits.	Government surpluses reduces non government financial saving
	The fiscal balance is largely determined by the economy's performance.	Fiscal balance outcome is not discretionary.
	The nation cannot run out of its own money.	Government 'budget' is NOT like a household budget.
Public Debt	The governments' debt is our asset.	Government debt provides a risk free financial asset to strengthen non government portfolios.
		Government debt helps to stabilise the financial system.
Income support	We take care of our own.	As our government faces no financial constraints, it uses its fiscal capacity to ensure resources are mobilised to care for its population.
	A good nation supports its people.	Unemployment is always evidence of a policy failure, a failure to put resources to work.
	A good nation helps to support those in other nations who need help.	Rich nations help to mobilise resources needed by poorer nations.

(Bill Mitchell, ^{9e}[British labour lost in a neo-liberal haze](#), *Billy Blog*, May 3, 2017)

Steve Keen, commenting on an earlier British election, put all this rather well:

The British election campaign has begun, and Prime Minister David Cameron is running with the slogan that his Conservative Party will deliver "A Britain living within its means" by running a surplus on day-to-day government spending by 2017/18. It is, as the UK Telegraph noted, hardly an inspiring slogan. But it is one that resonates with voters, because it sounds like the way they would like to manage their own households. And a household budget - whether you balance yours or not - is something we can all understand. If a household spends less than it earns, it can save money, or pay down its debt, or both. So it has to be good if a country does the same thing, right?

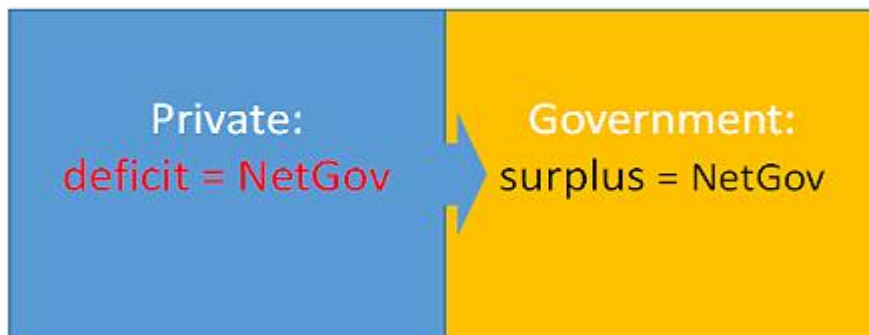

If only it worked that way. In fact, a government surplus has the opposite effect on Joe Public: a government surplus means that the public has to either run down its savings, or increase its debt. And if the government runs a sustained surplus, then - unless the country

in question has a huge export surplus, like Japan or Germany - a financial crisis is inevitable.

That's the opposite of what both politicians and most of the public think that running a government surplus will achieve - and yet it's easy to prove that that is the outcome a sustained surplus will lead to.

Firstly, a government surplus means that, in a given year, the taxes the government imposes on the public exceed the money it spends (and gives) to the public. There is therefore a net flow of money from the public to the government. As a once-off, that doesn't have to be a problem. But if it's sustained for many years, then the public has to provide a continuous flow of money to the government. Let's call this flow NetGov: a sustained surplus requires the situation shown in Figure 1 (where a deficit is shown in red and a surplus in black).

Figure 1: A sustained government surplus requires the private sector to supply the government with a continuous flow of money

One way that the public can do this is to run down its own money stock - to reduce its savings. But that's the opposite of what the policy is intended to achieve: the expectation of enthusiasts for government surpluses is that it will enable the public to save more, not less. But as a simple matter of accounting, increased public savings - increased balances in the public's bank accounts - are only compatible with a government surplus if the public can produce more money than it pays to the government to maintain its surplus. This raises the question "how does the public produce money?". Anyone in the private sector can produce goods and services for sale, but the production of money is a very different thing to production of goods. The public in general can't "produce money" - but the banks can. As the Bank of England recently explained, banks create money by making loans:

Whenever a bank makes a loan, it simultaneously creates a matching deposit in the borrower's bank account, thereby creating new money (Bank of England, "[Money Creation in the modern economy](#)")

So if the private sector is to finance the government sector's surplus, and if the economy is growing at the same time, then there has to be a net flow of new money created by the banking sector - part of which expands the non-banking public's money stock, and part of which finances the government sector's surplus. Therefore the banking sector has to "run a deficit": new loans have to exceed loan repayments (plus interest payments on outstanding debt).

(Steve Keen, ^œ[Beware Of Politicians Bearing Household Analogies](#), *Forbes/Investing*, Jan 14, 2015)

697 (08/01/16) This has largely been a result of the resurfacing of the [Intermediation of Loanable funds \(ILF\) fallacy](#) with the triumph of neoliberalism over the past forty years. Neoliberal economics, [in its various guises](#), has not only denied the legitimacy of public credit creation, proponents have, all-too-often failed to understand the nature of [private credit creation](#), leading to an unfortunate presumption that:

Lending starts with banks collecting deposits of real resources from savers and ends with the lending of those resources to borrowers.

As Paul Krugman put it, appearing to endorse the intermediation of loanable funds (ILF) model of banking:

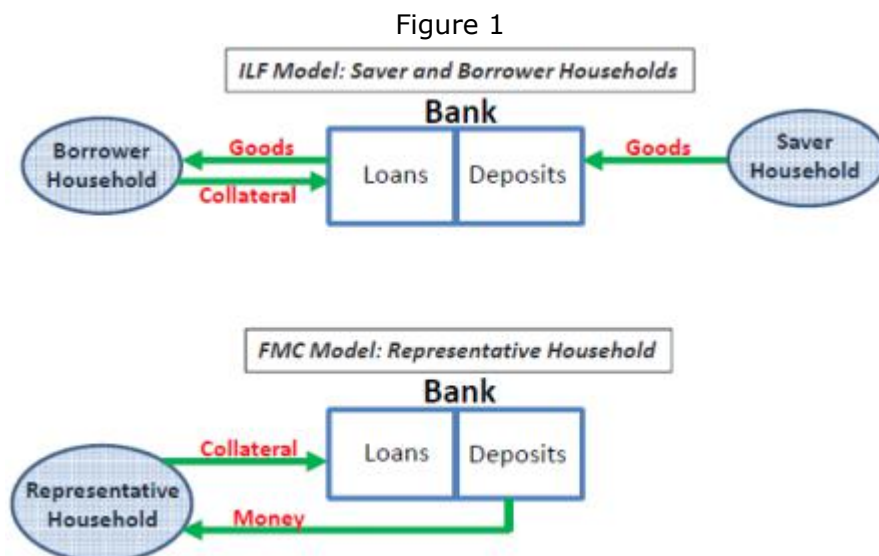

Banks are just another kind of financial intermediary, and the size of the banking sector - and hence the quantity of outside money - is determined by the same kinds of considerations that determine the size of, say, the mutual fund industry.

(Paul Krugman, [Commercial Banks As Creators of "Money"](#), *New York Times*, Opinion Pages, August 24, 2013).

(Those who presume the validity of the ILF model, inevitably presume also that government 'debt' must come from 'somewhere'. So, it becomes inevitable that they will also presume that sovereign governments must 'borrow' from elsewhere if they wish to increase 'spending'. Krugman commonly [presumes government borrowing](#) either from the US Central Reserve as [an autonomous entity which 'lends' to government](#) or, possibly, in the private financial marketplace. One is reminded of [Leo Tolstoy's observation](#). A number of the comments appended to the above blog entry are informative.)

As Zoltan Jakab and Michael Kumhof (2015) have explained, the ILF ...models are based on the highly misleading 'intermediation of loanable funds' theory of banking.... We argue instead that the correct framework is 'money creation' theory.

In a summary paper, published on [CEPR's Policy Portal](#), *VOX* (18 June 2015), they provide a clear, simple graphic illustrating the major difference between the two models:

(08/02/16)(23/10/16)(11/04/17)

(13/07/18) There is another common fallacy which Western commentators on political issues all-too-often perpetuate: Any suggestion that individuals are preferred candidates for public office because they have been successful in business demonstrates a failure to understand the difference between:

- business activity: the pursuit of 'profit';
- and
- government activity: the pursuit of the *Commonweal*.

Despite [neoclassical and neoliberal claims for the primacy of the independent individual](#), the two are not the same! Appointment of individuals to public office based on expertise in profit making/taking is a short-cut to plutocracy.

In a democracy, government has a *fiduciary duty* to its constituency. It takes responsibility for the commonweal. [It is not a 'profit making' enterprise](#). To paraphrase a ^œ[Wikipedia definition of fiduciary responsibility](#):

In such a fiduciary relationship, people, in positions of vulnerability, justifiably vest confidence, good faith, reliance, and trust in their elected representatives; and governments provide aid, advice and protection as needed. In such a relation good conscience requires the fiduciary to act at all times for the sole benefit and interest of all those under its care and protection.

Wade Riddick, in a comment posted on the Blog Site ^œ[Naked Capitalism](#), put the problem in a nutshell:

When private actors provide government services at a profit - especially monopoly services like water and power - the natural tendency is to confiscate the budget for public goods and extort the captive population. These "consumers" are, in fact, captives because they have no other place to turn for affordable service. Are you going to build your own water distribution network with cars?

This problem with privatizing essential government functions has been a major issue since the days of the Magna Carta and tax farming (i.e., privatized, for-profit tax collection on "commission"). (Wade Riddick, Comment, ^œ[Jim Hightower: What Really Poisoned the Water in Flint, Michigan](#), Posted on February 7, 2016 by Lambert Strether)

(10/02/16) The reasoning Riddick employs is equally appropriate to running government as though it were a business. Once profit and loss reasoning is employed in the provision/delivery of government services, "the natural tendency is to confiscate the budget for public goods and extort the captive population".

Jim Hightower spelt out the problem:

The mantra of every Koch-headed, right-wing politico is that government should be run like a business, always focused on cutting costs.

Welcome to Flint, Michigan. This impoverished, mostly African-American city has indeed been run like a private corporation since Republican Gov. Rick Snyder appointed his "emergency manager" to seize control of Flint's heavily indebted local government. Snyder's coup d'état usurped the people's democratic voice and effectively

imposed a corporate-style autocracy over them, run by his unelected CEO-like manager who answers only to Snyder.

Flint's emergency manager holds authoritarian budgetary power and is focused not on serving the people but on the bottom line. His mandate from the governor was to slash costs ruthlessly, so bankers and other holders of the city's debt could be paid off. Snyder was delighted that his appointed czar proved to be an enthusiastic slasher, including a cleaver move in 2014 to cut a couple million dollars from the budget by shifting the source of the city's drinking water from Lake Huron to the Flint River...

But - oops - the bottom line of thinking you can simply apply corporate methods and ethics to public responsibilities is that very bad things can happen. In this case, Flint's water supply is contaminated with lead, its entire infrastructure of water pipes needs to be replaced, thousands of the city's children may be permanently impaired by lead poisoning ... and Snyder's name is mud.

(Jim Hightower: [What Really Poisoned the Water in Flint, Michigan](#): Flint reveals that there is a much deeper contamination poisoning our country's political morals, *AlterNet*, February 3, 2016)

Karen Garcia, in a comment on a *New York Times* article by Paul Krugman, summed up the consequences of the [slipshod government for 'profit'](#) playing out in the United States and around the Western capitalist world in the second decade of the 21st century:

Trump is the personification of capitalism run amok.

He fires at whim. He's immune to public shaming.. His pursuit of wealth and power is relentless. He cares for nobody but his immediate gene pool, just as the capitalistic system itself has no regard for anyone other than owners and the investor class.

He's a very stable crook and a master gaslighter. Taunting his prey one minute and fawning over them the next is how he keeps them off-balance before either lunging for the kill or leaving it for later.

This is exactly how bosses, from CEOs all the way down to middle managers, instill fear into workers every day of their precarious lives.

Thanks to both our major parties moving further right in the past 50 years, there are now few legal restraints against either public and private tyrannical behavior or graft.

It's no surprise that Trump confuses "the country" with "my company." It's no surprise that the longstanding, pre-existing world order of profits over people has produced such a glut of reactionary global leaders like him.

It's no use griping that Trump is destroying "norms," or pretending that everything was cool before he came along. More than a dozen wars, with millions killed and trillions of dollars wasted since World War II, coupled with the constant assaults on our social programs, have created a virtual Petri dish for all kinds of Trumps to grow and thrive like Blobs.

We need some social democracy, and we need it right now.

A new New Deal or bust.

(Karen Garcia, Comment, on Paul Krugman, [For Trump, Failure Is](#)

[the Only Option](#), *New York Times*, July 12, 2018)

Michael Hudson summed it all up in an interview on *The Real News Network*:

KIM BROWN: So, Michael, in an interview that Jared Kushner gave the Washington Post over the weekend from his West Wing office, ...Jared Kushner says that the American government needs to be run like a business - I'm paraphrasing here. This seems to be a feeling, an ethos, if you will, shared by this Trump administration.

So, is it a good idea to try to run government the way that corporations are being run?

MICHAEL HUDSON: Not only is it a bad idea, but yesterday, the Financial Times of London, the premier financial paper, had a wonderful editorial, saying ^œ[Why business cannot make government great](#) [subtitle: Making law is not making money, and governing is not managing (March 29, 2017) - behind a pay wall]. In other words, why it can't be run like a government.

The main reason is that [businesses are run to make a profit](#)....

Imagine somebody working for an employer... [T]he last thing you want is for the employer to run his business the way he wants, without any safety conditions, without paying you overtime, without paying you a pension, without paying you medical care.

The idea of running it like a business is... to pay labor as little as possible, and to get as much money for themselves - the businessmen - as possible. **So, when Kushner says, Let's run government like a business, what he really means is, let's run government for business....**

...[R]unning the government as a business says,

- let's get rid of the environmental concerns, because that's a cost to business.
- Let's not tax business, because that's a cost.
- Let's get rid of any pro-labor legislation. We have our consumer protection.
- Let's get rid of the Consumer Financial Protection Agency that blocks banks from cheating their customers, because business is all about gouging as much as you can get.

So, do you really want a government that is going to be run like a business and gouge people? And then the final kicker that really makes the analogy between business - and a private balance sheet - and government different is that businesses can't run a deficit....

But governments are supposed to run a deficit, because they're supposed to lose money in balance sheet terms. They're supposed to spend money into the economy; that's how the economy gets enough money to grow.

(^œ[Trump's Idea of Running Government Like a Business is Bad for Citizens](#), Posted on *Naked Capitalism*, April 10, 2017 by Yves Smith)

⁶⁹⁸ Paul Samuelson: ^œ[interview with Mark Blaug](#) on the superstition that the budget must be balanced at all times.

Robert Skidelsky has given "a glimpse into the mindset of a bygone era" through a discussion of "the [mix of neoclassical and Keynesian](#)

economics that defined the mainstream of the field [of economics] for 50 years" through the New Deal and post-New Deal period. As he says,

...it is extraordinary to realize just how confident economists of [Samuelson's] generation were that the New Economics (as the Keynesian approach was called in America) had solved the problem of depression and mass unemployment. As Samuelson put it in his 1973 introduction, "the specter of a repetition of the depression of the 1930s has been reduced to a negligible probability."

Yes, there would still be small fluctuations; but, as he wrote in 1966, "Great Depressions - cumulative slumps that feed on themselves - are indeed extinct." The reason was that governments now had the tools, especially discretionary fiscal policy, to check any incipient downturn. "What is important about the budget," he said in 1970, "is whether it is inflationary or deflationary, not whether [it is] balanced or unbalanced." In other words, "A deficit in a good cause is good business." How many economists or politicians believe this today?

(Robert Skidelsky, "œThe Fall of the House of Samuelson ", *Project Syndicate*, Jan 22, 2015)

699 That politicians and economists should strip economic support from those most in need in their communities in the interests of 'balancing the budget' is inexcusable. It is one thing to display one's naivety (dare one say 'stupidity'?) in believing the fairy tales earlier economists have spun to ensure 'economic discipline' in the community; it is quite another to callously condemn the most vulnerable to penury in doing so. Such policies are not only morally reprehensible, they are also economically absurd.

700 For an explanation of US Federal Reserve System Capital Adequacy requirements and guidelines, see: œUSFRB Capital Guidelines and Adequacy.

Simon Johnson provided a (2013) picture of British attempts at ensuring that banks œ'have enough loss-absorbing capital'. As he claimed, 'British officials - and those elsewhere - should come back to work and do their job properly, by phasing in much higher capital requirements in a responsible manner':

The devil is always in the details. And the greatest devils of our economic age lurk in the details of how officials regard the capital - the equity funding - of our largest banks. Government officials have identified far too closely with the distorted, self-interested worldview of global banking executives. The result is great peril for the rest of us.

In this surreal world, the United Kingdom takes on disproportionate influence, because London is still a top financial center - and because the biggest banks in the United States and Europe have proved very effective at playing off American and British regulators against one another. Opinion leaders around the world look to the British for a clever and nuanced approach to financial-sector policy. Unfortunately, they currently look in vain.

To understand the precise problem, you must dip into the latest details of the Prudential Regulatory Authority's "œcapital shortfall exercise " with eight major UK banks. I won't pretend that the PRA's work is easy reading for a layperson; but anyone who spends a little time with the documents will first laugh and then cry.

With great fanfare (and generally favorable press coverage), the PRA announced that some banks do not have enough loss-absorbing capital - relative to target levels of equity that are ludicrously low. The Bank of England's Financial Policy Committee (FPC) said that ^œ[the target should be 7% of risk-weighted assets under Basel III definitions](#). And, ^œ[in the PRA's presentation](#), this amounts to a leverage ratio of around 3% for most of these banks (again using Basel III definitions), though a couple of banks will need an additional adjustment to reach that level.

In plain English, a supposedly well-capitalized bank in the UK can have 97 cents of debt per one dollar of assets (and just three cents of equity)....

So much for the laughs. The tragedy in the PRA's exercise is British officials' apparent belief that they are carrying out real reform, rather than setting the stage for serious trouble...

But the potential for more tears for taxpayers - still reeling from the cost of rescuing the Royal Bank of Scotland (RBS) - looms large. The invitation to banks to game the risk-weighting system further is stated plainly: "In line with the FPC recommendation, the PRA has accepted restructuring actions which, by reducing risk-weighted assets, will credibly deliver improvements in capital adequacy." In other words, the banks can change how they calculate risk - for example, by tweaking their own models - in ways that will make them look better as far as regulators are concerned.

(Simon Johnson, *Project Syndicate*, Jun. 26, 2013, ^œ[British Banks' Comedy of Terrors](#))

Anat Admati and colleagues, in 2013, addressed 'the pervasive view that "equity is expensive," which leads to claims that high capital requirements are costly for society and would affect credit markets adversely.' As they explained,

A pervasive view that underlies most discussions of capital regulation is that "equity is expensive," and that equity requirements, while offering substantial benefits in preventing crises, also impose costs on the financial system and possibly on the economy. Bankers have mounted a campaign against increasing equity requirements. Policymakers and regulators are particularly concerned by assertions that increased equity requirements would restrict bank lending and impede economic growth.

Possibly as a result of such pressure, the proposed Basel III requirements, while moving in the direction of increasing capital requirements, still allow banks to remain very highly leveraged. We consider this very troubling, because, as we show below, the view that equity is expensive is flawed in the context of capital regulation.

From society's perspective, in fact, having a fragile financial system in which banks and other financial institutions are funded with too little equity is inefficient and indeed "expensive."

(Anat R. Admati, Peter M. DeMarzo, Martin Hellwig and Paul Pfleiderer, ^œ[Fallacies, Irrelevant Facts, and Myths in the Discussion of Capital Regulation: Why Bank Equity is Not Expensive](#), *Stanford Business*, October 22, 2013, Working Paper No. 2065)

⁷⁰¹ Dean Baker has summed it up well:

The third key group that has been promoting the SGD [Second Great Depression] myth is the economists and policy-types (including reporters) who deal with macroeconomic and financial issues. Their reason for promoting the SGD story is that they need cover for having failed to recognize the housing bubble and the severe downturn that would be an inevitable outcome of its collapse. The SGD myth goes along with the idea that the collapse and continuing weakness of the economy is all very mysterious.

They want the public to believe that the issues involved are complicated and beyond the understanding of normal people. This is why their focus is always the financial crisis. After all credit default swaps and collateralized debt obligations can be complicated.

On the other hand, the basic story of the housing bubble was pretty damn simple. When the country saw an unprecedented run-up in house prices it should have caught some economists' attention. After all, the US housing market was the largest market in the world and it was not previously subject to erratic fluctuations of this sort.

The huge construction boom driven by the bubble was also not a secret. Nor was the flood of dubious loans, which even at the time were the subject of jokes about their poor quality by people in the industry.

In short, the story of the housing bubble and the devastation wreaked on the economy by its collapse is a simple one that the great minds of the economics profession should have all seen coming. Rather than acknowledge that they made a colossal blunder, it's much better to build up the myth that it's all so complicated. And, if we didn't give Wall Street everything it wanted, we would be subject to the curse of the SGD.

(Dean Baker, [Lehman Day: Making Fun of the Second Great Depression Crowd](#), *Truthout*, Monday, 14 September 2015)

⁷⁰² Blair Mcclendon summed it up well:

The Obama presidency gave rise to a uniquely powerful iconography that projected a sense of hope and radical possibility. But behind the president's messianic imagery was a country unraveling at the seams - and a president who stood for nothing.

(Blair Mcclendon, [Barack Obama, the Hollow Icon](#), *Jacobin*, September 13, 2021)

⁷⁰³ A comment on the article by John Grannis sums it all up:

Several financial journalists have written books about the causes of and response to the Great Recession. I hope one of them takes the time to rewrite this piece of revisionist fluff, replacing the self serving lies with the obvious truth. I'll mention a couple of easy targets. Start with "the seeds of financial panic were sown..." No mention of conspiracy between the major banks and the credit rating authorities to create massive fraud. No word about the bogus investment instruments sold to investors around the world. Not a peep about predatory lenders or robo foreclosures. These were not flaws in the system, they were crimes.

Let's move on to the response. Bernanke, Geithner and Paulson, prime suspects all, present themselves as brave firefighters, saving the world from ruin. What did they do? After Goldman Sachs' Paulson allowed Lehman Brothers to fall, the Fed and Treasury moved to bail out banks

dollar for dollar, while letting millions of people lose their homes. Did it ever occur to them that all those trillions of dollars could have been injected at the bottom of the system, rather than the top, thus saving the housing market and millions of jobs? Apparently the welfare (and immunity) of a few rich bankers was more important than that of ordinary American citizens.

The writers state that "the enemy is forgetting." I agree. Our financial lords would have us forget who is truly responsible [for] the Great Recession and all of its ongoing consequences. We refuse to comply. (John Grannis, Comment on: [What We Need to Fight the Next Financial Crisis: Congress has taken away some of the tools that were crucial to us during the 2008 panic. It's time to bring them back](#), *New York Times*, September 7, 2018)

⁷⁰⁴ Raphaële Chappe *et al* explained the 21st Century US 'magic money' problem:

MORAL HAZARD AS A BUSINESS MODEL

Under normal conditions, conventional monetary policy involves the Fed (and other central banks) directly influencing short-term interest rates by buying and selling short-term government securities through open-market operations. But in its efforts to contain the 2008 financial crisis and the present COVID-19 recession, the Fed has departed from that model.

In 2008, the policy of quantitative easing extended these purchases to long-term government debt and toxic assets such as mortgage-backed securities. This past March, in response to the pandemic, the Fed publicly pledged to buy a much wider range of assets from a much wider range of sellers, including corporate bonds rated below investment grade.

The idea behind the move was that investors would trade the securities on the Fed's "buy list" with the assumption that they were insulated from overall market conditions. This helped restore market confidence, prompting a stock market rally in spite of widespread economic devastation and massive unemployment....

BAILOUTS FOR ME, BUT NOT FOR THEE

In severing any remaining ties between financial markets and the real economy, policymakers seem to believe that the rising value of stocks and bonds will trickle down enough to produce GDP growth. But the belief that increased wealth can replace wage growth as the driving force in lifting aggregate demand ignores the fact that the vast majority of U.S. households are not able to build wealth in the first place.

According to recent research by Goldman Sachs, the bottom 90 percent of Americans hold a mere 12 percent of the value of stocks owned by U.S. households [almost all of it, including the 12%, in the hands of the top 20% of households]

The U.S. economy has failed to deliver inclusive growth for decades, as real wages for many workers have been stagnant since the mid-1970s. The Fed itself determined last year that the majority of American adults would not be able to cover a hypothetical unexpected expense of \$400 - a scenario that for millions of Americans became a reality when the pandemic forced the country to shut down. The only remaining recourse for typical consumers

struggling to maintain their standard of living is to rely on ever more expensive credit.

In short, the United States seems to have stumbled into a monetary policy regime that has untethered the fate of economic elites, who derive most of their income from state-protected financial assets, from that of ordinary people, who rely on low and precarious wages.

Such a regime offers permanent protections to those with high incomes from financial assets; everyone else gets little more than temporary help in times of crisis. In a world of high inequality and intense polarization, this is a dangerous policy mix.

(Raphaële Chappe; Mark Blyth; Sebastian Mallaby, ^œ[Hocus-Pocus? Debating the Age of Magic Money](#), *Foreign Affairs*, November/December 2020)

⁷⁰⁵ As Mariana Mazzucato explains, the world [cannot afford to repeat the mistakes of 2008](#) in the aftermath of the 2020 Covid-19 Crisis.

...[A]s countries are reeling from the COVID-19 pandemic and the resulting lockdowns, they must avoid making the same mistake. In the months after the virus first surfaced, governments stepped in to address the concomitant economic and health crises, rolling out stimulus packages to protect jobs, issuing rules to slow the spread of the disease, and investing in the research and development of treatments and vaccines. These rescue efforts are necessary. But it is not enough for governments to simply intervene as the spender of last resort when markets fail or crises occur. They should actively shape markets so that they deliver the kind of long-term outcomes that benefit everyone.

The world missed the opportunity to do that back in 2008, but fate has handed it another chance. As countries climb out of the current crisis, they can do more than spur economic growth; they can steer the direction of that growth to build a better economy. Instead of handing out no-strings-attached assistance to corporations, they can condition their bailouts on policies that protect the public interest and tackle societal problems. They can require COVID-19 vaccines receiving public support to be made universally accessible. They can refuse to bail out companies that won't curb their carbon emissions or won't stop hiding their profits in tax havens.

For too long, governments have ^œ[socialized risks but privatized rewards](#): the public has paid the price for cleaning up messes, but the benefits of those cleanups have accrued largely to companies and their investors. In times of need, many businesses are quick to ask for government help, yet in good times, they demand that the government step away. The COVID-19 crisis presents an opportunity to right this imbalance through a new style of dealmaking that forces bailed-out companies to act more in the public interest and allows taxpayers to share in the benefits of successes traditionally credited to the private sector alone. But if governments instead focus only on ending the immediate pain, without rewriting the rules of the game, then the economic growth that follows the crisis will be neither inclusive nor sustainable. Nor will it serve businesses interested in long-term growth opportunities. The intervention will have been a waste, and the missed opportunity will merely fuel a new crisis.

(Mariana Mazzucato, ^œ[Capitalism After the Pandemic: Getting the Recovery Right](#), *Foreign Affairs*, October 02, 2020)

706 That repayment was in part funded by the billions of dollars of TARP (Troubled Asset Relief Program) funds *given away* by Paulson, much of which found its way into the coffers of the troubled banks: a feat of prestidigitation. The US Fed was, in part, repaid for loans made to the too-big-to-fail banks with its own distributed TARP funds (now returned to the Fed as bank reserves (withdrawing access to that credit from the mundane economy)) - leaving those banks with the foreclosed properties they had gained from their previously toxic mortgage assets to be transferred into 'a rental market controlled by Wall Street '. As Orwell put it, "all animals are equal but some animals are more equal than others". (For further information on the TARP program see: ^œ[About TARP: 5 Year Update 2008-2013](#), U.S. Department of Treasury, for more detail; also this article by Erik Klingenberg: The Troubled Asset Relief Program: Summary and analysis of the troubled asset relief program (*Consumer Finance Law Quarterly Report*, Volume 62, Numbers 1-2, Spring-Summer 2008, pp. 26-35) for a critical examination of its origins and implementation.)

For a critical examination of the role the Fed played as "lender of last resort" in the aftermath of the financial crisis of 2007 see Wray (2013). As Wray summarized:

If anything, the crisis response largely restored the financial system that existed in 2007 on the eve of the crisis.

...[B]ecause the response... simply propped up a deeply flawed financial structure and because financial system reform will do little to prevent financial institutions from continuing risky practices, another crisis is inevitable - and indeed will likely occur far sooner than most analysts expect.

(L. Randall Wray, ^œ[The Lender of Last Resort: A Critical Analysis of the Federal Reserve's Unprecedented Intervention After 2007](#), Levy Economics Institute, April 2013)

For a description and explanation of SEC prosecution practices over the period (and another example of prestidigitation) see Matthew Yglesias (2014):

The Securities and Exchange Commission is one of the main agencies that's supposed to be regulating Wall Street. But they've been essentially caught red handed working together with Goldman Sachs to make it look like Goldman was paying a huge fine when really they're paying a small one. Sadly, though, the story probably won't get much attention from the general public because the CDO prosecution issue is a little obscure and it hasn't really been in the news for years.

...What is now looking clearer and clearer is that the settlements were not as advertised. The banks paid money - in Goldman Sachs' case \$550 million - not to settle one CDO suit, but to settle all the CDO suits. So rather than Goldman paying \$550 million for wrongdoing around the Abacus CDO and then facing 10 more charges related to 10 other suspicious CDOs, it was paying a price of \$55 million per CDO to settle all 11 cases. Except the SEC didn't want to look like it was letting the banks get away with a slap on the wrist, so it worked out an arrangement whereby both sides would publicly act as if only one case had been settled while agreeing under the table that all claims were now resolved. (Matthew Yglesias, ^œ[The SEC's just been caught colluding with the](#)

[banks it's supposed to regulate](#), Vox 13 April 2014.

Yglesias, incidentally, provides a clear explanation of the nature of collateralized debt obligation (CDO) packages.)

(11/04/16) Sleight-of-hand discounting of financial settlements for wrongdoing in the US was not limited to the immediate post-2008 Global Financial Crisis fallout. Nathaniel Popper has described very similar practices in a 2016 Goldman Sachs settlement reached with the US Justice Department. As Popper explains:

Goldman is the last of the major banks to settle with the government. Past deals with other banks also contained some of these concessions, but Goldman appears to have negotiated an even sweeter deal. For all the banks, the credits suggest that the amounts that the banks will have to actually spend on consumer relief will be much lower than the numbers announced in the news releases.

"They appear to have grossly inflated the settlement amount for P.R. purposes to mislead the public, while in the fine print, enabling Goldman Sachs to pay 50 to 75 percent less," said Dennis Kelleher, the founder of the advocacy organization Better Markets, referring to the government announcement. "The problem all along, with all of these settlements - and this one highlights it even more - is that they are carefully crafted more to conceal than reveal to the American public what really happened here - and what the so-called penalty is."

A Justice Department official with direct knowledge of the negotiations, who spoke on the condition that his name not be disclosed, said that the banks were given extra credit for activities that the government wanted to encourage, like funding development of low-income housing or providing relief to areas hit by natural disasters. But he also said that the final terms were a result of a back and forth between the banks and government officials.

Goldman is the last of the big American banks to reach a settlement with the national working group that was set up in 2012 to investigate how Wall Street exacerbated the mortgage bubble and ensuing financial crisis. The group included several federal regulators and state attorneys general.

(Nathaniel Popper, ["Goldman Mortgage Settlement Is Much Less Than Meets the Eye"](#), *New York Times*, DealBook, April 11, 2016

⁷⁰⁷ Both Treasury securities and agency mortgage-backed securities have been purchased. As the Federal Reserve Bank of New York explains: "Only fixed-rate agency MBS securities guaranteed by Fannie Mae, Freddie Mac and Ginnie Mae are eligible assets for purchase." See ["Statement Regarding Purchases of Treasury Securities and Agency Mortgage-Backed Securities"](#) for detail.

⁷⁰⁸ Michael Hudson, in an interview conducted by Finnish journalist Antti J. Ronkainen, gave his explanation of the rationale for the US Federal Reserve's response to the 2008 crisis:

AJR: So let's go back to beginning. When the Great Financial Crisis escalated in 2008 the Fed's response was to lower its main interest rate to nearly zero. Why?

MH: The aim of lowering interest rates was to provide banks with cheap credit. The pretense was that banks might lend to help the economy get going again. But the Fed's idea was simply to re-inflate the Bubble Economy. It aimed at restoring the value of the mortgages that banks had in their loan portfolios. The hope was that easy credit would spur new mortgage lending to bid housing prices back up - as if this would help the economy rather than simply raising the price of home ownership.

But banks weren't going to make mortgage loans to a housing market that already was over-lent. Instead, homeowners had to start paying down the mortgages they had taken out. Banks also reduced their credit-card exposure by a few hundred billion dollars. So instead of receiving new credit, the economy was saddled with having to repay debts.

Banks did make money, but not by lending into the "real" production and consumption economy. They mainly engaged in arbitrage and speculation, and lending to hedge funds and companies to buy their own stocks yielding higher dividend returns than the low interest rates that were available.

AJR: In addition to the near zero interest rates, the Fed bought US Treasury bonds and mortgage backed securities (MBS) with almost \$4 trillion during three rounds of Quantitative Easing stimulus. How have these measures affected the real economy and financial markets?

MH: In 2008 the Federal Reserve had a choice: It could save the economy, or it could save the banks. It might have used a fraction of what became the vast QE credit - for example \$1 trillion - to pay off the bad mortgages and write them down. That would have helped save the economy from debt deflation. Instead, the Fed simply wanted to re-inflate the bubble, to save banks from having to suffer losses on their junk mortgages and other bad loans.

Keeping these debts on the books, in full, let banks foreclose on defaulting homeowners. This intensified the debt-deflation, pushing the economy into its present post-2008 depression. The debt overhead is keeping it depressed.

One therefore can speak of a financial war waged by Wall Street against the economy. The Fed is a major weapon in this war. Its constituency is Wall Street. Like the Justice and Treasury Departments, it has been captured and taken hostage.

(Michael Hudson and Antti J. Ronkainen, [∞][The Federal Reserve and the Global Fracture](#), *Counter Punch*, February 17, 2016)

⁷⁰⁹ Stiglitz summed up the post-Global Financial Crisis problems and necessities well:

What was needed was more than a massive bank bailout. The US needed a fundamental reform of its financial system. The 2010 Dodd-Frank legislation went some way, though not far enough, in preventing banks from doing harm to the rest of us; but it did little to ensure that the banks actually do what they are supposed to do, focusing more, for example, on lending to small and medium-size enterprises.

More government spending was necessary, but so, too, were more active redistribution and pre-distribution programs - addressing the

weakening of workers' bargaining power, the agglomeration of market power by large corporations, and corporate and financial abuses. Likewise, active labor-market and industrial policies might have helped those areas suffering from the consequences of deindustrialization.

Instead, policymakers failed to do enough even to prevent poor households from losing their homes. The political consequences of these economic failures were predictable and predicted: it was clear that there was a risk that those who were so badly treated would turn to a demagogue. No one could have predicted that the US would get one as bad as Donald Trump: a racist misogynist bent on destroying the rule of law, both at home and abroad, and discrediting America's truth-telling and assessing institutions, including the media....

There are many lessons to be learned as we reflect on the 2008 crisis, but the most important is that the challenge was - and remains - political, not economic: there is nothing that inherently prevents our economy from being run in a way that ensures full employment and shared prosperity. Secular stagnation was just an excuse for flawed economic policies. Unless and until the selfishness and myopia that define our politics - especially in the US under Trump and his Republican enablers - is overcome, an economy that serves the many, rather than the few, will remain an impossible dream. Even if GDP increases, the incomes of the majority of citizens will stagnate.

(Joseph E. Stiglitz, [The Myth of Secular Stagnation](#), *Project Syndicate*, 28 August, 2018)

⁷¹⁰ Bill Mitchell, in a blog entry entitled: [The government has all the tools it needs, anytime, to resist recession](#), (*Billy Blog*, April 20, 2016), has commented on the fact that "central banks have had little effect on economic growth despite the rather massive buildup of their 'balance sheets' via various types of quantitative easing programs". His observations complement Mike Lofgren's [discussion of the fachidiot](#) :

Several new articles have appeared in the last few weeks in the major media outlets expressing surprise that central banks have had little effect on economic growth despite the rather massive buildup of their 'balance sheets' via various types of quantitative easing programs. I have indicated before that I am coming to the view that most of the media, politicians, central bankers and other likely types (IMF and European Commission officials etc) seem to be in a constant state of 'surprise' as each day of reality fails to confirm what they said yesterday or last week (allowing for lags :-)). What a group of surprised people we have to effectively run our nations on behalf of capital. Poor souls, constantly be shocked out of their certainties. That is what Groupthink does - creates mobs that deny reality until it smacks them so hard in the face that they can only utter "that was surprising!" And in that context, the latest media trend appears to be something along the lines of 'well let's get the turbines moving' or 'those helicopters are about to launch' and when we read that and what follows we learn that the media input into our lives only reinforces the smokescreen of ignorance that we conduct our daily lives within.

⁷¹¹ (06/06/16) While, since the 1970s, those who explain the seemingly obvious fact that banks *create* credit and 'money', appear to see this as

a newly discovered truth, it is, of course, [merely a rediscovery](#) of the New Deal understanding of the nature of credit and 'money'. The [US Federal Reserve, in 1939, spelt it out](#):

Federal Reserve Bank credit... does not consist of funds that the Reserve authorities "get" somewhere in order to lend, but constitutes funds that they are empowered to create.

*The creation of unsecured credit by private financial institutions **is not the same** as credit creation by sovereign central banks.* One is based on an assumption of 'credit-worthiness' backed by presumed access to sovereign credit; the other is the issuer of unencumbered sovereign credit. As Beardsley Ruml explained, the Roosevelt Administration based its fiscal policies and practices, which resulted in what [Gorton has called the "Quiet Period"](#) in U.S. banking, on this understanding.

Frances Coppola has explained the means by which private banks create credit and money well:

...when a bank creates a new loan, it also creates a new balancing deposit. It creates this "from thin air", not from existing money: banks do not "lend out" existing deposits, as is commonly thought.

...The volume of excess reserves in the system is what it is, and banks cannot reduce it by lending. They could reduce excess reserves by converting them to physical cash, but that would simply exchange one safe asset (reserves) for another (cash). It would make no difference whatsoever to their ability to lend.

(Frances Coppola, [Banks Don't Lend Out Reserves](#), *Forbes*, Investing, 1/21/2014)

Dan Kervick provides additional clarity to Coppola's explanation:

...I wholeheartedly agree with the bottom line moral Coppola draws from the operational mechanics of bank lending, but I do think some additional clarity can be had on the question of whether or not commercial banks lend their reserves. And I also have some reservations about the justification Coppola cites for the policy of paying interest on reserves in the first place....

Do banks lend their reserves? A complete answer requires being clear about which question we are asking. If the question is, "Does an individual commercial bank lend its reserves?" then the most accurate answer is "Sometimes." If the question is "Does the commercial banking system in the aggregate lend its reserves?" then the most accurate answer is "No."

([Bank Lending and Bank Reserves](#), *New Economic Perspectives*, January 22, 2014. (See also the comments appended to the explanation.))

(04/01/16) Paul Sheard (2013), Standard & Poor's chief global economist, provided a detailed explanation of all this. As he explained:

Banks lend by simultaneously creating a loan asset and a deposit liability on their balance sheet. That is why it is called credit "creation" - credit is created literally out of thin air (or with the stroke of a keyboard). The loan is not created out of reserves. And the loan is not created out of deposits: Loans create deposits, not the other way around. Then the deposits need a certain amount of reserves to be held against them, and the central bank supplies them...

So how do reserves enter into the credit creation picture? Borrowers borrow in order to spend the money (or buy an asset), so the borrower will likely do just that. The money "circulates" in the economy, so to speak. In aggregate terms, that means one of two things: the deposit money either moves into cash in circulation (banknotes) or stays on deposit somewhere in the banking system (typically it is some combination of both). To the extent that the deposit ends up being converted into cash, reserves go down because that is where banknotes come from...

Here is the link between reserves and bank lending. Reserves go down when banknotes increase. Banknotes increase when borrowers take the money they borrowed out of the bank and part or all of the money remains in cash, rather than being re-deposited in the banking system. For an individual bank, the link between reserves and loans is an indirect and largely uncontrollable one. Individual banks can try to "get rid of" their excess reserves by making new loans, and, to the extent that the deposits so created leave their bank and, importantly, do not return as new deposits (the bigger the bank the less likely this condition is to hold), this will work for them. But for banks as a whole, new lending leads to a reduction in reserves only to the extent that the deposits created move into cash in circulation.

(Paul Sheard, [Repeat After Me: Banks Cannot And Do Not "Lend Out" Reserves](#), *Standard & Poor's Rating Services*, Economic Research, August 13, 2013, p. 7)

Zoltan Jakab and Michael Kumhof (2015) have compared the common misperception amongst both economists and others in the community:

➤ that "banks accept deposits of pre-existing real resources from savers and then lend them to borrowers"

with the reality:

➤ that "banks provide financing through money creation".
(See here [for a simple graphic illustrating their point.](#))

As they explain:

Since the Great Recession, banks have increasingly been incorporated into macroeconomic models. However, this literature confronts many unresolved issues. This paper shows that many of them are attributable to the use of the intermediation of loanable funds (ILF) model of banking. In the ILF model, bank loans represent the intermediation of real savings, or loanable funds, between non-bank savers and non-bank borrowers. But in the real world, the key function of banks is the provision of financing, or the creation of new monetary purchasing power through loans, for a single agent that is both borrower and depositor. The bank therefore creates its own funding, deposits, in the act of lending, in a transaction that involves no intermediation whatsoever. Third parties are only involved in that the borrower/depositor needs to be sure that others will accept his new deposit in payment for goods, services or assets. This is never in question, because bank deposits are any modern economy's dominant medium of exchange.
(Zoltan Jakab and Michael Kumhof, [Banks are not intermediaries](#))

of loanable funds - and why this matters, *Bank of England, Working Paper No. 529*, May 2015, p.ii)

For further clarity see: Michael McLeay, Amar Radia and Ryland Thomas: ^œ[Money creation in the modern economy](#) *Bank of England Quarterly Bulletin* (Q1, 2014, pp. 14-27). Unfortunately the use of the term 'money' rather than 'credit' in the title of this article has caused some confusion. Of course, private banks do not create 'money' in the form of official currency, they create 'credit'.

(01/09/16) The interchange of credit and currency should be viewed independently of the creation of private credit - and it is best to avoid treating the term 'money' as synonymous with the term 'credit'. The vast bulk of private credit creation does not involve the conversion of that credit into official currency¹⁰⁶⁶ - where it does, banks draw on their official Reserve Bank bank or currency reserves. See Ann Pettifor, ^œ[Out of thin air - Why banks must be allowed to create money](#) (*Prime : Policy Research in Macroeconomics*, 25th June 2014) for a discussion of the resulting confusion and the demand that banks not be allowed to 'create their own money'.

US Federal Reserve spokespeople, for reasons addressed by both Dan Kervick and Paul Sheard (^œ[Banks cannot "lend out" reserves](#), *Nomura Global Weekly Economic Monitor*, Global Letter, 4 March 2011), appear sanguine about the [dangers of releasing a flood of new currency](#) into the economy in the present economic climate. As John Williams (FRBSF) put it:

...once the economy improves sufficiently, won't banks start lending more actively, causing the historical money multiplier to reassert itself? And can't the resulting huge increase in the money supply overheat the economy, leading to higher inflation? The answer to these questions is no, and the reason is a profound, but largely unappreciated change in the inner workings of monetary policy.

The change is that the Fed now pays interest on reserves. The opportunity cost of holding reserves is now the difference between the federal funds rate and the interest rate on reserves...

(John C. Williams, ^œ[Monetary Policy, Money, and Inflation](#), FRBSF Economic Letter, July 9, 2012)

However, the reserves held are truly unprecedented and the Federal Reserve seems to have no clear plan for significantly reducing them¹⁰⁶⁷. One can but wonder about the long-term consequences of handing major banks such potentially powerful means of manipulating US Federal Reserve policy and practice into the future. One might speculate that such a straightjacketing of the power of the Fed has the potential to shift monetary base control from the Federal Reserve Board into the hands of a fast-emerging US plutocracy.

⁷¹² (17/02/16) Bill Mitchell has suggested a likely contributor to the 2008 Global Financial Crisis (GFC) debacle - a groupthink augmented, amoral narcissism:

...[A]part from the corrupt and plainly unethical conduct exhibited by Wall Street, the rating agencies and the bank[s] that fed on all the ridiculous products that were created to make complex what, in fact, was a simple strategy - make money of real estate, there was also plain dumbness at the centre of the collapse and the crisis. Dumbness created by a dangerous Groupthink where patterned

behaviour was inculcated into the financial system and, ultimately, came back to bite most of us.

While the representations of cocky, sharp, bright financial market traders with PhDs in physics or mathematics in a sequence of movies about the GFC and its aftermath lead to the conclusion that these conspirators knew what they were doing and were happy to profit for themselves at the expense of those they considered to be dumber, a recent academic research study has revealed that the traders themselves were oblivious to what they were doing and became entranced themselves by their own image.

That is what Groupthink does - it builds an impervious layer for those trapped inside the group - they are insulated from reality, consistent logic, criticism and behave in self-reinforcing ways that may involve enlarged deviations from anything reasonable, smart or evidence based. Groupthink makes people dumb and compliant.

The GFC was in no small measure the product of that sort of dumb compliance, which is not to reduce the enormity of the corruption involved. It, however, does reinforce my view that we should ban all these speculative products that provide no beneficial input to the real economy, if only because the sociopaths that are attracted to creating and selling them are too dumb to know what they are doing.

(Bill Mitchell, ["It is fuelled by stupidity ... That's not stupidity that's fraud"](#), Bill Mitchell - *Billy Blog*, February 15, 2016)

Ing-Haw Cheng, Sahil Raina, and Wei Xiong spelled it all out:

Did Wall Street foresee the recent crash of the US housing bubble? Given the role played by Wall Street in facilitating the credit expansion that precipitated the housing market boom, understanding this question is important for systematically understanding the causes of the worst financial crisis since the Great Depression.

With the benefit of hindsight, many find it hard to imagine that Wall Street missed seeing large-scale problems in housing markets before others. For example, the Financial Crisis Inquiry Commission wrote in its report that, in the years preceding the collapse, "Alarm bells were clanging inside financial institutions" (Financial Crisis Inquiry Commission 2011).

If Wall Street was aware that the process of securitization was generating a national housing bubble that would lead to a deep financial crisis yet proceeded to securitize mortgage loans of dubious quality, this would reveal far more severe incentive problems on Wall Street than many have recognized - and confirm many of the worst fears underlying outrage from the public and policymakers.

On the other hand, if Wall Street employees involved in securitization systematically missed seeing the housing bubble, despite having better information than others, this raises fundamental questions regarding how Wall Street employees process information and form their beliefs.

(Ing-Haw Cheng, Sahil Raina, and Wei Xiong, ["Wall Street and the Housing Bubble"](#), *American Economic Review*, 2014, 104(9): 2797-2829, (<http://dx.doi.org/10.1257/aer.104.9.2797>))

713 Of course, we could always completely rethink the nature of 'work' and means of 'granting the right to consume'; We could revisit that [1964 report to Lyndon Johnson](#) which suggested that:

The continuance of the income-through-jobs link as the only major mechanism for distributing effective demand - for granting the right to consume - now acts as the main brake on the almost unlimited capacity of a cybernated productive system.

Sadly, however, I guess that is even more unlikely now than it was in 1964!

714 Deena Zaidi has spelt out some of the looming problems resulting from the failure to regulate US shadow banking:

Investment banks, structured investment vehicles, hedge funds, non-bank financial institutions, money market funds, mutual funds and exchange-traded funds are all a part of the shadow banking system and are not required to maintain any reserves or emergency capital. "No regulations" in a "regulated environment" could be the biggest worry of the shadow banking system. Often beyond the control of regulators and monetary policy, shadow-banking activities can resort to risky lending. According to the [New York Fed](#), shadow banks have "increased the fragility of the entire financial system." While the total of non-bank financial intermediaries decreased immediately after the 2008 financial crisis, the number of shadow banks have picked up in recent years.

The vulnerabilities of the traditional banking system to the unregulated risks undertaken by the shadow banking system continue to threaten the financial system in 2016. According to the Financial Stability Board's [Global Shadow Banking Monitoring Report 2015](#), the United States accounted for the largest shadow-banking sector, with \$14.2 trillion in 2014. The figure is more than one-third of global shadow banking assets, and represents 82 percent of the nation's GDP.

With more than 80 percent of shadow banking activities residing in the advanced economies of North America, Asia and northern Europe, shadow banking could be one of the biggest threats to the current financial system. The report identifies the difficulty in assessing the amount of risk involved due to the lack of detailed data. The Financial Stability Board, an international board that monitors the global financial system, said the shadow-banking sector posed a huge risk of \$36 trillion across 26 jurisdictions across the world in 2014.

(Deena Zaidi, [The Rise of Shadow Banks and the Repeal of the Glass-Steagall Act](#), Truthout | News Analysis, Wednesday, 13 January 2016)

Jeremy Kahn and Liam Vaughan (September 13, 2013), explained how, by 2009, major players were already devising means for circumventing emerging regulatory capital adequacy requirements:

Chenavari is one of a handful of firms that invest in capital relief trades, or CRTs. A bank pays a third party, such as a hedge fund or pension fund, to take on some of the risk associated with its loans. That makes it easier for the bank to meet regulators' capital-to-risk requirements.

Private Deals

CRTs often involve complex structures in which special-purpose companies are set up to provide protection to the bank through a credit-default swap, a derivatives contract that pays the buyer if a designated bond or loan portfolio defaults, and are in turn funded through the sale of notes to investors.

Launched in May 2011 with an initial investment of \$75 million, Fery's Toro II strategy, part of the firm's Chenavari Credit Fund, is built on CRTs. Since then, Chenavari, with \$4 billion under management across two funds, has invested about \$1 billion in about 20 CRT deals, Fery says. The Toro II strategy earned 43 percent from its inception through the end of July.

While it's impossible to know how many CRTs exist in total because most of the deals are private, regulatory filings indicate that European banks have engaged in at least \$30 billion of these trades since 2009. CRTs use the same instruments, such as collateralized loan obligations and CDSs, that precipitated the 2008 financial crisis.

(Jeremy Kahn and Liam Vaughan, [Banks Allying With Hedge Funds as Capital Rules Bite](#), *BloombergBusiness*, September 13, 2013)

⁷¹⁵ Keynes, describing the US in the 1920s-1930s, put it all rather well. It seems that little has been learned since then:

It is rare, one is told, for an American to invest, as many Englishmen still do, 'for income'; and he will not readily purchase an investment except in the hope of capital appreciation. This is only another way of saying that, when he purchases an investment, the American is attaching his hopes, not so much to its prospective yield, as to a favourable change in the conventional basis of valuation, i.e. that he is, in the above sense, a speculator.

Speculators may do no harm as bubbles on a steady stream of enterprise. But the position is serious when enterprise becomes the bubble on a whirlpool of speculation. When the capital development of a country becomes a by-product of the activities of a casino, the job is likely to be ill-done.

The measure of success attained by Wall Street, regarded as an institution of which the proper social purpose is to direct new investment into the most profitable channels in terms of future yield, cannot be claimed as one of the outstanding triumphs of *laissez faire* capitalism - which is not surprising, if I am right in thinking that the best brains of Wall Street have been in fact directed towards a different object.

These tendencies are a scarcely avoidable outcome of our having successfully organised 'liquid' investment markets. It is usually agreed that casinos should, in the public interest, be inaccessible and expensive. And perhaps the same is true of stock exchanges. (John Maynard Keynes, [The General Theory of Employment, Interest, and Money](#), Chapter 12: The State Of Long-term Expectation, Section VI)

⁷¹⁶ Francis Bacon, in 1625, explained the state's responsibility to its citizenry:

Above all things, good policy is to be used, that the treasure and moneys, in a state, be not gathered into few hands. For otherwise a

state may have a great stock, and yet starve.

'Unsustainable borrowing', in the 21st century, is the *raison d'être* of bubble economies. However, as John Siman, in a review of Michael Hudson's book, *And Forgive Them Their Debts: Lending, Foreclosure, and Redemption from Bronze Age Finance to the Jubilee Year*, has explained, 'in any society in which interest on loans is calculated, [borrowers are] inevitably subject to being impoverished, then stripped of their property, and finally reduced to servitude'. As he elaborates:

...Hudson demonstrates that we, twenty-first century globalists, have been morally blinded by a dark legacy of some twenty-eight centuries of decontextualized history. This has left us, for all practical purposes, utterly ignorant of the corrective civilizational model that is needed to save ourselves from tottering into bleak neo-feudal barbarism.

This corrective model actually existed and flourished in the economic functioning of Mesopotamian societies during the third and second millennia B.C. It can be termed Clean Slate amnesty, a term Hudson uses to embrace the essential function (of what was called *amargi andnig-si-sá* in Sumerian, *andurarumand misarum* in Akkadian (the language of Babylonia), *sudutu andkireenzi* in Hurrian, *para tarnumar* in Hittite, and *deror...* in Hebrew): It is the necessary and periodic erasure of the debts of small farmers - necessary because such farmers are, in any society in which interest on loans is calculated, inevitably subject to being impoverished, then stripped of their property, and finally reduced to servitude (including the sexual servitude of daughters and wives) by their creditors, creditors. The latter inevitably seek to effect the terminal polarization of society into an oligarchy of predatory creditors cannibalizing a sinking underclass mired in irreversible debt peonage. Hudson writes: "That is what creditors really wanted: Not merely the interest as such, but the collateral - whatever economic assets debtors possessed, from their labor to their property, ending up with their lives" (p. 50).

And such polarization is, by Hudson's definition, barbarism. For what is the most basic condition of civilization, Hudson asks, other than societal organization that effects lasting "balance" by keeping "everybody above the break-even level"?

(John Siman, *Everything You Thought You Knew About Western Civilization Is Wrong: A Review of Michael Hudson's New Book, And Forgive Them Their Debts*, Posted in ^œ*Naked Capitalism* on November 16, 2018 by Yves Smith)

⁷¹⁷ Perhaps that is what current US shale gas development is all about (see: Igor Alexeev, ^œ*Has the Shale Bubble Already Burst?* OilPrice.com, 26 August 2013; Art Berman and Ray Leonard, ^œ*Years Not Decades: Proven Reserves and the Shale Revolution: The Apparent End of The Beautiful Story*, Houston Geological Society, Houston, Texas, February 23, 2015)

Justin Mikulka has described some of the consequences of the ready funding of fracking by Wall Street through the second decade of the 21st century:

The U.S. shale oil industry hailed as a "revolution" has burned through a quarter trillion dollars more than it has brought in over

the last decade. It has been a money-losing endeavor of epic proportions.

In September 2016, the financial ratings service Moody's released a report on U.S. oil companies, many of which were hurting from the massive drop in oil prices. Moody's found that "the financial toll from the oil bust can only be described as catastrophic," particularly for small companies that took on huge debt to finance fracking shale formations when oil prices were high.

And even though shale companies still aren't turning a profit, Wall Street continues to lend the industry more money while touting these companies as good investments. Why would investors do that?

David Einhorn, star hedge fund investor and the founder of Greenlight Capital, has referred to the shale industry as "a joke."

"A business that burns cash and doesn't grow isn't worth anything," said Einhorn, who often goes against the grain in the financial world.

Aren't investors supposed to be focused on putting money toward profitable companies? While, in theory, yes, the reality is quite different for industries like shale oil and housing.

If the U.S. financial crisis of 2008 has revealed anything, it is that Wall Street isn't concerned with making a "shitty deal" when it means profits and bonuses for its traders and executives, despite their roles in the crash.

Wall Street makes money by facilitating deals much like a Vegas bookie makes money by taking bets. As the saying about Las Vegas goes: "The house always wins." What's true about casinos and gambling also holds true for Wall Street.

Wall Street caused the 2008 financial crisis, with some of its architects personally benefiting. However, while a few executives profited, the result was a drop in employment of 8.8 million people, and according to Bloomberg News in 2010, "at one point last year [2009] the U.S. had lent, spent, or guaranteed as much as \$12.8 trillion to rescue the economy."

JP Morgan (along with much of Wall Street) required large sums of money in the form of bailouts to survive the fallout from all of the bad loans made, which brought about the housing crisis. Is JP Morgan steering clear of making loans to the shale industry? No. Quite the opposite.

(Justin Mikulka, ^œ[How Wall Street Enabled the Fracking 'Revolution' That's Losing Billions](#), *DeSmog*, May 4, 2018)

(Keynes provided a vivid, damning assessment of such activity: "a somewhat disgusting morbidity, one of those semicriminal, semi-pathological propensities which one hands over with a shudder to the specialists in mental disease".)

⁷¹⁸ Ozlem Akin, José M Marín, and José-Luis Peydró, in a study of bank insiders' awareness and anticipation of the impending 2008 financial crisis, have described their awareness and anticipation of impending crisis and their consequent share trading activities:

Banking crises are recurrent phenomena that often trigger deep and long-lasting recessions with enormous economic and political costs.

Yet the empirical evidence is now overwhelming that banking crises do not come as bolts from the blue - they come after periods of strong bank credit growth and risk-taking, often associated with real-estate bubbles. The crisis of 2008 was no different: it is clear that banks took on more and more risk as bubbles swelled in many countries.

A key research question is why banks take such excessive risks. Many defenders of finance in the recent crisis suggest that the giant institutions were really taken by surprise when the bubble popped. Otherwise, runs the argument, why wouldn't they have sold off all the junk? The implication of this "behavioral" view is that banks take on high risks because, for example, they neglect unlikely tail risks and have over-optimistic beliefs about the economy.

But there is another, less innocent answer: explicit and implicit bank guarantees by states, such as deposit insurance, provision of central bank liquidity, and bail-outs make it rational for banks to take on excessive risk. Sometimes this "moral hazard" point of view is combined with an "agency failure" account, which stresses how bank managements can escape from control of their shareowners and holders of bank debt.

These views of why banks take on excessive risk are testable. In a ^œ[recent paper](#) we tackle this question by providing sector-wide evidence from US. We examine what bank insiders were doing before the crisis and use executives' trading with their own bank shares as a proxy for their understanding of risk before the crisis hit in 2007-08. Specifically, we investigate the relationship between bank's performance in the crisis and bank executives' sale of their own bank shares in the period prior to the crisis.

The paper finds that the top executives' ex-ante sale of their own bank shares predicts worse bank returns during the crisis; interestingly, effects are insignificant for independent directors' and other officers' sales of shares. That is, effects are substantially stronger for the insiders with the highest and best level of information, the top five executives. Moreover, the top five executives' impact is stronger for banks with higher ex-ante exposure to the real estate bubble, where an increase of one standard deviation of insider sales is associated with a 13.33 percentage point drop in stock returns during the crisis period. Our results suggest that insiders understood the heavy risk-taking in their banks; they were not simply over-optimistic, and hence they sold more of their own shares before the crisis.

(Ozlem Akin, José M Marín, and José-Luis Peydró, ^œ[Was the Financial Crisis Anticipated?](#), *Institute for New Economic Thinking*, Jul 21, 2016)

As a commenter on all this, ^œ[posted by Yves Smith](#) on the *naked capitalism* blog site, put it:

One can wonder if the bank executives will tout the study because it shows they DO really know what is going on and are not unaware of their business risk.

After all, they can pitch that as evidence they deserve their high pay as they are on top of the action.

Maybe Alan Greenspan can be trotted out to do the PR work.

That's the ticket, spin the study for executive pay justification.
(John Wright, July 23, 2016)

719 The *US Financial CHOICE Act of 2016* has provided a clear indication of the future trajectory of US financial regulation. The following is a summary of the Act's intentions by the US *Congressional Research Service*:

This bill amends the Dodd-Frank Wall Street Reform and Consumer Protection Act, among other Acts, to:

- repeal the "Volcker Rule" (which restricts banks from making certain speculative investments);
- with respect to winding down failing banks, eliminate the Federal Deposit Insurance Corporation's orderly liquidation authority and establish new provisions regarding financial institution bankruptcy; and
- repeal the "Durbin Amendment" (which limits the fees that may be charged to retailers for debit card processing).

Certain banks may exempt themselves from specified regulatory standards if they maintain a certain ratio of capital to total assets and meet other specified requirements.

The bill removes the Financial Stability Oversight Council's authority to designate non-bank financial institutions and financial market utilities as "systemically important" (also known as "too big to fail"). Under current law, entities so designated are subject to additional regulatory restrictions. Designations made previously are retroactively repealed.

The bill also amends the Consumer Financial Protection Act of 2010 to:

- restructure the Consumer Financial Protection Bureau by replacing its director with a bipartisan commission;
- subject the commission to the congressional appropriations process, expanded judicial review, and additional congressional oversight; and
- limit the commission's authority to take action against entities for "abusive" practices.

In addition, the bill:

- modifies provisions related to the Securities and Exchange Commission's managerial structure and enforcement authority;
- eliminates the Office of Financial Research within the Department of the Treasury; and
- revises provisions related to capital formation, insurance regulation, civil penalties for securities laws violations, and community financial institutions.

(^œ[Summary: H.R.5983 - 114th Congress \(2015-2016\)](#),
Congressional Research Service)

Josh Bivens and Heidi Shierholz have provided a succinct explanation of key features of the Act. As they conclude:

These provisions of the CHOICE Act would have devastating effects on the ability of regulators to protect investors from exploitation. They would also further solidify both the policy preferences and the policy influence of the financial sector over monetary policymaking.

As a whole, the CHOICE Act would expose consumers and investors to heightened risk of abuse in their normal dealings with the financial sector, and would expose the broader economy to increased risk of another financial crisis.

(Josh Bivens and Heidi Shierholz, ^œ[A couple lesser-known bits of mayhem in the Financial CHOICE Act](#), Working Economics Blog, *Economic Policy Institute*, June 7, 2017).

⁷²⁰ Michael Hudson has described the consequences in the US (and of course, elsewhere):

The financial overhead has grown so large that paying interest, amortization and fees shrinks the economy. So we are in for years of debt deflation. That means that people have to pay so much debt service for mortgages, credit cards, student loans, bank loans and other obligations that they have less to spend on goods and services. So markets shrink. New investment and employment fall off, and the economy falls into a downward spiral.

...The result is a slow crash. The economy just gets poorer and poorer. More debtors default, and their property is transferred to creditors. This happens not only with homeowners who fall into arrears, but also corporations and even governments. Ireland and Greece are examples of the kind of future in store for us.

(^œ[Michael Hudson on Debt Deflation, the Rentier Economy, and the Coming Financial Cold War](#), *Naked Capitalism*, Posted on March 22, 2016 by Yves Smith)

⁷²¹ 'Unsustainable borrowing', as Greece and many other nations have found over the past fifty years, is not simply a problem for private individuals and businesses. In a *laissez faire*, free-market-fundamentalist world, [nations, also, can be encouraged to borrow beyond their capacity to repay](#).

In the drive to accumulate 'hard' assets, lenders, intent on gaining access to 'desirable' assets, have been all-too-ready to ensnare unwary politicians in schemes designed to drive their governments into 'bankruptcy' - though, of course, true bankruptcy with its borrower protections is not the aim of such lending practices. As Madeleine Wedesweiler, in real estate promotions, explained:

Bargain hunters have their eyes locked on the Mediterranean as the Greek debt crisis unfolds.

On Thursday the Greek parliament approved a bailout agreement which, according to ^œ[Time Magazine](#), means the country will consider selling off its islands to help compensate \$96 billion of debt.

In its latest "Island Report" British Property agent Knight Frank has predicted more "fire-sales" of Greek Islands as the long-term ramifications of the financial bail-out play out.

Greece has as many as 6000 islands - 227 of which are inhabited - and if you buy now it's likely to be the best deal you'll ever get.

With crystal clear waters, almost constant blue skies, tranquil beaches and olive groves they really are paradise and we've found a selection of the best that are currently for sale.

(Madeleine Wedesweiler, ^œ[Greek debt crisis: Islands going cheap](#), *Domain*, July 17, 2015)

Simon Shuster described the 'asset sale' conditions demanded in order to "save Greece from going bankrupt":

To regain the trust of its creditors, Greece will have to scrape together about \$50 billion in state assets, which will effectively be used as collateral on the latest package of emergency loans to Greek banks and the Greek government. None of Greece's previous bailouts have included such draconian terms.

In explaining this part of the deal, Dijsselbloem, the head of the so-called Eurogroup of finance ministers, said Greece would have to transfer this pile of assets into a specially created fund. "The fund will monetize these assets either by privatizing or running the assets and trying to make money from those," he added. "That money will be used to deal with debt and to reduce debt."

The idea of creating such a fund came from Germany, whose Finance Ministry proposed it over the weekend as a way of guaranteeing Greek debts. The German proposal even suggested that Greece would have to transfer these state assets abroad before they could count as collateral on any further loans. But on this point, at least, Prime Minister Tsipras seemed to win a concession from his most unforgiving creditors. "It will be based in Greece," Dijsselbloem said of the so-called guarantee fund.

On practically all other points in the negotiations, however, Greece capitulated to the demands of German officials and other hardliners, who faced criticism over the weekend of trying to humiliate Greece and even to force the ruling Greek government from power. Asked on Monday about the claims that European leaders were effectively staging a "coup" in Greece, the European Commission President countered that other parties to the talks had also been forced to accept unpleasant conditions.

(Simon Shuster, ^œ[Greece Agrees to Its Third European Bailout After Marathon Talks](#), *Time*, July 13, 2015)

Elizabeth Lewis (2015) has described how private equity companies in the US (and, of course, elsewhere) have played this game; how they gain control of companies, take them private, asset strip them, and wind them up in bankruptcy. As she summarizes:

Modern corporate bankruptcy law has been shaped, and some of it written, by special interests. Even so, the law is rooted in American ideals of renewal, and of viewing failure in the marketplace as a sign of effort and gumption, not moral collapse. It's a powerful idea - shedding the past to begin anew. But for decades, Chapter 11 of the U.S. Bankruptcy Code has also been used strategically - to destroy union contracts, edge out competitors, and limit product liability lawsuits.

More recently, some private equity firms have honed Chapter 11 as an efficient financial engineering tool for insider sales - and for dumping pensions. Based on partial data from the Pension Benefit Guaranty Corp., at least 51 companies have abandoned pension plans in bankruptcy at the behest of private equity firms since 2001.

They've dumped \$1.592 billion in pension bills onto a government-backed agency that insures private defined benefit plans. Because pension insurance doesn't cover all benefits, their actions have left some of the nearly 102,000 workers or retirees with lost benefits amounting to at least \$128 million. And they've contributed to the chronic deficits at the Pension Benefit Guaranty Corporation.

Other types of businesses, including publicly held companies, have also abandoned pension plans in bankruptcy. But the business model and practices of some private equity firms can make pension-dumping in bankruptcy especially attractive.

The legal and regulatory environments in the U.S. combine with those practices to add up to a form of institutional corruption. In this working paper, I explain how Oliver Wendell Holmes' hypothetical "bad man" can use bankruptcy as a strategy to profit. So, here is a bad man's guide to ditching pensions in bankruptcy - legally.

(Elizabeth Lewis, ^{ae}[*A Bad Man's Guide to Private Equity and Pensions*](#), Edmond J. Safra Research Lab Working Papers, No. 68, Harvard University, June 19, 2015)

⁷²² It seems that some economists understand the obvious fact that sovereign governments can create credit but since most people believe that taxes fund governments it is expedient to explain government spending in such terms. However, they have a responsibility to educate 'most people' - not simply perpetuate [the myths of their predecessors](#).

They need to clearly explain that governments not only have a responsibility for the commonweal but also for redistributing credit through the society. If they think this is too hard a task then they need to find some other occupation. Providing clear explanation of sovereign government responsibilities is (or should be) an important part of their job description!

⁷²³ The numbers which show up in government ledgers, giving 'accumulated debt' 'owed by government (at whatever level)' to itself, are numbers - nothing more! If a government clerk could, without drawing attention to the act, rub out the numbers (or press the 'delete' key) so that everything was reset to zero, it *would not matter*. It only matters when it either results in inflation in the money supply - leading to over-supply of credit; or it results in a crisis of confidence in the 'value of money'. We, in capitalist societies, too easily reify big numbers - and the bigger the number the scarier its consequences.

J. D. Alt has provided a clear, simple perspective on the nature of sovereign credit creation which provides a salutary reminder of the danger of simplistic reasoning when dealing with sovereign credit creation:

... A U.S. Dollar is an I.O.U. issued by the sovereign U.S. government which says, "I owe you one Dollar's worth of credit on the Federal Taxes you owe me." Because the FG [Federal Government] doesn't have to "earn" Dollars (or anything else) in order to fulfill this promise as many times as necessary, by logic it can never have a "deficit" of its own I.O.U.s. In contrast, all of us who use those I.O.U.s for "money" (all U.S. citizens, businesses, state and local governments, for example) must earn them, or borrow them, before we can spend them. This is true for the simple reason that we are "users" of the money, rather than the "issuer" of

it.

(These articles provide a simple, graphic explanation of the nature of sovereign credit creation: J. D. Alt, ^œ[DIAGRAMS & DOLLARS: modern money illustrated \(Part 1\)](#), January 7, 2014; and ^œ[DIAGRAMS & DOLLARS: modern money illustrated \(Part 2\)](#), *New Economic Perspectives*, January 8, 2014) ¹⁰⁶⁸

Unfortunately, the (entirely legitimate) insistence that central banks should be 'independent' of the rest of government has muddled the waters ¹⁰⁶⁹. The pseudo-independence of many central banks allows credit creation and distribution to be perceived (by those ideologically predisposed to do so) as government-incurred liabilities which must be 'repaid'. However, as Randall Wray succinctly explained for the US Federal Reserve Board:

...the Fed is not a private institution but rather is a creature of Congress and no more independent of government than is the Treasury, the DOD, the DOT, or the IRS.... all of these other branches of government also have some independence from party politics.

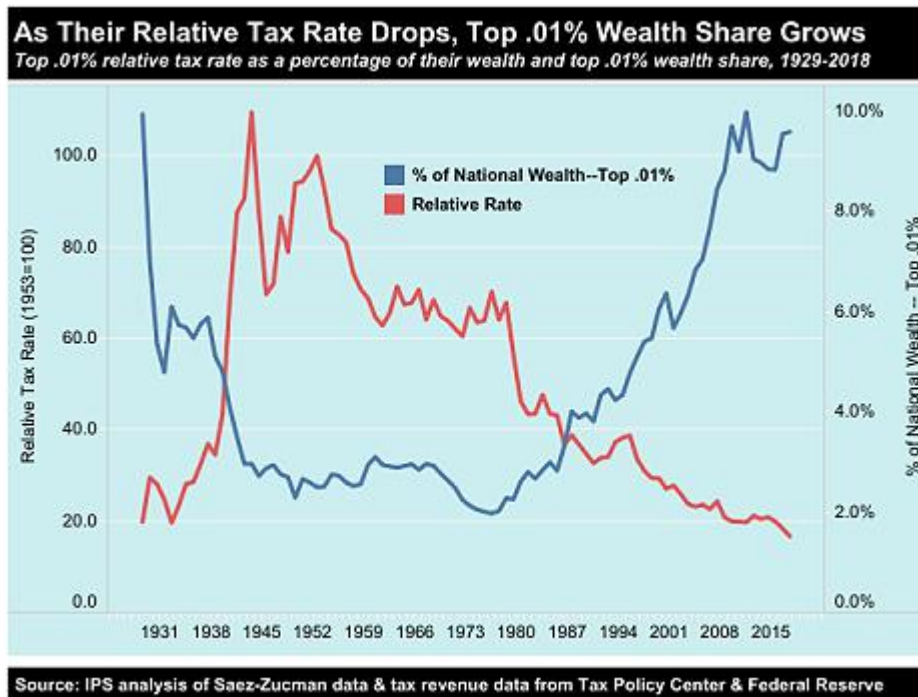

(L. Randall Wray, ^œ[To Consolidate or Not To Consolidate, that is the Question \(or maybe it isn't\)](#), *New Economic Perspectives*, June 26, 2014)

We need to remember that in capitalist societies economics and 'the economy' are the playground of secondary ideologies and magic formulae; where simplistic reasoning and impenetrable logic enhance mystique. One *should* assume ideological motives in simplistic arguments for 'deficit reduction'. From whom is the wealth being withdrawn in order to 'pay down the deficit'? As Lewis Carroll once wrote:

Beware the Jabberwock, my son! The jaws that bite, the claws that catch!
Beware the Jubjub bird, and shun The frumious Bandersnatch.
(1871, *Through the Looking-Glass*)

⁷²⁴ Of course the 'Rich' will strenuously oppose any attempt at such redistribution. And, since they are rich, they are able to [marshal those with appropriate influence and/or skills](#) to the defense of their 'wealth' - to limiting or negating redistributive policies and practices which impact on them.

Bob Lord and Chuck Collins, in a briefing paper entitled 'Wealth Concentration: The Unique and Dominant Role of Tax Policy', estimated the change in US tax payments as a percentage of wealth for the top .01 percent throughout the period 1929 to 2018

(Bob Lord and Chuck Collins, [Wealth Concentration: The Unique and Dominant Role of Tax Policy](#), *IPS Inequality Briefing Paper*, January 2021)

As they say:

Only the most extreme defenders of America's billionaire class contend that wealth concentration is not at least partly a result of tax policy. Logically, reduced tax payments from those at the top compared to the rest of us would cause more wealth to accumulate in the hands of the very rich.

Other factors certainly have played a role. Low- and middle-class incomes have stagnated relative to those in the upper class. Law professor [Tim Wu has shown a direct connection](#) between lax anti-trust enforcement and wealth inequality. A rising stock market also is a factor.

But how does the influence of tax policy on wealth concentration interact with the influence of other factors? Has tax policy, over the last century, been the dominant factor in the country's move from an extremely unequal society to a more egalitarian one and back again? Or are other factors equally or more important?

There are no clear answers, at least from our analysis. But we believe our analysis of the relationship between tax payments of the top .01 percent as a percentage of wealth, and the share of American household wealth held by the top .01 percent, indicates that tax policy plays a unique and dominant role in the concentration of wealth. No other factor is as visibly and as directly connected to the concentration of wealth as tax policy

That is why, in most 21st century Western nations, despite the stagnation of low and middle class incomes over the period, national budgetary adjustments have focused on reductions in 'social welfare' and other infrastructural costs and on various retail taxation regimes which disproportionately impact 'ordinary people' in 'balancing the budget'.

The result, in the United States, is evident to all not blinded by a sense of their own inherent importance.

Sam Pizzigati has described the 2021 consequences well:

[Uma] Subramanian, the aerospace engineer turned CEO of the luxury private-jet company Aero, now believes she has truly made humanity an awesome contribution.

"It just so happens that we might have built the perfect product for Covid," Subramanian recently told Vice World News.

Her new company, founded by Uber founder Garrett Camp, has launched a luxury "semi-private jet" experience that offers safe and comfy virus-free flights. Seats in Aero's suede-walled jets sit six feet apart in single file. "Hand-stitched Italian leather seats" aboard Aero's "sleek black planes" combine with "sophisticated art lighting" to create a "renaissance of luxury travel."

That "renaissance" is building from another direction as well. Brokers of used private jets have been enjoying a boom in sales ever since the pandemic began....

Amid our contemporary new Gilded Age, we've in effect come full circle. The private palaces of the original Gilded Age, structures that shed their private-pleasure status in the much more equal America of the mid-20th century, are reverting back into private palaces. The rich rule. They expect the rest of us to serve them. Some of us will cook and clean. Some of us will get them - to their vacation homes - with a minimum of hassle in the middle of a pandemic. (Sam Pizzigati, ["The Rich and Those Who Serve Them, Then and Now: We've already rejected the servant state once. We certainly can once again," *Inequality.org*, February 11, 2021\)](#)

As F. Scott [Fitzgerald famously wrote](#).

Let me tell you about the very rich. They are different from you and me. They possess and enjoy early, and it does something to them, makes them soft where we are hard, and cynical where we are trustful, in a way that, unless you were born rich, it is very difficult to understand. They think, deep in their hearts, that they are better than we are because we had to discover the compensations and refuges of life for ourselves. Even when they enter deep into our world or sink below us, they still think that they are better than we are. They are different....

(F. Scott Fitzgerald, ["The Rich Boy," 1926](#))

Neoliberalism has proved most useful to the mega-wealthy in providing superficially convincing rationalizations for successfully opposing and reversing various governmental redistributive policies aimed at, as [Bacon put it](#), 'spreading the muck'.

Arvind Subramanian, in a review of Thomas Piketty's 2019 book, *Capital and Ideology* in which he describes the evolution of Piketty's ideas, demonstrates this in a neoliberally blinkered summation of Piketty's 2019 thesis:

The most daring parts of the book relate to Piketty's prescriptions, especially his proposal to abolish permanent private property. Piketty, along with his collaborators Emmanuel Saez and Gabriel Zucman, has blueprinted arguably the most imaginative and radical alternative to traditional capitalism. Every citizen, on reaching the age of 25, would get a capital endowment that was roughly 60 percent of the average wealth in society. This would be financed by progressive taxes on wealth, income, and inheritance. The young could start life with a sense of new possibilities, "such as purchasing

a house or starting a business." Capital would circulate because excessive accumulation would be taxed by the state both during a person's life and at death via inheritance taxes.

One might call Piketty's concept "Patek Philippe custodialism," after the luxury watch company's famous catch phrase: "You never actually own a Patek Philippe. You merely look after it for the next generation." That is Piketty's goal for capital - with the crucial difference that the transfer of wealth would happen not within a family but between citizens and the state....

Piketty joins a chorus of left-wing thinkers who decry "billionairism" - the most egregious manifestation of private property - as a social pathology, an immoral blight that should never be allowed to come into being. Their policy proposals, including the imposition of wealth taxes, are as much about eliminating that blight as about tempering capitalism. That might be why Piketty neglects what economists call "size-of-the-pie effects": Wouldn't the vast redistribution he advocates be so damaging to incentives, entrepreneurship, and capital accumulation that it would leave little pie left to redistribute?

Piketty's inattention to that problem comes across as deliberate and almost disdainful. One suspects that he wants to rectify an imbalance. He devotes more energy to critiquing the neoliberal purveyors of the Third Way - Presidents François Mitterrand and Emmanuel Macron in his own country; British Prime Minister Tony Blair and U.S. Presidents Bill Clinton and Barack Obama in the Anglo-American world - and their intellectual enablers. These leaders and thinkers, Piketty claims, were so enamored with markets and incentives that they pied-pipered the developed world into its current predicament. His epithet for Macron is revealing: "an inegalitarian internationalist."

Subramanian's conclusion could have been written by any well-trained neoliberal economist. Not only does he raise the [classic neoliberal bogey of 'how would it all be paid for'](#), he further argues that:

...[T]here is no question that Piketty's proposals are impractical. Most societies would balk at the level and progressivity of the taxes - reaching up to 90 percent - that Piketty and his colleagues propose.

(Arvind Subramanian, [After Capital: A Radical Agenda to Tame Inequality](#), *Foreign Affairs*, July/August 2020)

One wonders what on earth 'prestigious' university economics departments teach their graduate students these days! He seems unaware of the [standard Western taxation regimes](#) from the late 1930s through to the late 1970s.

As Bob Lord and Chuck Collins very clearly illustrate above, when top marginal tax rates were high, inequality was reduced and low and middle class incomes were raised, when they have been low, inequality has snowballed and low and middle class incomes have stagnated or been reduced. One can but assume that, for Subramanian, such redistribution toward the wealthy and progressive impoverishment of the rest is desirable!

He also seems blissfully unaware of the rationale underpinning Roosevelt's New Deal legislation. I guess that, for him, redistribution toward the wealthy is part of the natural order of things and attempts at 'spreading the muck' are misguided and not worth investigating.

This, sadly, is standard neoliberal nonsense and it is long-past time to recognize it for what it is - a determined promotion of plutocracy at the expense of democracy. Such ideologically blinded, ahistorical gibberish in defense of the *status quo* brings to mind Lewis Carroll's similarly meaningless verse:

'Twas brillig, and the slithy toves
Did gyre and gimble in the wabe:
All mimsy were the borogoves,
And the mome raths outgrabe.
"Beware the Jabberwock, my son!
The jaws that bite, the claws that catch!
Beware the Jubjub bird, and shun
The frumious Bandersnatch!"

725 Robert Reich has described the way in which dynastic wealth produces a 'self-perpetuating aristocracy that is antithetical to democracy' in Western capitalist societies. In the United States, as in many Western capitalist 'democracies' of the early 21st century, failure to ensure effective processes of redistribution is producing its inevitable consequence. As [Jefferson urged George Wythe](#):

Let our countrymen know that the people alone can protect us against these evils, and that the tax which will be paid for this purpose is not more than the thousandth part of what will be paid to kings, priests and nobles who will rise up among us if we leave the people in ignorance.

Reich has spelt out the consequences:

America is now on the cusp of the largest inter-generational transfer of wealth in history. As wealthy boomers expire, an estimated \$30 trillion will go to their children over the next three decades.

Those children will be able to live off of the income these assets generate, and then leave the bulk of them - which in the intervening years will have grown far more valuable - to their own heirs, tax-free.

After a few generations of this, almost all of the nation's wealth will be in the hands of a few thousand families.

Dynastic wealth runs counter to the ideal of America as a meritocracy. It makes a mockery of the notions that people earn what they're worth in the market, and that economic gains should go to those who deserve them.

It puts economic power into the hands of a relative small number of people who have never worked, but whose investment decisions will have a significant effect on the nation's future.

And it creates a self-perpetuating aristocracy that is antithetical to democracy.

(Robert Reich, ^œ[The Growing Danger of Dynastic Wealth](#), [robertreich.org](#), 16 September, 2017)

726 (01/06/16)(24/06/16)(16/09/16) There has, for some time, been a growing enthusiasm for promotion of policies which include a 'universal basic income', funded by public credit creation. ¹⁰⁷⁰

This has much in common with such policies as the socialist '^œ[social dividend](#)' and the Georgist 'citizen's dividend'. The primary difference

between advocacy of a universal basic income and advocacy of a citizen's dividend seems to be the source of the income or dividend.

(22/09/16) Most proposals for a *Universal Basic Income* seem to assume public generation of credit 'out of thin air'; proposals for a *Citizen's Dividend*, on the other hand, seem to presume the public generation of credit 'from revenue raised by leasing or taxing the monopoly of valuable land and other natural resources'.

A Wikipedia discussion of the Georgist 'citizen's dividend' sums it up well:

Citizen's dividend is a proposed policy based upon the principle that the natural world is the common property of all persons (see Georgism). It is proposed that all citizens receive regular payments (dividends) from revenue raised by leasing or taxing the monopoly of valuable land and other natural resources.

(*Wikipedia*, ^œ[Citizen's Dividend](#), [accessed 16 September, 2016])

It seems, however, that, whatever terminology is employed, in order to counter the [concentration of all available wealth](#) in too few hands, any such universally distributed income should be funded through broadly based [progressively scaled revenue collection](#)

(07/04/17) As legislators of the New Deal and post-New Deal periods realized, simply distributing money to those in need, without, simultaneously, implementing a range of supporting legislation to ensure their long-term welfare is a superficial, temporary solution to [the problem of ensuring social welfare and equity](#).

(19/04/16) Unless such policies are accompanied by rigorous processes of progressively scaled revenue collection, over time they will feed, and exacerbate, growing inequality as the [inevitable consequences of unregulated capitalism](#) lead to what [Iglesias and de Almeida have described](#) as "*condensation*, i.e. concentration of all available wealth in just one or a few agents". This is why redistribution is key to community welfare.

(06/01/17) The problem, in Western capitalist communities of the 21st century, is not that credit is scarce but that it has accumulated in too few hands. The most important need of the time is not increased credit creation but effective processes of credit redistribution. A guaranteed basic income for all (or, alternatively, a universal job guarantee)¹⁰⁷¹ and/or [public funding of grass-roots](#), communal support and development programs and projects are great ideas, but they need, primarily, to be funded through the [recirculation of existing credit](#), rather than the generation of new credit¹⁰⁷².

To ensure the primacy of the community over the marketplace in capitalist societies, [communities must be resourced](#) to enable that. Keri Leigh Merritt has explained the need for both a universal basic income and a universal jobs guarantee. Focusing on the US, she explains:

In addition to standard social safety nets such as single-payer universal health care, America is in desperate need of both a universal basic income (UBI) and a federal jobs guarantee (FJG)....

The UBI would be for those who truly needed it - those who could not endure traditional full-time employment, either because of age, illness, disability, caretaking or student status. As baby boomers grow old and need care, as students struggle to earn an education without becoming hideously indebted, and as parents yearn to stay

home with infants and very young children, a UBI would truly revolutionize society....

UBI would work best if paired with a federal jobs guarantee. The vast majority of Americans want to work; they derive a sense of pride and fulfillment and identity from their jobs.

A FJG undoubtedly would transform the United States. Taking the best aspects of the New Deal (and learning lessons from the era about what not to do), a FJG would have the power to completely rebuild our nation's infrastructure, modernizing the country and making it accessible to most non-car owners....

(Keri Leigh Merritt, ^œ[Why We Need a Universal Basic Income: America is in desperate need of both a universal basic income and a federal jobs guarantee](#), *Moyers & Company*, September 15, 2017)

Not only should any universal basic income primarily be funded through the [recirculation of existing credit](#), it should also be accompanied by [reinforced wage rate negotiation and regulation](#). If it is not, then wage rates would almost certainly be adjusted downward in a 21st century reworking of the [Speenhamland solution](#)

A commenter on a blog posting by Dean Baker, in which he takes a *Washington Post* columnist to task for "his confused rationale [which] ties together many common misunderstandings", flagged the need to address a number of other issues in implementing such a scheme:

The problem that I have with the UBI is not that it moves the finish line, but the starting point. If a landlord finds out that all his tenants suddenly have an extra \$100 per month, then he can simply raise every rent by \$100. Although some suppliers that cater to low-income will continue to compete on price, most will exploit the UBI as a subsidy of suppliers and providers.

People who are middle-income might be better off with additional money, and people who are rich will be better off because of the subsidy, but (unless you changes the laws of supply and demand) people who are poor might be in exactly the same spot.

(Comment by Low_Budget_Dave, on blog entry by Dean Baker, [Universal Basic Income, Job Killing Robots, and the Washington Post](#), *Beat The Press*, 23 June 2016)

Eduardo Porter, a *New York Times* columnist, in a superficial, offhanded look at the issues involved, has suggested that:

A universal basic income has many undesirable features, starting with its non-negligible disincentive to work. Almost a quarter of American households make less than \$25,000. It would be hardly surprising if a \$10,000 check each for mom and dad sapped their desire to work.

(^œ[A Universal Basic Income Is a Poor Tool to Fight Poverty](#), *New York Times*, May 31, 2016)

As a number of commenters on his article have responded, it seems clear that Porter, though all-too-willing to voice his opinions, has a poor grasp on the realities of those living on minimal incomes. Apparently, [abject poverty, if it leads to greater commitment to work, is a good thing](#)! Sir William Petty, in 1665, used similar logic: "They seem content to live in a condition little above that of animals". Edmond Fitzmaurice (1895) summed up the attitude:

[Petty's] observations of the habits of the cloth-workers in England and of the Irish peasantry compelled him, however reluctantly, to the opinion that the general standard of living was as yet too low to make high daily wages of any advantage to the laborer, because of their tendency at once to reduce their hours and be content with wages just sufficient to support existence at a very low level of material civilization.

While Petty might have been justified in assuming that Western European peasants, still [determining relative status in pre-capitalist ways](#) which did not require the competitive accumulation and consumption of material goods and services, would [reduce their work related activities](#), there is little likelihood that people on low incomes in Western communities today live by such understandings.

Sir Henry Pollexfen, another of those concerned 17th century citizens, made very similar observations in 1697:

The advances of wages hath proved an inducement to idleness; for many are for being idle the oftener because they can get so much in a little time.

How easy it has always been for those in privileged circumstances to discount the hardships of poverty in promoting the virtues of 'work'.

⁷²⁷ Job guarantee positions should, of course, not be uncoupled from similar positions in the private sector. If they were, this would result in increasing numbers of people becoming dependent on Job Guarantee Program employment as their time away from the private sector made them less qualified for private sector jobs in the eyes of employers. The Job Guarantee Program should not be anchored to the 'minimum wage', but to the industry standard wage scales of the private sector.

The New Deal [industry/ skill-based wage-floors](#), established through negotiation between private sector employers and employed, usually set base wage rates according to various industry skill requirements (with loadings related to demanding or onerous job-specific conditions). These should also apply within Job Guarantee employment. It would also be essential to have the various pension and similar loadings of private sector employment echoed in the Job Guarantee Program. My preference would be for such employment loadings to be minimized within both private and public sector employment in favor of communally based 'Commons' support.

People employed within the Job Guarantee program would be employed in similar ways and conditions to private sector equivalents. Yes, this does mean that private sector employers would be in competition with Job guarantee employers for skilled workers, but that is as it should be if the Job Guarantee program is to guarantee the long-term employability of workers and also reinforce base employment conditions within the wider society.

The Job Guarantee Program should not be allowed to become a devalued sump for the unemployed, sustained at 'minimum wages' with all the pejorative implications of such schemes.

Job Guarantee Programs should be valued sources of employment and those within the programs should be recognized as equivalent in both skill and competence to current private sector employees. It is time to refocus capitalist societies on people and the communities in which they

live rather than on profit, with both public and private sectors servicing those communities, each in its own ways:

- The public sector focused on giving both legitimacy and necessary support to continuing, grass-roots, [public responsibility for the commonweal](#); the 'development' of well defined 'public' responsibilities which cannot, by definition, be transferred to private entities;
- The private sector focused not only on profitability but also on [benign welfare capitalism](#) as 'normal practice' for business

⁷²⁸ (08/06/16) It is easy, when dealing with economic issues, to fall into the neoclassical (and, of course, neoliberal) trap of treating the economy as a self-existent, autonomous entity with its own *raison d'être*, independent of 'social' and 'political' concerns. Even if it could be shown that redistribution had negative 'economic' effects¹⁰⁷³, the importance of redistribution as a means of [ensuring both social equity and a democratically organized capitalist society](#) is surely paramount (of course, I'm assuming that both objectives are preferable to the disenfranchising consequences of allowing a drift into plutocracy)¹⁰⁷⁴.

If one focuses on 'the economy' as an isolable entity, one might conclude that any lower-per-capita-GDP consequences of redistributive policies are negatives. If, however, these reflect improvement in individual life outcomes - e.g. lower age of retirement, higher wages leading to shorter working hours and increased leisure etc. - then economic negatives might well be found to be social positives.

The process of credit withdrawal has, all-too-often, been characterized as 'rent-seeking among bureaucrats'. I would suggest, however, that such terminology obfuscates rather than clarifies the *necessary* role of government in credit redistribution. Far too often, economic terminology reflects and reinforces particular ideological positions. To quote Hausmann (2013):

... a research question that goes to the heart of the debate on the proper role and actual motivations of the state in regulating markets: Does regulation exist to achieve some laudable social goal or mainly to extract rents? This question has long divided economists along a right-left axis, at least since University of Chicago economists George Stigler and Milton Friedman argued that many, if not most, regulations were motivated by rent-seeking among bureaucrats and business incumbents.
(Ricardo Hausmann, ^œ[What to do with Doing Business?](#), *Project Syndicate*, May 27, 2013)

⁷²⁹ One needs to clearly differentiate between 'bigotry' and 'tradition'.

Bigotry is that intolerant inability to countenance the opinions and/or rights and responsibilities of others which leads to persecution and exclusion of others from what are considered the rights and responsibilities of community members. All societies recognize bigotry which is, inevitably, community specific and refers to such behaviors and attitudes in all areas of life.

Tradition safeguards the communal structures and forms which ensure the rights and responsibilities of community members and of others associated with those communities, again in all areas of life.

Tradition is and should be sacrosanct. But, as Heraclitus was [reputed to have explained](#),

all things are in motion and nothing at rest; he compares them to the stream of a river, and says that you cannot go into the same water twice.

Tradition, like language and primary ideology, is in constant flux, not primarily because individuals decide that it should change (though this might well lead to long-term change) but as a result of changes in the conditions/circumstances of communal life through time. Refusal to accept such change leads to moribundity: increasingly anachronous institutions and behaviors which over time lose the support of the community.

Bigotry is, justifiably, condemned in communities since it discriminates and divides. Tradition, on the other hand, unites and legitimizes communities and their place within larger wholes.

Attacks on 'tradition' are, in fact, attacks on the integrity of communities. Denial of communal tradition, as in the capitalist world, leads to disempowered communities, easily divided and plundered.

730 (27/06/16) With neoliberalism showing little sign of weakening as a guiding ideology for those who dominate political and economic life in most Western democracies, the possibility of change in the immediate to mid-term future seems highly unlikely. Neoliberalism, itself, [despite its pre-New Deal dominance](#), required [some thirty years of consistent and determined promotion](#) before New Deal understandings were successfully displaced in the late 1960s. It took a further decade before the emergent neoliberal promoters could successfully take control of Western democratic processes.

As we have seen throughout history, real change takes time. It requires people with a clear vision of a future in which they can believe and a determination to ensure it. Josh Hoxie has spelt out the requirements for the US (applicable to most 21st century Western nations) well:

...If you're in the business of social change, you have to think in terms of decades.

It's with this lesson in mind that we should consider taking on one of the most pressing problems of our time: wealth inequality. The problem with wealth inequality, after all, isn't simply that it's been growing steadily over the past 30 years. The problem is that it's showing no signs of stopping in the near *or* distant future.

And things are going to get worse.

The Long View

Short of an all-out, torches-and-pitchforks revolt, reducing structural inequality means going through the legislative process - most particularly, reforming the tax code. But with an intransigent Republican Congress, a campaign-finance system dominated by wealthy donors, and a dispirited and deeply divided public, it's clear that legislative change isn't going to come soon.

That places us in what Alperovitz calls "pre-history." We have to lay the foundation for change without knowing when it will come.

His heroes, Alperovitz says, are the civil rights workers of the 1930s and '40s. They took on insurmountable odds - as well as serious personal risk - to lay the groundwork for what would become the

very successful civil rights movement of the 1960s. They knew they might never see the fruits of their labor - Jim Crow and its supporters in Washington seemed impossibly entrenched - but their efforts made it possible for success in the unknowable future.

With the benefit of this long view, we can look past election cycles to see what solutions would actually solve our serious problems. On wealth inequality, that means a direct tax on concentrated wealth.

We shouldn't just tax billionaires' paychecks, in other words. We need to tax the wealth they've already amassed. That idea isn't going to clear Congress anytime soon. But it's just as serious, reasonable, and likely to become law as any other genuine solution. (Josh Hoxie, ^œ[How to Redistribute Wealth - Without the Guillotine](#), *The American Prospect*, April 28, 2016)

731 (26/05/16)(15/01/17) The levying of wealth taxes in the United States, matched, to varying degree, in most other Western countries, has, over the past hundred years, been strongly justified not in terms of credit redistribution, but as means of government funding in times of crisis. This has provided a superficially justifiable argument for repeal of such taxes as conditions return to 'normal'¹⁰⁷⁵.

Michael Graetz provided a description of this while examining the history of estate taxation in the US over the past two centuries in a keynote address to a Boston College Law School and American College of Trust and Estate Counsel Symposium (October 2, 2015):

...The modern estate tax dates from 1916, when it was enacted to fund the first World War.... During the 1940s, to finance the second World War, Congress increased the top rate to 77% and set the exemption at \$60,000 - where those numbers stood for nearly thirty-five years...

The editorial abstract to a published version of his address summarizes it:

Michael Graetz describes the fight over the repeal of the estate tax and its current diminished state. Graetz argues that the political battle over the repeal of the estate tax reflects a fundamental challenge to our nation's progressive tax system. This Address concludes that a revitalized estate tax is important for managing the national debt and reducing massive inequalities in wealth. (Graetz, Michael J., ^œ['Death Tax' Politics](#) (May 5, 2016). *Boston College Law Review*, Vol. 57, No. 3, 2016)

(07/03/16) Douglas Hopkins (below), in an article subtitled:

Giving preferential tax treatment to a privileged class of citizens violates the principles of both democracy and capitalism. An annual levy on wealth over \$250,000 could begin returning us to core principles,

addressed why the [Picketty/Saez proposals](#) have largely been ignored. He claims that "arguing in favor of redistributive taxes on wealth may be factually, logically, and even morally supportable - but such arguments are counter-productive".

While he provides a sound case for "an even-handed, moderate annual wealth tax", I'm less than convinced that such an approach to the problem of credit accumulation would be any more effective than a direct argument in favor of credit redistribution through various forms of progressive taxation. Modern plutocracies are sustained by armies of

lawyers and lobbyists whose *raison d'être* is to identify and oppose any attempts at credit redistribution, however benignly presented.

(21/03/16) (02/05/16)(11/07/16) The New Deal and post-New Deal success in tackling the [inevitable long-term entropic consequences of credit dissipation](#) was based on overwhelming electoral support. This was bolstered through later appeal, by the New Deal's architects, to 'patriotic' sacrifice in support of the 'war effort' and 'post-war reconstruction', not on convincing arguments or even-handed moderation¹⁰⁷⁶.

(06/10/16) Once such a mindset dominates public understanding and has justified a constantly expanding range of policies and expenditures, it can be extremely difficult to change. Jeff Faux has explained, and illustrated, the 'national security' sales pitch which is commonly used in the US to justify and bolster support for programs which might otherwise be rejected:

...Whenever the economic case crumbles, "national security" becomes the fallback rationale.

After a quarter century of off-shored jobs and depressed wages in the wake of corporate-driven trade de-regulation, the claim that the Trans-Pacific Partnership will make life better for American workers is so discredited that both Hillary Clinton and Donald Trump are opposed....

But the Republican leadership and Barack Obama still want it, and they will try to get Congressional approval in the post-election "lame duck" session before the new president takes office.

True to form, their sales pitch has shifted from the claim that the TPP will make Americans prosperous to the claim that it will make America safer.

Defense Secretary Ashton Carter says "passing TPP is as important to me as another aircraft carrier." Likewise, eight former Defense secretaries assure Congressional leaders that approving the TPP will "contribute to a safer world for us, our children and our grandchildren."

Obama's former chief economist Alan Krueger now tells us that "trade agreements are primarily about foreign relations."

(Jeff Faux, [∞][TPP: The "National Security" Sales Pitch](#): Like other trade deals since NAFTA, is the TPP also just a device for capitalists to drive down the wages of American workers? *The Globalist*, September 29, 2016)

The New Deal required catastrophic economic failure. One can only hope that breaking out of a mindset which presumes life in a nation under threat from 'external enemies' and/or from 'freeloaders' on 'free enterprise' will be less traumatic. However, as Mark and Paul Engler suggest,

Social change is seldom either as incremental or predictable as many insiders suggest. Every once in a while, an outburst of resistance seems to break open a world of possibility, creating unforeseen opportunities for transformation.

(Mark and Paul Engler, [∞][Breaking the World Open: In Praise of "Impractical" Movements](#), *Truthout*, 7 March 2016)

Political *incrementalism* has a bad habit of producing cosmetic change (the metaphor 'lipstick on a pig' springs to mind); not revolutionary redirection.

Hopkins spells out his vision of effective incremental change:

The most interesting examination of economics over the last three decades has been Thomas Piketty's *Capital in the 21st Century*. But hardly anyone has taken Piketty's policy proposals seriously, mainly because Piketty himself framed them as overtly redistributive and described them as utopian.

In America today, arguing in favor of redistributive taxes on wealth may be factually, logically, and even morally supportable - but such arguments are counter-productive. Confiscatory tax policies pose a lethal threat to the rich and powerful, demanding their aggressive resistance.

Redistributive policies also hold little appeal to the American voting public. Who among us really wants to go to war against a class we all aspire to join? Even progressives, who often embrace and utilize redistributive rhetoric as part of the inequality debate, have largely dismissed Piketty's proposed wealth tax.

But Piketty nearly got it right. A properly structured annual wealth tax could equalize effective tax rates between labor and capital, while simultaneously stimulating more productive capital allocations - and, in the process, job creation.

Shielding wealth from direct taxation distorts investment incentives. If the productive deployment of capital serves as a key driver of economic growth and prosperity, then our policies should carefully aim at encouraging productive domestic investment. But by taxing investment profits, while shielding wealth itself from any direct assessment, we are *subsidizing unproductive capital*.

By taxing productive capital more heavily than unproductive capital, we encourage income sheltering and suppression and overburden the kind of job-creating productive domestic investments that create a growing and healthy economy.

Structural preferences aimed at wealth have, in effect, made tax avoidance and valuation manipulation more profitable than productive enterprise. Repealing the inefficient, highly variable, often contradictory, and much-abused taxes currently imposed on investment income and replacing them with an assessment directly upon accumulated net wealth would remove the distorted incentives that are undermining our productive economy.

An even-handed, moderate annual wealth tax would stimulate an aggressive redeployment of capital in search of more productive opportunities - and trigger a massive stimulus investment program financed entirely with private capital...

(Douglas Hopkins, ["A Business Case for a Wealth Tax"](#), *Inequality.Org*, March 2, 2016)

⁷³² As they explain:

Concern about inequality is at least as old as the United States itself. Writing in 1792 about the necessity and dangers of political parties, James Madison made the connection between excessive wealth and its political influence:

The great object should be to combat the evil: 1. By establishing a political equality among all. 2. By withholding unnecessary opportunities from a few, to increase the inequality of property, by an immoderate, and especially an unmerited, accumulation of

riches. 3. By the silent operation of laws, which, without violating the rights of property, reduce extreme wealth towards a state of mediocrity, and raise extreme indigence towards a state of comfort.

Excessive wealth concentration, in Madison's view, was as poisonous for democracy as war. "In war," he continued, "the discretionary power of the executive is extended; its influence in dealing out offices, honors, and emoluments is multiplied. . . . The same malignant aspect in republicanism may be traced in the inequality of fortunes."

Wealth is power. An extreme concentration of wealth means an extreme concentration of power: the power to influence government policy, the power to stifle competition, the power to shape ideology. Together, these amount to the power to tilt the distribution of income to one's advantage. This is the core reason why the extreme wealth of some can reduce what remains for the rest - why part of the income of today's superrich can be earned at the expense of the rest of society. That's what earned John Astor, Andrew Carnegie, John Rockefeller, and other Gilded Age industrialists their epithet of "Robber Barons."

(Emmanuel Saez and Gabriel Zucman, ["Taxing the Superrich: For the sake of justice and democracy, we need a progressive wealth tax," *Boston Review*](#), April 9, 2020)

⁷³³ (07/05/16) Perhaps we can strike a medal or two that we can give them as we relieve them of the burden of having to cope with such accumulations of cash. We could have national competitions leading to an international 'Accumulator Olympics' complete with medal ceremonies, national (or perhaps Corporate) anthems and crowds of admiring supporters - and, of course, as in 'drugs in sport', ceremonial defrocking of those found to be cheating (or abusing the spirit of the rules - often described as 'tax avoidance')¹⁰⁷⁷. Possible candidates for defrocking:

Over the last two years, the 71 technology companies in the Standard & Poor's 500-stock index - including Apple, Google, Yahoo and Dell - reported paying worldwide cash taxes at a rate that, on average, was a third less than other S. & P. companies'. (Cash taxes may include payments for multiple years.)

Even among tech companies, Apple's rates are low. And while the company has remade industries, ignited economic growth and delighted customers, it has also devised corporate strategies that take advantage of gaps in the tax code, according to former executives who helped create those strategies.

Apple, for instance, was among the first tech companies to designate overseas salespeople in high-tax countries in a manner that allowed them to sell on behalf of low-tax subsidiaries on other continents, sidestepping income taxes, according to former executives. Apple was a pioneer of an accounting technique known as the "Double Irish With a Dutch Sandwich," which reduces taxes by routing profits through Irish subsidiaries and the Netherlands and then to the Caribbean. Today, that tactic is used by hundreds of other corporations - some of which directly imitated Apple's methods, say accountants at those companies.

(Charles Duhigg and David Kocieniewski, ["How Apple Sidesteps Billions in Taxes," *New York Times*](#), April 28, 2012)

Gabriel Zucman, in a book on the subject, has explored the extent of the [problem of tax evasion and tax 'avoidance'](#) (a euphemism for tax evasion through clever accounting and legal maneuvering). As he says, "Tax havens are at the heart of financial, budgetary, and democratic crises." In an excerpt from his book he sketches the problem:

...[D]espite some progress in curtailing it in recent years, tax evasion is doing just fine. There has, in fact, never been as much wealth in tax havens as today. On a global scale, 8% of the financial wealth of households is held in tax havens. According to the latest available information, in the spring of 2015 foreign wealth held in Switzerland reached \$2.3 trillion. Since April 2009, when countries of the G20 held a summit in London and decreed the "end of banking secrecy," the amount of money in Switzerland has increased by 18%. For all the world's tax havens combined, the increase is even higher, close to 25%. And we are only talking about individuals here. Corporations also use tax havens.

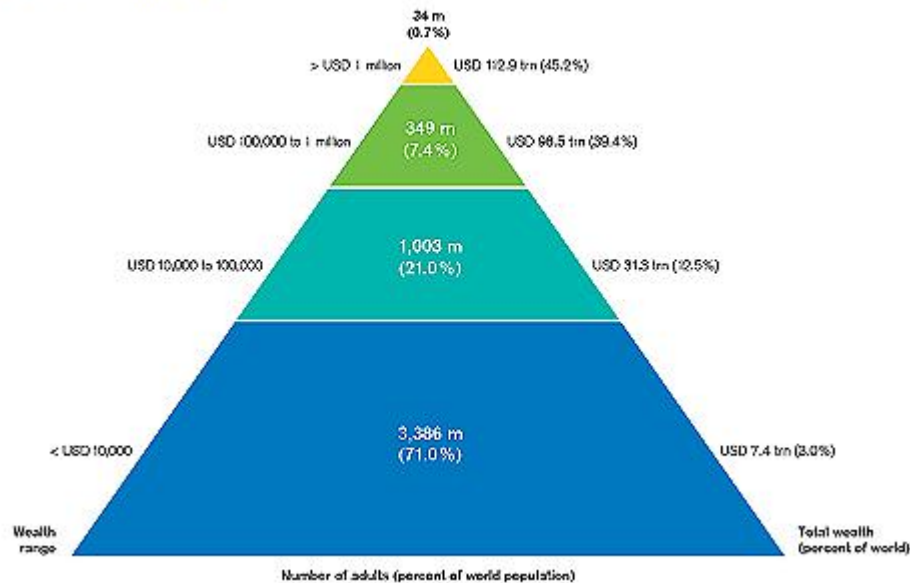

Corporate filings show that US companies are shifting profits to Bermuda, Luxembourg, and similar countries on a massive and growing scale. Fifty-five percent of all the foreign profits of US firms are now kept in such havens. Since multinationals usually try to operate within the letter - if not the spirit - of the law, this profit shifting is better described as "tax avoidance" rather than outright fraud. But its cost is enormous - \$130 billion a year for US firms alone - and since equity ownership is very concentrated, it essentially benefits only the wealthiest among us.

(Gabriel Zucman, ^œ[How Much Money Does the 1% Have Hidden in Tax Havens? An economist finds out, and the data is staggering](#), *Alternet*, October 8, 2015)

For an in-depth examination of [the problem of wealth inequality](#) around the world, see this *Credit Suisse Research Institute* study, ^œ[The Global Wealth Report 2015](#) and other publications on the site. As the site advertisement says,

In its sixth edition, the Credit Suisse Global Wealth Report offers a comprehensive portrait of global wealth, covering all regions and countries, and all parts of the wealth spectrum, from the very base of the wealth pyramid to ultra-high net worth individuals.

Figure 1
The global wealth pyramid

Source: James Davies, Rodrigo Lluberas and Anthony Shorrocks, Credit Suisse Global Wealth Databook 2015

(Markus Stierli (*et al*), *The Global Wealth Report 2015*, Credit Suisse AG Research Institute, October 2015, p. 24)

Matias Vernengo has summed up the main features of the 2015 'Global Wealth Pyramid':

Not much difference with previous one, but a bit worse. Now 71% of the population holds 3% of the wealth (before it was the 67% at the bottom held 3.3% approximately). And the top 0.7% of the population holds slightly more than 45% of total wealth.

By the way, the US has added more people at the top, while Japan and Europe have lost a few. If you are interested on how many really wealthy people there are (not the 34 million people at the top of the figure above, which are the ones worth more than 1 million), here is what the report says:

We estimate that there are 123,800 UHNW individuals worldwide, defined as those whose net worth exceeds USD 50 million. Of these, 44,900 are worth at least USD 100 million and 4,500 have assets above USD 500 million.

UHNW means Ultra-High Net Worth (or what a decade ago Citigroup analysts called the plutonomy). So about 4,500 with a net worth above 500 million dollars.

(Matias Vernengo, ^œ[The plutonomy is doing fine, Naked Keynesianism](#), October 15, 2015)

How strange (and patently absurd) that some of those claiming to be 'expert commentators' should suggest that the answer to such tax evasion (exploiting loopholes which have been created through mindless processes of deregulation over the past 30 years) is to stop taxing the evaders, thus giving them 'no incentive' to exploit the loopholes!! As one of those self-proclaimed experts put it when addressing the problem:

A wide consensus of economists and tax experts finds it to be bad policy. Nobody, so far as I could find, thought that corporate taxes were a smart or efficient way for governments to raise revenue. Economic theory provides no strong argument for special taxation of corporate income, at whatever rate.

(Evan Soltas, ^œ[Apple Shows It's Time to Abolish Corporate Taxes](#), *The Ticker*, Bloomberg, May 24, 2013)

734 William Ripple et al have expanded on all this in a research paper entitled ^œ[World Scientists' Warning of a Climate Emergency 2022](#) (*BioScience*, 26 October 2022). As they say:

We are now at "code red" on planet Earth. Humanity is unequivocally facing a climate emergency. The scale of untold human suffering, already immense, is rapidly growing with the escalating number of climate-related disasters...

735 Perhaps, if capitalism can weather the looming climate catastrophe, it will arrive at a time when all available scarce resources have been mined, processed and used and the 'necessary' energy generating infrastructure has fallen into disrepair: a dystopian world with populations eking out a living amongst those relics of a once 'grand civilization'!

736 As Wible continues:

This special issue examines how research can engage with and support communities and governments navigating this uncertain landscape. Researchers are interweaving science and governance for community decision-making, improving integration of global and local analyses of human habitability, estimating the largely unmeasured costs of human displacement, mapping policy pathways toward retreat from rising seas, preparing destination regions to be migrant friendly, incorporating design and decision support into retreat planning, and more.

The direction, quality, legitimacy, and impact of such research may depend not only on the creativity of its formulation and the rigor of its execution but also on its assumptions about who makes decisions. This is because many groups whose lives will be disproportionately disrupted by climate change have also historically experienced hardships under decisions imposed upon their communities by outsiders. Thus, we must consider not only what science can do but also how science is done, and by whom.

(Brad Wible, ^œ[Special Section: Climate-induced Relocation: Out of Harm's Way](#), *Science*, Vol 372, Issue 6548, Pp.1274-1299, June 18, 2021)

 **Update Dates for Chapter 11:** (31/07/18) (01/08/18) (19/08/18) (26/08/18) (07/12/18) (24/12/18) (21/02/19) (04/03/19) (06/06/19) (11/06/19) (28/01/20) (01/02/20) (21/04/20) (14/05/20) (29/06/20) (29/07/20) (04/08/20) (23/08/20) (04/09/20) (29/09/20) (30/09/20) (17/10/20) (20/10/20) (01/11/20) (19/11/20) (27/11/20) (31/12/20) (01/01/21) (24/01/21) (15/04/21) (16/04/21) (25/04/21) (09/05/21a) (10/06/21) (19/06/21) (29/06/21) (12/07/21) (10/08/21) (12/08/21) (22/10/21) (02/11/21) (05/11/21) (08/11/21) (10/11/21) (02/05/20) (29/05/20) (09/07/19)(11/02/20) (02/06/20) (05/08/20) (13/08/20) (14/08/20) (22/08/20) (27/08/20) (03/09/20) (26/09/20) (17/10/20) (07/11/20) (22/11/20) (19/12/20) (11/02/21) (24/02/21) (16/03/21) (18/05/21) (30/05/21) (22/08/21) (09/09/21) (02/10/21) (14/11/21) (19/11/21) (20/11/21) (02/12/21) (30/12/21) (31/12/21) (09/01/22) (28/12/18) (18/01/21) (04/02/22) (24/07/22) (26/07/22) (05/08/22) (23/08/22) (27/08/22) (28/08/22) (08/09/22) (14/09/22) (27/09/22) (13/10/22) (21/10/22) (05/11/22) (27/11/24)

(07/08/24) (24/08/24) (29/09/24)

737 But, of course, this is not going to happen to me! I've planted fire-resistant trees around my home and outbuildings and plantation trees behind them to absorb the impact of wild weather (some of the wood that was keeping the home warm in the increasingly-mild southern winter when this was written was felled by wild weather! I viewed the fallen and snapped off trees and thanked the powers that be for doing my fire-wood tree selection for me!) but I was fortunate!

I've mowed fire-breaks and strengthened more vulnerable parts of my buildings to guard against future wild weather and fire; I'm on high ground and water, after filling my dams, drains away to lower regions so flooding should never be an immediate problem - though, of course, all roads lead to those lower regions - but there are some things one can't 'prepare' for!

Surely, given my preparations, I'll be alright! Yes, this does look increasingly like self-delusion! Just 100 kilometers from my bolt-hole folks thought the same, but in 2021 hundreds lost their homes to wild weather. It becomes more real when one realizes that but for the whimsy of the weather, that could have been me!

738 The focus on United States' developments is intentional. The United States, at least since 1945, has been, and, for the foreseeable future, is the center of Western Capitalism. What the US does strongly influences the actions and determinations of other Western (and many other) nations.

739 The all-too-familiar obfuscatory dance went on... Doina Chiacu of *Reuters* explained:

WASHINGTON, June 27 (Reuters) - Republican Senate negotiators on an infrastructure deal were optimistic about a \$1.2 trillion bipartisan bill on Sunday after President Joe Biden withdrew his threat to veto the measure unless a separate Democratic spending plan also passes Congress.

U.S. Senator Rob Portman said he and his fellow negotiators were "blindsided" by Biden's comments on Thursday after a rare bipartisan compromise to fix the nation's roads, bridges and ports.

"I was very glad to see the president clarify his remarks because it was inconsistent with everything that we had been told all along the way," Portman said in an interview with ABC.

Moments after announcing the bipartisan deal on Thursday, Biden appeared to put it in jeopardy with his comment that the infrastructure bill would have to move "in tandem" with a larger bill that includes a host of Democratic priorities that he hopes to pass along party lines.

"If this is the only thing that comes to me, I'm not signing it," he said.

The comments put internal party pressure on the 11 Republicans in the group of 21 senators who endorsed the infrastructure package to abandon the agreement.

Biden issued a statement on Saturday that essentially withdrew that threat, saying that was "certainly not my intent."

"We were glad to see them disconnected and now we can move forward," Portman said on Sunday.

(Doina Chiacu, ^œ[Republicans Senate negotiators ready to move forward on infrastructure after Biden walkback](#), *Reuters*, June 29, 2021)

As a once popular children's dance put it:

You put your right foot in
You put your right foot out
You put your right foot in
And you shake it all about
...
You do the hokey pokey
And you turn yourself around
That's what it's all about

⁷⁴⁰ Rachit Dubey *et al* explain the capitalist drive to demonstrating self-worth through material self-promotion:

In evaluating our choices, we often suffer from two tragic relativities.

First, when our lives change for the better, we rapidly habituate to the higher standard of living.

Second, we cannot escape comparing ourselves to various relative standards.

Habituation and comparisons can be very disruptive to decision-making and happiness, and till date, it remains a puzzle why they have come to be a part of cognition in the first place.

Here, we present computational evidence that suggests that these features might play an important role in promoting adaptive behavior.

Using the framework of reinforcement learning, we explore the benefit of employing a reward function that, in addition to the reward provided by the underlying task, also depends on prior expectations and relative comparisons. We find that while agents

equipped with this reward function are less happy, they learn faster and significantly outperform standard reward-based agents in a wide range of environments.

Specifically, we find that relative comparisons speed up learning by providing an exploration incentive to the agents, and prior expectations serve as a useful aid to comparisons, especially in sparsely-rewarded and non-stationary environments. Our simulations also reveal potential drawbacks of this reward function and show that agents perform sub-optimally when comparisons are left unchecked and when there are too many similar options. Together, our results help explain why we are prone to becoming trapped in a cycle of never-ending wants and desires, and may shed light on psychopathologies such as depression, materialism, and overconsumption.

(Rachit Dubey *et al*, [∞][The pursuit of happiness: A reinforcement learning perspective on habituation and comparisons](#), *PLoS Computational Biology* 18(8): e1010316, August 4, 2022)

⁷⁴¹ The United Nations Office for Disaster Risk Reduction has described how extreme weather events have come to dominate the disaster landscape of the 21st Century:

Over the last twenty years, 7,348 disaster events were recorded worldwide by EM-DAT, one of the foremost international databases of such events. In total, ...disasters claimed approximately 1.23 million lives, an average of 60,000 per annum, and affected a total of over 4 billion people (many on more than one occasion). Additionally, disasters led to approximately US\$ 2.97 trillion in economic losses worldwide.

These numbers represent a sharp increase of the number of recorded disaster events by comparison with the previous twenty years. Between 1980 and 1999, EM-DAT recorded 4,212 disasters linked to natural hazards worldwide, which claimed approximately 1.19 million lives and affected over 3 billion people (Figure 1). Economic losses totaled US\$ 1.63 trillion.

While better recording and reporting may partly explain some of the increase in events, much of it is due to a significant rise in the number of climate-related disasters. Between 2000 and 2019, there were 510,837 deaths and 3.9 billion people affected by 6,681 climate-related disasters. This compares with 3,656 climate-related events which accounted for 995,330 deaths (47% due to drought/famine) and 3.2 billion affected in the period 1980-1999. The number of people affected by disasters, including injuries and disruption of livelihoods, especially in agriculture, and the associated economic damage are growing in contrast to the decrease in mortality.

Key points and recommendations:

- A temperature increase of 3°C of the global climate is estimated to increase the frequency of potentially high impact natural hazard events across the world. This could render current national and local strategies for disaster risk reduction and climate change adaptation obsolete in many countries;
- Shifting rainfall patterns and greater variability in precipitation poses a risk to the 70% of global agriculture that is rain-fed

and the 1.3 billion people dependent on degrading agricultural land;

- The concentrated impact due to a single disaster type in some countries provides an opportunity for a more focused approach on disaster risk reduction. However, COVID-19 demonstrates the need for a systemic, multihazard approach in an increasingly globalized and interconnected world;
- There is a requirement for strengthening disaster risk governance to manage disaster risk with clear vision, competence, plans, guidelines, funding and coordination across sectors and in a manner which takes account of the increasingly systemic nature of disaster risk;
- Public and private investment in disaster risk prevention and reduction through structural and non-structural measures needs to be stepped up to create disaster resilient societies.

(United Nations Office for Disaster Risk Reduction, ^œ[The human cost of disasters: an overview of the last 20 years \(2000-2019\)](#), published to mark the International Day for Disaster Risk Reduction on October 13, 2020)

⁷⁴² As Sommer continues:

The scientists contend that input and expertise of Indigenous and other local and communities is essential to understanding and managing this global issue.

The commentary identifies two new features of recent Arctic fires. The first is the prevalence of holdover fires, also called zombie fires. Fire from a previous growing season can smolder in carbon-rich peat underground over the winter, then re-ignite on the surface as soon as the weather warms in spring.

We know little about the consequences of holdover fires in the Arctic," noted Turetsky, "except that they represent momentum in the climate system and can mean that severe fires in one year set the stage for more burning the next summer."

The second feature is the new occurrence of fire in fire-resistant landscapes. As tundra in the far north becomes hotter and drier under the influence of a warmer climate, vegetation types not typically thought of as fuels are starting to catch fire: dwarf shrubs, sedges, grass, moss, even surface peats. Wet landscapes like bogs, fens, and marshes are also becoming vulnerable to burning. (Shelly Sommer, ^œ[The Arctic is burning in a whole new way](#), *Institute of Arctic and Alpine Research*, University of Colorado, September 28, 2020)

⁷⁴³ For further detail on Arctic/ Antarctic sea ice extent and concentrations see the US *National Snow and Ice Data Center* ongoing monthly and daily sea ice measurements (with explanations of the various data gathering processes) ^œ[Sea Ice Index: Arctic- and Antarctic-wide changes in sea ice](#)

⁷⁴⁴ Chuck Collins, in 2017, put the problem well:

Part of the inequality problem... is that trillions of dollars are being shifted off the ledger, hidden from measurement and taxation. Some of this "hidden wealth of nations," as Gabriel Zucman calls it, is kept in offshore tax havens like the Cayman Islands and Panama

that function as secrecy jurisdictions with minimal transparency or reporting requirements. Trillions more has been hidden in trusts and other complex financial arrangements available only to the very wealthy. New research suggests that households in the top 0.01 percent, those with wealth over \$40 million, evade 25 to 30 percent of person income and wealth taxes - about 10 times more than the general population.

This process is aided and abetted by professional wealth managers who facilitate and lubricate the process of hiding wealth. Many of them work in private family offices that serve wealthy families. These are not mom-and-pop financial planners who help protect families from running out of money. We're talking about the well-compensated professionals that serve the richest one-tenth of one percent of Americans....

Brooke Harrington... spent several years being trained as a wealth manager in order to gain firsthand insight into the secretive world of this discreet profession. By obtaining professional certification through the Society of Trust and Estate Practitioners (STEP), Harrington built relationships, trust, and access with 65 wealth advisers around the world. To conduct interviews, she traveled to 18 countries, including notorious offshore tax havens like the Cook and Seychelles islands...

Wealth is not just detaching from states but from the nation-state system itself. You have these huge piles of private wealth floating around the world, untouchable by states or state authority, through the machinations of wealth managers. And people who own the wealth also detach from states. There's a certain group of well-to-do people who don't want to be subject to the laws that bind the rest of us. They don't want anarchy, because that would be inconvenient. They still want roads and the rule of law. They want murderers to go to jail. They just don't want the laws to apply to them, because it's a bummer. So, with the help of wealth managers, they put themselves above the nation-state system by changing passports at will, having multiple residences, and bouncing around strategically to ensure that no national laws apply to them.

(Chuck Collins, ^œ[Managers to the Super-Rich Undermine Society and What We Can Do About It](#), *The Nation*, June 21, 2017)

⁷⁴⁵ Zengkai Zhang *et al* have shown the contribution of extended global supply chains to global CO₂ emissions. As they summarize:

Enterprises are at the forefront of climate actions and multinational enterprises (MNEs) engage in foreign direct investment, allowing them substantial influence over the entire supply chain. Yet emissions embodied in the international supply chains of MNEs are poorly known. Here we trace the carbon footprints of foreign affiliates of MNEs and show that the gross volume of global carbon transfer through investment peaked in 2011, mainly driven by the decline in carbon intensity.

Despite declining carbon footprints of developed country-based MNEs, there has been a notable increase in carbon transfer sourced from the Chinese mainland. We propose an investment-based accounting framework to allocate carbon footprints of MNEs to the investing country. Investment-based accounting of emissions could

inform targeted and effective climate policies and actions. For instance, some large MNEs play a crucial role in carbon transfer, therefore their originating country should bear more responsibilities of carbon emissions reduction as an investor. (Zengkai Zhang *et al*, ^œ[Embodied carbon emissions in the supply chains of multinational enterprises](#), *Nature Climate Change*, 07 September 2020)

⁷⁴⁶ In February 2023 *Microsoft* introduced an 'upgrade' to their *Bing* search engine. As they announced to those willing to 'explore' this first step into a pseudo-social interactional world:

How To Access Bing's ChatGPT 4.0 Right Now!

Bing's ChatGPT 4.0 (Bing Chat) is a cutting-edge technology that provides users with a seamless conversational experience. As one of the most advanced chatbots in the world, ChatGPT 4.0 is capable of understanding natural language and responding in a human-like manner. For those new to Bing Chat or looking to enhance their experience, this article will provide a step-by-step guide on accessing Bing's ChatGPT 4.0 right now.

As my son emailed me (good to have perceptive offspring!):

If you're interested in the next societally destructive piece of technology our tech overlords are about to bestow on us, the first segment of this podcast is incredible. Genuinely terrible and dangerous piece of technology.^œ[dts.podtrac.com](#)

And I responded (yes we do sometimes communicate!):

...While it seemed as though the person recounting his experience was in control of the discussion, in fact, once the first question was asked the rest of the 'conversation' was in response to the program's replies.

Imagine how many people who listen to this podcast will now spend hours 'chatting' with their product!

Microsoft is devious!!!!

⁷⁴⁷ A report entitled 'The missing economic risks in assessments of climate change impacts' has given a summary of some of the major problems in 2019 assessments of the consequences of climate change around the world:

- Economic assessments of the potential future risks of climate change have been ^œ[omitting or grossly underestimating many of the most serious consequences for lives and livelihoods](#) because these risks are difficult to quantify precisely and lie outside of human experience.
- Political and business leaders need to understand the scale of these 'missing risks' because they could have drastic and potentially catastrophic impacts on citizens, communities and companies.
- Scientists are growing in confidence about the evidence for the largest potential impacts of climate change and the rising probability that major thresholds in the Earth's climate system will be breached as global mean surface temperature rises, particularly if warming exceeds 2°C above the pre-industrial

level.

These impacts include:

- Destabilisation of ice sheets and glaciers and consequent sea level rise
 - Stronger tropical cyclones
 - Extreme heat impacts
 - More frequent and intense floods and droughts
 - Disruptions to oceanic and atmospheric circulation
 - Destruction of biodiversity and collapse of ecosystems
- Many of these impacts will grow and occur concurrently across the world as global temperature climbs.
- Some of these impacts involve thresholds in the climate system beyond which major impacts accelerate, or become irreversible and unstoppable.
- When a threshold is breached, it might cause one or more other thresholds to be exceeded as well, leading to a cascade of impacts.
- Many of these impacts could exceed the capacity of human populations to adapt, and would significantly affect and disrupt the lives and livelihoods of hundreds of millions, if not billions, of people worldwide.
- These impacts would also undermine economic growth and development, exacerbate poverty and destabilise communities.
- Economic assessments fail to take account of the potential for large concurrent impacts across the world that would cause mass migration, displacement and conflict, with huge loss of life.
- Economic assessments that are expressed solely in terms of effects on output (e.g. gross domestic product), or that only extrapolate from past experience, or that use inappropriate discounting, do not provide a clear indication of the potential risks to lives and livelihoods.
- It is likely that there are additional risks that we are not yet anticipating simply because scientists have not yet detected their possibility, as we have entered a period of climate change that is unprecedented in human history.
- Some advances are being made in improving economic assessments of climate change impacts but much more progress is required if assessments are to offer reliable guidance for political and business leaders on the biggest risks.
- The lack of firm quantifications is not a reason to ignore these risks, and when the missing risks are taken into account, the case for strong and urgent action to reduce greenhouse gas emissions becomes even more compelling.

(DeFries, Ruth S. *et al*, [∞][The missing economic risks in assessments of climate change impacts](#), *Earth Institute*, September 23, 2019)

748 As the 21st Century unfolds humanity is [∞]confronted with a tsunami of its own waste, fouling the environment, filling landfill sites and polluting rivers, lakes and oceans.

In almost all Western homes inhabitants confront a daily deluge of packaging waste. Inhabitants in capitalist communities, living in 'throw-away' societies, are faced with the daily problem of what to do with the accumulating waste which seems to be an inevitable consequence of daily life.

But for the regular garbage collection services on which they are dependent, Western inhabitants would find themselves buried under their own accumulating trash!

And, of course, I am one of them! I seldom make use of the garbage disposal services provided by my own local council but, nonetheless, I find myself having to daily burn the accumulating combustible packaging in which my weekly supply of groceries arrive.

Yes, I avail myself of a 21st century version of the grocery delivery services provided by all major 'supermarkets'. Once a week, despite my rural location, a delivery truck enters my property, drives up to my front door and leaves my pre-ordered groceries - alerting me by 'text message' and a convenient 'map' to its progress and final arrival. It's a far-cry from my early 1950s delivery bike, but essentially the same service!.

My groceries' plastic and cardboard packaging is augmented by a range of other inevitable garbage, consequences of living in a climate-affected Western community.

In August last year (2024) a giant hail storm demolished the 30+-year-old polycarbonate of my shed skylights and my pergola roofing. Inevitably, I found myself confronting the questions of what should replace it and what to do with the remains of the polycarbonate sheeting I removed during repairs.

The first question was answered for me by my polycarbonate sheeting supplier: Install 'virtually indestructible' polycarbonate sheets (3X the thickness of the damaged sheets). Of course, when, inevitably, these are replaced, we will be confronted with at least three times the waste disposal problems. Despite being 'virtually indestructible', the manufacturers' guarantee extends for only 20 years!

My dilemma when disposing of the discarded sheets: If I took them to my region's landfill site they would either be buried, disintegrating over time and so adding to the micro-plastics problem facing the world, or they would be burned, contributing to greenhouse problems.

And, of course, my rebuilding and repairs have generated a range of other debris.

This was not a problem unique to me - the damage I experienced was replicated across the region and various contractors have been hard at work replacing damaged structures and generating mounting piles of debris. 'Global Warming' is going to produce a staggering plastics and other debris problem for communities around the world .

Alexander Nihart *et al* explain why this is a problem for life on the planet: microplastics are not just 'blowing in the wind' and floating in the oceans, rivers and lakes, they're also preferentially accumulating in our brains! ([∞]Bioaccumulation of microplastics in decedent human brains, *Nature Medicine*, 03 February 2025)

Today's global abundance of floating ocean plastics is estimated at approximately 82 - 358 trillion plastic particles weighing 1.1 - 4.9 million tonnes. We observed no clear detectable trend until 1990, a fluctuating but stagnant trend from then until 2005, and a rapid increase until the present. This observed acceleration of plastic densities in the world's oceans, also reported for beaches around the globe, demands urgent international policy interventions.

(Marcus Eriksen *et al*, ^œ[A growing plastic smog, now estimated to be over 170 trillion plastic particles afloat in the world's oceans - Urgent solutions required](#), *PLOS ONE*, March 08, 2023)

Kara Lavender Law *et al* have detailed the massive 'plastic problem' being created by residents of the United States of America. As they summarize:

Plastic waste affects environmental quality and ecosystem health. In 2010, an estimated 5 to 13 million metric tons (Mt) of plastic waste entered the ocean from both developing countries with insufficient solid waste infrastructure and high-income countries with very high waste generation. We demonstrate that, in 2016, the United States generated the largest amount of plastic waste of any country in the world (42.0 Mt). Between 0.14 and 0.41 Mt of this waste was illegally dumped in the United States, and 0.15 to 0.99 Mt was inadequately managed in countries that imported materials collected in the United States for recycling. Accounting for these contributions, the amount of plastic waste generated in the United States estimated to enter the coastal environment in 2016 was up to five times larger than that estimated for 2010, rendering the United States' contribution among the highest in the world.

(Kara Lavender Law *et al*, ^œ[The United States' contribution of plastic waste to land and ocean](#), *Science Advances* Vol. 6, no. 44, 30 Oct 2020)

While the 'plastic problem' facing the world is huge, it is, of course, merely one of the almost insurmountable waste problems generated by deregulated capitalism in this century. As the website *The World Counts* has described:

Every year we dump a massive 2.12 billion tons of waste. If all this waste was put on trucks they would go around the world 24 times. This stunning amount of waste is partly because 99 percent of the stuff we buy is trashed within 6 months.

(^œ[A world of waste](#), *The World Counts* Accessed July 29, 2020)

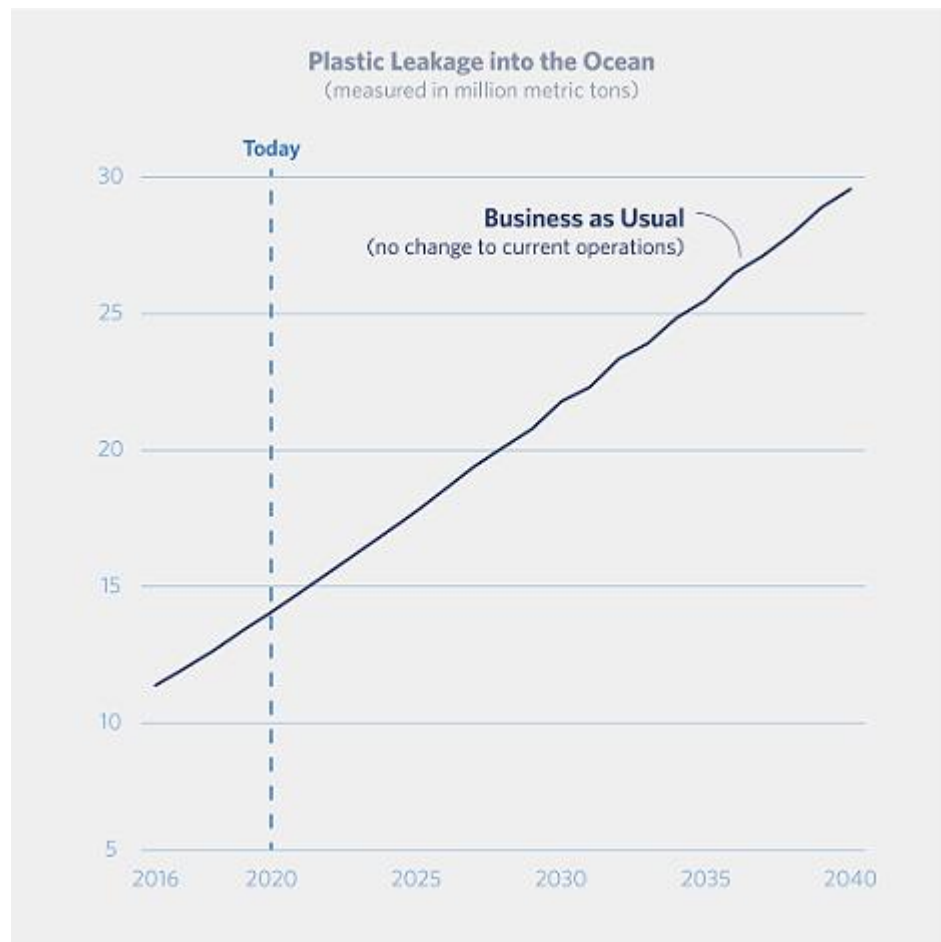

Simon Reddy and Winnie Lau have described the deluge of plastic waste being generated in this 21st century:

Plastic has become ubiquitous on store shelves and in our homes. From wrapped food and disposable bottles to microbeads in body washes, it's used widely as packaging or in products because it's versatile, cheap, and convenient. But this convenience comes with a price. Plastic waste is entering the ocean at a rate of about 11 million metric tons a year, where it is harming marine life and damaging habitats.

How did we get here? We have been producing vast quantities of plastic products and have had few measures in place to regulate their use or properly manage their disposal.

...Without immediate and sustained action, that amount will nearly triple by 2040, to 29 million metric tons per year. That's the same

as dumping 110 pounds (50 kilograms) of plastic on every meter of coastline around the world.

(Simon Reddy and Winnie Lau, ^œ[Breaking the Plastic Wave: Top Findings for Preventing Plastic Pollution](#), *The Pew Charitable Trusts*, July 23, 2020)

⁷⁴⁹ Military greenhouse gas emissions are huge, yet seldom factored into calculations of greenhouse gas contributions by their nations. The site ^œmilitaryemissions.org provides ongoing information on the issues involved. As it explains:

Militaries are huge energy users whose greenhouse gas (GHG) emissions are making a significant contribution to the climate crisis.

The UN Framework Convention on Climate Change obliges some states to report on their GHG emissions every year. But because reporting military emissions is voluntary, data is often absent or incomplete - this is the military emissions gap.

This site is dedicated to tracking, analysing and closing the military emissions gap, bringing together the data that governments report into one place...

For some backgrounding see: ^œ[Scientists call on world's military forces to come clean on carbon emissions](#) (EurekAlert, 09 November, 2021)

⁷⁵⁰ In an impassioned speech to the 77th General Assembly of the United Nations (20 September 2022), President Gustavo Petro of Colombia described the problems facing us all:

Which is more poisonous to humans: cocaine or coal or oil? The ruling of power has ordered that cocaine is the poison and must be persecuted, even if it only causes minimal deaths by overdose, and more by the mixtures caused by its dictated clandestinity, but,

instead, coal and oil must be protected, so that their use can extinguish all, all humanity. These are the things of world power, things of injustice, things of irrationality, because world power has become irrational.

They see in the exuberance of the jungle, in its vitality, the lustful, the sinful; the guilty origin of the sadness of their societies, imbued in the deep unlimited compulsion to have, to have and to consume. How to hide the loneliness of the heart, in its dryness in the midst of societies without affections, competitive until imprisoning the soul in solitude, if not blaming the plant, the man who cultivates it, the libertarian secrets of the jungle. According to the irrational power of the world, the fault is not the market that cuts existence, the fault lies with the jungle and those who inhabit it.

Bank accounts have become unlimited, the money kept by the most powerful on earth can no longer even be spent in the time of the centuries. The sadness of existence produced by this artificial call to competition, fill it with noise and drugs. The addiction to money and having, has another face: drug addiction in people who lose competition, of the artificial career in which they have transformed humanity. The disease of loneliness is not cured by glyphosate over the jungles. It is not the jungle that is to blame. The culprit is their society educated in endless consumption, in the stupid confusion between consumption and happiness that allows, of course, the pockets of power to be filled with money.

The culprit of drug addiction is not the jungle, it is the irrationality of its world power....

You gathered the scientists, and they spoke with reason, with mathematics and climate models, they said that the end of the human species was approaching, that its time is no longer millennia, or even centuries. Science set off the alarm and we stopped listening to it. The war served as an excuse for us not to take the necessary measures.

When actions were most needed, when speeches were no longer useful, when it was essential to deposit money in funds to save humanity, when it was necessary to move away from coal and oil as soon as possible, one war and another and another were invented. They invaded Ukraine, but also Iraq, and Libya and Syria. They invaded in the name of oil and gas.

They discovered in the twenty-first century the worst of their addictions: addiction to money and oil.

Wars have served as an excuse for them not to act against the climate crisis. Wars have shown them how dependent they are on what will wipe out the human species....

The climate disaster fills us with viruses that swarm sweeping us away, but you do business with medicines and turn vaccines into commodities. They propose that the market will save us from what the market itself has created. The Frankenstein of humanity is in letting the market and greed act without planning, surrendering brain and reason, kneeling human rationality to greed.

Why war if what we need is to save the human species? What good is NATO (North Atlantic Treaty Organization) and empires, if what is coming is the end of intelligence?

The climate disaster will kill hundreds of millions of people and listen well, it is not produced by the planet, it is produced by capital. The cause of climate disaster is capital. The logic of relating to consume more and more, to produce more and more, and for a few to earn more and more, that is what produces the climate disaster. They articulated the logic of the expanded accumulation of capital, the energy engines of coal and oil and unleashed the hurricane: the chemical change of the atmosphere deeper and deadlier. Now in a parallel world, the expanded accumulation of capital is an expanded accumulation of death....

From Latin America we call on Ukraine and Russia to make peace.

Only in peace can we save life in this, our common land. There is no Total Peace without social, economic and environmental justice.

We are at war, too, with the planet. Without peace with the planet, there will be no peace among nations.

Without justice, there is no social peace.

(President Gustavo Petro of Colombia, ^œ[Speech to the 77th General Assembly of the United Nations](#), *Ministry of Foreign Affairs*, Bogotá D.C., Colombia, 20 September 2022)

For an extensive commentary and translation of the speech see Benjamin Norton ^œ["War on drugs has failed": At UN, Colombia condemns 'addiction to money and oil'](#)

⁷⁵¹ Rebecca Henderson explained:

... Given the slowing global economy and the slide toward populism and nationalism in much of the world, the prospects for any kind of comprehensive global accord seem increasingly remote. So far, at least, the public sector is failing to confront the problem.

But the private sector has begun to step in to fill the vacuum. In January, Larry Fink, the CEO of BlackRock, the largest asset manager in the world, declared that "climate risk is investment risk" and announced that going forward BlackRock would ask every firm in its portfolio to disclose its carbon emissions. BlackRock has roughly \$7 trillion under management and is one of the largest shareholders in nearly every publicly traded firm in the world. So companies around the world paid attention when Fink went on to say that BlackRock would consider voting against boards whose firms "do not make sufficient progress" in addressing climate-related risks and would cease to invest altogether in some fossil fuel projects.

Fink is not alone. Many of the world's largest asset owners are coming to the conclusion that climate change is the most important risk to the long-term health of their portfolios. More than a third of global invested capital - about \$19 trillion - is controlled by the world's 100 largest asset owners. Nearly two-thirds of this money is in pension funds; the remaining third is in sovereign wealth funds. These funds are now so large that they are sometimes referred to as "universal owners" or "universal investors" since, in effect, they hold the entire market. For that reason, they cannot diversify away from the risk of climate change - a risk that Mark Carney, who until earlier this year was the governor of the Bank of England, suggested could result in an abrupt financial collapse, potentially wiping out as much as \$20 trillion of assets. To avert that kind of

calamity, major asset owners are starting to push the companies in their portfolios to address climate change.

This trend is not driven by altruism or a deep commitment to the environment: it's a function of economic interests. For the world's largest asset owners, climate change is not an externality - it is a profound threat to their long-term returns. It will, after all, be significantly harder to make money in a world where most of the major ports are underwater, harvests are failing on a routine basis, and hundreds of millions of people are on the move....

(Rebecca Henderson, ^œ[The Unlikely Environmentalists: How the Private Sector Can Combat Climate Change](#), *Foreign Affairs*, Volume 99, Number 3, Pp.47-53, May/June 2020)

⁷⁵² James Dyke *et al* have put the problem well:

We have arrived at the painful realisation that the idea of net zero has licensed a recklessly cavalier "burn now, pay later" approach which has seen carbon emissions continue to soar. It has also hastened the destruction of the natural world by increasing deforestation today, and greatly increases the risk of further devastation in the future.

To understand how this has happened, how humanity has gambled its civilisation on no more than promises of future solutions, we must return to the late 1980s, when climate change broke out onto the international stage....

(James Dyke *et al*, ^œ[Climate scientists: concept of net zero is a dangerous trap](#), *The Conversation*, April 22, 2021)

A comedic YouTube video explanation (with a few expletives) of the nature and likely value of some of these 'promising technologies' has been provided by *The Juice Media*:

^œ[Honest Government Ad: Carbon Capture & Storage](#).

⁷⁵³ Service outlined some of the possible 'plans':

Reacting these wastes with CO₂ from the air could make them safer by solidifying them - and at the same time help the world avert climate disaster. In the 2015 Paris climate agreement, most of the world's countries resolved to limit climate warming to below 2°C. For that to happen, the Intergovernmental Panel on Climate Change (IPCC) has determined, cutting greenhouse gas emissions won't be enough. Countries will also need to employ "negative emissions technologies" (NETs) to pull as much as 10 billion tons (gigatons) of CO₂ out of the atmosphere every year toward the end of this century. Possible NETs include planting vast forests, which suck carbon out of the air as they grow; chemically absorbing CO₂ from the air or power plant exhaust and pumping it underground; and growing grasses or shrubs, burning them for energy, and capturing and storing the CO₂ (*Science*, 16 February 2018, p. 733).

But underground storage chambers can leak, and forests can burn. Mineralization is more permanent: Carbon-based minerals, or carbonates, are among the most stable on Earth, adds Siobhan "Sasha" Wilson, a biogeochemist at the University of Alberta, Edmonton. "It's a really robust place to store CO₂," she says.

And suitable rock waste is plentiful. Start with ultramafic wastes, the calcium- and magnesium-rich rock in which diamonds, along

with metals such as nickel, platinum, and palladium are found. A 2019 report on NETs by the U.S. National Academy of Sciences (NAS) described CO₂ storage in ultramafic mine wastes as "low-hanging fruit." Today, some 419 million tons of this and less alkaline "mafic" wastes are produced annually. If fully carbonated, they could lock up 175 million tons of atmospheric CO₂ per year. Then there are the alkaline wastes from aluminum, iron, steel, and cement production, which could bring the total up to at least 310 million tons - and by some estimates more than 4 gigatons (GTs) - of CO₂ trapped each year. The somewhat less alkaline basalt rock powder generated by coal production could sequester another 2 GTs per year, Phil Renforth of Heriot-Watt University and his colleagues have calculated - meaning alkaline wastes could in principle provide more than half of the negative emissions that IPCC called for. (Robert F. Service, ^œ[The carbon vault: Industrial waste can combat climate change by turning carbon dioxide into stone](#), *Science*, Vol. 369, Issue 6508, pp. 1156-1159, 04 Sep 2020)

⁷⁵⁴ There is no escaping the glaringly obvious: We are in a newly emerging age of escalating natural disasters. To continue documenting the consequences around the world seems pointless: We all know what is happening and only the truly self-deluded can continue to claim that these events are 'normal' in any meaningful use of such a term.

Over the past several years increasingly powerful typhoons and similar weather events have devastated regions of the Philippines. As 2020 drew to a close it happened again. Jason Gutierrez described the scene:

Brown water submerged nearly everything, as entire villages were swallowed by the deluge.

The floods, fast and furious, left few people with enough time to make it even to their rooftops. Homes provided little refuge from the devastation.

Francisco Pagulayan, 45, sat dazed as he stared at three white coffins on the roadside near his village. Two of his seven children - Ian, 17, and Frank, 19 - along with his mother-in-law, Virginia Bautista, were killed when a landslide buried their modest wooden home.

"There was a loud boom, and within seconds everything was gone," said Mr. Pagulayan, who lives in Baggao, a village in Cagayan Province. "They survived the flash flood, but were buried by the landslide."

...the storms are getting more ferocious and more frequent, the tragic consequence of a changing climate that is making disasters more intense....

(Jason Gutierrez, ^œ[Within seconds everything was gone...](#), *New York Times*, November 18, 2020)

⁷⁵⁵ Keith Spencer, focusing on the 2nd decade of this century, provides links to some of the optimistic reports of such 'research'. As he says,

...[F]or at least a decade, the media landscape has been littered with casuist puff-pieces with headlines like:

➤ "This Machine Just Started Sucking CO₂ Out Of The Air To Save Us From Climate Change" (^œ[Fast Company](#), May 2017)

- "Start-Ups Hoping to Fight Climate Change Struggle as Other Tech Firms Cash In" (^œ[New York Times](#), May 2019)
- "Sucking carbon from air, Swiss firm wins new funds for climate fix" (^œ[Reuters](#), August 2018)
- "These companies are leading the fight against climate change" (^œ[CNN Business](#), October 2018)
- "Why and how business must tackle climate change now" (^œ[Forbes](#), October 2018)

The unsaid message behind these stories? Climate change is the kind of monetizable "problem" that business can "solve" - as if it were akin to smoothing over a supply chain hiccup or a PR crisis. But it isn't.

(Keith A. Spencer, ^œ[Technology won't save us from climate change](#), *Salon*, August 31, 2019)

Duncan McLaren and Nils Markusson have expanded on this. As they summarize:

The nature and framing of climate targets in international politics has changed substantially since their early expressions in the 1980s. Here, we describe their evolution in five phases - from 'climate stabilization' to specific 'temperature outcomes' - co-evolving with wider climate politics and policy, modelling methods and scenarios, and technological promises (from nuclear power to carbon removal).

We argue that this co-evolution has enabled policy prevarication, leaving mitigation poorly delivered, yet the technological promises often remain buried in the models used to inform policy. We conclude with a call to recognise and break this pattern to unleash more effective and just climate policy.

(Duncan McLaren and Nils Markusson, ^œ[The co-evolution of technological promises, modelling, policies and climate change targets](#), *Nature Climate Change*, 20 April 2020)

In a further extrapolation on the ^œ[EurekAlert](#) website they 'map the history of climate targets in five phases: "stabilization", followed by a focus on "percentage emissions reductions", shifting to "atmospheric concentrations" (expressed in parts per million), "cumulative budgets" (in tonnes of carbon dioxide), and currently "outcome temperatures"

- In the first phase (around Rio, 1992) technological promises included improved ^œ[energy efficiency](#), large-scale enhancement of carbon sinks, and ^œ[nuclear power](#)
- In the second phase around the Kyoto summit (1997) policy promises focused on cutting emissions with efficiency, fuel switching and carbon capture and storage (CCS).
- In the third phase (around Copenhagen, 2009), CCS became linked to bioenergy, while policy focused on atmospheric concentrations.
- Phase four saw the development of sophisticated global ^œ[carbon budgeting](#) models and the emergence of a range of putative negative emissions technologies.
- Policy in phase five focused increasingly on temperature outcomes, formalised with the Paris accord of 2015.

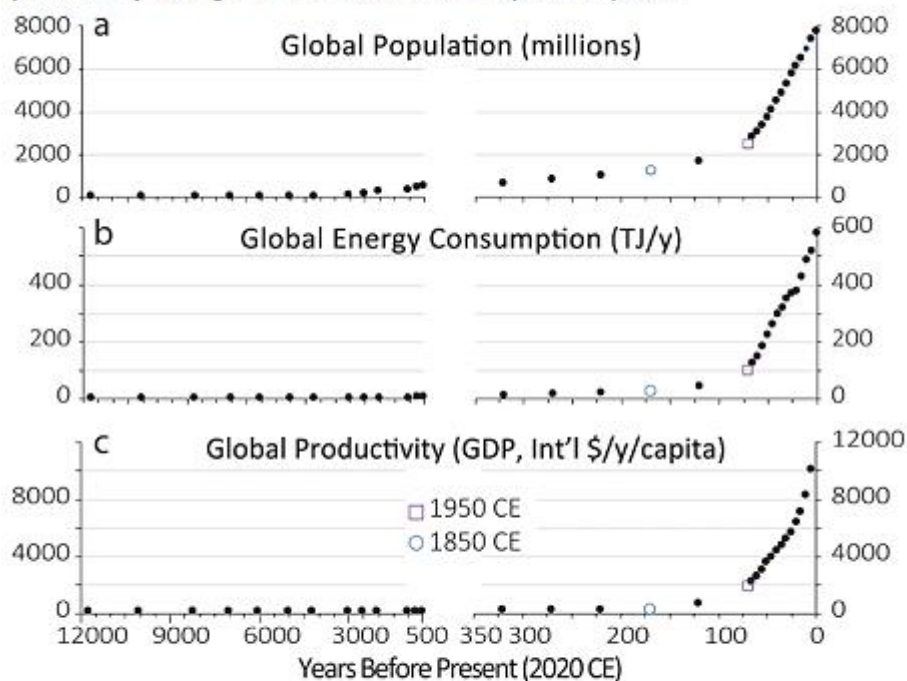

756 There is increasing concern that 'self-reinforcing feedbacks could push the Earth System toward a planetary threshold that, if crossed, could prevent stabilization of the climate at intermediate temperature rises and cause continued warming on a "Hothouse Earth" pathway'.

The rapid trajectory of the climate system over the past half-century along with technological lock-in and both political and socioeconomic inertia ensure near-term conditions beyond those which have existed at any time in the last five million years.

Jaia Syvitski *et al* have succinctly summarized the ^{ae}*great acceleration* in energy use, economic productivity and *population* since 1950. As they explain:

Growth in fundamental drivers - energy use, economic productivity and population - can provide quantitative indications of the proposed boundary between the Holocene Epoch and the Anthropocene. Human energy expenditure in the Anthropocene, ~22 zetajoules (ZJ), exceeds that across the prior 11,700 years of the Holocene (~14.6 ZJ), largely through combustion of fossil fuels. The global warming effect during the Anthropocene is more than an order of magnitude greater still. Global human population, their productivity and energy consumption, and most changes impacting the global environment, are highly correlated. This extraordinary outburst of consumption and productivity demonstrates how the Earth System has departed from its Holocene state since ~1950 CE, forcing abrupt physical, chemical and biological changes to the Earth's stratigraphic record that can be used to justify the proposal for naming a new epoch - the Anthropocene.

Fig. 1: Correlation of global human population, energy consumption and productivity during the Holocene and Anthropocene epochs.

a Global human population (millions), **b** global energy consumption (TJ/y), and **c** global productivity (\$/y/capita), across the Holocene and proposed Anthropocene epochs (in this paper starting in 1950 CE). All three parameters are highly correlated (Spearman's rank coefficient = 1.00). Larger circle = 1850 CE; large square = 1950 CE. Data references are listed in [Supplementary Online Material](#).

(Jaia Syvitski *et al*, ^{ae}*Extraordinary human energy consumption and resultant geological impacts beginning around 1950 CE initiated the proposed Anthropocene Epoch*, *Communications Earth & Environment* Vol. 1, No. 32, 16 October 2020)

Beth Gardner, in an article subtitled

Polluters have long exaggerated the cost of new regulations and downplayed their benefits. Now, the Trump administration is turning that approach into policy as it seeks to slash regulations governing power plant emissions and weaken other environmental laws

has described the political inertia in the United States of America,

"There's a whole industry of consultants and lawyers whose job it is to make prospective new pollution control requirements as horrible-looking as possible," said David Doniger, a Natural Resources Defense Council attorney who has been working on air quality since the 1970s. Under President Trump, he said, "now they have their hands on the steering wheel" at the EPA....

Other administrations have used cost-benefit estimates to their advantage too, Kotchen said, adding that some see Obama-era calculations as having been designed to justify regulations the administration sought. "This goes on all the time," he said. "But I'm very confident in saying the extent, and the 180-degree shift, of the Trump administration, is at a level we've never seen before." What's more, he added, the changes are being made without review or open discussion, in part because the EPA has eliminated many of the scientific panels that advised previous administrations on such issues.

(Beth Gardiner, [Fuzzy Math: The Strategy Behind the Trump EPA's Deregulation Push](#), *YaleEnvironment360*, June 6, 2019)

Similar conditions [have emerged in Australia](#) since the 2019 Federal elections.

Will Steffen *et al*, in 2018 (global CO₂ concentration, in May 2018, had reached 411.24 ppm), provided a somber (but, as scientifically constrained studies inevitably are, cautious and conservative) assessment of the trajectory which is being set by Western capitalism into the 21st century:

The Anthropocene is a proposed new geological epoch based on the observation that human impacts on essential planetary processes have become so profound that they have driven the Earth out of the Holocene epoch in which agriculture, sedentary communities, and eventually, socially and technologically complex human societies developed.

The formalization of the Anthropocene as a new geological epoch is being considered by the stratigraphic community, but regardless of the outcome of that process, it is becoming apparent that Anthropocene conditions transgress Holocene conditions in several respects.

The knowledge that human activity now rivals geological forces in influencing the trajectory of the Earth System has important implications for both Earth System science and societal decision making.

While recognizing that different societies around the world have contributed differently and unequally to pressures on the Earth System and will have varied capabilities to alter future trajectories, the sum total of human impacts on the system needs to be taken into account for analyzing future trajectories of the Earth System....

The Anthropocene represents the beginning of a very rapid human-driven trajectory of the Earth System away from the glacial-interglacial limit cycle toward new, hotter climatic conditions and a profoundly different biosphere(SI Appendix). The current position, at over 1 °C above a preindustrial baseline, is nearing the upper envelope of interglacial conditions over the past 1.2 million years (SI Appendix, Table S1).

More importantly, the rapid trajectory of the climate system over the past half-century along with technological lock in and socioeconomic inertia in human systems commit the climate system to conditions beyond the envelope of past interglacial conditions. We, therefore, suggest that the Earth System may already have passed one "fork in the road" of potential pathways, a bifurcation (near A in Fig. 1) taking the Earth System out of the next glaciation cycle....

...[T]he risk [is] that a 2 °C warming could activate important tipping elements, raising the temperature further to activate other tipping elements in a domino-like cascade that could take the Earth System to even higher temperatures (Tipping Cascades). Such cascades comprise, in essence, the dynamical process that leads to thresholds in complex systems....

What Is at Stake?

Hothouse Earth is likely to be uncontrollable and dangerous to many, particularly if we transition into it in only a century or two, and it poses severe risks for health, economies, political stability (especially for the most climate vulnerable), and ultimately, the habitability of the planet for humans.

Insights into the risks posed by the rapid climatic changes emerging in the Anthropocene can be obtained not only from contemporary observations but also, from interactions in the past between human societies and regional and seasonal hydroclimate variability. This variability was often much more pronounced than global, longer-term Holocene variability (SI Appendix).

Agricultural production and water supplies are especially vulnerable to changes in the hydroclimate, leading to hot/dry or cool/wet extremes. Societal declines, collapses, migrations/resettlements, reorganizations, and cultural changes were often associated with severe regional droughts and with the global megadrought at 4.2-3.9 thousand years before present, all occurring within the relative stability of the narrow global Holocene temperature range of approximately ± 1 °C.

(Will Steffen *et al*, ^{oe}[Trajectories of the Earth System in the Anthropocene](#), *PNAS*, August 14, 2018 115 (33) 8252-8259)

⁷⁵⁷ Over the past half century the debate, for those who have taken 'climate change' seriously, has often centered on how to present information in a way that would encourage positive engagement to tackle the problems. As *Grist* staff put it:

The question is whether fear is the right emotion to play on to get people to sit up, listen, and take action. According to *Grist*'s own Eric Holthaus, who's been writing about climate change for more than a decade, it's not. To him, it's best to accept the scientific consensus and inspire our fellow humans to roll up their sleeves and ensure we do

whatever it takes to decarbonize the global economy rapidly.
(Grist staff, ^{ae}To fear or not to fear? *Grist*, Mar 2, 2019)

So, let's be clear about this. I am not trying, in this section, to change anyone's mind on the issues addressed.

These are the issues - [I really don't care what your reaction to them might be.](#)

Back in the 1950s, when it first became obvious (to me) that the capitalist world was setting an unsustainable course into the future, it was also clear (as others, more articulate and focused than I recognized and explained) that something could have been done about the looming problems.

But, for 'serious' 'leaders' and spokespeople for the 'mainstream', those who pointed this out were in the same camp as UFO hunters and other delusional souls - best ignored or humored as quaint oddities, the *Don Quixotes* of capitalism.

Most of those commentators and 'leaders' have passed into oblivion, but there have been many more who have readily filled their shoes.

Questioning Capitalism has always been an unacceptable pastime of dillitantes, subversives and communists. And, if we are brutally honest about it all, such presumptions, dressed in varied garb, are predominant amongst the 'leaders' of capitalism and its 'main stream media' 60+ years on, in the 21st century.

In recent times I have become aware of people who seem to believe that, while it is true that 'climate change' is happening, there must be 'responsible people' behind the scenes (whether in the 'deep state' or in the military/ surveillance/ intelligence complexes) who are actively planning for such a future.

It is all-very-well to grasp at straws but drowning people who do so drown anyway. Those complexes are not run by 'responsible' people, they are run by the servants of deregulated capitalism. There is no real possibility of the devil saving us from hell!!

I would be truly delighted to be proved wrong, but, I fear that the trajectory is now set, the die is cast, and, whether we like it or not, the near future for humanity will be catastrophic.

Please prove me wrong!

⁷⁵⁸ Tun Jan Young *et al*:

Subglacial hydrologic systems regulate ice sheet flow, causing acceleration or deceleration, depending on hydraulic efficiency and the rate at which surface meltwater is delivered to the bed. Because these systems are rarely observed, ice sheet basal drainage represents a poorly integrated and uncertain component of models used to predict sea level changes.

Here, we report radar-derived basal melt rates and unexpectedly warm subglacial conditions beneath a large Greenlandic outlet glacier. The basal melt rates averaged 14 mm ·d⁻¹ over 4 months, peaking at 57 mm ·d⁻¹ when basal water temperature reached +0.88 °C in a nearby borehole.

We attribute both observations to the conversion of potential energy of surface water to heat in the basal drainage system, which peaked during a period of rainfall and intense surface melting. Our findings reveal limitations in the theory of channel formation, and we show

that viscous dissipation far surpasses other basal heat sources, even in a distributed, high-pressure system.

As they further explain:

...[T]he observed basal melt rates are several orders of magnitude higher than predictions and previous estimates. Our observations show that the effect of viscous dissipation from surface meltwater input is by far the largest heat source beneath the Greenland Ice Sheet.

(Tun Jan Young *et al*, [Rapid basal melting of the Greenland Ice Sheet from surface meltwater drainage](#), *PNAS*, March 8, 2022 119 (10))

759 Boers *et al*:

It has been suggested that, in response to anthropogenic global warming, the Greenland Ice Sheet may reach a tipping point beyond which its current configuration would become unstable. A crucial nonlinear mechanism for the existence of this tipping point is the positive melt-elevation feedback: Melting reduces ice sheet height, exposing the ice sheet surface to warmer temperatures, which further accelerates melting.

We reveal early-warning signals for a forthcoming critical transition from ice-core-derived height reconstructions and infer that the western Greenland Ice Sheet has been losing stability in response to rising temperatures. We show that the melt-elevation feedback is likely to be responsible for the observed destabilization. Our results suggest substantially enhanced melting in the near future.

(Niklas Boers and Martin Rypdal, [Critical slowing down suggests that the western Greenland Ice Sheet is close to a tipping point](#), *PNAS*, May 25, 2021 118 (21) e2024192118)

760 Slater and Straneo have provided further evidence of the nature of rapid ice loss:

Rapid ice loss from the Greenland ice sheet since 1992 is due in equal parts to increased surface melting and accelerated ice flow. The latter is conventionally attributed to ocean warming, which has enhanced submarine melting of the fronts of Greenland's marine-terminating glaciers. Yet, through the release of ice sheet surface meltwater into the ocean, which excites near-glacier ocean circulation and in turn the transfer of heat from ocean to ice, a warming atmosphere can increase submarine melting even in the absence of ocean warming.

The relative importance of atmospheric and oceanic warming in driving increased submarine melting has, however, not been quantified.

Here, we reconstruct the rate of submarine melting at Greenland's marine-terminating glaciers from 1979 to 2018 and estimate the resulting dynamic mass loss. We show that in south Greenland, variability in submarine melting was indeed governed by the ocean, but, in contrast, the atmosphere dominated in the northwest. At the ice sheet scale, the atmosphere plays a first-order role in controlling submarine melting and the subsequent dynamic mass loss. Our results challenge the attribution of dynamic mass loss to ocean warming alone and show that a warming atmosphere has amplified the impact of the ocean on the Greenland ice sheet.

(D. A. Slater and F. Straneo, [∞][Submarine melting of glaciers in Greenland amplified by atmospheric warming](#), *Nature Geoscience*, 03 October 2022)

⁷⁶¹ Heather McFarland, reporting on research undertaken by a team led by Igor Polyakov, has explained:

The eastern Arctic Ocean's winter ice grew less than half as much as normal during the past decade, due to the growing influence of heat from the ocean's interior, researchers have found.

The finding came from an international study led by the University of Alaska Fairbanks and Finnish Meteorological Institute. The study, published in the *Journal of Climate*, used data collected by ocean moorings in the Eurasian Basin of the Arctic Ocean from 2003-2018.

The moorings measured the heat released from the ocean interior to the upper ocean and sea ice during winter. In 2016-2018, the estimated heat flux was about 10 watts per square meter, which is enough to prevent 80-90 centimeters (almost 3 feet) of sea ice from forming each year. Previous heat flux measurements were about half of that much.

"In the past, when weighing the contribution of atmosphere and ocean to melting sea ice in the Eurasian Basin, the atmosphere led," said Igor Polyakov, an oceanographer at UAF's International Arctic Research Center and FMI. "Now for the first time, ocean leads. That's a big change."

Typically, across much of the Arctic a thick layer of cold fresher water, known as a halocline, isolates the heat associated with the intruding Atlantic water from the sea surface and from sea ice.

This new study shows that an abnormal influx of salty warm water from the Atlantic Ocean is weakening and thinning the halocline, allowing more mixing. According to the new study, warm water of Atlantic origin is now moving much closer to the surface.

"The normal position of the upper boundary of this water in this region was about 150 meters. Now this water is at 80 meters," explained Polyakov.

A natural winter process increases this mixing. As sea water freezes, the salt is expelled from ice into the water. This brine-enriched water is heavier and sinks. In the absence of a strong halocline, the cold salty water mixes much more efficiently with the shallower, warm Atlantic water. This heat is then transferred upward to the bottom of sea ice, limiting the amount of ice that can form during winter.

"These new results show the growing and spreading influence of heat associated with Atlantic water entering the Arctic Ocean," added Tom Rippeth, a collaborator from Bangor University. "They also suggest a new feedback mechanism is contributing to accelerating sea ice loss."

(Heather McFarland, [∞][Arctic ocean moorings shed light on winter sea ice loss](#), *University of Alaska Fairbanks*, August 21, 2020)

⁷⁶² The term 'yr-1' may be translated as 'per year' or 'year after year'.

⁷⁶³ A commenter on a Bill Mitchell blog posting summed it all up:

It is apparent from the above comments that nobody in the comments list believes it is possible to stop climate change now.

Sadly, I have to concur. The real question, for merely intellectual interest reasons now, is why? Why has it proven impossible for humans in a modern globalized civilization to take any effective action against climate change? But first, let us look at the conclusions of ^œ[Climate Reality Check](#), according to some headings in their report:

1. Warming is 1.2 C and accelerating.
2. The IPCC and the climate model it relies upon do not capture all the risks.
3. 1.5 C is not a safe target.
4. 1.5 C of warming is likely around 2030.
5. 2.0 C is very dangerous and, on the current emission path, likely before 2050.
6. There is no carbon budget for 2.0 C with a low risk of overshoot.
(Higher temperatures will result from greenhouse gases already in the atmosphere.)
7. A cascade of tipping points is unfurling.
(Some tipping points have been passed, others are close at hand.)
8. 2.0 C may trigger a "hothouse earth" scenario of self-reinforcing warming.
(We are perilously close to dramatic climate change that could run out of our control.)
9. 3.0 C warming would be catastrophic.
10. The world is on a 2.0 C to 3.6 C warming path by 2100.
11. Sea levels will likely rise by tens of meters.
12. Reducing emissions levels alone will have no significant impact on warming trend over next two decades." - Climate Reality Check.

These are enough headings to go on with. The rest of the headings are mainly about what we need to do to prevent human extinction and eco-collapse. What we need to do is so critical and exacting and what COP26 commits us to doing (ABSOLUTELY NOTHING!) are so far apart that the real chances of us doing anything are effectively ZERO. To repeat, why has it proven impossible for humans in a modern globalized civilization to take any effective action against climate change? The basic reasons are:

- A. Capitalism - Capitalism as a system is committed to endless growth. The debt model of money commits the system to attempted endless growth to repay debt. That is the model and command system of capitalism. Debt model capital operations ARE the command system. (MMT seeks to reclaim money creation as fiat creation by the state: a more sovereign money stance.)
- B. Geo-strategic competition - The biggest economy can maintain the biggest military. No large nation will voluntarily constrain or de-grow its economy to prevent climate change.

C. Jevons' Paradox or a variation thereof - Any new source of energy leads to greater total energy consumption because of A and B above. There is little to no voluntary retirement of dirty energy sources.

D. The nature of humans. - This is not judgemental, simply observational. Humans evolved to sense and viscerally react to proximal dangers, meaning near-term and near-at-hand dangers. Climate change does not fit this danger-sensing model. It is distant, requires instruments (not basic senses) to detect and operates with long lag-times. By the time humans sense the dangers with their bodily senses, it is already far too late to act. Time scales and physical scales (of the events involved) are also beyond most natural imagination which is linked to the human sensory scale. Causal chains are also too long to be easily comprehended, except by trained experts.

Of course, we have to hope against hope. Individuals and families should attempt to consume less overall and less fossil fuels in particular. MMT principles need to be followed in a "re-claim the state" fashion. If we could re-claim the state we could do something. While neoliberal capitalism remains in charge, real action is impossible.

(Ikonoclast, Comment on ["Australian government invokes 'can-do capitalism' to save us from climate change - disaster awaits, Bill Mitchell - Modern Monetary Theory"](#), November 18, 2021)

⁷⁶⁴ Daniel Rothman, in research into 'enigmatic transient changes in the ocean's store of carbon' has elaborated:

The great environmental disruptions of the geologic past remain enigmatic. Each one results in a temporary change in the oceans' store of carbon. Although the causes remain controversial, these changes are typically interpreted as a proportionate response to an external input of carbon. This paper suggests instead that the magnitude of many disruptions is determined not by the strength of external stressors but rather by the carbon cycle's intrinsic dynamics. Theory and observations indicate that characteristic disruptions are excited by carbon fluxes into the oceans that exceed a threshold. Similar excitations follow influxes that are either intense and brief or weak and long-lived, as long as they exceed the threshold. Mass extinction events are associated with influxes well above the threshold.

(Daniel H. Rothman, ["Characteristic disruptions of an excitable carbon cycle"](#), *PNAS*, July 8, 2019)

Carl Reddin *et al* have further elaborated the consequences of rapid climate change for marine extinctions:

Rapid climate change is postulated to cause marine extinctions, especially among climate-sensitive clades, traits and regions...

...[W]e show that experimental responses of modern marine ectotherms to single and combined climate-related stressors (such as seawater warming, hypoxia and acidification) align with Phanerozoic fossil extinction regimes across clades and functional traits [the period of geologic time from about 540 million years ago to the present, including the Paleozoic, Mesozoic, and Cenozoic Eras].

Of climate-related stressors, the synergistic interaction between warming and hypoxia, encumbering aerobic metabolism, has the greatest potency as a proximate driver of extinction. All else being equal, this synergy particularly imperils modern warm-water organisms.

Modern-fossil agreement is strongest at intermediate-high extinction intensities and hyperthermal events but may fail at extreme extinction events, perhaps due to rising prominences of, and interactions among, additional biotic and abiotic stressors. According to results from marine ectotherms, clade-based sensitivity of individuals to climate-related stressors scales up from subannual experiments and decadal range-shift response magnitudes, to extinction selectivity patterns at ancient climate-related stressor events and the Phanerozoic durations of genera. (Reddin, C.J., Nätscher, P.S., Kocsis, Á.T. *et al.*, ^œ[Marine clade sensitivities to climate change conform across timescales](#), *Nature Climate Change*, 10 February 2020, <https://doi.org/10.1038/s41558-020-0690-7>,)

⁷⁶⁵ Kunio Kaiho *et al* have explained this in detail in a 2020 research paper:

Eruption of the Siberian Traps large igneous province (LIP) is thought to have triggered the Permian-Triassic biological crisis, the largest of the Phanerozoic mass extinctions. Mercury concentration enrichments have been widely used as a proxy for volcanic inputs to sediments, especially for ancient LIP eruptions. However, detailed correlations of magmatic pulses with extinction events in the terrestrial and marine realms are not fully resolved.

Here we use paired coronene (a six-ring polycyclic aromatic hydrocarbon, a high-temperature combustion proxy) and mercury spikes as a refined proxy for LIP emplacement. In records from stratigraphic sections in south China and Italy, we identify two sets of paired coronene-mercury spikes accompanied by land plant biomarker spikes, followed by a rapid decrease coinciding with terrestrial ecological disturbance and extinction of marine metazoans. Each short-term episode is likely caused by high-temperature combustion of sedimentary hydrocarbons during initial sill emplacement of the Siberian Traps LIP. These data indicate that discrete volcanic eruptions could have caused the terrestrial ecosystem crisis followed by the marine ecosystem crisis in ~60 k.y., and that the terrestrial ecosystem was disrupted by smaller global environmental changes than the marine ecosystem. (Kunio Kaiho *et al.*, ^œ[Pulsed volcanic combustion events coincident with the end-Permian terrestrial disturbance and the following global crisis](#), *Geology*, November 04, 2020)

⁷⁶⁶ Somini Sengupta, in a brief comment on a change in Australian conservative political leadership, summed up a common problem in early 21st century Western democracies:

Climate change policy toppled the government in Australia on Friday.

How much does that really matter?

It is certain to keep Australia from meeting its emissions targets under the Paris climate agreement. It's also a glimpse into what a potent political issue climate change and energy policy can be in a

handful of countries with powerful fossil fuel lobbies, namely Australia, Canada and the United States.

In Australia, the world's largest exporter of coal, climate and energy policy have infused politics for a decade, helping to bring down both liberal and conservative lawmakers.

This week, the failure to pass legislation that would have reined in greenhouse gas emissions precipitated Malcolm Turnbull's ouster as prime minister. He was elbowed out by Scott Morrison, an ardent champion of the Australian coal industry who is known for having brought a lump of the stuff to Parliament....

The Australian parallels with the United States are striking. The Trump administration has promised to revive the coal industry, rolled back fuel emissions standards and announced the country's exit from the Paris pact altogether....

(Somini Sengupta, [Climate Change Policy Toppled Australia's Leader. Here's What It Means for Others](#), *New York Times*, 24 August, 2018)

⁷⁶⁷ For a range of discussions and information on these issues see [World Bank Blog Topics](#). As might be expected, the 2020 Covid-19 pandemic has strongly impacted international resource demand.

Also, *Metal Tech News* [Editorials](#) for discussion of many of the issues.

USGS National Minerals Information Center: [Commodity Statistics and Information](#)

⁷⁶⁸ The U.S. Secretary of the Interior in 2018 might not have been aware of the fact, but Christmas had not 'come a few weeks early this year'. Intelligent and aware people around the world have known of the existence of such resources for a long time (there are far more of them around the world than those the U.S. Geological Survey report has identified). But, being intelligent and aware people, they have also realized that developing such resources would quickly result in a world where climatic conditions spiraled out of control.

As Jim Reilly explained, the Permian and similar mature basins have not been considered viable for producing large new recoverable resources. That Reilly is now prepared to contemplate their development, 'thanks to advances in technology', says a lot more about US political opportunism than about mature responsibility for safeguarding future generations from the climatic disaster waiting in the wings.

Kenny Stancil, in an article entitled "'This Must Not Happen': If Unhalted, Permian Basin Fracking Will Unleash 40 Billion Tons of CO₂ by 2050", has given more information on this:

"The Permian Basin has, for the past decade, been the site of an oil and gas boom of unprecedented scale," Lorne Stockman, research co-director at Oil Change International, said in a statement.

"Producers have free rein to pollute and methane is routinely released in vast quantities. Oil exports fuel Permian production growth and today they constitute around 30% of US oil production."

"While climate science tells us that we must consume 40% less oil in 2030, Permian producers plan to grow production more than 50%" from 2021 to 2030, said Stockman. "This must not happen."

"If left unchecked," the report notes, "the Permian could continue to produce huge amounts of oil, gas, and gas liquids for decades to

come. With global markets flush with Permian oil and gas, it can only be harder to steer the world's economy toward clean energy."

According to the report, the nearly 40 billion tons of carbon dioxide that would be emitted from burning the fossil fuels that corporate executives expect to extract from the Permian Basin by 2050 represent about 10% of the world's remaining "carbon budget," or the amount of pollution compatible with limiting global warming to 1.5°C above preindustrial levels by the century's end.

Moreover, "scientists studying methane emissions in the Permian Basin estimate that as much as 3.7% of gas production is being vented and leaked into the atmosphere," the report notes. "At this rate, methane emissions in the Permian Basin would emit over 9.5 billion tons of CO₂ equivalent (CO₂e) by 2050," which the authors compare to "taking 50 standard mile-long trains of coal out into the desert, dumping the coal, and just burning it in a giant pile" every day from 2021 until 2050.

(Kenny Stancil, ^œ['This Must Not Happen': If Unhalted, Permian Basin Fracking Will Unleash 40 Billion Tons of CO₂ by 2050](#), *Common Dreams*, November 9, 2021)

⁷⁶⁹ An IMF Working Paper has spelt out the true commitment of 191 nations to reining in fossil fuels use and their impact on climatic conditions and air pollution. So much for the 2015 ^œ[Paris Agreement](#) goal of limiting mean projected warming to 2°C. As the authors summarize:

This paper updates estimates of fossil fuel subsidies, defined as fuel consumption times the gap between existing and efficient prices (i.e., prices warranted by supply costs, environmental costs, and revenue considerations), for 191 countries.

Globally, subsidies remained large at \$4.7 trillion (6.3 percent of global GDP) in 2015 and are projected at \$5.2 trillion (6.5 percent of GDP) in 2017. The largest subsidizers in 2015 were China (\$1.4 trillion), United States (\$649 billion), Russia (\$551 billion), European Union (\$289 billion), and India (\$209 billion).

About three quarters of global subsidies are due to domestic factors - energy pricing reform thus remains largely in countries' own national interest - while coal and petroleum together account for 85 percent of global subsidies.

Efficient fossil fuel pricing in 2015 would have lowered global carbon emissions by 28 percent and fossil fuel air pollution deaths by 46 percent, and increased government revenue by 3.8 percent of GDP. (David Coady, Ian Parry, Nghia-Piotr Le, and Baoping Shang, ^œ[Global Fossil Fuel Subsidies Remain Large: An Update Based on Country-Level Estimates](#), *IMF Working Paper* No. 19/89, 2 May, 2019)

⁷⁷⁰ Christian Berndt *et al*:

The Palaeocene-Eocene Thermal Maximum (PETM) was a global warming event of 5-6 °C around 56 million years ago caused by input of carbon into the ocean and atmosphere. Hydrothermal venting of greenhouse gases produced in contact aureoles surrounding magmatic intrusions in the North Atlantic Igneous Province have been proposed to play a key role in the PETM carbon-cycle perturbation, but the precise timing, magnitude and climatic impact of such venting remains uncertain.

Here we present seismic data and the results of a five-borehole transect sampling the crater of a hydrothermal vent complex in the Northeast Atlantic.

Stable carbon isotope stratigraphy and dinoflagellate cyst biostratigraphy reveal a negative carbon isotope excursion coincident with the appearance of the index taxon *Apectodinium augustum* in the vent crater, firmly tying the infill to the PETM.

The shape of the crater and stratified sediments suggests large-scale explosive gas release during the initial phase of vent formation followed by rapid, but largely undisturbed, diatomite-rich infill. Moreover, we show that these vents erupted in very shallow water across the North Atlantic Igneous Province, such that volatile emissions would have entered the atmosphere almost directly without oxidation to CO₂ and at the onset of the PETM.

(Christian Berndt *et al*, [[∞]Shallow-water hydrothermal venting linked to the Palaeocene-Eocene Thermal Maximum](#), *Nature Geoscience*, 03 August 2023)

⁷⁷¹ A [[∞]Wikipedia entry](#) spells it out:

The beginning of the Eocene is marked by the Paleocene-Eocene Thermal Maximum, a short period of intense warming and ocean acidification brought about by the release of carbon en masse into the atmosphere and ocean systems, which led to a mass extinction of 30-50% of benthic foraminifera-planktonic species which are used as bioindicators of the health of a marine ecosystem - one of the largest in the Cenozoic. This event happened around 55.8 mya, and was one of the most significant periods of global change during the Cenozoic.

⁷⁷² A proposed mining 'development' in the Australian state of Queensland ([[∞]approved](#) by the Queensland State Government on June 13, 2019 and, of course, endorsed by the newly elected Australian Federal Government) provides an excellent illustration of the process by which 'developed' Western nations minimize the impact of 'meeting their greenhouse gas emissions targets' while continuing to develop their coal reserves. The Galilee Basin (targeted for 'development' over the next 20 years) is a 247,000 square kilometer thermal coal basin in the central region of the Australian state of Queensland. It is one of the largest untapped coal reserves on the planet:

Government backs Galilee Basin development

The Queensland government is committed to facilitating the development of the Galilee Basin's coal resources and related infrastructure. In late 2013 the Premier of Queensland Campbell Newman announced the Galilee Basin Development Strategy plan. One of the key initiatives within the plan is the potential to class the area as the Galilee Basin State Development Area (GBSDA).

A State Development Area was officially recognised in June 2014. The SDA is known as a clearly defined area of land for industry, infrastructure corridors and major public works which are established to promote economic development in the state of Queensland. Covering some 106,000 hectares, the SDA directly affects 74 landholders, which is considerably less than the 1.8 million hectares and 1400 landholders affected by the initial plan.

The primary function of the GBSDA will be to open up the way for development of a corridor to access the southern area of the Galilee Basin and a corridor to access the central area of the Galilee Basin. The sole purpose of the corridors is to facilitate the transportation of coal to the Port of Abbot Point near Bowen.

The development of the Galilee Basin coal reserves is the primary reason for this government initiative. Despite the environmental concerns around the mine(s) development, it is clear the economic benefits to the state of Queensland are simply too good to pass up. This being the case, the government is determined to pave the way for mining companies ^œ[like Adani](#), GVK Hancock and China First Coal Project (Clive Palmer) to build the mega-mines that are currently awaiting federal approval.

(iMINCO, ^œ[Queensland mining companies target Galilee Basin coal mines](#), Accessed 31 May 2019)

A major player in the development is Adani Mining. It is:

A multinational company based in Ahmedabad, India, Adani Group builds and operates mines, ports and power plants. The company has operations in coal, gas and renewable energy across India, Indonesia and Australia.

Adani Mining chief executive Jeyakumar Janakaraj has faced scrutiny for failing to disclose that a company he ran in Africa was guilty of serious environmental breaches, despite being asked to do so in a letter from the Federal Environment Department.

But Queensland Mines Minister Anthony Lynham has expressed confidence Adani will operate its Australian mine safely and that the Great Barrier Reef will be protected, with "200 stringent conditions placed on this project"....

Once complete, it will be Australia's largest coal mine, with six open-cut pits and up to five underground mines.

The Queensland Government estimated the life span of the mine to be between 25 and 60 years....

The mine will supply Indian power plants with enough coal to generate electricity for up to 100 million people.

Coal from the mine will be processed through the Abbot Point Coal Terminal, off the coast of Bowen in north Queensland.

(Allyson Horn, ^œ[Here's what we know about Adani and the Carmichael mine project](#), ABC News, 6 April 2017)

And, as David Crowe reported in the wake of the 2019 election of a new Liberal Government in Australia:

A new coal-fired power station is back on the federal government's agenda in the wake of its election victory, with ministers supporting a major project in Queensland despite calls from environmentalists to accelerate the shift to renewable energy.

Resources Minister Matt Canavan is backing the new power station proposal and pointing to the Coalition's strong vote in his home state of Queensland to warn off critics from southern states who want to halt the project.

Senator Canavan is also heightening pressure on the Victorian and NSW governments to open up more gas fields in order to prevent further increases in energy costs for households and manufacturers.

The message comes as Opposition Leader Anthony Albanese embarks on a "listening tour" of Queensland and prepares to reconsider party policy on climate change....

Senator Canavan said a pilot scheme to build a new power station would go ahead and could be expanded into a major project within a few years.

"The government will progress investments in coal-fired power," he said.

"That was what we took to the election, it was a key part of our policy package in North Queensland - that we would look at building a coal-fired power station in North Queensland....

Senator Canavan said former Greens leader Bob Brown had helped the Coalition in Queensland by leading a protest movement from the southern states to try to stop the Adani mine, galvanising Queenslanders who did not like the interference.

"Undoubtedly Bob Brown was a net plus for our election," he said, adding that the protesters encouraged an attitude that was ungrateful, ignorant and patronising.

It's ungrateful because the coal industry delivers billions of dollars in royalties to the state governments and billions of dollars in taxes to the federal government.

"It's ignorant because a lot of people make comments about the coal market and they have no bloody idea about the coal market". (David Crowe, ^œ[Resources Minister backs new coal plant as Labor reconsiders climate policy](#), *The Sydney Morning Herald*, 29 May, 2019)

⁷⁷³ Han Chen, in a Natural Resources Defense Council (NRDC) report entitled ^œ[Carbon Trap: How International Coal Finance Undermines the Paris Agreement](#), has explained:

A few nations within the Group of 20 (G20) account for the vast majority of international coal finance. The export credits used to finance coal mainly benefit businesses in the home countries rather than in the recipient countries. The emerging economies are then left to grapple with the financial, public health, and environmental impacts.

⁷⁷⁴ Research in April 2017 which studied the changing temperatures at the bottom of the Southern Ocean, has provided further information on the nature of deep-ocean warming:

In recent decades, winds blowing over the Southern Ocean have been getting stronger due to the hole in the ozone layer above Antarctica and increasing greenhouse gases. The data collected by Boaty, along with other ocean measurements collected from research vessel RRS James Clark Ross, have revealed a mechanism that enables these winds to increase turbulence deep in the Southern Ocean, causing warm water at mid depths to mix with cold, dense water in the abyss.

The resulting warming of the water on the sea bed is a significant contributor to rising sea levels. However, the mechanism uncovered by Boaty is not built into current models for predicting the impact of increasing global temperatures on our oceans.

(EurekAlert News Release, ^œ[Boaty McBoatface mission gives new](#)

[insight into warming ocean abyss](#): The first mission involving the autonomous submarine vehicle Autosub Long Range (better known as 'Boaty McBoatface') has for the first time shed light on a key process linking increasing Antarctic winds to rising sea temperatures, *University of Southampton*, June 17, 2019)

As the researchers summarize:

Significance

The overturning circulation of the global ocean is regulated by deep-ocean mixing, which transforms cold waters sinking at high latitudes into warmer, shallower waters. The effectiveness of mixing in driving this transformation is jointly set by the intensity of turbulence near topography and the rate at which well-mixed boundary waters are exchanged with the stratified ocean interior. We use innovative observations of a branch of the overturning circulation in the Southern Ocean to identify a previously undocumented mixing mechanism, by which deep-ocean waters are rapidly laundered through intensified near-boundary turbulence and boundary-interior exchange. As the conditions triggering this mechanism are common to other branches of the overturning circulation, our findings highlight a requirement for its representation in models of the overturning.

(Alberto C. Naveira Garabato, Eleanor E. Frajka-Williams *et al*,
[Rapid mixing and exchange of deep-ocean waters in an abyssal boundary current](#), *PNAS*, June 18, 2019)

⁷⁷⁵ (16/03/20) While the quantities of carbon dioxide being released into the atmosphere are currently far more significant than other potent greenhouse-gasses, both *anthropogenic* methane and nitrous oxide emissions make growing and often under-estimated contributions to the problem, as explained below.

Methane clathrates (non-anthropogenic methane), as Dyonisius *et al*, in a 2020 study, concluded, will not, at a projected 4°C warming, destabilize and trigger a big release of methane from permafrost or the ocean. Their evidence comes from past levels of carbon-14 methane at intervals from 15,000 to 8000 years ago, an era when Earth switched from an ice age to a climate up to 0.5°C warmer than today. As they explain:

...The Oldest Dryas-Bølling (OD-B) transition (14.6 to 14.45 ka BP) represents the first large and abrupt CH₄ rise during the last deglacial sequence of events (Fig. 1B) at the time when sea level was ~100 m lower than today. This abrupt CH₄ rise was synchronous with the acceleration of Northern Hemisphere (NH) warming (Fig. 1E), ice sheet retreat, and rapid sea-level rise. This climate transition may have also coincided with the first instance of marine hydrate destabilization during the last deglaciation caused by hydrostatic pressure relief from NH ice sheet retreat and incursion of warm intermediate ocean water into shallow, hydrate-bearing Arctic sediments. During the destabilization of marine hydrate reservoirs, abrupt events such as submarine landslides or collapse of marine hydrate pingos could result in large and rapid CH₄ expulsions that may have contributed to the rapid atmospheric CH₄ rise if they were capable of bypassing oxidation in the water column.

In contrast to old carbon reservoirs, contemporaneous CH₄ sources such as wetlands and biomass burning emit CH₄ with a ¹⁴C signature that reflects the contemporaneous ¹⁴CO₂ at the time. Our ¹⁴CH₄ measurements for the OD-B transition are all within 1σ uncertainty of the contemporaneous atmospheric ¹⁴CO₂ (Fig. 1A), indicating a dominant role of contemporaneous CH₄ sources.

(M. N. Dyonisius *et al*, [Old carbon reservoirs were not important in the deglacial methane budget](#), *Science*, 21 Feb 2020: Vol. 367, Issue 6480, pp. 907-910)

This conclusion is consistent with past studies examining the role of such releases over millions of years. However, the problem is not that at a projected 4°C warming such destabilization might occur - this is, as [Rebecca Lindsey and Michon Scott conclude](#), most unlikely - but that, should warming continue beyond that threshold, higher temperatures might trigger such releases. We are, indeed, as a species, heading into largely uncharted waters and the possible consequences, as we do so, are as uncharted as the waters.

As Warren Cornwall concluded:

...The new findings are meeting some resistance. Giuseppe Etiope, a geochemist whose calculations are challenged in the new paper, questions how the geologic emissions could be so low. One recent study, for instance, suggests that 3 million tons of methane rise every year from one part of the Arctic Ocean alone. "This [is] a scientific conundrum," says Etiope, of Italy's National Institute of Geophysics and Volcanology. "If they are right, many other people are wrong."

Katey Walter Anthony, an aquatic ecologist at the University of Alaska, Fairbanks, who studies methane from lakes created by melting permafrost, has questions about the Greenland study, but she also hasn't found flaws in the U of R team's method. "What I think needs to happen is we all need to get together and be very vulnerable and say, 'Where could I be going wrong?'" she says.

The study of ancient methane emissions, on the other hand, is consistent with her research, which shows that permafrost lakes didn't release vast quantities of methane as the planet left its last ice age. The danger now, she says, is that temperatures by the end of this century could rise several degrees higher than during that previous warming event. If that unleashes still more carbon trapped in permafrost, some of it might be converted into greenhouse gases including carbon dioxide or methane. "The carbon has to go somewhere," she says.

(Warren Cornwall, [Humans are a bigger source of climate-altering methane, new studies suggest](#), *Science*, Feb. 20, 2020)

While researchers will continue to explore (and dispute) the possibilities of methane clathrate destabilization, the importance of anthropogenic sources of methane is becoming increasingly clear.

Benjamin Hmiel *et al*, in the same 2020 study of Atmospheric methane (CH₄), have concluded that,

...Geological emissions were less than 15.4 teragrams CH₄ per year at the end of the Pleistocene, about 11,600 years ago, but that period is an imperfect analogue for present-day emissions owing to the large terrestrial ice sheet cover, lower sea level and extensive

permafrost. Here we use preindustrial-era ice core $^{14}\text{CH}_4$ measurements to show that natural geological CH_4 emissions to the atmosphere were about 1.6 teragrams CH_4 per year, with a maximum of 5.4 teragrams CH_4 per year (95 per cent confidence limit) - an order of magnitude lower than the currently used estimates.

This result indicates that anthropogenic fossil CH_4 emissions are underestimated by about 38 to 58 teragrams CH_4 per year, or about 25 to 40 per cent of recent estimates. Our record highlights the human impact on the atmosphere and climate, provides a firm target for inventories of the global CH_4 budget, and will help to inform strategies for targeted emission reductions.

(Benjamin Hmiel *et al*, [\$^{14}\text{CH}_4\$ indicates greater anthropogenic fossil \$\text{CH}_4\$ emissions](#), *Nature*, 19 February 2020)

Hiroko Tabuchi has summed up:

The findings, published in the journal *Nature*, add urgency to efforts to rein in methane emissions from the fossil fuel industry, which routinely leaks or intentionally releases the gas into air.

"We've identified a gigantic discrepancy that shows the industry needs to, at the very least, improve their monitoring," said Benjamin Hmiel, a researcher at the University of Rochester and the study's lead author. "If these emissions are truly coming from oil, gas extraction, production use, the industry isn't even reporting or seeing that right now."

Atmospheric concentrations of methane have more than doubled from preindustrial times. A New York Times [investigation into "super emitter"](#) sites last year revealed vast quantities of methane being released from oil wells and other energy facilities instead of being captured.

(Hiroko Tabuchi, [Oil and Gas May Be a Far Bigger Climate Threat Than We Knew](#), *New York Times*, Feb. 19, 2020)

The growing quantities of anthropogenic methane being released into the atmosphere should concern all who are not myopically and sociopathically fixated on the accumulation of 'profits' at the expense of all else. However, methane is not the only potent greenhouse gas being emitted in quantities which have been both under-estimated by climate scientists and is flying under the radar. Anthropogenic emissions of nitrous oxide (N_2O) have also been growing, and present an often under-rated threat.

Peter Grace and Louise Barton spell it out:

...Methane and nitrous oxide are also contributors to Australia's greenhouse gas account. And both have a much greater impact on the atmosphere in terms of global warming than carbon dioxide.

Carbon dioxide is the currency of climate change and, in those terms, one tonne of methane emitted to the atmosphere (for example from livestock) is equivalent to 34 tonnes of carbon dioxide emissions. One tonne of nitrous oxide is equivalent to 298 tonnes of carbon dioxide.

Nitrous oxide has an atmospheric lifetime of 110 years. The process that removes nitrous oxide from the atmosphere also depletes ozone. So nitrous oxide is not only a greenhouse gas, but also an

ozone destroyer.

(Peter Grace and Louise Barton, ^œ[Meet N₂O, the greenhouse gas 300 times worse than CO₂](#), *The Conversation*, December 9, 2014)

Kritee Kritee *et al* (2018) have examined one of the major (and expanding) sources of atmospheric N₂O:

Methane from global rice cultivation currently accounts for one-half of all crop-related greenhouse gas emissions. Several international organizations are advocating reductions in methane emissions from rice by promoting intermittent flooding without accounting for the possibility of large emissions of nitrous oxide (N₂O), a long-lived greenhouse gas. Our experimental results suggest that the Indian subcontinent's N₂O emissions from intermittently flooded rice fields could be 30-45 times higher than reported under continuous flooding....

Our empirical data show high N₂O fluxes at medium- and intense-intermittently flooded rice farms, and extrapolation of these observations suggests that many, but not all, rice-growing regions in the Indian subcontinent (and potentially globally) could potentially be experiencing significant rice-N₂O and concomitant climate impacts (Figs. 1 and 2 and Dataset S1, Tables 41, 42, and 44). Increasing pressure on limited water resources, AWD water management, and a changing climate (i.e., higher temperatures and evapo-transpiration rates) could make additional regions susceptible to high N₂O fluxes. Thus, if we are to understand the climate implications and realistic mitigation potential of climate-smart rice production practices, it is important that rice-N₂O be intensively measured (Dataset S1, Table 43) along with the mapping of actual flooding regimes. We expect rice-N₂O to be significantly higher than present estimates.

(Kritee Kritee *et al*, ^œ[High nitrous oxide fluxes from rice indicate the need to manage water for both long- and short-term climate impacts](#), *PNAS* September 25, 2018 115 (39) 9720-9725)

⁷⁷⁶ Elisabeth Ramm *et al* explain:

In contrast to the intensive levels of research having been carried out to address the permafrost C climate feedback ..., research on permafrost soil N[itrogen] biogeochemistry and the associated release of the potent greenhouse gas (GHG) nitrous oxide (N₂O) under a changing climate is strongly lagging behind.

Thus far, little is known about the fate of formerly protected organic N during thawing of permafrost soils that store as much as 67 Pg [Petagram - A unit of mass equal to 1,000,000,000,000,000 (10¹⁵) grams] N ... Until recently, the soil N cycle in cold and pristine ecosystems was thought to be largely confined to organic N cycling due to the scarcity of N inputs, slow decomposition at low temperatures and high competition for bioavailable N between biota.... Thus, it has been postulated for a long time that N₂O emissions from permafrost soils are low as a result of limited amounts of inorganic N.... However, over the last decade, a growing number of studies have reported very high N₂O emissions from permafrost soils, which are in a comparable range as observed for tropical forests or agricultural ecosystems....

In addition, the few available studies on experimental warming of permafrost soils hint at a stimulation of N₂O emissions by temperature.... The potential significance of inorganic N cycling and N₂O release in permafrost soils can be illustrated by a simple calculation. If 10% of the organic N stored in permafrost soils (i.e., 6.7 Pg N) is released between the present day and the year 2100, as it has been estimated for C release..., and only 1% is emitted as N₂O (67 Tg [teragram (10¹² grams)] N₂O-N), just like the IPCC's default N₂O emission factor for N mineralized from mineral soils..., this would be equivalent to 10 times the global annual rate of N₂O emissions from soils under natural vegetation [6.6 Tg N₂O-N yr⁻¹...]. Consequently, there is an urgent need to better understand N biogeochemistry and associated gaseous N emissions in permafrost soils under the auspices of a warming climate.

(Elisabeth Ramm *et al*, [The Forgotten Nutrient - The Role of Nitrogen in Permafrost Soils of Northern China](#), *Advances in Atmospheric Sciences*, Vol. 37, August 2020, 1-7)

⁷⁷⁷ A *EurekAlert* summary of the research has explained:

"These findings suggest that our climate system, which depends greatly on deep ocean circulation, is critically poised near a tipping point for abrupt disruptions," said co-author Yair Rosenthal...

"Although the disruptions in circulation and possible coolings may be relatively short-lived - lasting maybe a century or more - the consequences might be large."

The warm North Atlantic Current - the northernmost part of the Gulf Stream - flows into the Greenland Sea. It becomes progressively colder and saltier due to heat loss to the air, eventually sinking and forming the North Atlantic Deep Water formation - a mass of deep, cold water that flows southward. Melting of the polar ice sheet in the Arctic region would result in more fresh water entering the ocean and disrupting that circulation pattern, potentially causing cooling in northern areas of Europe and North America.

(Rutgers University, [How stable is deep ocean circulation in warmer climate?](#) Altered circulation might have cooled northern areas of North America and Europe, *EurekAlert*, News Release 26 March, 2020)

For more on this see:

Eirik Vinje Galaasen *et al*, [Interglacial instability of North Atlantic Deep Water ventilation](#), *Science*, 27 Mar 2020, Vol. 367, Issue 6485, pp. 1485-1489

Thomas F. Stocker, [Surprises for climate stability](#), *Science* 27 Mar 2020, Vol. 367, Issue 6485, pp. 1425-1426

⁷⁷⁸ (26/01/18)(09/02/18) Let's start with William Blum's question to us all:

...[W]hat do American leaders think of their own record?

He starts the ball rolling by providing his own assessment:

Former Secretary of State Condoleezza Rice was probably speaking for the whole private club when she wrote that in the pursuit of its national security the United States no longer needed to be guided by "notions of international law and norms" or "institutions like the United Nations" because America was "on the right side of history."

Clearly, Trump has not been the only US 'leader' prone to announcing the bizarre - though he has elevated it to a minor art form! CBS News has compiled a list of 30 of Donald Trump's wildest quotes. As might be expected, climate change, along with shiny red buttons and sundry other absurdities, figures prominently:

On November 6, 2012, Donald Trump tweeted: "The concept of global warming was created by and for the Chinese in order to make U.S. manufacturing non-competitive."

On October 19, 2015, he then tweeted: "It's really cold outside, they are calling it a major freeze, weeks ahead of normal. Man, we could use a big fat dose of global warming!"

(^œ[30 of Donald Trump's wildest quotes](#), CBS News (accessed 04 January, 2018))

Yes, he's President Trump of the United States of America - and he had and has a solid core of supporters backing him, not only from the 'rabid right' but some of the US' most prominent politicians and corporate CEOs. Jeet Heer of the *New Republic* magazine explained:

...Thankfully, we have actual data on Trump's supporters. Far from being idiots, they are people who would normally be considered functioning and successful. Trump's supporters are better educated and wealthier than the American average.

(Jeet Heer, ^œ[Are Donald Trump's supporters idiots?](#), *New Republic*)

As William Blum put it:

"Let me tell you about the very rich," F. Scott Fitzgerald famously wrote. "They are different from you and me."...

[L]et me tell you about American leaders. In power, they don't think the way you and I do. They don't feel the way you and I do.

There is a truism which explains why this is so: human beings are (in all walks of life) predisposed to choosing friends and partners with whom they can easily interact.

And, there is another truism to be coupled with that: In [Western, individualistic societies](#), a sociopathic personality enhances unregulated capitalist performance.

This results in communities of 'successful' people with sociopathic tendencies.

A commenter on a *Naked Capitalism* posting described those tendencies well:

Aurelien/David has eloquently and I have no doubt correctly written about the ideology of european "elites" and what drives them in their crusade to rid if not the world so at least Europe of all these "archaic" and "dividing" notions of nation and nationalism, religion, culture and even history, as if to create a sort of eternal now, a timeless political nirvana, with only a vague sense of history as only having been a prologue to the timeless, perfect liberal endstate, but in no way something that is still ongoing....

...[F]or all their horrible lack of pretty much any other commendable human traits, psychopaths and sociopaths are usually not particularly fearful people.

They may be many things, but they rarely are driven and controlled by fear.

Instead they truly are for the most part very aggressive and confident, genuinely convinced of their superiority and far more likely to react with rage and increased aggression even at great risk to themselves when thwarted.

They tend to be gambling types and adrenalin junkies and they are rather unlikely to be fundamentally ideology driven deep down, trending to thrive in chaos and love conflict for conflict's sake.

Peace, rather than something to be preserved and promoted would more likely be boring to them.

So the quasi utopian ideological motivation may have partly driven earlier generations of eurocrats and there might be plenty of those left even now, especially on lower and mid levels, as there surely aren't enough sociopaths around to man the entirety of the vast bureaucracies by themselves (which would include lots and lots of jobs too boring for most genuine sociopaths and their thrillseeking mentality) but with the whole structure growing ever more pathocratic over the decades at least in the positions of genuine power where the sociopaths can be expected to be especially overrepresented, there would at this point [be] little left of those misguided, utopian dreamers.

(Commenter ^œ['Snailslime'](#), *Naked Capitalism*, April 12, 2024)

The inevitable consequence is that, in Western societies, those who are socialized in communities of 'the very rich' (or of political 'elites'), tend to exhibit sociopathic tendencies. Over time, this results in communities of people who see sociopathic behavior as 'normal' and so, as F. Scott Fitzgerald described: the rest of society, in which sociopathic tendencies are considered aberrant, will see '[successful capitalist individuals and groups as different from themselves](#)'.

William Blum (2014) has provided a thought-provoking perspective on US foreign policy over the past half century and more:

... [L]et me tell you about American leaders. In power, they don't think the way you and I do. They don't feel the way you and I do. They have supported "awful jihadists" and their moral equivalents for decades. Let's begin in 1979 in Afghanistan, where the Moujahedeen ("holy warriors") were in battle against a secular, progressive government supported by the Soviet Union; a "favorite tactic" of the Moujahedeen was "to torture victims [often Russians] by first cutting off their nose, ears, and genitals, then removing one slice of skin after another", producing "a slow, very painful death".

With America's massive and indispensable military backing in the 1980s, Afghanistan's last secular government (bringing women into the 20th century) was overthrown, and out of the victorious Moujahedeen arose al Qaeda.

During this same period, the United States was supporting the infamous Khmer Rouge of Cambodia; yes, the same charming lads of Pol Pot and The Killing Fields.

President Carter's National Security Adviser, Zbigniew Brzezinski, was a leading force behind the US support of both the Moujahedeen and the Khmer Rouge. What does that tell you about that American leader? Or Jimmy Carter - an inspiration out of office, but a rather different person in the White House? Or Nobel Peace Laureate Barack Obama, who chose Brzezinski as one of his advisers?

...More recently, the US has supported awful jihadists in Libya and Syria, with awful consequences.

It would, moreover, be difficult to name a single brutal dictatorship of the second half of the 20th Century that was not supported by the United States; not only supported, but often put into power and kept in power against the wishes of the population. And in recent years as well, Washington has supported very repressive governments, such as Saudi Arabia, Honduras, Indonesia, Egypt, Colombia, Qatar, and Israel.

Not exactly the grand savior our sad old world is yearning for. (Oh, did I mention that Washington's policies create a never-ending supply of terrorists?)

And what do American leaders think of their own record? Former Secretary of State Condoleezza Rice was probably speaking for the whole private club when she wrote that in the pursuit of its national security the United States no longer needed to be guided by "notions of international law and norms" or "institutions like the United Nations" because America was "on the right side of history." (William Blum, ^œ[The Historical US Support for al-Qaeda](#), *Foreign Policy Journal*, Jan 10, 2014)

Tom Engelhardt, with depressing clarity, describes the nature of 'US Presidencies' in this 21st Century (but, of course, not only this century!):

...[Trump] isn't at all unique (except in the details, except in the exaggeration of it all). What makes him so clownish, in the sense I'm describing, is that he offers a chillingly exaggerated, wildly fiery-and-furious version of the very imperial American presidency we've come to know over these last seven decades:

- the one that has long ridden herd on a [nuclear apocalypse](#);
 - that ^œ[killed millions on its journey to nowhere](#) in Southeast Asia in the previous century;
 - that hasn't been able to stop itself from overseeing more than a quarter-century of war-making -- two wars, to be exact -- in Afghanistan of all places;
 - that, in its pursuit of its [never-ending "war" on terror](#), has made war on so much else as well, turning significant parts of the planet into zones of increasing chaos, failed states, ^œ[fleeing populations](#), and wholesale destruction;
 - the one whose "^œ[precision](#)" military -- the battle against ISIS in Iraq and Syria has been termed the "most precise campaign in history" -- has helped transform cities from ^œ[Ramadi](#) and ^œ[Fallujah to Mosul](#) ^œ[and Raqqa](#) into landscapes that, in their indiscriminate wreckage, look like Stalingrad after the battle in World War II
 - (and that now is threatening to develop a "precision" version of nuclear war as well);
- and
- that has, in this century, overseen the creation of "^œ[Saudi America](#)" on a planet in which it was already easy enough to grasp that fossil fuels were doing the kinds of damage to the

human environment that nothing short of a giant asteroid or nuclear war might otherwise do.

From his America First policies to his reported desire to see (and make use of) terrorist attacks on this country, the man who has declared climate change a Chinese hoax, threatened to loose "fire and fury like the world has never seen," described other countries in language once considered unpresidential by presidents who nonetheless treated the very same countries like "shitholes," and given "his" [generals a remarkably free hand](#) to "win" the war on terror is but an eerily clownish version of all that has gone before.

He has, in a sense, ripped away the façade of dignity from the imperial presidency and let us glimpse just what is truly imperial (and imperious) about it. He continues to show us in new ways quite an old reality: how terrifying a force for destruction, possibly even on a planetary level, U.S. power can be.

(Tom Engelhardt, [Creating an Empire of Graveyards? At the Circus with Donald Trump](#), January 25, 2018)

779 Elizabeth Gamillo has summarized the findings:

The hefty document includes data compiled by 524 scientists working in 65 countries. A few highlights:

- Atmospheric concentrations of CO₂ - the primary planetary warming gas - last year rose by 2.2 ppm over 2016. Similar levels were last reached at least 800,000 years ago, according to data obtained from air bubbles trapped in ancient ice cores.
- Atmospheric concentrations of methane and nitrous oxide - both potent warming gases - were the highest on record. Levels of methane increased in 2017 by 6.9 parts per billion (ppb), to 1849.7 ppb, compared with 2016. Nitrous oxide levels increased by 0.9 ppb, to 329.8 ppb.
- Last year also marked the end of a world-wide coral bleaching event that lasted 3 years. Coral bleaching occurs when seawater warms, causing corals to release algae living within their tissues, turning the coral white and sometimes resulting in the death of the coral. It was the longest documented bleaching event.
- Global precipitation in 2017 was above the long-term average. Russia had its second wettest year since 1900. Parts of Venezuela, Nigeria, and India also experienced heavier than usual rainfall and flooding.
- Warmer temperatures contributed to wildfire outbreaks around the world. The United States suffered an extreme wildfire season that burned 4 million hectares and caused more than \$18 billion in damages. The Amazon region experienced some 272,000 wildfires.
- In Alaska, record high permafrost temperatures were reported at five of six permafrost observatories. When thawed, permafrost releases CO₂ and methane into the atmosphere and can contribute to global warming.
- Arctic sea ice took a hit. The extent of sea ice hit a 38-year low, and was 8% below the mean extent reported for 1981 to

2010. Spring snow cover in the Arctic, however, was greater than the 1981 to 2010 average, and the Greenland Ice Sheet recovered from a record low mass reported in 2016. 2017 was also the second warmest year on record for the Arctic.

- Many countries reported setting high-temperature records, including Argentina, Uruguay, Spain, Bulgaria, and Mexico.

(Elizabeth Gamillo, ⁸[Atmospheric carbon last year reached levels not seen in 800,000 years](#), *Science Magazine*, Climate, Aug. 2, 2018)

⁷⁸⁰ Somini Sengupta and Lisa Friedman have described the entirely predictable reponse of 'world leaders' at The United Nations Climate Action Summit for which the report was prepared:

The United Nations Climate Action Summit on Monday was meant to highlight concrete promises by presidents, prime ministers and corporate executives to wean the global economy from fossil fuels to avoid the worst effects of global warming.

But despite the protests in the streets, China on Monday made no new promises to take stronger climate action. The United States, having vowed to pull out of the Paris Agreement, the pact among nations to jointly fight climate change, said nothing at all. A host of countries made only incremental promises.

The contrast between the slow pace of action and the urgency of the problem was underscored by the Swedish climate activist Greta Thunberg, 16, who excoriated world leaders for their "business as usual" approach. "The eyes of all future generations are upon you," she said, her voice quavering with rage. "If you choose to fail us, I say we will never forgive you."

There were some concrete measures. Roughly 60 countries announced efforts to achieve net-zero emissions by 2050, several asset fund managers said they would aim to get to a net-zero portfolio of investments by the same year, and dozens of businesses said they would aim to abide by the Paris Agreement targets...

Andrew Steer, head of the World Resources Institute and a former World Bank official, said most of the major economies fell "woefully short" of expectations. "Their lack of ambition stands in sharp contrast with the growing demand for action around the world," he said.

The United States did not request a speaking slot at the summit, but President Trump unexpectedly dropped into the General Assembly hall with Vice President Mike Pence in the late morning. Michael R. Bloomberg, the former New York City mayor who is now a United Nations special envoy for climate, welcomed Mr. Trump's presence and addressed the president directly by saying, "Hopefully our discussions here will be useful for you when you formulate climate policy."

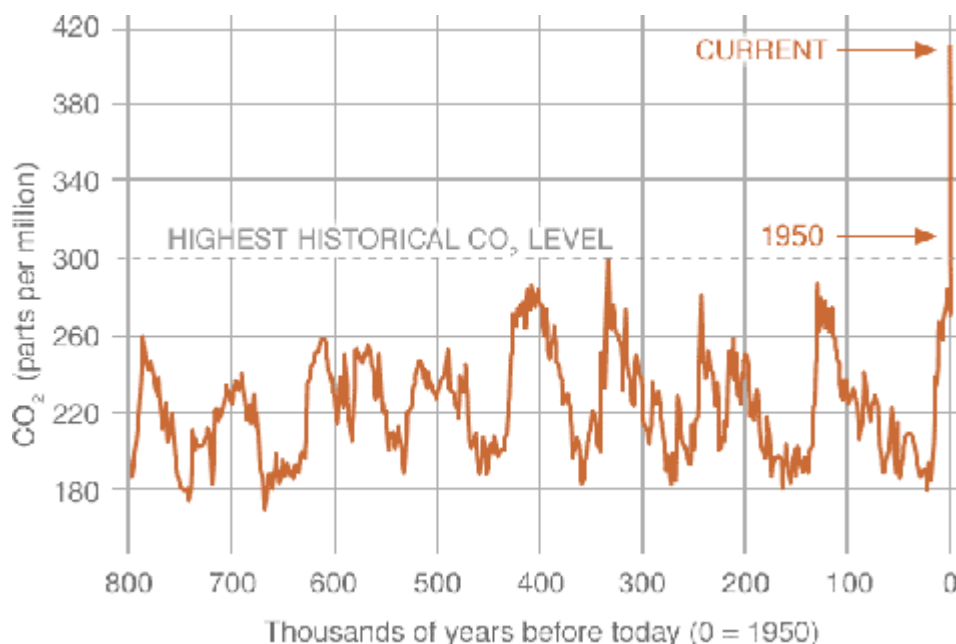

That was followed by laughter and applause. It signaled a sharp contrast from just a few years ago, when the United States was credited with pushing other countries, including China, to take climate change seriously. The United States has said it intends to withdraw from the 2015 Paris climate accord. It is not on track to meet its voluntary pledges under the agreement in any case. And

the Trump administration has rolled back a host of environmental regulations that were meant to curb greenhouse gas emissions from automobile tailpipes, coal plants and oil and gas wells.
(Somini Sengupta and Lisa Friedman, ^œ[At U.N. Climate Summit, a Call for Action Yields Few Commitments](#), *New York Times*, 23 September, 2019)

781 Atmospheric carbon dioxide levels are increasing alarmingly. And, despite the impact of the Covid-19 epidemic on worldwide economic activity, it has shown no signs of reduction through to the end of May, 2021.

The *NASA Global Climate Change: Vital Signs of the Planet* site explained:

Over the past 171 years, human activities have raised atmospheric concentrations of CO₂ by 48% above pre-industrial levels found in 1850. This is more than what had happened naturally over a 20,000 year period (from the Last Glacial Maximum to 1850, from 185 ppm to 280 ppm).

(^œ[Carbon Dioxide: Latest Measurement: May 2021: 416 ppm](#), *NASA: Global Climate Change: Vital Signs of the Planet*, [accessed July 06, 2021])

To paraphrase Sigman *et al*,

...[T]he concentration of carbon dioxide in the atmosphere rose about 20 parts per million (ppm), from 260 ppm in the early Holocene to 280 ppm in the late Holocene...

For comparison, since the beginning of industrialization until now, the carbon dioxide concentration in the atmosphere has increased from 280 to *more than 415 ppm* as a consequence of burning fossil fuels.

To put it even more starkly: the carbon dioxide increase of the Holocene was 20 ppm over *more than 10,000 years*; a similar atmospheric carbon dioxide increase has *now occurred in 8 years*. Atmospheric CO₂ ppm concentration ^œ[in 2011 was 393.25 ppm](#). In 2021 it grew to 415.68 ppm - an increase of >22 ppm!

If coupled with the possibility of methane release both from anthropogenic sources and from warming oceans and polar regions, the problems might be apocalyptic.

So, given the increasing possibility of a human 'extinction level' threat resulting from their deregulated economic and military activity, where is the concerted international effort to tackle the resulting problems?

Western nations seem more than willing to expend effort in preparing for and engaging in [belligerent military aggression](#) and ['regime change'](#), but they show no comparable determination to tackle far more urgent looming environmental threats.

The US National Oceanic and Atmospheric Administration (NOAA) climate site has explained that threat well:

A methane bomb...or not

Scientists have long recognized the possibility - small, but not zero - that global warming could ignite a "methane bomb" in the Arctic: the rapid release of huge amounts of methane from thawing permafrost and underwater ^œ[methane hydrates](#). Such a release could trigger ^œ[extinction-level warming](#)...

Even without a catastrophic Arctic release, methane matters. It has a shorter lifetime than carbon dioxide but a larger global warming potential...

(Rebecca Lindsey and Michon Scott, ^œ[After 2000-era plateau, global methane levels hitting new highs](#), NOAA Climate.gov, July 11, 2017)

Given the 'extinction level' possibilities of such atmospheric green-house-gas build up, I must admit that I find it intriguing that, in 2019, the US and most of the Western World is more concerned about an imaginary 'Iranian threat' than it is about the possible extinction level threat of green-house-gas emissions! We really are a most peculiar species!!

⁷⁸² An episode from the 1980s British television series *Yes Prime Minister* spells out some of the problems of 'big government' for true democracy: *Yes, Minister S02E05* - ^œ[Power To The People](#) (31 minutes: most relevant part from 9 minutes)

⁷⁸³ As she continues:

"These are some pretty strange coincidences," you might find yourself thinking. "What are the odds that a society which is driven by the will of the people would so consistently benefit a small minority of rich and powerful individuals to the disadvantage of the voting majority, across so many separate nations, from generation to generation for many decades, without ever deviating from this pattern? Seems like the rich and powerful must be tipping the scales in their favor somehow."

The official story holds that you are a crazy conspiracy theorist if you say this, and should be shunned and denied any platform from which to speak to a large number of people.

The official story is that this sort of society, which only serves the worst people in the world by pure coincidence, is so wonderful that it needs to be exported to every corner of the earth. Also by pure coincidence, all of the nations which most urgently need freedom and democracy always just so happen to occupy land of immense geostrategic importance for planetary domination and resource control.

In the official story, the United States and its allies are always on the right side of every international conflict, and it is only by a series of unfortunate accidents and intelligence blunders that this

alliance is killing far more people with military violence and starvation sanctions than any other power structure in today's world. The news media feed us accurate information about each and every one of those conflicts, explaining truthfully why each country's government needs to be toppled to free the people of that nation, and it is only by coincidence that we suddenly stop getting news reports about how those people are doing once they have been liberated from their tyrannical oppressors....

(Caitlin Johnstone, [œThe Official Story, Caitlin's Newsletter](#), February 15, 2022)

784 Margot Sanger-Katz, in a *New York Times* article entitled '[œThe Yarn Store Would Like You to Vote: And so would nearly every company out there this year](#)', has described the enthusiasm being manufactured during the 2020 US presidential election: But, this is not 'democracy' at work, this is the alternative to (and subversion of) true democracy: Democracy is *not about 'electing leaders'*. [That is elitist 'elective' government"](#).

785 The 'World-Wide-Web' has, over the past three decades, grown exponentially, enabling burgeoning information, opinion and prejudice sharing around the world. In the third decade of the 21st century we find ourselves able to access and share information and opinion in ways and at a scale unimagined fifty years ago.

We live in a potentially extraordinarily well informed and serviced age. In many ways what has emerged reminds one of the neural networks of living entities. A world interconnected and interacting in ways which half a century ago were the subject of science fiction but have all-too-soon become reality.

Not only is it a [globally interconnected world of independent, disaggregated, communicating individuals](#), it is increasingly blatantly serving the interests of a [profit and power driven privatized neoliberal world](#).

So, if there is no such thing as a 'free lunch', just what and where are the hidden costs?

All 'internet interactions' pass through network 'nodes' and every node is or can be filtered for information. That filtered information is 'commoditized', customized, focused to the requirements of clients, packaged to increase its usability and sold to the highest bidders. And, the highest bidders are, inevitably, those who have determined how best to use the provided information for profit and power.

In a globalized world of 'independent, disaggregated individuals' subliminal control by those with the tools to do so becomes increasingly inevitable.

We are facing a future of subliminally primed Hamelin children:

Once more he stepped into the street;
And to his lips again
Laid his long pipe of smooth straight cane;
And ere he blew three notes (such sweet
Soft notes as yet musician's cunning
Never gave th'enraptured air)
There was a rustling, that seem'd like a bustling
Of merry crowds justling at pitching and hustling,
Small feet were pattering, wooden shoes clattering,

Little hands clapping, and little tongues chattering,
 And, like fowls in a farm-yard when barley is scattering,
 Out came the children running.
 All the little boys and girls,
 With rosy cheeks and flaxen curls,
 And sparkling eyes and teeth like pearls, Tripping and skipping, ran
 merrily after
 The wonderful music with shouting and laughter.
 ...
 After him the children pressed;
 Great was the joy in every breast....
 When, lo, as they reached the mountain's side,
 A wondrous portal opened wide,
 As if a cavern was suddenly hollowed;
 And the Piper advanced and the children follow'd,
 And when all were in to the very last,
 The door in the mountain side shut fast.

What future awaits us within that 'door in the mountain side shut fast'?

Though few seem to have realized the danger, people should be aghast
 at the ease with which Western media censorship has been enacted since
 the Russian 'invasion' of Ukraine in February 2022; at the flood of
 absurdly biased propaganda presented almost unchallenged by Western
 media outlets; and at the seeming ease with which populations have
 been willingly coopted to the warmongering of '[ever shifting Elite
factions](#)'

⁷⁸⁶ With the advent of neoliberalism and the [corporatization of public
institutions](#) in the US (and elsewhere in the Western World) those
 committed to its ideological understandings have quite deliberately
 focused their [attacks on public education](#). They see such education as
[harboring forces opposed to neoliberal reorganization](#). The attack on
 public education, at all levels, has, of course, been part of a larger
[coordinated attack on the institutions of democracy](#).

Lynn Parramore has outlined what has happened in the United States
 through the first decades of the 21st century:

...It's the latest battle in a contest between two countervailing
 forces: one bent on reengineering America for the benefit of the
 wealthy, the other struggling to preserve dignity and security for
 ordinary people.

If the story turns out the way the Jim Justices desire, the children of
 a first-world country will henceforth be groomed for a third-world
 life.

Gordon Lafer, Associate Professor at the Labor Education and
 Research Center at the University of Oregon, and Peter Temin,
 Professor Emeritus of Economics at MIT, help illuminate why this is
 happening, who is behind it, and what's at stake as the educational
 system that once united Americans and prepared them for a life of
 social and economic mobility is wiped out of existence....

After five years of research and the publication of ^æ[The One Percent
Solution](#), Lafer concluded that by lobbying to make changes like
 increasing class sizes, pushing for online instruction, lowering
 accreditation requirements for teachers, replacing public schools
 with privately-run charters, getting rid of publicly elected school

boards and a host of other tactics, Big Business was aiming to dismantle public education.

The grand plan was even more ambitious. These titans of business wished to completely change the way Americans and their children viewed their life potential. Transforming education was the key.

The lobbyists and associations perfected cover stories to keep the public from knowing their real objectives. Step one was to raise fears about an American educational crisis that did not, in fact, exist. Lafer notes, for example, that the reading and math scores of American students have remained largely unchanged for forty years. Nonetheless, the corporate-backed alarmists worked to convince the public that the school system was in dire condition.

Step two was to claim that unproven reforms to fix the fictional crisis, like online learning, were sure to improve outcomes, despite the fact that such schemes go directly against hard evidence for what works in education and deny students the socialization that is crucial to a child's progress. Sometimes the reformers said the changes were needed because of budget deficits; other times, they claimed altruistic aims to improve the quality schools.

In Lafer's view, their strategy had little to do with either...

(Lynn Parramore, ["The Corporate Plan to Groom U.S. Kids for Servitude by Wiping Out Public Schools," *Institute for New Economic Thinking*, April 6, 2018](#))

⁷⁸⁷ While we will speak of 'the commons' in this section, Sheila Kennedy has cogently argued that it is time to rethink the definition of *social safety nets*. As she has explained:

It's easy to see the persistent attacks on income-supports for disadvantaged folks as both dishonest and mean-spirited, and most efforts to rebut them tend to revolve around the realities of social supports: the percentages of recipients who are children, elderly, and disabled, the overwhelming numbers of impoverished Americans who work forty or more hours a week.

I want to suggest that we may be missing the forest for the trees.

A "social safety net," properly conceived, is the web of institutions and services that benefit all members of a given society while building bonds of community and cross-cultural connection. In this broader understanding, the safety net includes public education, public parks, public transportation and other services and amenities available to and used by citizens of all backgrounds and income categories.

Public education is a prime example. Even granting the challenges - the disproportionate resources available to schools serving richer and poorer neighborhoods, the barriers to learning created by poverty - public schools at their best integrate children from different backgrounds and give poor children tools to escape poverty. Public schools, as Benjamin Barber has written, are *constitutive* of a public.

Common schools create common cultures, and it is hard to escape the suspicion that attacks on public education have been at least partially motivated by that reality. While supporters of charter schools and voucher programs have promoted them as ways of allowing poor children to escape failing schools, the data suggests

that most children - including poor children - are better served by schools that remain part of America's real social safety net. (Sheila Kennedy, ^œ[Rethinking America's Social Safety Net: It may be time to re-conceptualize our social safety net](#), *Inequality news*, A project of the *Institute for Policy Studies*, March 6, 2017)

788 (06/07/17)(01/04/19)

When private ambitions and fortunes overtake participatory democracies, the shell of democratic government can remain, hollowed out and empty. Outwardly ornamental, a 'grand democracy': but, look closer, and you'll find a hollowed out, lifeless shell, [hijacked by some alien life form](#), predatory on the original builders and inhabitants.¹⁰⁷⁸

Such things do not happen overnight (except in superficially entertaining Hollywood fantasies). They happen incrementally. Step by step a democratic nation loses its way¹⁰⁷⁹. If we focus on the past forty years of US political history we can see how the process evolves. From Richard Nixon¹⁰⁸⁰, to Reagan, with [an accommodating liberal presidency](#) between, the United States was primed for democratic degeneration.

A reader comment on a *New York Times* article has provided a scathingly accurate assessment of Ronald Reagan's contribution to US (and general Western) decline over the past half-century:

...Ronald Reagan's sabotaging of the rule of law and his Reagan Restoration have debilitated America and the world since 1980. He denigrated government, ushered in reckless deregulation, rejuvenated racial bias and strife with his dogwhistling and renewal of the Southern Strategy, and let slip the dogs of greed to loot America's economy and treasury. He was a right-wing demagogue in a smiley face who was a shill for corruption.

Reagan was very successful in the sleight-of-hand tugging the perceived center of the American political spectrum rightward, so that anyone left of Attila the Hun is a commie. So successful he was no longer viewed by many - as he had been - as a right-wing extremist but as a benign daddy in Morning in America, restoring America to its rightful place in the cynical American Century neoimperialist and mercantile fantasy.

Reagan was an inflammatory and cynical salesman. W [George W Bush] was his son and Trump his illegitimate stepchild. Brexit and the devolution of American politics can be laid at his feet and those of his political wife, Margaret Thatcher. Both were agents of oligarchy, rampant inequality and retrenchment to the gilded ages.

Reagan was an artful conman. Some say his visage should be on Mt. Rushmore. I say it should be in the pantheon of anti-Americans. That he was so successful is a damning indictment of the gullibility of the American electorate.

(Rocky, Commenter on Jamelle Bouie, ^œ[Oliver North Showed Republicans the Way Out: Belligerence, shamelessness and partisanship can take you far](#), *New York Times*, March 28, 2019)

The time for retrospection and introspection in Western 'democracies' is fast closing. As Andrew Bacevich tells his readers:

Like it or not, the president of the United States embodies America itself. The individual inhabiting the White House has become the preeminent symbol of who we are and what we represent as a nation and a people. In a fundamental sense, he is us.

By the start of the 21st century and the advent of the second George Bush, US citizens had been inured to the hijacking of their democratic rights and responsibilities. President Trump is merely an inevitable consequence of a process which has been fifty years in the making.¹⁰⁸¹

To paraphrase a 2500 year old observation:

Of making many lists there is no end...(Ecclesiastes 12:12)

It is time for concerned citizens, everywhere, to do more than compose new lists! So, Andrew Bacevich, what now?

Charles Blow:

Every now and then we are going to have to do this: Step back from the daily onslaughts of insanity emanating from Donald Trump's parasitic presidency and remind ourselves of the obscenity of it all, registering its magnitude in its full, devastating truth.

There is something insidious and corrosive about trying to evaluate the severity of every offense, trying to give each an individual grade on the scale of absurdity. Trump himself is the offense. Everything that springs from him, every person who supports him, every staffer who shields him, every legislator who defends him, is an offense. Every partisan who uses him - against all he or she has ever claimed to champion - to advance a political agenda and, in so doing, places party over country, is an offense.

We must remind ourselves that Trump's very presence in the White House defiles it and the institution of the presidency. Rather than rising to the honor of the office, Trump has lowered the office with his whiny, fragile, vindictive pettiness.

The presidency has been hijacked.

(Charles M. Blow, ^œ[The Hijacked American Presidency](#), *New York Times*, July 3, 2017)

But, it is important to remember that this did not happen overnight. It is not the result of some opportunistic hijacking. It is the almost inevitable end-product of a corrosive process of stripping democratic rights and responsibilities from citizens and investing them in an amoral sociopathic plutocracy.

US citizens cannot escape responsibility for being complicit in this process. It is they who have surrendered their responsibilities to private ambition and 'big money'. Deposing Donald Trump won't fix the problem, nor will outlasting his presidency. US democratic institutions are now hostage to the [semi-criminal, semi-pathological propensities](#) of those whose driving motivation is [the pursuit of profit](#).

This is equally true, if less glaringly obvious, elsewhere in the Western world.

In the 21st century, the United States of America provides an object lesson for participatory democracies everywhere. Timothy Egan has described it well - but, do not assume that this is all the fault of one side of politics. Both major US political parties are complicit in this hijacking of participatory democracy - the Republican Party is not the only party which has been hollowed out by private ambition and 'big money':

...For the United States, the biggest institutional lie of the moment is that we have a government of the people, responding to majority will.

On almost every single concern, Congress - whether it's the misnamed People's House, or the Senate, laughably mischaracterized as the world's greatest deliberative body - is going against what most of the country wants. And Congress is doing this because there will be no consequences.

We have a fake democracy, growing less responsive and less representative by the day.

The biggest example of this is the monstrosity of a health care bill, which a cartel of Republicans finally allowed us to peek at on Thursday. The lobbyists have seen it; of course. But for the rest us, our first look at a radical overhaul of one-sixth of the economy, something that touches every American, comes too late to make our voices heard...

Our fake democracy reveals itself daily. Less than a third of Americans support President Trump's decision to withdraw from the Paris Climate Agreement. In a truly representative government, you would see the other two-thirds, the common-sense majority, howling from the halls of Congress.

Most Americans are also against building a wall along the Mexican border. They would prefer putting taxpayers' billions into roads, bridges, schools and airports. But the wall remains a key part of President Trump's agenda.

Trump is president, of course, despite losing the popular vote by nearly 3 million people. Almost 60 percent of the public is against him now. In a parliamentary system, he'd be thrown out in a no-confidence vote. In our system, he's primed to change life for every citizen, against the wishes of a majority of Americans. Try calling that a democracy while keeping a straight face.

(Timothy Egan, ^œ[Our Fake Democracy](#), *New York Times*, June 23, 2017)

Bill Mitchell, in a review of a book by Elizabeth Anderson (below), has explained the 'rise of "private government"', a form of government which is 'natural' to those plutocracies which are overtaking and subverting Western participatory democracies everywhere.

Peter Malcolm has described the experiences of a once proudly 'equal' New Zealand in an article entitled 'The Sad Slide of a Once Equal Nation'. As he has explained:

Some 30 years ago, by a variety of measures, New Zealand ranked one of the world's more equal nations. We have now become one of the more unequal.

Our current tax system both reflects our growing inequality and contributes to it. Thirty years ago, we had a much more comprehensive, more steeply progressive tax structure, with a top marginal tax rate of 63 percent. The top marginal tax rate today stands at half that, 33 percent.

Our current tax system, note analysts like Robert Salmond, rates as much tougher on the poor and more generous to high-income earners than tax systems elsewhere in the developed world

We also had inheritance taxes and a capital gains tax three decades ago. Today, apart from some small exceptions, we have neither. Instead of these levies, taxes that primarily impact the wealthy, we

now have a goods and services tax of 15 percent, a flat-tax levy that burdens the poor much more than high-income earners.

In New Zealand today, life overall rates as much tougher for the poor. Some 28 percent of New Zealand's children now live in families experiencing income poverty. Back in 1982, only 14 percent of children lived in that poverty.

New Zealand's affluent, in the meantime, have done quite well. The incomes of our nation's most affluent 10 percent averaged about five times the incomes of New Zealand's poorest 10 percent three decades ago. That gap has nearly doubled.

The bottom line: In the early 1980s, New Zealand had a level of inequality about as low as Denmark, one of the world's most equal nations. Today, New Zealand and Denmark sit at opposite ends of the inequality spectrum.

(Peter Malcolm, 'œThe Sad Slide of a Once Equal Nation', *Inequality.Org*, Research & Commentary, July 04, 2017)

Franklin Roosevelt (1938) warned of this:

...A democracy is not safe if the people tolerate the growth of private power to a point where it becomes stronger than their democratic state itself. That, in its essence, is Fascism - ownership of Government by an individual, by a group, or by any other controlling private power.

Bill Mitchell explained the rise of private government:

We ignore the benefits of collective goods and laws that protect us, but turn a blind eye to the on-going, minute-by-minute, repression in the workplace. I was reminded of this again as I was reading a new book that came out in May 2017 - *Private Government: How Employers Rule Our Lives (and Why We Don't Talk About It)* - by American philosopher Elizabeth Anderson.

She studies that way in which corporate America serves in effect as a "private government" minutely and vicariously controlling our daily working lives yet many of us still accept the construction that this is the 'free market' operating. It is when the word 'free' loses all meaning. I especially like her use of the term "private government" to reinforce the hypocrisy of the elites and the inconsistency of those (workers included) who call for small 'government' as if that is the exemplar of freedom....

The concept of "private government" arises because workers "are subject ... to authorities that can order them around and impose sanctions for noncompliance".

This workplace despotism leads her to conclude that "Libertarians and free market economists and politicians wrongly equate 'freedom' with private enterprise, ignoring the reality that for most workers, employment in large firms brings with it subjection to arbitrary power that extends beyond their work lives".

It is clear that "the security of private property depends on a strong state" but then "so too do many forms of freedom".

In an interview relating to her book - *Where Despots Rule* (June 29, 2017), Elizabeth Anderson noted that:

The history of democracy is the history of movements to make government a public thing; that is, to make it the business of the

governed - transparent to them, attentive to their interests, accountable to the public.

Private government is rule by authorities who tell the governed that the rules to which they are subject are none of their business, that they aren't entitled to know about how their government operates, that they have no standing to insist that their interests be taken into account in how they are governed, that their rulers are not accountable to them.

By US law, the default constitution of the workplace is a private government, rather than a public one. Managers run a government that is kept private from the workers they govern.

...The Anglo-world, in particular, has been at the forefront of dismantling worker protections and allowing these "private governments" to increase in power.

(Bill Mitchell, ^œ[The rise of the "private government"](#), *Billy Blog*, 05 July, 2017)

⁷⁸⁹ While there is much to admire in Bellamy's vision, his description of the 'rule of the rich' in a variety of historical situations, and his solution to the 'problem' need some revision!

Bellamy's very popular 1888 book, ^œ[Looking Backward: From 2000 to 1887](#) spells out a 'socialist' solution to the burgeoning inequality of late 19th century US. It fueled an [almost pathological opposition](#) to 'socialist' or any other 'solution' to the inequalities of the period. That [opposition grew stronger](#) and more [coherently focused](#) through the 20th century.

⁷⁹⁰ US citizens have been disenfranchised, their voices drowned out by those of economic elites and major business interests. Any attempt to re-enfranchise those citizens will face the coordinated opposition of both dominating groups. Martin Gilens and Benjamin Page have examined four traditions in US politics:

...[F]our families of theories: *Majoritarian Electoral Democracy*, *Economic-Elite Domination*, and two types of interest-group pluralism - *Majoritarian Pluralism*, in which the interests of all citizens are more or less equally represented, and *Biased Pluralism*, in which corporations, business associations, and professional groups predominate. Each of these perspectives makes different predictions about the independent influence upon U.S. policy making of four sets of actors: the *Average Citizen* or "median voter," *Economic Elites*, and *Mass-based* or *Business-oriented Interest Groups* or industries...

Their rather depressing conclusion:

The central point that emerges from our research is that economic elites and organized groups representing business interests have substantial independent impacts on U.S. government policy, while mass-based interest groups and average citizens have little or no independent influence. Our results provide substantial support for theories of Economic-Elite Domination and for theories of Biased Pluralism, but not for theories of Majoritarian Electoral Democracy or Majoritarian Pluralism.

(Martin Gilens and Benjamin I. Page, ^œ[Testing Theories of American Politics: Elites, Interest Groups, and Average Citizens](#), *Perspectives on Politics*, Volume 12, Issue 3 September 2014 , pp. 564-581)

⁷⁹¹ Bill Gorton has summed up Popper's 'theory of democracy':

...Popper's theory of democracy also arguably contained conservative elements insofar as it required only a limited role for the average citizen in governing. As we saw above, the primary role of the public in Popper's democracy is to render a verdict on the success or failure of a government's policies.

For Popper public policy is not to be created through the kind of inclusive public deliberation envisioned by advocates of radical or participatory democracy. Much less is it to be implemented by ordinary citizens. Popper summed up his view by quoting Pericles, the celebrated statesman of Athenian democracy in 5th-century B.C.E.:

Even if only a few of us are capable of devising a policy or putting it into practice, all of us are capable of judging it.

Popper added, "Please note that [this view] discounts the notion of rule by the people, and even of popular initiative. Both are replaced with the very different idea of *judgement by the people*" (*Lessons of This Century*, 72, Popper's emphasis).

This view in some ways mirrors traditional conservatives' support for rule by "natural aristocrats," as Burke called them, in a democratic society. Ideally, elected officials would be drawn from the class of educated gentlemen, who would be best fit to hold positions of leadership owing to their superior character, judgment and experience.

However, in Popper's system, good public policy in a democracy would result not so much from the superior wisdom or character of its leadership but rather from their commitment to the scientific method.

(William Gorton, ^œ[Karl Popper: Political Philosophy](#), *Internet Encyclopedia of Philosophy* (accessed February 17, 2017))

We all know where this elitist vision of 'democracy' has taken the Western World in the second decade of the 21st century!

⁷⁹² Though Gabler's suggestion that [before Trump](#) the US was

a country of soaring ideas and idealism, a beacon to the world, an example of freedom at home and a protector of freedom abroad, an anchor of sanity in a world often bouncing on the waves of madness

suggests a chauvinist blindness to [US' contribution to the international mayhem of the post WW2 period](#).

⁷⁹³ William Du Bois:

Between me and the other world there is ever an unasked question: unasked by some through feelings of delicacy; by others through the difficulty of rightly framing it. All, nevertheless, flutter round it. They approach me in a half-hesitant sort of way, eye me curiously or compassionately, and then, instead of saying directly, How does it feel to be a problem? they say, I know an excellent colored man in my town; or, I fought at Mechanicsville; or, Do not these Southern outrages make your blood boil? At these I smile, or am interested, or reduce the boiling to a simmer, as the occasion may require. To the real question, How does it feel to be a problem? I answer seldom a word...

[T]he Negro is a sort of seventh son, born with a veil, and gifted with second-sight in this American world, - a world which yields him

no true self-consciousness, but only lets him see himself through the revelation of the other world. It is a peculiar sensation, this double-consciousness, this sense of always looking at one's self through the eyes of others, of measuring one's soul by the tape of a world that looks on in amused contempt and pity. One ever feels his twoness, - an American, a Negro; two souls, two thoughts, two unreconciled strivings; two warring ideals in one dark body, whose dogged strength alone keeps it from being torn asunder.

The history of the American Negro is the history of this strife, - this longing to attain self-conscious manhood, to merge his double self into a better and truer self. In this merging he wishes neither of the older selves to be lost. He would not Africanize America, for America has too much to teach the world and Africa. He would not bleach his Negro soul in a flood of white Americanism, for he knows that Negro blood has a message for the world. He simply wishes to make it possible for a man to be both a Negro and an American, without being cursed and spit upon by his fellows, without having the doors of Opportunity closed roughly in his face.

This, then, is the end of his striving: to be a co-worker in the kingdom of culture, to escape both death and isolation, to husband and use his best powers and his latent genius. These powers of body and mind have in the past been strangely wasted, dispersed, or forgotten.

The shadow of a mighty Negro past flits through the tale of Ethiopia the Shadowy and of Egypt the Sphinx. Through history, the powers of single black men flash here and there like falling stars, and die sometimes before the world has rightly gauged their brightness.

Here in America, in the few days since Emancipation, the black man's turning hither and thither in hesitant and doubtful striving has often made his very strength to lose effectiveness, to seem like absence of power, like weakness.

And yet it is not weakness, - it is the contradiction of double aims. The double-aimed struggle of the black artisan - on the one hand to escape white contempt for a nation of mere hewers of wood and drawers of water, and on the other hand to plough and nail and dig for a poverty-stricken horde - could only result in making him a poor craftsman, for he had but half a heart in either cause.

By the poverty and ignorance of his people, the Negro minister or doctor was tempted toward quackery and demagoguery; and by the criticism of the other world, toward ideals that made him ashamed of his lowly tasks. The would-be black savant was confronted by the paradox that the knowledge his people needed was a twice-told tale to his white neighbors, while the knowledge which would teach the white world was Greek to his own flesh and blood. The innate love of harmony and beauty that set the ruder souls of his people a-dancing and a-singing raised but confusion and doubt in the soul of the black artist; for the beauty revealed to him was the soul-beauty of a race which his larger audience despised, and he could not articulate the message of another people.

This waste of double aims, this seeking to satisfy two unreconciled ideals, has wrought sad havoc with the courage and faith and deeds of ten thousand thousand people, - has sent them often wooing

false gods and invoking false means of salvation, and at times has even seemed about to make them ashamed of themselves.

Away back in the days of bondage they thought to see in one divine event the end of all doubt and disappointment; few men ever worshipped Freedom with half such unquestioning faith as did the American Negro for two centuries. To him, so far as he thought and dreamed, slavery was indeed the sum of all villainies, the cause of all sorrow, the root of all prejudice; Emancipation was the key to a promised land of sweeter beauty than ever stretched before the eyes of wearied Israelites. In song and exhortation swelled one refrain - Liberty; in his tears and curses the God he implored had Freedom in his right hand. At last it came, - suddenly, fearfully, like a dream. With one wild carnival of blood and passion came the message in his own plaintive cadences: -

"Shout, O children!
Shout, you're free!
For God has bought your liberty!"

Years have passed away since then, - ten, twenty, forty; forty years of national life, forty years of renewal and development, and yet the swarthy spectre sits in its accustomed seat at the Nation's feast. In vain do we cry to this our vastest social problem: -

"Take any shape but that, and my firm nerves
Shall never tremble!"

The Nation has not yet found peace from its sins; the freedman has not yet found in freedom his promised land. Whatever of good may have come in these years of change, the shadow of a deep disappointment rests upon the Negro people, - a disappointment all the more bitter because the unattained ideal was unbounded save by the simple ignorance of a lowly people

And yet, being a problem is a strange experience, - peculiar even for one who has never been anything else...

(W. E. B. Du Bois, ^œ[The Souls of Black Folk](#), (*Project Gutenberg Ebook*, August 11, 2021) A. C. McClurg & Co., Chicago, 1903)

⁷⁹⁴ A commenter on the same *Naked Capitalism* blog posting as *justanotherprogressive* expanded on this:

AJ Nock's [Albert J. Nock, 1935, *Our Enemy, The State*] main idea is that coercive govt drives out what he called 'social power'. That latter is identical to what deToqueville observed and called 'civic associations'.

Americans use associations to give fêtes, to found seminaries, to build inns, to raise churches, to distribute books, to send missionaries to the antipodes; in this manner they create hospitals, prisons, schools...

In America I encountered sorts of associations of which, I confess, I had no idea, and I often admired the infinite art with which the inhabitants of the United States managed to fix a common goal to the efforts of many men and to get them to advance to it freely.

(Alexis de Tocqueville, ^œ[Democracy in America](#), Vol. 2, Chapter V: Of The Use Which The Americans Make Of Public Associations In Civil Life)

It's hard to dispute Nock's point. When Nock wrote his book, there were 130,000 school governance authorities in the US - with each requiring a dozen or more part-time volunteers from the community to manage it. A huge portion of adults had SOME experience in actually being on a school board. Today there are 12,000 'school districts' - all run by full-time 'professionals' and the only allowed wider responsibility is to vote periodically and pay taxes. Not only are those professionals inclined more coercively; those who vote and 'keep them accountable' are now ignorant. And no matter what the social arena, the problem is the same.
(^{ae}Jfree, April 29, 2017)

⁷⁹⁵ The need for citizens of democratic states to understand their responsibilities has never been clearer than it is in the early 21st century ¹⁰⁸². Neil Gabler has clearly explained the nature of the dilemma in which citizens of the United States of America find themselves. As he says,

The system wasn't supposed to work this way. The Founding Fathers deliberately devised a structure in which someone like Donald Trump - a vain, self-centered, mendacious demagogue - could never become chief executive, and in which the legislature could never be captured by a reckless, ideologically obsessed minority bent on overriding the majority interests of Americans.

Those Founders labored to create an independent judiciary that was not captive to any single ideology or party. They carefully crafted a set of checks and balances in which no single branch of government could overpower another, and in which each held its own prerogatives dearly.

In doing so, they thought they had provided posterity with a wise, cautious and magnanimous governmental operation that would serve the larger public weal rather than advantage any particular group or party, and that could withstand the gusts of any given historical moment.

It actually worked surprisingly well for 250 years, which is not to say that it didn't have plenty of hiccups or that special interests weren't often privileged. But it doesn't work anymore, and though I am optimistic enough to believe that we will have a new president and Congress someday who will change policies and perhaps set us back on the road to rationality and common decency ("Make America Good Again"), the Trump presidency and the Republican Congress have nevertheless exposed the flaws in the system itself.

The prognosis isn't good: These flaws are embedded in the Constitution and cannot be repaired without wholesale change, which isn't coming. These defects are now openly visible for the next demagogue and the next gaggle of political hypocrites and power mongers to exploit. You can forget all the alleged fail-safes. The Constitution was supposed to protect us from this. It was expressly designed to do so. It didn't.

The system failed because the Founding Fathers did not anticipate anything like the modern Republican Party. On the contrary, they believed that extremism and overweening self-interest of the sort Republicans routinely display could always be quarantined.

Were they wrong!

Instead of the Constitution circumscribing reactionary populism, reactionary populism has circumscribed the Constitution. That is where we are now. And there is no way out.

The Founding Fathers weren't naive idealists. They understood the deficiencies of human nature, which is why they felt the need to devise structural defenses against them. "If men were angels," wrote James Madison in Federalist No. 51, "no government would be necessary." But men weren't, so it was. Still, our forebears were comforted by four assumptions that would underpin American democracy - four assumptions that let them believe their Constitution would sustain the new nation.

(Neil Gabler, ^{oe}[How the System Got Broken, and Why It Can't Be Fixed: Whatever happened to the separation of powers?](#), *Bill Moyers & Company*, March 13, 2017)

He then proceeds to a clear analysis of the consequences of those assumptions for the US.

The US Founding Fathers' Assumptions:

1. They envisioned a government of sagacious men of good will who set aside their own interests for the country's: the "best and brightest."
2. They separated the three branches of government and assumed that each would check and balance the others as a form of protection against any one branch encroaching on the power of the others.
3. They assumed that extremism could never take root in the government - not because there weren't any extremists, but because the system had safeguards against their assuming power.
4. The fourth and most important assumption: They assumed that those who aspired to power did so to govern; they didn't aspire to govern to gain power.

(18/03/17) Unquestionably, the problems faced by US citizens in the early 21st century are a result of a failure among those citizens to take their responsibilities seriously. A failure which signals a clear lack of understanding of the nature of those responsibilities.

As Jefferson argued,

I know no safe depository of the ultimate powers of the society but the people themselves; and if we think them not enlightened enough to exercise their control with a wholesome discretion, the remedy is not to take it from them but to inform their discretion by education. This is the true corrective of abuses of Constitutional power.

(12/05/17) US citizens may or may not be able to do anything to alter the current trajectory of the nation, though, it is in times like these that, in the past, US citizens have finally found their voices and exercised that 'principle of association' which de Tocqueville found so inspiring in the early 19th century. Once again, Abraham Lincoln's Gettysburg Address should invoke that determination which US citizens have displayed in previous times when it was desperately needed:

It is for us the living, rather, to be dedicated here to the unfinished work which they who fought here have thus far so nobly advanced. It is rather for us to be here dedicated to the great task remaining before us - that from these honored dead we take increased devotion to that cause for which they here gave the last full measure of devotion - that we here highly resolve that these dead shall not have died in vain - that this nation, under God, shall have a new birth of freedom, and that government of the people, by the people, for the people, shall not perish from the earth.

(18/11/17) All who take government 'of the people, by the people, for the people' seriously now know that an uninformed, complacent electorate, content to carelessly 'elect leaders' without understanding the consequences, is a threat to true democracy. It is now time for US citizens to *organize*. As [Al Giordano has argued](#): Organizing is based on attainable and quantifiable goals (be they small, as in, "put a stop sign in the neighborhood," or be they large) and now is the time for US citizens, finally, to act.

[The forces of top-down, elitist 'elective' government](#) in the US have not rested on their laurels. As Joseph OShaughnessy has summarized:

Big Money has been paying bodies to enact treachery--anti-humane, anti-populist, anti-American Middle Class legislation--at the state level all across the country. It is a simple agenda.

- 1.Reduce the political power of working people to fight against Big Money. Virtually outlaw unions.
- 2.Widen the gap between rich and poor. Make it harder for the working class to find enough disposable income, or time, to combat Big Money.
- 3.Divide the people. College educated (whatever that means these days) against those without a degree. Then divide the college grads. Those with technical skills, immediately useful. Those with broader knowledge, less Spartan, whom we merely acknowledge with a certificate and a frown. We basically divide our college grads into two groups as well.

Divide Blacks from Whites. Whether you like it or not, the fact is Blacks left the south, to survive, found more racism everywhere, never received adequate education or social integration or capitalization. Yeah. Capitalization. You know...what daddy and mommy did for you.

Muslims...direct hit targets for phobic Fascists. That's an easy one to skim off. Muslims should smile more and tell satiric jokes. End that problem.

Finally, blame the undocumented, most Hispanic, for everything else.

Fascism, (Republicanism) 101

(Joseph OShaughnessy, ^œ[Comment on: Paul Krugman, Days of Greed and Desperation](#), Krugman Blogs, *New York Times*, November 17, 2017)

Alex Kotch has described their 2017 determination to ensure victory 'state-by-state' throughout the United States of America:

The Bradley Foundation, which has historically supported taxpayer-funded "school choice" initiatives and work requirements for welfare recipients, is named after Lynde and Harry Bradley, two brothers who founded the profitable factory automation manufacturer Allen Bradley Co. After Lynde's death in 1942, the Allen-Bradley Foundation was established. When Allen Bradley was sold to Rockwell International in 1985 for \$1.7 billion, the foundation's assets ballooned and it became the Lynde and Harry Bradley Foundation as it added a focus on promoting the brothers' conservative ideology on a national scale.

Thirty gigabytes of Bradley Foundation internal documents hacked by a group named Anonymous Poland reveal that after a \$200 million influx of cash in late 2012 from the trust of Caroline Bradley, Lynde's wife, the Bradley Foundation geared up to fund networks of conservative think tanks, legal centers, candidate recruitment organizations, media outlets and advocacy groups in 13 states, based on the foundation's successful efforts in Wisconsin. The foundation had already laid the groundwork for a welfare-to-work program and a private school voucher system and defended GOP Gov. Scott Walker in a campaign finance probe, helping him survive a recall election prompted by his dismantling of public-sector unions.

Now the foundation is focusing on five states it views as having a strong conservative infrastructure, thus making them ripe for rightward change. The foundation is working to expand conservative power in Colorado, North Carolina, Oregon, Washington and Wisconsin by funding established networks of right-wing organizations that promote conservatism and help far-right candidates win elections. It's a long-term strategy that "can take decades," according to the longtime CEO of the foundation, Rick Graber, who recently stepped down from his post.

The trove of hacked documents shows that Bradley Foundation has recently given large grants to groups in these states...

(Alex Kotch, [Documents Reveal a Powerful, Secretive Foundation's Blueprint for Spreading Right-Wing Ideology, State by State](#): Meet the Bradley Foundation, giving the Koch brothers a run for their money, *AlterNet*, May 9, 2017; See also: [Tax Forms Reveal Koch Brothers Spent Millions to Shape State Politics in 2017](#), *TruthOut*, February 25, 2018)

A Commenter on Paul Krugman's optimistic *New York Times* article titled "Conservative Fantasies, Colliding With Reality" has summed up the 2017 US situation well:

"Voters will quickly get a lesson in what slashing spending really means - and they won't be happy."

How much nearly all Democrats, and even some moderate Republicans, would like to believe that Paul Krugman's words quoted above will turn out to be an accurate prediction!

We got into this mess because of laziness.

No, not the kind of mythical laziness Republicans use to indict all people who are recipients of welfare or other programs in a social safety net.

This laziness is real, and it is the laziness of many citizens and, incredibly, many politicians to learn how government, the economy and the real world works.

It takes hard work to be a good citizen. You have to be willing to inform yourself, to listen to several sources about how things work and to read, read and read about history and politics.

A good citizen reads what is written by people with whom he or she initially disagrees.

Donald Trump's core group of supporters were lazy citizens, which made them easy to manipulate.

Donald Trump, himself, is a lazy politician because he never bothered to find out how the world works outside the hermetically sealed Trump Tower and "the shows."

Paul Ryan and most diehard conservatives are lazy, because they never bothered to learn the difference between dogma and truth. They take shortcuts out of laziness and rely on crony capitalism.

Democratic politicians were lazy because they did not engage the Trump supporters on their home ground in Middle America.

(SDW, Commenter on: Paul Krugman, ^{ae}[Conservative Fantasies, Colliding With Reality](#), *New York Times*, Opinion Pages, March 17, 2017)

That laziness, born of complacency, and nurtured by a lack of understanding of the nature and responsibilities of citizenship in a democratic society, has infected both citizens and the politicians they have elected, creating fertile ground for reactionary populism to flourish. As Neil Gabler has suggested, "Instead of the Constitution circumscribing reactionary populism, reactionary populism has circumscribed the Constitution."

⁷⁹⁶ Sayu Bhojwani has written an illuminating piece on the ways in which US citizens, whatever their origin, are already exercising their democratic responsibilities. De Tocqueville, in the early 19th century, would have found her story unsurprising. It is, indeed, one of the many ways in which the civic responsibilities of citizenship have, over two centuries, been exercised. As she has explained:

I still often feel like an outsider, but unlike my parents, who accept that as the price of their minority status, I fight it. Not just on my own behalf, but also on behalf of other immigrants like me, for whom America is their chosen home.

Those early years of my life created the foundation for the work I do now - helping to prepare first- and second-generation Americans to run for public office. This work is rooted in my personal journey of negotiating identity and navigating power. This parallel path is the heart of the immigrant narrative, isn't it? Understanding, loving, being who we are while learning, challenging, exploring how that makes us both powerless and powerful.

In my work at The New American Leaders Project, I search for these answers while attempting to help others find them. I am on the same journey as those we train - leaning into our stories, our power, while recognizing that our fellow citizens are not all ready for these stories, this power. Our signature training targets community leaders who are rooted in movement building, self-aware and ready to be champions for an inclusive democracy.

Over a weekend, we teach three things, rooted in the values of authenticity, inclusivity and accountability. First and foremost, we help them explore their leadership journey, and how it has been informed by their own or their family's immigration story. With that as a foundation, they are able to craft an authentic stump speech based on the core values that motivate them to run for office.

Second, our training encourages participants to think about how our current political system favors those who always vote instead of opening democracy up to new or low-efficacy voters. Often, these are immigrants or people of color who have not been invited to participate, and by reaching out to them, candidates can be far more inclusive.

Finally, we push back against the message that immigrants are takers, not makers. We suggest that our communities can and should be stakeholders in democracy by contributing to campaigns. This helps ensure that elected officials are accountable to the community, as voters and donors. At its core, our training is about creating a democracy that is stronger because everyone participates.

We know this model works because even in 2016, one of the most hate-filled election cycles in recent memory, 67 percent of our 39 alumni won their races for local and state office in Arizona, California, New York and Michigan. Now, these leaders from the newcomer communities most under attack in our society today - American Muslims, the formerly undocumented, children of refugees - are serving on school boards, city councils and state legislatures. (Sayu Bhojwani, ^œ[Former NYC Commissioner Is Helping Immigrants Run for Office](#): The New American Leaders Project targets community leaders who are rooted in movement building and ready to champion an inclusive democracy, *Moyers & Company*, May 31, 2017)

As Al Giordano explained in 2009, it is time for US citizens to get involved in ensuring that grass-roots, participatory democracy reflects and reinforces their rights and responsibilities. As someone once said, there are better ways of ensuring the future of participatory democracy, whether in the US or anywhere else, than sitting on an acorn! Unless those who believe in government of the people, by the people, for the people actively work to ensure it, participatory democracy will wither and die.

⁷⁹⁷ Al Giordano, in 2009, explained why, for him, the term *activism* was inappropriate. What Alexis de Tocqueville meant by the term *principle of association* could better be understood as political/communal *organizing*.

As Giordano explained:

I don't believe in activism.

I think activism, as it is generally practiced in the United States, is more often than not a cop out and an excuse by some to avoid doing the heavy lifting of organizing.

What is the difference, you might ask, between activism and organizing?

To me, it's this:

Activism is the practice of preaching to the choir, rallying the already converted, and trying to convince other "activists" to do

your work for you (say, call your Congressman, or write your Senator for or against a piece of legislation). Activists like to make declaratory "statements," hold "meetings," invite other activists (usually fairly hegemonic of the same socio-economic demographics as them), engage in group "process," make "decisions," veto (or attempt to do so) others from taking initiative outside of the groupthink that too often happens in activist projects, declare "party lines," enforce them, and claim that one is part of a "movement" even when there is no evidence that one really is.

Activism seeks media attention through protests and other means, errantly thinking it will draw others to its cause by doing so. This dominant tendency in "activism" becomes a circular, self-reinforcing, self-marginalizing, chest-thumping, bureaucratic and anally-retentive activity and a big waste of time with little impact on the issues or policies it seeks to change or defend.

Organizing is something completely different: It is based on attainable and quantifiable goals (be they small, as in, "put a stop sign in the neighborhood," or be they large, as occurred last year: elect an underdog as president of the United States). Here's a simple yardstick by which to measure: If it doesn't involve knocking on doors, making phone calls or otherwise proactively communicating with people demographically different than you, it's not organizing. If it doesn't involve face-to-face building of relationships, teams, chains of command, and, day-by-day, clear goals to measure its progress and effectiveness, it's not organizing. If it happens only on the Internet, that's not organizing either.

Clearly, both tendencies involve some similar activities. An organizer may call everybody in the neighborhood (or go door to door) to get something done, whereas an activist will call those he knows already agree to recruit them to make some kind of statement that he believes - usually futilely - is *toward* getting something done. And once an organizer or group of organizers has built an effective organization or base, some of the tools of activists (i.e. "call your Congressman") can then be deployed effectively. But that shouldn't cause activists to think that if they do that absent a locally based organizing campaign that it somehow rises to the level of organizing or is the same thing - or even on the same side of the barricades.... (Al Giordano, [[∞]The End of Activism and the Renaissance of Organizing](#), February 5, 2009)

Nancy leTourneau, in a *Washington Monthly* blog posting titled, [[∞]Advice For the Resistance: Don't Just Mobilize... Organize](#) (February 24, 2017), has elaborated on Giordano's theme. As she explained of the US in 2017, "It is critical to move from mobilization to organizing."

Sarah Lazare, in an *Alternet* article titled: [[∞]Activism: Why Popular Assemblies Sweeping the Country Are Building Blocks of the Resistance](#): From Raleigh to Los Angeles, communities on the frontlines are building the movement infrastructure for a coordinated fightback (March 01, 2017), has outlined the growth in 'popular assemblies' across the US in recent years As she says,

While some popular assemblies are connected to regional organizations like the Atlanta-based Project South, others are springing up independently. "People are building new mechanisms of community power," David Abud, regional organizer from the National Day Laborer Organizing Network, told AlterNet. "This is

coming from an understanding that there will continue to be state violence against our communities. The state isn't going to be the one to stop that violence coming to us; we are the ones that will be able to stop it."

798 Ira Chernus has described it like this:

Diagnosing Our Deep Sickness

The Sixties spawned many analyses of the ills of the American system. The ones that marked that era as revolutionary concluded that the heart of the problem was a distinctive mode of consciousness - a way of seeing, experiencing, interpreting, and being in the world. Political and cultural radicals converged, as ^œhistorian [Todd Gitlin](#) concluded, in their demand for a transformation of "national if not global (or cosmic) consciousness."

Nor was such a system uniquely American, they discovered. It was nothing less than the hallmark of Western modernity.

In exploring the nature of that "far deeper malady," Martin Luther King, for instance, turned to the European philosopher Martin Buber, who found the root of that consciousness in modernity's "I-It" attitude. From early childhood, he suggested, we learn to see other people as mere objects ("its") with no inherent relation to us. In the process, we easily lose sight of their full humanity. That, in turn, allows us free rein to manipulate others (or as in Vietnam simply destroy them) for our own imagined benefit.

King particularly ^œdecried such dehumanization as it played itself out in American racism: "Segregation substitutes an 'I-it' relationship for the 'I-thou' relationship and ends up relegating persons to the status of things." But he ^œcondemned it no less strongly in the economic sphere, where it affected people of all races. "The profit motive, when it is the sole basis of an economic system," he said, "encourages a cutthroat competition and selfish ambition that inspire men to be more I-centered than thou-centered... Capitalism fails to realize that life is social." (Ira Chernus, ^œ[Trump, A Symptom Of What? A radical message from a half-century ago](#), *Moyers & Company*, April 18, 2017)

799 In the 3rd decade of the 21st century, many who have built their reputations and opinions on neoliberal understandings assert that claims that central reserve authorities *create* credit out of thin air and that

The only limitations on the funding of the credit requirements of public commons institutions, processes and activities are those of resource availability and the will of government to take responsibility for maintaining economic stability through well-crafted taxation policies which remove excess credit from the economy when it has fulfilled its varied purposes

are profound threats to economic stability and social wellbeing. [Leo Tolstoy's observation](#) is apposite. It brings to mind a well-worn aphorism:

The ignorant can be educated; but [stupidity is genetic!](#)

800 While those who benefit most from low marginal tax rates are most likely to provide doomsday scenarios should rates be raised, the experience of Western nations from 1936 to 1980 makes their protestations groundless. The highest bracket tax rate in the US was set at 79% in 1936; above 90% from 1952-1963; and never fell below 70% over the entire period of 44 years.

The graph below, produced by the US Federal Reserve Bank of St Louis (September, 27, 2018), entitled (somewhat hyperbolically - in line with Daniel Thornton's presumptions on how to 'finance deficit spending') 'Tumultuous tax brackets: U.S. income tax brackets have varied (sometimes wildly) over time', demonstrates the variation in US tax rates over the period 1913-2015.

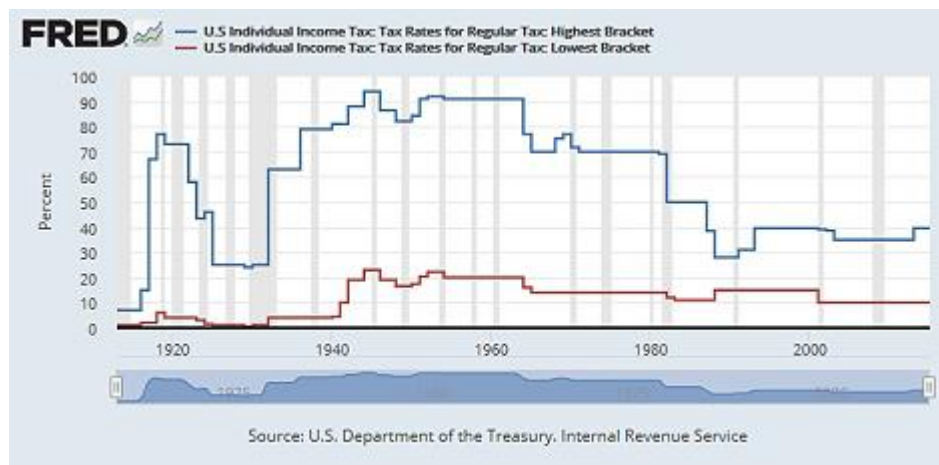

Paul Krugman has explained the rationale underpinning high marginal tax rates on extreme wealth:

Diminishing marginal utility is the common-sense notion that an extra dollar is worth a lot less in satisfaction to people with very high incomes than to those with low incomes. Give a family with an annual income of \$20,000 an extra \$1,000 and it will make a big difference to their lives. Give a guy who makes \$1 million an extra thousand and he'll barely notice it.

What this implies for economic policy is that we shouldn't care what a policy does to the incomes of the very rich. A policy that makes the rich a bit poorer will affect only a handful of people, and will barely affect their life satisfaction, since they will still be able to buy whatever they want.

So why not tax them at 100 percent? The answer is that this would eliminate any incentive to do whatever it is they do to earn that much money, which would hurt the economy. In other words, tax policy toward the rich should have nothing to do with the interests of the rich, per se, but should only be concerned with how incentive effects change the behavior of the rich, and how this affects the rest of the population.

(Paul Krugman, ^œ[The Economics of Soaking the Rich](#), *New York Times*, January 5, 2019)

(^œ[U.S. Individual Income Tax: Tax Rates for Regular Tax: Highest Bracket](#))

As the authors explain,

Income tax law is complex and many of its variables change over time. One much-discussed example is its progressivity - that is, how much the tax rate increases when taxable income increases. In the United States, this progression is determined by a system of brackets: Once a taxable income threshold is reached, any additional income is taxed at a higher rate (the so-called marginal tax rate). The number of those brackets, the incomes at which they kick-in, the associated tax rates, and what constitutes taxable income are all elements in the complex formula of taxes. The graph

shows just two elements of that formula: the first and the last marginal tax rates. This highlights how much these rates have varied through history (compared, let's say, with the past decade or two) and also how high they have been.

(The FRED® Blog, ⁸⁰[Tumultuous tax brackets: U.S. income tax brackets have varied \(sometimes wildly\) over time](#), *Federal Reserve Bank of St Louis*, September 27, 2018)

⁸⁰¹ This has been [demonstrated elsewhere](#) but bears repeating. The *Economic Policy Institute* has highlighted this for the US in a posting entitled 'Top Charts of 2018':

As the economy normalizes following a long, slow recovery from the Great Recession, we are quickly resuming our prerecession course of rising inequality. The fruits of economic growth are bypassing typical families and going straight into the hands of the already-rich.

Our current policy trajectory is doing nothing to reverse the trend of inequality. But it's doing plenty to widen it. This year's edition of Top Charts highlights how policy choices continue to exacerbate inequality and how we can achieve more broadly shared prosperity through better policy choices.

Their first chart:

The upward march of inequality is firmly reestablishing itself

Cumulative percent change in real annual earnings, by earnings group, 1979–2017

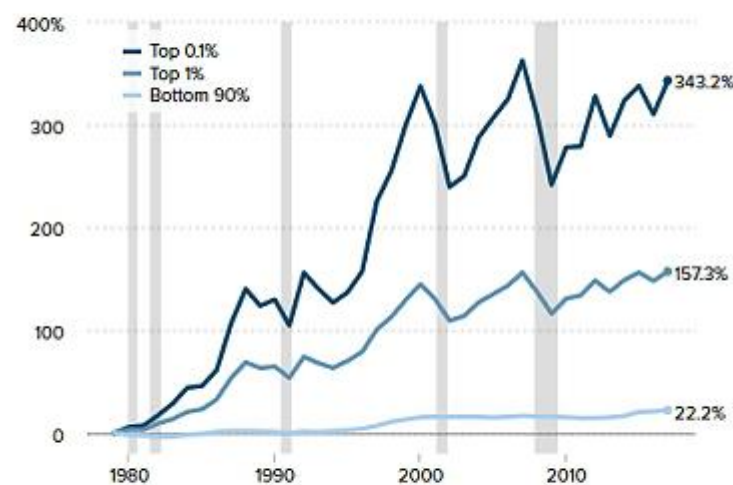

Chart Data

Source: Adapted from Figure A in Lawrence Mishel and Julia Wolfe, "Top 1 Percent Reaches Highest Wages Ever—Up 157 Percent Since 1979," *Working Economics* (Economic Policy Institute blog), October 18, 2018. Shaded areas denote recessions.

While top 1 percent earnings took a dive following the Great Recession, by 2017 those earnings had risen to their highest level ever, and the annual earnings of the top 1 percent had risen 157 percent cumulatively since 1979. For the top 0.1 percent, earnings have grown a whopping 343.2 percent since 1979. In contrast, earnings of the bottom 90 percent of workers rose just 22.2 percent over the same period.

The dynamic of large but temporary earnings declines for the highest earners during the Great Recession reflects the composition

of their pay packages. For CEOs and other executives in the top 1 and 0.1 percent, earnings include stock options and other compensation measures linked strongly to firms' stock market performance. As the stock market fell rapidly during the recession, this led to a sharp decline in earnings. But as stock prices went back up, so did the earnings of the top 1 and 0.1 percent - and so did inequality.

(⁸⁰²[Top charts of 2018: Twelve charts that show how policy could reduce inequality - but is making it worse instead](#) *Economic Policy Institute*, December 20, 2018)

⁸⁰² The 'cooperatives' movement in Western capitalist communities is a step in this direction, though, for widespread adoption and success, it needs to be publicly supported through legislative empowerment and by a deep, abiding commitment to communal interdependence - to what de Tocqueville (1835) called the "principle of association". [In the absence of both protective legislation](#) and community commitment to that 'principle of association', successful cooperative movements can find themselves in a no-holds-barred war with the private sector.

Jay Walljasper has painted an optimistic picture of cooperative activity in Quebec. The most important achievements of the movement he describes are in raising the profile of existing cooperative organizations and in providing a sheltered and supportive environment within which new ventures can grow and mature. As he says,

Quebec's social economy (also translated as "solidarity economy") extends far beyond the province's two major cities and includes manufacturing, agricultural cooperatives, daycare centers, homecare services, affordable housing, social service initiatives, food coops, ecotourism, arts programs, public markets, media and funeral homes. The capital that fuels all this economic activity comes from union pension funds, non-profit loan funds, credit unions, government investment and philanthropy.

"We always say the social economy is simply the formalization of the commons. It's social ownership, the goal of which is a sustainable, democratic economy with a market - instead of a market economy," explains Nancy Neamtan, co-founder of Chantier de l'Economie Sociale, a network of social economy organizations whose anniversary banquet is described above. "Our mission is building a broader vision of what the economy actually is."

"When Chantier started out, a lot of people said it wouldn't work. We had unions, women's organizations, green groups, and many thought it was too diverse," Neamtan says. "But it does work." Evidence for her assertion is visible all around - Chantier's office is tucked into a six story building that takes up most of a city block, all of which is filled with social economy organizations.

Not all of these social businesses are new - some of the credit unions, cooperatives and union pension funds go back a hundred years. "But they were largely invisible to many people until the name social economy became popular," Neamtan adds...

(Jay Walljasper, ⁸⁰³[A More Equitable Economy Exists Right Next Door: In Quebec, co-ops and non-profit businesses account for 8-10 percent of GDP](#), *Alternet*, Local Peace Economy, March 22, 2017)

⁸⁰³ (24/07/17) Over the past half century, Western nations have been gripped not only in a fever of privatization but also in a fever of corporatization.

(09/10/17) Public services have been reorganized to mimic private corporations and their administrations have been charged with reorganizing their responsibilities [as though they were private corporations delivering dividends to their shareholders](#) (in this case their governments). Their *raison d'être* has shifted from the efficient delivery of public services to citizens to the 'profitable' management of 'resources' in order to ensure a dividend to government.

This was, of course, an inevitable consequence of the neoliberal presumption that sovereign [governments must 'borrow' in private money markets](#) to cover the costs of government. Through corporatization of government services those services could, at last, begin to 'cover their costs'.

Damian Paletta, in a *Washington Post* article describing the 'Federal deficit' inconsistencies of the US Republican Party, succinctly summarized the prevailing neoliberal understanding of the nature and importance of 'the deficit':

With the House passing a critical budget resolution this past week, GOP lawmakers are charging forward next week with plans to cut taxes in a way that could add more than \$1.5 trillion to the government's debt over 10 years, with the goal of legislation by early next month. That is on top of an effort to significantly increase military spending. White House officials say their focus is on growing the economy now and dealing with the debt later.

The moves come as the federal deficit, the *difference between what the government earns in revenue and spends on programs*, is growing more quickly. It will be \$600 billion this year and is projected to reach \$1.46 trillion in a decade, even without additional policy actions.

(Damian Paletta, [In a switch, GOP deserts its budget-cutting mantra](#), *Washington Post*, October 7, 2017) (My emphasis)

After all, as [Margaret Thatcher explained](#) to the faithful,

If the State wishes to spend more it can do so only by borrowing your savings or by taxing you more. It is no good thinking that someone else will pay - that "someone else" is you. There is no such thing as public money; there is only taxpayers' money.

Citizens become transformed into 'customers' who should accept responsibility for the costs of the services they choose to use. Administrations become central and the resources they 'manage' include not only the services they traditionally provided but also the personnel they employ.

In what ways can available 'resources', such as employees and infrastructures, be [reorganized to maximize profits](#)?

Citizens become merely one of the means by which profits are realized and employees become a resource to be mined for profit. In many cases, the delivery of the services which originally justified the existence of those 'corporate entities' becomes a less-profitable distraction from more 'rewarding' pursuits.

Investopedia has succinctly defined and spelled out the aim of corporatization:

The act of reorganizing the structure of a government owned entity into a legal entity with the corporate structure found in publicly traded companies. These companies tend to have a board of

directors (B of D), management and shareholders. However, unlike publicly traded companies, the government is typically the company's only shareholder and... the shares in the company are not traded publicly...

The main goal of corporatization is allowing the government to retain ownership of the company but still enable it to run as efficiently as its private counterparts because government departments sometimes are inefficient with the level of bureaucracy involved.

Furthermore, the government may one day feel that the private sector could do a better job of running the company, possibly conducting an offering on the stock market in order to divest it. (*Investopedia*, ^œ[Definition of Corporatization](#), [accessed 24 July 2017])

As JTMcPhee has observed of US citizens, in a comment on an article posted on the *naked capitalism* website (September 27, 2019) by Yves Smith:

Most of us don't know the history of corporations as legal entities. The corporate charter was a privilege, and a very limited one too. It had a finite term, and could be and was revoked for violations and illegal behavior. And there were laws and enforcement and a different attitude toward corporations. Corporate officers were subject to liability... and there's no reason (ha ha) that the old rules could not be brought back.

(^œ[JTMcPhee, Comment \(September 27, 2019\)](#) on Michelle Meagher, ^œ[We Can't Rely on Corporations to Reform Themselves - We Must Challenge Their Power](#), openDemocracy, 26 September, 2019)

(See this site (^œ[Reclaim Democracy!](#)) for an explanation of the hidden history of Corporations in the United States)

Wikipedia has defined the resulting managerialism well:

Managerialism is a belief in the value of professional managers and of the concepts and methods they use. Contemporary management writers such as Thomas Diefenbach associate managerialism with hierarchy. But managerialism is also linked to control, accountability and measurement, and an ideologically determined belief in the importance of tightly managed organizations, as opposed to individuals, or to groups that do not resemble an organization.

Following Enteman's classic on Managerialism: *The Emergence of a New Ideology* (1993), American management experts Robert Locke and J C Spender see managerialism as an expression of a special group - management - that entrenches itself ruthlessly and systemically in an organization. It deprives owners of decision-making power and workers of their ability to resist managerialism. In fact the rise of managerialism may in itself be a response to people's resistance in society and more specific workers' opposition against managerial regimes

Building on Enteman (1993) and Locke/Spender (2011) the most up-to-date definition of Managerialism has been delivered by Thomas Klikauer in "Managerialism - Critique of an Ideology" (2013) defining Managerialism as

[....] Managerialism combines management knowledge and ideology to establish itself systemically in organisations and

society while depriving owners, employees (organisational-economical) and civil society (social-political) of all decision-making powers. Managerialism justifies the application of managerial techniques to all areas of society on the grounds of superior ideology, expert training, and the exclusive possession of managerial knowledge necessary to efficiently run corporations and societies.

(Wikipedia, ⁸⁰²[Managerialism](#), [accessed 23 July, 2017])

⁸⁰⁴ It is time for all who understand the importance of 'the commons' in a democratically organized state to think outside the box; to imagine solutions which might not depend upon the activities and imaginations of capitalist 'wealth-makers'. Here is an example of such thinking; a vision of a world where real people provide real solutions to that soul-destroying poverty which results from loss of employment and income in an unregulated capitalist world:

...It is time to begin imagining specific, concrete solutions to what is becoming a fundamental dilemma of our time.

Imagine, for example, that every American citizen over the age of 16 can choose to earn a living-wage in exchange for providing a useful service to their local or regional community. Imagine that every local community has a free health and pharmacy clinic (in conjunction with a free methadone and counseling center) - where some of the employees are the living-wage earners. Imagine further that every local community has a housing co-op system (built in part by some of the living-wage earners) that makes available - to every family that needs it - a basic dwelling unit that is warm, dry, well-ventilated, and which provides for cooking, bathing, sleeping, and family gathering. Imagine that every local community has at least one community garden and rookery (managed by some of the living-wage earners) which grows, harvests, and processes vegetables, fruits, eggs, cheese - and perhaps fish - for local consumption. Imagine that every local community has at least one pre-school day-care (manned at least in part by some of the living-wage earners) which provides, free of charge, a safe, early childhood learning environment between the hours of 6 A.M. and 6 P.M. Imagine that every local community has a system of retirement co-housing villages (built and staffed, in part, by the living-wage earners).

Imagine, in other words, replacing what we now define as "poverty" with another kind of living condition - we might call it "community subsistence."...

(J. D. Alt, ⁸⁰³[The New Poverty](#), *New Economic Perspectives*, December 28, 2017)

⁸⁰⁵ Alt has asked why 'we - whether intentionally or by happenstance - have put in place and operate a money system that seamlessly creates dollars, as necessary, for profit-making enterprise, but specifically does NOT create dollars for not-for-profit ventures'.

Why does our monetary system only benefit and facilitate activity within the for-profit economy, while, at the same time, making activity focused on the commonweal unsustainable? As he explains:

In aggregate, then, the money system we've established and operate so efficiently only creates money, as it's needed, to cover the profits of profit-seeking ventures. No money is created for

ventures which do not make profits. This dynamic is doubled down on by the fact that we also operate with the institutional insistence that the sovereign government, if it decides to undertake something for the collective good, must pay for that collective good with "tax dollars" - which are dollars previously created in the profit-earning system.

There are two things peculiar about this. First is the implied premise that profit-seeking ventures are inherently good, while not-for-profit ventures are merely optional "niceties" that we can pay for on the side, so to speak. The second is our insistent belief that the money system we have cannot rationally be managed in any other way. (J. D. Alt, ^œ[Two Loaves](#), *New Economic Perspectives*, October 7, 2016)

⁸⁰⁶ This enthusiasm for supporting [the international sale of Western armaments](#) is scarcely new to President Trump. As William Hartung explained:

To be fair, Donald Trump is hardly the first American president to make it his business to aggressively promote weapons exports. Though seldom a highlighted part of his presidency, Barack Obama proved to be a weapons salesman par excellence. He made ^œ[more arms offers](#) in his two terms in office than any U.S. president since World War II, including an astounding ^œ[\\$115 billion in weapons deals](#) with Saudi Arabia...

(William D. Hartung, ^œ[Weapons for Anyone: Donald Trump and the Art of the Arms Deal](#), *TomDispatch*, April 1, 2018)

⁸⁰⁷ Michael Beckley has described the problem when a nation's armed forces become almost independent; setting their own agendas and developing their own priorities:

The United States has spent \$19 trillion on its military since the end of the Cold War. That is \$16 trillion more than China spent and nearly as much as the rest of the world combined spent during the same period. Yet many experts think that the United States is about to lose a devastating war.

In March, Admiral Philip Davidson, then the commander of U.S. forces in the Indo-Pacific, warned that within the next six years, China's military will "overmatch" that of the United States and will "forcibly change the status quo" in East Asia. Back in 2019, a former Pentagon official claimed that the U.S. military routinely "gets its ass handed to it" in war games simulating combat with China. Meanwhile, many analysts and researchers have concluded that if China chose to conquer Taiwan, the Chinese People's Liberation Army (PLA) could cripple whatever U.S. forces tried to stand in its way.

It has become conventional wisdom that this gathering storm represents the inevitable result of Beijing's rise and Washington's decline. In fact, it is nothing of the sort. The United States has vast resources and a viable strategy to counter China's military expansion. Yet the U.S. defense establishment has been slow to adopt this strategy and instead wastes resources on obsolete forces and nonvital missions.

Washington's current defense posture doesn't make military sense, but it does make political sense - and it could very well endure. Historically, the United States has revamped its military only after

enemies have exposed its weaknesses on the battlefield. The country may once again be headed for such a disaster. (Michael Beckley, ^œ[America Is Not Ready for a War With China: How to Get the Pentagon to Focus on the Real Threats](#), *Foreign Affairs*, June 10, 2021)

⁸⁰⁸ A well balanced, researched and documented account of the United States military industrial complex and its funding and operations entitled 'The Business of War', provides an excellent summary of it all. As a promotional introduction explains:

As the Ukrainian conflict drags on, the U.S. continues to send weapons to Ukraine whilst American arms dealers profit. "The Business of War ", a 30-minute CGTN special, explores the history of U.S. arms dealers and how they benefit from conflicts. The special will focus on 4 chapters - Profit from Conflict, The Military Industrial Complex, Wars & American interests, and American Leadership or Hegemony (^œ[The Business of War](#), CGTN, Video 21:25, 14 August 2022)

⁸⁰⁹ For a comparison of national military expenditures, see ^œ[List of countries by military expenditures](#), *Wikipedia*.

Andrew Cockburn in an article entitled ^œ[Getting the defense budget right: A \(real\) grand total, over \\$1.4 trillion](#) (*Responsible Statecraft*, May 07, 2023) and subtitled:

Laying it out in graph form shows past and present gimmicks used to manipulate the public's perception of what is considered 'defense'

described the ways in which the true US 2023 military budget is massaged to minimize its apparent size.

Rebecca Kheel, in a report entitled 'Biden requests \$753B defense budget, a slight increase' outlined the continued growth of US military funding in 2021:

A \$753 billion defense budget would be a modest increase over this year's \$740 billion, as would a \$715 billion Pentagon budget compared to this year's \$704 billion.

The increases roughly reflect the rate of inflation, likely not enough to appease Republicans who have been pushing Biden to increase the budget by 3 to 5 percent over inflation. That's the amount of annual increases officials early in the Trump administration said would be necessary to properly fund a strategy that reorients the military toward competition with China and Russia.

Progressive Democrats, meanwhile, have been urging Biden to slash the defense budget by at least 10 percent, arguing the COVID-19 pandemic has demonstrated U.S. spending priorities have been misguided.

Liberal groups were fuming ahead of Friday's budget release after reports of the \$715 billion Pentagon figure.

"President Trump's Pentagon budget was already outrageous. President Biden just outdid it," Win Without War advocacy director Erica Fein said in a statement Thursday night. "Following a year of deadly proof that throwing money at the Pentagon does not keep us safe from modern day threats, it is unconscionable to not only extend Trump's spending spree, but to add to it."

In response to progressive criticism, an administration official defended the request by arguing the budget works to bring non-defense spending "back to its 30-year historical average."

(Rebecca Kheel, ^œ[Biden requests \\$753B defense budget, a slight increase](#), *The Hill*, April 09, 2021)

As Burns and Lardner explained, in 2018 the US military budget remained on growth steroids:

It's the biggest budget the Pentagon has ever seen: \$700 billion...

And next year it would rise to \$716 billion. Together, the two-year deal provides what Defense Secretary Jim Mattis says is needed to pull the military out of a slump in combat readiness at a time of renewed focus on the stalemated conflict in Afghanistan and the threat of war on the Korean peninsula.

The budget bill that President Donald Trump signed Friday includes huge spending increases for the military: The Pentagon will get \$94 billion more this budget year than last -- a 15.5 percent jump. It's the biggest year-over-year windfall since the budget soared by 26.6 percent, from \$345 billion in 2002 to \$437 billion the year after, when the nation was fighting in Afghanistan, invading Iraq and expanding national defense after the 9/11 attacks.

The extra money is not targeted at countering a new enemy or a singular threat like al-Qaida extremists or the former Soviet Union. Instead the infusion is being sold as a fix for a broader set of problems, including a deficit of training, a need for more hi-tech missile defenses, and the start of a complete recapitalization of the nuclear weapons arsenal.

(Robert Burns and Richard Lardner, Associated Press, ^œ[Congress, Trump give Pentagon a budget the likes of which it has never seen](#), *Chicago Tribune*, February 9, 2018)

Kimberly Amadeo, in a well-researched article entitled 'U.S. Military Budget: Components, Challenges, Growth: Why Military Spending Is Bigger Than You Think', has given a breakdown of the focuses of US military spending for the period October 1, 2018 through September 30, 2019 (Financial Year 2019 (FY2019)):

Estimated U.S. military spending is \$886 billion. That's from ^œ[President Trump's budget](#) for Fiscal Year 2019 submitted to Congress. It covers the period October 1, 2018 through September 30, 2019. Military spending is the second largest item in the federal budget after Social Security. The United States spends more on defense than the next nine countries combined.

There are four components.

- First is the \$597.1 billion base budget for the Department of Defense.
- Second is the overseas contingency operations for DoD to fight the Islamic State group (\$88.9 billion).
- Third is the total of other agencies that protect our nation. These expenses are \$181.3 billion. They include the Department of Veterans Affairs (\$83.1 billion), the State Department (\$28.3 billion), Homeland Security (\$46 billion), FBI and Cybersecurity in the Department of Justice (\$8.8

billion) and the National Nuclear Security Administration in the Department of Energy (\$15.1 billion).

► The last component is \$18.7 billion in OCO funds for the State Department and Homeland Security to fight ISIS.

On February 9, 2018, Congress passed a spending bill that appropriates \$700 billion for the defense base budget and overseas contingency operations. Congress will delineate spending for each of the other departments by March 2018.

(Kimberly Amadeo, ^œ[U.S. Military Budget: Components, Challenges, Growth: Why Military Spending Is Bigger Than You Think, the balance](#), February 15, 2018)

⁸¹⁰ Of course, disappointingly, Wertheim feels obliged (perhaps because he is writing for *Foreign Affairs*) to truncate history, ascribing 'blame' to [those maneuvered into conflict by United States'](#) policies and agencies (truly a nation which only remembers the past when it is to its advantage):

One can hardly blame U.S. policymakers for the turmoil. [It was Russian President Vladimir Putin who decided to invade Ukraine in 2022, and Hamas that chose to attack Israel in 2023.](#) No one had a crystal ball to predict these shocking actions years in advance. Yet American officials bear responsibility for making a failed wager of their own. They hoped entire regions of the world would sit still because they preferred to turn their gaze elsewhere, even as the United States remained ensconced in those regions' security arrangements. The Biden administration wanted to prioritize what in its view mattered most while declining to disentangle the United States from what mattered less.

This is a form of wishful thinking - perhaps as naive as invading countries to liberate them - and ought to be recognized as such. The Biden administration is not the first to indulge in it. The rationale for American global dominance after the Cold War, as articulated by the Pentagon in 1992, was that by maintaining military primacy in most world regions, the United States would suppress competition among other countries, dissuade challengers from emerging, and keep the peace at a reasonable cost to Americans. But the unipolar era is over. Going forward, the options are stark: the United States can selectively retrench and control costs and risks, or it can stick with global primacy and lurch from crisis to crisis.

(Stephen Wertheim, ^œ[Why America Can't Have It All: Washington Must Choose Between Primacy and Prioritizing, Foreign Affairs](#), February 14, 2024)

⁸¹¹ Claims made through 2022 of the 'true intentions' of various negotiators involved in delivering the 2014 and 2015 Minsk Agreements seem heavily propagandized. As has been true throughout 2022, the intentions of those involved in the Minsk negotiations have become the subject of an [avalanche of biased commentary](#).

Angela Merkel's 2022 explanation of her motivation in endorsing the agreements would seem to indicate that she was not, in fact, acting in 'good faith':

...the 2014 Minsk agreement was an attempt to give Ukraine time.

She has also used this time to become stronger, as you can see today. The Ukraine of 2014/15 is not the Ukraine of today. How to take part in the battle for Debaltseve (railway town in Donbass, Donetsk Oblast, ed.) In early 2015, Putin could easily have overrun them. And I doubt very much that the NATO states could have done as much then as they do today to help Ukraine...

It was clear to all of us that this was a frozen conflict, that the problem had not been solved, but that was exactly what gave Ukraine valuable time...

(Tina Hildebrandt and Giovanni di Lorenzo, ^œ[Angel Merkel: "Did you think I was coming with a ponytail?"](#), *ZEIT ONLINE*, December 07 2022) [translated from German]

And, of course, it remains true that the Ukrainian authorities throughout the eight years following the Agreements did very little to honor the commitments made.

RT has reported Putin's response to Merkel's comments:

Putin said he was surprised and disappointed by former German chancellor Angela Merkel's confession that the purpose of the Minsk peace agreements was to "buy time" for Ukraine. However, he added that it justified Moscow's military operation against Kiev.

"Their point was only to load up Ukraine with weapons and prepare it for hostilities. We see that. Honestly, we may have realized that too late, and maybe should have started all this sooner," Putin said.

While he knew that Ukraine did not intend to implement the deal, "I thought other participants in that process were honest. Turns out they too were deceiving us," said the Russian president.

(^œ[Putin talks Ukraine, Merkel and nuclear war](#), *RT*, 09 December, 2022)

M. K. Bhadrakumar (November 29, 2022)), one of the less obviously biased of those commentators (as always, readers are left to sift through the deluge of disinformation as best they can), ^œ[described the purpose of Western European negotiators and their US 'advisors'](#) in entering into what Russia assumed to be 'good faith' negotiation of the two Minsk Accords.

It appears that those Western negotiators realized that Russia really did want to find a peaceful solution to the 'Donbass problem' and played on that perceived 'weakness' in order to prepare for a prolonged war in the region:

⁸¹² Asaf Elia-Shalev of *The Times of Israel* explained:

A major funder of pro-Israel politics and a prolific donor to Jewish causes, Adelson, 79, is carrying on a legacy she built with her late husband, casino magnate Sheldon Adelson. The Adelson family has long been one of the largest sources of campaign money for Republican candidates and has backed Trump during each of the last three general elections. Now, the widow is wielding an estimated net worth of \$35 billion on her own. Though seen as more deliberate in her decision-making, she has not meaningfully departed from her late husband's politics.

Her contribution was the largest in an array of new big money disclosures on Tuesday, eclipsing the \$75 million contributed by Elon Musk, the world's richest person and head of Tesla and SpaceX, to his own pro-Trump super PAC (political action committee).

(Asaf Elia-Shalev, ^œ[Miriam Adelson gives \\$100 million to Trump campaign, making good on reported pledge](#), *The Times of Israel*, 17 October 2024)

This is, of course, a long-established tradition within the United States' political scene. As always, to understand US politics, one needs to '[follow the money](#)'

Alan Kronenberg described the major funders of the 2024 presidential election campaigns:

Here are the top political donors nationally in the 2024 election cycle, according to data tabulated by the campaign finance nonprofit ^œ[OpenSecrets](#). These individuals have given the most money to federal political causes - not just candidates' campaign committees, but also political parties, political action committees and outside groups....

(Alan Kronenberg, ^œ[The Biggest Political Donors of the 2024 Election](#), *U. S. News*, November 5, 2024)

Millard Fillmore provided an acerbic, withering summation of Donald Trump which will resonate with many who find Trump's style and policies hard to take:

'Why do many British people not like Donald Trump? This was a question asked on Quora last February 12 [2019]: Why do many British people not like Donald Trump?

Nate White is a London-based copy writer - that is, advertising guy. His Quora profile says, "Drinks coffee. Writes copy." Nate took a swing at answering the question, and knocked that ball into orbit.

Here is 'Nate White's stunning answer to the question: Why do many British people not like Donald Trump?'

A few things spring to mind

Trump lacks certain qualities which the British traditionally esteem.

For instance, he has no class, no charm, no coolness, no credibility, no compassion, no wit, no warmth, no wisdom, no subtlety, no sensitivity, no self-awareness, no humility, no honour and no grace = all qualities, funnily enough, with which his predecessor Mr. Obama was generously blessed.

So for us, the stark contrast does rather throw Trump's limitations into embarrassingly sharp relief.

Plus, we like a laugh. And while Trump may be laughable, he has never once said anything wry, witty or even faintly amusing = not once, ever.

I don't say that rhetorically, I mean it quite literally: not once, not ever. And that fact is particularly disturbing to the British sensibility = for us, to lack humour is almost inhuman.

But with Trump, it's a fact. He doesn't even seem to understand what a joke is = his idea of a joke is a crass comment, an illiterate insult, a casual act of cruelty....

(Millard Fillmore, ^œ[Nate White's stunning answer to the question: Why do many British people not like Donald Trump?](#), *Millard Fillmore's Bathtub*, accessed February 10, 2025)

813 Puppet and Puppet Master? Who sets the United States' Middle East agenda?

Today I'm delighted to welcome Israeli Prime Minister Benjamin Netanyahu back to the White House. It's a wonderful feeling and a wonderful event. We had fantastic talks, and thank you very much, with your staff.

I want to say it's an honour to have you with us. Over the past four years, the US and the Israeli alliance has been tested more than any time in history, but the bonds of friendship and affection between the American and Israeli people have endured for generations and they are absolutely unbreakable.

I'm confident that, under our leadership, the cherished alliance between our two countries will soon be stronger than ever. We had a great relationship. We had great victories together four years ago, not so many victories over the past four years, however. In my first term, prime minister and I forged a tremendously successful partnership that brought peace and stability to the Middle East like it hadn't seen in decades.....

Over the past 16 months, Israel has endured a sustained aggressive and murderous assault on every front, but they fought back bravely. You see that and you know that. What we have witnessed is an all-out attack on the very existence of a Jewish state in the Jewish homeland. The Israelis have stood strong and united in the face of an enemy that has kidnapped, tortured, raped and slaughtered innocent men, women, children and even little babies.

I want to salute the Israeli people for meeting this trial with courage and determination and unflinching resolve. They have been strong. In our meetings today, the prime minister and I focused on the future, discussing how we can work together to ensure Hamas is eliminated and ultimately restore peace to a very troubled region..

...[W]e should go to other countries of interest with humanitarian hearts, and there are many of them that want to do this and build various domains that will ultimately be occupied by the 1.8 million Palestinians living in Gaza, ending the death and destruction and frankly bad luck.

This can be paid for by neighbouring countries of great wealth. It could be one, two, three, four, five, seven, eight, 12. It could be numerous sites, or it could be one large site. But the people will be able to live in comfort and peace and we'll make sure something really spectacular is done.

They're going to have peace. They're not going to be shot at and killed and destroyed like this civilisation of wonderful people has had to endure. The only reason the Palestinians want to go back to Gaza is they have no alternative. It's right now a demolition site. This is just a demolition site. Virtually every building is down.

They're living under fallen concrete that's very dangerous and very precarious. They instead can occupy all of a beautiful area with homes and safety and they can live out their lives in peace and harmony instead of having to go back and do it again.

The US will take over the Gaza Strip and we will do a job with it too. We'll own it and be responsible for dismantling all of the dangerous unexploded bombs and other weapons on the site, level the site and

get rid of the destroyed buildings, level it out. Create an economic development that will supply unlimited numbers of jobs and housing for the people of the area ... do a real job, do something different.... (Sarah Harvey, ^œ[What Donald Trump said on Gaza - his statement in full President Donald Trump said Palestinians could be resettled away from their homes in the war-torn enclave](#), *Independent* (UK Edition), 05 February 2025)

⁸¹⁴ When a nation's wellbeing is inextricably merged with and dependent on the 'necessities' and 'profitability' of its military/ industrial/ security organizations, then, the elaboration of internal security institutions and the focus on both internal and international adventurism, weapons development, manufacture and sales become inevitable.

In a military Keynesian state, forever-war is not a consequence of external threat but of internal necessity. 'Threats' (both internal and external), if they do not present themselves, must be manufactured to justify constantly expanding 'budgets'.

The *United States Department of Defense* ^œ[Intergovernmental Affairs Program](#) website explains:

National security requires a 'Whole of Government' approach. DoD's Federal agency partners, states, localities, non-profit groups, and the private sector play a critical role in mission readiness and economic security. Supporting and protecting our nation's defense activities and men and women in uniform goes far beyond the military fence line.

To effectively and efficiently address the pressing and complex security challenges this nation faces, DoD must enlist the support of stakeholders at all levels of government and industry. A primary goal of this program is to assist states, counties, municipalities, regions, and other communities to foster cooperation with military installations to:

- enhance the military mission;
- achieve facility and infrastructure savings and reduced operating costs;
- address encroachment and compatible land use issues;
- support military families; and,
- increase military, civilian, and industrial readiness and resiliency.

OLDCC's Intergovernmental Affairs (IGA) program is the foundation for the success of all our activities. Our IGA program leverages, integrates, and amplifies the goals and activities of each OLDCC's programs to ensure defense priorities benefit from the synergy created by a diverse and crosscutting set of stakeholders. For instance, the Economic Adjustment Committee coordinates all our Federal partners on economic, workforce, manufacturing, environmental, and infrastructure challenges and opportunities to better the National Defense Strategy.

The annual ^œ[Report on Defense Spending by State](#) published by the *United States Department of Defense* provides a breakdown of spending in each State.

Amanda Winters, in a report to *The National Governors Association*, has provided a summation of the impact of such spending within each state. As she explains:

Clear and contextual data that outlines the ecosystem of defense-related spending and the intersections to state investment can maximize efficiency, state-federal collaboration, and positive outcomes for infrastructure and community impact...

States play a critical role in supporting the national defense mission. Installations, supply chains, service members and communities rely on a complex web of state, territorial, and federal systems. This ecosystem of investment and support builds off of the Department of Defense's National Defense strategy and is resourced by Congress. Installation, equipment, personnel, and service spending drives the development of industry supply chains and regional economies. Foundational data on these DoD investments is captured in the annual Defense Spending by State (DSBS) report.

This analysis is compiled to help state and local leaders assess a region's defense assets and identify opportunities to target assistance to support more resilient and innovative communities and businesses. The National Governors Association is partnering with the DoD to explore the ways the DSBS data can inform and strengthen state economic and infrastructure planning.

(Amanda Winters, [Defense Spending By State Report: Federal Data To Support State Strategic Planning](#), *National Governors Association*, October 25, 2021)

- ⁸¹⁵ Lee Lacy, in an essay replete with standard US presumptions about the nature of the 'Soviet Union', explained the post-war reasoning behind the [Interstate Highway construction program](#):

The IHS was the largest public works project undertaken in the United States and came at a time when the Cold War consumed not only a large part of the federal budget but also the attention of the U.S. public.

The Cold War played a pivotal role in the creation of the IHS. Shortly after Eisenhower took office in 1953, Soviet leader Josef Stalin died, setting off a power struggle in the Kremlin. It was not until September that Nikita Khrushchev emerged as the general secretary of the Communist Party of the Soviet Union.

On Aug. 12, 1953, the Soviets exploded their first hydrogen bomb, thus moving closer to the United States in nuclear parity. It was unsettling to have a superpower with an unstable government armed with the latest nuclear weapons technology. This event further jolted an already rattled U.S. public, which routinely engaged in civil defense drills. Citizens built bomb shelters, stockpiled food, and prepared for imminent nuclear war.

In a July 1954 speech to the Governors' Conference, Vice President Richard Nixon expressed concern over the "appalling inadequacies" of the existing U.S. road infrastructure and its inability to meet the needs for responding to a national emergency on the scale of atomic war. Nixon mentioned atomic or atomic war no less than 10 times in the speech.

(Lee Lacy, [Dwight D. Eisenhower and the birth of the Interstate Highway System](#), *Army Sustainment Magazine Archives*, February 20, 2018)

816 Hal Brands asked the question which the first year of Biden's presidency evokes: 'Does America Have More Rivals Than It Can Handle?':

The United States is an overstretched hegemon, with a defense strategy that has come out of balance with the foreign policy it supports. Biden's first year has already shown how hard it is to manage an unruly world when Washington has more responsibilities - and more enemies - than it has coercive means. Over the longer term, a superpower that fails to keep its commitments in line with its capabilities may pay an even heavier price.

(Hal Brands, ^œ[The Overstretched Superpower: Does America Have More Rivals Than It Can Handle?](#), *Foreign Affairs*, January 18, 2022)

I must confess that I find Brands' apparent belief that these 'rivals' and 'threats' are 'real' less than convincing. They seem, to me, largely those of an aging empire experiencing a common problem of 'the aged'. As a ^œ[website dedicated to helping those who care for the aged](#) has explained:

Aggressive behaviors may be verbal or physical. They can occur suddenly, with no apparent reason, or result from a frustrating situation. While aggression can be hard to cope with, understanding that the [empire]... is not acting this way on purpose can help.

The late ^œ[January 2022 nonsense in Ukraine](#) seems to have been clearly aimed at testing the tolerance of Russia to unprovoked threat escalation:

U.S. officials confirmed to CBS News that the Biden administration had given permission to several NATO allies to send emergency shipments of U.S.-made weapons - including anti-tank missiles - to Ukraine to reinforce the country's defenses. State Department sources said allies including Estonia, Latvia, Lithuania and the U.K. were cleared to make "Third Party Transfers" of U.S.-made and supplied equipment to Ukraine, which one official described as part of a race "to get as much gear to the Ukrainians as quickly as possible."

There is a sad insanity about US behavior. They have walked away from responsible engagement in negotiations to address Russia's clearly explained security concerns.

Instead, they have opted to increase the very risks to Russia's security which lie at the heart of the 2022 tensions between Ukraine (and other border nations) and Russia.

This cannot be justified as rational foreign policy. It seems that those responsible for US foreign policy were prepared to sacrifice Ukraine in a tawdry, sociopathic determination [to provoke war](#). And on April 26 2022 it appears that they are ^œ[trying to provoke Russia into a confrontation with Moldova](#)!

US behavior reminds one of similar escalation in provocations in other regions of the world - leading to US invasion and the devastation of those targeted nations - over the past several decades. This should signal to all who are not blind followers that there is something seriously wrong with US 'foreign policy' leadership.

Given the US track record in fomenting Western 'outrage' against targeted nations and then engineering 'coalitions of the willing' to become involved in invasion and subjugation of those targeted nations, there is nothing irrational in Russia's subsequent behavior. Meekly

accepting continued escalation of tensions and provocations can, given US' previous history this century, only ensure mounting US belligerence.

Bullies are not deterred by lack of retaliation - that merely encourages escalated bullying!

Following George Bush into the Middle East (because '9/11') proved to be based on serious [distortions of reality and outright lying](#) but, following Joe Biden into an unprovoked escalation of tensions in Europe and Asia cannot be justified in any way!

It is long-past time for 'The West' to wake up to the reality of an aging empire acting increasingly irrationally in attempts to demonstrate its 'indispensability'.

⁸¹⁷ The range of activities in which US forces are engaged in vassal states is wide, many of them clandestine in nature and readily denied by US officials. These include, since 2001, ^œ[secret prisons operated by both the CIA and US Special Forces](#).

Among the ^œ[clandestine activities](#) routinely denied by the US is involvement with vassal states in 'managing' biological research laboratories (by divorcing 'management' - and funding - from 'ownership', the US believes it is justified in claiming that it does not have any such facilities in vassal states). The closest any US official has come to admitting this has come from the 2022 United States Undersecretary of State, Victoria Nuland:

Ukraine has biological research facilities which in fact we are quite concerned Russian troops, Russian forces, may be seeking to gain control of, so we are working with the Ukrainians on how they can prevent any of those research materials from falling into the hands of Russian forces should they approach,
(^œ[Victoria Nuland, United States Undersecretary of State](#), March 08, 2022)

Shortly after that admission, all sites coming from Russian sources were 'forbidden' to Western audiences:

403 - Forbidden . That's an error.

Client does not have access rights to the content so server is rejecting to give proper response. That's all we know.

All information coming from Russia was 'censored'. No further information on who is responsible for this has been provided.

This blanket censorship of alternative voices to the US and its 'allies' has enabled the United States to shape and control the narrative. Western audiences, tuning in to their permitted 'news' sources, find themselves 'informed' of what is happening in this new 21st Century US manufactured 'Cold War' by 'correspondents' from 'Washington'!

So, in 2022, in turning off the lights, what are they trying to hide?

In an article entitled 'Russia presents new evidence from US-funded Ukraine biolabs', The Russian television site *RT* provided its version of what Nuland was alluding to:

Moscow believes that laboratories in Ukraine funded by the US military were making biological weapons components, but that local staff was being kept in the dark about their research, a senior Russian general said on Thursday.

Lieutenant-General Igor Kirillov, who commands the Nuclear, Biological and Chemical Protection Forces of Russia, presented documents and imagery showing why the military has come to such a conclusion.

"We believe that components of biological weapons were being made on the territory of Ukraine," said Kirillov.

He noted that the documents he was presenting "have the signatures of real officials and are certified by the seals of organizations," for those journalists and experts in the West doubting their veracity.

(^œ[Russia presents new evidence from US-funded Ukraine biolabs](#), *RT:Russia & former Soviet Union*, 17 Mar, 2022)

Given the abysmal depths to which this new Cold War 'news' reporting has sunk, one needs to examine what is being presented; seek other versions of the 'information' and then, from the avalanche of disinformation, try to distil 'reality'. May the gods smile upon our endeavors!

Russian claims, that the materials were 'components of biological weapons', have since been elaborated with claims, backed by 'authenticated' documentation that the research has been aimed at finding and engineering pathogens which can be targeted at specific 'ethnic' populations.

If even remotely connected to such ambitions, this is the very definition of 'murderous' research and military aspirations.

'Evil' is too tame a descriptor for such activity. The United States has an obligation to humanity to provide clear and unambiguous evidence of the true nature of its Ukraine (and Georgia) biological research activities. Claims of protecting 'security sources' in order to deny such provision cannot be justified - this is a matter of species survival, not of 'breaches of confidentiality'!

Chinese officials have, entirely reasonably,

...demanded that Washington reveal the details of the biological laboratories that it had established in Ukraine. Beijing also took a swipe related to the COVID-19 pandemic, as it asked the US to unveil the information regarding the type of viruses that it had stored for research purposes in Kyiv.

(Zaini Majeed, ^œ[Russia Invades Ukraine: China Asks US To Publish Data On Military Biological Labs In Kyiv](#), *Republic World*, 8th March, 2022)

To date (April 22, 2022) the United States has dismissed all such demands, refusing to elaborate on biological research being undertaken in vassal states around the world (what has been happening in Ukraine seems to have been replicated in a number of other nations bordering both Russia and China).

This must not, for humanity's sake, be allowed to go unanswered. The world needs verifiable controls on all such biological research. One rogue nation, successfully engineering 'ethnically targeted' biological weapons will guarantee the proliferation of such weapons. We seem hellbent on damning ourselves as a species!!

With '[U.S. special operations forces deployed to 154 countries](#), or roughly 80 percent of the world's nations' in 2020 and responsible for capturing and imprisoning or killing "thousands of terrorists" around the world (an

unremarkable year for USSOCOM activity), perceived problems loom large.

But, of course, if those nations which will not bend to US direction can be 'freed' from control by 'authoritarian' and 'totalitarian' regimes they will become useful bases from which the United States can '[continue to lead the 'liberal international order'](#)' and 'fulfill its historic responsibility as the indispensable nation'.

So many peoples to free; so many '[mortal enemies who will seize upon our vulnerabilities](#)' to bloody us, to murder our citizens, to commit horror for the purpose of forcing horror upon us'; so many oppressive governments to be removed, so many 'regime change' responsibilities!

But, of course, the US has no option, it must [stand as a shining city upon a hill](#), as a model of freedom to the rest of the world! It must lead the peoples of the world out of the wilderness and into the Promised Land!

So, not only Russia and China but all those nations dominated and infected by them, must be transformed!

As in [Syria, in 2012](#), so in Kazakhstan in 2022: There appear to have been two very different forms of civil unrest, one highjacking the other.

The first was an entirely justified civil protest against unreasonable corporate profiteering in the nation. Balihar Sanghera and Elmira Satybaldieva, in an informative explanation of this entitled 'Rentier capitalism and class warfare in Kazakhstan' explained:

The recent protests in oil-rich Kazakhstan have highlighted the devastating effects of rent extraction. The country's largest sellers of liquefied petroleum gas (LPG), including KazMunaiGas, Kazgermunai, CNPC-AktobeMunaiGas and Kazakhoil, have been accused by the government of increasing fuel prices by abusing their oligopoly power. When the state lifted its price cap on LPG at the start of 2022, the market price doubled within a couple of days. The impact was immediately felt by poor and vulnerable sections of Kazakhstani society, which relied on the commodity for heating and vehicles.

Ultimately, the price hike was a violent attempt by powerful oil corporations to extract rent - they knew that most of the population had no alternative but to pay up or go without. Akin to social historian EP Thompson's moral economy of the 18th-century English crowd that rioted against soaring food prices, Kazakhstan's working class revolted against the market price and the injustice of the 'free' market.

(Balihar Sanghera and Elmira Satybaldieva, [œRentier capitalism and class warfare in Kazakhstan: Blame 'free' market reforms that benefit the rich and powerful at the expense of the working class for the country's recent protests, Open Democracy](#), 14 January 2022)

The second seems to have been a coordinated 'terrorist' insurrection using the civil unrest as cover for a coup d'état attempt:

Pepe Escobar, in an article subtitled 'What happened in Kazakhstan increasingly looks like a US-Turkish-British-Israeli-led coup d'état attempt foiled dramatically by their Eurasian adversaries', has described the first 2022 US attempt at 'regime change':

The year 2022 started with Kazakhstan on fire, a serious attack against one of the key hubs of Eurasian integration. We are only beginning to understand what and how it happened.

On Monday morning, leaders of the Collective Security Treaty Organization (CSTO) held an extraordinary session to discuss Kazakhstan.

Kazakh President Kassym-Jomart Tokayev framed it succinctly. Riots were "hidden behind unplanned protests." The goal was "to seize power" - a coup attempt. Actions were "coordinated from a single center." And "foreign militants were involved in the riots."

Russian President Vladimir Putin went further: during the riots, "Maidan technologies were used," a reference to the Ukrainian square where 2013 protests unseated a NATO-unfriendly government.

Defending the prompt intervention of CSTO peacekeeping forces in Kazakhstan, Putin said, "it was necessary to react without delay." The CSTO will be on the ground "as long as necessary," but after the mission is accomplished, "of course, the entire contingent will be withdrawn from the country." Forces are expected to exit later this week.

But here's the clincher: "CSTO countries have shown that they will not allow chaos and 'color revolutions' to be implemented inside their borders."

Putin was in synch with Kazakh State Secretary Erlan Karin, who was the first, on the record, to apply the correct terminology to events in his country: What happened was a "hybrid terrorist attack," by both internal and external forces, aimed at overthrowing the government.

The tangled hybrid web

Virtually no one knows about it. But last December, another coup was discreetly thwarted in the Kyrgyz capital, Bishkek. Kyrgyz intel sources attribute the engineering to a rash of NGOs linked with Britain and Turkey.

That introduces an absolutely key facet of The Big Picture: NATO-linked intel and their assets may have been preparing a simultaneous color revolution offensive across Central Asia....

(Pepe Escobar, ^œ[After Kazakhstan, the color revolution era is over](#), *The Cradle.co*, January 12 2022)

⁸¹⁸ United States involvement in the Ukraine and wider Black Sea region in the 21st Century has been the subject of very different and inevitably biased commentaries. In large part this obfuscation has been a consequence of the diversification of US Central Intelligence (CIA) activities, using subsidiaries to prosecute its agendas, including the ^œ[National Endowment for Democracy \(NED\)](#) and various 'special forces' teams.

Russian Defence Minister Sergei Shoigu provided a clear explanation of Western involvement in the 2022 conflict in Ukraine:

In Ukraine, the Russian military is being confronted by combined Western forces that run the leadership of that country in a hybrid war against Russia.

The supply of weapons and military equipment to Ukraine is being stepped up, and training of the Ukrainian army is being carried out. Huge financial resources are transferred to maintain the viability of the nationalist regime.

The actions of Ukraine's armed forces are planned and coordinated by foreign military advisers. Reconnaissance data is supplied from all available NATO sources. The use of armaments is supervised by Western specialists.

NATO's efforts are aimed at prolonging the agony of the Kiev regime. However, we know for a fact that no one in NATO has any doubt that the goals of the Russian leadership's special military operation will be achieved, and that plans to strategically and economically weaken Russia are failing. The dollar has not reached the ceiling of 200 roubles, as predicted by the US president, the Russian economy has stood firm.

The special military operation has dispelled the myth of "super-weapons" supplied to Ukraine by the West, which are capable of fundamentally changing the situation on the front. Initially, they were talking about deliveries of Javelin anti-tank systems, some kind of "unique" drones. Lately, the Westerners have been promoting the role of super-weapons with HIMARS multiple launch rocket systems and long-range howitzers. However, these weapons also grind to a halt in battle. They did not make a significant impact. The Russian weapons, for their part, have proved their best qualities in combat.

We are taking a close look at trophy weapons from the West. The features and their specific qualities are taken into account in order to improve the way combat operations are conducted and the effectiveness of Russian armaments.

The supply of NATO weapons to Kiev means that Western countries are responsible for their inhumane use and for the deaths of civilians in Donbass and in the liberated territories. Ukrainian armed forces operations are planned in Washington and London. Not only are the coordinates of the targets to be attacked provided by Western intelligence, but the input of this data into weapons systems is conducted under the full control of Western specialists.

Kiev's role in the West's combat approach has been reduced to supplying manpower, which is seen as expendable. This explains the huge loss of personnel in Ukraine's armed forces and territorial defence formations.

(Russian Defence Minister Sergei Shoigu, [Russian Defence Minister Sergei Shoigu's welcoming speech at the opening of 10th Moscow Conference on International Security, The Embassy of the Russian Federation in the Republic of India, August 16, 2022](#))

Kit Klarenberg has provided a well-documented explanation of the extent and nature of United States and European Union involvement in both Ukraine and other territories. As he explained:

Obvious examples of Central Intelligence Agency covert action abroad are difficult to identify today, save for occasional acknowledged calamities, such as the long-running \$1 billion effort to overthrow the government of Syria, via funding, training and arming barbarous jihadist groups.

In part, this stems from many of the CIA's traditional responsibilities and activities being farmed out to "overt" organizations, most significantly the [National Endowment for Democracy \(NED\)](#).

Founded in November 1983, then-CIA director William Casey was at the heart of NED's creation. He sought to construct a public mechanism to support opposition groups, activist movements and media outlets overseas that would engage in propaganda and political activism to disrupt, destabilize, and ultimately displace 'enemy' regimes. Subterfuge with a human face, to coin a phrase.

Underlining the Endowment's insidious true nature, in a 1991 Washington Post article boasting of its prowess in overthrowing Communism in Eastern Europe, senior NED official Allen Weinstein acknowledged, "a lot of what we do today was done covertly 25 years ago by the CIA."

It Begins

Fast forward to September 2013, and Carl Gershman, NED chief from its launch until summer 2021, authored an op-ed for The Washington Post, outlining how his organization was hard at work wresting countries in Russia's near abroad - the constellation of former Soviet republics and Warsaw Pact states - away from Moscow's orbit.

Along the way, he described Ukraine as "the biggest prize" in the region, suggesting Kiev joining Europe would "accelerate the demise" of Russian President Vladimir Putin. Six months later, Ukraine's elected president Viktor Yanukovich was ousted in a violent coup....

(Kit Klarenberg, ^œ[Anatomy of a Coup: How CIA Front Laid Foundations for Ukraine War](#), *Kit's Newsletter*, July 02, 2022)

[Links to explanatory documents have been omitted but it is well worth accessing his blog posting for them]

It is indisputable that, in 2014 Ukraine, as in Syria in 2012 and in Kazakhstan in 2022, there were two very clearly different phases to the 'revolutionary' protests in those nations. This is perhaps most clearly illustrated in the [2022 experience of Kazakhstan](#).

The initial civil protests, in all three regions, were based in legitimate and very strongly held reactions to internal social, economic and political circumstances and conditions. The second phase involved the weaponization of elements within the protest movements.

The situation in Ukraine¹⁰⁸³, as outlined by Mike Madden (below), began as a popular, internal uprising. This was quickly followed by the involvement of US politicians and US State operatives in 'guiding' the direction and nature of those protests. And, it was, chronologically, in the aftermath of the US involvement that those protests turned violent.

The nature of that violent weaponizing of the protests is, inevitably, clouded in controversy but, [as in Syria](#), the likelihood of US involvement in that phase of the 'revolution' is high. One can but say -"if it walks like a duck..."!

Mike Madden has given a clear and depressing description of what the United States has been doing in the Ukraine (and in much of the Black Sea) region over the past decade. As we have [seen elsewhere](#), this has been the US response around the world over more than fifty years to those elected governments which resist being transformed into vassal states:

U.S. Undersecretary of State for Political Affairs Victoria Nuland, who choreographed the 2014 coup that overthrew Ukraine's

democratically-elected government and set the current crisis in motion, was invited by PBS NewsHour on Dec. 7 to explain the standoff in Ukraine.

Typical of Western media, the story began with Russia's involvement in eastern Ukraine and the annexation of Crimea, which took place in March 2014. The crisis actually began a week earlier with the violent overthrow of democratically-elected President Viktor Yanukovich on Feb. 22, 2014. While accusations flew of Russian aggression, invasion and annexation, there was not a word about the U.S. instigated coup or Nuland's role in it.

For the sin of declining a Western aid package loaded with austerity measures, and accepting instead an unencumbered Russian package, Yanukovich became a target for U.S. regime change. Undersecretary Nuland's role in the coup is essential to the story.... (Mike Madden, ^œ[How Not to Explain the Ukraine Crisis](#), *Consortium News*, December 24, 2021)

Ivan Katchanovski has provided further information on what happened (his explanation provides links to source materials not replicated here but important to understanding what happened):

The narratives that are propagated by the Western governments and the mainstream media concerning the origin and the nature of the Ukraine conflict are truly Orwellian. They state that the pro-Russian government in Ukraine was ousted as result of peaceful mass Euromaidan protests in February 2014 and that President Viktor Yanukovich fled Ukraine because he ordered the massacre of the peaceful Maidan protesters by government forces. These protests took place on the main square in Kyiv, which is called Maidan, and they were directed against the Yanukovich government and his decision to suspend signing the EU association and free trade agreement. According to these narratives, Russia then annexed Crimea by using pure military force and launched a war with Ukraine in Donbas. These narratives assert that Ukraine is a sovereign democratic state which has a right to join the North Atlantic Treaty Organization (NATO) in the future and that Russia plans to invade Ukraine within days or weeks.

Various evidence presented in studies by Western scholars who have researched the Ukraine conflict shows that these narratives are false. This mass killing of the Maidan movement's own supporters - perpetrated by the oligarchic and far right elements of the Maidan alliance - made it possible for Maidan leaders to falsely blame the pro-Russian Yanukovich government and its police and security forces for the killing and then seize power in Ukraine. Western governments backed this undemocratic overthrow of the democratically elected Ukrainian government....

(Ivan Katchanovski, ^œ[Lies About Ukraine Conflict Are Standing in the Way of a Peaceful Resolution](#), *Truthout*, February 16, 2022)

With Ukraine transformed into a compliant vassal state (with encapsulated Russian minorities required to accept the new US imposed 'reality' in the nation), the US has used it as a base from which to threaten its old 'enemy' (still, in its jaded mind, very possibly) an 'evil empire' which threatens the peace and security of all 'freedom loving' 'democratic' and 'capitalist' nations around the world.¹⁰⁸⁴

The US, as the world's quick-gun sheriff with a custodial mandate to ensure compliance with the 'Rule of Law' (whatever that might mean for a less than coherent, prematurely aging empire), is threatening expansion of NATO into a nation directly bordering Russia (encapsulating regions which have long identified themselves as closely allied with Russia and included within the Soviet Union).

It is, simultaneously, supplying armaments and military training, and, in a Newspeak distortion of reality, accusing Russia of making this 'necessary' in order to protect Ukraine from Russian invasion.

We've been here before! Since the Second World War, The United States, using a range of pretexts for threatening and invading nations which they have felt unable to convert into vassal states, has formed military alliances ('coalitions of the willing') with compliant nations, leading them into military and diplomatic quagmires from which they find it difficult to extricate themselves: The Korean War did not 'end' in 1953! it has festered for more than seventy years with no apparent means of ending the stalemate!

We should not underestimate the delusional incompetence of US Administrations when it comes to warmongering and 'winning' its wars of choice!.

Dmitri Trenin has described Russia's response:

As 2021 came to a close, Russia presented the United States with a list of demands that it said were necessary to stave off the possibility of a large-scale military conflict in Ukraine. In a draft treaty delivered to a U.S. diplomat in Moscow, the Russian government asked for a formal halt to NATO's eastern enlargement, a permanent freeze on further expansion of the alliance's military infrastructure (such as bases and weapons systems) in the former Soviet territory, an end to Western military assistance to Ukraine, and a ban on intermediate-range missiles in Europe. The message was unmistakable: if these threats cannot be addressed diplomatically, the Kremlin will have to resort to military action.... (Dmitri Trenin, ^œ[What Putin Really Wants in Ukraine: Russia Seeks to Stop NATO's Expansion, Not to Annex More Territory](#), *Foreign Affairs*, December 28, 2021)

⁸¹⁹ A commenter, on a *Naked Capitalism* blog posting by Yves Smith, named ^œ[JonnyJames](#), summed it up:

In addition to making Europe weaker and more dependent on the US, the objectives of US foreign policy (crudely put) is to weaken Russia financially and economically, destabilize the country, then "regime change", then break up the RF into smaller states. However, this looks like the typical hubris of a declining power. Zbig B.[Zbigniew Brzezinski], for example, outlined much of this back in 1997 in *The Grand Chessboard*.

This one from Rand (2019) sums it up.

https://www.rand.org/pubs/research_briefs/RB10014.html

The Russians, aware of this, are taking slow, cautious steps to achieve their objectives, and it looks like they have been very careful not to overextend, not to over-spend or dedicate too many resources to the SMO in Ukraine. Going forward, I would imagine a similar approach. Successfully achieving those objectives won't be

easy and it seems like Russian leadership must walk a fine line in more ways than one.

820 And in early March 2022, it has all happened again. Western media outlets have been flooded with ill-informed, superficial 'explanation':

Russia's unprovoked assault on Ukraine did not come as a surprise. The United States and its European allies learned last fall what Russia planned to do, and even publicized the Kremlin's plans to the world. Even so, they failed to prevent Russia's onslaught on its much weaker neighbor. Once they ruled out direct military assistance to Ukraine, deterring a Russia bent on controlling its neighbors and upending the post-1990 European security order was always going to be a tall order.

The same threats that failed to dissuade Russia from invading before - severe sanctions, military assistance to Ukraine, and beefing up NATO - are unlikely to compel Russia from changing course now. Instead, Washington and its democratic allies need to embark on a strategy of containment that increases the cost to Russia and eventually forces internal political change that brings the brutal regime of Vladimir Putin to an end.

(Ivo H. Daalder, ^œ[The Return of Containment: How the West Can Prevail Against the Kremlin](#), *Foreign Affairs*, March 01, 2022)

No in depth analysis of underlying causes or of other players in what has unfolded, just 'a strategy of containment that increases the cost to Russia and eventually forces internal political change that brings the brutal regime of Vladimir Putin to an end'!

Media sources which might have provided such analysis have been blocked, their attempts at providing alternative explanation denounced as 'propaganda'. All the information Western populations 'need' is to be provided by the mainstream media of the West. Audiences are being conditioned to a renewed 'policy of containment' of those who personify 'evil' in the West's 2022 world!

821 Pilger on propaganda:

Marshall McLuhan's prophecy that "the successor to politics will be propaganda" has happened. Raw propaganda is now the rule in Western democracies, especially the US and Britain. On matters of war and peace, ministerial deceit is reported as news. Inconvenient facts are censored, demons are nurtured. The model is corporate spin, the currency of the age. In 1964, McLuhan famously declared, "The medium is the message." The lie is the message now.

But is this new? It is more than a century since Edward Bernays, the father of spin, invented "public relations" as a cover for war propaganda. What is new is the virtual elimination of dissent in the mainstream.

The great editor David Bowman, author of *The Captive Press*, called this "a defenestration of all who refuse to follow a line and to swallow the unpalatable and are brave". He was referring to independent journalists and whistle blowers, the honest mavericks to whom media organisations once gave space, often with pride. The space has been abolished.

The war hysteria that has rolled in like a tidal wave in recent weeks and months is the most striking example. Known by its jargon, "shaping the narrative", much if not most of it is pure propaganda.

(John Pilger, ^œ[War in Europe and the Rise of Raw Propaganda](#), *CounterPunch*, February 18, 2022)

⁸²² Western 'expert commentators' have, in 2022 - as in 2001 and its aftermath and, of course, in earlier 'adventures' undertaken by the United States and its acolytes - readily provided the 'serious commentary' required to justify its behavior.

Before reading the nonsense (yes it is nonsense) below, a blog posting by Yves Smith on the blogsite *Naked Capitalism* entitled '^œ[The Danger of Underestimating Russia](#)' provides a sane and much needed corrective to both Western political and 'Western Expert' commentaries.

Michèle Flournoy (Co-Founder and Managing Partner of WestExec Advisors and Co-Founder and Chair of the Board of Directors of the Center for a New American Security), in an essay subtitled 'Washington Must Ramp Up Support for Vulnerable Partners - Before It's Too Late', has demonstrated this well. The reader is left to critically assess the legitimacy of her commentary!

Those who have allowed themselves to be blinkered by the pervasive Western censorship of alternative understandings of reality in 2022 will, no doubt, be fully persuaded by the 'logic' of her descriptions, assertions and arguments:

It is too soon to predict how Russia's brutal, unjustified war against Ukraine will end. But for now, it is clear that the Russian military has shockingly underperformed in the first phase of the war, whereas the Ukrainian military has punched far above its weight. Other revisionist powers contemplating aggression will be looking closely at Russia's failings to avoid making the same mistakes, and the countries they threaten will be looking to Ukraine's example for insight into how to fend off a larger, better-equipped adversary.

But there are also lessons for the United States. U.S. defense leaders need to consider what outcomes in Ukraine mean not only for how Washington assesses the military capabilities of adversaries in the future but also for how the United States and its allies can use asymmetric tactics to undermine those adversaries' strengths and exploit their weaknesses. For example, militaries fielded under leaders who do not tolerate dissent or question assumptions will be vulnerable to a host of problems, from strategic miscalculation and inadequate logistics to poor battlefield command and troop morale. This is a systemic weakness of authoritarian regimes, but other states can also be susceptible. In addition, militaries that have not been tested in battle may struggle to train troops for the actual conditions they will face in war, to fight effectively as a joint force, and to adapt in real time to an adversary's asymmetric tactics.

Moscow's war effort has been deeply flawed, but that is not the only reason Ukrainian forces have fared so well: they have been able to take advantage of Russian weaknesses thanks in part to the help they have received from the West. The remarkable performance of Ukraine's military is a direct result of a multiyear security-assistance effort undertaken by the United States and its NATO allies since Russia's 2014 invasion of Crimea. In those eight years, support in the form of equipment, training, and help with planning transformed the Ukrainian military into a far more capable fighting force. Over the past three months, unified Western assistance has made a difference on the battlefield, too. Dozens of countries have come

together to share intelligence, offer military and economic aid, and impose severe economic and political costs on Russia...
(Michèle A. Flournoy, ^œ[How to Prepare for the Next Ukraine](#), *Foreign Affairs*, May 23, 2022)

824 An examination of the consequences of United States' (and general 'Western') diplomatic negotiations with Russia since 1990 clearly illustrates the dilemma for Russia in attempting to 'negotiate' lasting agreements with Western nations. As Benjamin Norton demonstrates in a *YouTube* video presentation entitled ^œ[Ukraine's Zelensky sabotaged peace deal with Russia, West blocked negotiations](#), Russia is left with no option but to assume their duplicity.

823 As the United States Office of The Historian summed it all up:

The Cuban missile crisis stands as a singular event during the Cold War and strengthened Kennedy's image domestically and internationally. It also may have helped mitigate negative world opinion regarding the failed Bay of Pigs invasion. Two other important results of the crisis came in unique forms. First, despite the flurry of direct and indirect communications between the White House and the Kremlin - perhaps because of it - Kennedy and Khrushchev, and their advisers, struggled throughout the crisis to clearly understand each others' true intentions, while the world hung on the brink of possible nuclear war. In an effort to prevent this from happening again, a direct telephone link between the White House and the Kremlin was established; it became known as the "Hotline." Second, having approached the brink of nuclear conflict, both superpowers began to reconsider the nuclear arms race and took the first steps in agreeing to a nuclear Test Ban Treaty.

(^œ[The Cuban Missile Crisis, October 1962](#))

825 As Lavrov continued:

We are grateful to our Belarusian allies for completely understanding the causes, goals and tasks of the special military operation. President Vladimir Putin discussed these issues in his remarks yesterday concerning the results of the Caspian Five Summit in Ashgabat.

We focused on biological security, while exchanging opinions on strategic stability and arms control. We agree that US activities on post-Soviet space are quite dangerous and non-transparent. The activities of Pentagon's biolabs in Ukraine highlight the risks they bear. We exposed these facts but failed to obtain a US response. So, we initiated a process, stipulated by the Biological and Toxin Weapons Convention, in full compliance with its Article 5. We sent inquiries to countries, parties to this important international treaty. We perceive threats to the national security of Russia and Belarus, the reluctance of the United States to ensure the transparency of its military-biological activities in many countries on post-Soviet space, primarily those around Russia and Belarus. We have an agreement, within the framework of the Collective Security Treaty Organisation, to establish close and transparent interaction on these issues, in order to counter attempts to advance such projects (that cause concern in our countries) behind the scenes and without due transparency.

We are also cooperating in order to counter the dirty information war unleashed by the collective West against our countries. We agreed to expand and upgrade Russian-Belarusian media cooperation, and you should be particularly interested in this issue....

...As for our relations with the EU, Russia has not had them since 2014. Brussels swallowed the humiliating move by the opposition forces which perpetrated a coup in Ukraine in defiance of EU guarantees. In response, the Crimea residents refused to live in a neo-Nazi state. Ukraine's eastern regions did the same, and the European Union failed to muster enough courage to talk sense into the putschists who carried out an illegal power grab, and in fact began to support them in their attack, including physical, on the people of Crimea and eastern Ukraine.

When the referendum took place in Crimea and the DPR and the LPR were proclaimed, the European Union, instead of pushing for compliance with the agreements between President Yanukovich and the opposition it had co-sponsored, sided with the ultranationalist and deep down neo-Nazi regime which proclaimed fighting the Russian language and culture as its goal. In the years that followed, the regimes led by Poroshenko and Zelensky proved Kiev's loyalty to this particular course.

In 2014, when it all happened, the EU, feeling powerless and aware of its own inability to enforce implementation of its own proposals, said the Russian Federation was to blame. ...

With regard to the Iron Curtain, it is already on its way down. They should make sure they don't get anything caught in it as it goes down. In all other matters, we have a straightforward position: we are for things being fair....

(⁸²⁶[Foreign Minister Sergey Lavrov's statement and answers to media questions at a joint news conference with Foreign Minister of Belarus Vladimir Makei following talks, Minsk, June 30, 2022, The Ministry of Foreign Affairs of the Russian Federation, 30 June 2022](#))

⁸²⁶ As they claimed:

Russian President Vladimir Putin appears poised to launch a large-scale invasion of Ukraine. He has amassed troops near the border, spurned Western attempts at a diplomatic resolution, and most recently recognized the independence of the so-called Luhansk and Donetsk People's Republics, with Russian troops and weapons entering the region soon after.

U.S. President Joe Biden has called Russia's move into the Donbas an "undeniable invasion," and announced a set of sanctions on Russian financial institutions, sovereign debt, and individuals. These were interim steps; Biden warned that more sanctions will follow should Russia continue to escalate the crisis.

Berlin has also halted the certification of the controversial Nord Stream 2 pipeline linking Russian natural gas to Germany, marking a major shift in its policy toward Russia and sounding a warning to Putin that his aggression is alienating the country, along with others in Europe.

The Kremlin is undoubtedly watching the U.S. and European responses closely, and Putin is likely contemplating a range of

potential scenarios.

Russia may still launch a large-scale invasion of Ukraine, as the Biden administration expects. Or, since the United States and Europe have now announced new sanctions and are threatening more, Putin may choose a different strategy: the long grind.

In this scenario, he would seek to consolidate control over Ukraine without triggering more severe punishment from the United States and Europe. He would work to weaken Ukraine's sovereignty by squeezing its economy, launching crippling cyberattacks, and inciting coup attempts to undermine the country's political system....

(Alina Polyakova and Daniel Fried, ^œ[Putin's Long Game in Ukraine](#), *Foreign Affairs*, February 23, 2022)

⁸²⁷ Here is the kind of logic which justifies this:

...Ukraine will run short of fuel, ammunition, antitank weapons, air defense systems, unmanned combat aerial vehicles (UCAVs), and aircraft long before its manpower is exhausted or its morale breaks.

Western democracies have the necessary resources to close this gap and ensure that Ukraine prevails.

Talk of supporting a hypothetical Ukrainian insurgency is premature and counterproductive while the Ukrainian army and territorial defense battalions remain far from defeated.

To give those forces a fighting chance, Washington and its allies should establish a lend-lease program modeled on the one that provided arms and assistance to U.S. allies in Europe during World War II. This program would allow the United States and other NATO members to loan or give aid to Ukraine at little or no cost; such aid could include medium- and long-range air defense systems, antitank weapons (beyond the Javelins that have already been provided), advanced extended-range antiarmor capabilities, coastal defense systems, high mobility artillery, and critically important UCAVs.

Kyiv could also benefit from systems that could be leased from the United States and its allies, albeit with the understanding that the weapons and equipment would not necessarily be returned after the war....

(Alexander Vindman and Dominic Cruz Bustillos, ^œ[America Must Do More to Help Ukraine Fight Russia: A Lend-Lease Plan for the Ukrainian Military](#), *Foreign Affairs*, March 6, 2022)

⁸²⁸ William Hartung has provided an excellent synopsis of the 2022 US weapons industry and its impact around the world. As he says

These are good times to be an arms maker. Not only are tens of billions of dollars in new military spending headed for the coffers of this country's largest weapons contractors, but they're being praised as defenders of freedom and democracy, thanks to their role in arming Ukraine to fight the Russians.

(William D. Hartung, ^œ[Arsenal of Autocracy?](#), *TomDispatch*, May 24, 2022)

⁸²⁹ When it comes to the armaments business, the Western hegemon will brook no competitors - [not even among its vassals!](#)

Marco Seliger, in a report on the early 2023 decision by Western nations to supply tanks to Ukraine, described the tension between Washington and Berlin on armaments production and sales:

So far, the delivery of Leopard 2 to Ukraine has always been discussed from the military aspect. But arms deliveries are also associated with armaments policy interests. This is where German and American perspectives diverge....

US wants to offer its own tanks

When US Secretary of Defense Lloyd Austin appeared before the press in Ramstein shortly after Pistorius, he was asked whether Germany was sufficiently committed as a leading power in Europe. Austin couldn't help but smile, but then replied that Germany was doing enough and was a "reliable ally". He should know exactly why Pistorius spoke of good reasons for and good reasons against tank deliveries. The reasons for this are military: without tanks, Ukraine cannot successfully defend itself.

The reasons for this have so far been named by the German government rather evasively. From the German arms industry, however, the concern can be heard that the Americans were just waiting to offer the Europeans a replacement with their own tanks for their Leopard delivery. After helicopters, fighter jets and missiles, the Ukraine war offers the USA the opportunity to gain a foothold in the European arms market with armored vehicles and to oust German competition.

(Marco Seliger, [German tank debate: What role do American armaments interests play?](#), *Neue Zürcher Zeitung*, January 22, 2023)

⁸³⁰ In a display of ignorant arrogance, the US confrontation with Russia was set in motion in the 1990s by Clinton and his 'foreign affairs' advisor Strobe Talbott. A couple of Talbott quotes give some idea of the ideological bent of this US 'specialist':

In the next century, nations as we know it will be obsolete; all states will recognize a single, global authority. National sovereignty wasn't such a great idea after all ([America Abroad: The Birth of the Global Nation](#). *Time*, July 20, 1992)

and

We already know that the Kremlin helped put Trump into the White House and played him for a sucker... Trump has been colluding with a hostile Russia throughout his presidency ([Anti-Trump Frenzy Threatens to End Superpower Diplomacy](#). *The Nation*. January 16, 2019).

Frank Costigliola, in an article entitled 'Kennan's Warning on Ukraine: Ambition, Insecurity, and the Perils of Independence', described 'the stupidity of excess hubris and unconditional love of ones own theories and ideology' that have shaped United States foreign policy over the past half century and more:

Unlike Kennan, many Kremlinologists did not see the collapse of the Soviet Union coming. He was hailed as a prophet at the end of the Cold War. Nonetheless, in the ensuing debate over NATO expansion, he was honored rather than heeded. This paradox was illustrated in 1995, when U.S. President Bill Clinton's adviser on Russian affairs, Strobe Talbott, sought to pay homage to Kennan, whom he deeply

admired. Talbott invited Kennan to fly with the president to Moscow for the 50th anniversary of Victory in Europe Day on May 9 commemorating Nazi Germany's surrender. Back in 1945, Kennan, the ranking U.S. official in Moscow, had warmly greeted the cheering Russians thronging the embassy. Now, however, the 91-year-old declined the invitation because of ill health. His refusal to go was probably for the best.

Kennan likely would have felt used had he learned of the full agenda for the trip. In a memorandum to Clinton, Talbott characterized the day after the anniversary festivities as "May 10: Moment of Truth." In his meeting with Russian President Boris Yeltsin, Clinton did as Talbott suggested and pressured the Russians to accept both NATO's expansion and Moscow's participation in the Partnership for Peace, an association best understood as "NATO-lite" that was crafted to soothe Russian concerns. Talbott admitted to Clinton that "virtually all major players in Russia, all across the political spectrum, are either deeply opposed to, or at least deeply worried about, NATO expansion."

(Frank Costigliola, ⁸⁰[Kennan's Warning on Ukraine: Ambition, Insecurity, and the Perils of Independence](#), *Foreign Affairs*, January 27, 2023)

⁸³¹ As Kathryn Watson and Rebecca Kaplan reported:

The House on Thursday approved the Ukraine Democracy Defense Lend-Lease Act of 2022 by 417-10, after the Senate passed it by unanimous consent earlier this month. The lend-lease bill allows the president to lend or lease defense equipment to Ukraine for fiscal year 2022 and 2023, and also slashes bureaucratic red tape to make sure equipment is delivered quickly. The legislation is named for the revival of a World War II era program that helped supply allies in the fight against Nazi Germany.

"We have heard clearly from Ukrainian President Zelenskyy: Ukraine desperately needs more military aid to sustain its fight for sovereignty and defend its civilian population," said Rep. John Katko, one of the bill's cosponsors. "I cosponsored this bill and was proud to support it on the House floor because it will expand our nation's ability to expeditiously deliver additional defense articles to the government of Ukraine as they fight back against Vladimir Putin's barbaric and unlawful invasion. This is a necessary step to protect the future of Ukraine and the safety of its people."

The World War II-era lend-lease program was viewed as a pivotal tool that allowed for the allies' victory against Nazi Germany. It allowed the U.S. government to lend or lease war supplies, rather than selling them, to any country deemed vital to the United States' defense. The aid particularly helped Great Britain in its battle against Nazi Germany.

The bill's passage comes as President Biden urged Congress to swiftly pass a \$33 billion assistance package for Ukraine as it continues to block Russian President Vladimir Putin's assault. The White House says nearly all of the \$3.5 billion in drawdown authority Congress provided last month for military assistance is depleted....

(Kathryn Watson and Rebecca Kaplan, ⁸⁰[Congress passes bill letting U.S. lend weapons systems to Ukraine](#), *CBS News*, April 29, 2022)

832 ^œ[Maxwell Johnston summed it up](#) well: "UKR leadership might look to the past (Hungary 56, Prague 68, Saigon 75, Iran 79, Kurdistan 91, Kabul 21, to name the most obvious candidates) as a guide to their future as a USA proxy."

833 The United States has a propensity for manoeuvring itself, its 'willing' vassals and proclaimed 'enemy' state(s) and/ or 'terrorist' organisations into foreign policy quagmires.

The creation and maintenance of weapons markets in support of 'the war effort' has become an essential 21st century responsibility of the US Administration. War is good business and necessary for a nation built on and sustained by military industrial facilities and activities spread through the nation.

Vladimir Putin explained it well:

This is why the collective West - the so-called collective West - is deliberately undermining the European security system and knocking together ever new military alliances. NATO is crawling east and building up its military infrastructure. Among other things, it is deploying missile defence systems and enhancing the strike capabilities of its offensive forces. This is hypocritically attributed to the need to strengthen security in Europe, but in fact quite the opposite is taking place. Moreover, the proposals on mutual security measures, which Russia put forward last December, were once again disregarded.

They need conflicts to retain their hegemony. It is for this reason that they have destined the Ukrainian people to being used as cannon fodder. They have implemented the anti-Russia project and connived at the dissemination of the neo-Nazi ideology. They looked the other way when residents of Donbass were killed in their thousands and continued to pour weapons, including heavy weapons, for use by the Kiev regime, something that they persist in doing now.

(Vladimir Putin, ^œ[Address to participants and guests of the 10th Moscow Conference on International Security](#), August 16, 2022)

Forever war ensures the financial health and wellbeing of both participating states and their populations. Congress knows this and, inevitably, actively promotes and ensures the health of this form of military Keynesianism.

John Mearsheimer described the process of ensuring prolonged military entanglements/ commitments well:

Western policymakers appear to have reached a consensus about the war in Ukraine: the conflict will settle into a prolonged stalemate, and eventually a weakened Russia will accept a peace agreement that favors the United States and its NATO allies, as well as Ukraine. Although officials recognize that both Washington and Moscow may escalate to gain an advantage or to prevent defeat, they assume that catastrophic escalation can be avoided. Few imagine that U.S. forces will become directly involved in the fighting or that Russia will dare use nuclear weapons.

Washington and its allies are being much too cavalier. Although disastrous escalation may be avoided, the warring parties' ability to manage that danger is far from certain. The risk of it is substantially greater than the conventional wisdom holds. And given that the

consequences of escalation could include a major war in Europe and possibly even nuclear annihilation, there is good reason for extra concern.

To understand the dynamics of escalation in Ukraine, start with each side's goals. Since the war began, both Moscow and Washington have raised their ambitions significantly, and both are now deeply committed to winning the war and achieving formidable political aims. As a result, each side has powerful incentives to find ways to prevail and, more important, to avoid losing. In practice, this means that the United States might join the fighting either if it is desperate to win or to prevent Ukraine from losing, while Russia might use nuclear weapons if it is desperate to win or faces imminent defeat, which would be likely if U.S. forces were drawn into the fighting.

Furthermore, given each side's determination to achieve its goals, there is little chance of a meaningful compromise. The maximalist thinking that now prevails in both Washington and Moscow gives each side even more reason to win on the battlefield so that it can dictate the terms of the eventual peace. In effect, the absence of a possible diplomatic solution provides an added incentive for both sides to climb up the escalation ladder. What lies further up the rungs could be something truly catastrophic: a level of death and destruction exceeding that of World War II....

(John J. Mearsheimer, ⁸³⁴[Playing With Fire in Ukraine: The Underappreciated Risks of Catastrophic Escalation](#), *Foreign Affairs*, August 17, 2022)

Gilbert Doctorow provides a cautionary critique of Mearsheimer's essay:

I freely acknowledge the merit of Mearsheimer's new article: to warn how the conflict in Ukraine could easily spin out of control and escalate to a nuclear war. The White House team of inexperienced and ignorant advisers must be shaken from their complacency and anything published in *Foreign Affairs* will necessarily be brought to their attention, whereas a piece published by www.antiwar.com, for example, will be burned before reading.

However, this does not excuse Mearsheimer from basing himself on the same restricted and distorted sources of information as are used by mainstream media and mainstream academics, while ignoring other sources of information that would give greater depth to his analysis and possibly change his conclusions substantially. To be explicit, I believe he has been listening too closely to Washington and Kiev's rosy forecasts of a counter-offensive that will result in a stalemate, possibly in a Russian defeat, and he is not listening to Russian reporting on the progress of their campaign on the ground, which points to a slow and steady grinding down of all in their path to conquest of the Donetsk oblast, meaning the capture of the entire Donbas.

(Gilbert Doctorow, ⁸³⁴[John Mearsheimer's latest article on Ukraine in "Foreign Affairs" - a critique](#), August 20, 2022)

⁸³⁴ The United States has, since the 1949 Communist defeat of the Chinese Nationalist government (the Kuomintang), used the Nationalist claim to being the legitimate government of all of China (including Taiwan) to legitimize its own interference in mainland Chinese 'ambitions'. (The Nationalist Government ruthlessly suppressed Taiwan Islanders' protests in 1947 and subsequently relocated to Taiwan in 1949.)

Despite US insistence that it promotes 'democracy' around the world, the United States' relationship with Taiwan did not require 'democratic government'. Taiwan, the very definition of an 'autocratic' government in the post-1949 era, has long been considered the US' 'aircraft carrier' in the South China Sea.

Following the Kuomintang's relocation, Taiwan has been 'developed' as a US vassal state, with formal legislation - such as the 1979 Taiwan Relations Act promising to help the island defend itself - passed long before there was any suggestion of it becoming 'a leading democracy in the heart of Asia'.

The United States was long-content to deal with Nationalist leader Chiang Kai-shek who ruled the island with an iron fist, appointing his son to replace him before his death in 1975. The [first full elections in Taiwan](#), aimed at consolidating US control of the island, were not held until 1992 - 43 years after the final Nationalist abandonment of Mainland China and relocation to the island.

Jude Blanchette and Ryan Hass summarized the US' presumptive 'responsibility' to protect Taiwan from the consequences of its own long held insistence that it is an integral part of China:

For 70 years, China and the United States have managed to avoid disaster over Taiwan. But a consensus is forming in U.S. policy circles that this peace may not last much longer. Many analysts and policymakers now argue that the United States must use all its military power to prepare for war with China in the Taiwan Strait. In October 2022, Mike Gilday, the head of the U.S. Navy, warned that China might be preparing to invade Taiwan before 2024. Members of Congress, including Democratic Representative Seth Moulton and Republican Representative Mike Gallagher, have echoed Gilday's sentiment.

There are sound rationales for the United States to focus on defending Taiwan. The U.S. military is bound by the 1979 Taiwan Relations Act to maintain the capacity to resist the use of force or coercion against Taiwan. Washington also has strong strategic, economic, and moral reasons to stand firm on behalf of the island. As a leading democracy in the heart of Asia, Taiwan sits at the core of global value chains. Its security is a fundamental interest for the United States.

(Jude Blanchette and Ryan Hass, [The Taiwan Long Game: Why the Best Solution Is No Solution](#), *Foreign Affairs*, January/February 2023)

Patrick Lawrence has summarized this 'failure in American foreign policy':

As readers will know, I am always on for another failure in American foreign policy. House Speaker Pelosi just gave us the biggest and best we have seen in years, although the Ukraine mess is a contender for the title. Equally, I favor each step the non-West takes toward the condition of parity it seeks, and that I count as a 21st century imperative. We will see many of these in the post - Pelosi era, if I may call it that.

During the two-and-some hours Xi Jinping and Joe Biden spoke by telephone prior to the Pelosi misadventure, the Chinese president made a few points it is useful to note. Here is one, as Global Times,

the English-language paper owned by People's Daily, summarized the Foreign Ministry readout of the call:

"Faced with a world of change and disorder, the international community and the people around the world expect China and the U.S. to take the lead in upholding world peace and security and in promoting global development and prosperity. This is the responsibility of China and the U.S. as two major countries."

The key thought there is joint responsibility, the duty the People's Republic and the U.S., as the world's most powerful nations, share toward the rest of the human community. I read it as some 5 - to - midnight effort on Xi's part to talk sense into Biden.

Sudden Breach

When Pelosi went ahead anyway, the breach was sudden. Apart from the live-fire military exercises, which we read Sunday are going to be held regularly, Beijing severed diplomatic relations with the U.S. in a range of areas - drug interdiction, illegal migrants, cross-border crime and so on. Among these, are several big ones: Talks on climate change and contacts on the defense side, at policy and operational levels, are canceled. So are consultations on maritime security.

In effect, Beijing has given up on the joint responsibility Xi urged Biden to think about. Any spirit of bilateral cooperation that survived the past several years of Washington's diplomatic assaults, military provocations, and the whittling away of Washington's commitment to the One China principle is now dead....

(Patrick Lawrence, [The Pelosi Fallout: The U.S. now operates as a bulwark against time and history - a hopeless but destructive project](#), *Consortium News*, August 9, 2022)

⁸³⁵ While Eisenhower's 'domino theory' drove and justified both the Vietnam War and the enveloping 'Cold War' through the second half of the 20th Century, the term 'domino effect' fell out of favor in this. But that did not mean that 'The West' was no longer driven to root out 'communism', 'socialism' and any other form of government which was not directly allied with 'The West'. It remained committed to its evangelical fervor to rid the world of all forms of government attempting to 'defeat' its drive to the neoliberal privatization of the world.

There has remained a solid core of influential politicians, 'capitalists' and other ideologues who firmly believe that if they do not successfully oppose 'socialism' in all its forms, it will 'win the war' and impose its ideologies on all those who are 'defeated'. This has driven much of the 'regime change' nonsense of the past seventy and more years. As [Evgeny Mikhaylov](#) accurately explained,

"There have been many difficult, dramatic, and bloody events in the history of each nation. But when we assess other people, when we assess other states, other peoples, we are always looking in the mirror. We always see ourselves there", Putin said

⁸³⁶ Thomas Christensen *et al* have injected a little sanity into the 'Taiwan' confrontation engineered by the United States:

As tension rises between Beijing and Washington over Taiwan, strategists on all sides seem to have forgotten what the American game theorist Thomas Schelling taught years ago: deterring an adversary from taking a proscribed action requires a combination of

credible threats and credible assurances. Instead of heeding that lesson, a growing number of U.S. analysts and officials have called for the United States to treat Taiwan as if it were an independent state and to abandon the long-standing policy of "strategic ambiguity" in favor of "strategic clarity," defined as an unconditional commitment to use military force to defend the island in the event of a mainland Chinese attack. These calls have intensified since Russia's invasion of Ukraine, with some commentators even advocating for formal recognition of Taiwan as a sovereign country. Still others have called for a permanent (and significant) deployment of U.S. forces to Taiwan to lend credibility to the U.S. threat of a military response to a mainland attack. In testimony before the U.S. Senate last year, Ely Ratner, the assistant secretary of defense for Indo-Pacific security affairs, implied that the United States could never allow Beijing to control Taiwan because such an outcome would make it impossible to defend other U.S. allies in Asia.

But shifting U.S. policy toward support for Taiwan's permanent separation from the mainland is more likely to provoke than to deter an attack on Taiwan. Deterrence requires credibility in both of its elements: threat and assurance. The threat requires signaling both the costs of a proscribed action and sufficient political will to impose those costs. The assurance requires conveying to the target, in a way that it can trust, that it will not be taken advantage of if it refrains from taking the proscribed action.

Avoiding war in the Taiwan Strait requires all sides to be deterred. At a minimum, Taiwan must be deterred from declaring formal independence, Washington must be deterred from recognizing Taiwan as an independent state or restoring a formal alliance with the island, and Beijing must be deterred from using military force against Taiwan to compel unification. All sides must not only be threatened with harm for crossing these redlines but also be assured that they will not suffer catastrophic losses to their interests if they refrain from these actions. Triangular deterrence has succeeded for over 40 years in keeping the peace across the Taiwan Strait. But rising tensions have made this delicate arrangement more fragile.

(Thomas J. Christensen *et al*, [How to Avoid a War Over Taiwan: Threats, Assurances, and Effective Deterrence](#), *Foreign Affairs*, October 13, 2022)

⁸³⁷ On 29th November, 2021, An advertisement flashed across Australian screens: It read "LOCKHEED MARTIN Australia". A key member of the pernicious, parasitic United States' military-industrial complex was announcing its presence in Australia. A Merchant of Death had its feet under the table in 'The Land Down Under'!

Earlier in the same year the Australian government had announced to the Australian people that it had entered into an alliance with the United States to develop hypersonic missile technology; then it announced that it was entering into an agreement to procure nuclear submarines. Now it has welcomed United States weapons manufacturers to establish branch offices in Australia (or is Australia to be a branch office of the US Military Industrial Complex - obediently playing the part, which so many other nations (including the US) have played, of expendable vassal to the US MIC?).

Kelley Beaucar Vlahos summed it up:

An unclassified ^œ[summary](#) of the [US] Defense Department's Global Posture review [GPR] was released Monday and in the words of the indomitable Jimmy Page and Robert Plant, the song of American military primacy worldwide pretty much "remains the same."

Of course the summary of the GPR, which has been long anticipated, doesn't offer much detail, but the bottom line is this: China remains a key "pacing threat" and it will be met. There seems to be no plan, however, for reshuffling U.S. military forces from other theaters to grow the foot print in East Asia. Instead, Washington aims to build upon its strategic partnerships in the region. Where there is actual growth in the footprint, mentioned below, much of that had already been announced previously:

(The GPR) directs additional cooperation with allies and partners to advance initiatives that contribute to regional stability and deter potential Chinese military aggression and threats from North Korea. These initiatives include seeking greater regional access for military partnership activities; enhancing infrastructure in Australia and the Pacific Islands; and planning rotational aircraft deployments in Australia, as announced in September. The GPR also informed Secretary Austin's approval of the permanent stationing of a previously-rotational attack helicopter squadron and artillery division headquarters in the Republic of Korea, announced earlier this year.

Most of the hullabaloo over the Australia-UK-U.S. (AUKUS) agreement in September had been over the transfer of nuclear submarine technology to Australia. But as David Vine pointed out in ^œ[this RS article](#), AUKUS is also allowing the U.S. to station more assets and personnel Down Under, including, "combined logistics, sustainment, and capability for maintenance to support our enhanced activities, including... for our submarines and surface combatants" and "rotational deployments of all types of U.S. military aircraft to Australia."

(Kelley Beaucar Vlahos, ^œ[Pentagon: U.S. military footprint staying right where it is](#): The long-awaited Global Force Posture review shows that status quo is the key refrain as the China song remains the same, *Responsible Statecraft*, November 30, 2021)

Australia has entered into a public-private-partnership with [Lockheed Martin to develop hypersonic weaponry](#). A militant United States, seeking to shore up its military presence in the Pacific, is in the process of co-opting another sovereign nation to serve as a militant proxy and put itself in the firing line of any future military confrontation. David Vine spelt it out:

Largely overlooked in last week's announcement of the U.S. - Australia nuclear-powered submarine deal is the fact that the U.S. government plans to build new U.S. military bases Down Under.

In a September 16 press conference, Australia Defence Minister Peter Dutton announced plans to establish new facilities for naval, air, and ground forces with "combined logistics, sustainment, and capability for maintenance to support our enhanced activities, including...for our submarines and surface combatants" and "rotational deployments of all types of U.S. military aircraft to

Australia." The U.S. military already has at least seven installations in Australia.

While mainstream media outlets frequently raise fears of China's "escalating military presence in the South China Sea," the U.S. military has hundreds of bases throughout the Asia Pacific region, surrounding China's borders.

Worldwide, despite the recent withdrawal from Afghanistan, the U.S. government still maintains approximately 750 military bases abroad in 80 foreign countries and colonies, according to a new, exhaustive list of U.S. overseas military installations that I helped compile for the Quincy Institute and World BEYOND War.

That the Biden administration intends to expand the already massive collection of bases in Australia and elsewhere in the Pacific is deeply troubling.

(David Vine, ^œ[Not just about subs, AUKUS expands US military footprint in Australia, too](#), *Responsible Statecraft*, September 20, 2021)

Hal Brands and Michael Beckley described the danger facing Australia in its acceptance of this frontline role in future US military adventures,

The United States is getting serious about the threat of war with China. The U.S. Department of Defense has labeled China its primary adversary, civilian leaders have directed the military to develop credible plans to defend Taiwan, and President Joe Biden has strongly implied that the United States would not allow that island democracy to be conquered.

Yet Washington may be preparing for the wrong kind of war. Defense planners appear to believe that they can win a short conflict in the Taiwan Strait merely by blunting a Chinese invasion. Chinese leaders, for their part, seem to envision rapid, paralyzing strikes that break Taiwanese resistance and present the United States with a fait accompli. Both sides would prefer a splendid little war in the western Pacific, but that is not the sort of war they would get.

A war over Taiwan is likely to be long rather than short, regional rather than local, and much easier to start than to end. It would expand and escalate, as both countries look for paths to victory in a conflict neither side can afford to lose. It would also present severe dilemmas for peacemaking and high risks of going nuclear. If Washington doesn't start preparing to wage, and then end, a protracted conflict now, it could face catastrophe once the shooting starts.

(Hal Brands and Michael Beckley, ^œ[Washington Is Preparing for the Wrong War With China: A Conflict Would Be Long and Messy](#), *Foreign Affairs*, December 16, 2021)

There is, indeed, madness in the Australian air! It is entering into a pact with a [very real 'Evil Empire'](#): one that has indiscriminately sold weaponry of every kind to buyers around the world and has, just as indiscriminately, used the threat of military conflict to secure its interests in that world.

Australia's descent into branch office status had begun with an ^œ[Australian prime ministerial visit to the United States in 2019](#) during which President Trump, in a typically flamboyant manner, effusively

flattered both Australia and its Prime Minister. As a variation on a well-worn aphorism would have it: 'Beware of the flattery of US Presidents bearing gifts!'.

838 As Wertheim continued:

The years that followed were not kind to Biden's assurances. President Donald Trump rejected a world-ordering role for the United States, unleashing 'America first' nationalism instead. More important, perhaps, Trump exposed the shallow domestic political support for the high-minded abstractions for which foreign policy elites ask soldiers to fight and citizens to pay.

By the time of his presidential campaign in 2020, Biden no longer spoke much about the liberal international order or American indispensability. He emphasized healing the country's domestic wounds and influencing others 'not merely by the example of our power, but by the power of our example.'

But Biden will need to be much bolder if his presidency is to succeed. He is inheriting a long-standing U.S. grand strategy that is systemically broken and that no tonal adjustment or policy nuance can fix.

For three decades, successive presidents - Trump included - continually expanded U.S. wars, forward deployments, and defense commitments in the pursuit of armed dominance across the globe. (Stephen Wertheim, [^œDelusions of Dominance: Biden Can't Restore American Primacy - and Shouldn't Try](#), *Foreign Affairs*, January 25, 2021)

839 As Patrick argues:

The biggest problem with their proposal is its lack of global political legitimacy. Over the past two centuries, the international system has grown to include 193 independent sovereign nations and developed a dense array of multilateral organizations and treaties that regulate everything from the use of force to the allocation of orbital slots in outer space. Haass and Kupchan give short shrift to this vast if imperfect institutional architecture, particularly the unmatched global authority the United Nations enjoys - for better or worse - by virtue of its universal membership and legally binding Charter. A case in point is the global concert's envisioned crisis-response function, which would compete directly with the role of the U.N. Security Council - and without the latter's grounding in international law.

Most U.N. member states already consider the Group of 20, let alone the G-7, unrepresentative and illegitimate. Creating a new, self-appointed global directorate - a "G-6," if you will - would elicit much louder howls from those left outside, not least from Africa, Latin America and the Middle East. Haass and Kupchan propose to mollify them by granting regional bodies like the African Union, the Organization of American States, the Arab League and the Association of Southeast Asian Nations periodic audiences before the new concert. But the optics would reinforce a global caste system pitting the dominance and privilege of great powers against the submission and supplication of weak ones. The concert would also likely encourage the world's fragmentation into at least tacit spheres of influence, as each great power asserts a right, and is even granted leeway, to police its respective neighborhood. The

authors reassure the reader this will not occur, insisting that this new concert "would promote regional integration and look to existing regional bodies to encourage restraint." But history provides few examples of that.

(Stewart M. Patrick, ⁸⁴⁰[A Concert of Powers Is an Idea Whose Time Has Come - and Gone](#), *World Political Review*, April 5, 2021)

⁸⁴⁰ Caitlin Johnstone summarized it well:

So what the US intelligence cartel is asking us to believe this time around is that America's democracy has suffered yet another invisible attack, the evidence for which is of course top secret, and that the culprits involved are most of the governments the US intelligence cartel doesn't like. Also, we're being asked to believe that US-aligned nations like Saudi Arabia and Israel have had no similar interventions in the US electoral process at all.

And of course we're already getting reports that this narrative will be used to justify sanctions against many of the accused nations, including Iran (which would necessarily kill the nuclear deal Biden campaigned on re-entering).

(Caitlin Johnstone, ⁸⁴¹[US Intelligence Cartel: All The Governments We Hate Interfered In Our Election](#), *Caitlin's Newsletter*, March 17, 2021)

⁸⁴¹ Michael Hudson put it well:

There is incompatibility between a rentier society controlled by the finance and real estate interests and military interests and an industrial democracy.

Industry in England and Europe in the 19th century - the whole fight for democratic reform to increase the role of the House of Commons against the House of Lords in England and the lower house in Europe - was a fight to get labor on the side of industry [and] to get rid of the landlord class. And it was expected that ... capitalism [would then be] free of the landlord class, free of something that wasn't really capitalism at all, it was a carry-over from feudalism. Once you free capitalism, you wouldn't have this overhead of the idle 1 percent, only consuming resources and going to war, anymore.

And then World War I changed all of that Already, in the late 19th century, the landlords and the banks fought back, and they fought back largely through the Austrian School of individualism and the English marginalist and they called it freedom. They call it free markets. Free market meant giving power to the monopolists, to the oppressors, to violence. A free market was where armies can come in, take over your country, impose a client dictatorship like [Gen. Augusto] Pinochet in Chile or the neo-Nazis in the Ukraine. And you call that a free market.

The free world was a world centrally planned by the American military and finance together. So, it's Orwellian, and the dynamic of this world is shrinking because it's polarizing and you've seen with the Covid pandemic in the United States, the economy has polarized much more sharply than ever before between the 1 percent, the 10 percent and the rest of the economy.

Well, as opposed to that here, you have economies that are not run by a rentier class, that do not have a banking class and the landlord

class controlling the economy, but a partnership. The kind of thing you had in Germany in the late 19th century, government industry and labor, all working together to design how we provide the financing for industry so that it can provide not only industrial capital formation, but public funding for us to build infrastructure and uplift the population.

What China is doing is what made America rich in the 19th century, what made Germany rich. It's exactly the same logical engineering plan. Now, this plan because it's based on economic expansion, and environmental preservation and economic balance instead of concentration, this is going to be a growing economy. So, you're having a growing economy outside of the United States and a shrinking economy in the States and its satellites in Europe. (Michael Hudson and Pepe Escobar, ["In Quest of a Multi-Polar World," Consortium News](#), March 26, 2021)

Caitlin Johnstone has summed up the US (and general Western) limits of political 'freedom':

One of the most consequential collective delusions circulating in our society is the belief that our society is free. Our society is exactly free enough to create the illusion that we have freedom; from that line onwards it's just totalitarianism veiled in propaganda....

It is true that dissidents are permitted to criticize the government systems of the US-centralized empire to an extent, but only to an extent. Yes, as long as my criticisms of capitalism, oligarchy and imperialism remain relegated to the fringes of influence I am indeed permitted to express my views unmolested. If however I somehow ascended to a position of significant mainstream influence I would be targeted and smeared until my reputation was ruined or I had a psychological breakdown and went away. You may be certain of this. (Caitlin Johnstone, ["They Don't Work To Kill All Dissent, They Just Keep It From Going Mainstream," February 20 2021](#))

⁸⁴² Here is how it is all-too-often done:

1. Select target nations, one of which will be the 'justification' for the coming conflict and another which can be used as a conflict proxy, buffering the United States and its 'allies' from direct involvement in the coming 'war';
2. Provoke conflict through 'regime changing' the conflict proxy and convincing the new administration that ethnic minorities within its borders must be compelled to relinquish their own traditions, language and identities and become members of a homogeneous majority (most post-colonial nations have such populations);
3. Convince the conflict proxy that it needs a strong, well organized military to compel compliance with its new 'integration' demands;
4. Convince the nation with which the selected minorities can be identified that it has a responsibility to protect them from the fomented aggression (most post-colonial territories include ethnic groups divided by the arbitrary drawing of colonial borders, perpetuated in post-colonial nation national boundaries);
5. Establish a 'coalition of the willing' which will be committed to underwriting a 'war' to protect the conflict proxy from the

'unwarranted aggression' of its neighbor, requiring it to supply massive quantities of all sorts of armaments - preferably from existing stockpiles of weaponry in those nations (where they purchased those weapons is a secondary irrelevance);

6. Flood the conflict proxy with weaponry and provide 'instructors' to organize and focus its military;
7. Convince the target nation that the selected minorities are under imminent threat of brutal attack by that weaponized military;
8. As the newly contrived 'war of aggression' develops require members of the 'coalition of the willing' to deplete their current stocks of weaponry and reassure them that, since they will be vulnerable without a stockpile of weaponry, the United States will 'guarantee' replacement of their depleted weapons stockpiles.

⁸⁴³ Whether Australia realizes it or not, accepting sophisticated US military nuclear technology means accepting ongoing US control over its deployment. Australia is not merely upgrading its maritime 'defense' capabilities though purchasing sophisticated nuclear submarines, it is also [accepting an ongoing US involvement in both the maintenance and deployment of those acquisitions](#). It is tethering its naval future, and, therefore, its foreign policy to US military agendas. French continued

Some degree of French anger in this matter is surely understandable. But the lingering smoke from Paris' ongoing fit of temper has obscured the most meaningful implications of what will likely stand as one of the most consequential geopolitical realignments of the post-Cold War era.

Upon the scaffolding of the new submarine deal, a new security relationship is being established between Australia, the United Kingdom and the United States under the ungainly name AUKUS, one that gives the first real heft to the idea of an American "pivot" to the Pacific, first proposed early in the Obama administration but until now never meaningfully advanced.

Before speaking to the profound ramifications that will flow from this development, it is worth examining the French emotional outburst up close, to cut through all the surface color in order to get to the heart of the matter.

It is true that France, a European ally of the United States, received little to no prior warning of the cancellation of its \$66 billion submarine contract in advance of Biden's announcement of the AUKUS deal. It is equally true that if Canberra, or Washington, had informed Paris well beforehand, France would have pulled out every stop to try to preserve its agreement with Australia and prevent the deal with the U.S. and Britain from going forward....

...More important even than the nature of the technology involved, the three parties to the AUKUS alliance must have concluded, whether separately or in discussion with each other, that if push ever comes to shove in the Pacific with China - over, say, Taiwan, which is the most dangerous potential flashpoint in the region at present - that the French were far less likely to commit human lives, or indeed even risk their business interests with China, in such a faraway contest than any of the new partners would be.

We must all ardently hope that war between Western powers and China never breaks out, but war, at heart, means risking real human lives. And we must be more candid in acknowledging that this is what this entire brouhaha is really about - a grim fact that, so far, the public broadly ignores in all of the countries concerned, save perhaps Australia.

(Howard W. French, ^œ[Looming Over the AUKUS Deal Is the Shadow of War](#), *World Politics Review*, September 22, 2021)

⁸⁴⁴ Two short videos illustrate US attitudes toward its 'enemies' and acolytes and the kind of thinking which underlies US 'Russia' paranoia.

The first provides a potted (and superficial but not inaccurate) history of US post-1950s involvement with Australia, culminating in a thinly veiled threat of US retaliation should Australia attempt to side with China against US aggression by a prominent US political scientist, John Mearsheimer:

^œ[The American Colony of Australia](#) - 'Security wise you really want to go with us... if you go with China you are our enemy':

(<https://youtu.be/IER2SGbjCWo>)

The second is a propaganda video by well-known US personalities explaining that Putin - and therefore Russia - is threatening the US and so, consequently, the US is at war with Russia:

^œ[Committee to Investigate Russia: War](#) (<https://youtu.be/Uz9PNoecNxU>)

⁸⁴⁵ As Nexon described:

...[T]he fate of a central plank of Trump's foreign policy remains uncertain: the focus on great-power competition, which according to his administration's National Security Strategy has "returned." In a major address at the U.S. State Department, Biden underscored his intention to "work with Beijing when it's in America's interests to do so," but days later noted the likelihood of "extreme competition" with China. This rhetoric may reflect either pragmatism or that great-power competition is on its way to assuming a dominant place in Biden administration policy....

For all the concept's influence in recent years, great-power competition is not a coherent framework for U.S. foreign policy. Treating it as a guiding principle of American grand strategy risks confusing means and ends, wasting limited resources on illusory threats, and undermining cooperation on immediate security challenges, such as climate change and nuclear nonproliferation. In the long run, a fixation on great-power competition is likely to undermine, rather than enhance, U.S. power and influence.

(Daniel H. Nexon, ^œ[Against Great Power Competition: The U.S. Should Not Confuse Means for Ends](#), *Foreign Affairs*, February 15, 2021)

⁸⁴⁶ As Savell summarizes:

From 2018 to 2020, the United States government undertook what it labeled "counterterrorism" activities in 85 countries.

The map illustrates countries in which the U.S. government conducted operations it explicitly described as counterterrorism, in an outgrowth of President George W. Bush's "Global War on Terror."

These operations include air and drone strikes, on-the-ground combat, so-called "Section 127e" programs in which U.S. special

operations forces plan and control partner force missions, military exercises in preparation for or as part of counterterrorism missions, and operations to train and assist foreign forces.

(The map does not comprehensively cover the full scope of U.S. post-9/11 warfare, as it does not document, for instance, U.S. military bases used for counterterror operations, arms sales to foreign governments, or all deployments of U.S. special operations forces.)

Despite the Pentagon's assertion that the U.S. is shifting its strategic emphasis away from counterterrorism and towards great power competition with Russia and China, examining U.S. military activity on a country-by-country basis shows that there is yet to be a corresponding drawdown of the counterterror apparatus. If anything, the map demonstrates that counterterrorism operations have become more widespread in recent years.

(Stephanie Savell *et al*, ⁸⁴⁷[United States Counterterrorism Operations, 2018-2020](#), *Watson Institute For International And Public Affairs, Brown University*, Accessed February 28, 2021)

⁸⁴⁷ Lawrence explained:

The Pentagon employs more than seven contractors for every service member in Afghanistan, figures from U.S. Central Command show.

More than 18,000 contractors remain in Afghanistan, a Defense Department report released this week said, after the Pentagon announced Friday it had reduced its troop total in the country to 2,500.

The contractor population decreased by about 4,300 from last October, down about 20%. The drawdown of U.S. troops over the last year "drove reductions in requirements for contracted support," the report said.

About one service member deployed for each contractor a decade ago, at the height of the U.S. troop presence in Afghanistan.

The ratio grew as limits on troop levels led to a reliance on contractor and temporary duty personnel, a Congressional Research Service paper in 2019 found.

Concerns about DOD contractor use go back more than a decade. In 2008, Congress established the bipartisan Commission on Wartime Contracting in Iraq and Afghanistan to look into the issue.

The commission found in 2011 that the two wars led to an "unhealthy over-reliance" on contractors, which often overwhelmed the U.S. government's ability to effectively oversee or manage them, it said.

About 4,700 of the contractors are Afghans hired locally, but nearly three-quarters come from outside the country, including about a third who are U.S. citizens, the data in this week's report show. Many of the rest are from developing countries such as Uganda and Nepal.

(J. P. Lawrence, ⁸⁴⁸[Troop levels are down, but US says over 18,000 contractors remain in Afghanistan](#), *Stars and Stripes*, January 19, 2021)

⁸⁴⁸ Tom Engelhardt, in an introduction to Klare's post, put it well:

For a moment, imagine an upside-down military world. Instead of U.S. guided-missile destroyers and other ships regularly carrying out "freedom of navigation operations" near Chinese-claimed islands in the South China Sea and such destroyers no less regularly passing through the Strait of Taiwan between that disputed island and the People's Republic of China, consider how any administration would react if Chinese naval vessels were ever more provocatively patrolling off the coast of California. You know that official Washington would quite literally go nuts and we'd find ourselves at the edge of war almost instantly.

Or, in a similar fashion, imagine that Russia had moved nuclear weapons close to the southern Mexican border, was selling advanced weaponry and offering other military aid to Mexico, and acting as we've been doing in relation to Ukraine. Washington would be up in arms, again all too literally.

Don't misunderstand me: I hold no torch for either Chinese President Xi Jinping or Russian President Vladimir Putin. (And I suspect, by the way, that if Putin were foolish enough to invade Ukraine he might find himself involved in an updated version of the Soviet Union's disastrous Afghan War of the 1980s in a far more explosive part of the world.) I'm merely pointing out that the American urge to be militarily anywhere it wants to be on this planet in any fashion it chooses might not be quite what's needed these days. A new Cold War on an ever hotter and more pandemic planet? Just what we really (don't) need.

I mean honestly, on a planet in deep doo-doo, where the major powers should be cooperating big time, having a post-Trump administration (with, admittedly, an old cold warrior as president) so ready to return us to a Cold War-style world seems, to say the least, both a tad out of date and a bit reckless as well.

(Tom Engelhardt, Michael Klare, ⁸⁴⁹[Welcome to the New Cold War in Asia; None Dare Call It "Encirclement"](#), *TomDispatch*, January 13, 2022)

⁸⁴⁹ Remarks by US Secretary of Defense Mark T. Esper at the Munich Security Conference Feb. 15, 2020:

...The NDS states that we are now in an era of Great Power Competition, with our principal challengers being China, then Russia, and that we must move away from low intensity conflict and prepare once again for high-intensity warfare.

At the same time, it recognizes that our second tier priorities are rogue states such as North Korea and Iran.

And finally, dealing with Violent Extremist Organizations will likely be an enduring threat for years to come.

Being in Europe, I know that there has been much discussion about the challenges from Russia, so this morning I want to focus on the Pentagon's top concern: the People's Republic of China.

Next year will mark the 20th anniversary of a decision that fundamentally altered the course of international affairs: China's admission into the World Trade Organization.

I was working in the United States Senate at the time, and two competing arguments over China's membership dominated the public debate.

The prevailing notion of the day was that, if we allowed the PRC into the WTO and other multilateral institutions, China would continue on its path of economic reform and eventually become a market-oriented trading partner.

More broadly, increased engagement with the liberal world order would also spur political opening and help transform the PRC into a responsible global stakeholder.

The more skeptical voices argued that, if granted membership, China would use the benefits of free trade and an open international order to grow its economy and access the technology required to build a strong military and security state capable of expanding the reach of their authoritarian rule.

These were both credible arguments, but we all know which one is winning right now.

It's not the former.

In fact, under President Xi's rule, the Chinese Communist Party is heading even faster and further in the wrong direction - more internal repression, more predatory economic practices, more heavy-handedness, and most concerning for me, a more aggressive military posture.

It is essential that we - as an international community - wake up to the challenges presented by China's manipulation of the long-standing international, rules-based order that has benefited all of us for many decades.

The Communist Party and its associated organs, including the People's Liberation Army, are increasingly operating in theaters outside its borders, including Europe, and seeking advantage by any means, and at any cost...

Unfortunately, their current behavior leaves great cause for concern.

The United States' National Defense Strategy recognizes this critical challenge as we adapt and prepare our force to deal with China in this new era of great power competition.

The PRC's growing economic, military, and diplomatic power often manifests itself in ways that are threatening, coercive, and counter to the rules-based international order.

Over time, we have watched them seize and militarize islands in the South China Sea, and rapidly modernize their armed forces, while seeking to use emerging technologies to alter the landscape of power and reshape the world in their favorand often at the expense of others.

I continue to stress to my friends in Europe - and just this past week again at the NATO Defense Ministerial in Brussels - that America's concerns about Beijing's commercial and military expansion should be their concerns as well.

This September will mark the 75th commemoration of the end of World War II, and the birth of the international rules-based order that has supported security and prosperity across the globe.

The United States, our NATO allies, and partners across the Indo-Pacific have sacrificed blood and treasure over the decades to protect and preserve it.

Yet, the PRC seeks to undermine and subvert this system, the same one that allowed them to rise and become what they are today.

As we speak, Communist China is exerting financial and political pressure, publicly and privately, on many Indo-Pacific and European nations - large and small - while pursuing new strategic relationships worldwide.

In fact, the smaller the country, the heavier the hand of Beijing.

Through its Belt and Road Initiative, for example, the PRC is leveraging its overseas investments to force other nations into sub-optimal security decisions.

This has wide-reaching ramifications for the United States and our allies in critical areas like data security, interoperability, and military readiness.

While we often doubt the transparency and forthrightness of Beijing, when it comes to their security aims, we should take the Chinese government at its word.

- By 2035, the PRC intends to complete its military modernization,
- And, by 2049, it seeks to dominate Asia as the preeminent global military power.

Furthermore, the global community should be deeply concerned about the Party's use of artificial intelligence and other cutting-edge technologies to surveil and repress Muslim minorities, journalists, and pro-democracy protestors.

To make matters worse, the government is now exporting these tools worldwide in a manner that could bolster other authoritarian regimes.

China's rapid ascent has stirred much debate over the primacy of the United States and the West in the 21st century...

China's growth over the years has been remarkable, but in many ways it is fueled by theft, coercion, and exploitation of free market economies, private companies, and colleges and universities.

American and European institutions and corporations face the brunt of these malign activities, and we have seen a multitude of examples where our economies and companies have suffered as a result.

But Beijing's bad behavior will only take them so far.

The world is increasingly aware of its motives - and responding in turn.

Regrettably, rather than change course, Party leadership continues its rampant technology theft, while resolving to eventually end its reliance on foreign innovation altogether, independently develop its own systems, and then dominate critical sectors and markets.

Huawei and 5G are today's poster child for this nefarious activity.

History has proven time and again, though, that authoritarianism breeds corruption, promotes conformity, smothers free thinking, and suppresses freedom.

In stark contrast to this are our values, sense of fairness, and culture of opportunity, which encourage disruption and unleash the very best of human intellect, spirit, and innovation.

This is why it is critical that, together, we directly and unambiguously, address Beijing's actions and intentions, so that we are never intimidated, duped, or pushed into bad security, economic, or political choices.

And maybe, just maybe, we can get them on the right path.

Again, make no mistake, we do not seek conflict with China.

That's not what we want; not at all. Rather, we seek fair and open competition in the economic realm.

And in general, we simply ask of Beijing what we ask of every nation: to play by the rules, abide by international norms, and respect the rights and sovereignty of others.

To restore an equal footing, the Department of Defense is doing its share.

We are focused on deterring bad behavior, reassuring our friends and allies, and defending the global commons.

And to maintain the peace, through strength, we are implementing the United States' National Defense Strategy.

As part of this strategy, we are doing our part to safeguard American innovation and reinvigorate our industrial base.

Thanks to our largest Research and Development budget in 70 years, we are investing in cutting-edge technologies and accelerating the modernization of our force, while at the same time, divesting from legacy systems and re-investing those savings into hypersonic missiles, artificial intelligence, autonomous systems, and other game-changing technologies.

Unlike China and others, we will use these advanced capabilities to help keep the peace, promote prosperity, ensure security, and protect the sovereignty of all freedom-loving countries....

The United States does not want an adversarial relationship with China.

It is a great country with an extraordinary history, a rich culture, and a wonderful people.

Rather, we want China to behave like a normal country that adheres to the international rules and order that generations before us have fought hard to protect and preserve.

And that means the Chinese government needs to change its policies and behaviors.

If the PRC will not change its ways, then defending this system must be our collective priority.

We can only do this by making greater investments in our common defense; by making the hard economic and commercial choices needed to prioritize our shared security; and by working together to maintain a ready and capable alliance network that is prepared to deter any threat, defend any Ally, and defeat any foe.

(Mark T. Esper, US Secretary of Defense, [Speech the Munich Security Conference 2020](#), US Department of Defense, Feb. 15, 2020)

850 Alexander Cooley and Daniel Nexon provide a Western-centric explanation of the driving forces behind this 2020 US apprehension.

The description of Chinese and Russian 'projects' as 'autocratic and illiberal', rivaling the 'U.S.-led liberal international system' is frankly chauvinist. As is the juxtaposition of terms like 'vicious' and 'virtuous' 'cycles' or their description of 'illiberal, often right-wing transnational networks' which 'are pressing against the norms and pieties of the liberal international order'.

With those cautions in mind, here is their explanation:

...[P]redictions of American decline and a shift in international order are far from new - and they have been consistently wrong. In the middle of the 1980s, many analysts believed that U.S. leadership was on the way out....

But this time really is different. The very forces that made U.S. hegemony so durable before are today driving its dissolution. Three developments enabled the post-Cold War U.S.-led order. First, with the defeat of communism, the United States faced no major global ideological project that could rival its own. Second, with the disintegration of the Soviet Union and its accompanying infrastructure of institutions and partnerships, weaker states lacked significant alternatives to the United States and its Western allies when it came to securing military, economic, and political support. And third, transnational activists and movements were spreading liberal values and norms that bolstered the liberal order.

Today, those same dynamics have turned against the United States: a vicious cycle that erodes U.S. power has replaced the virtuous cycles that once reinforced it. With the rise of great powers such as China and Russia, autocratic and illiberal projects rival the U.S.-led liberal international system. Developing countries - and even many developed ones - can seek alternative patrons rather than remain dependent on Western largess and support. And illiberal, often right-wing transnational networks are pressing against the norms and pieties of the liberal international order that once seemed so implacable. In short, U.S. global leadership is not simply in retreat; it is unraveling. And the decline is not cyclical but permanent. (Alexander Cooley and Daniel H. Nexon, ^œ[How Hegemony Ends: The Unraveling of American Power](#), *Foreign Affairs*, July/August 2020)

851 As a reviewer of Pierre Landry's 2008 book ^œ[Decentralized Authoritarianism in China: The Communist Party's Control of Local Elites in the Post-Mao Era](#) has summarized:

China, like many authoritarian regimes, struggles with the tension between the need to foster economic development by empowering local officials and the regime's imperative to control them politically...the Chinese Communist Party (CCP) manages local officials in order to meet these goals and perpetuate an unusually decentralized authoritarian regime.

Like so many Western analyses of Chinese political/ economic/ social organization and practice, both Landry and Milanovic provide Western-centric explanations of those integrated forms of organization and practice. These manage, simultaneously, to provide both convincing explanations of them for Western audiences and yet miss that

fundamental difference between Western and Chinese understandings which Tsui, Farh and Lih (1997) identified:

Chinese often view themselves interdependent with the surrounding social context, and it is the 'self in relation to other' that becomes the focal individual experience. This view of an interdependent self is in sharp contrast to the Western view of an independent self.

To use a metaphor from the insect world:

How does the solitary wasp understand the beehive?¹⁰⁸⁵

All this is further confounded by a failure to recognize that China is, like so many non-Western communities in the 21st century, having to grapple with the historical consequences of enforced reorganization of their worlds to fit the requirements of capitalism.

Here is Milanovic's explanation of China's 'top-down structure':

The Chinese government's greatest asset in the management of the crisis has been the centralization of its power and its ability to control vast resources. Because of this top-down structure, China was able to impose draconian policies extraordinarily quickly and to shift assets (including human assets, such as doctors and nurses) to the areas where they were needed most. Without these measures, China could not have achieved such remarkable results: Shanghai, a city 24 million strong, experienced coronavirus deaths only in two digits, and just three months after its quarantine was imposed, Wuhan is now mostly free of new infections.

But a centralized political system also has vulnerabilities. The economist Xu Chenggang has described the Chinese system as one of regionally decentralized authoritarianism, in which provincial authorities have broad powers, so long as they deploy them in the pursuit of objectives determined by the center. The central government's priorities include maximizing economic growth, attracting foreign investors, and, sometimes, controlling pollution. The system is efficient in allowing provincial and local authorities to pursue these objectives using the means they know best and deem most appropriate. But central authorities reward local ones based on how they perceive their management, so local authorities also have an incentive to hide undesirable developments.

...The provincial authorities reacted with hesitation - and even denial - because they did not want to create an impression of lack of control or of poor management. They relayed as little information as possible to the center about the mysterious infections, even as the seeds of the pandemic were sown. Only when the problem was too obvious to conceal was the truth allowed to flow upstream. At that point, China's central government responded with an efficiency and professionalism that made up for some lost ground....

The American political system has reacted to the virus in a manner exactly opposite to that of China. The central authorities - the U.S. federal government and its agencies - have presented a picture of disarray and amateurism. In the pandemic's first moments, the federal government was absent altogether, and so it has more or less remained. But American federalism assigns a role to the states that has helped compensate for the weakness of the center.

When the U.S. federal government disappeared, consumed by meaningless press conferences, the states took over management

of the crisis. In doing so, they showcased the power and resilience of federalism, which, unlike "regionally decentralized authoritarianism," devolves real powers to the states even when they may conflict with federal priorities. ...

The world is carefully watching two systems - political and liberal capitalism, decentralized authoritarianism and federalism - respond to an identical crisis. Many people will overlook the origin of the crisis and compare the Chinese response favorably to the American one. China, after all, is returning to a normal life that stirs envy and longing: companies back at work, retail stores open, relaxed Starbucks patrons sipping coffee.

So far, political capitalism is winning....

(Branko Milanovic, ["Is the Pandemic China's Sputnik Moment? What a Virus Reveals About Two Systems," *Foreign Affairs*, May 12, 2020](#))

852 As they say:

The U.S. ambassador on the spot in an Asian economic powerhouse put it bluntly in a cable to the secretary of state in Washington: Don't cut them off. Give them some "economic elbow-room," or they'll be forced to carve out an economic empire of their own by force. But Washington was in the grip of economic nationalists battling a historic economic downturn. The White House, consequently, was deaf to the Ambassador Joseph Grew's pleas from Tokyo in 1935.

Within a few years, the United States ramped up economic pressure on Japan, culminating in a trade and oil embargo. Six years after Grew wrote his dispatch, the two countries were engaged in total war.

Today, American policymakers are consumed by the economic and geopolitical confrontation with another Asian heavyweight. And, as in the 1930s, economic decoupling is all the rage.

For the more hawkish members of the Trump administration, undoing 40 years of ever-closer economic relations with China and rolling back U.S. reliance on Chinese factories, firms, and investment was always the end game of the endless trade war - even before the coronavirus pandemic turbocharged Washington's desire to disentangle itself from what many view as a dangerous economic bear hug. Now, lawmakers and administration officials are mulling a raft of measures to cleave parts of the two largest economies in the world: Bans on a wide variety of sensitive exports, additional tariffs on Chinese goods, forced reshoring of U.S. companies, even pulling out of the World Trade Organization altogether, which is seen by some as facilitating China's so-called economic imperialism.

It's not just economic ties between China and the United States that are in danger. Europe, too, is increasingly talking of rolling back the deep trade and investment ties it has developed with Beijing in recent decades (even as it is cutting trade ties with itself, as the United Kingdom leaves the European Union). Other countries are also pulling up the drawbridges - all leery that today's unprecedented level of economic integration has gone too far, bringing more pain and less gain.

The threat of a great decoupling is a potentially historic break, an interruption perhaps only comparable to the sudden sundering of the first huge wave of globalization in 1914, when deeply intertwined economies such as Britain and Germany, and later the United States, threw themselves into a barrage of self-destruction and economic nationalism that didn't stop for 30 years. This time, though, decoupling is driven not by war but by peacetime populist urges, exacerbated by a global coronavirus pandemic that has shaken decades of faith in the wisdom of international supply chains and the virtues of a global economy.

(Keith Johnson and Robbie Gramer, ^œ[The Great Decoupling](#): Washington is pressing for a post-pandemic decoupling from China. But the last big economic split brought on two world wars and a depression. What's in store this time?, *Foreign Policy*, May 14, 2020)

⁸⁵³ As Lee Hsien Loong explained:

The status quo in Asia must change. But will the new configuration enable further success or bring dangerous instability? That depends on the choices that the United States and China make, separately and together. The two powers must work out a modus vivendi that will be competitive in some areas without allowing rivalry to poison cooperation in others....

...Every year, the Chinese premier travels to an ASEAN member state to meet the ASEAN countries' leaders, well prepared to explain how China sees the region and armed with proposals to enhance Chinese cooperation with the grouping's members. As China's stake in the region has grown, it has launched its own initiatives, including the Belt and Road Initiative and the Asian Infrastructure Investment Bank. These have helped deepen China's engagement with its neighbors and, of course, increased its influence.

But because the regional architecture is open, China's influence is not exclusive. The United States remains an important participant, underpinning regional security and stability and enhancing its economic engagement through initiatives such as the Asia Reassurance Initiative Act and the BUILD Act. ASEAN also has formal dialogue mechanisms with the European Union, as well as with India and many other countries. ASEAN believes that such a network of connections creates a more robust framework for cooperation and more space to advance its members' collective interests internationally.

(Lee Hsien Loong, ^œ[The Endangered Asian Century: America, China, and the Perils of Confrontation](#), *Foreign Affairs*, July/August 2020)

⁸⁵⁴ Bilahari Kausikan has explained:

When I served as a Singaporean diplomat, I once asked a Vietnamese counterpart what an impending leadership change in Hanoi meant for his country's relations with China. "Every Vietnamese leader," he replied, "must get along with China, every Vietnamese leader must stand up to China, and if you can't do both at the same time, you don't deserve to be leader."

As U.S. President Joe Biden begins his term in office, his team should heed those words. Southeast Asia is the epicenter of the competition between China and the United States. To different

degrees and in their own ways, every country in the region has adopted that approach to China - and to the United States, too.

Southeast Asia has always been a strategic crossroads, where the interests of great powers intersect and sometimes collide. It is naturally a multipolar region, never under the sway of any single external power, except for in the brief period of Japanese occupation during World War II. Today's competition between China and the United States is just another phase of a centuries-old dynamic that has embedded the instinct to simultaneously hedge, balance, and bandwagon in the region's political DNA....

Biden should be cautious about promoting American values in response to Trump's indifference to them. Such values are not necessarily a strategic asset in Southeast Asia, where they are not shared by all. "Democracy" is a protean term, "human rights" is subject to many interpretations, and Southeast Asia generally places more emphasis on the rights of the community than on those of the individual.

The United States has not deployed forces on the mainland of Southeast Asia since the end of the Vietnam War. As an offshore balancer, the United States will always find it difficult to determine just how it should position itself: too forceful a stance against China will evoke fears of entanglement in the region; too passive a stance will elicit fears of abandonment.

This cannot be helped. But Biden must avoid Obama's mistake of thinking that the United States needs to de-emphasize competition to secure Beijing's cooperation on issues such as climate change.

As any undergraduate student of international relations should know, cooperation is not a favor one state bestows on another. If it is in its interest, Beijing will cooperate. States can and do compete and cooperate simultaneously. That understanding is fundamentally what Southeast Asia expects of the United States.

(Bilahari Kausikan, ⁸⁵⁵[The Arena: Southeast Asia in the Age of Great-Power Rivalry](#), *Foreign Affairs*, March/April 2021)

⁸⁵⁵ Observations by two commenters on a blog posting by Yves Smith provide some insight into this:

Palaverve

China doesn't solely calculate direct returns to an industry, but takes the overall economic, social and political impact into consideration.

Infrastructure is in effect their "national loss leader" and other sectors are expected to make up for the losses. By bringing countries into their sphere of influence they save on military resources, increase their market share, and can offset their demographic decline with access to younger labor pools (hiring their competition). In a neomercantilist world, the cost of logistics is outweighed by victory.

Unfortunately, Americans are shortsighted stingy bean counters which was bred into them by their obsession with stock market[s] and the dopamine hit they get from market volatility. China is hacking the developing world the same way it hacked America's political system:...

laodan

Yes. Succinct but to the point.

I follow up with some more...

Societies are assemblies of extremely complex systems interacting non-stop with one another. And the fact is that Western societies and China's society are operating along the lines of different paradigms :

- their cultural fields have nothing in common
- their economic fields operate according to different textbooks
- their social field is directly impacted by the place reserved to their capital holders in the public decision making process. Seen the radical difference in the nature of the capital ownership of both, their social realities on the ground are radically diverging.
The handling of Covid-19 is a case in point. The Chinese citizens are reading this as such and consequently their rates of appreciation for the actions of their government are increasing to unheard levels of satisfaction... (95% presently).
- their relations with the rest of the world are grounded in opposite perceptions of "the other" and so their approaches toward the rest of the world have nothing in common.

In light of the rather fundamentally different approaches of these societies it is imperative to understand that the categories, defining the working of one, are not applicable in defining the working of the other. In other words using Western categories to understand China is ludicrous.

In my view we have entered in a very volatile historical process that will not stabilize before - or [until] - one of them collapses under her own contradictions, or China's economy grows so overwhelmingly bigger than Western economies that the fact is simply registered by all and life continues under a new paradigm.

From where I sit here in Beijing I think that the Chinese leadership is strategizing the latter. And consequently its outside interventions are bound to a momentary slow down....

The belt and Road until now was in a phase of testing and it was decided at the time of its launch that the strategy relating to the project would be finalized during the year 2021 !

This is a whole century project !

How many in the West are taking this publicly available information into account ?

In China's calculus the first priority with the outside is the unification of East-Asia and so the rest of the world should await less imports and less investments from China in the coming years.

The priority for the next 5 to 10 years is an internal strengthening of the nation economically, technologically, culturally, and in daily life while prioritizing the following outside projects :

1. East-Asian cultural commonalities and economic inter-dependencies will be strengthened by absorbing the cost of a trade balance deficit with ASEAN, Korea and Japan

2. there will be an intensification of trade and diverse science and tech cooperation projects with Russia
 3. The China - Pakistan Economic Corridor (CPEC) remains a priority
 4. the participation in the development of Iran and Iraq is an extension of the CPEC priority.
- Yes China needs to secure its procurement of energy over the coming years. It has announced getting out of dependency from fossil fuel by 2060. This leaves thus 4 decades of needs to be fulfilled by imports of oil and gas.

(Comments on Yves Smith *NakedCapitalism* Blog posting: [œChina Retrenches on Belt and Road Initiative as Defaults Rise](#), December 16, 2020)

⁸⁵⁶ Frank Tang has summed up China's trade position at the close of 2020:

In the first 11 months of the year, China's biggest trade partner was the Asean bloc of nations, followed by the Europe Union, according to customs data.

The United States was China's third largest trade partner between January and November, but it remained its biggest export market. Japan was China's fourth largest partner....

Despite a push from Washington for decoupling, the US bought US\$51.9 billion worth of merchandise in November, up 46 per cent, year on year.

The US trade deficit with China was US\$37.6 billion in November, up 52 per cent from a year earlier, and more than 70 per cent since the day Donald Trump entered office vowing to narrow the gap.

"Despite all of the rhetoric, the trade relationship between China and the US is getting even closer this year," said Larry Hu, chief China economist at Macquarie Capital. "Given the rising interdependence, it's hard for the new president to escalate the trade war in the near term."

President-elect Joe Biden has not yet revealed his China policy, but has said he will not immediately dismantle the phase one trade deal agreed to in January.

(Frank Tang, [œUS-China decoupling: has China cast aside US threat with booming exports in 2020?](#) *SCMP*, 09 December, 2020)

⁸⁵⁷ Dean Baker, commenting on the article, summed it up:

...Perhaps the paper considered the risks so apparent that it didn't need to mention them in the article, because it didn't. Yes, we all know the coronavirus originated in China and that its government was not forthcoming with information about the disease and its spread, but what does that have to do with "relying economically" on China? Is the NYT suggesting as an alternative a complete ban on trade and travel between China and the rest of the world?

If not, the issue of "relying economically" on China is pretty much beside the point. I guess we infer from the article that the NYT doesn't like China's government, but other than that, the piece is incoherent...

(Dean Baker, [œNYT Gives Up on Logic in News Reporting - Tells](#)

858 Michael Schuman has explained:

TikTok has become a symbol of the new challenge a rising, tech-enabled China presents not simply to a free society, but to American dominance in the technology sector. The internet today is largely run - for better or worse - by American corporations such as Alphabet, Amazon, and Facebook, and TikTok is the first Chinese company to truly break through to the American, and global, consciousness, something its compatriots, including Alibaba, Baidu, and Tencent, have yet to do.

Fears are percolating in the U.S. that Beijing, thanks to its growing technological might, may be amassing an immense storehouse of information that could be used to identify or blackmail American citizens - or for purposes we haven't yet thought of. The worry is that TikTok could be a powerful vacuum, sucking up images of and details on unsuspecting Americans to feed Beijing's voracious appetite. China's widespread collection of data on its own people - whether through the surveillance state it has built in Xinjiang, the social-credit system that is being implemented, or its intrusive tracking of movements and meetings to combat the spread of the coronavirus - has further driven fears of its willingness to gather such information from abroad for its own ends. TikTok thus finds itself not simply the symbol of China's ascendance and penetration into America, but on the front lines of a new battle between the U.S. and China.

(Michael Schuman, ^œ[Why America Is Afraid of TikTok](#), *The Atlantic*, July 30, 2020)

859 Paul Rosenzweig and Arthur Rizer (July 27, 2020) have described the US Administration's justification for all this:

Last week Attorney General William Barr went full interventionist, telling the press that he was deploying federal law-enforcement officers to Chicago and Albuquerque, New Mexico (this coming after the previous week's deployment to Portland), to combat "violent criminal activity." President Trump said much the same thing as he rattled off cities his administration was eyeing for future intervention - Chicago, Philadelphia, Detroit - because of "gun violence" and "drugs."

How greatly have traditional conservative values of federalism and limited government been transformed. Today, a sitting Republican president invokes the power of the federal government to send militarized Department of Homeland Security agents (equipped with military-grade weapons, body armor, tear gas, and camouflage, like armed forces entering a war zone) to swarm American city streets under unwritten rules of engagement. If video evidence now circulating is to be credited, these agents are not merely protecting federal property; they have detained citizens who aren't violating any law and used the power of their presence to chill civil protests and disobedience....

The consequences of this radical expansion of federal law-enforcement authority are enormous - and none of them are likely to be good. This is what is keeping both of us awake at night. We are conservatives who are united in our love of the Constitution, the

limited rule of law, effective government, individual rights, and civil discourse. We believe in checks and balances and the separation of powers.

And we are watching all of this crumble before our eyes, as the executive branch deploys unchecked power.

(Paul Rosenzweig and Arthur Rizer, ^œ[There Is Nothing Conservative About What Trump Is Doing in Portland](#) *The Atlantic*, July 27, 2020)

⁸⁶⁰ Kristina Wong, August 2019, explained:

President Trump announced on Thursday the official creation of the United States Space Command - the U.S. military's 11th war-fighting geographic combatant command.

"The establishment of the 11th combatant command is a landmark moment. This is a landmark day. One that recognizes the centrality of space to America's national security and defense," Trump said in a Rose Garden ceremony.

"Spacecom will soon be followed very importantly by the establishment of the United States Space Force as the sixth branch of the United States Armed Forces, and that's really something if you think about it," he added.

The ceremony marked a major milestone in one of the administration's top national security priorities, to renew American interest and investment in outer space.

Senate Armed Services Committee Chairman Jim Inhofe (R-OK) praised the official establishment of Spacecom.

"I applaud President Trump for standing up United States Space Command as a Unified Combatant Command today," he said in a statement, which continued:

This is an important step to support the space warfighting domain and ensures our strategic competitors, Russia and China, realize we are serious about implementing our National Defense Strategy. The next step is establishing the United States Space Force, which we are working on as part of the final National Defense Authorization Act.

Rep. Mike Waltz (R-FL), a member of the House Armed Services and the Science, Space and Technology Committees, said in a statement: "I'm grateful to President Trump and his Administration for making a unified, combatant Space Command a reality and I'm also looking forward to the authorization of a new military branch to protect American assets in space."

Air Force Gen. John Raymond, the new U.S. Space Command commander, warned during an earlier press conference that the U.S.'s edge in space was diminishing:

We're the best in the world in space, but our level of superiority is diminishing. The scope, scale, and complexity of the threat to our space capabilities is real and it is concerning. We no longer have the luxury of operating in a peaceful benign domain and we no longer have the luxury of treating space superiority as a given.

Our adversaries have had a front row seat in our many successes of integrating space, and they don't like what they see, because it provides us with such a great advantage and they're developing

capabilities to negate our access to space. It's an imperative that we stand up this command today.

He named China and Russia as countries that pose the more "significant threats" in space, in terms of being able to jam or target U.S. satellites.

"China and Russia in particular are updating their organization, in fact they had reform in 2015 where they've created a greater focus on space and they are updating their doctrine and their capabilities both space to enable to their terrestrial forces, and counterspace," said Defense Assistant Secretary of Defense Steve Kitay, adding:

Their doctrine, and there's a perception that space represents an achilles heel and that this is a way an asymmetric advantage for them to then take on the United States' power because we project power globally through space-enabled capabilities...space will not become an achilles heel. We will protect and defend it and provide it for our way of life and our way of war.

Raymond said the hope is not to fight a war in space, but to prevent one.

(Kristina Wong, [President Trump Announces the Official Establishment of U.S. Space Command](#), *Breitbart*, 29 August, 2019)

⁸⁶¹ These developments are not new - they are *not* a reluctant response to 'Russian' and 'Chinese' threats. The US has been planning and preparing for this escalation. As Lockheed Martin CEO Marillyn Hewson explained:

"We've been investing in hypersonics for many, many years," she said. "As a result of that, I think that's why we're leading in this front end of being able to bring capability forward."

Jon Harper, in a 'Weapons of Mass Destruction' subsection of the Defense Industry magazine *National Defense*, entitled 'U.S. Nukes Russia in Simulation Exercise', has described US Department of Defense involvement in it all:

Secretary of Defense Mark Esper earlier this week participated in a "mini exercise" in which the United States launched a simulated nuclear strike against Russia, a senior Pentagon official announced Feb. 21.

While the U.S. military frequently conducts exercises to practice the mechanics of nuclear warfare and plays tabletop games to simulate crises, it is unusual for senior Pentagon officials to describe the results and for the secretary of defense to take part.

During the exercise that took place this week at Strategic Command in Nebraska, Esper played himself in a simulated showdown in Europe between Russia and NATO, a senior defense official told reporters during a briefing at the Pentagon under condition of anonymity.

"They attacked us with a low-yield nuclear [warhead], and in the course of the exercise we simulated responding with a nuclear weapon," the official said, adding that it was a "limited" response. The official did not say what type of platform launched the attack in the simulation.

The pretend Russian attack was against a NATO target in Europe. The official did not say what type of target the U.S. military simulated attacking in retaliation.

During the briefing with reporters, senior Pentagon officials made the case for beefing up investments in the nation's nuclear forces. The Trump administration is continuing plans drawn up by the Obama administration to modernize the military's inventory of intercontinental ballistic missiles, bombers, submarines and air-launched cruise missiles. The plan is to bring online a new Ground-Based Strategic Deterrent, B-21 bomber, Columbia-class submarine and Long-Range Stand-Off weapon in the next decade or so.

The Trump administration has additional initiatives for the sea-based leg of the triad that were not part of the Obama administration's plans. They include a low-yield submarine-launched ballistic missile warhead and a sea-launched cruise missile. Earlier this month, the Defense Department announced that the low-yield SLBM warhead, the W76-2, had been deployed. Pentagon officials are currently conducting an analysis of alternatives for a new sea-launched cruise missile, with the aim of fielding it in the next seven to 10 years.

Plans also call for modernizing the nuclear stockpile, which is managed by the Department of Energy's National Nuclear Security Administration. The Trump administration will start a program of record for a new warhead, the W93, to replace aging warheads such as the W88, the official said.

The official noted that the United States is in an era of great power competition with Russia and China, as outlined in the 2018 National Defense Strategy. "The other side is building their nuclear weapons up, modernizing their stockpiles, and so this [U.S. modernization effort] is just a sensible response to that."

During his visit to Stratcom, Esper was briefed on Russian, Chinese and North Korean nuclear threats, and discussed the challenges of replacing legacy systems with next-generation capabilities.

We spoke a little bit about the transition risks involved with maintaining the old systems - the ICBMs, subs, bombers, cruise missiles - and making sure that the new systems come online before the old systems expire," the official said. "The secretary is very much captured with ... managing this so-called transition risk.

"We've had a couple of deep dives with the secretary so he understands that that period is going to be very risky," the official added. "You've been tracking acquisition programs at the Pentagon for a long time, and there's always a risk that the systems won't be delivered on time. And so how do you manage that risk? We spent a lot of time on that - not just the weapon systems themselves but also the nuclear command-and-control that supports that."

Plans to modernize the U.S. strategic arsenal are expected to come with a hefty price tag. The Congressional Budget Office, among others, has estimated that it will be north of \$1 trillion...

(Jon Harper, ^{oe}[BREAKING: U.S. Nukes Russia in Simulation Exercise](#), *Natioonal Defense*, 21 February, 2020)

Yasmin Tadjdeh, in a special report for the *National Defense* magazine (The business and technology magazine of the National Defense Industrial Association (NDIA)), explained the urgency:

A renewed sense of urgency spurred by rivals Russia and China has pushed the U.S. military to speed up the development of hypersonic

technology. The Army, Navy and Air Force are all closely involved in the campaign with more test flights coming in 2020.

The systems are characterized by their maneuverability and ability to reach speeds of Mach 5 and greater.

Michael Griffin, undersecretary of defense for research and engineering, has been an outspoken advocate for hypersonic weapon research and development.

"Hypersonic capabilities remain a major department-wide modernization focus, and DoD is accelerating hypersonic systems development and demonstration," he said in March during testimony before the House Armed Services Committee's subcommittee on intelligence and emerging threats and capabilities.

The Defense Department requested \$2.6 billion toward hypersonics in President Donald Trump's fiscal year 2020 budget request and is nearly doubling its long-term investments from \$6 billion to \$11.2 billion over the next five years, Griffin noted.

"We have significantly increased flight testing, as we intend to conduct approximately 40 flight tests over the next few years, to accelerate the delivery of capability to our warfighters years earlier than previously planned," he said in his prepared testimony....

Meanwhile, as the services invest in and develop new hypersonic weapons, Defense Department leadership is considering how it can bolster the industrial base to manufacture such systems.

"We are going to have to create a new industrial base for these systems," Griffin said in December during a discussion hosted by NDIA. "Industry will get a very clear message from the department as to the paths we are pursuing in hypersonic offensive and defensive systems development, and we're confident that you guys will respond."

The department needs "multiplicity and redundancy" in the supply chain, he added.

Acting Secretary of Defense Patrick Shanahan, who at the time was serving as deputy secretary of defense, noted that producing thousands of hypersonic weapons and other systems to defend against them has implications for the size of the industrial base, the number of needed suppliers and the amount of government investment required.

"As we're looking at kind of setting up the industrial base or production system or development, we want to have two or three competitors," he said. "So instead of a winner-take-all, it's 'How do we create that ecosystem that has sustained competition?'"

(Yasmin Tadjdeh, [SPECIAL REPORT: Defense Department Accelerates Hypersonic Weapons Development](#), *National Defense*, 07 November, 2019)

⁸⁶² In a further explanation of issues being discussed Lavrov continued:

We discussed the Joint Comprehensive Plan of Action designed to settle matters related to the Iranian nuclear programme. In conjunction with other nations that signed this plan, we have been striving for a long time now to correct the mistake made by the United States. Washington withdrew from this deal and from the corresponding UN Security Council resolution, once again trampling

upon its commitments under international law. We will push for the JCPOA to be restored in its original configuration, the way it was approved in 2015 by a UN Security Council resolution, without exceptions or additions, to make sure that the illegal sanctions on Iran that are inconsistent with the JCPOA are lifted. We hope Washington will make a rational choice, although we cannot fully rely on that.

We spoke about our cooperation on a Syrian settlement, primarily in the Astana format that includes Russia, Iran and Turkey. We highly rated the regular session in this format which took place in the capital of Kazakhstan in early June of this year. We agreed to continue coordinating our efforts to achieve the implementation of UN Security Council Resolution 2254, resolve humanitarian problems in Syria and encourage the international community to start practical work on restoring the infrastructure, preparing for the return of refugees and in general, ensuring the country's return to normal life.

Iran and the Russian Federation are doing much in this area, helping to implement relevant projects on the ground in the Syrian Arab Republic. Unfortunately, the majority of the Western members of the international community are doing everything to delay fulfilment of the requirements of this resolution and impede the efforts of international organisations to this end, primarily the relevant UN agencies. This politicised course of action prevents the settlement of problems in Syria and, zooming out, in the Middle East and North Africa.

Russia and Iran have a common position on the need to resume direct talks between the Palestinians and the Israelis with a view to implementing all decisions of the international community, including the creation of the State of Palestine and the OIC-approved Arab Peace Initiative. We will uphold this position in the UN and closely cooperate with the OIC and the Arab League.

We talked about the developments in the South Caucasus, Afghanistan and Yemen. Russia and Iran have many opportunities to use their influence and contacts with a view to achieving a durable settlement and normalisation.

We reaffirmed our commitment to facilitate stabilisation in the Persian Gulf. As you know, Russia has introduced and continues promoting a concept for collective security in this important part of the world. We are willing to help promote dialogue between the Arab countries and the Islamic Republic of Iran.

We are members of the Caspian Five. Next week, the Caspian states will meet for a summit in Ashgabat. We coordinated our preparations for this important event.

Talking yesterday with President of Iran Ebrahim Raisi and today with Foreign Minister of Iran Hossein Amir-Abdollahian, we described in detail the current developments in and around Ukraine. We thanked our Iranian friends for their entirely correct understanding of the events. Above all, they realise that during the past decade our US-led Western colleagues have been trying to turn Ukraine into a bridgehead for threatening and "detering" Russia, in part, by developing Ukraine's territory militarily. We repeatedly sought to engage with the West on this matter. All our concerns

have been ignored. President Vladimir Putin and other high-ranking officials explained many times that Russia simply did not have another choice but to ensure the interests of Donbass and its Russian residents in the face of a threat from the increasingly aggressive neo-Nazi regime that took power in Kiev after the anti-Constitutional coup d'état. The Kiev authorities and those who put them in power and continue supporting officially refuted all our attempts to achieve the implementation of the Minsk agreements that were approved by the UN Security Council.

We are convinced that an overwhelming majority of the world's countries understand the current situation. The Americans are trying to impose a "rules-based order" on all others. This concept is designed to subordinate the security of all countries to the interests of the Western world and ensure the total, "eternal" domination of Washington and its allies. Understandably, this concept goes against the entire historical process and the objective trend towards forming a multipolar world order under which countries, with their independence and self-worth intact, will uphold their interests in conformity with the principles of the UN Charter. The Islamic Republic of Iran and the Russian Federation are among these countries.

(Sergey Lavrov, ⁸⁶²[Foreign Minister Sergey Lavrov's statement and answers to media questions at a joint news conference following talks with Minister of Foreign Affairs of Iran Hossein Amir-Abdollahian, Tehran, June 23, 2022, The Russian Federation, 23 June 2022](#))

⁸⁶³ As Sanders continues:

It is quite remarkable how quickly conventional wisdom on this issue has changed. Just over two decades ago, in September 2000, corporate America and the leadership of both political parties strongly supported granting China "permanent normal trade relations" status, or PNTR. At that time, the U.S. Chamber of Commerce, the National Association of Manufacturers, the corporate media, and virtually every establishment foreign policy pundit in Washington insisted that PNTR was necessary to keep U.S. companies competitive by giving them access to China's growing market, and that the liberalization of China's economy would be accompanied by the liberalization of China's government with regard to democracy and human rights.

This position was seen as obviously and unassailably correct....
(Bernie Sanders, ⁸⁶⁴[Washington's Dangerous New Consensus on China: Don't Start Another Cold War, Foreign Affairs, June 17, 2021](#))

⁸⁶⁴ Patrick Lawrence has clearly summed up the sad and most unfortunate reality. Putin felt it necessary to explain to Russian listeners that:

Mr. Biden is a professional, and you need to be very careful when working with him so as not to miss something. He himself does not miss a thing, I assure you, and this was absolutely clear to me. Let me say it again: he is focused, he knows what he wants to achieve and does it very skillfully, and you can instantly sense it.

As Lawrence says,

I do not write this in a spirit of partisanship, or to ridicule, having no interest in the former and no inclination toward the latter. It is time we put all such ancillary things aside and look squarely at this

reality: Our forty-sixth president, the latest in a long line indicating a declining direction in our leadership (and I do not exclude the clownish Obama), is not entirely competent....

Think about the nature of these comments and the Russian president's subtext. There can be only one reason Putin bent so far backward to praise the very things so evidently missing in Joe Biden's capacities. I suspect others world leaders will act similarly to spare Biden and 325 million other Americans embarrassment in so extraordinary a circumstance as ours. But this, of course, does little good at the horizon. It does not make Biden any more capable.

...No room for ridicule or YouTube segments here. The matter is simply too grave.

Two highly consequential treaties - Open Skies and New START - tensions NATO provokes on Russia's western flank, the Syria mess, the Ukraine mess, Russia's hypersonic weaponry, Israel's apparent intent to go for broke this time with the Palestinians, all the cyberbusiness - little to nothing got done in Geneva on any of these questions.

(Patrick Lawrence, ^œ["Something happened in Geneva.": Second thoughts on the summit, *The Scrum*, June 23, 2021](#))

⁸⁶⁵ Caitlin Johnstone explained the US dilemma well:

...What kind of person seeks power over others? Psychologists have been saying for years that psychopaths routinely ascend to power not just in political spheres but in business, academia and law enforcement as well. The competition-based models that shape our society tend to reward those who are willing to do whatever it takes to get to the top, and the type of person who is willing to do whatever it takes to get to the top happens to be the type of person who enjoys the power which comes from being at the top.

When all your systems inevitably reward psychopaths with power and money, you will necessarily find yourself ruled by psychopaths. (Caitlin Johnstone, ^œ[On Psychopathy, Power, Empire And Ego, *Caitlin's Newsletter*, May 06, 2022](#))

⁸⁶⁶ Reference to 'The West' and 'The Rest' assumes that 'The West' comprises all those European nations and their 'new world' offspring which have, over the past 500+ years, been involved in colonizing 'The Rest' of the world and see themselves as, in the words of Josep Borrell, High Representative of the Union for Foreign Affairs and Security Policy, of the European Union, living in 'gardens' surrounded by the 'jungles' of the non-Western world.

Those nations which have accepted subordinate status "[by special favor and grudgingly made, citizens](#)" (often expressed through incorporation into various Western dominated 'alliances' such as NATO, AUKUS etc.) are included in an expanded 'West'.

'The Rest' then refers to all those nations which have resisted vassalage to 'The West' and have to one degree or another insisted on their right to sovereign independence.

The alternative to this dichotomy is use of alternative terms, each a distortion of 21st century realities, such as 'The global South' or 'The Third World'

⁸⁶⁷ Michael Klare has explained what was happening in June 2020:

America's pundits and politicians have largely concluded that a new Cold War with China - a period of intense hostility and competition falling just short of armed combat - has started. "Rift Threatens U.S. Cold War Against China," as a New York Times headline put it on May 15th, citing recent clashes over trade, technology, and responsibility for the spread of Covid-19. Beijing's decision to subject Hong Kong to tough new security laws has only further heightened such tensions. President Trump promptly threatened to eliminate that city-state's special economic relationship with this country, while imposing new sanctions on Chinese leaders. Meanwhile, Democrats and Republicans in Congress are working together to devise tough anti-Chinese sanctions of their own.

For anyone who can remember the original Cold War, the latest developments may seem eerily familiar. They bring to mind what occurred soon after America's World War II collaboration with the Soviets collapsed in acrimony as the Russians became ever more heavy-handed in their treatment of Eastern Europe. In those days, distrust only grew, while Washington decided to launch a global drive to contain and defeat the USSR. We seem to be approaching such a situation today. Though China and the U.S. continue to maintain trade, scientific, and educational ties, the leaders of both countries are threatening to sever those links and undertake a wide range of hostile moves.

Admittedly, some of the steps being discussed in Washington to punish China for its perceived bad behavior will have little immediate impact on the lives of Americans. A lot of the threats, in fact, may turn out to be little more than good old-fashioned chest thumping. Consider, for instance, the proposal floated by the top-ranking majority and minority members of the Senate Armed Services Committee, Oklahoma Republican Jim Inhofe and Rhode Island Democrat Jack Reed, to fund a multibillion dollar "Pacific Deterrence Initiative" intended to bolster American forces in Asia. That effort, they avowed, will "send a strong signal to the Chinese Communist Party that the American people are committed to defending U.S. interests in the Indo-Pacific."

Well, that was easy! All we, the taxpaying citizens of the United States, need to do in this opening salvo of a new Cold War is salute Congress as it funnels yet more billions of dollars to the usual defense contractors and thereby "send a signal" to Beijing that we will "defend U.S. interests" somewhere far across the globe. (Now there's a moment to wave your American flag!)

But don't count on such a moment lasting long, not if a new Cold War starts in earnest. ...

(Michael T. Klare, ⁸⁶⁸[The new Cold War with China, Responsible Statescraft](#), June 14, 2020)

⁸⁶⁸ As Gailberger continues:

The Department of Defence will hold a meeting with industry representatives on Friday then assess involvement in the lucrative contract over the next six months.

The missiles, which will be launched from fighter jets, are part of a \$9.3bn Federal Government investment in hypersonic research and high-speed, long-range strike capabilities and missile defence.

"Investing in capabilities that deter actions against Australia also benefits our region, our allies and our security partners," Defence Minister Linda Reynolds said.

"The Morrison Government remains committed to keeping Australians safe, while protecting the nation's interests in a rapidly changing global environment."

The hypersonic weapons will travel up to Mach 5, and will be launched from aircraft already in the RAAF fleet including Super Hornet, Growler, P-8 and F-35.

The missiles will have the capacity to destroy infrastructure including offshore aircraft or warships, with defence hoping they will be part of Australia's arsenal within the next five to 10 years....

The deal to develop and test prototypes, inked last week, follows discussions Senator Reynolds had during her landmark visit to the US in July.

Some testing of the hypersonic missiles will occur in Australia once the prototypes are built, with one expected to occur soon.

"Developing this game-changing capability with the US from an early stage is providing opportunities for Australian industry," Senator Reynolds said.

"We remain committed to peace and stability in the region, and an open, inclusive and prosperous Indo-Pacific."

US Defense Department spokesman Michael Kratsios said the collaboration was a true testament to the strong partnership between the US and Australia.

"This initiative will be essential to the future of hypersonic research and development," he said.

The air-launched missile prototypes will also inform the development of additional ground and sea-launched weapons as Australia seeks to bolster its warfighting capability.

(Jade Gailberger, ⁸⁶⁹[Australia signs hypersonic missile development and testing deal with the US](#): Australia will transform its warfighting capability with fastest missiles it has ever developed under a new agreement with the US, *NCA NewsWire*, December 01, 2020)

⁸⁶⁹ The race is now on! The world is going to arm itself with the kinds of weaponry only insanity could 'justify'.¹⁰⁸⁶

In accordance with President Trump's oft-stated insistence that ⁸⁶⁹[US 'allies' must 'pull their weight'](#) and purchase military equipment which Washington has determined they 'need' in order to demonstrate their commitment to the [US National Defense Strategy](#), Australia's prime minister announced that

We are looking to the future by investing in technology such as hypersonic weapons and increasing our defence capabilities in space.

A loyal 'ally' and supporter of US strategic ambitions is now going to spend billions of dollars on technology prescribed by the US National Defense Strategy.

Elliot Williams, in a *Canberra Times* report entitled 'Hypersonic missiles and Australia's futuristic defence exploits' outlined Australia's July 2020 military ambitions:

The Australian Defence Force Structure Plan, released on Wednesday, states that Australia wants to implement "a development, test and evaluation program for high-speed, long-range strike and missile defence, including hypersonic weapons, leading to prototypes".

The defence force has indicated it will spend between \$6.2 and \$9.3 billion on high-speed, long-range strike options including hypersonic research.

Why does Australia want them?

Given so many actors in the Indo-Pacific region either have or are pursuing hypersonic weapons, it is hardly surprising Australia is seeking to join their ranks.

The defence force highlighted its desire to develop advanced strike capabilities with improved speed and range, and views hypersonic missiles as a natural progression to its existing capabilities.

However, as Professor Williams notes, it may be less constructive to consider the offensive capabilities of hypersonic missiles, and much more important to plan on defending against them.

"The speed and manoeuvrability of hypersonic weapons make it very difficult to detect, track, target, and engage them - or even to confirm the intended target until it is too late to react." he wrote in November last year.

"They are ideal first-strike weapons for blinding and incapacitating an opponent. Unless concerted international action is taken to limit hypersonic weapons, we risk another arms race as nations scramble to arm themselves with large numbers of them in the years ahead."

Why now?

In announcing the push for hypersonic weaponry and other funding, the Prime Minister made it clear that Australia was to become more self-reliant in regards to defence.

While he recommitted to our partnership with the US, he also hinted that Australia may elect to avoid entering conflicts with the US in future if it went against our interests closer to home.

The Prime Minister referenced tensions in the Indo-Pacific region, such as China's exploits in the South China Sea and said that Australia needed to prepare for "a post-COVID world that is poorer, more dangerous and more disorderly."

(Elliot Williams, ⁸⁷⁰[Hypersonic missiles and Australia's futuristic defence exploits](#), *The Canberra Times*, July 2, 2020)

⁸⁷⁰ The 2020 US military budget was inflated further. The *National Priorities Project* explained:

A Militarized Budget

The United States is the single biggest military spender in the world. This report takes note of that fact, and ties U.S. military spending - which is primarily focused on current and potential conflicts abroad - to its analog here at home: spending on veterans of foreign wars, incarceration, immigration enforcement, and the war on drugs.

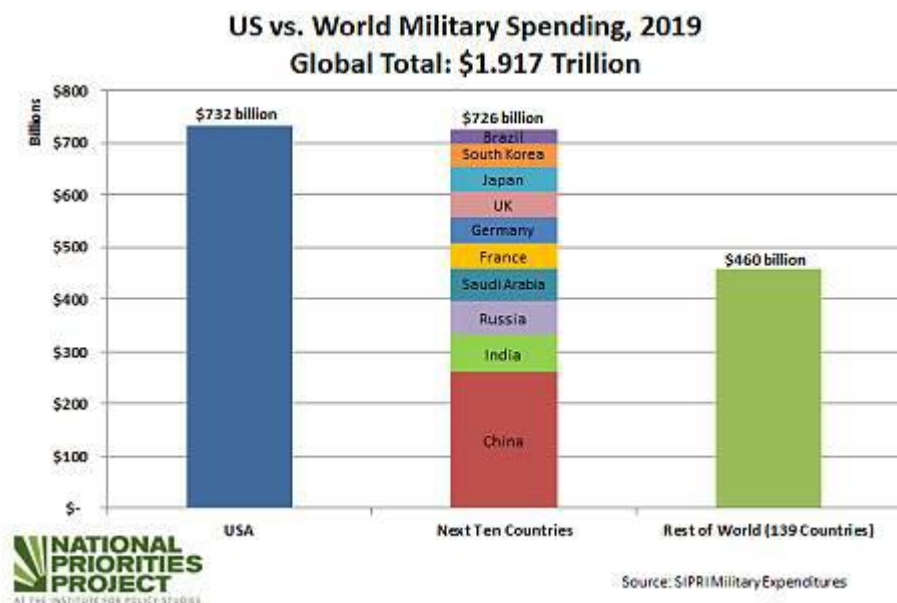

In 2019, the militarized budget amounted to 64.5 percent of discretionary spending.

U.S. military spending, traditionally defined, was \$730 billion in 2019. Studies that seek to define a 'national security' budget - which includes the military, and also veterans' affairs, homeland security, and similar expenses - can easily arrive at estimates approaching or exceeding \$1 trillion per year. That amount approaches the size of the entire U.S. discretionary budget.

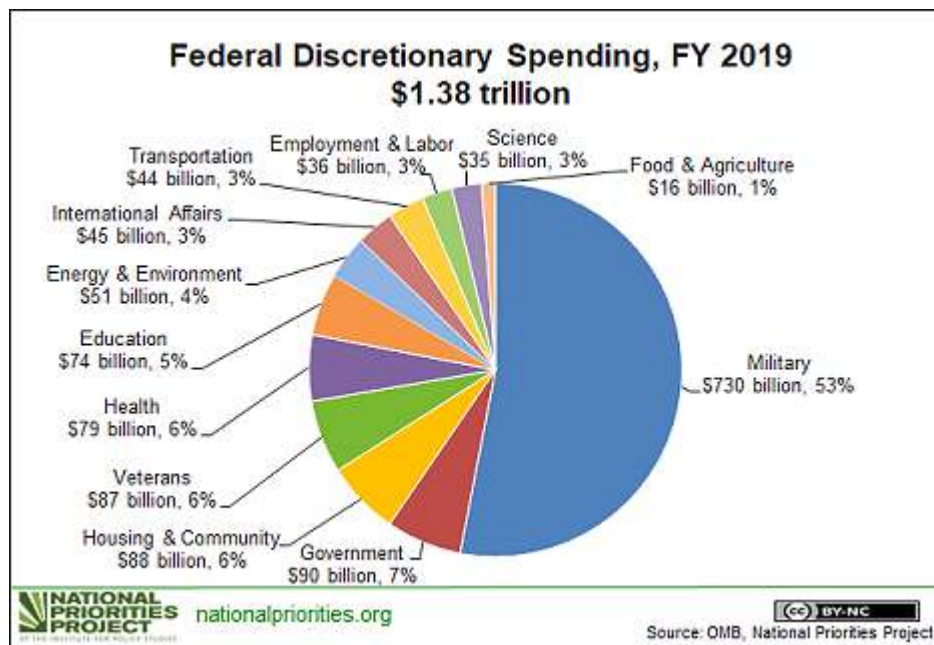

This report defines a different, but related, concept: the militarized budget. In recognition that the U.S. maintains both the world's highest military spending, and one of its highest incarceration rates, the militarized budget includes the traditional military budget, as well as spending on veterans' affairs, homeland security, incarceration, law enforcement, immigration enforcement, and the still-ongoing war on drugs.

The U.S. Military Budget

The United States has a military budget that is greater than the next ten countries combined: more than rivals like China and Russia, and more than allies like Saudi Arabia, the United Kingdom, and France.

At \$730 billion in 2019, military spending accounted for more than 53 percent of the federal discretionary budget - the budget that Congress sets each year during its annual appropriations process.

(^œThe Militarized Budget 2020, *National Priorities Project*, June 22, 2020)

- ⁸⁷¹ Lora Lumpe, in a 'Climate Crisis' article entitled '^œWill the US end military domination to save the planet?' (*Responsible Statecraft*, January 28, 2021), provides a link to maps showing the location of ^œUS military bases around the world.

Stephanie Savell, in an article entitled 'America at War', provides updated information. As she says,

We found that, contrary to what most Americans believe, the war on terror is not winding down - it has spread to more than 40 percent of the world's countries. The war isn't being waged by the military alone, which has spent \$1.9 trillion fighting terrorism since 2001. The State Department has spent \$127 billion in the last 17 years to train police, military and border patrol agents in many countries and to develop antiterrorism education programs, among other activities.

Because we have been conservative in our selections, U.S. efforts to combat terrorism abroad are likely more extensive than this map shows. Even so, the vast reach evident here may prompt Americans to ask whether the war on terror has met its goals, and whether they are worth the human and financial costs.

(Stephanie Savell *et al*, ^œ*America at War*, *Smithsonian Magazine*, January/February 2019)

- ⁸⁷² As the Plan summary has explained:

This annual plan provides a single, integrated picture of current and future nuclear security enterprise activities funded by the Weapons Activities account in support of the Nation's nuclear deterrent and is developed to be consistent with the Nuclear Weapons Council's Strategic Plan for FY 2017-2042.

To achieve mission success, highlights of near-term and out-year objectives include:

- Advance the innovative experimental platforms, diagnostic equipment, and computational capabilities necessary to ensure stockpile safety, security, reliability, and responsiveness.

- Complete production of the W76-1 warheads by FY 2019.
 - Deliver the first production unit of the B61-12 by FY 2020.
 - Deliver the first production unit of the W88 Alteration (Alt) 370 (with refresh of the conventional high explosive) by FY 2020.
 - Achieve a first production unit of the W80-4 by FY 2025.
 - Produce not less than 10 War Reserve pits in 2024, not less than 20 War Reserve pits in 2025, and not less than 30 War Reserve pits in 2026.
 - Create a modern, responsive nuclear infrastructure that includes the capability and capacity to produce 50 to 80 pits per year by 2030.
 - Cease enriched uranium programmatic operations in Building 9212 at the Y-12 National Security Complex and deliver the Uranium Processing Facility for no more than \$6.5 billion by 2025.
 - Implement the "3+2 Strategy" for a smaller stockpile with upgraded safety and security and interoperable nuclear explosive packages for the missile warheads.
 - Achieve exascale computing and deliver an exascale machine by the early 2020s.
 - Ensure a trusted supply of strategic radiation-hardened microsystems by 2025.
 - Develop an operational enhanced capability for subcritical experiments by the mid 2020s.
- (Executive Summary, *Fiscal Year 2018 Stockpile Stewardship and Management Plan*, US Department of Energy/National Nuclear Security Administration, November 2017, Page vii)

⁸⁷³ The timing of Eisenhower's warning, at the end of his presidency, should be recognized. Andrew Bacevich has provided some context:

As for Eisenhower, although there is much in his presidency to admire, his errors of omission and commission were legion. During his two terms, from Guatemala to Iran, the CIA overthrew governments, plotted assassinations and embraced unsavory right-wing dictators - in effect, planting a series of IEDs [improvised explosive devices] destined eventually to blow up in the face of Ike's various successors. Meanwhile, binging on nuclear weapons, the Pentagon accumulated an arsenal far beyond what even Eisenhower as commander-in-chief considered prudent or necessary.

In addition, during his tenure in office, the military-industrial complex became a rapacious juggernaut, an entity unto itself as Ike himself belatedly acknowledged. By no means least of all, Eisenhower fecklessly committed the United States to an ill-fated project of nation building in a country that just about no American had heard of at the time: South Vietnam. Ike did give the nation eight years of relative peace and prosperity, but at a high price - most of the bills coming due long after he left office.

(Andrew Bacevich, ^œ[Tomgram: Andrew Bacevich, Pseudo-Election 2016](#), *TomDispatch*, August 4, 2016)

874 'An independent audit of the Department of Defense' was suspended in November 2018 after auditors announced that they were unable to complete the job. A report on their findings has been summarized by Dave Lindorff of *The Nation* (amongst others) under the title 'Exclusive: The Pentagon's Massive Accounting Fraud Exposed: How US military spending keeps rising even as the Pentagon flunks its audit'. His conclusion:

...So here's the situation: We have a Pentagon budget that a former DOD internal-audit supervisor, Jack Armstrong, bluntly labels "garbage." We have a Congress unable to evaluate each new fiscal year's proposed Pentagon budget because it cannot know how much money was actually spent during prior years. And we have a Department of Defense that gives only lip service to fixing any of this. Why should it? The status quo has been generating ever-higher DoD budgets for decades, not to mention bigger profits for Boeing, Lockheed, and other military contractors.

The losers in this situation are everyone else. The Pentagon's accounting fraud diverts many billions of dollars that could be devoted to other national needs: health care, education, job creation, climate action, infrastructure modernization, and more. Indeed, the Pentagon's accounting fraud amounts to theft on a grand scale - theft not only from America's taxpayers, but also from the nation's well-being and its future.

As President Dwight D. Eisenhower, who retired from the military as a five-star general after leading Allied forces to victory in World War II, said in a 1953 speech, "Every gun that is made, every warship launched, every rocket fired signifies, in the final sense, a theft from those who hunger and are not fed, those who are cold and are not clothed." What would Eisenhower say today about a Pentagon that deliberately misleads the people's representatives in Congress in order to grab more money for itself while hunger, want, climate breakdown, and other ills increasingly afflict the nation?

(Dave Lindorff, ^œ[Exclusive: The Pentagon's Massive Accounting Fraud Exposed: How US military spending keeps rising even as the Pentagon flunks its audit](#), *The Nation*, November 27, 2018)

875 That anyone took this nonsense seriously boggles the mind. The presumption that deregulated capitalism constitutes

- the 'end point of mankind's ideological evolution'
- the 'final form of human government,' and
- constitute[s] the 'end of history.'

is so obviously absurd as to require us to ask - how was this ever able to gain an audience, much less be promoted as a 'reasonable' account of what was happening in the 1990s and beyond?

⁸⁷⁶ As Brunoli continues:

...[W]e Americans fought fascism in WWII, We cannot go around saying that we are fascists. So we say we are Capitalists.

This has never really made any sense. It is simply ridiculous to think that a farmer or a worker who owns no stocks and barely pays their bills every month - in short someone without one cent in Capital - would nonetheless proudly call themselves a Capitalist.

I really think that this is simply due to an aversion to the word fascist. Yes, the American elite have built a fascist State, but we don't call it that. We say we are Capitalists and, as Nancy Pelosi famously said, "that's just the way it is."

Because of such sloganeering, many Americans believe incorrectly that capitalism is a form of society. It is not. Capitalism has no political or social component. It is purely an economic system.

By contrast, fascism is a political and social system, but not an economic one. So you can see how fascism and capitalism complement each other. Fascism is a political and social order in search of an economic system; capitalism is an economic system in search of a political and social order in which to operate.

(Joe Brunoli, ^œ[Capitalism, Nationalism, and Militarism: A History of American Fascism](#), *Due Dissidence*, November 27, 2020)

⁸⁷⁷ The documentary ^œ[Shadow World](#) (2016), provides a compelling feature length investigation into the multi-billion dollar international arms trade which, in the post WW2 world, has largely driven US and general Western militarism around the world and, far too often, has made diplomacy a prelude to war.

⁸⁷⁸ East and South-East Asian nations have shown that it is possible to take advantage of the opportunities provided by short-sighted Western corporations 'as individual production stages are located where the costs of production are lowest'. However, in order do so, they need to have invested in the development of a pool of educated people with the necessary skills to take advantage of such opportunities.

They also need to be willing and able to provide the seed-funding necessary for those trained personnel to develop and exercise their entrepreneurial and experimentation activities. They need to be able to tolerate and encourage those who experience short-term hiccups and failures on the road to success.

No nation can succeed merely by hosting corporate activities within their borders. They need politicians and administrations with foresight and vision to prepare their populations to take advantage of the opportunities afforded and to support them as they hone their various aptitudes and skills.

China had the good fortune to be blessed with political leaders who understood the importance of state involvement in preparing their populations to take advantage of offered opportunities:

Long before their 'miraculous' take-off into entrepreneurial success, East and South-East Asian nations invested heavily in education through the 1980s and beyond, offering competitive salaries and work conditions to

the necessary personnel to ensure the quality of their educational facilities. They also provided funding for students in overseas educational facilities.

Dan Wang has provided an example of the consequent developing technological independence in China

In 2007, the year Apple first started making iPhones in China, the country was better known for cheap labor than for technological sophistication. At the time, Chinese firms were unable to produce almost any of the iPhone's internal components, which were imported from Germany, Japan, and the United States. China's overall contribution to the devices was limited to the labor of assembling these components at Foxconn's factories in Shenzhen - what amounted to less than four percent of the value-added costs.

By the time the iPhone X was released, in 2018, the situation had dramatically changed. Not only were Chinese workers continuing to assemble most iPhones, but Chinese firms were producing many of the sophisticated components inside them, including acoustic parts, charging modules, and battery packs. Having mastered complex technologies, these firms could produce better products than their Asian and European competitors. With the latest generation of iPhones, this pattern has only accelerated. Today, Chinese tech firms account for more than 25 percent of the device's value-added costs.

Although the iPhone is a special case - as one of the most intricate pieces of hardware in existence, it relies on an exceptional range of technologies - its expanding footprint in China captures a broader trend. In a majority of manufactured goods, Chinese firms have moved beyond assembling foreign-made components to producing their own cutting-edge technologies....

(Dan Wang, ⁸⁶[China's Hidden Tech Revolution: How Beijing Threatens U.S. Dominance](#), *Foreign Affairs*, February 28, 2023)

⁸⁷⁹ The US relocation of industrial activity to China seems to have been indiscriminate! Mike McCormack explained:

High-ranking U.S. officials and corporate executives have sounded the alarm bells for years: U.S. national security is at risk due to our military's reliance on foreign nations for raw materials, parts and products.

It is time for leaders to walk their talk and wrestle back the manufacturing and defense industrial base.

U.S. corporations have outsourced more than 5 million jobs and 91,000 manufacturing plants since 1998, according to the Economic Policy Institute. The closing of factories in the nation for the past 24 years has forced the U.S. military to increasingly rely on imports to keep forces armed and ready.

The Alliance for American Manufacturing has been calling attention to this precarious issue since 2013, when it published a report, "Remaking American Security," that identified many of the weaknesses in the military supply chains and overall defense preparedness. The organization proclaimed that the health of the manufacturing sector is inextricably intertwined with national security, and it is vital we strengthen the sector.

Five years later, the situation had not improved. A Pentagon-led review ordered by then President Donald Trump in 2018 identified hundreds of instances where the U.S. military was dependent on foreign countries, especially China, for critical materials. For example, an analysis from the U.S. Geological Survey at the time said the United States produced no rare earth minerals in 2017, while China accounted for 81 percent of global mine production. Rare earth minerals are used in magnets, radars and other electronics critical to defense systems.

Four years later, the next administration raised the same concerns. A February report developed on the order of President Joe Biden warned of the consequences of low manufacturing investment in the United States. The study pointed out that the U.S. share of the world market in goods has continuously declined, and manufacturing output as a percentage of GDP has similarly declined, from more than 25 percent in 1947 to 11 percent at the end of 2020. The report went on to outline 64 recommendations as initial steps in a longer-term effort to build a strong and responsive supply chain in the coming years.

Despite the warnings, the situation continues to get worse. The COVID-19 pandemic highlighted the need for a continued push for onshoring and revitalizing North American manufacturing. When the outbreak began, supply lines necessary to sustain production within the defense industry were frozen, drawing attention to the vulnerability of the defense industrial base to being cut off. According to the consulting firm McKinsey and Company, only 22 percent of automotive, aerospace and defense players had regionalized production to boost their supply chain resilience by May 2020, even though they indicated previously they had prioritized the approach.

(Mike McCormack, ["Americanize the Defense Industry Supply Chain," *National Defense*, September 30, 2022](#))

Of course they transferred not only industrial technology, organizational processes and activity but also the jobs of Western workers to what was assumed to be an alternative unregulated non-unionized, compliant, cheap-labor region.

These organizations displayed no commitment to the Western regions where they were based (and within which they still, despite their betrayal, receive privileged tax and other benefits).

There also seems to have been a presumption that, unlike the 'high cost' Western 'welfare states' which had spawned them, China would remain a low cost, 'authoritarian', anti-welfare, vassal state, tied and beholden to Western Corporate power; ensuring a permanent, state-controlled, cheap and manipulable labor force. A Global Capitalist's fantasy world!

⁸⁸⁰ M. K. Bhadrakumar explained:

A commentary in the Global Times, the Chinese Communist Party daily, on Thursday under the byline of a noted India hand in Tsinghua University took stock of the state of play in the US-India relationship as characterised by trust deficit and growing wariness on the part of the Indians regarding American intentions. Let me quote a concluding passage in the commentary:

"India should not be viewed as a loyal supporter of the US, or a force that blindly follows the US. Judging from the country's foreign

policy orientation since the Russia-Ukraine conflict, India has withstood waves of pressure from the US and the West, insisting on maintaining a neutral position in the Ukraine crisis.

"New Delhi has kept a relatively large extent of its strategic autonomy and adopted policies based on the need to safeguard its own national interests. As India acts as an emerging power with growing self-confidence, it is impossible to expect New Delhi to be completely incorporated into the system dominated by Washington." (M. K. Bhadrakumar, ^œ[Whose game is Pakistan's Khar playing?](#), *Indian Punchline*, January 20, 2023)

⁸⁸¹ Ashley Tellis summed it up:

Washington's current expectations of India are misplaced. India's significant weaknesses compared with China, and its inescapable proximity to it, guarantee that New Delhi will never involve itself in any U.S. confrontation with Beijing that does not directly threaten its own security. India values cooperation with Washington for the tangible benefits it brings but does not believe that it must, in turn, materially support the United States in any crisis - even one involving a common threat such as China....

India's view of military cooperation, which emphasizes nurturing diversified international ties, represents a further challenge. India treats military exercises more as political symbols than investments in increasing operational proficiency and, as a result, practices with numerous partners at varying levels of sophistication. On the other hand, the United States emphasizes relatively intense military exercises with a smaller set of counterparts....

The Biden administration is now going to great lengths to reverse the failure of the Defense Trade and Technology Initiative. Last year, it announced the Initiative on Critical and Emerging Technology, which aims to fundamentally transform cooperation between the two countries' governments, businesses, and research entities pertaining to technology development. This endeavor encompasses a wide variety of fields, including semiconductors, space, artificial intelligence, next-generation telecommunications, high-performance computing, and quantum technologies, all of which have defense applications but are not restricted to them.

For all its potential, however, the Initiative on Critical and Emerging Technology does not guarantee any specific outcomes. The U.S. government can make or break the initiative, as it controls the release of the licenses that many joint ventures will require. Although the Biden administration seems inclined to be more liberal on this compared with its predecessors, only time will tell whether the initiative delivers on India's aspirations for greater access to advanced U.S. technology in support of Modi's "Make in India, Make for World" drive, which aims to transform India into a major global manufacturing hub that could one day compete with, if not supplant, China as the workshop of the world.

(Ashley J. Tellis, ^œ[America's Bad Bet on India: New Delhi Won't Side With Washington Against Beijing](#), *Foreign Affairs*, May 01, 2023)

⁸⁸² *Hans India*:

New Delhi: A series of suspiciously-timed and targeted events suggest that there is an Anglo-American destabilization being launched to topple Prime Minister Narendra Modi in the coming

months, claims F. William Engdahl of the Centre for Research on Globalization [^œ[Washington Is Out to Topple India's Modi](#), *Global Research*, February 20, 2023]. One of the most critical economic partners of Russia amid the unprecedented Western economic sanctions from Washington and the EU over the Ukraine war has been the Indian government.

In the past several years, Modi, playing a delicate balancing act between alliances with Russia and also with the West, has emerged as a vital trade partner of Russia amid the sanctions. Despite repeated efforts by US President Joe Biden's administration and UK officials, Modi has refused to join sanctions against Russian trade, above all oil trade, the article said.

India under Modi has repeatedly refused to join Washington in condemning Russia's Ukraine actions. It has defied US sanctions on Russian oil buying, despite repeated US threats of consequences. In addition to being a fellow BRICS member, India is also a major long-time buyer of Russian defense equipment. Modi is facing a national election in Spring 2024, and important regional ones this year, that will determine his future. In January a clear Anglo-American assault on Modi and his key financial backer was launched.

(^œ[Conspiracy to topple Modi in coming months: Report](#), *Hans News Service*, 8 March 2023)

883 *Global Times*:

In the face of China's rise, the US is incapable of promoting itself, but can only rely on maximum suppression of its opponents to maintain a narrow lead. The launch of a unit focused on China by the US State Department is the latest example....

US Secretary of State Antony Blinken on Friday presided over the launch of the new Office of China Coordination, informally known as China House. Reuters portrayed it as "an internal reorganization" to help expand and sharpen the US policymaking toward its top geopolitical rival.

This is evidently a step forward of the US government in an attempt to have more intense competition with China rather than cooperation, embodying that the Biden administration has pushed its China policy to a more dangerous zone. ...

The creation of a unit focused on China by multiple departments in the US demonstrates that the US positioning of its relations with China is confrontation, instead of win-win cooperation that China has underlined. The US will go further on the road in antagonizing China. Today, when the US holds summits with ASEAN, the EU, or African leaders, it will directly or indirectly involve the theme of confronting China. With the creation of units focusing on China, experts anticipate that US promotion of competition with China on bilateral, regional and global basis will become even more worrying. Notably, it may continue to demonize China in public opinion, distort China's contribution to the international community, and further rope in its allies to contain China. ...

Blinken announced the creation of China House in May. And he called China the "most serious long-term threat" to the world order. How has China threatened the world order? What has triggered the US to use such rhetoric is its belief that China has challenged its global hegemony. In light of this, Washington intends to do

everything possible to hinder China's development and curb China's influence. The international community should not have illusions that the US will sincerely seek cooperation with China.

(Editorial, ^œ['China House' shows US pushing China policy to more dangerous zone](#), *Global Times*, December 18, 2022)

⁸⁸⁴ As Bhadrakuma says,

... India's ruling elite traditionally finessed the art of placating the US when differences took a serious turn - such as over the US' proxy war against Russia in Ukraine....

...[M]ake no mistake, India also has a strong motivation today to tilt toward the Biden administration. For the first time since the Sino-American detente in the early 1970s, here is an administration that is dominated by the neocons who are openly pursuing hostile policies toward China.

Put differently, the scale of the US-Indian congruence of interests is unprecedented. Indeed, it is highly symbolic that US nuclear capable heavy bombers, including two B-1Bs, are heading to India to participate in the Cope India exercise at this juncture when tensions are spiking around Taiwan.

At one stroke, the forthcoming state visit by Modi to the US assumes profound significance not only in the Asian power dynamic but internationally, as India stands up to be counted as the West's quasi-ally. The Pentagon must be feeling elated.

We may never know how far this wild swing in Indian policy is a ^œ["butterfly effect."](#)

(M. K. Bhadrakumar, ^œ[George Soros poses no danger to India](#), *Indian Punchline*, April 11, 2023)

⁸⁸⁵ Bhadrakumar on India's ambivalent attitude:

The opening address by Prime Minister Narendra Modi at the SCO event failed to convince, leave alone stimulate the other member countries - especially Russia and China who invented the 'Shanghai spirit' almost three decades ago, which became five years later in 2001 the guideline for the SCO cooperation.

The saddest part is that Modi seems unaware of the Shanghai spirit, although his government fortuitously came to harvest the foreign policy initiative by the previous Manmohan Singh government to seek SCO membership for India. Modi's speeches on the multilateral platforms have by now come to acquire a familiar trait - aiming barbs through innuendoes at Pakistan and China. They enthrall the anti-Muslim and Sinophobic lobbies within India but will have no use for the SCO collective....

Asserting that the historical trend of peace, development, and win-win cooperation is unstoppable, Xi called for efforts to maintain regional peace and safeguard common security and reminded his audience that sustaining peace and security in the SCO region is a common responsibility.

Both Putin and Xi dilated on the issue at some length. They seem to inhabit the same planet, Planet Earth. In contrast, the Indian statement dismissed this topic rather perfunctorily and curtly in two sentences. Modi said, 'The present times mark a crucial phase in global affairs. In a world surrounded by conflicts, tensions and

pandemics; food, fuel, and fertiliser crises is a significant challenge for all nations.' Period!

It's as simple as that! Does India have any views at all on such a 'crucial phase in global affairs'? Instead, Modi's speech took a detour, wandering aimlessly through Venus and Mars - Startups and Innovation; Traditional Medicine; Youth Empowerment; Digital Inclusion; Shared Buddhist Heritage; Emerging Fuels; Decarbonisation in the Transportation Sector; Digital Public Infrastructure and so on - which, ironically, would have made the business of the moribund SAARC [South Asian Association for Regional Cooperation: the regional intergovernmental organization and geopolitical union of states in South Asia].

This is becoming hilarious as India pretends that it is not even aware that SCO is quintessentially a security platform. In reality, Delhi seems to be increasingly frustrated that more and more countries from South Asia (eg., Maldives, Bangladesh, Nepal, Pakistan) are finding SCO to be an alternative to the SAARC, which India is subjecting to slow death.

(M. K. hadrakumar, ^œ[India's discontent with the SCO](#), *Indian Punchline*, July 06, 2023)

⁸⁸⁶ India's ambivalent attitude to involvement in 'a new world order'

...Russia and China are under US sanctions. On the contrary, India's relationship with the US is perhaps at its highest point in history - almost a quasi-alliance - and Washington describes it as the "defining partnership" of the century. Arguably, the US sanctions against China could even hold advantages for India. The close bonding between the two countries that is in the pipeline for the chip industry is a case in point. Suffice to say, life may even be getting better for India, and the country's elite would see no reason to trade its modest revisionist wishes for a most fundamental restructuring of the existing international order, let alone its destruction.

The bottom line is that India is content if the influence of BRICS [and the *Shanghai Cooperation Organization*] in the shaping of the main aspects of the global agenda can make the world more just and stable. Indeed, that is not a far-fetched dream, as BRICS is on the right side of history. None of the group's members have their economic opportunities and political influence grounded in a history of bloody wars, conducted with the purpose of establishing regional and global dominance centered around the wealth accumulated over several centuries. India feels at home.

(M. K. Bhadrakumar, ^œ[Why India doesn't want BRICS to dismantle the world order built by the West](#), *RT*, 21 Aug, 2023)

⁸⁸⁷ The consequences of China's emergence as a threatening competitor to Western hegemony:

Two-way trade between the US and India is on an upward spiral. The dominant Western narrative is that a "decoupling" of US and Chinese economy and the disruptions brought by the pandemic has heightened the importance of diversification for global businesses, and India can become the "next factory" of the world as multinational corporations relocate portions of their global supply chain to countries like India. However, this deviates from reality.

Indeed, India's foreign trade with the US has seen an increase, but this is not the whole story. There are three important aspects. First, China is rapidly moving up the manufacturing value chain, producing more sophisticated goods, and creating a higher-paid workforce in the process. It helps to boost the overall market competitiveness of Chinese high-tech corporations with an increased export to the US markets.

Second, the cost of production in China, especially in the major coastal cities, is on the rise, so some low-end manufacturers are moving portions of their production to other countries like India. Bloomberg said in September that India, believed by many to have the potential to become the next China, is finally making headway in the exports market as it has become one of the top five suppliers of Christmas decorative items and T-shirts to the US. Bilateral trade is indeed on an upward spiral, but low-cost manufacturing segments remain the highlight.

Third, although multinational corporations relocate some of their supply chain to India, manufacturing companies will not entirely move out of China. It will take time to build a complete and comprehensive industrial chain in India, and before the nation achieves that milestone, it has to import a range of intermediate products from China. An increase in demand of intermediate products in India is an inevitable result of the production shift.

There is an interesting phenomenon happening: China's exports to the US, India's exports to the US, and China's exports to India all increase at the same time. And when the three are combined together it tells the whole story....

(Editorial, ⁸⁸[US-India trade friction to increase despite communication mechanism like TPF](#), *Global Times*, January 10, 2023)

⁸⁸⁸ Shekhar Gupta, in an endorsement of a Western-focused future for India:

The Shanghai Cooperation Organisation (SCO) foreign ministers' meeting in Goa has produced the usual photo-ops and probably even some important outcomes in backroom conversations. It should also make us reflect on the proliferation of similar multilateral organisations, what they stand for, and what they mean for India.

As the name indicates, the SCO is a China-inspired and, whatever the pretence, China-led organisation. Look at the two others that have come up more or less in the same era, the past two decades: The BRICS (Brazil, Russia, India, China, South Africa) and RIC (Russia-India-China) forums.

Three countries are common to these. China, Russia, and India. The common factor in all three forums is the pre-eminence of China. Which is the reason we have listed India as the last of the three. We know all governments love the razzmatazz of summitry, and the Narendra Modi government revels in it more than any since probably Indira Gandhi's. But the downside of participating with such enthusiasm in three regional groups led and dominated by China, with Russia as its loyal follower, has to be debated.

We also know that the buzzword these days is multilateralism. However, what quality and what kind of multilateralism can be

expected from China-launched and China-run organisations with a couple of its loyalists, if not near-vassals, and an adversarial India? (Shekhar Gupta, ^œ[Perils of new multilateralism](#), *Business Standard*, May 07, 2023)

⁸⁸⁹ The US [New Deal](#) relied on similar funding.

The resulting unprecedented speed and sophistication of China's industrial and infrastructural development is well illustrated in these YouTube videos:

^œ[Exploring China's Huge & Facinating Road Network: The Grand Tour](#); and

^œ[The Unstoppable Growth of China's High-Speed Rail Network](#)

⁸⁹⁰ China's remarkable poverty alleviation programs have transformed impoverished regions. These videos provide graphic illustration of the process:

^œ[A model of China's poverty alleviation: Stories shared by Xi Jinping](#); and

^œ[China's poverty alleviation "a great historic accomplishment": U.S. economist](#)

⁸⁹¹ China's "dual circulation" strategy:

Beijing will... seek to reduce its exposure to U.S. financial sanctions, including by promoting the use of the renminbi in foreign trade and investment.

Last year, it started trials of a digital currency in a handful of large cities, an innovation that could one day allow China and its business partners to conduct international transactions outside SWIFT, the financial messaging system, which is under de facto U.S. control and a major source of American geopolitical leverage.

China will, of course, not turn inward altogether: the Belt and Road Initiative, Beijing's massive global infrastructure campaign, will continue, although progress has been slow during the pandemic.

Since the "dual circulation" strategy enshrines the domestic market, and not global linkages, as Beijing's primary political focus, the BRI's projects will henceforth be based more on market demand than on political considerations.

China will also continue to seek technological cooperation with other countries, provided they can resist U.S. pressure to decouple from China on this front.

(Yan Xuetong, ^œ[Becoming Strong: The New Chinese Foreign Policy](#), *Foreign Affairs*, July/August 2021)

⁸⁹² It should not be presumed that Trump's intervention to continue arms sales to Saudi Arabia was unusual. Since the 2nd World War, all US presidents (including President Obama) have displayed similar commitment to maintaining the trade. Michael LaForgia and Walt Bogdanich have described what happened:

Weapons supplied by American companies, approved by American officials, allowed Saudi Arabia to pursue the reckless campaign. But in June 2017, an influential Republican senator decided to cut them off, by withholding approval for new sales. It was a moment that might have stopped the slaughter.

Not under President Trump.

With billions at stake, one of the president's favored aides, the combative trade adviser Peter Navarro, made it his mission to reverse the senator. Mr. Navarro, after consulting with American arms makers, wrote a memo to Jared Kushner and other top White House officials calling for an intervention, possibly by Mr. Trump himself. He titled it "Trump Mideast arms sales deal in extreme jeopardy, job losses imminent."

Within weeks, the Saudis were once again free to buy American weapons.

(Michael LaForgia and Walt Bogdanich, ["Why Bombs Made in America Have Been Killing Civilians in Yemen,"](#) *New York Times*, 16 May, 2020)

⁸⁹³ On September 23, 2009 Muammar Gaddafi, Prime Minister of Libya, gave a 90 minute, freewheeling [speech to the 64th United Nations General Assembly](#). One could attempt to summarize its content but no summary could adequately address the many issues he covered. Suffice to say that his speech revealed a clear-minded non-Western appreciation of the problems confronting a post WW2 world dominated by Western powers.

On 19th March 2011 A US led 'Coalition of the Willing' attacked Libya.

Micah Zenko, in an article titled ["The Big Lie About the Libyan War"](#) (*Foreign Policy*, March 22, 2016), explained what happened:

The Obama administration said it was just trying to protect civilians. Its actions reveal it was looking for regime change.

On October 20th 2011 Muammar Gaddafi was murdered.

["Hillary Clinton exemplified Western attitudes to his death:"](#)

We Came, We Saw, He Died.

To understand why The West decided this leader had to die, one needs to listen to and understand [his United Nations' speech](#).

The BBC, in a 25 May 2017 News item titled ["Why is Libya so lawless?"](#), provided a synopsis of Libya's post-Gaddafi experiences:

How bad is the situation in Libya?

Only Libya's myriad armed militias really wield power - and it is felt they often hold the politicians they supposedly back to ransom. During the uprising, anyone with a gun could command respect, and lots of armed groups emerged - up to 1,700, according to some estimates.

There are two rival parliaments and three governments - the latest government was formed in UN-brokered talks with the aim of replacing the other two. But this initiative is still on the rocks, partly because of concerns that the new government is being imposed by Western powers.

The oil-rich country once had one of the highest standards of living in Africa, with free healthcare and free education, but six years on from the uprising, it is facing a financial crisis.

This turmoil has allowed IS to gain a foothold in the country....

Some security analysts describe Libya as an arms bazaar. It is awash with weapons looted from Gaddafi's arsenal - making an ideal playground for jihadists fleeing air strikes in Syria and Iraq.

IS has been attacking Libyan oil facilities, has kidnapped several foreign oil workers and in 2015 was behind two high-profile attacks on Tunisia's tourism industry - carried out by gunmen trained in Libya.

Tunisia has built a partial security barrier and trench along its border with Libya aimed at preventing further atrocities....

Former US President Barack Obama, in an [interview published in April 2016](#), said that the "worst mistake" of his presidency was the failure to prepare for the aftermath of Col Gaddafi's overthrow.

He partly blamed then-UK Prime Minister David Cameron for "the mess", saying he had not done enough to support the North African nation whose instability was threatening its neighbours and was a factor in Europe's migrant crisis.

William Rivers Pitt said it well, though, of course, presumptuous bombing raids aimed at 'regime change' have not been confined to US Republican presidents:

The administrations and legacies of Richard Nixon, Ronald Reagan and George W. Bush combine to tell a long, sorry tale of corruption, greed, brazen lies, abused power and religious fundamentalism gone wild that, in whole and in part, put us where we are today. Remove any one of those men from... history, and Donald Trump would likely be just another late-night punchline you slept through, again. Nixon, Reagan and W. Bush made Donald Trump possible. (William Rivers Pitt, [The Terrible Trump Portrait That Explains Everything](#), *Truthout*, October 18, 2018)

⁸⁹⁴ As they conclude:

On the eve of the meeting, Washington had set its own confrontational tone by sanctioning 24 Chinese and Hong Kong officials for their role in rewriting the city's election laws, which further erode Hong Kong's autonomy. That followed a flurry of meetings that Secretary of State Antony Blinken and Secretary of Defense Lloyd Austin had held in Seoul and Tokyo, shoring up America's two main military alliances in Asia, while Biden met with the leaders of Japan, India and Australia in the first online summit of the so-called Quad, to push back against China's growing assertiveness in the region.

For its part, Beijing announced the opening of the trials of two Canadians whose arbitrary detentions in China in 2018 were largely viewed as an act of hostage diplomacy in retaliation for Canada's arrest of Huawei executive Meng Wanzhou. The hearings for Canadian businessman Michael Spavor and former diplomat Michael Kovrig were held in secret last week, with foreign diplomats barred from entering the court. The verdicts are still being withheld, raising the stakes for the U.S., which is seeking to extradite Meng for fraud charges.

In Anchorage, the gloves came off right at the opening statements, and were followed by further sparring. Blinken started by expressing "deep concerns" with China's actions in Xinjiang, Hong Kong and Taiwan - all issues that Beijing sees as "internal affairs" and characterizes as "red lines" that cannot be crossed. Along with cyberattacks on the U.S. and economic coercion toward American allies, "each of these actions threaten the rules-based order that maintains global stability," Blinken said.

(Rachel Cheung and Benjamin Wilhelm, ^œ[There Won't Be Any 'Reset' With China](#), *World Politics Review*, March 24, 2021)

⁸⁹⁵ A commenter on the ^œ[blog site *Naked Capitalism*](#) summed it up well

... [G]lobalists.. have arrogated the term "the center" for themselves and call the non-globalists "radical extremists"

⁸⁹⁶ Venezuela's President Maduro (13 February 2020) has, justifiably, called the US sanctions ^œ[a 'crime against humanity' and their use against Venezuela an economic 'weapon of mass destruction'](#) and has instructed Foreign Minister Jorge Arreaza to file a complaint with the International Criminal Court (ICC) against the United States and its sanctions.¹⁰⁸⁷

As Garikai Chengu explained in 2019,

American economic sanctions have been the worst crime against humanity since World War Two. America's economic sanctions have killed more innocent people than all of the nuclear, biological and chemical weapons ever used in the history of mankind.

The fact that for America the issue in Venezuela is oil, not democracy, will surprise only those who watch the news and ignore history. Venezuela has the world's largest oil reserves on the planet.

America seeks control of Venezuela because it sits atop the strategic intersection of the Caribbean, South and Central American worlds. Control of the nation, has always been a remarkably effective way to project power into these three regions and beyond.

From the first moment Hugo Chavez took office, the United States has been trying to overthrow Venezuela's socialist movement by using sanctions, coup attempts, and funding the opposition parties. After all, there is nothing more undemocratic than a coup d'état.

United Nations Human Rights Council Special Rapporteur, Alfred de Zayas, recommended, just a few days ago, that the International Criminal Court investigate economic sanctions against Venezuela as a possible crime against humanity perpetrated by America.

(Garikai Chengu, ^œ[Sanctions of Mass Destruction: America's War on Venezuela](#), *Counterpunch*, 01 February, 2019)

The US Congressional Research Service (using explanatory language best suited to [a US Orwellian reality](#)) has provided an overview of sanctions imposed on Venezuela. As the report explains:

For more than a decade, the United States has imposed sanctions in response to activities of the Venezuelan government and Venezuelan individuals. In response to the authoritarian leadership of Nicolás Maduro, the Trump Administration has significantly expanded sanctions. As of January 22, 2020, the Treasury Department has imposed sanctions on at least 144 Venezuelan or Venezuelan-connected individuals, and the State Department has revoked the visas of hundreds of individuals and their families. The Trump Administration also has imposed sanctions on Venezuela's state oil company (Petróleos de Venezuela, S.A., or PdVSA), government, and central bank.

Sanctions have increased economic pressure on the Maduro government, accelerating a decline in oil production. Nevertheless, Maduro remains in power a year since the United States ceased to recognize him as president. The Trump Administration has promised continued support to National Assembly President Juan Guaidó,

whom the United States and 57 governments recognize as interim president of Venezuela. Recent U.S. sanctions targeted legislators who tried to block Guaidó's January 2020 reelection as National Assembly president. On February 18, 2020, Treasury sanctioned Rosneft Trading S.A., a subsidiary of the Russian state-controlled Rosneft Oil Company, for facilitating Venezuelan oil exports (^œ[Venezuela: Overview of U.S. Sanctions](#), *Congressional Research Service*, Updated February 21, 2020)

The U.S. Department of the Treasury has also provided a summary of ^œ[Venezuela-related Sanctions](#) together with ^œ[Frequently Asked Questions Regarding Venezuela-related Sanctions](#)

⁸⁹⁷ John McEvoy put it well:

There are clear and disturbing parallels between the events that led to the 2003 invasion of Iraq and the current frenzy promoting regime change in Venezuela. From the state actors to the massive disinformation campaign, Washington and its "coalition of the willing" appear to be following the same old imperialist formula.

The Canary spoke to activist journalists Mike Prysner and Fiona Edwards about the parallels between the lead-up to the invasion of Iraq and current events in Venezuela. Prysner was 19 years old when he was deployed to Iraq in March 2003. He is now an anti-war activist, producer and writer for The Empire Files, and co-host of the Eyes Left podcast. Edwards, meanwhile, is a national officer of Stop the War coalition (a central organising force against the Iraq invasion) and a writer on Latin America.

Déjà vu in Venezuela

Prysner began by saying:

The biggest parallel I see at the moment is the creation of a pretext for US invasion on two separate fronts; the first being the rhetoric of a 'national security threat'. Like with Iraq, the administration is building a case that Venezuela actually poses a threat to US security.

On 7 February, US secretary of state Mike Pompeo told Fox News that "Hezbollah has active cells" in Venezuela. This is today's equivalent to false and exaggerated claims surrounding Iraq's WMDs and links to Al Qaeda.

Prysner continued:

To me, [Pompeo's claims] are not taken seriously, but neither were WMDs in Iraq.... It was under the 'humanitarian intervention' that was ultimately the rationale I went to war with.

In Iraq and Venezuela alike, the evidence of this humanitarian crisis was something actively manufactured by US policy through the use of sanctions and economic blockade. For the US government to asphyxiate the country for years, then be the saviors, really exposes that their policy never had anything to do with what was best for its people.

(John McEvoy, ^œ[The ocean of lies on Venezuela recalls the lead-up to the invasion of Iraq](#), *the Canary*, 11 February 2019)

Goebbels spelt it out:

If you tell a lie big enough and keep repeating it, people will eventually come to believe it. The lie can be maintained only for

such time as the State can shield the people from the political, economic and/or military consequences of the lie. It thus becomes vitally important for the State to use all of its powers to repress dissent, for the truth is the mortal enemy of the lie, and thus by extension, the truth is the greatest enemy of the State.

(^œ[Joseph Goebbels: On the "Big Lie"](#), *Jewish Virtual Library*, Accessed: 18 March, 2019)

As Stephanie Sarkis put it:

1. They tell blatant lies.

You know it's an outright lie. Yet they are telling you this lie with a straight face. Why are they so blatant? Because they're setting up a precedent. Once they tell you a huge lie, you're not sure if anything they say is true. Keeping you unsteady and off-kilter is the goal.

2. They deny they ever said something, even though you have proof.

You know they said they would do something; you know you heard it. But they out and out deny it. It makes you start questioning your reality - maybe they never said that thing. And the more they do this, the more you question your reality and start accepting theirs.

(Stephanie A. Sarkis, ^œ[11 Warning Signs of Gaslighting](#), *Psychology Today*, January 22, 2017)

Anatoly Kurmanaev and Clifford Krauss, in a US main stream media white-washing of its presumptuous regime change behavior (signaled in such phrases as 'Venezuela's "authoritarian leader"' and 'years of gross mismanagement and corruption'), have heralded the capitulation of Venezuela's elected president to US demands for control of its oil industry:

...Under Venezuelan law, the state-run oil company must be the principal stakeholder in all major oil projects. But as that company, *Petróleos de Venezuela*, or *Pdvs*a, unravels - under the weight of American sanctions, years of gross mismanagement and corruption - the work is unofficially being picked up by its foreign partners.

Private companies are pumping crude, arranging exports, paying workers, buying equipment and even hiring security squads to protect their operations in a collapsing countryside, according to managers and oil consultants working on the country's energy projects.

In effect, a stealth privatization is taking place, said Rafael Ramírez, who ran Venezuela's oil industry for more than a decade before breaking with Mr. Maduro in 2017, in a video address this week.

"Today, *Pdvs*a doesn't manage our oil industry, Venezuelans don't manage it," said Mr. Ramírez. "In the middle of the chaos generated by the worst economic crisis suffered by the country in its history, Maduro is taking actions to cede, transfer and hand over oil operations to private capital."

(Anatoly Kurmanaev and Clifford Krauss, ^œ[To Survive, Venezuela's Leader Gives Up Decades of Control Over Oil](#): Faced with a severe economic crisis, the country's leader, Nicolás Maduro, is letting foreign firms take over daily operations of its oil fields. It's a break with core tenets of his socialist revolution, *New York Times*, Feb. 8, 2020)

898 The next stage in the process of Venezuelan regime-change echoes similar regime-change activity of the past. Stephen Kinzer has summarized Iran's experiences through the first half of the 20th century:

Early in the 20th century, the people of Iran began moving towards democracy. It was a very difficult struggle. It was back and forth. But finally, after the Second World War, democracy did emerge in Iran. It was the one parenthesis, the one period of real democracy that we've had in Iran over the last hundred years. So, the problem came when the Iranians chose the wrong leader. They did something that the United States never likes: They chose a leader who wanted to put the interests of his own country ahead of the interests of the United States. And that alarmed the West, and particularly the United States.

Mosaddegh's first move was to nationalize Iranian oil. We thought this would be a terrible example for the rest of the world. We didn't want to start this process going in other countries. So, in order to set an example, the United States decided we would work with the British to overthrow the elected democratic government of Iran. We sent a senior CIA officer, who worked in the basement of the American Embassy in Iran organizing the coup. The coup finally succeeded in the summer of 1953. Mosaddegh was overthrown.

And, more important, the democratic system in Iran was destroyed forever. This was not just an attack on one person, but an attack on democracy. And the reason why we attacked that democracy is the democracy produced the wrong person. So, we like elections and democratic processes, but they have to produce the candidates we like; otherwise, our approval disappears.

(Transcript of Discussion, ^{ae}[Overthrow: 100 Years of U.S. Meddling & Regime Change, from Iran to Nicaragua to Hawaii to Cuba](#), *Democracy Now*, March 12, 2018)

Noam Chomsky spelt out Nicaragua's experiences through the second half of the last century:

In the ten years prior to the overthrow of the Nicaraguan dictator Anastasio Somoza in 1979, US television - all networks - devoted exactly one hour to Nicaragua, and that was entirely on the Managua earthquake of 1972.

From 1960 through 1978, the New York Times had three editorials on Nicaragua. It's not that nothing was happening there - it's just that whatever was happening was unremarkable. Nicaragua was of no concern at all, as long as Somoza's tyrannical rule wasn't challenged.

When his rule was challenged, by the [popular, left-wing] Sandinistas in the late 1970s, the US first tried to institute what was called "Somocismo [Somoza-ism] without Somoza" - that is, the whole corrupt system intact, but with somebody else at the top. That didn't work, so President Carter tried to maintain Somoza's National Guard as a base for US power.

The National Guard had always been remarkably brutal and sadistic. By June 1979, it was carrying out massive atrocities in the war against the Sandinistas, bombing residential neighbourhoods in Managua, killing tens of thousands of people. At that point, the US ambassador sent a cable to the White House saying it would be "ill-advised" to tell the Guard to call off the bombing, because that

might interfere with the policy of keeping them in power and the Sandinistas out.

Our ambassador to the Organisation of American States also spoke in favour of "Somocismo without Somoza," but the OAS rejected the suggestion flat out. A few days later, Somoza flew off to Miami with what was left of the Nicaraguan national treasury, and the Guard collapsed.

The Carter administration flew Guard commanders out of the country in planes with Red Cross markings (a war crime), and began to reconstitute the Guard on Nicaragua's borders. They also used Argentina as a proxy. (At that time, Argentina was under the rule of neo-Nazi generals, but they took a little time off from torturing and murdering their own population to help re-establish the Guard - soon to be renamed the contras, or "freedom fighters.")

Ronald Reagan used them to launch a large-scale terrorist war against Nicaragua, combined with economic warfare that was even more lethal. We also intimidated other countries so they wouldn't send aid either.

And yet, despite astronomical levels of military support, the United States failed to create a viable military force in Nicaragua. That's quite remarkable, if you think about it. No real guerrillas anywhere in the world have ever had resources even remotely like what the United States gave the contras. You could probably start a guerrilla insurgency in mountain regions of the US with comparable funding.

Why did the US go to such lengths in Nicaragua? The international development organisation Oxfam explained the real reasons, stating that, from its experience of working in 76 developing countries, "Nicaragua was...exceptional in the strength of that government's commitment...to improving the condition of the people and encouraging their active participation in the development process."

Of the four Central American countries where Oxfam had a significant presence (El Salvador, Guatemala, Honduras and Nicaragua), only in Nicaragua was there a substantial effort to address inequities in land ownership and to extend health, educational and agricultural services to poor peasant families. (Noam Chomsky, ^œ[The contra war in Nicaragua](#), 8 September, 2006)

And, in 2020, they are at it again. Having failed in every other attempt to oust the Venezuelan government and install a puppet regime in the nation, they have resorted to a means they have used before. They have, after 20 and more years of attempting every other means short of military invasion, decided to accuse the legitimately elected president of Venezuela and members of his inner circle of converting Venezuela's state into a criminal enterprise at the service of drug traffickers and terrorist groups. Joshua Goodman and Jim Mustian of *Associated Press* have explained:

The Trump administration will announce indictments against Venezuela's Nicolas Maduro and members of his inner circle for effectively converting Venezuela's state into a criminal enterprise at the service of drug traffickers and terrorist groups, according to four people familiar with the situation.

The indictments from prosecutors in Miami and New York, which will encompass money-laundering and drug-trafficking charges, will be announced at a news conference by U.S. Attorney General William Barr on Thursday, according to the four, who spoke on condition of anonymity to discuss the indictments ahead of their unsealing.

The U.S. is also expected to announce \$25 million in rewards for information leading to the arrest or prosecution of Maduro and Diosado Cabello, head of the ruling socialist party. That's according to two U.S. officials familiar with the matter. The State Department is expected to announce the reward offers at the same time the Justice Department goes public with the indictments, the officials said.

The indictment of a functioning head of state is highly unusual and is bound to ratchet up tensions between Washington and Caracas as the spread of the coronavirus threatens to collapse a health system and oil-dependent economy driven deep into the ground by years of corruption and U.S. sanctions.

Analysts said the action could boost Trump's re-election chances in the key swing state of Florida, which he won by a narrow margin in 2016 and where Venezuelans, Cubans and Nicaraguans fleeing authoritarian regimes have political muscle.

But it's unclear how it brings Venezuela any closer to ending a 15-month standoff between Maduro, who has the support of Russia and China, and the U.S.-backed opposition leader Juan Guaidó. It also could fragment the U.S.-led coalition against Maduro if European and Latin American allies think the Trump administration is overreaching.

"This kind of action does nothing to help a negotiated solution - something that's already really difficult," said Roberta Jacobson, who served as the State Department's top diplomat for Latin America until 2018.

(Joshua Goodman and Jim Mustian, ^œ[U.S. Indicts Venezuelan President Maduro, Aides for Drug Trafficking and Money Laundering](#), *Time*, 26 March, 2020)

A malignant, mendacious cancer has metastasized within the United States of America since the Second World War: warping foreign policy; fueling war and armaments manufacture and sales; and justifying regime-change activity around the world. Its first symptom seems to be [a willingness to distort the truth and invent lies](#) in order to manufacture consensus within the United States population in favor of the distorted reality US politicians and administrators have invented to support their belligerence.

Time and again US Administrations and their political and media supporters have resorted to this reinvention of reality to suit their purposes. Time and again they have demonstrated the validity of Goebbels' assertion that 'if you tell a lie big enough and keep repeating it, people will eventually come to believe it.'

Roger Cohen has put it nicely (though Trump is not the first, and will certainly not be the last, US politician to engage in repeated fabrications to justify his behavior):

Trump is like the Bellman in Lewis Carroll's "^œ[The Hunting of the Snark](#)": "I have said it thrice: What I tell you three times is true."...

He is working hard at voter suppression and attempts to disqualify legitimate votes. "Mail ballots, they cheat," the president claims. Mail ballots are "substantially fraudulent." Mail ballots "will be printed by foreign countries."

What I tell you three times is true. Like saying over and over that a Biden victory will lead to destruction or that he has done more for African-Americans than any president since Lincoln....

(Roger Cohen, ^œ[An American Disaster Foretold](#), *New York Times*, 28 August, 2020)

US Main Stream Media (MSM) commentators and 'reporters' have become so infected by the cancer that they barely need a repetition of the distortions to convince them of their 'reality'. There seems little point in addressing the latest, Trumpian example of this.

A ^œ [New York Times contribution](#) to the swelling MSM chorus in support of the Trump administration's latest set of unsupported assertions - including a \$15 million reward for information leading to a conviction - demonstrates the willingness with which the media fall into line in supporting such distortions.

A comment by a reader pseudonymed 'Alan' puts it into some perspective (how good it is to find that at least some US residents are still capable of independent assessment of the reality of administration assertions):

It's both unbelievable and unsurprising that the Trump administration would bring these charges at this moment in history, as a deadly pandemic rages across the world. These are the same people who are starving Venezuela of food, medicine and other necessities of life by imposing a cruel and illegal sanction regime.

AG Barr knows full well that the Justice Department will never have to prove its case, as no trial will ever take place in a U.S. court. Hence, he is free to accuse President Maduro of any crimes that cross his mind, as their true purpose is propaganda. Anti-Maduro partisans can be expected to jump on the bandwagon, but they have no knowledge of the facts and are not even slightly interested in facts. Again, propaganda and narrative control are what matter most to them.

⁸⁹⁹ With a US presidential election looming in 2020, US administration officials have, once again, demonstrated the depths to which they will sink in ^œ[imposing irrationally justified](#) and [abusive](#) sanctions on nations around the world merely to bolster election prospects at home. As *Prensa Latina* explained:

Iranian Foreign Minister Mohammad Yavad Zarif called the unilateral U.S. sanctions that are hindering the battle against Covid-19 economic and medical terrorism, local media reported today.

Zarif spoke via Internet in an intergovernmental forum called Conference on Interaction and Confidence Building Measures in Asia, broadcast on the Iranian channel Press TV.

'We need to jointly address the impact of unilateral coercive measures against efforts to combat the pandemic. They are nothing more than economic and medical terrorism,' he said. In any case, he said, cooperation is imperative, because these common challenges affect the health and well-being of the 27 Asian states and humanity.

The head of Iranian diplomacy called for promoting multilateralism and enhancing collaboration, while the Covid-19 pandemic challenged geographical, political and socioeconomic divisions.

The doctrine of U.S. President Donald Trump, he explained, is characterized by a unilateral approach that led to the withdrawal of the nuclear agreement signed in 2015 between Tehran and other world powers and the re-imposition of sanctions against the Islamic Republic.

The latter, he added, even covered food and vital medicines in the midst of a scourge that has killed 980,000 people in the world until today, including 25,000 in Iran.

(⁹⁰[Iran says: US sanctions equivalent to medical terrorism](#), *Prensa Latina*, September 26, 2020)

⁹⁰⁰ In a time of dire crisis, with a rampant corona virus pandemic threatening people around the world, Venezuela and Iran remain hobbled by US sanctions, unable to access needed resources to safeguard their populations from its consequences. Vijay Prashad and Paola Estrada have described the response of the US controlled International Monetary Fund (IMF) to a request for assistance:

...[T]he Venezuelan Foreign Ministry sent a letter to the IMF asking for funds to finance the government's "detection and response systems" for its efforts against Covid-19. In the letter, President Nicolas Maduro wrote that his government was "taking different preventive measures and following through strict and exhaustive controls to protect the Venezuelan people." These measures required funding, which is why the government was "turning to your honorable organization to request its evaluation about the possibility of authorizing Venezuela a financing line of \$5 billion from the Rapid Financing Instrument emergency fund."

Georgieva's policy to provide special assistance to countries should have been sufficient for the IMF to provide the assistance that the Venezuelan government had requested. But, very quickly, the Fund declined the request from Venezuela.

It is important to underline the fact that the IMF made this denial at a time when the coronavirus that causes Covid-19 had begun to spread in Venezuela.

On Sunday, the day the government sent the letter to the IMF, Maduro met with senior government officials in Caracas. The Venezuelan pharmaceutical body (CIFAR) and Venezuelan medical equipment companies said they would be able to increase production of machines and medicines to stem the crisis; but, they said, they would need key raw materials that have to be imported. (Vijay Prashad and Paola Estrada, ⁹⁰[IMF refuses aid to Venezuela in midst of Covid-19 crisis](#), *Asia Times*, March 19, 2020)

A comment on a ⁹⁰[nakedcapitalism](#) reposting of the piece by a commenter pseudonymed *Thuto* has summed it all up:

Thuto

Most leaders who steer their nations through this crisis will see their popularity soar and their legacies bolstered, if not cemented. The IMF, no doubt under US instructions, is refusing to provide the funds for Nicolas Maduro to help this battered nation fight the spread of

this virus, lest they give him the springboard to endear himself to his people.

The US puppet Guaido on the other hand is surely being prepared to undermine the official government's response, and to point at the inevitable death rate as a failure by Maduro.

How utterly predictable from an evil and imperial playbook, weaponizing a public health crisis of global import for political ends. Just when one thinks an opportunity is at hand for the US to arrest its decades long decline into a murderous regime and show a semblance of conscience in the face of a common enemy confronting humanity, they redefine the very notion of what it means to be evil.

⁹⁰¹ David Goldman has continued:

Washington is angry at Germany for building a natural gas pipeline with Russia, at India for purchasing a Russian air defense system, at Russia for mistreatment of President Putin's opponents and at China for treatment of its Uighur Muslim minority.

None of Washington's recent threats is consistent with identifiable policy objectives. On the contrary, recent outbursts from Biden and his cabinet will cement a Sino-Russian alliance against the US, undermine US efforts to rebuild relations with European allies and damage US efforts to create a "Quad" alliance against China in the Pacific.

It is hard to avoid the conclusion that no one is in charge at the White House, and that senior officials are jockeying for position in a power vacuum by signaling to domestic constituencies. But the net effect recalls the old joke about the firing squad that stands in a circle.

President Biden March 16 called Russia's President Putin "a killer" who "has no soul," and averred that Putin would "pay a price" for allegedly trying to help Trump in the 2020 presidential election - an unprecedented combination of threat and insult that no Western leader ever has uttered except in wartime.

(David R. Goldman, ^œ[Biden's firing squad stands in a circle](#), *Asia Times*, March 22, 2021)

⁹⁰² (01/10/18) Over the past fifty and more years, US soldiers have been eulogized as 'war heroes', nobly defending US 'freedom' and 'democracy'. As an [editorial in *The Economist*](#) put it, the majority of Americans

...see the world in terms of good and evil. They think America should be willing to use military power to defeat the forces of chaos.

To question this is to attack those who are 'defending America'. They are shielded from scrutiny of the reasons for their presence in diverse regions of the world and, equally, of the ways in which US wars and 'peace keeping' activities have been pursued, by claims that [those who do so are 'un-American'](#).

A ^œ[comment on a *Naked Capitalism* site](#) by a commenter pseudonymed 'Temporarily Sane' summed up the 21st Century US 'nation building' reality well:

Haven't we done this destroying the village in order to save it thing before? This is absolute madness.

Yup...and it makes the preformative "concern" for women and children, and the tweeted and facebooked pics of grunts holding Afghan babies that the internet has recently been inundated with, even more revolting.

Fake empathy and compassion has become de rigueur in neoliberal America while at the same time the brutal domination and suffering that is inflicted by our country on innocent people with no means to defend themselves has become so normalized that the entire MSM loudly clamoring for more war barely raises eyebrows any more.

The dissonance on display here is downright depraved...evil even.

The United States of (wilful?) Amnesia indeed.

And, in the 21st century, ^œ[the Patriot Act](#) has given the government extensive new powers to spy, interrogate and detain. Attorney General John Ashcroft (2003) explained why patriotic Americans should neither question nor challenge its provisions:

To those who scare peace-loving people with phantoms of lost liberty, my message is this: Your tactics only aid terrorists.

As [William Astore explained](#), US troops have morphed into 'a post-democratic force that prides itself on its warrior ethos', to be praised, not scrutinized. 'War crimes' are committed by others. US troops, defend 'honor and duty' and lay down their lives for noble causes.

So, in a strangely twisted logic, those who die, sanctify all as 'heroes'. Both the purposes of war and the actions of the 'heroes', sanitized and sanctified by the loss of life.

Morality becomes defined as that which 'had to be done' to ensure victory. And [victory, itself, is defined as "attacking our enemies"](#). The U.S. military now loses only if it stops fighting. And those war heroes 'on the front line' only lose if and when they become demobilized 'veterans': the 'Once Were' forgotten ones of unending wars.

A statement on the charitable ^œ[headstrong](#) website, dedicated to providing US 'post-9/11 military veterans with free mental health care that works' summed it up:

For every soldier we have lost in combat, 25-30 take their own lives.

US Veteran Joe Quinn:

"Thank you for your service" comes from a good place, but it's meaningless if it's not followed up by serious interest in a veteran's life and story and, more important, followed up with actions for veterans' care.

I carry a deep-seated sense of shame and guilt that so many veterans have been killed or injured following 9/11. Many are dealing with trauma and the invisible wounds of war.

(Joe Quinn, ^œ[What Is the Point of War?](#), *New York Times*, October 1, 2018)

A ^œ[Wikipedia entry](#) has defined the concept of the Nietzschean übermensch well:

Philosopher Friedrich Nietzsche's concept of an übermensch ("Overman") was that of a New Man who would be a leader by example to humanity through an existentialist will to power that was vitalist and irrationalist in nature.... The übermensch emerges

as the new meaning of the Earth, a norm-repudiating individual who overcomes himself and is the master in control of his impulses and passions.

It's all about sociopathic hubris, self-belief and a presumption that morality and history are what übermenschen decide to make them: that morality is whatever is expedient and, when employed by übermenschen, 'might is right'.

⁹⁰³ As he continues:

Since their military defeat, the US and its allies have imposed another of their interventionist pet policies: strangling the Syrian population with economic warfare. As Syria now faces a famine and tries to rebuild, the US military is occupying one-third of Syria, depriving it of access to a resource-rich region containing vital oil reserves and wheat, as US officials openly boast. In the summer of 2020, the Trump administration imposed a new round of crippling sanctions under the bipartisan Caesar Act. These sanctions explicitly target reconstruction, and have, in the proud words of Trump envoy James Jeffrey, "crushed the country's economy."

Rather than challenge their own governments' decade-long military and ongoing economic terror campaign in Syria, a coterie of Western academics, media personalities, and journalists have emerged to champion it, and to dismiss any heretics as dictator-loving "Assadists." In the name of defending "the Syrian revolution," these voices promote Western chauvinism and whitewashing its catastrophic consequences for the Syrian people. The claim of democracy promotion is cruelly absurd: no Syrian voted for the NATO states and Gulf autocracies who, acting as a global dictatorship, arrogate to themselves the right to decimate a foreign country by funding, arming, and training a vast army of jihadist proxy militias.

(Aaron Maté, ^œ[McCarthyite meltdown shows how Russiagate, Syria propaganda captured 'left' media](#), *Aaron Maté's Newsletter*, June 09, 2021)

⁹⁰⁴ Benjamin Norton has provided an excellent discussion of the origin and nature of Western sanctions on Syria in a *YouTube* video entitled ^œ[How Western war and sanctions devastated Syria, where earthquake now kills thousands](#).

⁹⁰⁵ Tom Allard, in a *Reuters* news report explained:

For months, by Zoom calls and then by jet, Indonesian ministers and officials scoured the world for access to a vaccine for the coronavirus that Southeast Asia's biggest country is struggling to control. This month, their campaign paid off.

Three Chinese companies committed 250 million doses of vaccines to the archipelago of 270 million people. A letter of intent was signed with a UK-based company for another 100 million.

Absent from these pledges: the United States.

Not only was it not promising any vaccine, but months earlier the United States shocked Indonesian officials by asking to land and refuel its spy planes in the territory, four senior Indonesian officials told Reuters. This would reverse a decades-long policy of strategic neutrality in the country.

(Tom Allard, ^œ[Vaccines, not spy planes: U.S. misfires in Southeast Asia](#), *Reuters*, October 27, 2020)

⁹⁰⁶ On November 10th 2019 the *duly elected* President of Bolivia, Evo Morales, stepped down from the presidency. *Aljazeera* described it:

Bolivian President Evo Morales said on Sunday he would resign after the military suggested he step down and allies resigned amid a fierce backlash to a disputed election last month.

"I resign my post as president," Morales said in a televised address, capping a day of fast-moving events in which several ministers and senior officials quit as support for Latin America's longest-serving president crumbled.

"I want to tell you, brothers and sisters, that the fight does not end here. The poor, the social movements, will continue in this fight for equality and peace," he said.

The commander of Bolivia's armed forces earlier called on the embattled Morales to resign.

"After analysing the internal conflict situation, we ask the president of the state to renounce his presidential mandate, allowing for peace to be restored and the maintenance of stability for the good of Bolivia," armed forces commander Williams Kaliman told reporters.

Speaking on national television, Kaliman also appealed to Bolivians to refrain from violence. He stepped in after Morales agreed earlier in the day to hold a new election.

(^œ[Bolivia's beleaguered President Morales announces resignation](#), *Aljazeera*, November 11, 2019)

As that paragon of democratic virtues, US President Trump, repeatedly explained of Venezuela to his voting base,

The problem... is not that socialism has been poorly implemented, but that socialism has been faithfully implemented.

Evo Morales (and before him, [Venezuelan President Maduro](#)) has discovered a commonplace of such bullying: It is the nature of schoolyard bullying that victims of abuse are, almost inevitably, blamed for the persecution they must endure. Trump exemplifies the crude bullying tactics which US leaders have all-too-often employed.

Anatoly Kurmanaev of the *New York Times* described the result:

The interim leader of Bolivia took power this week promising to unify a nation in turmoil. But she has since stacked her cabinet with conservative ministers and thrust religion to the forefront of government at the risk of deepening the divides.

The leader, Jeanine Añez, also called on security forces to restore public order and police responded by opening fire Friday on coca farmers protesting against the government in the central city of Cochabamba. The clash left nine protesters dead and dozens injured, the worst violence yet in the country's monthlong political crisis.

Ms. Añez already appeared to be reaching beyond her caretaker mandate of organizing national elections by January - taking steps, for example, to reshape the country's foreign policy. Her actions threaten to complicate negotiations with allies of former President Evo Morales to reach a democratic solution to the crisis....

The new Bolivian government has accused Venezuela and Cuba of destabilizing the country and financing subversive groups, an allegation regularly used by the region's right-leaning governments when faced with internal discontent. On Friday, Bolivian police detained nine Venezuelan citizens, whom they claimed were undercover security agents.

On Thursday, Ms. Añez issued a presidential decree exempting the military from criminal prosecution when maintaining public order. The following day, police cracked down with lethal force on the protesters in Cochabamba.

The new interior minister, the right-wing Senator Arturo Murillo, began by promising to hunt down Mr. Morales's top former minister, Juan Ramón Quintana, who has gone into hiding.

"We're going to go hunting for Juan Ramón Quintana," said Mr. Murillo, "because he is an animal that feeds on the blood of the people."...

(Anatoly Kurmanaev, ["In Bolivia, Interim Leader Sets Conservative, Religious Tone,"](#) *New York Times*, Nov. 16, 2019)

But, of course, there really was no alternative! Harriet Marsden (among many other 'main stream' commentators) had explained why:

The Amazon is burning, and everybody is looking to Brazilian president Jair Bolsonaro. They should be looking a little further south. In Bolivia, wildfires have been rampaging across the dry savannah of the country for weeks. On the southwest border with Paraguay and Brazil, at least 1 million hectares of farmland have been destroyed. In the northeast, the fires have spread to the Amazon.

Leaving aside the danger to indigenous tribes and the consequences of losing that much farmland, Bolivia's fires have grave geopolitical implications. Bolivia's president Evo Morales refused western aid for weeks, until domestic and international pressure forced his hand on Sunday. But that initial refusal - from an inferior economic power, no less - both taunts and emboldens neighbouring strongman Bolsonaro, who is also set to reject foreign aid for the emerging crisis, preferring to scrap with Macron about his wife.

Coica, the pan-Amazon organisation, has accused both Morales and Bolsonaro of environmental genocide - but it is Bolsonaro who is being targeted by the G7. While Sao Paulo was plunged into darkness from smoke last week, the world is in metaphorical darkness about the problem of Bolivia.

(Harriet Marsden, ["The world believes the Amazon is in trouble because of Bolsonaro. Instead, they should look to Bolivia:"](#) The Amazon rainforest is trapped, burning, between a pincer-grip of unstable left-wing Morales, and unstable right-wing Bolsonaro. This could be the spark that sets a civil war alight, *Independent*, Tuesday 27 August)

Wyatt Reed described the process:

With fires set by landowners raging throughout the Amazon for nearly a month, a group of Western-backed information warriors has begun working to redirect outrage from the far-right Brazilian government toward a more convenient target.

After a flurry of media pinned the blame on everyone from poor people eating meat to China, a new target has come into focus: the leftist Bolivian government of President Evo Morales.

Originally content to merely accuse Bolivians of not responding fast enough, the regime-change machine is switching gears and making the absurd claim that Bolivia bears the majority of responsibility for the Amazon fires.

The campaign has been orchestrated by Jhanisse Vaca Daza, an anti-Morales operative identified merely as an "environmental activist" in a recent BBC report pointing the finger at the Bolivian president for the fires.

A closer look at Daza's work, however, reveals that she is the spearhead of a network of Western organizations that trained and advised the leaders of regime-change operations from Venezuela to Eastern Europe to the ongoing anti-China protests in Hong Kong. (Wyatt Reed, ^œ[Western regime-change operatives launch campaign to blame Bolivia's Evo Morales for Amazon fires](#), *The GrayZone*, August 29, 2019)

Marjorie Cohn, in her own inimitable style, has spelt it all out:

Once again, the United States is complicit in an illegal coup d'état in Latin America, this time in Bolivia. On November 10, a right-wing, anti-Indigenous group seized power after the Bolivian military's removal of President Evo Morales, who had declared victory in the October 20 presidential election.

The United States' fingerprints are all over the coup. Advisers from the U.S. Southern Command have been stationed on Bolivia's border with Argentina, Ivanka Trump made a surprising visit to an Argentine province near the Bolivian border in September, the pro-U.S. Organization of American States (OAS) cast unfounded doubt on Morales's election victory, and the U.S.'s ^œ[National Endowment for Democracy \(NED\)](#) provided suspicious grants to Bolivia....

During Morales's nearly 14 years in office, his Movement Towards Socialism (MAS) party reduced poverty by 42 percent and extreme poverty by 60 percent. It cut unemployment by 50 percent and nearly tripled the per-capita G.D.P. "It's indisputable that Bolivians are healthier, wealthier, better educated, living longer and more equal than at any time in this South American nation's history," ^œ[Anthony Faiola wrote](#) in *The Washington Post*.

There was discontent about Morales seeking a fourth term among some sectors in Bolivia, who thought there should be space for new leadership. But Morales had a strong record of establishing policies to help the people of Bolivia, which angered the U.S. government, Western corporations and the corporate media, "who function as ideological shock troops against leftist governments in Latin America," ^œ[Alan MacLeod wrote](#) at Fairness and Accuracy in Reporting.

The U.S. and Argentine governments helped to engineer the Bolivian coup, Stella Calloni reported in *Resumen: Latinoamerico*. She cited the presence of advisers from the U.S. Southern Command on the Argentine border with Bolivia....

(Marjorie Cohn, ^œ[US Is Again Complicit in an Illegal Coup, This Time in Bolivia](#), *Truthout*, November 27, 2019)

907 Less than a year later, in a new election, the Bolivian *Movement for Socialism* (MAS) was resoundingly returned to power. The US backed coup had 'failed' and the unelected politicians who promoted it were seeking asylum in the United States.

Not only have Bolivians insisted on a return to a 'socialist' government, in Brazil, in 2021, ['Lula' Da Silva has been acquitted](#) of the manufactured charges brought against him - which enabled a rightwing coup and Bolsonaro's election - and is once again eligible to run for office.

Are US 'regime change' experts losing their touch?

Is it too optimistic to hope that this heralds the end of US meddling in Bolivia and Brazil?

Medea Benjamin and Nicolas Davies, in a *CodePink* report entitled 'Ending Regime Change - in Bolivia and the World', explained what happened:

Less than a year after the United States and the U.S.-backed Organization of American States (OAS) supported a violent military coup to overthrow the government of Bolivia, the Bolivian people have reelected the Movement for Socialism (MAS) and restored it to power.

In the long history of U.S.-backed "regime changes" in countries around the world, rarely have a people and a country so firmly and democratically repudiated U.S. efforts to dictate how they will be governed. Post-coup interim president Jeanine Añez has reportedly requested 350 U.S. visas for herself and others who may face prosecution in Bolivia for their roles in the coup.

(Medea Benjamin and Nicolas J S Davies, [Ending Regime Change - in Bolivia and the World](#), *CodePink*, October 28, 2020)

908 Frida Ghitis provided a 'balanced', US mainstream media (MSM) version of how the Bolivian MAS government behaved on reelection:

The cautious optimism that greeted the election of Luis Arce as Bolivia's president has abruptly turned to profound concern. Arce, the socialist technocrat who came to office in the midst of dangerously inflamed political divisions last year, had vowed to "rebuild the country in unity," including by making the judiciary independent of politics. Yet he just had Bolivia's previous president, Jeanine Anez, along with more than a dozen former officials, arrested and imprisoned on dubious charges of "terrorism," "conspiracy" and "sedition" connected to the ouster of her predecessor, Evo Morales.

(Frida Ghitis, [Arce's Promise of 'Unity' Rings Hollow in Bolivia](#), *World Politics Review*, March 18, 2021)

And, in a commentary of similar refrain on [Brazil's prospects with Luis Inacio "Lula" da Silva cleared of all charges](#) against him and free to contest the next presidential election, Frida Ghitis provided a US mainstream media version of its future in an article entitled 'With Lula Back, Is Brazil's Center Doomed?'

It's always nice to know that there are 'journalists' out there who will not disappoint when one goes looking for mainstream media versions of unfolding events - what would we do without them?

The news hit Brazil like an earthquake. Former President Luiz Inacio Lula da Silva, widely known as Lula, was suddenly free to run for president in next year's election. That was the principal, if

potentially reversible, result of a surprising decision issued Monday by a Brazilian Supreme Court judge, tossing out criminal corruption cases against the iconic leftist leader. The 2022 presidential race has now taken on a dramatic new player who poses a major threat to the reelection of Brazil's controversial far-right president, Jair Bolsonaro.

The court ruling, which still faces possible challenges, sets the stage for an extraordinarily divisive election next year, with two personalities whose political views are polar opposites and who each inspire their own passionate supporters. Brazil has spent years in the grip of political acrimony, and the next election is all but certain to make it much worse.

The conventional wisdom is that the presence of Lula and Bolsonaro on the ballot all but forecloses the possibility that a centrist candidate could emerge victorious. But the conventional wisdom could be wrong. Brazilian voters, not unlike those in the United States, are exhausted from headline-grabbing, outrage-inducing, family-splitting political leaders. Just as the long-time centrist Joe Biden might have seemed too moderate and too low-key to take on Donald Trump last year, the appeal of a calm, steady hand during a time of crisis in Brazil could yet surprise the pundits.

(Frida Ghitis, [With Lula Back, Is Brazil's Center Doomed?](#), *World Politics Review*, March 11, 2021)

⁹⁰⁹ *Deutsche Welle*, in a Business story subtitled "The US has a total embargo on Venezuela. The EU has imposed new sanctions. The goal is to oust President Nicolas Maduro. But the measures are hitting Venezuelans hard and are likely to kill many people" has described the nature and consequences of such sanctions:

...U.S. sanctions have become increasingly aggressive since they were first announced by former US President Barack Obama in 2015. Under pressure from the United States, foreign companies stopped doing business with the country. Citibank closed Venezuela's foreign accounts.

President Donald Trump intensified sanctions in 2017 and this year imposed an oil embargo that blocked the purchase of petroleum from Venezuela's state oil company, PDVSA. It also confiscated Venezuela's US subsidiary CITGO, worth \$8 billion. It was a huge blow for Venezuela, which received 90% of government revenue from the oil industry.

The U.S. government has also frozen \$5.5 billion of Venezuelan funds in international accounts in at least 50 banks and financial institutions. Even if Venezuela could get money abroad, the United States has long blocked international trade by threatening sanctions on foreign companies for doing business with the country...

Failing equipment and broken parts

According to representatives from Hidrocapital, the state water agency for the capital, Caracas, roughly 15%-20% of Venezuelans don't have access to potable water in their homes, because the government cannot acquire new foreign-built parts to fix broken pumps and pipes.

"With the blockade, we've had situations, where we have the pumps and the motors and they are about to ship and then comes the all-

powerful hand of the United States and they block the money in the bank or sanction the company that is working with us, just for selling us this equipment and without seeing that they are affecting people's lives," says Maria Flores, vice president of operations at Hidrocapital.

In response, Hidrocapital ships truckloads of water each week to needy communities. But the blockade, and the lack of parts for vehicles, is also impacting the number of water trucks Hidrocapital can keep on the road. Maria Flores says their fleet has been reduced by 75% over the last three years, to now only a handful of trucks.

An unequal crisis

Those with access to dollars, in the wealthier neighborhoods of Caracas, are weathering the storm.

Shoppers pour in and out of the upscale Sambil mall on the eastern end of the city. On the top floor, a sushi restaurant is packed. A two-person meal there can cost several times more than the monthly minimum wage.

But in the poor barrios, many try to hold down multiple jobs. Jobs with access to dollars, if possible. Millions have left the country in search of opportunities abroad.

Carolina Subero's husband is one of them. He sends money home each month. But it's still not enough to pay for their little girl's medicine or to make ends meet.

Subero is not a huge fan of President Maduro. But she also doesn't blame the government. The problem, she says, are the US sanctions.

"They don't care. They think they are hurting President Maduro, and they're really hurting the people," says Subero. "If they really wanted something good for Venezuela, they would not be doing what they are doing right now."

(Michael Fox, ^œ[The human cost of the US sanctions on Venezuela](#), DW, October 01, 2019)

910 (26/02/20)

It seems that, as the 21st century unfolds, various 'intelligence' organizations, politicians and their advisors have become convinced that what they have been doing to other sovereign nations is now being done to the United States of America. 'Foreign powers' - particularly 'Russia', and, of course 'China', but others too - are attempting to subvert 'American democracy' and 'influence elections'.

Julian Barnes and Sydney Ember have described it in 2020:

...Senior intelligence officials told members of the House Intelligence Committee last week that Russia was continuing its election sabotage campaign, including intervening in the Democratic primaries.

Intelligence officials also warned House lawmakers that Russia was interfering in the campaign to try to get President Trump re-elected, according to people familiar with the matter. They said that the disclosure to Congress angered Mr. Trump, who complained that Democrats would use it against him.

(Julian E. Barnes and Sydney Ember, ^œ[Russia Is Said to Be](#)

[Interfering to Aid Sanders in Democratic Primaries](#), *New York Times*, 21 February, 2020).

It appears that 'Russian interference' lacks coherence - or is it that US paranoia does?

Michael Hudson has provided an alternative explanation to paranoia:

To hear the candidates debate, you would think that their fight was over who could best beat Trump. But when Trump's billionaire twin Mike Bloomberg throws a quarter-billion dollars into an ad campaign to bypass the candidates actually running for votes in Iowa, New Hampshire and Nevada, it's obvious that what really is at issue is the future of the Democrat Party. Bloomberg is banking on a brokered convention held by the Democratic National Committee (DNC) in which money votes. (If "corporations are people," so is money in today's political world.)

Until Nevada, all the presidential candidates except for Bernie Sanders were playing for a brokered convention. The party's candidates seemed likely to be chosen by the Donor Class, the One Percent and its proxies, not the voting class (the 99 Percent). If, as Mayor Bloomberg has assumed, the DNC will sell the presidency to the highest bidder, this poses the great question: Can the myth that the Democrats represent the working/middle class survive? Or, will the Donor Class trump the voting class?

This could be thought of as "election interference" - not from Russia but from the DNC on behalf of its Donor Class. That scenario would make the Democrats' slogan for 2020 "No Hope or Change." That is, no from today's economic trends that are sweeping wealth up to the One Percent.

All this sounds like Rome at the end of the Republic in the 1st century BC. The way Rome's constitution was set up, candidates for the position of consul had to pay their way through a series of offices. The process started by going deeply into debt to get elected to the position of aedile, in charge of staging public games and entertainments. Rome's neoliberal fiscal policy did not tax or spend, and there was little public administrative bureaucracy, so all such spending had to be made out of the pockets of the oligarchy. That was a way of keeping decisions about how to spend out of the hands of democratic politics....

(Michael Hudson, ["The Democrats' Quandary - In a Struggle Between Oligarchy and Democracy, Something Must Give"](#), posted on website *naked capitalism* by Yves Smith, 25 February, 2020)

[Alexey Kovalev \(2019\)](#) described Russian reaction to the suggestion that their politicians and 'intelligence agencies' were attempting to manipulate US elections (though, of course, US operatives have certainly been guilty of such behavior toward Russia in past years):

It's not just the state media that has rejected the idea that Mr. Trump colluded with Russia. Even liberals and opponents of President Vladimir Putin have been deeply skeptical, pointing out that Russia's ruling circles are barely competent enough to prop themselves up, let alone manipulate a superpower.

When the news broke last week that Mr. Mueller had finished his report, Moscow's political and media circles reacted with a mixture of contempt and derision. Far from being a top news story, it was

practically forgotten after a few angry comments from state officials.

Perhaps the US is not beyond redemption and this is paranoia induced by, as [Obafemi Awolowo put it](#), a 'compunction of conscience which usually dawns on any evil-doer who is not hardened beyond redemption'!

⁹¹¹ A recent ^œ[comment by Elizabeth Pula](#) on a *Project Syndicate* contribution entitled 'The Powerlessness of the Most Powerful', compared the regular use of teleprompter training-wheels by prominent US politicians, with President Vladimir Putin's ability to easily and competently deal with wide ranging issues in response to public questioning, as in his performance at ^œ[the Valdai Club](#): an example of 'reasonable, civil, global political leadership'. As she says,

There is no representative from the US that could present any on-task, focused and immediately responsive direct verbal messages for approximately 2 hours, without a... teleprompter and totally pre-scripted comments...

⁹¹² SourceWatch, a project of the ^œ[Center for Media and Democracy](#), has provided a succinct explanation of the 'School of the Americas'. As it says:

The U.S. Army School of the Americas (SOA), located in Fort Benning, Georgia, is a military training institution focused on training officers from Latin American countries. Since its creation in 1946, some 60,000 Latin American military officers have graduated from the school...

Many of its graduates have been implicated in serious human rights abuses and manuals used at the school appear to condone if not promote the use of torture. This has resulted in a grassroots human rights campaign to close the SOA, led by the organization SOA Watch. Activists opposed to the SOA often refer to the school as the "School of Assassins" and the "School of Coups."

Abuses SOA graduates have alleged to have committed include "the death or disappearance of 200,000 Guatemalans and innumerable other atrocities.... In Colombia 2 million have been displaced and thousands are still reliving the horrors of their torture - not surprising since, with 10,000 graduates from the SOA, Colombia is the school's largest customer and has the worst human rights record on the continent."...

In 2000, pressure on Congress to stop funding the SOA increased to the point where the Pentagon decided to rename the school the Western Hemisphere Institute for Security Cooperation, abbreviated as WHISC or WHINSEC.

(^œ[School of the Americas](#), *SourceWatch*, accessed 18 October, 2020)

Jeffrey Smith and Nic Cheeseman, having sketched the US scene in June 2020, ironically suggest that what the US has been doing around the world should now be done at home: that, "to save its democracy", the United States needs a dose of its own medicine - though, perhaps, this trivializes what are egregious behaviors in other countries and communities:

Imagine the following scene: A country is burning. Minority communities and their allies are flooding major cities to protest human rights abuses and inequality. The president is a divisive

demagogue who openly endorses violence against his critics in a cynical effort to bolster his waning support. The media, once a respected institution, has become caught in real-life crossfire, at risk of arrest and attack. And the police are no longer respected as guarantors of the rule of law but are instead seen as a threat to public safety.

Smoke plumes are visible in the capital city; government buildings and neighborhoods are tagged with anti-establishment graffiti while police headquarters are set ablaze; storefronts are shattered; police and ambulance sirens blare while helicopters buzz overhead; and citywide curfews are imposed.

This is precisely the kind of country that the United States regularly invests millions of dollars in to promote democracy. But today we are not speaking of the Democratic Republic of the Congo or the Philippines or Venezuela. It is the United States itself. The irony is that the U.S. government is crying out for the kind of democracy aid program that it regularly implements "over there" in so-called developing countries.

...Indeed, the United States urgently needs the sort of democracy promotion program that its leaders, often on a bipartisan basis, have long advocated abroad.

The complacency exhibited by U.S. political leaders is deeply entrenched, especially in Washington, where officials of all stripes appear to be oddly comfortable overseeing the steady erosion of the country's democratic norms. The malaise has a deep cultural component that has its roots in the notion of American exceptionalism. According to this worldview, the United States is portrayed, envisioned, and often believed by its citizens to be fundamentally different from its global counterparts - often in a manner that elevates it above criticism.

This tendency to idealize U.S. democracy has been reinforced by the work of some of the organizations analyzing global democratic trends - such as Freedom House - which for too long framed the American project as the epitome of what a democracy should look like - the very standard, in other words, by which other countries are judged. Although organizations like Freedom House and others have recently raised serious concerns about the downward trajectory of U.S. democracy, as well as its global ramifications, this has yet to fully permeate the national consciousness.

As a result, this often distorting feedback loop, and the prevailing presumption of the United States' strong institutions and good intentions, has served to mask the country's fundamental flaws. Over the past several years in particular, these have included the continued economic and political marginalization of minority groups; the woeful underrepresentation of women in elected office; heavily gerrymandered electoral districts that create an uneven political playing field; the fomenting of political violence by extremist elected officials; and the grossly distorting influence of big money in politics.

(Jeffrey Smith and Nic Cheeseman, ["To Save Its Democracy, the United States Needs a Dose of Its Own Medicine," *Foreign Policy*](#), June 14, 2020)

⁹¹³ A Wikipedia entry details the sociopathic bombing campaigns of the 'Vietnam Era':

The bombing campaigns of the Vietnam War were the longest and heaviest aerial bombardment in history. The United States Air Force, the U. S. Navy, and U. S. Marine Corps aviation dropped 7,662,000 tons of explosives. By comparison, U. S. forces dropped a total of 2,150,000 tons of bombs in all theaters of World War II. (Wikipedia, ^œ[List of bombing campaigns of the Vietnam War](#), accessed 08 June, 2020)

There is an extensive literature dealing with the unconscionable US and US instigated atrocities in all three regions. Among them is Nick Turse's ^œ[BLOOD ON HIS HANDS, Survivors of Kissinger's Secret War in Cambodia Reveal Unreported Mass Killings](#), *The Intercept*, May 23 2023.

⁹¹⁴ US interference throughout Central and South America over the past century and more has been so common, and, often, so devastating to the nations on the receiving end of its attentions, that it is easy to simply pass over the egregious nature of those interferences. Where does one start, and when does one finally decide that enough is enough and so pass on to other issues? But, a close study of US activity *should* leave one feeling a helpless outrage for the millions of victims, passed over by the US authorities as mere 'collateral damage' of their activity.

By no means the most egregious, but a well-documented, text-book example of US regime-change activity in Central and South American nations is Nixon's use of the CIA to engineer a violent overthrow of the elected Chilean government in 1973. The democratically-elected Popular Unity government of Salvador Allende was systematically destabilized, and Allende killed. General Pinochet was then installed and supported to head a US friendly, repressive right-wing government.

Nixon's instruction to his national security adviser, Henry Kissinger, to 'make the Chilean economy scream' is an example of a recurring approach to engineering economic and political chaos within target nations as a means of 'justifying' US led regime-change. An approach crudely mimicked in President Trump's ham-fisted imposition of 'sanctions' on nations around the world.

Peter Kornbluh has summarized the Chilean experience:

Washington, D.C. - September 11, 1998 marks the twenty-fifth anniversary of the military coup led by General Augusto Pinochet. The violent overthrow of the democratically-elected Popular Unity government of Salvador Allende changed the course of the country that Chilean poet Pablo Neruda described as "a long petal of sea, wine and snow"; because of CIA covert intervention in Chile, and the repressive character of General Pinochet's rule, the coup became the most notorious military takeover in the annals of Latin American history.

Revelations that President Richard Nixon had ordered the CIA to "make the economy scream" in Chile to "prevent Allende from coming to power or to unseat him," prompted a major scandal in the mid-1970s, and a major investigation by the U.S. Senate. Since the coup, however, few U.S. documents relating to Chile have been actually declassified- -until recently. Through Freedom of Information Act requests, and other avenues of declassification, the National Security Archive has been able to compile a collection of

declassified records that shed light on events in Chile between 1970 and 1976.

These documents include:

- Cables written by U.S. Ambassador Edward Korry after Allende's election, detailing conversations with President Eduardo Frei on how to block the president-elect from being inaugurated. The cables contain detailed descriptions and opinions on the various political forces in Chile, including the Chilean military, the Christian Democrat Party, and the U.S. business community.
- CIA memoranda and reports on "Project FUBELT"--the codename for covert operations to promote a military coup and undermine Allende's government. The documents, including minutes of meetings between Henry Kissinger and CIA officials, CIA cables to its Santiago station, and summaries of covert action in 1970, provide a clear paper trail to the decisions and operations against Allende's government
- National Security Council strategy papers which record efforts to "destabilize" Chile economically, and isolate Allende's government diplomatically, between 1970 and 1973
- State Department and NSC memoranda and cables after the coup, providing evidence of human rights atrocities under the new military regime led by General Pinochet.
- FBI documents on Operation Condor--the state-sponsored terrorism of the Chilean secret police, DINA. The documents, including summaries of prison letters written by DINA agent Michael Townley, provide evidence on the carbombing assassination of Orlando Letelier and Ronni Moffitt in Washington D.C., and the murder of Chilean General Carlos Prats and his wife in Buenos Aires, among other operations.

These documents, and many thousands of other CIA, NSC, and Defense Department records that are still classified secret, remain relevant to ongoing human rights investigations in Chile, Spain and other countries, and unresolved acts of international terrorism conducted by the Chilean secret police. Eventually, international pressure, and concerted use of the U.S. laws on declassification will force more of the still-buried record into the public domain--providing evidence for future judicial, and historical accountability. (Peter Kornbluh, [Chile and the United States: Declassified Documents Relating to the Military Coup, September 11, 1973](#), *National Security Archive Electronic Briefing Book No. 8*)

Martin Luther King summed it all up:

A nation that continues year after year to spend more money on military defense than on programs of social uplift is approaching spiritual death....

... the greatest purveyor of violence in the world today: my own government.

Branko Marcetic put it into perspective in an article titled 'The CIA's Secret Global War Against the Left' and subtitled:

Forty-five years ago, under a cloak of secrecy, Operation Condor was officially launched: a global campaign of violent repression against the Latin American left by the region's quasi-fascist military dictatorships. The US government not only knew about the program - it helped to engineer it.

As he summarized:

The middle of the twentieth century saw a flourishing of people's movements in Latin America that threatened to upend the rigid hierarchies of the hemisphere: feminist and workers' movements, movements for indigenous rights, peasant-led movements for agrarian reform, and leftist movements, to name a few. Naturally, they had to be stopped.

Until then, Washington-backed juntas and dictatorships had successfully kept a lid on such social change, or simply overthrew whatever governments those movements succeeded in forming. Such changes, after all, directly threatened not just the power and privileges of the region's long-standing elite, but Western business interests, too. So it was that, at the prodding of US-owned corporations like Chase Manhattan, Anaconda Copper, and Pepsi, former corporate lawyer and then-president Richard Nixon backed the military overthrow of Salvador Allende's democratically elected socialist government in 1973, and its replacement by a vicious dictatorship under General Augusto Pinochet.

But for the region's paranoid leadership, even their internal campaigns of terror were not enough. So, in 1975, the governments of Chile, Argentina, Bolivia, Paraguay, and Uruguay secretly met in Santiago, Chile, and agreed to work together to spy on and track "suspicious individuals" and organizations "directly or indirectly linked to Marxism." Before long, Brazil, Peru, and Ecuador joined up, too. The information-gathering initiative was dubbed "Condor," in honor of the national bird of several of the participants, including the host country.

Despite what the minutes stated, this was no mere surveillance pact. What Operation Condor meant in practice was that the state kidnappings, torture, and murder that had run roughshod over the remaining pockets of dissent within these countries would now go beyond their national borders. If you were a leftist or anyone else the government saw as a threat, then escape, exile, and even asylum would no longer save you. There was nowhere to hide.

"Argentina was still a democracy at the time, and was a safe haven for many leftists who had been forced out of several countries in the Southern Cone," says New York University associate professor Remi Brulin. "Suddenly, they realized that was not safe anymore."

While Condor officially lasted only a few years, the region's governments had long collaborated in less formalized ways to stamp out their political opponents. According to the Database on South America's Transnational Human Rights Violations, between 1969 and 1981, such cross-border operations claimed at least 763 victims of atrocities ranging from kidnapping and torture to outright murder, nearly half of them Uruguayan, close to a quarter Argentine, and 15 percent of them Chilean. Most of these atrocities took place in Argentina, which saw 544 cases, with Uruguay a distant second at 129.

As explained in a 1976 report by Harry W. Shlaudeman, Richard Nixon's assistant secretary of state for inter-American affairs, South American officials like Uruguay's foreign minister Juan Carlos Blanco Estradé ("one of the brighter and normally steadier members of the group") saw themselves as fighting a "Third World War," with "the countries of the southern cone as the last bastion of Christian civilization." Having come to power "in battle against the extreme left," he noted, these repressive governments had "their ego, their salaries, and their equipment-budgets" inextricably wrapped up in this concept.

The result was a stream of often stomach-churning crimes.

The typical Condor operation might go something like this: once a target was identified, a team - made up of nationals from one or more member countries - would find and surveil the individual, before a second team snatched and spirited them away to a secret prison, sometimes in the country they'd been found, sometimes elsewhere. There they would be held and tortured, including beatings, waterboarding, mock executions, electrocution, rape, and worse, sometimes for months on end. In some cases, family members were kidnapped and tortured, too, or even stolen from them, for no reason beyond sadism. According to the database, there are at least twenty-three cases of the kidnapping of victims' children, passed off to their killers to be raised as their own. (Branko Marcetic, ^œ[The CIA's Secret Global War Against the Left](#), *Jacobin*, 30 November, 2020)

⁹¹⁵ In 2021 the United States is ^œ[withdrawing its troops from Afghanistan](#). A disastrous occupation has ended and, undeniably, they are leaving the region in far worse shape than it was before they began their self-serving disruption of the nation.

Before continuing, a *Jacobin* post by Branko Marcetic provides a sobering reminder of what, for many Afghans, the Coalition occupation entailed.¹⁰⁸⁸

'Nation building' has, for [Western Capitalist colonial powers](#), proved a difficult business. The long list of 'failed states' attests this. But, seldom has a post-colonial government failed so spectacularly as Afghanistan in August 2021!¹⁰⁸⁹ One can but forlornly hope that the United States, assessing its failure, will decide that 'regime change' is not one of its strengths!

Here is US President Biden speaking to an assembled press conference about the likely fate of the US supported Afghan Government (August 15, 2021) **one day before the Taliban took control of Kabul:**

^œ[The possibility of the Taliban 'overrunning everything and owning the whole country is highly unlikely'](#)

The US had 20 years to plan its final exodus from the country - after all it had humiliatingly mismanaged its withdrawal from Vietnam! Yet, as David Zucchino described, blind hubris, and refusal to accept the inadequacy of its 'nation building' activities has, once again, resulted in a mismanaged 'withdrawal':

The speed and violence of the Taliban sweep through the countryside and cities the previous week caught the American military and government flat-footed. Hastily arranged American military helicopter flights evacuated the sprawling American

Embassy compound in Kabul, ferrying American diplomats and Afghan Embassy workers to the Kabul military airport. At the civilian airport next door, Afghans wept as they begged airline workers to put their families on outbound commercial flights even as most were grounded in favor of military aircraft....

Two decades after American troops invaded Afghanistan to root out Qaeda terrorists who attacked on Sept. 11, 2001, the American nation-building experiment was in ruins - undercut by misguided and often contradictory policies and by a relentless insurgency whose staying power had been profoundly underestimated by U.S. military planners.

(David Zucchino, [Kabul's Sudden Fall to Taliban Ends U.S. Era in Afghanistan](#): A takeover of the entire country was all but absolute as the Afghan government collapsed and the U.S. rushed through a frenzied evacuation, *New York Times*, August 15, 2021)

The real question to be asked is 'Why was the US so hell-bent on staying in Afghanistan'? Michael Tracey has addressed the question and provided his answer:

The only 'commitment' that the Afghanistan War 'sustained' was to deceit, corruption, waste, and failure - a cycle that would've never been broken until the plug was belatedly pulled.

The narrow outrage on display now about the allegedly 'incompetent' execution of the withdrawal reflects a misunderstanding of the entire intervention, which was predicated on 'incompetence.' And 'incompetence' is an overly-kind word. More like systematic plunder, graft, and propaganda.

If the Afghan government could collapse so quickly after billions and billions of dollars were funneled into it over 20 years, why would anyone expect a withdrawal to be carried out with seamless or 'competent' precision? If you expected that, it's safe to assume you've indulged in the same fantastical delusions that persisted throughout the whole conflict.

I encourage everyone to watch [this explanation](#) given by Richard Hanania about how nit-picking the 'incompetence' of the withdrawal is a fallacy that deflects from the 'incompetence' at the very heart of the entire mission.

Biden might be losing his marbles, but at least he made a firm decision to end the war and has stuck with that decision unrepentantly - even as he's now swarmed by a furious political backlash. That's more than can be said for his most recent two predecessors....

(Michael Tracey, [Ignore The Fake "Experts" - The Real "Catastrophe" In Afghanistan Was Always The War Itself](#), August 18, 2021)

No, it did not all begin in 2001!

The [official narrative would have us believe](#) that the US invaded Afghanistan in search of Al Qaeda terrorists, succored by a ruthless Taliban who had seized control of the country and were committing horrendous acts of violence against its people. The US stayed there (it did not find the terrorist leader in the country (he was later executed by a US military hit-squad in Pakistan)), because it 'cared about the people'.

This is how much it cared:

Q: The former director of the CIA, Robert Gates, stated in his memoirs ["From the Shadows"], that American intelligence services began to aid the Mujahadeen in Afghanistan 6 months before the Soviet intervention [in late 1979]. In this period you were the national security adviser to President Carter. You therefore played a role in this affair. Is that correct?

Brzezinski: Yes. According to the official version of history, CIA aid to the Mujahadeen began during 1980, that is to say, after the Soviet army invaded Afghanistan, 24 Dec 1979. But the reality, secretly guarded until now, is completely otherwise: Indeed, it was July 3, 1979 that President Carter signed the first directive for secret aid to the opponents of the pro-Soviet regime in Kabul [At this point the Soviet Union did not have its troops in Afghanistan!] And that very day, I wrote a note to the president in which I explained to him that in my opinion this aid was going to induce a Soviet military intervention.

Q: Despite this risk, you were an advocate of this covert action. But perhaps you yourself desired this Soviet entry into war and looked to provoke it?

Brzezinski: It isn't quite that. We didn't push the Russians to intervene, but we knowingly increased the probability that they would.

Q: When the Soviets justified their intervention by asserting that they intended to fight against a secret involvement of the United States in Afghanistan, people didn't believe them. However, there was a basis of truth. You don't regret anything today?

Brzezinski: Regret what? That secret operation was an excellent idea. It had the effect of drawing the Russians into the Afghan trap and you want me to regret it? The day that the Soviets officially crossed the border, I wrote to President Carter: We now have the opportunity of giving to the USSR its Vietnam war. Indeed, for almost 10 years, Moscow had to carry on a war unsupportable by the government, a conflict that brought about the demoralization and finally the breakup of the Soviet empire.

Q: And neither do you regret having supported the Islamic [integrisme], having given arms and advice to future terrorists?

Brzezinski: What is most important to the history of the world? The Taliban or the collapse of the Soviet empire? Some stirred-up Moslems or the liberation of Central Europe and the end of the cold war?

Q: Some stirred-up Moslems? But it has been said and repeated: Islamic fundamentalism represents a world menace today.

Brzezinski: Nonsense! It is said that the West had a global policy in regard to Islam. That is stupid. There isn't a global Islam. Look at Islam in a rational manner and without demagoguery or emotion. It is the leading religion of the world with 1.5 billion followers. But what is there in common among Saudi Arabian fundamentalism, moderate Morocco, Pakistan militarism, Egyptian pro-Western or Central Asian secularism? Nothing more than what unites the Christian countries.

(Jeffrey St. Clair and Alexander Cockburn, ^œ[How Jimmy Carter and I Started the Mujahideen](#), *CounterPunch*, January 15, 1998)

As Brzezinski explained, the Afghan government, in 1979, was a secular 'modernizing' government (promoting all those 'virtues' which the US, post 2001, used to justify its occupation of the country).

The [Taliban were legitimized, armed and encouraged to attack](#) that democratically elected, secular government of Afghanistan by the United States. Another in a depressingly long list of democratic governments around the world which, over the past seventy and more years, have been subjected to the 'regime changing' attentions of the US.¹⁰⁹⁰

The formula is an old one: Depose the existing government, hunt down its leaders and replace them with compliant alternatives, hand-picked by US operatives. That end always justifies the means!

In 2001 the US, having apparently 'forgotten' its earlier involvement in the destabilization of the nation, confronted those same 'holy warriors', armed and supported by US operatives throughout the 1980s and longer, and set out to complete its 'mission' - the installation of a compliant, US acolyte government.

After 18 years of futility, President Trump, in 2020, decided to 'negotiate' a US withdrawal from Afghanistan which, in many respects, echoed the Nixon withdrawal from Vietnam in April 1973. In August 2021, that ['withdrawal' looks more like 'flight'](#) with the Taliban in control of the country and the 'withdrawal' not yet complete! As the site *RareHistoricalPhotos.com* explained:

...By 1 April 1973, U.S. forces were out of Vietnam (except for a few embassy guards and attaches) and 587 POWs had returned home (about 2,500 other Americans remained missing in action). Congress cut off funds for the air war in Cambodia, and bombing there ended in August. Over Nixon's veto, Congress passed the War Powers Resolution in November 1973. It limited presidential power to deploy U.S. forces in hostile action without congressional approval.

Nixon characterized the Paris Peace Agreements of 1973 as "peace with honor," but primarily they allowed the U.S. military to leave Vietnam without resolving the issue of the country's political future. ([Vietnam War: Escalation and Withdrawal, 1968-1975](#), *RareHistoricalPhotos.com*, accessed 05 March, 2020)

Rania Khalek, in a realistically pessimistic account of the 2021 decision by the US president Biden to 'withdraw' from Afghanistan (but not from the region) described the likely consequences for the Afghan people:

The end to the American invasion and occupation of Afghanistan is long overdue, but the way it is being done will likely only perpetuate the suffering of Afghans.

One longtime expert described the deal as so intrusive and imposing it treats Afghanistan as a colony of the US.

Biden is implementing the February 2020 deal struck in Doha between Zalmay Khalilzad, Special Representative for Afghanistan Reconciliation at the US State Department, and Mullah Baradar, the Taliban Deputy's Commander for Political Affairs. It was called the "Agreement for Bringing Peace to Afghanistan", although nobody believes it will bring peace to a country at war for over forty years. At the same time, the US also signed a separate deal with the Afghan government entitled the "Joint Declaration between the Islamic Republic of Afghanistan and the United States of America for

Bringing Peace to Afghanistan." Meanwhile the intra-Afghan talks between the Taliban and the government of Afghanistan do not have the word "peace" in their description.

The deal that Khalilzad, or "Zal" as he is called, signed in Doha was an "America first" deal that ignored the interests of the Afghan government or people and prioritized the US while empowering the Taliban. It stipulated a troop withdrawal on schedule, by May 1, 2021. This automatically stripped the Afghan government of its leverage and also meant it would be facing a possible Taliban offensive on May 2. Trump did not seem to care and handed it all to the Taliban from the beginning because he was in such a rush to sign the deal.

The US did not place any conditions on the Taliban, such as achieving progress in their talks with the Afghan government. Instead, the US even proposed an interim government to replace the current elected (if flawed) one. To many observers this looked like a US-backed Taliban coup. And Zal has been promising everyone positions in that new government.

The Taliban had to commit to halting their attacks on the US but they could continue to attack Afghan government forces at a time when those Afghan forces were receiving less US military assistance and less logistical assistance so they could not supply bases and had to withdraw from more of the country. The Taliban also increased their attacks against civilians at the end of 2020. None of this mattered to the US government, which wanted the deal for domestic reasons related to US elections and not in order to leave a stable Afghanistan with a successful peace process.

According to one close observer of the talks, "Zal improvised, lied to everybody (including the UN and Europeans) and it fragmented the non-Taliban space. He doesn't want to negotiate; he wants an easier path to a Taliban government. The Taliban don't have a political language. They don't have language for governing. Even the pro-Taliban people in American spaces say the Taliban have no interest in negotiating. And why would they? They are about to win. But the country will blow up. It's not the country of the 90s. You cannot just back the strongest actor. There are too many, and the Taliban is not homogenous, and they have not prepared their fighters because they want to maintain cohesion. Nobody has prepared anything, nobody talked about integration of fighters into the security forces." (Rania Khalek, [US Pours Gasoline on Afghan Conflict on Its Way Out, Breakthrough News](#), June 05, 2021) (clickable supporting information provided in the original)

Marjorie Cohn neatly summarized the Trump version of 'peace with honor' in Afghanistan:

It's true that the Trump administration signed a "peace deal" with the Taliban - something that eluded both George W. Bush and Barack Obama - but a closer look at the agreement reveals it to be riddled with conditions that are fraught with obstacles.

The terms of the deal suggest that Trump is more interested in boasting that he's fulfilling his campaign promise to bring the troops home than he is committed to achieving real peace in Afghanistan. This fact has also been noted by Trump's former national security aides, some of whom have said that the president "is far less

interested in an actual Afghan peace" than in claiming he is making good on his vow to withdraw the U.S. troops.

The agreement announced on February 29 should not rightly be called a "peace deal," Rep. Barbara Lee (D-California) said in a statement. Although the agreement "is a step forward," Lee noted, "It leaves thousands of troops in Afghanistan and lacks the critical investments in peacebuilding, human-centered development, or governance reform needed to rebuild Afghan society."...

... After 18 years, tens of thousands killed and more than \$2 trillion spent, the U.S. government is returning Afghanistan to the Taliban.

"United States went to war against the Taliban, and then almost two decades later, handed Afghanistan back to the Taliban," Vijay Prashad, foreign policy expert and director of the Tricontinental Institute for Social Research, noted ironically.

^œ[More than 100,000 Afghan civilians](#) and over 58,000 Afghan security forces have been killed. About 2,400 U.S. servicemembers have been killed and 20,000 wounded in the United States's longest war.

After a 10-year preliminary examination, International Criminal Court (ICC) Prosecutor Fatou Bensouda found ^œ[a "reasonable basis" to believe that U.S. military and CIA forces committed war crimes](#) and crimes against humanity, including torture, in Afghanistan.

The ICC Pre-Trial Chamber agreed with Bensouda but refused to open a formal investigation, citing doubt about whether it could secure "meaningful cooperation from relevant authorities" which limited the "prospects for a successful investigation." Bensouda appealed the ruling. On March 5, the ICC Appeals Chamber will issue a judgment affirming or reversing the Pre-Trial Chamber's refusal to initiate an investigation.

Meanwhile, the Taliban control or claim to ^œ[control almost half of Afghanistan's districts](#), "more territory . . . than at any point since 2001," according to the Pentagon.

Robert Malley, president of the International Crisis Group, told The Intercept's Mehdi Hasan that the reason the Taliban "got so much out of the deal" is that "after two decades, the U.S. has failed to win an unwinnable war."

Nevertheless, The Washington Post's explosive report titled "The Afghanistan Papers" reveals that the ^œ[Bush, Obama and Trump administrations all lied](#) routinely about U.S. success in the war.

In his op-ed in The Times, London opines that Trump's special envoy for Afghanistan, Zalmay Khalilzad, who negotiated the so-called peace deal for the United States, only wants the agreement to survive until the fall election. London wrote that Khalilzad has his sights set on being appointed secretary of state in a second Trump administration.

If the deal falls apart, Trump has threatened to "go back with a force that no one's ever seen."

In the meantime, Trump, whose overwhelming motive is to be reelected, can claim bragging rights about securing a "peace deal" with the Taliban.

⁹¹⁶ Melvyn Leffler, in a review essay entitled 'The Decider: Why Bush Chose War in Iraq', has explained the inept, often delusional reasoning of key US officials and 'feuding, distrustful advisers' responsible for promoting and prosecuting the 2003 US led invasion of Iraq:

...The president [George W. Bush] should have known that Saddam Hussein, Iraq's dictator, had no weapons of mass destruction (WMD), no links to al Qaeda, and no responsibility for 9/11. According to Draper, Bush led the United States into a needless war. He did so because he believed deeply in the United States' nobility and its mission to spread freedom - which Draper says the president considered "God's gift to the world." Not only was Saddam "the guy who tried to kill my dad," as Bush once noted, referring to a failed plot to assassinate George H. W. Bush in 1993. Far worse, the president said, "he hates the fact, like al Qaeda does, that we love freedom." These, according to Draper, were Bush's animating impulses.

No policymaker comes off well in Draper's account. From the moment he took office, Cheney worried about the United States' vulnerability to terrorists armed with chemical or biological weapons. "After 9/11," Draper writes, the Office of the Vice President "emerged as the Bush administration's think tank of the unthinkable, where apocalyptic scenarios became objects of obsession, no matter how unlikely." Whereas Cheney was quiet, thoughtful, and probing,

Rumsfeld was an irascible, irresponsible bully. He schemed to get close to Bush, collaborated with Cheney, and sidelined civilian subordinates and military officers who disagreed with him, thereby ensuring that "dissent on critical issues was close to nonexistent in the Pentagon."

Secretary of State Colin Powell, in Draper's view, had deep-seated reservations about going to war but lacked the courage to voice his convictions and did not possess an alternative vision that he could sell to the president. He carefully guarded his doubts lest he become irrelevant.

George Tenet, the director of the CIA, prized the attention that Bush bestowed on his agency and massaged the information going to the president for fear that he would be perceived as soft. Many of Tenet's subordinates assumed that their boss did not want to antagonize "the First Customer," the president, and hence hesitated to convey many of their reservations about the accuracy of their assessments of Iraq's WMD programs.

Among this set of feuding, distrustful advisers, all of whom had had years of experience in the highest echelons of past administrations, Condoleezza Rice, Bush's national security adviser, was outmatched and unable to orchestrate the consensus recommendations for which she yearned.

(Melvyn P. Leffler, [The Decider: Why Bush Chose War in Iraq](#), *Foreign Affairs*, Review Essay, November/December 2020)

⁹¹⁷ It is long-past time for Western people to listen to the other side of a story which has been deliberately distorted and [fabricated to justify](#)

[Western aggression](#). Bouthaina Shaaban has been a clear, coherent and logical spokesperson for Syria in recent years. As she has explained:

...[H]ere is the problem: That there is a number of countries who formulate an alliance and who consider themselves to hold the superior value in the world, by the way linked with interests; always, when they speak about values, they speak about also achieving American interests and promoting American values. So those countries are the ones who have, or who possess, these values and anyone who joins them becomes a part of this alliance and partnership, and anyone who doesn't or who has a different idea of governance or a different way of life, is considered either an autocrat or an aggressor...

In the case of Syria, the Western calls for democracy and freedom that was - really that caused the entry of thousands, hundreds of thousands of terrorists into our country, that caused the destruction of our schools, of our infrastructure - all these calls moved our country a hundred years backwards.

And from my point of view as a Syrian woman, who always lived in this land and who will always live on this land, no matter what, I can tell you that the reason for this war on Syria, is that Syria has an independent political mind, and an independent political decision. And this is not welcome at all by these circles, who want the whole world to be a copy of what they think, of what they want. And no one has the right to have, for example, a different democracy, or a different way of life, or a different culture that leads to things that we probably appreciate, here in Syria, where other people appreciate different things!

So that the issue I found with this strategy is that it left no room to the variety of human nature, to the variety of human culture, to the variety of human likings and dislikings. So, Syria, for example, in 2010 had the fourth developing economy in the world. And now, they destroyed our economy, they destroyed our schools, they destroyed our way of life! They destroyed our identity, through a flood of terrorism that came through Turkey, of course, into our country.

And the issue is that, I'm sure all of you hear that the United States is in the northeast of Syria in order to fight ISIL and in order to fight terrorism. Now, if we are fighting terrorism - which we are, definitely, because it's in our interest and it's our life to live free of terrorism - and if they are here to fight terrorism, why can't we join forces together to fight terrorism? I tell you, the United States, and allied forces with them in Syria, are here to protect the terrorists, and this is what they have been doing. If it were not for the presences of the United States forces in the Tanf and if it were not for their military attacks against our forces, we would have liberated the entire Syrian soil from terrorism.

The other objective for them is to prevent any relation between Iraq and Syria, because a relation between Iraq and Syria is extremely vital for the Syrian people and for the Iraqi people.

(Bouthaina Shaaban, ^œ[A Syrian Perspective](#), *Executive Intelligence Review*, March 26, 2021)

Here is her YouTube explanation of what has happened to Syria since 2011: ^œ[The role of Western media in the destruction of Syria](#) (May 9,

2021, (13:30 minutes))

In 2021, under President Biden, the US continued its 'regime change' campaign in Syria. Tulsi Gabbard, interviewed by Aaron Maté:

The regime change war that the United States continues to wage in Syria - using al-Qaeda, Al Nusra, HTS terrorists as our proxy ground force, and who now occupy and control Idlib, imposing Sharia law, and cleansing the area of most Christians and religious minorities. The Biden administration continues to use our military to illegally occupy northeastern Syria to, quote "take the oil" as Trump so crassly, but honestly put it, violating international law. A modern day siege of draconian embargo and sanctions, similar to what the Saudi-US alliance employed in Yemen, is causing death and suffering for millions of innocent Syrians. Depriving them of things like food, medicine, clean water, energy, warmth - and making it impossible for the Syrian people to try to begin to rebuild their war-torn country.

(Tulsi Gabbard and Aaron Maté, [Tulsi Gabbard calls out the US dirty war on Syria that Biden, aides admit to](#), *The GreyZone*, March 5, 2021)

⁹¹⁸ Scott Ritter, in an article entitled '[Yemen: Saudi Arabia's Lost Cause](#)', provides some backgrounding to the 2021 situation in Saudi Arabia's war with Houthi rebels in Yemen.

As has all-too-often been the case, US involvement in the Yemen catastrophe was based on inadequate understanding, misleading or false 'intelligence', and an overweening belief in US military and strategic prowess and their ability to control what would happen 'on the ground'.

Robert Malley and Stephen Pomper explained the way in which the United States got 'pulled into this wretched mess':

How did the United States get pulled into this wretched mess? The tale begins in 2011, with the fall of Yemen's aging, corrupt, and authoritarian president, Ali Abdullah Saleh, who was forced by protests to hand over power to his vice president, Abd-Rabbu Mansour Hadi. Hadi was supposed to serve as a bridge between the old regime and a brighter future, but it didn't work out that way. A nine-month "national dialogue conference" delivered an aspirational, if flawed, blueprint for political reform in January 2014. But by then, the economy was near collapse, and a group of rebels that had been fighting the central government for the past decade was making rapid territorial gains. These were the Houthis, also known as Ansar Allah (Partisans of God), followers of the Zaydi branch of Shiite Islam who were based in the country's north, near the Saudi border. In September 2014, riding a wave of antigovernment anger, the Houthis seized control of Yemen's capital, Sanaa, and eventually chased Hadi to the southern port city of Aden.

Saudi Arabia feared that its neighbor would be completely taken over by Iranian surrogates. In early 2015, it rallied a coalition of nine mostly Sunni Arab states, the United Arab Emirates chief among them, and prepared to launch a military intervention to restore Hadi to power and counter what it perceived as an expanding Iranian threat to the region. The decision came on the heels of a power transition in Saudi Arabia that resulted in the rise of Crown Prince Mohammed bin Salman, or MBS, who would become the face of the war in Yemen.

That was the context in which the Saudis made their request for American help. U.S. officials scrambled to consolidate their views and make a recommendation to the president. Many had concerns about the coalition's possible heavy-handedness and were of mixed minds about whether MBS should be seen as a potential rising star or a worrying hothead, but in the end, the decision was not an especially close call. Obama's senior national security team unanimously recommended proceeding with some measure of assistance for the Saudi campaign, and the president concurred. The White House announced that he had authorized "the provision of logistical and intelligence support" to the coalition and that the United States would work with its new partners to create a joint planning cell in Riyadh that would "coordinate U.S. military and intelligence support."...

The support that Obama authorized came with limits, caveats, and safety features. Obama's guidance was that American help should serve the purpose of protecting Saudi Arabia's territorial integrity, making the assistance essentially defensive in nature. The administration also hoped that the joint planning cell would act as a forum where American advisers could professionalize their Saudi counterparts, learn what they were doing, and, when necessary, rein them in.

As soon become apparent, and has since become incontrovertible, the United States greatly underestimated the challenge it would face in curbing Saudi operations and minimizing both humanitarian damage and civilian casualties. The coalition resorted to brass-knuckle tactics early on. First, it prevented imports from entering Houthi-held areas, strangling the flow of commodities into the country's largest and most important port, Hodeidah. Then, it bombed critical infrastructure, such as container cranes and food-production facilities. Strikes hit residential neighborhoods and weddings. In several instances, U.S. officials worried that the coalition was acting intentionally, perhaps perceiving these strikes to have a tactical benefit....

(Robert Malley and Stephen Pomper, ⁹⁸[Accomplice to Carnage: How America Enables War in Yemen](#), *Foreign Affairs*, March/April 2021)

⁹¹⁹ As [Gustave Speth explained](#):

We... forget that during the period of the cold war's geopolitical fight for spheres of influence, Africa became a focal point for the ideology and the arms that today contribute to the havoc we find in Rwanda and Burundi, in Zaire and Angola and Somalia...

And, now, in 2019

The drawdown of American military operations elsewhere in the world - including in Syria and, to a lesser immediate extent, Afghanistan - also has most likely freed up more drones and other gunships for use over Somalia, several former United States officials said.

"We were geared up for counterterrorism efforts in Somalia, and now there are more resources to do it, so we're doing more of it," suggested Stephen Schwartz, who served as the United States ambassador to Somalia from 2016 to 2017, although he cautioned that he had no current insider knowledge.

"It could be there is some well-thought-out strategy behind all of this," Mr. Schwartz added, "but I really doubt it." The loosening of Obama-era constraints on using force in Somalia, as approved by President Trump in 2017, has also contributed. Shortly after taking office, Mr. Trump declared Somalia to be an "area of active hostilities" subject to war-zone rules. That freed the United States military to carry out offensive operations whenever Shabab militants presented themselves - including against foot soldiers without special skills or roles.

(Eric Schmitt and Charlie Savage, ^œ[U.S. Airstrikes Kill Hundreds in Somalia as Shadowy Conflict Ramps Up](#), *New York Times*, March 10, 2019)

As Stephen Schwartz suggested, US 'Special Forces' seem to feel obliged to ramp up their activities elsewhere in the world when they scale down activities in other regions.

With 'spare drones and other gunships' at their disposal, Somalia is now in the cross-hairs as American commanders inflict as much punishment on the Shabab as they can in a region which 'has faced civil war, droughts and an influx of Islamist extremists over the years'.

Violence breeds violence, surely the lessons of the Middle East have taught us that, if nothing else! When will the West ever learn?

⁹²⁰ The story of European predations in the territory of the Democratic Republic of Congo through more than 500 years is a bleak and sad one.

From the arrival of Portuguese in 1483 (see Geddes 1994) and the subsequent development of the slave trade (see MacGaffey 1977, Geddes 1994), to the 1885 declaration of the Congo Independent State (the [personal fiefdom of King Leopold II of Belgium](#)), the Kingdom of Kongo was progressively dismantled and its peoples brutally co-opted to serve European 'interests'.

Things did not improve with the declaration of 'independence' in July 1960. By January 1961, with the US/ Soviet Cold War dominating Western concerns, the US and its 'Coalition of the Willing'¹⁰⁹¹ engaged in 'regime change'. With little apparent concern for consequences, the first legally elected Prime Minister of the Democratic Republic of Congo, Patrice Lumumba, was assassinated and the country plunged into prolonged political chaos.

There is compelling evidence (much of it was until 2020 obtainable from CIA archives but that is no longer accessible!) that Lumumba's assassination was directly [orchestrated by CIA](#) and Belgian operatives because [they perceived him as being a 'communist agent'](#). As Gerrard and Kuklick say, he was, in fact:

..a proud nationalist and Pan-Africanist who strove to be neutral in the Cold War. Unfortunately, agency heads and President Eisenhower thought they knew better and disregarded this intelligence.' (Emmanuel Gerard and Bruce Kuklick, *Death in the Congo: Murdering Patrice Lumumba*, Harvard University Press, 2015).

⁹²¹ When a coalition led by the United States fails to successfully remove those it has defined as the 'oppressors' and has to precipitately evacuate an occupied region, it will find other means of pursuing its long-held aims.

One has only to examine the consequent experiences of nations such as Cuba, Vietnam, Syria, Iran... and now Afghanistan. Any claims of genuine concern, by the US and its acolytes, for the peoples of those regions are soon dispelled.

As the US and its 'allies' have demonstrated time and again, they will continue to pursue their ambitions by other means. Hannah Duncan and Kate Clark describe how that looked for Afghanistan in the wake of the US withdrawal:

This report first lays out how sickly Afghanistan's economy already was, dependent on aid and outside funding and hit by pandemic, drought and conflict. It then looks at the multiple shocks which have hit Afghanistan since 15 August: the halt in aid, cut-off of supply of dollars and resulting banking crisis, sanctions and a depleted workforce. Finally, the report considers some of the options - and dilemmas - facing the Taliban and Afghanistan's donors if they are to mitigate a humanitarian catastrophe.

Highlights of the report:

- **The Taliban's seizure of power - without a prior political settlement or official handover - has ruptured Afghanistan's relationship with its international backers.** The US government put a hard stop to the country's usual cash supplies, donors have frozen aid and the World Bank and IMF halted planned transfers of funds.
- **The banking sector is in crisis, with cash reserves extremely low and international sanctions regimes restricting international transactions.** Commercial banks are still, for the most part, closed as they have no money to give out to their depositors. This crisis is pushing the afghani to depreciate and prices of flour, medicine, electricity and other basic goods to rise across the country.
- **The effects of the banking sector crisis will be far-reaching.** Afghanistan's financial system has been the beating heart of its economy, upon which vital formal institutions which fuel and supply much of the rest of the informal, cash-based economy rely. Afghanistan already faced a humanitarian emergency - over half of Afghanistan's entire population are in need of assistance, one-third malnourished and half of all children under five are severely malnourished.
- **Afghanistan was already in for a painful adjustment period, necessary to deal with its significant trade imbalance and already declining aid flows. Declines in aid have exposed a weak, undiversified economy that does not produce enough to pay for the current levels of imports and public services.** Grants to Afghanistan are currently around USD 8.5 billion per year, equivalent to 43 per cent of Afghanistan's GDP. These grants have paid for 75 per cent of public expenditure, 50 per cent of the budget, and around 90 per cent of government security spending.
- **The banking sector crisis and sudden cuts to aid - especially for development and security - mean the Afghan economy is now in free fall.** Economic contraction will cause major layoffs, dramatic drops in access to services

and a steep decline in people's incomes and will hit cities and towns particularly hard. The number of Afghans living in poverty will increase.

- **There is no scenario under which the Taliban, after forming an administration, could resume 'business as usual' as regards the basic functions of government.** They have neither the volume of resources nor the external recognition needed to get the systems used by the former government back up and running. In government (1996-2001) and in areas under their control since 2001, they showed little interest in running public services. It is unclear if they appreciate the full scale of the looming economic disaster.
- **In the face of an unfolding humanitarian catastrophe, Afghanistan's donors hold the purse strings and the power to revise sanctions regimes.** However, they face complex political, legal and operational dilemmas, fraught with ethical questions and uncertainty about the Taliban's priorities. Humanitarian aid alone will not prevent economic collapse, but donors will hesitate to continue with the large aid flows that would be needed if that helps the Taliban administration survive.
- **Afghanistan is highly unstable, buffeted by an economic storm that is worsening by the day, and ruled by a group very narrowly drawn from society and with authoritarian ways of governing.** Neither the Taliban nor the old donors are prepared with a vision of what to do next. Donors' actions could help the new administration survive or nudge it into modification. Yet in the past, the western powers have shown themselves to be poor at conditionality and acting on evidence, rather than wishful thinking. Smart political calculation cannot be expected. (Hannah Duncan and Kate Clark, ["Afghanistan's looming economic catastrophe: What next for the Taliban and the donors?", Afghanistan Analysts Network](#), 6 September, 2021)

⁹²² United States involvement in Afghanistan, in 2023, continued unabated. As Russian News Agency TASS reported:

Moscow is alarmed by attempts by non-regional players to intensify their activities in and around Afghanistan, Russian Foreign Minister Sergey Lavrov said in a written address to the participants in the Moscow format consultations on Afghanistan now taking place in Kazan.

"We are concerned about the attempts of extra-regional players to become more active in the Afghan direction," the top Russian diplomat said in his message, which was read out at the meeting by Russian Special Presidential Representative for Afghanistan Zamir Kabulov, who also serves as director of the Foreign Ministry's Second Asian Department.

The full-fledged unification of efforts by the countries of the region with the member states of the NATO bloc, according to Lavrov, "is possible only if the latter fully acknowledge their full responsibility for the baleful results of their 20-year military presence in Afghanistan, which ended in a complete fiasco."

"The Western countries, which inflicted irreparable damage on the Afghan people, must bear the main burden of the country's post-conflict reconstruction," the top Russian diplomat stressed. "In this regard, Washington's freezing of Afghan bank assets is counterproductive and only escalates the situation and complicates the already difficult living conditions of ordinary Afghans," Lavrov concluded.

(^œ[Russia concerned that external players trying to activate meddling in Afghanistan - Lavrov, TASS, September 29, 2023](#))

- ⁹²³ Bhadrakumar summed up the Central Asian problem, including not only Russia but also the Chinese regions in and around Xinjiang:

What emerges is that Beijing's interest lies primarily in security considerations against the backdrop of the activities of extremist groups such as the Islamic State (which continues to get covert support from the US) that are operating out of Afghanistan. China's thesis is that security is best strengthened through economic development and for that reason, therefore, the region is important from the point of view of economic cooperation and regional development - although in aggregate terms, Central Asian economic resources are nowhere near sufficient for meeting China's needs.

Suffice to say, terrorist threats emanating from the region, posing threat to Xinjiang, are China's main concern and Beijing is willing to openly invest its resources in the security of the region and take part in the training of the anti-terrorist forces of the Central Asian states. Geographically, three out of the five Central Asian countries, namely Kazakhstan, Kyrgyzstan, and Tajikistan, share borders with China. As for Russia, it has long regarded the region as its traditional sphere of influence and a strategic buffer zone, and thus prioritised the security of its southern border. Therefore, a safe and secure Central Asia aligns with China and Russia's respective national interests.

In the context of the Ukraine crisis, Central Asia has emerged as a frontline for the US strategy to contain and weaken Russia.

(M. K. Bhadrakumar, ^œ[China takes leadership role in Central Asia, Indian Punchline, May 31, 2023](#))

- ⁹²⁴ On September 3, 2024 Nick Corbishley published a study entitled ^œ[China Urges US to Give Up Monroe Doctrine, As Washington Intensifies Its Meddling in Latin America](#) (*Naked Capitalism*, 03 September, 2024). Both the study and the reader comments provide salutary insights into 21st Century "US interventionism in Latin America as a whole".

- ⁹²⁵ President Trump, ignoring (ignorant of?) both precedent and law, appointed a retired general to be his Secretary of Defense. Carrie Lee, below, has explained why this was a dangerous precedent to set. So, why is the US President-elect, Biden, proposing that, in 2021, his secretary of defense will be a recently retired general? As McInnis has explained, this could overly empower the military and erode the principle of civilian control of foreign policy:

Kathleen McInnis, in 2017, explained that 'civilian political authority over military leadership is a bedrock principle of the U.S. Constitution'.

The proposed nomination of General (Ret.) James Mattis, United States Marine Corps (hereafter referred to as "General Mattis"), who retired from the military in 2013, to be Secretary of Defense requires both houses of Congress to consider whether and how to

suspend - or remove - a provision contained in Title 10 U.S.C. §113 that states,

A person may not be appointed as Secretary of Defense within seven years after relief from active duty as a commissioned officer of a regular component of an armed force.

This provision was originally contained in the 1947 National Security Act (P.L. 80-253), which mandated that 10 years pass between the time an officer is relieved from active duty and when he or she could be appointed to the office of the Secretary of Defense. Only one exception to this provision has been made. Enacted on September 18, 1950, at the special request of President Truman during a time of conflict, P.L. 81-788 authorized the suspension of statutory requirements otherwise prohibiting General of the Army George C. Marshall from serving as Secretary of Defense. In 2007, Section 903 of the FY2008 National Defense Authorization Act (P.L. 110-181), Congress changed the period of time that must elapse between relief from active duty and appointment to the position of Secretary of Defense to seven years.

(Kathleen J. McInnis, ^œ[Statutory Restrictions on the Position of Secretary of Defense: Issues for Congress](#), *Congressional Research Service*, January 5, 2017)

Carrie Lee, in an article entitled 'Sleepwalking Into World War III: Trump's Dangerous Militarization of Foreign Policy', has described the process by which 'civilian political authority over military leadership..., so fundamental to the American system of government that it has rarely been questioned' has been eroded in Trump's presidential term:

From the beginning of the Trump era, the national security establishment made a Faustian bargain: in an effort to constrain the new president, it looked the other way as extraordinary numbers of active duty and retired military officers were appointed to positions usually reserved for civilian experts. As the "adults in the room," these career military officials hoped to protect American alliances and constrain Trump's worst impulses. Although few of these officers questioned the principle of civilian control, their narrow interpretation of civilian oversight meant that broader norms of civilian guidance became a kind of collateral damage in the struggle to contain the chaos.

This political bargain gave the more experienced military officers at the highest levels of the administration, some of whom had served together for decades, a natural advantage over their civilian counterparts. Their shared service gave them a common language and, most important, an outlook that allowed them to easily sideline civilian outsiders like Secretary of State Rex Tillerson, Secretary of Homeland Security Kirstjen Nielsen, and later, Secretary of Defense Mark Esper.

When leaders are appointed at the top levels of government, they staff their organizations with people whom they trust to execute their plans. Most civilian leaders have diverse professional networks to draw upon, but career military officers tend to know few qualified people outside of veterans' organizations. As a result, many of the lower-level staff posts within the Trump administration have also been filled with retired military officers.

(Carrie A. Lee, ^œ[Sleepwalking Into World War III: Trump's](#)

Western democracies, often imperfectly, have always [assumed the principle of political control](#) of both administrative and military policy. While military leaders have 'on the ground' responsibility for strategy and troop movements (with political oversight), politicians have always assumed, as a sign on US President Harry Truman's desk read, that 'the buck stops here'. They make the policy decisions and they take responsibility for the decisions they make.

Jonathan Stevenson has explained the US division of responsibility between political and military authorities over the past century and the gradual erosion of lines of demarcation and responsibility over the past fifty years (what Arthur Nwankwo might have described as 'cimilicy'; the [Nigerianization of US civil/military responsibilities](#)):

...Generals aren't supposed to make policy, let alone get involved in politics.

In the mid-1950s, the political scientist Samuel P. Huntington observed that American military officers had evolved into a disciplined and largely apolitical group of professionals. He outlined a separation of roles: military obedience to civilian leaders in areas of strategic or political discretion, and civilian deference to the military on operational matters.

This was the norm until after Vietnam, when numerous scholars conducting post-mortems on the war - including, coincidentally, General McMaster in his book "Dereliction of Duty" - concluded that military commanders should have challenged civilian leaders more aggressively.

And over time, that's what happened. As the Pentagon gained a broader post-Sept. 11 mandate, branching into what were once considered law enforcement and diplomatic arenas, the line between the civilian and military division blurred. Combatant commanders' assertiveness peaked when a beleaguered President George W. Bush looked to Gen. David Petraeus to extricate the United States from the Iraq quagmire by way of the "surge" in 2007.

President Barack Obama reasserted civilian control when he fired Gen. Stanley McChrystal in 2010 and pulled the military out of Iraq in 2012.

Civilian control remains more or less intact, but the civilian leadership has changed. Unlike Mr. Obama, who took responsibility for his administration's military actions, Mr. Trump has publicly scapegoated the military for politically damaging episodes....

The generals have failed because for all their acumen, they're not suited to the job of the nation's strategic stewards. They're military men, not statesmen. ...[A]s Eliot Cohen noted in his book "Supreme Command." They lack the sound civilian leader's worldly acumen, and the good ones know it. (Obviously Mr. Cohen - one of Mr. Trump's most vehement Republican critics - did not have the current president in mind in positing the ideal civilian leader.)

(Jonathan Stevenson, ["The Generals Can't Save Us From Trump"](#), *New York Times*, Sunday Review, Opinion July 28, 2017)

In 2017, that understanding of the separation of political and military powers has been seriously eroded. As Mark Landler and Michael Gordon have explained :

...[F]ormer commanders and military scholars said that in sending troops before having a strategy, Mr. Trump has put the cart before the horse, eroded the tradition of civilian control over the military, and abdicated the president's duty to announce and defend troop deployments.

"A commander in chief keeps control of limited wars by defining missions, selecting commanders and setting troop levels," said Karl W. Eikenberry, a retired lieutenant general who served as a top commander and the American ambassador in Afghanistan. "To delegate any of these is dangerous."

(Mark Landler and Michael R. Gordon, ⁹²⁵[As U.S. Adds Troops in Afghanistan, Trump's Strategy Remains Undefined](#), *New York Times*, June 18, 2017)

Rebecca Gordon has summed it all up:

During the second half of the 20th century, Congress repeatedly ceded its constitutional power to declare war to successive executive administrations. At the moment, however, we have in Donald Trump a president who appears to be bored with those purloined powers (and with the very idea of civilian control over the military). In fact, our feckless commander-in-chief seems to be handing over directly to that military all power to decide when and where this country sends its troops or launches its missiles from drones.

Now that our democratic connection to the wars fought in our name has receded yet one more step from our real lives and any civilian role in war (except praising and thanking "the warriors") is fading into the history books, isn't it about time to ask some questions about the very nature of reality and of those wars?

(Rebecca Gordon, ⁹²⁶[America at War Since 9/11](#): For many Americans, the meaning of war is closer to reality TV than it is to reality, *Moyers & Company*, 28 June, 2017)

⁹²⁶ Dave Philipps has illustrated the evolution of the process of protecting US military personnel and others linked to military activity who are accused and convicted war criminals within the US from the consequences of their crimes:

President Trump has indicated that he is considering pardons for several American military members accused or convicted of war crimes, including high-profile cases of murder, attempted murder and desecration of a corpse, according to two United States officials.

The officials said that the Trump administration had made expedited requests this week for paperwork needed to pardon the troops on or around Memorial Day.

One request is for Special Operations Chief Edward Gallagher of the Navy SEALs, who is scheduled to stand trial in the coming weeks on charges of shooting unarmed civilians and killing an enemy captive with a knife while deployed in Iraq.

The others are believed to include the case of a former Blackwater security contractor recently found guilty in the deadly 2007 shooting of dozens of unarmed Iraqis; the case of Maj. Mathew L. Golsteyn,

the Army Green Beret accused of killing an unarmed Afghan in 2010; and the case of a group of Marine Corps snipers charged with urinating on the corpses of dead Taliban fighters....

Navy SEALs who served with Chief Gallagher told authorities he indiscriminately shot at civilians, gunning down a young woman in a flowered hijab and an unarmed old man. They also said he stabbed a teenage captive, then bragged about it in text messages. His trial is set to start at the end of this month. If convicted, he faces life in prison. He has pleaded not guilty and denies all charges.

Major Golsteyn is charged with killing an Afghan man that he and other soldiers said had bomb-making materials. After an interrogation, the soldiers let the man go. Fearing that the man would return to making improvised explosives, which had already killed two Marines in the area, Major Golsteyn later said he killed the man.

Mr. Trump has singled both men out on Twitter, calling Major Golsteyn a "U.S. Military hero," and praising Chief Gallagher for his service to the country.

(Dave Philipps, ["Trump Shows Signs He Will Pardon Servicemen Accused or Convicted of War Crimes,"](#) *New York Times*, May 18, 2019)

Six months later, and President Trump has not only pardoned a convicted war criminal but has insisted that he be restored to his full naval rank and position. As the *Navy Times* reported:

President Donald J. Trump has decided to restore convicted SEAL Edward Gallagher's pay grade to chief petty officer, overriding a decision last week by the Navy's top admiral, both *Navy Times* and Fox News learned.

Although naval officials and *Navy Times* discussed Trump's looming decision on Sunday, it was announced on the morning Fox and Friends show by network contributor Pete Hegseth, who said he spoke directly with the president about intervening in three war crimes cases.

A week before Veterans Day, Trump's move clears the way to free Army 1st Lt. Clint Lorance, who was convicted on a pair of murder charges for ordering his platoon to shoot and kill three Afghan men on a motorcycle in 2012 and is serving a 19-year sentence at the U.S. Disciplinary Barracks at Fort Leavenworth.

It also is poised to end the prosecution of Green Beret Maj. Matthew Golsteyn, who is accused of executing a suspected Taliban bomb maker in Helmand Province nine years ago.

"This president recognizes the injustice of it," Hegseth said during the broadcast. "You train someone to go fight and kill the enemy. Then they go kill the enemy the way someone doesn't like, and then we put them in jail or we throw the book at them."

(*Navy Times* staff, ["Report: Trump makes SEAL Gallagher a chief again,"](#) *Navy Times*, November 4, 2019)

William Everdell, in a letter to the *New York Times*, has put it in a nutshell:

The obvious way to avoid war-induced moral injury is not to engage in immoral wars in the first place, nor to glorify militarism run amok. But go to war we do, and President Trump is not the first to

excuse inexcusable killing. The moral injury that results, however, is not so much a bruise on the soul, as a scar on the soul, which doesn't go away. Nor should it.

Painful as it is, soldiers need to come to terms with their actions, as do the nations that send them to war, and more than treatment, what's required is atonement.

In researching soldiers who came to oppose war, I've talked with scores of veterans of wars from Vietnam to the present, most of whom have some form of a moral injury. They atone by working to end wars.

Though I have no idea about the state of the souls of the veterans in Congress, if they too feel a moral injury, cutting the bloated military budget and putting a stop to our endless rounds of war would be good places to start atoning.

(William R. Everdell, ⁹²⁷Re "The Moral Injury of Pardoning War Crimes" (editorial, Nov. 24), *New York Times*, Nov. 25, 2019)

⁹²⁷ Marjorie Cohn has provided an update on a decision by the International Criminal Court (ICC) Appeals Chamber to proceed with prosecution, ordering 'a formal investigation of U.S., Afghan and Taliban officials for war crimes, including torture, committed in the "war on terror."':

After the prosecutor of the International Criminal Court (ICC) found a reasonable basis to believe that U.S. military and CIA leaders committed war crimes and crimes against humanity in Afghanistan, Team Trump threatened to ban ICC judges and prosecutors from the U.S. and warned it would impose economic sanctions on the Court if it launched an investigation.

Apparently succumbing to the U.S. threats, in April 2019, the ICC's Pretrial Chamber refused to authorize the investigation that prosecutor Fatou Bensouda had requested.

But in an unprecedented decision, the Appeals Chamber unanimously overruled the Pretrial Chamber on March 5, 2020, and ordered a formal investigation of U.S., Afghan and Taliban officials for war crimes, including torture, committed in the "war on terror."

Once again, the Trump administration is threatening the International Criminal Court. Following the Appeals Chamber's decision, Secretary of State Mike Pompeo declared, "This is a truly breathtaking action by an unaccountable political institution, masquerading as a legal body." He added, "The United States is not a party to the ICC, and we will take all necessary measures to protect our citizens from this renegade, so-called court."

Pompeo is likely referring to the American Service-Members' Protection Act, enacted during the George W. Bush administration after it removed the U.S.'s signature from the ICC's Rome Statute. The act contains a clause called the "Hague Invasion Act" that says if a U.S. or allied national is detained by the ICC, the U.S. military can use armed force to extricate the individual. Although this provision has not yet been utilized, the potential for its use is frightening.

Even if a country is not a party to the Rome Statute, its nationals can still be tried in the ICC if the crimes took place in the territory of a country that is a party. Thus, although the United States has

not ratified the Rome Statute, the ICC still has jurisdiction over crimes committed by U.S. nationals in the territory of Afghanistan.

The impunity that U.S. officials have enjoyed for their international crimes may finally be coming to an end....

(Marjorie Cohn, ⁹²⁸[Team Trump Tried to Bully the ICC Into Dropping War Crimes Probe But Failed](#), *Truthout*, March 10, 2020)

⁹²⁸ Andrew Quilty, in an article entitled *THE CIA'S AFGHAN DEATH SQUADS: A U.S.-Backed Militia That Kills Children May Be America's Exit Strategy From Its Longest War*, described the ongoing 'death squad' involvement of the CIA, not only in Afghanistan but in many other regions:

The Americans "step on all the rules of war, human rights, all the things they said they'd bring to Afghanistan," said Wardak provincial council head Akhtar Mohammad Tahiri. They are "conducting themselves as terrorists. They show terror and violence and think they'll bring control this way."

Known collectively as strike force units because of their targeted, aggressive methods, the shadowy CIA-backed militias nominally fall under the purview of the National Directorate of Security, or NDS, Afghanistan's intelligence service. They are comprised of 01, which operates primarily in central Afghan provinces including Wardak and Logar; 02, which is based in Jalalabad and works in the eastern part of the country; 03, also known as the Kandahar Strike Force, which operates in the south; and 04, which conducts raids in Kunar and adjacent provinces in the northeast. Two units in the southeast, the Khost Protection Force and the Shaheen Forces, the latter of which emerged in the eastern Afghan province of Paktika in 2019, are believed to function under similar authority.

The units' American CIA advisers go by pseudonyms or call signs rather than names. They not only train Afghan unit members, but also choose their targets, which the Americans call "jackpots"; issue detailed pre-mission briefings; and accompany Afghan paramilitaries on the ground during raids. The Afghans and Americans are ferried to remote villages at night by American helicopters, and American assault aircraft hover overhead while they conduct their raids, providing lethal firepower that is sometimes directed at health clinics, madrassa dormitories, or civilian homes.

"I don't know whether they're special forces or a task force or CIA," said an NDS counterterrorism officer from Wardak who accompanied 01 on missions until late 2018, but "Americans are always with them."

The CIA has a long history of training, arming, and funding indigenous militia networks. Since its birth in 1947, the agency has supported anti-communist outfits in Greece, Cuba, Vietnam, Laos, and Central America, as well as the Afghan mujahedeen in the 1980s. Since the September 11 attacks, the CIA has repurposed and supercharged those methods, dispensing training and weapons to supposed allies from Somalia to Syria with dubious results.

But the level of CIA involvement in Afghanistan since the war on terror began has few precedents. In 2013, more than \$2.5 billion - nearly 5 percent of the entire U.S. intelligence budget - was allocated for covert action, the category under which the agency's Afghan strike force unit program falls, according to documents leaked by National Security Agency whistleblower Edward Snowden.

From establishing the strike force units to selecting their targets, overseeing their missions, and using special operations forces borrowed from the Pentagon to coordinate air support, the network of CIA-run militias in Afghanistan is perhaps the most dramatic manifestation, apart from America's well-documented drone program, of the secret war the U.S. intelligence agency is waging around the globe.

(Andrew Quilty, [THE CIA'S AFGHAN DEATH SQUADS: A U.S.-Backed Militia That Kills Children May Be America's Exit Strategy From Its Longest War](#), *The Intercept*, December 18 2020)

⁹²⁹ Nothing illustrates this better than the eponymous '[Earth Overshoot Day](#)'. As the years tick by, the date on which Earth Overshoot Day would fall if all of humanity consumed like the people in particular countries barely changes. As the site demonstrates, we know what the problem is; we can devise cunning schemes which might reduce our consumption footprints; we can publish the results of our findings; but nothing changes!!.

[Capitalism presumes constantly expanding material consumption and accumulation.](#)

And we all play the game - whether we want to or not.

The game is rigged and we are the willing dupes: consuming and accumulating because otherwise jobs will be lost; the 'economy' will collapse and we will all be living in the street - while our 'repossessed' dwellings become derelict and our possessions lose their 'value' and so become 'worthless' piles of 'rubbish'.

And, nobody deserves that!

So, if that did happen, we'd flock to those who have the answers: those who can make our economies 'healthy' again and enable us all to once again consume and collect as if that was, indeed, the true 'meaning and purpose of life'. And, for capitalists, rich and poor, it is indeed.

⁹³⁰ John Mecklin, editor-in-chief of the *Bulletin of the Atomic Scientists*, commented on the final version of the *US Nuclear Posture Review* (2018):

The Trump administration has officially rolled out its new Nuclear Posture Review after weeks of commentary and analysis of a leaked version of the review. Much of this pre-release comment focused on the NPR's call for increased spending on the nuclear arsenal, including on programs that would create new kinds of small nuclear weapons, and on its suggestion that nuclear weapons might be used in response to attacks of a non-nuclear nature, including, specifically, cyber attacks against critical US infrastructure. Administration officials have portrayed the NPR as a required response to changed world security conditions, particularly Russia's supposed increased reliance on nuclear options in its military doctrine. Many experts outside government have criticized the new NPR as a return to Cold War thinking and budgeting that makes the United States less rather than more secure.

Over the next several weeks, the *Bulletin* will be publishing a package of expert commentary on the NPR. The commentaries will include analysis of the NPR document itself and informed speculation on how it might or might not be implemented, frustrated, or altered through congressional and executive branch

processes in coming years. It is my hope that these commentaries will become a reference point for the policy makers and citizens who will deal with the real-world consequences of a document that proposes major changes in how the United States deals with its nuclear arsenal.

(John Mecklin, ⁹⁰[The experts on the new Nuclear Posture Review](#), *Bulletin of the Atomic Scientists*, February 2, 2018)

⁹³¹ As Larison continues:

Our government has a real credibility problem in that our government's promises to lift sanctions and make other concessions are not believable. This greatly complicates the ability of our negotiators to strike bargains with other governments to resolve outstanding disputes, because the U.S. has an increasing tendency to go back on its word or to tear up agreements in a fit of pique.

Even when certain other governments reach an agreement with the U.S. and abide by its terms, that is no guarantee that the U.S. won't turn around in a few years and seek to attack or depose them.

The Libyan government ended its international pariah status in exchange for ending its unconventional weapons programs and halting its support for terrorism in 2003, but the U.S. intervened to support regime change in Libya in 2011 and helped to destroy the government.

Iran was fully complying with the nuclear deal for years only to be rewarded with severe U.S. economic warfare after Trump reneged on the agreement.

Iran has been under sanctions for a longer period since it agreed to the nuclear deal than it was able to enjoy sanctions relief because of the deal. Republican hawks are already promising that any agreement that Iran makes with the Biden administration and the other major powers will be torn up by the next administration. Even allowing for demagogic posturing and hyperbole, the Iranian government has to assume that will happen and plan accordingly.

U.S. diplomacy also suffers from an overreliance on threats of military action. There has been a flurry of articles and letters in the last few months urging the Biden administration to make threats of military action against Iran more "credible," as if our government's willingness to resort to force were somehow seriously in doubt.

For example, just last week the Washington Institute of Near East Policy (WINEP) released a letter signed by several high-profile former officials, including Leon Panetta, Michele Flournoy, and David Petraeus, urging Biden to "restore Iran's fear" of military attack. The idea that the U.S. needs to instill fear to make progress in the talks gets everything backwards....

(Daniel Larison, ⁹⁰[Washington's real credibility problem](#), *Responsible Statecraft*, December 24, 2021)

⁹³² As they explain:

Unsettling as it may be, Mr. Trump has the absolute authority to start a nuclear war. Within minutes, the president could unleash the equivalent of more than 10,000 Hiroshima bombs. He does not need a second opinion. The defense secretary has no say. Congress has no role. Yet it would mean the end of civilization as we know it.

"There is nothing stopping a nuclear war except for Donald Trump's brain," Ben Rhodes, who served as deputy national security adviser to President Barack Obama, says... "That should be concerning to people."

Mr. Trump is not the first, and is unlikely to be the last, president to raise these concerns. Giving any president such unchecked authority entails significant risk. There is always some chance that a president, at the moment it matters, may be uninformed and impulsive (like Mr. Trump), drinks to excess (Richard Nixon), or is engaged in some other activity that could cloud his or her judgment. Presidents, like all of us, make mistakes. They are only human.

So, why do we give so much power to one fallible human? It started 75 years ago, when President Harry Truman was shown the devastation of Hiroshima and Nagasaki and determined not to use the atomic bomb again. To him, that meant keeping it out of military hands. So Truman declared that no more atomic bombs could be dropped unless he personally authorized it - and the bomb has not been used since.

But in addition to laudable civilian control, Truman set the dangerous precedent of one-person control. Atomic bombs became "the president's weapons" and sole authority was reinforced as both the United States and the Soviet Union deployed ballistic missiles that could span the globe in 30 minutes or less.

And the awesome ability to launch hundreds of thermonuclear weapons in mere minutes came with grave dangers. Would any president be able to make a wise decision under such crushing time pressures? What if it was a false alarm? How would the president know?...

(William J. Perry and Tom Z. Collina, ^œ[Who Can We Trust With the Nuclear Button? No One](#): The Cold War is over and all presidents make mistakes. Yet they still have sole control over whether to start a nuclear war, *New York Times*, June 22, 2020)

⁹³³ Max Boot, in a *Foreign Affairs* article entitled ^œ[Reagan Didn't Win the Cold War: How a Myth About the Collapse of the Soviet Union Leads Republicans Astray on China](#) (September 06, 2024), explains why the delusion that Ronald Reagan's policies brought about the demise of the Soviet Union is so dangerous:

...One of the biggest such myths is that Reagan had a plan to bring down the "evil empire" and that it was his pressure that led to U.S. victory in the Cold War.

In reality, the end of the Cold War and the fall of the Soviet Union were primarily the work of Soviet leader Mikhail Gorbachev - two consequences of his radically reformist policies (the former intended, the latter unintended).

Reagan deserves tremendous credit for understanding that Gorbachev was a different kind of communist leader, someone he could do business with and thereby negotiate a peaceful end to a 40-year conflict. But Reagan did not bring about Gorbachev's reforms, much less force the collapse of the Soviet Union. To imagine otherwise is to create dangerous and unrealistic expectations for what U.S. policy toward China can achieve today....

...Reality, however, is a lot messier than this simplistic story line. "It's tempting to go back and say, 'You know, we had this great strategy and we had all these things figured out,' but I don't think that's accurate," Reagan's secretary of state George Shultz told me. "What is accurate was that there was a general 'peace through strength' attitude."

Indeed, accounts that focus only on Reagan's get-tough approach to the Soviet Union during his first term miss a big part of the picture. Reagan's approach toward the Soviet Union was neither consistently tough nor consistently conciliatory. Instead, his foreign policy was an often baffling combination of hawkish and dovish approaches based on his own conflicting instincts and the clashing advice he received from hard-line aides such as Clark, Secretary of Defense Caspar Weinberger, and CIA Director William Casey and more pragmatic advisers such as Shultz and national security advisers Robert McFarlane, Frank Carlucci, and Colin Powell....

934 Only Fools Replay Doomsday:

Why would any sane nation want to refight a war that it had already won at enormous cost? Who in their right mind would want to hit the 'replay' button on such a costly, potentially cataclysmic strategic paradigm as deterrence through MAD, or mutually assured destruction?

Meet the New Cold War - Same as the Old One

Quite honestly, the who, the how, and the why depress me.

The 'who' is simple enough: the military-industrial-congressional complex, which finds genocidal nuclear weapons to be profitable, even laudable.

Leading the charge of the latest death brigade is my old service, the Air Force. Its leaders want new ICBMs, several hundred of them in fact, with a potential price tag of \$264 billion, to replace the Minutemen that still sit on alert, waiting to inaugurate death on an unimaginable scale, not to speak of a global nuclear winter, if they're ever launched en masse.

Not content with such new missiles, the Air Force also desires new strategic bombers, B-21 Raiders to be precise (the '21' for our century, the 'Raider' in honor of General Jimmy Doolittle's morale-boosting World War II attack on Tokyo a few months after Pearl Harbor). The potential price tag: somewhere to the north of \$200 billion through the year 2050....

The 'how' is also simple enough. The vast military machine I was once part of justifies such new weaponry via the tried-and-true (even if manifestly false) tactics of the Cold War. Start with threat inflation. In the old days, politicians and generals touted false bomber and missile 'gaps.' Nowadays, we hear about China building missile silos, as if these would pose a new sort of dire threat to us. (They wouldn't, assuming that China is dumb enough to build them.) A recent New Yorker article on Iran's ballistic missile program is typical of the breed. Citing a Pentagon estimate, the author suggests 'that China could have at least a thousand [nuclear] bombs by 2030.' Egad! Be afraid!...

The 'why' is also simple enough, and it disgusts me. Weapons makers, though driven by profit, pose as job-creators. They talk

about 'investing' in new nukes; they mention the need to 'modernize' the arsenal, as if nuclear weapons have an admirable return on investment as well as an expiration date. What they don't talk about (and never will) is how destabilizing, redundant, unnecessary, immoral, and unimaginably ghastly such weapons are. (William Astore, [^œOnly Fools Replay Doomsday: The Cold War, Reborn and Resurgent](#), *TomDispatch*, January 18, 2022)

Tom Engelhardt, in a foreword to the post, puts it in a nutshell:

We - all of us on this planet - now live in one world and only one. Somehow, this remains hard for so many of us to grasp. Yet it's been true since at least August 6, 1945, when a single atomic bomb obliterated the city of Hiroshima and, lest there were any doubts, three days later, a second one did the same thing to Nagasaki. From that moment on, no one should have doubted that we were, or would at least soon be, capable of obliterating not just two cities, but the whole planet. In the years since, as nuclear arsenals have been built to gigantic proportions and such weaponry has spread to nine countries, we've learned more about just how devastating such a conflict between great (or even regional) powers could be. After all, a significant regional nuclear exchange would create not just staggering global death and destruction but a nuclear winter of almost unimaginable proportions for all of us.

More recently, of course, it's become apparent in a second way that all of us exist on one all-too-destructible orb in space. As 2022 begins and the news arrives that the last seven years have been the seven hottest in recorded history; as the planet's oceans continue to absorb the equivalent in heat terms of 'seven Hiroshima atomic bombs detonating each second, 24 hours a day, 365 days a year'; as U.S. greenhouse gas emissions are once again rising, not falling; as the damage from flooding, heat, fire, and drought only increases, both immeasurably and measurably, it shouldn't be that hard to grasp that the climate emergency we face is the potential equivalent of the wholesale nuclear destruction of the planet, just on a vastly different time scale.

Sarah Burns provided a brief explanation of the 75 year-long process which resulted in the US Congress ceding its authority to declare war to the US presidency.

Trump's agenda strayed from the norm, but his use of executive power did not. Presidents have dominated U.S. foreign policy decision-making since well before Trump. In fact, structural changes began to warp the separation of powers, allowing presidents tremendous leeway, more than 75 years ago.

At first, those changes were difficult to enact: all three branches had to deny Congress the coequal status that the Constitution clearly confers on it. Congress made many efforts to guard the power it enjoyed during the first 150 years of the republic, but the altered relationship eventually became routine. By the twenty-first century, the branches had firmly established a new relationship: executives prosecute wars unilaterally,

Congress provides little more than a fig-leaf of authorization (if any at all), and the courts rarely interfere.

An accountable presidency attuned to the interests of the American people requires a legislature capable of restricting executive

independence - and voters who insist on it.

(Sarah Burns, ^œ[Presidents Were Never Meant to Have Unilateral War Powers: Congress and the Public Should Reassert Their Roles](#), *Foreign Affairs*, November 11, 2020)

⁹³⁵ As he concludes, in a subsection headed:

A ROGUE SUPERPOWER

Faced with flailing allies and a divided and apathetic public, the United States might start acting less like the head of a grand coalition and more like a rogue superpower - an economic and military colossus lacking moral commitments, neither isolationist nor internationalist, but aggressive, heavily armed, and entirely out for itself. In fact, under Trump, it already seems to be headed in that direction. During Trump's time in office, some U.S. security guarantees have started to look like protection rackets, with the president musing that allies should pay the costs of hosting U.S. troops plus a 50 percent premium.

The Trump administration has taken to enforcing trade deals with unilateral tariffs rather than working through the World Trade Organization. Trump has largely abandoned the goal of democracy promotion and has downgraded diplomacy, gutting the State Department and handing ever more responsibility to the Pentagon. The U.S. military is changing, too. Increasingly, it is a force geared for punishment rather than protection. The Trump administration has downsized permanent U.S. deployments on allied territory, replacing them with roving expeditionary units that can steam overseas, smash targets, and then slink back over the horizon.

Many of Trump's critics decry these changes as not just unwise but also somehow un-American. But Trump's approach appeals to many Americans today and aligns with their preferences regarding the United States' role in the world. If these conditions persist, the best-case scenario for American leadership may involve Washington adopting a more nationalist version of liberal internationalism.

The United States could retain allies but make them pay more for protection. It could sign trade agreements, but only with countries that adopt U.S. regulatory standards; participate in international institutions but threaten to leave them when they act against U.S. interests; and promote democracy and human rights, but mainly to destabilize geopolitical rivals.

(Michael Beckley, ^œ[Rogue Superpower: Why This Could Be an Illiberal American Century](#), *Foreign Affairs*, November/December 2020)

⁹³⁶ As Hans Kristensen, Matthew McKinzie and Theodore Postol [explained](#):

The US nuclear forces modernization program has been portrayed to the public as an effort to ensure the reliability and safety of warheads in the US nuclear arsenal, rather than to enhance their military capabilities. In reality, however, that program has implemented revolutionary new technologies that will vastly increase the targeting capability of the US ballistic missile arsenal.

This increase in capability is astonishing - boosting the overall killing power of existing US ballistic missile forces by a factor of roughly three - and it creates exactly what one would expect to see, if a

nuclear-armed state were planning to have the capacity to fight and win a nuclear war by disarming enemies with a surprise first strike.

⁹³⁷ Warner:

"Again, this is not a newsflash," Warner said about the reemergence of Russia. "Too often, those of us who are caught up in the day-to-day, who's up, who's down in Washington, we're all caught up in the latest news cycle. And I'm concerned that we can miss, by this failure to step back, how all these events actually form a context, and are basically presenting themselves in what I believe is an alarming picture of the -- in a sense, the new Russia, and how it's emerging as a threat to both the United States and our allies."

"If we just think about, for a moment, even the terminology," he observed. "Let me go down some of the litany -- bots, paid trolls, click farms, little green men, distributed denial of service. In the last couple of years, national security leaders have been forced to learn a whole new language, in terms of dealing with 21st-century threats. Our long-standing rival Russia has clearly reimagined in the world, and with a new playbook to exploit our very openness in our society, to divide us from within, and it's cut us off from our allies."

"Some commentaries -- commentators have tried to define this as a new phase of the Cold War. But what we're experiencing now, to me, doesn't resemble the Cold War that I recall growing up with. Back then, we had a clear sense of who our adversary was... Today's conflict, I believe, is much more amorphous. The traditional tools of the Cold War, Mr. Putin has his -- at his disposal a wide array of nonconventional weapons and tools; tools like cyber attacks, energy deals, hacking, selective leaking, and a bot army to sow and spread his disinformation."

"Many of these tools are actually deployed by nonstate surrogates, thereby giving Russia the ability to claim deniability when their hand or their agents are caught taking some of these actions."

Warner also said: "The bottom line: I believe -- rather than a framework of an old Cold War, I believe we're now engaged in a fight in the shadows, and I'm not sure that's a fight that we're currently winning."

(Tim Hains, ⁹³⁸[Sen. Mark Warner Speech At Carnegie Endowment On "Return Of Global Russia"](#), *RealClear Politics*, March 2, 2018)

⁹³⁸ With a compliant, apparently convinced commentariat and press, US (and other Western) 'news' and commentary readily portray such 'foes' as polar opposites of the 'liberal West'. As has been noted [elsewhere](#), China, the latest 'super villain' in the pantheon of villainy which has been built up over the past half-century and more, is now being redefined from being a future compliant Western acolyte state, to becoming an increasingly belligerent and defiant rogue nation determined to displace Western powers from their rightful 'liberal' place as guardians of Democracy and of Western, 'liberal values'.

Aaron Friedberg has demonstrated this all-too-common predilection in a *Foreign Affairs* article entitled 'An Answer to Aggression: How to Push Back Against Beijing':

The Chinese Communist Party's initial mismanagement of the COVID-19 pandemic and its subsequent attempts to exploit the crisis have produced enduring problems for the rest of the world.

But the CCP's behavior has also helped clarify the threat that China poses to the security, prosperity, and well-being of other countries. Public opinion polls show that over 60 percent of Americans of both political parties now hold a negative view of Beijing's leadership and intentions, and similar attitudes can be found across the democratic world. This heightened awareness of a shared danger creates an opportunity for the United States and its allies to formulate a new and more effective strategy for dealing with China.

For the past four decades, Western democracies have hoped that engagement with China would cause its leaders to abandon any revisionist ambitions they might harbor and accept their country's place as a "responsible stakeholder" in the U.S.-led international order. Expanding flows of trade and investment would, it was thought, also encourage Beijing to proceed down the path toward greater economic and political openness. The policy of engagement was not absurd on its face; it was a gamble rather than an outright blunder. But as has become increasingly obvious, the West's wager has failed to pay off.

Instead of opening up and mellowing out, with Xi Jinping at the helm, China is pursuing unusually brutal and oppressive policies at home and acting more aggressively abroad. China is trying to replace the United States as the world's leading economic and technological nation and to displace it as the preponderant power in East Asia. Beijing has ratcheted up its efforts to exploit the openness of democratic societies in order to shape the perceptions and policies of their governments. It is working hard to establish itself as the leader of the developing nations and, with their support, to rewrite rules and reshape international norms, standards, and institutions in line with its own illiberal, authoritarian preferences. In the long run, China's rulers evidently hope that they can divide, discredit, and weaken the democracies, lessening the appeal of their system, co-opting some, isolating others, and leaving the United States at the head of what will be, at best, a diminished and enfeebled coalition....

(Aaron L. Friedberg, *An Answer to Aggression: How to Push Back Against Beijing*, *Foreign Affairs*, September/October 2020)

⁹³⁹ President Putin expanded on this in his ^œ[2020 annual press conference](#) (17/12/2020):

The existence of Russia's hypersonic missile systems influences the situation in the world and changes it, Russian President Vladimir Putin said at his annual press conference on Thursday.

Russia is developing the most advanced weapons, including the Avangard hypersonic missile system whose speed exceeds Mach 20 and the Tsirkon long-range hypersonic anti-ship cruise missile flying at over eight times the speed of sound, Putin said.

"Moreover, it [the Tsirkon missile] can be placed both on stationary carriers and on surface and subsurface ships. Where can it be placed? In neutral waters. So, you can calculate the range and the speed and everything will become clear. Does this change and influence the situation somehow? Of course, it changes and influences it," the Russian president said.

Putin said that the work on the Tsirkon hypersonic missile had been largely completed.

The Avangard boost-glide vehicle is capable of flying at a hypersonic speed of up to Mach 27 (about 32,000 km/h) in the dense layers of the atmosphere, maneuvering by its flight path and its altitude and breaching any anti-missile defense. The first missile regiment armed with Avangard hypersonic weapons assumed combat duty in the Yasnenskaya missile division in the Orenburg Region in late 2019.

In his State-of-the-Nation Address to the Federal Assembly in February 2019, Russian President Vladimir Putin said that the Tsirkon was capable of developing a speed of about Mach 9 and its striking range capability could exceed 1,000 km. The Russian leader also said that the Tsirkon could strike both naval and ground targets.

(⁹⁰Putin says Russian hypersonic weapons' existence impacts global situation, TASS, Putin's Annual Press Conference, 18 Dec. 2020)

⁹⁴⁰ Poorly monitored and supervised US clandestine belligerent behavior toward other sovereign nations has been legalized and expanded since 2017, with 'routine conduct of "clandestine military activity" in cyberspace, ...[which] can now be authorized by the defense secretary without special presidential approval'.

A report by David Sanger and Nicole Periroth (accused of '⁹⁰a virtual act of treason' for their reporting by US President Trump) explained the rationale for this devolution of authority to initiate aggression against other sovereign nations:

The United States is stepping up digital incursions into Russia's electric power grid in a warning to President Vladimir V. Putin and a demonstration of how the Trump administration is using new authorities to deploy cybertools more aggressively, current and former government officials said...

President Trump's national security adviser, John R. Bolton, said the United States was now taking a broader view of potential digital targets as part of an effort "to say to Russia, or anybody else that's engaged in cyberoperations against us, 'You will pay a price.'"...

...Two administration officials said they believed Mr. Trump had not been briefed in any detail about the steps to place "implants" - software code that can be used for surveillance or attack - inside the Russian grid.

Pentagon and intelligence officials described broad hesitation to go into detail with Mr. Trump about operations against Russia for concern over his reaction - and the possibility that he might countermand it or discuss it with foreign officials, as he did in 2017 when he mentioned a sensitive operation in Syria to the Russian foreign minister.

Because the new law defines the actions in cyberspace as akin to traditional military activity on the ground, in the air or at sea, no such briefing would be necessary, they added.

The intent of the operations was described in different ways by several current and former national security officials. Some called it "signaling" Russia, a sort of digital shot across the bow. Others said the moves were intended to position the United States to respond if Mr. Putin became more aggressive.

(David E. Sanger and Nicole Perlroth, ⁹⁰U.S. Escalates Online Attacks on Russia's Power Grid, New York Times, June 15, 2019)

The [president of the United States has been sidelined](#) because 'he might countermand' decisions made by unelected officials.

Pentagon and intelligence officials and the John Boltons of the United States are gaining increasing power to independently initiate aggression against other nations they perceive as possible 'enemies' of the United States of America.

941 (09/04/19)(04/06/19)

I guess if one sees oneself as living in a 'Superman' version of a sovereign state (the US) resolutely promoting the ultimate goods of Capitalism and Democracy and just as resolutely opposing the evils of anti-capitalism and anti-democracy, one will also require the existence of an evil twin - a 'totalitarian', sovereign 'Lex Luthor' state, determined to undermine and subvert or destroy Capitalism and Democracy around the world.

That 'œ[evil empire](#)' used to be the Soviet Union. As Newt Gingrich (Republican Speaker of the US House of Representatives from 1995 to 1999) explained:

A quarter century ago, President Ronald Reagan delivered two masterful addresses within two weeks of one another: the so-called "Evil Empire" and "Star Wars" speeches. In them, Reagan laid out two great strategies for dismantling the Soviet Empire. He did it boldly without backing off, not permitting the economy, news media, polling numbers, or the permanent governing elite to intimidate him.

By calling the Soviet Union an "evil empire," Reagan sent a clear signal that America was going to challenge the Soviet Union morally, win the psychological information war, and de-legitimize it. If the government was evil, he argued, how could it have authority?

... In one short but unequivocal statement he asserted that the core of totalitarianism was evil by definition. No other statement of moral purpose would be more important in bringing about the end of the Soviet Empire.

(Newt Gingrich, œ[The Evil Empire](#), *American Heritage*, Volume 58 Issue 4, 2008)

Now it's China's turn with Russia and, possibly, Iran as understudies should they be needed. The rhetoric, [painting all three as oppressive, dictatorial, totalitarian states](#), the antitheses of Western democracies, is already being honed in the Western Media.

If ever Western populations have needed intelligent skepticism it has never been more desperately needed than in this 21st century.

Michael Klare has put it well:

...Pentagon officials envision clashes first erupting on the peripheries of China and/or Russia, only to later extend to their heartland expanses (but not, of course, America's). As those countries already possess robust defensive capabilities, any conflict would undoubtedly quickly involve the use of front-line air and naval forces to breach their defensive systems -- which means the acquisition and deployment of advanced stealth aircraft, autonomous weapons, hypersonic cruise missiles, and other sophisticated weaponry. In Pentagon-speak, these are called anti-access/ area-defense (A2/AD) systems.

As it proceeds down this path, the Department of Defense is already considering future war scenarios. A clash with Russian forces in the Baltic region of the former Soviet Union is, for instance, considered a distinct possibility. So the U.S. and allied NATO countries have been ^œ[bolstering](#) their forces in that very region and seeking weaponry suitable for attacks on Russian defenses along that country's western border.

Still, the Pentagon's main focus is a rising China, the power believed to pose the greatest threat to America's long-term strategic interests. "China's historically unprecedented economic development has enabled an impressive military buildup that could soon challenge the U.S. across almost all domains," Admiral Harry Harris Jr., commander of the U.S. Pacific Command (USPACOM) and now the U.S. ambassador to South Korea, typically testified in March 2018. "China's ongoing military modernization is a core element of China's stated strategy to supplant the U.S. as the security partner of choice for countries in the Indo-Pacific." (Michael T. Klare, ^œ[The Navy's War vs. Bolton's War: The Pentagon's Spoiling for a Fight -- But With China, Not Iran](#), *TomDispatch.com*, June 2, 2019)

Inevitably, the rhetoric of Chinese (and Russian) threats to the 'wellbeing', 'stability', 'democratic values', infrastructures... of Capitalism will escalate in Western societies as the Cold War mentality matures - just as it did in the aftermath of the 2nd World War and the consequent forty-year-long 'Cold War'.

There seems little point in documenting the escalating hysteria. An (26 March 2018) example of it all (when Russia was still accepted as the major threat to world peace and security) is succinctly summarized for us by the BBC:

It is said to be the largest collective expulsion of Russian intelligence officers in history.

More than 20 countries have aligned with the UK, expelling more than 100 diplomats.

Russia vowed to retaliate to the "provocative gesture".

Russia denies any role in the attack on Sergei Skripal and his daughter, Yulia, in Salisbury, southern England. The pair remain in a critical but stable condition in hospital.

(^œ[Spy poisoning: Russian diplomats expelled across US and Europe](#), BBC News, 26 March, 2018)

As 'The Saker' sarcastically opined, commenting on Western accusations of yet another 'Russian' 'novichok' incident:

Russians are dumb. Hopelessly stupid. They are amateurs of the worst kind. Ignoramuses on steroids. Why?

Well, for one, ***their so-called super-doooper biowarfare agent "Novichok" seems unable to kill anybody***. The Russians must have realized that. This is why, when they tried to kill Skripal (after freeing him from jail) they put that Novichok thing all over the place: on the bench near Salisbury, on Skripal's door handle, even in some bottle of perfume a local addict found in the trash. Probably all over the Skripal home, and this is why the Brits initially said that they would tear down the extremely toxic place (yet both the

Skripal cat and their hamster survived - tells you how utterly useless that pretend biowarfare substance really was...).

One would have thought that after this total cluster-bleep the Russians would have learned their lesson.

But no. They are clearly too dumb for that.

So they decided to poison Alexei Navalnyi, a well-know "dissident".

And they failed.

Again!...

(The Saker, ^œ[Russians are the dumbest idiots on the planet!](#), September 04, 2020)

Alexey Kovalev provided a much-needed 'Russian' perspective on the emerging hysteria:

...The idea of Russia electing and controlling an American president has always been deemed absurd. Most references to the Mueller inquiry and the Trump-Russia story in state media are preceded by a qualifier: "the so-called Russia investigation," as the prominent TV host Dmitry Kiselyov puts it.

It's not just the state media that has rejected the idea that Mr. Trump colluded with Russia. Even liberals and opponents of President Vladimir Putin have been deeply skeptical, pointing out that Russia's ruling circles are barely competent enough to prop themselves up, let alone manipulate a superpower.

When the news broke last week that Mr. Mueller had finished his report, Moscow's political and media circles reacted with a mixture of contempt and derision. Far from being a top news story, it was practically forgotten after a few angry comments from state officials.

(Alexey Kovalev, ^œ[Russians Always Knew There Was No Collusion: The Kremlin's allies and its opponents alike have been baffled by America's Russia obsession. Can we ever look at the U.S. the same way again?](#) *New York Times*, March 29, 2019)

The entire fiasco eerily echoes both Cold-War-Mark-I US ^œ[McCarthyism](#) and the 2002 rhetoric used to justify the Iraq invasion and all that has followed¹⁰⁹². So, who is orchestrating it all? The 'spontaneous' expulsion of Russian diplomats would be comedic but for the possible consequences of such orchestrated hysteria. Are Western populations really so easily led?

One can only hope that Western peoples will have learned from their past and treat the claims of those promoting Cold War hysteria with the caution and skepticism they deserve.

⁹⁴² (21/05/17)(07/06/18) One of the most disturbing 21st century developments is the emergence of government sanctioned international extra-legal assassination of so-called 'terrorists' and their sympathizers, all-too-often through use of long-range armed drones in targeted killing around the world. President Obama might well become remembered in history as the ^œ[first U.S. president to maintain an on-going 'kill-list'](#) of suspected terrorists: state sanctioned murder of suspected 'enemies of the state' around the world.

A 2016 report on 'policies involving long-range armed drones' spelled out current practice by United States 'special forces' engaged in this extra-legal murder of 'enemy targets' around the world. The report,

troublingly, does not question the morality or potentially disastrous long-term consequences of such activity, it merely argues for increasing clarity in strike policies. It concludes:

What is striking in the debates over questions related to international law and U.S. targeted killing policies is how U.S. government officials have left

1. ambiguities in their interpretations of international law covering drone strikes,
2. inconsistencies in their policy statements,
3. generality in U.S. export control policy with respect to the requirements and expectations for use by recipients, and
4. a willingness to allow international norms to arise from the practices of countries, including those of the United States.

(Lynn E. Davis, Michael J. McNerney, Michael D. Greenberg, ^{ae}[Clarifying the Rules for Targeted Killing: An Analytical Framework for Policies Involving Long-Range Armed Drones](#), RR-1610-OSF, 2016, *The RAND Corporation*)

(08/10/16)(30/12/16) Not only have [national borders and 'parochial' legislatures become seen as impediments](#) which can and should be overcome to ensure genuinely deregulated, internationalized free markets; they are now to be ignored in favor of 'targeted killing policies' by the 'special forces' of Western states and that military industrial complex which is increasingly setting policy for Western 'special forces' operations.

Be afraid, be very afraid. We are entering an amoral, sociopathic era (characterized by pervasive and persistent antisocial behavior, often criminal, and lacking a sense of moral responsibility or social conscience). Sooner or later, history tells us, what is seen as 'legitimate' beyond the perpetrators' own borders, becomes accepted as legitimate within those borders too¹⁰⁹³.

The world we Western peoples and nations are creating in the 21st century is a world of despair. Yes, there are bold and imaginative plans afoot for a new kind of globalization, a 'Globalization Mark II'; what President Xi Jinping of China dubbed, at Davos in January (2017), "inclusive globalization", but that is not a Western initiative. Pepe Escobar has summed it up well:

Let's cut to the chase. China's new 'Silk Road' initiative is the only large-scale, multilateral development project that the 21st century has seen so far.

There is no counter-offer from the West.

Which is why the two-day Belt and Road Forum for International Cooperation, starting this Sunday in Beijing, is being set up as a game-changer for the global economy. Here the initiative looks likely to switch to Mark II mode, accelerating into what President Xi Jinping dubbed, at Davos in January, "inclusive globalization."

The big ideas behind this grand Chinese plan, however, are still getting lost in translation. At first this trans-Asian trade expressway was billed as One Belt, One Road (OBOR), a literal translation from the Chinese yi dai yi lu. Now it's the Belt and Road Initiative (BRI), but that still does not really fly in the West, even when China has

tried adding a piece of soft power spin, as in its attempts to sell the Belt and Road to English-speaking children...

(Pepe Escobar, [∞][China widens its Silk Road to the world](#), *Asia Times*, May 13, 2017)

(07/11/17) The globalization the West is now offering the world is that globalization described by Tom Engelhardt:

...[J]ust imagine the situation four or potentially even eight years from now after Donald Trump's generals, already in the saddle, do their damndest in the Greater Middle East and Africa. There's no reason to believe that, under their direction, the smashing of key regions of the planet won't continue. There's no reason to doubt that, in an expanding world of Mosuls - the Syrian "capital" of the Islamic State, Raqqa, is undoubtedly the next city in line for such treatment - "victories" won't produce a planet of greater ethnic savagery, religious extremism, military destruction, and chaos.

This, in turn, ensures a further spread of terror groups and an even more staggering uprooting of peoples. (It's worth noting, for instance, that since the death of Osama bin Laden at the hands of U.S. Special Operations forces, al-Qaeda has grown, not shrunk, gaining yet more traction across the Greater Middle East.)

So far, America's permanent "war on terror" has helped produce a planet of fear, refugees on an almost unimaginable scale, and ever more terror. What else would you imagine could arise from the rubble of so many Mosuls?

If you don't think that this is an ever-more connected planet still being "flattened" (even if in quite a different way than expected), and that sooner or later the destruction of Mosul will reverberate in our world, too, then you don't get our world. It's obvious, for instance, that future Mosuls will only produce more refugees, and you already know where that's led, from Brexit to Donald Trump. Destroy enough Mosuls and, even in the heartland of the planet's sole superpower, the fears of those who already feel they've been left in a ditch will only rise (and be fed further by demagogues ready to use that global flow of refugees for their own purposes).

Given the transformations of recent years, just think what it will mean to uproot ever vaster populations, to set the homeless, the desperate, the angry, the hurt, and the vengeful - millions of adults and children whose lives have been devastated or destroyed - in motion. Imagine, for instance, what those pressures will mean when it comes to Europe and its future politics.

Think about what's to come on this small planet of ours - and that's without even mentioning the force that has yet to fully reveal itself in all its fragmenting and globalizing and leveling power. We now call it, mildly enough, "climate change" or "global warming."

Just wait until, in the decades to come, rising sea levels and extreme weather events put human beings in motion in startling ways (particularly given that the planet's sole superpower is now run by men in violent denial of the very existence of such a force or the human sources of its power).

You want a shrinking planet? You want terror? You want globalization? Think about that. And do you wonder why, these days, I have Mosul on my mind?

(Tom Engelhardt, ^œ[The Globalization of Misery](#), *TomDispatch.com*, May 14, 2017.)

Tom Engelhardt was right: it happened, Raqqa is in ruins and a coalition led by the United States is responsible for the devastation. *Amnesty International* has outlined what happened:

From amid the rubble of Raqqa, civilians are asking why US-led Coalition forces destroyed the city, killing hundreds of civilians in the process of "liberating" them from the armed group calling itself "Islamic State" (IS), Amnesty International said in a new report ahead of the offensive's anniversary.

Amnesty International researchers visited 42 Coalition air strike sites across the ruined city and interviewed 112 civilian residents who had survived the carnage and lost loved ones.

The accounts detailed in the report, ^œ["War of annihilation": Devastating Toll on Civilians, Raqqa - Syria](#), leave gaping holes in the Coalition's insistence that their forces did enough to minimize civilian harm. The report details four emblematic cases of civilian families who were brutally impacted by the relentless aerial bombardment. Between them, they lost 90 relatives and neighbours - 39 from a single family - almost all of them killed by Coalition air strikes.

They are part of a wider pattern and provide a strong prima facie case that many Coalition attacks that killed and injured civilians and destroyed homes and infrastructure violated international humanitarian law.

"When so many civilians are killed in attack after attack, something is clearly wrong, and to make this tragedy worse, so many months later the incidents have not been investigated. The victims deserve justice," said Donatella Rovera, Senior Crisis Response Adviser at Amnesty International.

(*Amnesty International*, ^œ[Syria: Raqqa in ruins and civilians devastated after US-led 'war of annihilation'](#), 5 June 2018)

The chaos of the Middle East is, unarguably, a ^œ[legacy of US military intervention](#) in Iraq, Afghanistan, Libya, Yemen, Syria, Somalia, Sudan, and other regions. It is being perpetuated by an apparently uncensored flow of armaments from Western armaments factories to combatants in the region and it shows no sign of abating.

A CBS News report says it all: 'Trump signs \$110 billion arms deal with Saudi Arabia'.

It's not enough that Yemen is in ruins, that Iraqi, Libyan and Syrian cities have been demolished, that extremist groups throughout the region seem to have unhindered access to sophisticated US and other Western military systems, hardware and explosives.

Now, with ^œ[scant regard for any investigation of Saudi involvement](#) in it all, the armaments are set to flow even more freely into the Middle East. As the report explains, this is not a one-off deal, this is a commitment into the future to continue the supply of weaponry, a commitment to long-term Middle East chaos:

President Trump signed a multi-billion-dollar arms and economic deal with Saudi Arabia Saturday in a move intended to strengthen the U.S.-Saudi Arabian alliance against ISIS on the president's first foreign trip.

The agreement is worth \$110 billion effective immediately and \$350 billion over 10 years, in an effort to equip Saudi Arabia and Persian Gulf partners in the fight against ISIS. The agreement will provide fighter jets, tanks, combat ships and anti-missile defense systems and create defense-sector jobs in the U.S., according to the White House. The deal includes additional private-sector agreements and a joint vision statement with Saudi Arabia, one of the world's largest oil producers.

"That was a tremendous day," Mr. Trump told reporters.

"Tremendous investments in the United States."

(Kathryn Watson, ["Trump signs \\$110 billion arms deal with Saudi Arabia"](#), CBS News, May 20, 2017)

While all US presidents have taken responsibility for internationally representing US business interests, few have so blatantly advanced themselves as 'dealmakers' and munitions salesmen as Donald Trump. The Saudi Arabian weapons deal was merely the first of the 'tremendous investments in the United States' which the US President is intent on spruiking. Six months later, on a state visit to Japan,

President Trump said on Monday that Japan could protect itself from a nuclear-armed North Korea by buying billions of dollars of American military equipment, drawing an explicit link between trade and security as he began a complex, politically charged tour of Asia. (Mark Landler and Julie Hirschfeld Davis, ["Trump Tells Japan It Can Protect Itself by Buying U.S. Arms"](#), New York Times, November. 6, 2017)

President Trump, elected US pitchman for Western armaments factories.

Undoubtedly, as the ensuing chaos comes home to the perpetrators of it all, powerful voices will insist on the need for a globalized authority to counter it. Henry Kissinger, displaying a sociopathic willingness to sacrifice others in pursuit of his goals, spelt out the process through which World Government might be achieved:

Today, America would be outraged if U.N. troops entered Los Angeles to restore order. Tomorrow they will be grateful! This is especially true if they were told that there were an outside threat from beyond, whether real or promulgated, that threatened our very existence. It is then that all peoples of the world will plead to deliver them from this evil. The one thing every man fears is the unknown. When presented with this scenario, individual rights will be willingly relinquished for the guarantee of their well-being granted to them by the World Government.

(Henry Kissinger, Bilderberger Conference, Evians, France, 1992)

Dominique Moisi (Dec. 27, 2016), in a *Project Syndicate* piece entitled ["How Dr. Strangelove Learned to Love Trump"](#), succinctly summed him up: "Kissinger is fascinated, if not obsessed, with power".

As Martin Niemöller warned long ago:

First they came for the Socialists, and I did not speak out - Because I was not a Socialist.

Then they came for the Trade Unionists, and I did not speak out - Because I was not a Trade Unionist.

Then they came for the Jews, and I did not speak out - Because I was not a Jew.

Then they came for me - and there was no one left to speak for me.
(Pastor Martin Niemöller (1892-1984))

⁹⁴³ The 2016 US presidential contest between Hillary Clinton and Donald Trump demonstrated the extent to which the importance of endorsement by 'military officials' has grown over the past fifty and more years. To ensure election to national office, US politicians, of both major party persuasions, must demonstrate their unswerving support for a strong, well-financed military. Pamela Engel has summed it up well:

It might not be intentional, but there appears to be an arms race between the campaigns of Donald Trump and Hillary Clinton to see who can gather more endorsements from military officials.

This week, both campaigns have released several statements about endorsements from US generals and admirals.

The first, from Trump, the Republican presidential nominee, came on Tuesday. The title of the news release was, "88 RETIRED U.S. GENERALS AND ADMIRALS ENDORSE TRUMP." (The media was quick to point out that many names on the list weren't immediately recognisable.)

Trump's release was followed the next day by a release from the campaign of the Democratic nominee. The title of that release: "95 Retired Generals and Admirals Endorse Hillary Clinton."

"Clinton is getting the backing of more senior military service members and former officials with command and management experience than any non-incumbent Democrat," the release noted.

The Clinton campaign's statement also slammed Trump for not getting as many military endorsements as Mitt Romney, the Republican nominee for president in 2012.

"According to yesterday's media reports, Trump has received more than 400 fewer endorsements than Mitt Romney received - 88 to Romney's 500," the statement said.

Then, on Friday, the Clinton campaign rolled out more endorsements, with a news release titled, "Number of Generals and Admirals Backing Clinton Grows to 110 After Forum."

The statement, which tied the endorsements to a "commander-in-chief" forum with Trump and Clinton that aired on NBC on Wednesday, again noted Trump's lack of endorsements compared to Romney.

This was followed by a release from the Trump campaign hours later: "32 NEW MILITARY LEADERS ENDORSE DONALD J. TRUMP FOR PRESIDENT." This brought Trump's total number of military endorsements to 120.

"These names were added following Wednesday's Commander-In-Chief Forum, showing Mr. Trump has the respect and trust from a number of military leaders across all branches of service," the campaign said in its statement.

So for now, Trump is winning the arms race with 120 endorsements compared to Clinton's 110.

(Pamela Engel, ⁹⁴[Trump and Clinton are suddenly in an arms race for military endorsements](#), *Business Insider*, Sep 10, 2016)

⁹⁴⁴ As Priest and Arkin explain of The United States intelligence and surveillance organizations:

The top-secret world the government created in response to the terrorist attacks of Sept. 11, 2001, has become so large, so unwieldy and so secretive that no one knows how much money it costs, how many people it employs, how many programs exist within it or exactly how many agencies do the same work.

These are some of the findings of a two-year investigation by The Washington Post that discovered what amounts to an alternative geography of the United States, a Top Secret America hidden from public view and lacking in thorough oversight. After nine years of unprecedented spending and growth, the result is that the system put in place to keep the United States safe is so massive that its effectiveness is impossible to determine.

The investigation's other findings include:

- ★ Some 1,271 government organizations and 1,931 private companies work on programs related to counterterrorism, homeland security and intelligence in about 10,000 locations across the United States.
- ★ An estimated 854,000 people, nearly 1.5 times as many people as live in Washington, D.C., hold top-secret security clearances.
- ★ In Washington and the surrounding area, 33 building complexes for top-secret intelligence work are under construction or have been built since September 2001. Together they occupy the equivalent of almost three Pentagons or 22 U.S. Capitol buildings - about 17 million square feet of space.
- ★ Many security and intelligence agencies do the same work, creating redundancy and waste. For example, 51 federal organizations and military commands, operating in 15 U.S. cities, track the flow of money to and from terrorist networks.
- ★ Analysts who make sense of documents and conversations obtained by foreign and domestic spying share their judgment by publishing 50,000 intelligence reports each year - a volume so large that many are routinely ignored.
(Dana Priest and William M. Arkin,⁹⁴⁵ [A hidden world, growing beyond control, Top Secret America](#), *Washington Post*, July 19, 2010)

More recent reports on the functioning of 'homeland security' in the United States include:

- ★ David Rittgers, ⁹⁴⁵[Abolish the Department of Homeland Security](#), *Policy Analysis*, No. 683, September 11, 2011 (Cato Institute, PDF);
- ★ Dara Lind, ⁹⁴⁵[The Department of Homeland Security is a total disaster. It's time to abolish it](#), *Vox*, February 17, 2015;
- ★ Steven Metz, ⁹⁴⁵[Abolish DHS? Reform the Department of Homeland Security Instead](#), *World Policy Review*, August 12, 2020.

⁹⁴⁵ It seems that, almost inevitably, 'visionary projects' of 'visible' politicians, unapproved by key 'visible' and 'invisible' opponents will meet this sort of 'roadblock':

President Joe Biden and Republicans entered the weekend sharply at odds over how to craft an infrastructure deal that could satisfy their camps, imperiling the odds of a bipartisan deal.

Democrat Biden shot down a new proposal from the main Republican negotiator on infrastructure, Senator Shelley Moore Capito, that increased spending by about \$50 billion over their last offer, the White House said.

Biden rejected the offer, saying it "did not meet his objectives to grow the economy, tackle the climate crisis, and create new jobs."...

Biden is eager to show that he made a good-faith effort at a bipartisan deal, sources said, but he risks creating division among Democrats, some who believe he is giving up too much to Republicans.... Democrats hold narrow majorities in both the House of Representatives and Senate.

(Trevor Hunnicutt, ⁹⁴⁵[Biden rejects new Republican infrastructure offer](#), *Reuters Business*, June 5, 2021)

(A cynic might say (of Biden's apparent insistence on 'bipartisan' support) that this provides a built in failsafe against having to confront and/or override the objections of those 'invisible' power brokers who might oppose his 'plans').

⁹⁴⁶ Tom Engelhardt, in an introduction to an essay titled 'How Not to Audit the Pentagon: Five Decades Later, the Military Waste Machine Is Running Full Speed Ahead' by William Hartung, has sketched some of the many problems with a US military-industrial complex which is out of control and unaudited:

Late last year, I spent some time digging into the Pentagon's "reconstruction" efforts in Iraq and Afghanistan, countries it invaded in 2001 and 2003 in tandem with a chosen crew of warrior corporations. As a story of fabled American can-do in distant lands, both proved genuinely dismal no-can-do tales, from roads built (that instantly started crumbling) to police academies constructed (that proved to be health hazards) to prisons begun (that were never finished) to schools constructed (that remained uncompleted) to small arms transfers (that were "lost" in transit) to armies built, trained, and equipped for stunning sums (that collapsed). It was as if nothing the Pentagon touched turned to anything but dross (including the never-ending wars it fought). All of it added up to what I then labeled a massive "\$cam" with American taxpayer money lost in amounts that staggered the imagination.

All of that came rushing back as I read TomDispatch regular William Hartung's latest post on "waste" at the Pentagon. It didn't just happen in Kabul and Baghdad; it's been going on right here in the good old USA for, as Hartung recounts, the last five decades. There's only one difference I can see: in Kabul, Baghdad, or any other capital in the Greater Middle East and Africa, if we saw far smaller versions of such "waste" indulged in by the elites of those countries, we would call it "corruption" without blinking. So here's my little suggestion, as you read Hartung: think about just how deeply what once would have been considered a Third World-style of corruption is buried in the very heart of our system and in the way of life of the military-industrial complex. By now, President Dwight Eisenhower must be tossing and turning in his grave.

(⁹⁴⁷[Tomgram: William Hartung, What a Waste, the U.S. Military](#), *TomDispatch*, April 10, 2016)

⁹⁴⁷ Joshua Yaffa, in an essay entitled 'What the War in Ukraine Has Revealed About Putin's Public', provided an excellent example of this.

Below is his description of the quiescent nature of 'Russian society' followed by a reworking of the same text to describe the quiescent nature of 'United States society'.

The intervening paragraph has been elided because it presents a distorted version of events so it seemed more appropriate to ignore it - I leave it to the reader to attempt that. The exercise I have attempted could be applied to much of the rest of the essay!:

Before Russia went to war in Ukraine, it was no great mystery that Russian society was adaptable, better at playing along and avoiding responsibility than actively protesting. From its outset, the system built by Russian President Vladimir Putin was based on the idea of a disengaged public, with matters of political and civic concern left to those on high. Even as the space for independent political and civic action shrank to near zero and real living standards declined, most Russians saw little reason to participate in collective action: such efforts were far more likely to result in a police baton upside the head or a lengthy prison term than in actual change. This arrangement suited both citizen and state just fine. Russian society was demobilized by design.[paragraph elided]...

After a year of war in Ukraine, however, it is now clear that instead of disrupting the existing social contract, Putin's war has only extended it. In the early days of the invasion, the Kremlin made no attempt to sell the war as a defining struggle for which every Russian must sacrifice; rather, Russians were presented with an image of a war that was distant, low cost, outsourced to professionals, and, if one was so inclined, possible to ignore.... (Joshua Yaffa, ["What the War in Ukraine Has Revealed About Putin's Public"](#), *Foreign Affairs*, February 23, 2023)

Let's test Putin's claim that

[when we assess other states, other peoples](#), we are always looking in the mirror. We always see ourselves there.

Here is the text quoted above with the term 'Russian' replaced by the term 'The United States'

Before The United States went to war in Ukraine, it was no great mystery that The United States society was adaptable, better at playing along and avoiding responsibility than actively protesting. From its outset, the system built by The United States President Joe Biden was based on the idea of a disengaged public, with matters of political and civic concern left to those on high. Even as the space for independent political and civic action shrank to near zero and real living standards declined, most United States citizens saw little reason to participate in collective action: such efforts were far more likely to result in a police baton upside the head or a lengthy prison term than in actual change. This arrangement suited both citizen and state just fine. The United States society was demobilized by design.[paragraph elided]...

After a year of war in Ukraine, however, it is now clear that instead of disrupting the existing social contract, Biden's war has only extended it. In the early days of the invasion, Congress made no attempt to sell the war as a defining struggle for which every United States citizen must sacrifice; rather, United States citizens were presented with an image of a war that was distant, low cost,

outsourced to professionals, and, if one was so inclined, possible to ignore.

For an excellent outline of various forms of propaganda see this *YouTube* video on the site *Second Thought* entitled 'œYou're Not Immune To Propaganda'

⁹⁴⁸ Westernized peoples will have to accept that their instinctive accumulative and consumptive behaviors must be consigned to the dustbin of history.

They will have to live as though they had migrated to an alien society where acceptance requires a permanent reorientation to the conservation of resources and limitation of consumption/ accumulation to the stripped-down essentials of life

The artificial 'daylight' of our night-time cities, the production/ consumption/ accumulation of what will have become superfluous to life in the new social environment, required for long-term survival, will become unacceptable profligacies. 'Capitalism', will become a pejorative expletive used to condemn/ discipline antisocial behaviors. And our dwellings and 'possessions' will be reduced to the true 'necessities' of life.

Welcome to a modified non-Western world where 'wealth' is no longer a virtue and conspicuous ownership/ consumption is recognized as a [disgusting morbidity, one of those semi-criminal, semi-pathological propensities which one hands over with a shudder to the specialists in mental disease..](#)

Learn to love it or die!

⁹⁴⁹ See [The Economy as an independent environment](#) for more on this.

⁹⁵⁰ To some people, mention of Karl Marx condemns what is being said to the dustbin of ideas. We should, however, be careful not to throw baby out with the bath water! His insights into western European history and 19th century conditions were often very astute, even if his philosophical models were at times rather naive.

⁹⁵¹ Marx was, himself, both Jewish and a well enculturated Western European. He used the metaphor of circumcision to emphasize the inseparable bond and inter-changeability between money and commodities in Western European understanding.

The reference closely follows the apostle Paul's explanation to Christians in Rome in the 1st century AD:

a man is a Jew if he is one inwardly; and circumcision is circumcision of the heart, by the Spirit, not by the written code.
(*Letter to the Romans* Chapter 2 Verse 29)

⁹⁵² Smith spent some time in examining the complexities of another very important neo-classical economic concept which is coupled with utility, *scarcity*. His clearest statement of its effect on price was in considering its effect on the price of 'food, clothing and lodging'.

To understand his observations one needs to remember the tremendous drive toward land consolidation and privatization which occurred through the 18th century (see [A Deeply Religious Capitalist Revival](#) for more on this). Given the forces at work, it is not surprising that he considered the relationship between scarcity and price to be, at best, an ambiguous one:

Land in its original rude state can afford the materials of clothing and lodging to a much greater number of people than it can feed. In its improved state it can sometimes feed a greater number of people than it can supply with those materials; at least in the way in which they require them, and are willing to pay for them. In the one state, therefore, there is always a superabundance of those materials, which are frequently, upon that account, of little or no value. In the other there is often a scarcity, which necessarily augments their value.

In the one state a great part of them is thrown away as useless, and the price of what is used is considered as equal only to the labor and expense of fitting it for use, and can, therefore, afford no rent to the landlord. In the other they are all made use of, and there is frequently a demand for more than can be had. Somebody is always willing to give more for every part of them than what is sufficient to pay the expense of bringing them to market.
(1776, Ch. 11 Pt 2)

⁹⁵³ John Locke, some eighty years earlier, had provided a preliminary explanation of the 'labor theory of value' which Smith would refine:

God gave the world to men in common; but since he gave it them for their benefit, and the greatest conveniencies of life they were capable to draw from it, it cannot be supposed he meant it should always remain common and uncultivated. He gave it to the use of the industrious and rational, (and labor was to be his title to it;) not to the fancy or covetousness of the quarrelsome and contentious.

He that had as good left for his improvement, as was already taken up, needed not complain, ought not to meddle with what was already improved by another's labor: if he did, it is plain he desired the benefit of another's pains, which he had no right to, and not the ground which God had given him in common with others to labor on, and whereof there was as good left, as that already possessed, and more than he knew what to do with, or his industry could reach to....

God commanded, and his wants forced him to labor. That was his property which could not be taken from him where-ever he had fixed it. And hence subduing or cultivating the earth, and having dominion, we see are joined together.

The one gave title to the other. So that God, by commanding to subdue, gave authority so far to appropriate: and the condition of human life, which requires labor and materials to work on, necessarily introduces private possessions.
(1690 Ch. 5 Sec. 34, 35)

⁹⁵⁴ See [Teaching Western Europeans to Work](#) for more on this.

⁹⁵⁵ For Smith, the key to prosperity was not consumption (as neo-classical economics would infer from the late 19th century through focus on 'consumer satisfaction') but the productive employment of labor.

So,

As soon as stock has accumulated in the hands of particular persons, some of them will naturally employ it in setting to work industrious people, whom they will supply with materials and subsistence, in order to make a profit by the sale of their work, or by what their labor adds to the value of the materials.

In exchanging the complete manufacture either for money, for labor, or for other goods, over and above what may be sufficient to pay the price of the materials, and the wages of the workmen, something must be given for the profits of the undertaker of the work who hazards his stock in this adventure.

The value which the workmen add to the materials, therefore, resolves itself in this ease into two parts, of which the one pays their wages, the other the profits of their employer upon the whole stock of materials and wages which he advanced. He could have no interest to employ them, unless he expected from the sale of their work something more than what was sufficient to replace his stock to him; and he could have no interest to employ a great stock rather than a small one, unless his profits were to bear some proportion to the extent of his stock.

The profits of stock, it may perhaps be thought are only a different name for the wages of a particular sort of labor, the labor of inspection and direction. They are, however, altogether different, are regulated by quite different principles, and bear no proportion to the quantity, the hardship, or the ingenuity of this supposed labor of inspection and direction. They are regulated altogether by the value of the stock employed, and are greater or smaller in proportion to the extent of this stock.

(Smith 1776 Chapter 6)

While the productive use of labor drives 'profit', production, divorced from its purpose makes little sense:

It cannot be very difficult to determine who have been the contrivers of this whole mercantile system; not the consumers, we may believe, whose interest has been entirely neglected; but the producers, whose interest has been so carefully attended to; and among this latter class our merchants and manufacturers have been by far the principal architects. In the mercantile regulations, which have been taken notice of in this chapter, the interest of our manufacturers has been most peculiarly attended to; and the interest, not so much of the consumers, as that of some other sets of producers, has been sacrificed to it. (Smith 1776, Book 4, Chapter 8, Conclusion)

As Smith explained, in examining the weaknesses in mercantilism, production only makes sense when one sees it for what it is: the supply of consumables:

Consumption is the sole end and purpose of all production; and the interest of the producer ought to be attended to only so far as it may be necessary for promoting that of the consumer. The maxim is so perfectly self evident that it would be absurd to attempt to prove it. But in the mercantile system the interest of the consumer is almost constantly sacrificed to that of the producer; and it seems to consider production, and not consumption, as the ultimate end and object of all industry and commerce.

In the restraints upon the importation of all foreign commodities which can come into competition with those of our own growth or manufacture, the interest of the home consumer is evidently sacrificed to that of the producer. It is altogether for the benefit of the latter that the former is obliged to pay that enhancement of price which this monopoly almost always occasions.

It is altogether for the benefit of the producer that bounties are granted upon the exportation of some of his productions. The home consumer is obliged to pay, first, the tax which is necessary for paying the bounty, and secondly, the still greater tax which necessarily arises from the enhancement of the price of the commodity in the home market
(Smith 1776, Book 4, Chapter 8)

⁹⁵⁶ 'Higher standard of living', of course, being assumed to equate with greater ability to accumulate possessions and expand consumption. This same logic can be found in most capitalist political rhetoric in the 21st century.

⁹⁵⁷ The 'Labor Theory of Value', as Smith's definition of value came to be called, was successfully challenged and displaced by neo-classical economic theorists in the second half of the 19th century. However, presumptions which require a belief in the labor theory of value remain dominant in Western economic and political policy making and disputation in the 21st century.

Neo-classical economics, from the 2nd half of the 19th century, has addressed questions of the place and definition of value and commodity through focusing on the relative values of goods and services in the marketplace, assuming that price is determined by consumer demand rather than by labor input into production.

Following the neo-classical refinement of economics in the late 19th century, the concept of value became related to the *marginal utility* of an object to a user.

This term superficially appears to conflate use value and exchange value. All that utility is, for economics, is "consumer satisfaction". The basis for choice of one object over another is assumed to be what the consumer judges will give the greatest satisfaction at the time when it is obtained.

Since, for economics, value can be boiled down to this, it is possible to measure the relative price of any objects and give them relative numerical values. The cost of any acquisition is an *opportunity cost*. It is assumed that whenever an individual acquires an object something has to be foregone in order to acquire it, whether what is foregone is time, money, comfort or anything else.

This is often summed up in a common economists' saying, "there's no such thing as a free lunch". To obtain the "price" of any object, one measures the money value of what the individual has foregone in order to acquire it (which, of course, presumes a commoditized world). In order to understand this, one needs to clearly grasp the concept of 'marginal utility'.

The nature of 'marginal utility'

Since the concept of *marginal utility* is one which many people find difficult to grasp, some further explanation is probably necessary. To illustrate, we will give two items (those used by Smith in his example) imaginary use values for a consumer (see the table below).

Water			Diamonds		
Litres	Utility (\$ value)	Marginal Utility Value	Carats	Utility (\$ value)	Marginal Utility Value
1	1,000	1,000	1	100	100
2	1,100	100	2	190	90
3	1,110	10	3	270	80
4	1,111	1	4	340	70
5	1,112	1	5	400	60
6	1,113	1	6	460	60

Water, if one has none and needs it, is very important for its use value, so the first value will be high. The more water you acquire, the less important it becomes to get more of it, so the additional value of an extra unit (litre) of water will decline as the consumer obtains more water.

As you can see from the table above, I have assumed a rapid scaling down in the *marginal usefulness* of acquiring additional amounts of water once the consumer "has enough". In economics this is known as the *law of diminishing marginal utility*.

Although it is far more important to obtain water than diamonds if one has none, the marginal utility of diamonds does not fall (or diminish) as quickly as the marginal utility of water. Once the consumer has 3 litres of water, he or she will only pay a dollar for an additional litre. However, if he or she acquires 3 carats of diamonds, the consumer will still pay 70 dollars for an additional carat. That is, the marginal utility of diamonds is much greater than the marginal utility of water once the need for water has been satisfied.

Of course, I can already hear you saying that all this must be determined by *the reason why* diamonds have a greater appeal than water as items to be accumulated beyond their *immediate use value*. The reason, according to neo-classical economics, is to be found in the relative scarcity of the two commodities. Since water is plentiful, it is easy to obtain additional units of water, but far more difficult to obtain additional units of diamonds. So, according to neo-classical economics, the marginal utility of the two items reflects their *relative scarcity*.

To understand the marginal utility definition of value, one has to recognize that the consumer's decision to acquire more of an item is not an all-or-nothing one, it is a decision whether or not to buy an *additional unit* of an item.

So demand for an object in the market place is not determined by the *total utility* of the item (1,000 dollars for the first unit of water), but by the marginal utility, *given that one already has access to the items involved* (one does not pay 1,111 dollars for the 4th litre of water, one pays the difference between the utility of 3 litres and 4 litres (that is, 1 dollar)).

The value of the item is determined by what is gained or lost as a result of a purchase or sale. For instance, if I have 5 litres of water and sell 1

litre I have given away 1 dollar in value of the stock of water to me. If, on the other hand I had only one litre of water and had to part with that, my loss would be 1,000 dollars.

Economists call the part of utility that is gained or lost (in the decision to buy or sell one unit of an item) the *marginal utility* of the item to the consumer, or the value to the consumer given the amount of a product already held by him or her. So, marginal utility is defined as the 'increase in utility of consuming one more unit of a good or service' (the term "consuming" here covers both possession and consumption).

To understand how marginal utility determines "usual price" (Smith's "natural price" that he refers to in the quotation) in the marketplace one has to assume that the products being bought and sold have more or less reached their demand equilibrium (5 & 6 litres or carats in the table above). That is, they have been bought and sold over a period of time and the demand for them reflects their value to consumers in relation to all the other goods and services they want or need. Demand settles down and the item involved takes its long-term place in the value rankings of the consumer.

Although often not spelt out in economic explanations of marginal utility, the differences in the original or *total utility* of items and of their marginal utility to consumers are their relative use and exchange values. Water has great use value, but limited exchange value; diamonds have limited use value but great exchange value.

Water is given a far higher total utility value than diamonds because you die if you do not have water, on the other hand, the use value of diamonds is far lower. So, total utility reflects the importance of the use values of commodities.

However, once the need for the item has been satisfied, acquisition of additional amounts of an item depends not on the use value, but on the exchange value of the item (which neo-classical economics assumes is determined by relative scarcity).

Underpinning marginal utility explanations of value is, in fact, Smith's description of use values and exchange values. While focusing on the marginal utility of an item to a person *appears* to make considerations of use value and exchange value unimportant, this is an illusion.

Although the reasoning behind the concept of marginal utility is elegant, it is built on a number of usually unrecognized presumptions.

Human beings are assumed to be naturally *competitively acquisitive* and naturally *conservative* (that is, they try to acquire what other people have; and they try to hold on to what they have acquired). The concept can, therefore, only be applied to communities in which people behave in these ways.

It conflates a range of very different reasons why people might need or want goods and services and assumes that investigation of these non-exchange values is outside the scope or interest of economics. It assumes that people *rank* their disparate needs and wants, and acquire items in terms of that ranking. That is, people are *rational*, and their rationality conforms with economic presumptions of what drives human behavior.

While superficially it might seem an elegant resolution of a difficult problem, the issue of *scarcity* is not as clear-cut as marginal utility definitions might suggest. We all know that the scarcity of diamonds is

contrived. World diamond markets deliberately release small quantities of diamonds so that the price will remain high. That is, scarcity is very often not a "natural" condition, it is a condition which is contrived and manipulated to ensure that the value of particular commodities remains high or low as determined by the community. Communities manipulate prices.

The price of objects in the market place is much more a consequence of the *perceived importance* and value of goods and services in the community than it is of their relative scarcity.

In other words, rather than price being determined by marginal utility, marginal utility is manipulated by the community to control the relative values of commodities (which are valued for both their intrinsic use values and for their usefulness in attaining, maintaining and assessing status and prestige). Relative "prices" are set and adjusted to the requirements of the community's social definitional system.

Rather than exchange values being determined by scarcity, they are much more likely to be determined by the perceived usefulness of accumulating and consuming particular goods and services in enhancing and maintaining status, prestige and self-image.

Since scarcity is *one of the means* by which value is determined in Western communities, it must be manipulated to ensure that the values of goods and services reflect their social definitional importance (we deal with this further in the section: [The nature of value](#)).

958 Although economics does not argue the case for the labor theory of value any longer, neo-classical economic argument still promotes both positions. If people in a community do not commit themselves to sustained hard work, the community will suffer; and, if those who create wealth (the 'owners' of productive enterprises) are not allowed to keep their wealth, the economy will grind to a halt.

Of course, as events in this 1st decade of the 21st century have shown, wealth, in a global capitalist economy, is most effectively created by financial manipulation not labor exploitation. It would be difficult to show any valid connection between wages and wealth creation in the financial activities of major capitalist [wealth creators](#).

While these beliefs are not required by current theories of the nature of economic value, the understandings which sprang from them remain part of the ideological baggage of capitalism.

959 As has been described elsewhere (see [The Poor are Lazy](#)), this 'problem' has driven social policy through much of the 17th to 21st centuries in Western communities. It seemed imperative to those who had gained power that everybody be put to work.

This was not simply because it was believed that societies became wealthy through hard work. It was, far more importantly, because of an explicit or implied belief in the possibility of establishing a utopia on earth, of, as Oliver Cromwell (see Trevor-Roper 1972 pp.281ff) believed, reforming society and vanquishing the forces which were delaying the return of Christ and the establishment of his millenarian kingdom.

The millenarian kingdom would be a perfect society based on the understandings which middle class British people were convinced were expressed in the *laws of nature* established by God for the perfection of life on earth, which Western Europeans were in the process of uncovering (see [From the Subversion of Tradition to Plotting the Future](#)).

⁹⁶⁰ See [Reciprocity and Exchange](#) for more on this.

⁹⁶¹ A few years ago, an elderly lady who had been a neighbour of mine in a village on an island in Kiribati came to stay with me for a short while. She had been a close friend of my wife's. When she was leaving, she came to me and asked whether she could take a container she had found in a kitchen cupboard. It was a disused ice-cream container.

I, of course, said she could have it, but, went on to explain that I would rather take her to a large department store (she had never before encountered stores of the size which is common in Western towns) and obtain a set of containers she could take with her as she returned home.

Her response was that this was not what she wanted. As she explained: 'When I take this out I can say to people around me "This is Bill's container"'.

I had automatically focused on the exchange value of the container. She had, just as automatically, focused on the container as an expression of a relationship between her and myself.

⁹⁶² This is a major reason why production is open-ended in Western communities. Since I am competing with others who also wish to get the cash from your pocket, I devise 'newer', 'better' (it's all about perception!) products which I attempt to persuade you should displace any products you have already acquired. Over time this results, inevitably, in communities of people who 'throw-away' 'outdated' objects in favor of more recently promoted alternatives.

⁹⁶³ Why else would most people buy a new car? The act of driving it off the dealer's site substantially lowers its investment value. The genuine use value of a new car as against one which is a few years old is surely negligible.

⁹⁶⁴ For more on the nature of public and private credit, see [The Nature and Importance of Public and Private Credit: Only Believe....](#)

⁹⁶⁵ Keynes discussed *The Essential Properties of Interest and Money* in ^œ[Keynes \(1936\), *General Theory of Employment, Interest, and Money*, Chapter 17](#). Despite the strange charge often leveled at this discussion by those who should know better, this is *not* a 'socialist' explanation!

For a discussion of the nature of money from a Modern Money Theory (MMT) perspective, see:

L. Randall Wray, 2012, *Modern Money Theory: A Primer on Macroeconomics for Sovereign Monetary Systems* (Palgrave MacMillan, New York), Chapter 8 (pp. 261-81): ^œ[What is Money? Conclusions on the Nature of Money](#);

Joe Guinan, ^œ[Modern money and the escape from austerity](#) (*Renewal*, Vol 22 No 3/4 2014).

Bill Mitchell (2011) has expanded on the nature of money in modern monetary theory:

The most important misperception is that MMT is in some way outlining an ideal or a new regime that could be introduced. The reality is that MMT just describes the system that most countries in the world live under and have lived under since 1971, when the US president at the time, Richard Nixon, suspended the convertibility of the US dollar into gold. At that point, the system of fixed exchange rates-in which all countries agreed to fix their currencies against the US dollar, which was in turn benchmarked in price against gold-was

abandoned. So since that day, most of us have been living in what we call a fiat currency system

In a fiat currency system, the currency has legitimacy because of legislative fiat: the government tells us that's the currency and then legislates it as such. The currency has no intrinsic value. What gives it value, what motivates us to use the currency that the government suggests, is the fact that all tax obligations are denominated in and have to be extinguished with that currency. We have no choice. If you live in America, for example, you have to pay American taxes to the IRS with American dollars. So demand for the currency, otherwise worthless bits of paper, is driven by the fact that all tax obligations have to be extinguished with that currency.

Once you consider that, then you immediately realize that the national government is the monopoly issuer of that currency. That means that the national government in such a system can never be short of that currency; it can never run out of money. It doesn't need you or I to lend it money or you and I to pay taxes to get more money. It can never run out of money. That's the first basic insight of MMT: governments are not constrained in their spending by a need to raise revenue.

If you extend that logic a little further, you might ask, "Well, don't we pay taxes and buy bonds so that the government can spend?" Well, you first have to ask yourself the question, "Where do you get the money to pay taxes and buy bonds?" And the answer is that we can't get our hands on the currency until the national government spends it. Spending is the prior act in a fiat monetary system; taxing and borrowing are following acts. In effect, the government is only taxing what it has already spent, and it's only borrowing back money that it has already spent. Once you start pursuing this logic, you realize that most of the propositions that are occupying the current debate around the world are based upon false premises.

Another basic premise of MMT is that we now live in a world of floating exchange rates, so all of the imbalances in the foreign exchange market are resolved by the price of the currency fluctuating. What that means is that domestic policy instruments- the central bank and fiscal policy-are free to target domestic policy goals knowing that the exchange rate will resolve the currency imbalances arising from trade deficits, trade surpluses, et cetera. (Winston Gee, ⁹⁶⁶[Debt, Deficits, and Modern Monetary Theory](#), Harvard International Review, October 16, 2011)

⁹⁶⁶ See [The nature of 'Work'](#) for more on this.

⁹⁶⁷ For this reason it needs to be recognized that those who legitimately accumulate money in a society are not necessarily those directly involved in 'economic' activity. After all, if one thinks about it, those most successful in accumulating money in Western communities are seldom those who are directly involved in productive activity. The 'financiers', who accumulate vast sums, might be considered facilitators but they are seldom truly creative individuals.

Similarly, while Western people often express strong disapproval of the accumulation of 'wealth' amongst 'politicians' in other communities, they also can be seen as 'facilitators', often very similar in their activity to the financiers of the West - the same book can have very different covers!

968 How status and prestige is assessed varies between communities. In Western communities it is primarily assessed through legitimately acquired material wealth, summed up in 'money worth'. If one sees a 'wealthy' person but has no idea where the wealth came from, it seems perfectly reasonable to ask, "How did he get his wealth?". We feel the need to know that it has been legitimately acquired.

One of the important reasons why inflation is often unsettling in Western communities is that it can appear to dilute the status and prestige distinctions, based on variations in 'wealth', which people recognize. It is also one of the reasons why so many people are strongly opposed to 'social welfare' which might 'elevate' the 'undeserving' and give them an illusion of status which they have not 'earned'.

In other communities very different forms of status and prestige assessment are employed. Michael Young (1971), in a book entitled *Fighting with Food: Leadership, Values and Social Control in a Massim Society*, gave a description of the kinds of ritual and other observances required of 'successful' individuals in a Massim community on Goodenough Island, Papua New Guinea. Status and prestige were directly linked to successful yam growing. But the value of their gardening activities depended not only on the result - large yams - but on the means by which the large yams were obtained.

Once, while living on a central Pacific island in the Kiribati group, I was socializing with a group of villagers around a fire in an evening. They were telling amusing stories of the past. One of the stories told, which was received with uproarious laughter by those present, was of a Chinese trader who had lived on the island some thirty to forty years earlier. In line with practices on the island, he had decided that he would demonstrate that he was worthy of respect by growing very large 'babai' (pit grown yams). He set about doing this by fertilising them with pig faeces.

The question was, how could he possibly have thought that babai grown using pig faeces would be acceptable? He not only gained no respect, he became a long-standing joke, someone who thought that the result was all that mattered. Everyone knew that the result required particular forms of activity and behavior.

969 see [Open-ended and Closed Utilization of the Material Environment](#) for more on this.

970 This is why Western people can so easily discard 'old', 'unfashionable' 'out-dated' items. They are no longer perceived as containing significant 'exchange value'. In fact, by retaining them, one is saying something about one's ability to accumulate 'valuable' possessions. It becomes necessary to discard them or feel that one is losing both self-respect and the approval of others.

The rampant growth in investment banking and consequent generation of money wealth with little or no connection to the production of commodities has been possible because the accumulation of money is no longer tied to 'habits of industry'. Now, the [accumulation of money](#) is simply assumed to demonstrate one's social responsibility.

971 While it has been postulated that the industrialized world can achieve significant dematerialization through improvements in technology, Christopher Magee and Tessaleno Devezas, in a study entitled ^œ[A simple extension of dematerialization theory: Incorporation of technical](#)

[progress and the rebound effect](#), show that this is unlikely to occur. As a *EurekAlert* summary explains:

Are humans taking more resources from the Earth than the planet can safely produce? The answer lies partly in whether we can "dematerialize," or reduce the amount of materials needed to produce goods and services.

While some scientists believe that the world can achieve significant dematerialization through improvements in technology, a new MIT-led study finds that technological advances alone will not bring about dematerialization and, ultimately, a sustainable world.

The researchers found that no matter how much more efficient and compact a product is made, consumers will only demand more of that product and in the long run increase the total amount of materials used in making that product.

Take, for instance, one of the world's fastest-improving technologies: silicon-based semiconductors. Over the last few decades, technological improvements in the efficiency of semiconductors have greatly reduced the amount of material needed to make a single transistor. As a result, today's smartphones, tablets, and computers are far more powerful and compact than computers built in the 1970s.

Nonetheless, the researchers find that consumers' demand for silicon has outpaced the rate of its technological change, and that the world's consumption of silicon has grown by 345 percent over the last four decades. As others have found, by 2005, there were more transistors used than printed text characters.

"Despite how fast technology is racing, there's actually more silicon used today, because we now just put more stuff on, like movies, and photos, and things we couldn't even think of 20 years ago," says Christopher Magee, a professor of the practice of engineering systems in MIT's Institute for Data, Systems, and Society.

"So we're still using a little more material all the time."

The researchers found similar trends in 56 other materials, goods, and services, from basic resources such as aluminum and formaldehyde to hardware and energy technologies such as hard disk drives, transistors, wind energy, and photovoltaics. In all cases, they found no evidence of dematerialization, or an overall reduction in their use, despite technological improvements to their performance.

"There is a techno-optimist's position that says technological change will fix the environment," Magee observes. "This says, probably not."

(*EurekAlert*, [Study: Technological progress alone won't stem resource use](#): Researchers find no evidence of an overall reduction in the world's consumption of materials, Massachusetts Institute of Technology, Public Release: 19-Jan-2017)

(Original paper: Christopher L. Magee and Tessaleno C. Devezas, [A simple extension of dematerialization theory: Incorporation of technical progress and the rebound effect](#), *Technological Forecasting and Social Change*, Vol. 117, April 2017, Pp 196-205)

⁹⁷² see [Status and Possessions](#) for more on this.

973 In modern law, the practice of charging an illegal rate of interest for the loan of money. In Old English law, the taking of any compensation whatsoever was termed usury. With the expansion of trade in the 13th century, however, the demand for credit increased, necessitating a modification in the definition of the term. Usury then was applied to exorbitant or unconscionable interest rates.

In 1545 England fixed a legal maximum interest; any amount in excess of the maximum was usury. The practice of setting a legal maximum on interest rates later was followed by most states of the United States and most other Western nations.

In some Muslim countries the charging of interest is still forbidden, at least in theory.

The Qur-'an, the Muslim holy book, prohibits the charging of interest, although various methods have been devised in order to circumvent the prohibition. For instance, a higher price may be charged for goods when payment is deferred than is charged if payment is made in advance or upon delivery.

("usury." *Encyclopedia Britannica*. 2010. Encyclopedia Britannica Online. 03 Sep. 2010

^œ<http://www.britannica.com/EBchecked/topic/620474/usury>)

974 Gerald Epstein and Juan Montecino have explored the consequences of deregulation of financial services in the US since the 1970s. As they say,

A healthy financial system is one that channels finance to productive investment, helps families save for and finance big expenses such as higher education and retirement, provides products such as insurance to help reduce risk, creates sufficient amounts of useful liquidity, runs an efficient payments mechanism, and generates financial innovations to do all these useful things more cheaply and effectively. All of these functions are crucial to a stable and productive market economy. But after decades of deregulation, the current U.S. financial system has evolved into a highly speculative system that has failed rather spectacularly at performing these critical tasks.

What has this flawed financial system cost the U.S. economy? How much have American families, taxpayers, and businesses been "overcharged" as a result of these questionable financial activities? In this report, we estimate these costs by analyzing three components: (1) rents, or excess profits; (2) misallocation costs, or the price of diverting resources away from non-financial activities; and (3) crisis costs, meaning the cost of the 2008 financial crisis. Adding these together, we estimate that the financial system will impose an excess cost of as much as \$22 .7 trillion between 1990 and 2023, making finance in its current form a net drag on the American economy...

To better understand the mechanisms and financial practices that have led to these excess costs, we describe in detail some of the ways in which banks and other financial institutions have overcharged for their services. We show how the asset management industry charges excessive fees and delivers mediocre returns for households trying to save for retirement; how private equity firms grab excessive levels of payments from pension funds and other investors while often worsening wages and employment opportunities for workers in the companies they buy; how hedge funds underperform; and how predatory lenders exploit some of the

most vulnerable people in our society. From this bottom-up perspective, we can see more clearly how the levels of overcharging we identified at the macro level actually come about in practice. (Gerald Epstein, Juan Antonio Montecino, ⁹⁶[Overcharged: The High Cost of High Finance](#), Roosevelt Institute, July 12, 2016)

⁹⁷⁵ Economics is, of course, all about involvement in commoditized activity. It is the 'instruction manual' for the accumulation/ expenditure of exchange value and consequent accrual of status/ prestige and enhanced self-image.

It provides the rationale and tools for the quantification of the social definitional value of individual accumulations of commodities and the similar quantification of the social definitional value which accrues from the consumption of commodities.

That is, economics is a fundamental feature of, and inextricably bound into, the Western system of status and prestige accrual and maintenance.

The intricacy of economics in Western communities is matched by the intricacy of explanations of and directions for involvement in such status and prestige systems as the Potlatch and the Kula Ring. Systems of status and prestige exist both to facilitate the achievement of status and prestige and to provide means for assessing attained status.

It is inaccurate to claim that in Western communities people *achieve* status, while in other communities status is *ascribed*. Status is both ascribed and achieved in *all* communities. What differs is not the achievement of status but *the means by which it is achieved*.

⁹⁷⁶ See [History of the Emergence of Capitalism](#) for more on this.

⁹⁷⁷ See [Primary and Secondary Ideology](#) for more on this.

⁹⁷⁸ Western people, in social interaction, tend to focus on the objects of an interaction rather than on the participants. The historical movement which produced the current Western understanding of social interaction has already been described:

Previously hierarchical obligations and responsibilities were transformed into 'terms of rent' and attached to the property rather than to the people involved. A social relation between individuals had assumed 'in their eyes, the fantastic form of a relation between things'.

The focus of Europeans was being fixed on the *legal obligations* and *quantifiable costs* of social interaction, attached to or incorporated into the *object* of any exchange, rather than the persons involved in the interaction.

(See [From personalized, cooperative hierarchical relationships to object-oriented, competitive oppositional relationships](#) for more on this.)

⁹⁷⁹ See [From Interdependence to Independence](#) for more on this.

⁹⁸⁰ Henry Giroux has provided a clear explanation of the impact of neoliberalism on the focusses and nature of higher education since the 1950s:

Conservatives have a long history of viewing higher education as a cradle of left-wing thought and radicalism. As early as the 1920s, conservatives were waging an ideological war against liberal education and the intellectuals who viewed higher education as a

site of critical dialogue and a public sphere engaged in both the pursuit of truth and in developing a space where students learned to read both the word and world critically. Conservatives were horrified by the growing popularity of critical views of education and modes of pedagogy that connected what students were taught to both their own development as critical agents and to the need to address important social problems. During the McCarthy era, criticism of the university and its dissenting intellectuals cast a dark cloud over the exercise of academic freedom, and many academics were either fired or harassed out of their jobs because of their political activities outside the classroom or their alleged communist fervor or left-wing affiliations.

In 1953, the Intercollegiate Studies Institute (ISI) was founded by Frank Chodorov in order to assert right-wing influence and control over universities. ISI was but a precursor to the present era of politicized and paranoid academic assaults. In fact, William F. Buckley, who catapulted to fame among conservatives in the early 1950s with the publication of *God and Man at Yale*, in which he railed against secularism at Yale University and called for the firing of socialist professors, was named as the first president of ISI. The former president of ISI, T. Kenneth Cribb Jr., delivered the following speech to the Heritage Foundation in 1989, a speech that perfectly captures the elitist and ruling-class ideological spirit and project behind ISI's view of higher education:

We must ... provide resources and guidance to an elite which can take up anew the task of enculturation. Through its journals, lectures, seminars, books and fellowships, this is what ISI has done successfully for 36 years. The coming of age of such elites has provided the current leadership of the conservative revival. But we should add a major new component to our strategy: the conservative movement is now mature enough to sustain a counteroffensive on that last Leftist redoubt, the college campus.... We are now strong enough to establish a contemporary presence for conservatism on campus, and contest the Left on its own turf. We plan to do this greatly by expanding the ISI field effort, its network of campus-based programming. [T. Kenneth Cribb, [Conservatism and the American Academy: Prospects for the 1990's](#), *The Heritage Foundation*, Lecture #226 on Political Thought, December 7, 1989]

ISI was an early effort on the part of conservatives to "'take back' the universities from scholars and academic programs regarded either as too hostile to free markets or too critical of the values and history of Western civilization." (10) As part of an effort to influence future generations to adopt a conservative ideology and leadership roles in "battling the radicals and PC types on campus," the Institute was just one of many right-wing foundations and institutes to have emerged since the 1980s, in particular, to provide numerous scholarships, summer programs and fellowships.

(Henry A. Giroux, [Higher Education and the Promise of Insurgent Public Memory](#), *Truthout* | News Analysis, Tuesday, 03 March 2015)

⁹⁸¹ See Milan Zafirovski (1998) for a discussion of the nature of this connection.

⁹⁸² I trust the reader will forgive me for not indulging in 'mathematical' 'demonstrations' of all this.

Such 'demonstrations' are merely an attempt on the part of those who should know better to convince the rest of us that they are erudite, 'scientifically minded' souls. Despite the 'mystique' built around mathematical constructs to bolster their legitimacy, such descriptions/ explanations merely rely on one of the human 'languages' upon which we all rely for communication.

The virtue of mathematical 'solutions' lies in their descriptive/ explanatory precision. But, inevitably, such stripped-down communication loses nuance. I could, were I proficient in written Mandarin, Cantonese, Russian... provide descriptions/ explanations based on Chinese characters or Cyrillic script (which, I might argue, more concisely or clearly explain the issues) but why bother? After all, the ideas are adequately expressed in run-of-the-mill English!

983 Marxism was extremely influential through most of the 20th century and still has a strong following. The Web site <http://www.marxists.org/> provides a comprehensive coverage of Marxist writings. For a clear summary of Marx's ideas see Fischer E. and Marek F. 1973, *Marx in His Own Words* (Translator: Anna Bostock) Penguin Books, Harmondsworth

984 The social philosophers of Western Europe, from the late 15th century onwards, had engaged in a search for Utopia, a real and yet an ideal future toward which the present should be molded. Marx had his own particular variant of a 'golden age' toward which humanity was evolving. See [Toward the Millennium](#) for more on this.

985 See [Redistributive System](#) for more on this.

986 For discussion of the notion of spheres of exchange, see Guyer Jane I. 1995, Wealth in People, Wealth in Things-Introduction, *The Journal of African History* January, Vol. 36 No. 1 p. 83;
Pannell Sandra 1993, 'Circulating Commodities': Reflections on the Movement and Meaning of Shells and Stories in North Australia and Eastern Indonesia, *Oceania*, September Vol. 64 No. 1 p. 57

987 See [The Nature of categorization](#) for more on this.

988 **formal system.** (2010). In *Encyclopedia Britannica*. Retrieved August 04, 2010, from Encyclopedia Britannica Online:
<http://www.britannica.com/EBchecked/topic/213751/formal-system>

989 This is, of course, not the only such set of relationship possibilities. Firstly, the illustration only deals with horizontal relationships, that is, relationships perceived as existing between individuals who see themselves as more or less socially 'equal'. Other possibilities might include continua of complementarity, displacement, containment, and accompaniment.

Additionally, there are the sets of relationships which occur within other spheres of social life.

The reductionist enterprise undertaken in social exchange theory strips away and treats as irrelevant all such multi-dimensional aspects of human relationships.

990 We need to remember Levi-Strauss' cautionary explanation of these sorts of models:

[C]onscious models... are by definition very poor ones since they are not intended to explain the phenomena but to perpetuate them. (Levi-Strauss 1963, p. 282).

When corporations and those who are beholden to them insist on the maintenance and strengthening of models which require the deregulation of communal safeguards, one should recall that important economists' warning: "There's no such thing as a free lunch"!

As Samuels and Shaffer put it:

Rather than creating costs, both regulation and deregulation shift them... Regulation and deregulation each consists of lower costs for one party and higher costs for the other.
(Samuels & Shaffer 1982, p. 467)

The 'rules and regulations' in any community are expressions of their basic cognitive and structural interactional principles: to deny and attack them in the interests of 'greater freedom' for 'individuals' is to threaten the viability of the communities which require them.

⁹⁹¹ Our tolerance of evil is always a [consequence of the ideologies](#) to which we have committed ourselves. Hal Brands, bound by the peculiar ideological frames of Western neo-conservatism, in a contemplative essay he entitles 'The Age of Amoralism: Can America Save the Liberal Order Through Illiberal Means?', provides us with an example of the pseudo-moral concern in which humans so readily indulge to 'justify' their barbarism. As he opines:

"How much evil we must do in order to do good," the theologian Reinhold Niebuhr wrote in 1946. "This, I think, is a very succinct statement of the human situation." Niebuhr was writing after one global war had forced the victors to do great evil to prevent the incalculably greater evil of a world ruled by its most aggressive regimes. He was witnessing the onset of another global conflict in which the United States would periodically transgress its own values in order to defend them. But the fundamental question Niebuhr raised - how liberal states can reconcile worthy ends with the unsavory means needed to attain them - is timeless. It is among the most vexing dilemmas facing the United States today.

U.S. President Joe Biden took office pledging to wage [a fateful contest between democracy and autocracy](#). After Russia invaded Ukraine, he summoned like-minded nations to a struggle "between liberty and repression, between a rules-based order and one governed by brute force." Biden's team has indeed made big moves in its contest with China and Russia, strengthening solidarity among advanced democracies that want to protect freedom by keeping powerful tyrannies in check. But even before the war between Hamas and Israel presented its own thicket of problems, an administration that has emphasized the ideological nature of great-power rivalry was finding itself ensnared by a morally ambiguous world.

(Hal Brands, ^œ[The Age of Amoralism: Can America Save the Liberal Order Through Illiberal Means?](#), *Foreign Affairs*, February 20, 2024)

And, as the author claims, 'the moral compromises of U.S. policy today are modest compared with those of World War II or the Cold War'. Despite the evil in which the United States indulges in this century, our intrepid author assures us that

There's no reason to be unduly embarrassed about this. A country that lacks the self-confidence to defend its interests will lack the power to achieve any great purpose in global affairs. Put differently, the damage the United States does to its values by engaging

dubious allies, and engaging in dubious behavior, is surely less than the damage that would be done if [a hyperaggressive Russia or neototalitarian China](#) spread its influence across Eurasia and beyond.

Such rationalizing can be used to 'justify' any and all of the horrors perpetrated by a dying empire in the 21st Century as it attempts to hold on to its various perceived 'advantages' around the world: from '[targeted killing](#)'; to [secret prisons and 'biological research laboratories'](#) indulging in torture of 'vanished' souls designated 'terrorist suspects' by those involved; to [carpet-bombing](#); and [genocide](#). And, all of this is claimed to be 'necessary evil' in which the United States, reluctantly, 'transgresses its own values in order to defend them'.

⁹⁹²_(11/10/16) Bill Black has a perspective on the nature of this prize in economics. As Black observes:

... The prize in economics in honor of Alfred Nobel is unique. It is not part of the formal Nobel Prize system. It was created by a large Swedish bank and it is the only "science" prize frequently given to those who proved incorrect. The theme of my series is how poorly the work has stood the test of predictive accuracy. Worse, it has led to policies in the private and public sector that are criminogenic and explain our recurrent, intensifying financial crises.

I want to stress that the reason that the work has proven so faulty is not that the Nobel Laureates in economics are incompetent or evil. Indeed, that is part of my theme. Economics is not a hard science and its pretensions that it is have helped make even brilliant economists vulnerable to grievous error, particularly those who were most dogmatic about their hostility to even democratic governments. A recurrent defect that will emerge is the failure of economics to take ethics seriously.

(William K. Black, (Benzinga Contributor), ^œ [Roger Myerson's Paean to Plutocracy](#), June 05, 2013.)

Bill Black is too generous in accepting the good faith of those involved in both establishing the prize and in the later selection of its recipients. Yves Smith has provided a little more context, and raised the issue of its ideological focus. As she says,

...[A]n influential Swedish economist, Assar Lindbeck, over time became more neoclassical in his policy stance, and in parallel, had major influence over the way the Sveriges Riksbank Prize in Economic Sciences in Memory of Alfred Nobel [was] awarded. In other words, this is yet another case example of how a strategically placed individual did considerable harm.

... [W]hen the facts are laid out, Lindbeck's conduct certainly seems to meet the "if it walks like a duck and quacks like a duck" standard.

I would go further than this - Lindbeck provided the neoliberal lens which has focused this prize through succeeding decades.

The deliberately disguised nature of the prize, ensuring that most people would fail to distinguish it from Nobel prize awards in other fields, meant that its [neoliberally oriented recipients](#) (whether of Galbraith's Tweedledum or Tweedledee persuasion) would become accepted as the leading authorities in the field of economics.

...[T]he halo conferred by the prize can - and often has - lend credibility to policies that harm the public interest, for example by driving inequality and making financial crises more likely.
(Avner Offer, ^œ[Nobel Economics Versus Social Democracy](#), *Project Syndicate*, October 10, 2016)

As ^œ[Avner Offer has explained](#):

Lindbeck's doctrines tallied with those of the IMF, the World Bank, and the U.S. Treasury, which motivated the Washington Consensus. Privatisation, deregulation, and free capital movement enriched business and finance, led to acute crises and reduced welfare in client economies. Economists did not anticipate that these policies would also instigate a 'corruption eruption'. Corruption then spilled over to the developed countries, and is now pervasive. This corruption is the unintended consequence of rational choice me-first premises, and has done a lot to harm the common good and to foster mistrust in governing elites. Swedish political scientist Bo Rothstein has petitioned the Swedish Academy (of which he is a member) to suspend the prize until the effect of economics on corruption is investigated.

(^œ[The Nobel Prize in Economics: How It Took a Hard Neoliberal Turn, Naked Capitalism](#), Posted on September 27, 2016 by Yves Smith)

⁹⁹³ Such pressures have not lessened in the post-Cold War years. The following is a brief excerpt from a much longer and more detailed commitment by all the nations of the world to 'human rights' and 'social development' on the occasion of the 50th anniversary of the United Nations (^œ[UN 1995](#)):

We heads of State and Government are committed to a political, economic, ethical and spiritual vision for social development that is based on human dignity, human rights, equality, respect, peace, democracy, mutual responsibility and co-operation, and full respect for the various religious and ethical values and cultural backgrounds of people. Accordingly, we will give the highest priority in national, regional and international policies and actions to the promotion of social progress, justice and the betterment of the human condition, based on full participation by all.

The resolutions of the World Summit for Social Development list, in detail, the concerns of First World governments during the 1990s, transferred onto the rest of the world as the concerns of all nations.

⁹⁹⁴ It was the practice of indentured labor which created the large Indo-Fijian population of the present and has resulted in ongoing tension between indigenous Fijian and Indian populations. See Lal (1983) for a discussion.

⁹⁹⁵ The Boer War (1899-1902) had just started and a great deal of British propaganda of the time was painting the Boers as barely civilized abusers of native populations.

⁹⁹⁶ France, in its 'overseas departments', has, through the post-WW2 period, pursued settler colonial policies, gradually shifting the voter balance from a preponderance of indigenous individuals and communities to a preponderance of 'settlers', shifting the 'democratic' balance in favor of strengthening ties with France.

This has resulted, in some places, in growing resistance against French moves, as in New Caledonia in 2024: ^œ[A state of emergency in France's South Pacific island territory of New Caledonia](#)

⁹⁹⁷ For a 2024 example of this see ^œ[Palestinian family being harassed and evicted from their land by 'settlers'](#)

⁹⁹⁸ *Traditional* Messianic Judaism (the ^œ[presumption of a future messiah by Jews](#)) as distinct from 21st century 'Messianic Judaism' referring to Jewish converts to Christianity.

⁹⁹⁹ Jonathan Kuttub, in a discussion on the *Al Jazeera* site 'The Bottom Line', gives an excellent explanation of the nature of 'Christian Zionism' and of the Palestinian Hamas movement: ^œ[Why do evangelical Christians support Israel? | The Bottom Line](#) (December 26, 2023)

¹⁰⁰⁰ Given Israel's track record of false and misleading propaganda to 'justify' their own crimes against humanity, it is reasonable to insist, as the UN Human Rights Chief explained on November 7th, 2023, that

'prompt, transparent and independent investigations into allegations of war crimes and crimes against humanity, perpetrated in Israel and in the Occupied Palestinian Territory on 7 October 2023 and thereafter'

should be undertaken - as happened in the '^œ[UN Commission of Inquiry on Syria: ISIS is committing genocide against the Yazidis](#)' (*Office of the High Commissioner for Human Rights*, Geneva, 16 June 2016)

In response, Israel provided no independently verifiable information to support their claims of sexual violence committed by the Palestinians involved in the October 7 attack. Until they do, it is reasonable to presume that no such evidence is available.

As the UN Human Rights Commissioner's statement explained:

"Independent investigators must be given the necessary resources, support and access required to conduct prompt, thorough and impartial investigations into crimes allegedly committed by all parties to the conflict," the experts said, calling on Israel, the Palestinian Authority and the de facto authorities in Gaza to cooperate fully with investigations.

(^œ[UN experts call for full and independent investigations into all crimes committed in Israel and the Occupied Palestinian Territory](#), *Office of the High Commissioner for Human Rights*, Geneva, November 27, 2023)

Israel has yet (February 19, 2024) to provide the access and support required for the UN High Commissioner for Human Rights to reasonably carry out such an investigation. *Unless they do, it is reasonable to presume that no such evidence is available.*

¹⁰⁰¹ Tom Segev, in a *Foreign Affairs* article entitled 'Israel's Forever War: The Long History of Managing - Rather Than Solving - the Conflict', described both Israel's post-October 7th, 2023 'military campaign in Gaza driven by rage and the desire for revenge' and the history of Zionist determination to seize the traditional land of Palestine and remove its historic 'Arab population':

His assertion that 'The Palestinians also hold on to the illusion of return, the principle that they will one day be able to reclaim their historic homes in Israel itself - a kind of Palestinian Zionism' is, however, a false equivalence.

The historical and mandatory state of Palestine was an existing, internationally legally recognized nation, as explained in an⁹⁸[ICJ presentation by Ralph Wilde for the League of Arab States](#), (01 March, 2024).

Tom Segev:

For Palestinians, the Gaza war is the worst event they have experienced in 75 years. Never have so many of them been killed and uprooted since the nakba, the catastrophe that befell them during Israel's war of independence in 1948, when hundreds of thousands of Palestinians were forced to give up their homes and became refugees. Like the Israelis, they also point to terrible acts of violence: by late March, Israel's military campaign had taken the lives of tens of thousands of Palestinians, among them thousands of children, and rendered well over a million homeless. As the Palestinians see it, the Israeli offensive is part of a larger plan to incorporate all Palestinian lands into the Jewish state and get them to abandon Gaza entirely - an idea that has in fact been raised by some members of Netanyahu's government. The Palestinians also hold on to the illusion of return, the principle that they will one day be able to reclaim their historic homes in Israel itself - a kind of Palestinian Zionism that, like Israel's maximalist aspirations, can never come true.

Ever since the first Zionists began to conceive of a Jewish homeland in Palestine in the late nineteenth century, Jewish leaders and their Arab counterparts have understood that an all-encompassing settlement between them was likely impossible. As early as 1919, David Ben-Gurion, Israel's future first prime minister, recognized that there could be no peace in Palestine. Both the Jews and the Arabs, he observed, were claiming the land for themselves, and both were doing so as nations. "There is no solution to this question," he repeatedly declared. "There is an abyss between us, and nothing can fill that abyss." The inevitable conflict, he concluded, could at best be managed - limited or contained, perhaps, but not resolved.

(Tom Segev, ⁹⁹[Israel's Forever War: The Long History of Managing - Rather Than Solving - the Conflict](#), *Foreign Affairs*, April 23, 2024

¹⁰⁰² Pappé continues:

In order to square this circle, the leadership insisted that their eliminatory actions against the Palestinians were a 'retaliation' or 'response' against Palestinian actions. But very soon, when this leadership wanted to move into more substantial actions of elimination, they deserted the false pretext of 'retaliation' and just stopped justifying what they did.

In this respect, there is a correlation between the way the ethnic cleansing in 1948 developed and in the operations of the Israelis in Gaza today. In 1948, the leadership justified to itself every massacre committed, including the infamous massacre of Deir Yassine on 9th April, as the reaction to a Palestinian action: it could have been throwing stones at the bus or attacking a Jewish settlement, but it had to be presented domestically and externally as something that doesn't come out of the blue, as self-defence. Indeed, that is why the Israeli army is called "Israeli Defence Forces". But because it is a settler colonial project it cannot rely all the time on 'retaliation'.

The Zionist forces began the ethnic cleansing during the Nakba in February 1948, for a month all these operations were presented as retaliation to the Palestinian opposition to the UN partition plan of November 1947. On 10th March 1948, the Zionist leadership ceased talking about retaliation and adopted a master plan for the ethnic cleansing of Palestine. From March 1948 to the end of 1948 the ethnic cleansing of Palestine that led to the expulsion of half of Palestine's population, the destruction of half of its villages and the de-Arabisation of most of its towns, was done as part of a systematic and intentional master plan of ethnic cleansing.

Similarly, after the occupation of the West Bank and the Gaza Strip in June 1967, whenever Israel wanted to change fundamentally the reality or engage in a full scale ethnic cleansing operation, it dispensed with the need of justification.

We are witnessing a similar pattern today. At first the actions were presented as retaliation to operation Tufun al-Aqsa, but now it is the war named "sword of war" aiming to return Gaza under direct Israeli control, but ethnically cleansing its people through a campaign of genocide.

The big question is why politicians, journalists, and academics in the west fell into the same trap they had fallen into in 1948? How can they still today buy into this idea that Israel is defending itself in the Gaza Strip? That it is reacting to the actions of 7th October?

Or maybe they are not falling into the trap. They might know that what Israel is doing in Gaza is using 7th October as a pretext.

Either way, so far, the Israelis claim to a pretext every time they assault the Palestinians, has helped the state to sustain the immunity shield that allowed it to pursue its criminal policies without fear of any meaningful reaction from the international community. The pretext helped to accentuate the image of Israel as part of the democratic and western world, and hence beyond any condemnation and sanctions. This whole discourse of defence and retaliation is important for the immunity shield that Israel enjoys from governments in the Global North...

(Ilan Pappé, ^œ[It is dark before the dawn, but Israeli settler colonialism is at an end](#), *The Long View*, Vol. 6 I.1, 01 February 2024)

¹⁰⁰³ As they continue:

Talking heads promising wisdom, hard truths or explanations for the conflict from across the political spectrum are also everywhere. As researchers both specialising on Palestine, we've taken a keen interest in what they've been saying. And on the side of Israel's apologists, we've seen two main narratives at work.

Both are deeply flawed. The first ignores all context to portray Israel as the undeniable victim of a brutish neighbour. The second draws selectively on context to portray Hamas and Israel as more or less equal adversaries tragically unable to come to an accord. This narrative, designed to appeal to moderates and confound pro-Palestinian messaging, argues that everyone has blood on their hands in this endless cycle of violence - meaning no easy condemnation of Israel is possible....

When the capacity of one side to exert violence over the other is so overwhelmingly disproportionate, surely even to the most moderate of moderates, something rings discordant here.

At the start of the invasion, Israel's defence minister said that "We are fighting human animals and we are acting accordingly". Hundreds are now being killed every day, and when Palestinians in the north obeyed Israel's order to travel south they were bombed anyway. The tired metaphor of 'shooting fish in a barrel' has never been so apt. Every message we have received from colleagues and friends in Gaza is the same: Israel's bombardment is like nothing they have ever experienced before.

The balance metaphor only works if weights of equal measure are distributed on both plates. If power were equally distributed, so too would be responsibility. But with Israel-Palestine these two weights are in no way equivalent....

(Caitlin Procter and Luigi Achilli, [What gives Israel the right to annihilate Gaza? Suggesting that both sides are equally to blame is not a defensible position](#), *openDemocracy*, 30 October 2023)

¹⁰⁰⁴ The mythical 'Land of Israel', stretching from [The River of Egypt to the Euphrates River](#) is the land which is believed to have been promised to the Israelites (but *never delivered*) by 'God'. Of course, many Jewish Zionists are 'secular', not, in fact, believers in a future Messiah or in a 3000 year old 'promise' to a band of wandering, nomadic pastoralists.

For many Jewish people, these promises have a spiritual, other-worldly interpretation. similar to the Christian Apostle Paul's understanding of 'Zion' as [the city of the living God](#), the heavenly Jerusalem', an understanding common among Jewish people of Paul's time

It is now presumed by some messianic Jews to be the land which God will finally give to 'His Chosen People' upon the earthly arrival of their Messiah.

For Zionists (who appear to have become tired of waiting!) the claimed 'promise' is a convenient 'justification' for their colonization of the region - creating the required conditions for the 'arrival' of the Messiah. As the website 'United with Israel' ambivalently claims:

Some of the Torah's laws only apply to Jews living in the Land of Israel, including the areas of Jordan, Lebanon and Syria that are a part of biblical - and future - Israel.

The Promised Land, known in Hebrew as Ha'aretz Hamuvtachat, is the land promised and given by God to Abraham and his descendants through Isaac. The Land has also been known as "The Land Of Canaan," "The Holy Land" and "Palestine."

The "West Bank" is the area known in the Bible as "Judea and Samaria." The promise is first made to Abraham, confirmed to Isaac, and confirmed again to Jacob. The entire Promised Land encompasses the territory from "The River of Egypt" to the "Euphrates River." These borders, however, will only be functional when the Messiah arrives.

(Ari Enkin, [The Promised Land: From the River of Egypt to the Euphrates](#), *United with Israel*, November 25, 2014)

It should be understood that this 'Promised Land' is claimed to be based on a promise given to Abraham (and Isaac - presumably to exclude

Ishmael and his descendants - some of whom are now being pogromed from the region) more than three thousand years ago!

The Biblical 'Land of Israel' was, of course, a fleeting phenomenon, existing for less than a hundred years. As the *Encyclopædia Britannica* explains:

Israel, either of two political units in the Hebrew Bible (Old Testament):

- The united kingdom of Israel under the kings Saul, David, and Solomon, which lasted from about 1020 to 922 BCE; or
- The northern kingdom of Israel, including the territories of the 10 northern tribes (i.e., all except Judah and part of Benjamin), which was established in 922 BCE as the result of a revolt led by Jeroboam. [About 722 BCE the Northern Kingdom of Israel was conquered by the Neo-Assyrian monarchs Tiglath-Pileser III and Shalmaneser V and its inhabitants dispersed throughout the empire at which time the northern tribes disappeared from the historical record]
- [After 922 BCE] the southern kingdom, ruled by the Davidic dynasty, was thereafter referred to as Judah.

The later kingdom's history was one of dynastic instability, with only two prolonged periods of stable government, under Omri (reigned 876-869 or c. 884-c. 872 BCE) and Ahab (c. 874-c. 853 BCE) and the Jehu dynasty (c. 842-746 BCE). In the 8th century BCE the northern kingdom was overrun by the Neo-Assyrian empire, with Samaria, the capital, falling in 722/721.

(History & Society: ^œ**Israel: Old Testament kingdom**, *Encyclopædia Britannica*, Accessed November 30, 2023)

¹⁰⁰⁵ In the heat of 2019 electioneering, Israeli prime minister Netanyahu intimated that the 'annexation' of the West Bank was inevitable.

In the short-term, such a move would 'legitimize' settlement expansion in Palestinian areas but, as the Apartheid regime in South Africa found, and as Southern Rhodesia under Ian Smith found, it will bring with it international demands for equal rights for all residents of that expanded Israel. Current international support for Israel will surely be eclipsed by similar anti-apartheid pressure on the Israeli state:

In the television interview, Mr. Netanyahu vowed not to divide Jerusalem or "uproot any settlement," and said he would "ensure that we will control the territory west of the Jordan River," meaning the entire West Bank.

When asked if he would push through before Tuesday the much-delayed evacuation of Palestinians living in Khan al-Ahmar, a Bedouin village near the Maale Adumim settlement bloc, he reiterated his opposition to a Palestinian state on the West Bank.

"I don't know whether it will be before the elections," he said of the Khan al-Ahmar expulsion, which set off intense international criticism after being marked for demolition to make way for an expanded Jewish settlement.

But, he added: "We have to control our destiny, and that is going to be impossible if we place there an independent, Arab entity - an Arab state, for all intents and purposes. A Palestinian state. That will

endanger our existence."

(David M. Halbfinger, ^œ[Netanyahu Vows to Start Annexing West Bank, in Bid to Rally the Right](#), *New York Times*, April 6, 2019)

¹⁰⁰⁶ One might be forgiven for comparing [Rhodes' acquisition of the Maxim gun](#), deployed with devastating effect in establishing and consolidating power in Northern and Southern Rhodesia (backed by the British); and Israel's stockpiling of nuclear weapons and vociferous denunciation of other states in the region with (all-too-often imagined) 'nuclear ambitions', together with its active involvement in destabilizing Middle Eastern nations considered possible threats to its future security ([backed by US 'Special Forces' operations through the region](#)).

¹⁰⁰⁷ The *Global Times* is a semi-official Chinese Government English Language newspaper version of global issues. Yang Liu explained its nature and role in an informative article entitled ^œ[Facts and Myths about Global Times, the most misunderstood publication in China](#), (*Beijing Channel*, February 03, 2021)

¹⁰⁰⁸ See ^œ[Clayton AntiTrust Act](#) for the text of the Act

¹⁰⁰⁹ Of course, the 1970s, even without the effects of the oil price explosion, would have been a decade of economic difficulty and 'stagflation'. This was the decade in which the West confronted its wine lake, butter and cheese mountains and various other over-supply problems associated with supply glut (which is a feature of unregulated or poorly regulated capitalist activity). Very often, analyses of the consequences of the OPEC increases fail adequately to distinguish between the OPEC and various non-OPEC distortions confronting the decade.

See ^œ[World Bank Concerns and Policies during the 1973-74 OPEC Oil Embargo](#) for a discussion of,

the causes and implications of the dramatic rise in prices that were occurring (from 88¢ per barrel in 1970 to \$3.11 per barrel at the beginning of October 1973).

(<http://go.worldbank.org/M0EECN0PV0>)

¹⁰¹⁰ (21/08/17) My comments apply also to those MMters who seem to hold a subliminal presumption of the independent existence of 'economies' and so find it difficult to accept the [primacy of communities](#) over their 'economies'.

[Modern Money Theory](#) devotees and aficionados (who tend to refer to themselves as 'MMters') are a motley crew. They come from a range of ideological and theoretical backgrounds but share a common realization that credit is created by both sovereign governments and private financial institutions 'out of thin air' rather than being a [semi-mystical consequence of private economic activity](#).

So, one finds those who come from various Marxist and related backgrounds, from 'traditional' neoclassical backgrounds and, even, some whose origins are in neoliberal understandings of reality.

In consequence, one finds echoes of those backgrounds in the explanations of the theory which they provide. This may account for the rather different emphases and explanations proffered to those who seek to understand (or criticize) the approach(es).

Bill Mitchell has neatly summed this up:

MMT clearly explains (as noted above) that you cannot do everything that you want.

MMT clearly states that while the government has no financial constraint on its spending capacity, it certainly has a real constraint on what it can spend its currency on.

It can only bring into productive use real resources that are available for sale.

It is also bound by the constraints posed by the natural environment.

A core notion of MMT is that attempting to go beyond those real constraints results in inflation.

...[P]olicy choices will reflect the value system preferences that the policymaker imposes on the choices available.

MMT is a lens not a value system.

(Bill Mitchell, [When neo-liberal masquerades as anti-establishment](#), *Billy Blog*, August 21, 2017)

So, while sharing a common realization that credit is *created*, policy decisions are determined by the ideological/ theoretical positions of those determining policy.

It is still possible to believe in, and be guided by, the existence and desirability of an 'independent economy', not shackled by 'social' and/ or 'political' constraints. It is, however, no longer possible to hide one's ideological predilections behind a smokescreen of 'the government can't afford it'.

Policy makers must accept/ admit responsibility for their predilections!

And, it is surely incumbent on those who belong to this 'motley crew' to ensure that fellow devotees who interpose ideological predilections into their explanations of modern monetary theory explain this to readers. Otherwise they will, inevitably, attract criticism for such interpolations as inconsistencies in explaining MMT.

The old Greek aphorism, 'Know Thyself' should apply to MMTers - don't allow non-MMT presumptions to cloud issues for those trying to understand them.

¹⁰¹¹ See [From personalized, cooperative hierarchical relationships to object-oriented, competitive oppositional relationships](#) for more on this

¹⁰¹² As has been explained elsewhere:

Social costs are of the same order as all other costs of extraction and processing borne by business. Once built into cost structures they become invisible and the economy continues as before.

I well remember the panic which ensued in Western countries with the first massive oil price increases of [the early 1970s](#). Many were the dire predictions of imminent economic collapse and long-term damage. Yet, within three years of the rise, the new, unavoidable costs of petroleum based products became built into the economies of the world through a period of rapid inflation. Once that settled, everything proceeded as before.

The major effect of an inclusion of social costs into the base price of production is that the circulation of money through the society becomes far more broadly based. The economy becomes less insulated from the rest of social organization and activity.

There are, of course, major differences between increases in oil prices and increases in social welfare costs:

- First, the oil increases are ubiquitous. Since they apply universally, no single nation is disadvantaged by them. The costs are, through inflation, built into all economic pricings. Social costs, on the other hand, are, by definition, internal to the nation and communities in which they are incurred. Means would have to be found to simulate similar effects to the universal inflation of oil costs so that no nation would be economically penalised for ensuring the well-being of its people.
- Second, the oil price increases were contained within 'economic' transactions; there was no palpable 'leakage' from 'the economy' to 'the social' areas of life. So, for those who 'know' instinctively that it is simply wrong to confuse the two areas, the necessary, required inflation resulting from the inclusion of social costs in economic costings is an affront on several levels.
- Third, there is an inbuilt belief in the moral virtue of 'work' and 'economic investment'. Income obtained other than through 'employment' or 'investment' is considered illegitimate.
- One could continue but these will suffice ...

Including social costs in the costs of productive and financial activity would inevitably result in a period of internal inflation to offset those costs. It would be difficult to thoroughly insulate populations from the effects of such cost of living adjustments.

I'm sure that opponents of reregulation and the inclusion of social costs as costs of production would present all the problems of the decade as problems associated with changes in the base costs of production. Any democratically elected government which attempted to build such costs into the internal economies of their nations would almost certainly lose the next election (unless, [like Roosevelt in the 1930s](#), the consequences of the alternatives are still vivid in the memories of their electorates) - and politicians seem averse to political suicide.

However, while enormous difficulties lie in the path of any attempt to readjust costs to include the social welfare requirements of communities and countries, this should not be used as an excuse for not addressing them. Surely, given the desperate straits in which millions of people find themselves at the start of this 21st century, this is not something we can afford to ignore - whatever our politics or ideologies. Are we not intelligent enough to devise solutions which will insulate human beings from the ravages of unregulated market activity?

For some of the consequences of applying crude accountancy measures to deal with Europe's public debt crisis see this *Reuters Report* (Thu May 31 2012): ^{oe}[Analysis: Greeks count mental health cost of a country in crisis](#):

Behind every suicide in crisis-stricken countries such as Greece there are up to 20 more people desperate enough to have tried to end their own lives.

And behind those attempted suicides, experts say there are thousands of hidden cases of mental illness, like depression, alcohol

abuse and anxiety disorder, that never make the news, but have large and potentially long-lasting human costs.

The risk, according to some public health experts, is that if and when Greece's economic woes are over, a legacy of mental illness could remain in a generation of young people damaged by too many years of life without hope.

"Austerity can turn a crisis into an epidemic," said David Stuckler, a sociologist at Britain's Cambridge University who has been studying the health impacts of biting budget cuts in Europe as the euro crisis lurches on.

"Job loss can lead to an accumulation of risks that can tip people into depression and severe mental illness which can be difficult to reverse - especially if people are not getting appropriate care," Stuckler said.

"Untreated mental illness, just like other forms of illness, can escalate and develop into a problem that is much more difficult to treat later on." ...

An article by Teo Kermeliotis, for CNN April 6, 2012, entitled ['Austerity drives up suicide rate in debt-ridden Greece'](#) spells out the desperate consequences for human beings of doing nothing to address the problem other than 'balancing the books':

"The further we go into the crisis, the more things get ugly," says Aris Violatzis of Klimaka, a non-governmental organization that runs a suicide helpline in Greece.:

The group - Klimaka translates as "scale" - says it receives up to 100 calls a day, with three of four callers citing economic problems as their main concern. In 2007, just before Greece fell into recession, the helpline used to take 10 calls a day maximum, explains Violatzis, and only one in four callers mentioned economic issues.:

"The social framework in Greece has become pathogenic - we have a morbid social environment where one of its symptoms is suicide," he adds:

Under its second bailout program, approved last month, Greece has agreed to implement a series of austerity measures and undertake broader reforms to make its economy more competitive.:

New taxes, rising unemployment and cuts to pay, pensions and social welfare provisions have brought many ordinary Greeks to their knees.:

As Greece remains mired in financial woes - the country's economy is heading for its fifth year of recession - many now fear that Christoulas's public act of protest could find more imitators.:

"I believe there are going to be more suicides and that's what got the government worrying," says archaeologist Despoina Koutsoumpa, who was among the hundreds who rushed yesterday in Syntagma Square to pay tributes to Christoulas.:

"His act was a punch in the stomach for all of us. It made you realize that the overthrowing of these policies requires self-sacrifice, like in Tunisia and in Egypt where hundreds of people died," Koutsoumpa, a regular at the anti-austerity demonstrations in Athens, told CNN.:

"In Greece there are also hundreds of people dying because of the crisis, people we don't see - there are suicides over debts, there are people dying in the streets because they don't have anything to eat," she adds.:

"A lot of people here understand that there will have to be even sacrifices of people in order to get rid of the situation.":

Seven months after setting himself on fire, Polyzonis says more and more Greeks find themselves close to the desperate condition he was in last September.:

"The situation is becoming every day worse," he says. "Every day people lose their jobs, every day people are unable to pay rent for their house, the basics to find something to eat - the last step before doing what I did or what another human being yesterday did in Greece."

¹⁰¹³_(08/09/17) [Progressive taxation](#) and similar *redistributive* regimes are important in checking the growth of inequality through any community. However, though important - and I would favor policies as aggressive as [those pursued through the 1950s-1970s](#) - their rationale is quite different from those focused on raising revenue.

[Democratically organized governments have a responsibility to establish **both**:](#)

- Central banking authorities which control the monetary base; and
- Publicly determined and administered regulations ensuring the economic wellbeing of their populations and both monetary and financial stability.

Where these are accepted responsibilities of government, taxes aimed at 'raising revenue' or curbing unacceptable economic practices become irrelevant.

As Beardsley Ruml (1946) explained, taxes are not 'needed' in order to fund revenue raising (see '[What Taxes are Really For](#)' for more on this). New Deal style regulatory measures such as those established in the wake of the 1930s [Pecora Commission's findings](#) are far more efficient forms of private sector constraint and discipline than punitive or prescriptive taxation.

Bill Mitchell has neatly explained why financial transaction taxes - and other similarly focused forms of public 'revenue raising' - are problematic:

Stephany Griffith-Jones compares financial taxes to carbon taxes:

Like taxes on carbon emissions, taxes on financial transactions such as the UK stamp duty aim to curb socially dangerous behaviour

This is the problem: progressives have been lured into the 'market frame'. That we need to address these great problems using the price system, which is a neo-liberal frame.

We don't!

We can simply use the legislative capacity of the national government to outlaw things we think are damaging to well-being and serve no other function.

(Bill Mitchell, ^œ[Progressives should move on from a reliance on 'Robin Hood' taxes](#), *Billy Blog*, September 4, 2017)

However, without a revolutionary New Deal style reorganization of existing neoliberally distorted *perceptions* of reality, we are left with attempting to minimize neoliberalism's destructive impact on a largely disenfranchised populace.

It is important to remember the redistributive consequences of neoliberalism over the past half century. Through most capitalist countries, access to income by the bulk of their populations has been severely limited by:

- the [draining of wealth](#) from the bulk of the population to the already wealthy;
- the [austerity doctrines](#) of neoliberalism, assuming that sovereign governments must rein in spending to limit deficits, strangling the availability of credit within their economies;
- belief that ['free markets' automatically 'self-correct' and self-regulate](#) and that those who 'use' services should meet the costs of that use; and
- belief that [every dollar spent by governments is a dollar lost](#) to private enterprise, which, of course, directly impacts governments' ability to fund welfare and infrastructural activity.

In the current world of neoliberal economics and politics any attempt to dampen the 'frothy high-volume trading' associated with illusory wealth creation seems worth pursuing, particularly if, in doing so, wealth can be diverted into real world economic activities generating both employment and social welfare.

I know there is a lot of angst in the US about Nader splitting the presidential vote in 2000, possibly allowing George Bush to win, but don't throw the baby out with the bathwater - this article is well worth reading. As one of the commenters on the article put it:

If Nader, who I once admired, hadn't thrown the election to George W then we wouldn't be in such dire financial straits. He's become nothing but a bitter old curmudgeon, Monday morning quarterbacking. That said - this is not a bad idea.

See Ralph Nader (*Washington Post* Saturday, December 1, 2012), ^œ[Ralph Nader on a simple way to avoid the fiscal cliff: Tax stock trades](#), for discussion of the possibilities of a financial transactions tax in the US. As he says:

A financial transaction tax would apply to purchases and sales of derivatives, options and stocks. The tax would be small, half a penny or less on each dollar of the transaction value, depending on the product. This idea is often called a "speculation tax," because it would hit hardest at frothy high-volume trading as opposed to sober long-term investment.

... As if its deficit-reducing potential weren't enough, a financial transaction tax could reduce risky speculative trading that diverts resources from productive economic activity and can be very destabilizing, as the 2008-2009 crash demonstrated. In fact, this summer, more than 50 financial industry professionals, including past and present executives from Goldman Sachs, JPMorgan Chase

and Morgan Stanley, signed a letter [See Sarah Anderson (*Institute for Policy Studies* June 21, 2012) ^œ[Letter From Financial Industry Professionals in Support of Financial Transaction Taxes](#)] to the Group of 20 and European leaders supporting a speculation tax.

They pointed out that financial market activity has skyrocketed in the past few decades: The value of transactions is now 70 times greater than the size of the real global economy. Trading volume has grown exponentially, skyrocketing from 188 billion shares of stock traded on the Nasdaq and the New York Stock Exchange in 1995 to nearly 1 trillion in 2011. Each year, the notional value of over-the-counter derivatives traded worldwide totals trillions more.

In their letter, these professionals cautioned that although the main purpose of financial markets is to raise investment capital, allocate resources efficiently and mitigate risk, today's markets, full of computer-driven, high-frequency trading, often undermine those goals. The Capital Institute's John Fullerton, a former managing director at JPMorgan, has estimated that nearly 70 percent of equity-trading volume is composed of these types of speculative strategies.

¹⁰¹⁴ John Weeks has described the European Union's descent into neoliberalism well:

Most Americans and many U.S. progressives hold a favorable view [of] the European Union. This positive assessment persists despite the crushing of the Greek challenge to austerity conditionalities set by the European Commission and European Central Bank aided and abetted by the International Monetary Fund.

The primary basis for pro-EU sentiments may be that Americans consider the European Union a bastion of social democracy in contrast to the neoliberal ideology of the Republican and Democratic parties, which Bernie Sanders has so eloquently attacked. However, the institutions of the European Union, especially its executive the European Commission practice a neoliberal ideology and pro-business policies as aggressive as counterparts in the United States.

This is not a recent change, but a long-maturing trend going back at least to when Helmut Kohl of the right-wing Christian Democratic Union replaced the Social Democrat Helmut, Schmidt, as chancellor of Germany. The misplaced belief that Jacques Delors, EC president for ten years, was committed to social democracy perpetuated the illusion of a progressive EU. While no reactionary like Kohl, the French socialist politician supported market oriented "reform" of the European Union's economic policies.

By the 2000s neoliberals had taken firm control of the European Commission, manifested most obviously in the 1992 Maastricht Treaty. The step-by-step legal codification of EU reactionary economic policies goes far beyond legislation enacted in the United States...

(John Weeks, ^œ[TSCG Fiscal Rules: EU Mandate for Bad Policies](#), *TripleCrisis*, April 18, 2016)

¹⁰¹⁵ Yves Smith has ^œ[posted a link](#) to what she describes as:

...a thoughtful, far-reaching piece. To quote Antonio Gramsci:

The crisis consists precisely in the fact that the old is dying and the new cannot be born; in this interregnum a great variety of

morbid symptoms appear.

Jayati Ghosh, in an essay entitled 'After neoliberalism, what next? There are economically-viable, socially-desirable alternatives to the failed neoliberal economic model', does, indeed, pose some interesting and challenging questions. As she says,

We may be living through one of those moments in history that future historians will look back on as a watershed, a period of flux that marked a transition to quite different economic and social arrangements. Unfortunately, in human history a 'moment' can be a very long time, so long that it could be decades before the final shape of the new arrangements are even evident; and in the interim, there could be many 'dead cat bounces' of the current system.

What is clear is that the established order - broadly defined as neoliberal globalised finance capitalism - is no longer capable of delivering on its promises of either growth or stability, even as it generates more inequality and insecurity across the world. In Marxist terms (as befitting the 150th anniversary of *Das Kapital*), the property relations under which production is organised have become fetters on the development of productive forces themselves, and generate more and more alienation. This may explain why, perhaps even more significantly, the system is also losing legitimacy in most countries, under attack from both right and left.

Whether we look at straws in the wind or green shoots in the ground, there is no doubt that there are incipient signs of change. But at this point there are many directions in which such change could go, and not all of them are progressive or even desirable. That is why it is important to get social and political traction for alternative trajectories that focus on more equitable, just, democratic and ecologically viable outcomes for most of humanity. (Jayati Ghosh, ^œ[After neoliberalism, what next? There are economically-viable, socially-desirable alternatives to the failed neoliberal economic model](#), *Red Pepper*, August 6, 2017)

¹⁰¹⁶ Bill Mitchell has a poignant description of the tragic British film *I, Daniel Blake* which documents the soul-destroying experiences of an ageing skilled worker, sacrificed to the neoliberal bottom-line in 21st century Britain:

...Back to *I, Daniel Blake*.

The film was motivated by the passing of the Welfare Reform Act 2012 - which was designed to make it harder for people to receive and stay on income support systems relating to unemployment and sickness.

Former PM David Cameron spoke to the bill saying

Where we back those who work hard and do the right thing ... Building that society is simply not possible without radically reforming welfare ... Ending the nonsense of paying people more to stay at home than to get a job - and finally making sure that work really pays ... What these examples show is that we have, in some ways, created a welfare gap in this country between those living long-term in the welfare system and those outside it.

Those within it grow up with a series of expectations: you can have a home of your own, the state will support you whatever decisions you make, you will always be able to take out no matter what you put in.

This has sent out some incredibly damaging signals.

That it pays not to work.

That you are owed something for nothing.

It gave us millions of working-age people sitting at home on benefits even before the recession hit.

It created a culture of entitlement ...

There are few more entrenched problems than our out-of-control welfare system and few more daunting challenges than reforming it ...

It's about the kind of country we want to be - who we back, who we reward, what we expect of people, the kind of signals we send to the next generation."

That sets the scene for the movie.

The storyline is fairly simple and linear.

Ageing skilled worker has a heart attack and his medical staff say he cannot work. He tries to get the British sickness benefit as is his right as a citizen but is knocked back by the points system, which claims he can work.

(Bill Mitchell, ^œ[I, Daniel Blake - essential viewing](#), *Billy Blog*, December 5, 2016)

Mitchell has since summarized the absurdity of the neoliberal agenda which has underpinned and driven this sociopathic determination to 'balance the budget' at the expense of the vulnerable in Western societies:

Readers who have now seen the latest Ken Loach movie - *I, Daniel Blake* - will know the frustration that it depicts when a disadvantaged citizen is confronted with the reality of having to deal with a national welfare agency. Many readers, presumably, have first hand experience of the labyrinthine procedures, rude staff, endless waiting on telephone lines, threatening letters and the rest of the wall that neo-liberal governments have erected to discourage access and/or push people off welfare benefits.

While this access and receipt became a right of citizenship in the social democracies that emerged after the Second World War, the neo-liberal era has degraded those rights in favour of a bean-counter interpretation of the world - welfare payments are dollars that can always be saved to balance fiscal accounts and every opportunity should be taken to do so.

Australia is way ahead of the game in terms of using government policies and processes to punish and isolate our most disadvantaged citizens so the Government can reduce its welfare spending a few million. We now allow our Government to implement the work of sociopaths and threaten poor citizens with imprisonment on the basis of half-cocked 'automatic computer-matching' algorithms that are allegedly tracking welfare fraud.

The evidence suggests these processes are massively buggy and deliver wrong outcomes in almost all the cases of fraud they claim to detect. However, that hasn't stopped the government from sending out tens of thousands of letters to the most disadvantaged among us accusing these people of receiving thousands of dollars in illegitimate welfare payments and threatening criminal prosecution if these alleged overpayments (now debts) are not paid back.

Mostly, it seems, the debts are illusory - mistakes by the ingenious (not!) algorithm that was introduced to replace people sacked by the austerity push - sorry, by the Government's "efficiency dividend" policy. Some people should be prosecuted for breaching human rights in this latest scandal!

...The whole exercise reeks of the sort of cruel disdain for people that drives austerity.

These interactions with people are designed to discourage access to what is a right of citizenship. But also, as Peter Martin surmises (and I agree) the letters demonstrate that Centrelink just "didn't know what they were doing".

Even the Minister apparently didn't know about the "10 per cent recovery fee" that was demanded in the letters.

The final observation is that the Minister for Human Services, the Treasurer and the Finance Minister - all part of the phalanx driving austerity and preaching rectitude are all 'devout' Christians.

They front a corps of evangelical types in the Liberal and National parties, many of whom are driving the 'new conservatism' noted above. The 'holier than thou' crew!

The Treasurer, an evangelical Christian who is part of a Pentecostal church in Sydney and who is driving these cutbacks etc, told the Parliament of Australia in his maiden speech that:

So what values do I derive from my faith? My answer comes from Jeremiah, chapter 9:24: I am the Lord who exercises loving-kindness, justice and righteousness on earth; for I delight in these things, declares the Lord."

The Lord might have declared a love of "kindness, justice and righteousness on earth" but Morrison and his Ministerial mates certainly only demonstrate hypocrisy of the tallest order.

(Bill Mitchell, ^œ[The Centrelink letters - a clear breach of human rights](#), *Billy Bog*, January 5, 2017)

¹⁰¹⁷ Of course, pension assets and mutual funds do need to be protected - at present they are all-too-often poorly differentiated from other global fund management activities - but this is best done through similar guarantees to those provided to bank deposits under US FDIC regulations (see ^œ[Federal Deposit Insurance](#) for an example of this kind of insurance, also ^œ[A History of the FDIC 1933-1983](#) for a historical contextualization), not by providing a blanket stimulus package to the global fund management sector.

¹⁰¹⁸ For more on the nature of Investor-State dispute settlement (ISDS) mechanisms see this UNCTAD discussion: ^œ[Recent Trends in IIAS and ISDS](#), Prepared by UNCTAD's IIA Team in advance of the Expert Meeting on "The Transformation of the International Investment Agreement Regime" from 25-27 February 2015 in Geneva.

See also the final report of the above meeting: [Report of the Expert Meeting on the Transformation of the International Investment Agreement Regime: The Path Ahead](#) (UNCTAD, Geneva, 17 April 2015).

Don Quijones has given a clear explanation of the kinds of leverage available to corporate interests through Investor-State dispute settlement (ISDS) mechanisms:

...In 2009, Pacific Rim filed a private lawsuit - what is referred to in the impenetrable jargon of modern globalism as an Investor-State Dispute Settlement (ISDS) - against the government of El Salvador for \$301 million, equivalent to just over 2% of the country's \$24 billion GDP. As BBC World reports (in Spanish), the amount is equivalent to three years' combined public spending on health, education and security....

...According to Luis Parada, a coordinator of a team of lawyers defending El Salvador, "what is ultimately at stake is whether an overseas company can use the international arbitration system to force a sovereign state to change its laws. Or whether it's the overseas investor who must comply with the laws of the country in which he has decided to invest."

(Don Quijones, [Corporation vs. Nation: The Ultimate Showdown: No Trial, No Judge, No Jury](#), *Wolf Street*, October 3, 2015)

¹⁰¹⁹ Dani Rodrik has weighed in on the merits of the various models. As he says,

...The trouble is that the real world has not lined up so neatly with trade economists' assumptions. Critics of trade agreements have marshaled countless anecdotes about the adverse effects of imports on wages and employment in affected communities. [Recent empirical work by three academic economists](#) - David Autor (MIT), David Dorn (University of Zurich), and Gordon Hanson (UC-San Diego) - shows that the critics have a point (and then some).

Autor, Dorn, and Hanson document that the expansion of Chinese exports has produced "substantial adjustment costs and distributional consequences" in the US. In regions with industries hit hard by competition from Chinese imports, wages have remained depressed and unemployment levels elevated for more than a decade. Falling employment in such industries was expected; the surprise was the absence of offsetting employment gains in other industries.

Advocates of trade agreements have long maintained that deindustrialization and the loss of low-skill jobs in advanced economies have little to do with international trade; they are the product of new technologies. In the current TPP debate, many prominent proponents still cling to this line. In light of the new empirical findings, such nonchalance toward trade has become untenable. (The Petri-Plummer model does indicate that the TPP will accelerate the movement of jobs from manufacturing to services, a result that the pact's advocates do not trumpet.)

Economists do not fully understand why expanded trade has produced the negative consequences for wages and employment that it has. We do not yet have a good alternative framework to the kind that trade advocates use. But we should not act as if reality has not severely tarnished our cherished standard model. It would be far better to consider the full range of possibilities highlighted by

the models on offer, instead of putting all the weight on a single one...

The bottom line is that neither side's models generate numbers reliable enough on which a case for or against the TPP can be made. Just about the only thing we can say with some certainty is that there will be winners and losers. Perhaps the agreement will galvanize investment and knowledge flows across the Pacific, giving the world economy a much-needed boost. Perhaps not. But those who believe that this trade agreement, like previous ones, will provide lopsided benefits have ample reason to be concerned. (Dani Rodrik, ^œ[The Trade Numbers Game](#), *Project Syndicate*, February 10, 2016)

1020 (28/09/16) Those neoliberal ideologues are not resting on their laurels (or dare one say '[Nobel laurels](#)'). Every day, new apologies for, or bare-faced promotions of, neoliberally driven 'globalization' appear in the various media. Robert Shiller is merely their latest champion. The future for Robert is a world without 'barriers'; a world of weakened, and ultimately superseded, nation-states; displaced in a "transition to a more just global economy". As one of the commenters on Shiller's utopian (dystopian?) vision of an apparently looming and inevitable '[coming anti-national revolution](#)' has said,

This article is an excellent example of new Elite apologia. The New Elite Agenda is actually for a "refeudalisation" of society to restore their historical privileges. But - like Elites throughout history - they seek to weave a cloak of virtue to conceal the nakedness of this self-interest.

(Stephen Morris, commenter on: ^œ[The Coming Anti-National Revolution](#), *Project Syndicate*, September 19, 2016)

1021 (03/05/16) Bill Mitchell has given a clear description of the 1970s (and later) neoliberal agenda:

The reality was that what they wanted was for the state to use its powers to tilt the economy (its distributional processes) more heavily towards the corporate sector and the financial market sector ('Wall Street'), in particular.

While the Left was conned into believing that the policy options were becoming limited in the face of an increasingly globalised world, the Right were much smarter and knew they had to compromise the state and advance its agenda through the capacities they knew were the monopoly of the state - currency-issuance, legislative fiat, and the power to set the regulatory environment.

How the Left was led down the path of ignorance is a testament to both the ingenuity of the Right and [the machinery it set up to regain control](#) of the policy agenda and the increasing splintering of the Left into peripheral 'post modern' deconstructions. Somehow, class struggle was no longer central to a lot of Leftist thinking and, in its place was a massive investment of time and energy into gender, race and sexuality type issues.

But in leaving the main game to the Right, the Left helped to reinforce the neo-liberal hegemony and the myths (dishonesty) that created it and upon which it still rests.

As part of this evolution, the US government became the international political conduit for 'Wall Street' influence and the growing influence of the 'City' in London, also allowed these neo-liberal ideas to permeate the policy making circles in Britain and, specifically, the upper echelons of the British Labour Party.

But it wasn't just a permeation that was going on. The US used institutions such as the IMF to conduct brute force attacks on the prosperity of nations to undermine the viability of their public sectors and to shift more of the national income and national assets into the hands of capital.

It was a brazen and very determined shift in world affairs.

(Bill Mitchell, [The metamorphosis of the IMF as a neo-liberal attack dog](#), *Billy Blog*, May 3, 2016)

Scott Jay has posed the question: 'why has the Left specifically failed to resist neoliberalism?' His answer:

...In the face of unrelenting neoliberalism, the international Left has embraced postmodernism, not in theory but in practice, putting style over substance and feel good moments and flashy leaders over the brute reality of resisting capitalist exploitation. The Postmodern Left does not reject metanarratives or objective reality in theory. In fact it embraces the metanarrative of its own centrality to altering the course of history, but when it finds itself at the center of historical development, then history is treated like an ethereal, formless blob that nobody can make any sense of. It simply happens, and no options are possibly available that can shape it. Once the Left is placed in the driver seat, there is no alternative other than to passively participate in the machinations of the system. Anything else is just too difficult.

The Postmodern Left avoids building actual power among the poor and the oppressed, instead focusing on self-promotional spectacles which feel like struggle and power but are entirely empty.

The Postmodern Left talks about "class struggle unionism" then carries out pension reform in the name of a balancing the budget and then insist that they never supported any such thing because words are meaningless and have no relationship to objective reality.

The Postmodern Left is detached from reality because it makes its own reality.

The Postmodern Left does not believe in postmodernism. The Postmodern Left is postmodernism...

The Postmodern Left is not the result of the declining relevance of objective reality. On the contrary, it has a solid material base from which it arises, and to which it is shackled, specifically in the Non-Governmental Organization (NGO) form. Under neoliberalism, the destruction of social welfare programs and other sources of stability for working class people have been replaced by services granted by NGOs, funded by foundations and governmental grants as well as directly from corporations. This organizational form has extended beyond the service sector and into the Left itself, where protest movement organizations can build up an infrastructure of full-time staff members through many of these same grants. The problem for NGOs, then, is to challenge the status quo without challenging the elite sources which fund the operation. This has proven to be an

impossible problem to solve, and instead NGOs have served to reproduce neoliberalism rather than challenge it.
(Scott Jay, ^œ[The postmodern left and the success of neoliberalism](#), *Libcom.org*, Jan 5 2016)

Bill Mitchell has examined the issues in a blog entry entitled "The Left confuses globalisation with neo-liberalism and gets lost". As he concludes:

...[T]he problem is not the global trends in supply chains etc. Rather it is that their elected representatives have become co-opted by neo-liberal elites who fully understand that state power can be skewed to work in their favour and deprive a vast majority of citizens of the benefits of such global economic activity.

But until we abandon democracy (voting out governments), we have power if we choose to use it. We can force changes in the political system so that it works more for us and not the top-end-of-town.

Perhaps the anger now being unleashed is a start of that fightback.

The problem is that the Left is not leading the charge. It is leaving that to the crazy popularists while it crafts ever more ridiculous arguments to justify 'austerity lite' type policies to make them look responsible.

The reference group they seek to appeal to though is the neo-liberal elites - which means the Left is going nowhere.

(Bill Mitchell, ^œ[The Left confuses globalisation with neo-liberalism and gets lost](#), *Billy Blog*, April 27, 2016)

In an earlier post, he sketched the way in which 'the British Labour Party were infested with the Monetarist virus in the late 1960s'. As he explains:

...[T]he British Labour Prime Minister James Callaghan's speech to [the] Labour Party Conference held at Blackpool on September 28, 1976 was laced with pro-Monetarist assertions that have been used by many on the Left as being defining points in the decline of the state to run independent domestic policy aimed at maintaining full employment....

Margaret Thatcher was, in fact, a 'johnny-come-lately' in this respect. The British Labour Party were infested with the Monetarist virus in the late 1960s and Callaghan's 1976 Speech just consolidated what had been happening over the decade prior.

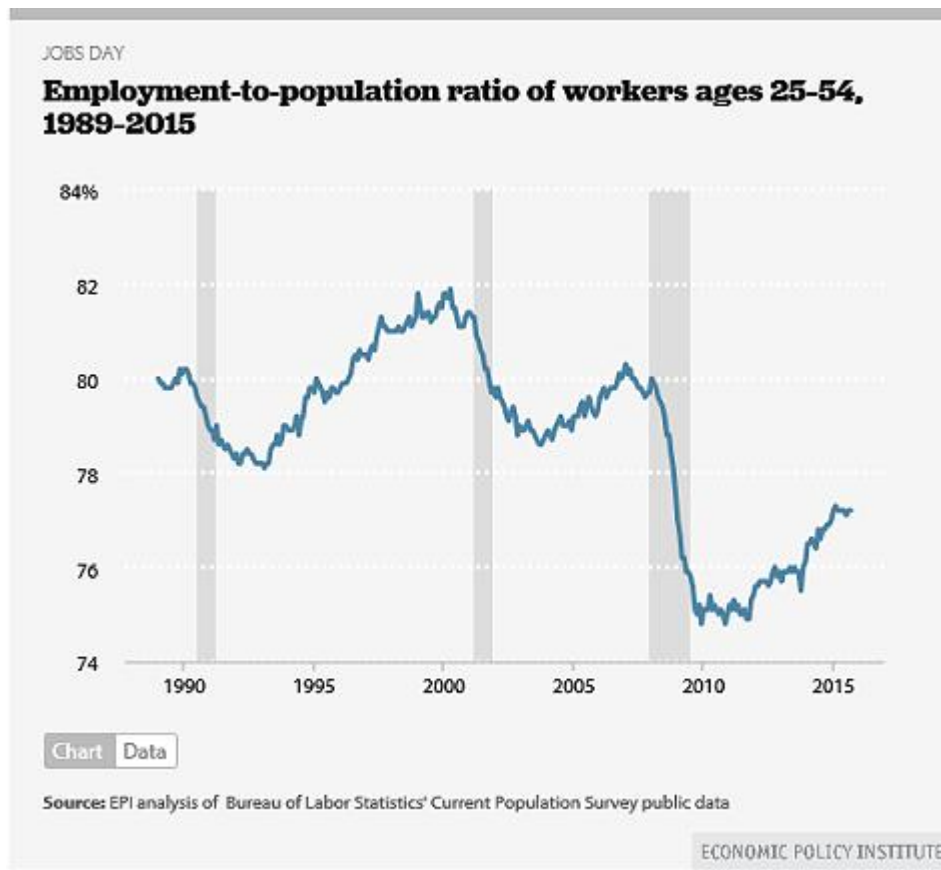

Further, it was not the oil crisis in the early 1970s that provided the open door for governments to reject Keynesian policy. In Britain, the Treasury and Bank of England were captivated by the ideas of Milton Friedman some years prior to the OPEC price push.

(Bill Mitchell, ^œ[The British Monetarist infestation](#), *Billy Blog*, February 25, 2016)

¹⁰²² Elise Gould, in a 2015 posting on the *Working Economics Blog* site, has illustrated this problem for the US. As she explained:

Another way to get at the same story is to look at the prime-age employment-to-population ratio (EPOP), one of the best indicators of labor market health... To put this year's prime-age EPOP of 77.2 percent in perspective, it is still below the lowest point of the previous two business cycles. In fact, in the last business cycle, the prime-age EPOP trough was 78.6 percent, 1.4 percentage points

higher than we are now. The closest we got to today's rate was back in 1993, when prime-age EPOPs bottomed out at 78.1 percent, still 0.9 percentage points higher than today.

For the labor market to be truly expansionary, we need to see faster job growth - to employ the new labor market entrants, unemployed workers, and the 4 million missing workers who have left or never entered the labor market because of weak job opportunities. (Elise Gould, ^{oe}[What to watch on Jobs Day: Job growth has only been fast enough to keep up with population growth](#), *Economic Policy Institute*, Working Economics Blog, Posted November 5, 2015)

¹⁰²³ Oren Cass has explained the problem well:

The often-cited alternative to an increased minimum wage, the earned-income tax credit, gets rave reviews from economists and politicians from both parties. The credit, paid to low-income households as a tax refund, increases as income initially grows, and then decreases as income goes above the poverty line.

On the blackboard, this approach appears ideal. Low-wage workers benefit from additional income, but employers do not face new costs that might drive them to reduce hiring or increase prices. To the contrary, the program functions as a subsidy from which employee and employer both benefit, expanding the labor force by producing an incentive to offer and accept low-wage work.

But life is messier than a crisply drawn supply-and-demand graph. A worker receives the tax credit as an after-the-fact lump sum, producing a boom-and-bust cycle for household finances. Twenty percent of eligible households fail to claim the credit, and even among claimants, most of them do not understand its calculation or what portion of their refund it contributes, diluting its incentive. Even worse, because the credit phases out as earnings increase,

many households face a significant disincentive to work longer hours or have another member work.

(Oren Cass, ^œ[A Smarter Way to Raise Paychecks](#), *The New York Times*, Opinion Pages, September 10, 2015)

1024 (16/03/16)(11/01/17) A word of caution on Krugman's position: Krugman believes (or at least used to believe - I am unsure of his current views though I suspect they have modified over time - but ^œ[not by much!](#)) in the virtues of free trade and globalization, however, he wants to mitigate the effects of the consequences. So, he writes as a person concerned for mitigating effects, while still supporting the fundamental causative policies. Rather like a Climate Change Denier who, while believing that climate change isn't happening, sees the consequences and wants to mitigate their impacts in people's lives.

Paul Krugman is, primarily, a populist writer who writes to a particular, 'liberal', audience which is looking for 'authoritative' support. In this neoliberal age, such commentators are hard to find. However, while he provides this support (his responsibility as a *New York Times* columnist seems to be to satisfy this segment of its readership - which he usually accomplishes well!), he is torn between expressing acceptable 'liberal' commentary and retaining some credibility amongst mainstream economists (considered his true peers).

When almost all the 'authoritative' economic voices are neoliberal, retaining credibility means periodic public reaffirmation of basic neoliberal understandings - even if that, from time to time, means irritating his readership. One sometimes feels an urge to ask: "Would the real Paul Krugman please stand up"!

Bill Mitchell has given a clear critique of some of Krugman's ideas. His assessment:

It was always going to happen. Several prominent New Keynesians both in the US and the UK have been hiding behind a smokescreen they erected during the Global Financial Crisis to allow their readers to form the view that they were not part of the problem. That they were different from the more rabid anti-deficit economists and that they had a deep understanding of why the crisis occurred and what the solutions were.

For a while they masqueraded under the aegis of promoting the discretionary use of fiscal deficits (increasing them nonetheless) to stimulate growth in output and employment. They were seen by many who have a lesser understanding of economics as being progressive economists. The British Labour leader even had some of them on his inner advisory team. But the masks can only stay on so long. Yesterday, one of the most prominent of these characters, Paul Krugman came out! He is not progressive at all. He is a New Keynesian with all the IS-LM baggage that they cannot let go of. (Bill Mitchell, ^œ[Paul Krugman's ideas are part of the problem](#), *Billy Blog*, January 10, 2017)

Much of the confusion which people often feel in trying to come to grips with economic solutions to social problems stems from similar mismatches between basic economic presumptions and massaged explanations/ mitigations of social outcomes. The consequence is that for many, economics seems to be just too difficult to get one's head around: "The confusion I feel must be because I am missing something!"

George DeMartino and Ilene Grabel have summed up the problem over the past three decades well:

The sad fact of the matter is that Detroit suffers today from international trade and international financial policies of the past two decades that Krugman himself, and indeed many other leading international economists embraced. It was not so long ago that leading international economists, Krugman included, advocated strongly for the North American Free Trade Agreement (NAFTA), the WTO, and just about every other neoliberal international agreement that came down the pike. At the time the champions of neoliberalism ridiculed anyone who raised virtually any concerns about the agreements. Labor and human rights advocates, environmentalists and child's rights advocates were branded as well meaning but ignorant, sanctimonious, or simply self-interested.

What seemed to escape the attention of the leading international economists at the time was that by opening up the world to free trade and free financial flows, without at the same time attending to basic labor and human rights and environmental protections, the extraordinary opportunities that the new policy regimes would create for massive corporate tax avoidance and evasion (and hence fiscal crises), and the failure of the US and no doubt other governments to make meaningful provision in advance for the extraordinary adjustment costs that these agreements would entail, they essentially ensured that defaults on the scale of Detroit would be highly likely if not inevitable...

(George DeMartino and Ilene Grabel, [Fiscal Crises: Coming To A City Near You?](#), *Triple Crisis*, July 29, 2013)

I guess my main problem with Krugman is that when it really mattered, when a sane, intelligent voice was desperately needed, Krugman was missing in action. His often intelligently vitriolic denunciations of those who saw the looming dangers of both globalization and free trade did much to confuse and stifle opposition to the neoliberal deregulatory drive of the 1980s and early 1990s.

James Galbraith (2009), commenting on an essay by Paul Krugman ([How Did Economists Get It So Wrong?](#) *New York Times Magazine*, September 6, 2009), succinctly explained why apparently 'liberal' economic commentaries so frequently lead to neoliberal conclusions:

Krugman's entire essay is about two groups, both deeply entrenched at (what they believe to be) the top of academic economics. Both are deeply preoccupied with their status and with a struggle for influence and for academic power and prestige - against the other group. Krugman calls them "saltwater" and "freshwater" economists; they tend to call themselves "new classicals" and the "new Keynesians" - although one is not classical and the other is not Keynesian. One might speak of a "Chicago School" and an "MIT School" - after the graduate programs through which so many passed. In truth, there are no precise labels, because the differences between them are both secondary and obscure.

The two groups share a common perspective, a preference for thinking along similar lines. Krugman describes this well, as a "desire for an all-encompassing, intellectually elegant approach that also gave economists a chance to show off their mathematical prowess." Exactly so. It was in part about elegance - and in part about showing off. It was not about ... the economy. It was not a

discussion of problems, risks, dangers, and policies. In consequence, the failure was shared by both groups. This is the extraordinary thing. Economics was not riven by a feud between Pangloss and Cassandra. It was all a chummy conversation between Tweedledum and Tweedledee. And if you didn't think either Tweedle was worth much - well then, you weren't really an economist, were you?

(James K. Galbraith, [œWho Are These Economists, Anyway?](#), *Thought and Action*, Fall 2009, pp. 85-97)

Tom Palley's (2014) article on Milton Friedman's influence on the economics profession is useful in understanding why 'liberal' economic solutions all-too-often presume neoliberal dogmas. As he summarized:

Friedman's professional triumph is testament to the weak intellectual foundations of the economics profession which accepted ideas that are conceptually and empirically flawed. His success has taken economics back in a pre-Keynesian direction and squeezed Keynesianism out of the academy. Friedman's thinking also frames so-called new Keynesian economics which is simply new classical macroeconomics with the addition of imperfect competition and nominal rigidities. By enabling the claim that macroeconomics is fully characterized by a divide between new Keynesian and new classical macroeconomics, new Keynesianism closes the pincer that excludes old Keynesianism.

(Thomas I. Palley, 2014, [œMilton Friedman's economics and political economy: an old Keynesian critique](#), forthcoming in Robert Cord (ed.), *Milton Friedman: Contributions to Economics and Public Policy*, Oxford University Press, forthcoming, 2015)

Olivier Blanchard, in an NBER working paper entitled 'The State of Macro', spelt out the major focusses of the post-Keynesian revolution in macroeconomics:

When they launched the "rational expectations revolution", Lucas and Sargent (1978) did not mince words:

That the predictions [of Keynesian economics] were wildly incorrect, and that the doctrine on which they were based was fundamentally flawed, are now simple matters of fact, involving no subtleties in economic theory. The task which faces contemporary students of the business cycle is that of sorting through the wreckage, determining what features of that remarkable intellectual event called the Keynesian Revolution can be salvaged and put to good use, and which others must be discarded.

They predicted a long process of reconstruction:

Though it is far from clear what the outcome of this process will be, it is already evident that it will necessarily involve the reopening of basic issues in monetary economics which have been viewed since the thirties as "closed" and the re-evaluation of every aspect of the institutional framework within which monetary and fiscal policy is formulated in the advanced countries. This paper is an early progress report on this process of re-evaluation and reconstruction.

They were right. For the next fifteen years or so, the field exploded. Three groups dominated the news, the new-classicals, the new-

Keynesians, and the new-growth theorists (no need to point out the PR role of "new" here), each pursuing a very different agenda:

The new-classicals embraced the Lucas-Sargent call for reconstruction. Soon, however, the Mencheviks gave way to the Bolcheviks, and the research agenda became even more extreme. Under Prescott's leadership, nominal rigidities, imperfect information, money, and the Phillips curve, all disappeared from the basic model, and researchers focused on the stochastic properties of the Ramsey model (equivalently, a representative agent Arrow-Debreu economy), rebaptized as the Real Business Cycle model, or RBC. Three principles guided the research: Explicit micro foundations, defined as utility and profit maximization; general equilibrium; and the exploration of how far one could go with no or few imperfections.

The new-Keynesians embraced reform, not revolution. United in the belief that the previous vision of macroeconomics was basically right, they accepted the need for better foundations for the various imperfections underlying that approach. The research program became one of examining, theoretically and empirically, the nature and the reality of various imperfections, from nominal rigidities, to efficiency wages, to credit market constraints. Models were partial equilibrium, or included a trivial general equilibrium closure: It seemed too soon to embody each one in a common general equilibrium structure.

The new-growth theorists simply abandoned the field (i.e. fluctuations). Lucas' remark that, once one thinks about growth, one can hardly think about something else, convinced many to focus on determinants of growth, rather than on fluctuations and their apparently small welfare implications. Ironically, as the Ramsey growth model became the workhorse of the new-classicals, much of the progress on the growth front was made by examining the implications of various imperfections, from the public good nature of knowledge and the nature of R & D, to externalities in capital accumulation.

Relations between the three groups - or, more specifically, the first two, called by Hall "fresh water" and "salt water" respectively (for the geographic location of most of the new-classicals and most of the new-Keynesians) - were tense, and often unpleasant. The first accused the second of being bad economists, clinging to obsolete beliefs and discredited theories. The second accused the first of ignoring basic facts, and, in their pursuit of a beautiful but irrelevant model, of falling prey to a "scientific illusion." (See the debate between Prescott and Summers (1986)). One could reasonably despair of the future of macro (and, indeed, some of us came close (Blanchard 1992)).

(Olivier J. Blanchard, ^œ[The State Of Macro](#) , Working Paper 14259, NBER Working Paper Series, August 2008, pp. 3-5)

¹⁰²⁵ For other forces involved see ^œ[Stagflation: From Tragedy to Farce](#) and the accompanying comments (*Naked Capitalism*, Posted on August 16, 2022 by Yves Smith)

¹⁰²⁶ (29/08/17) In the long run it matters little whether countries and communities are invaded militarily or through 'foreigners bearing gifts'. If the aim of the invasion is accessing the raw materials of the country or community, then, to paraphrase [Liz Wily \(2011\)](#), traditional rights to land

and resources will be steamrollered in the name of a warped and outdated view of economic development.

This is, indeed, the 'development' of their own nations by those 'foreigners' at the expense of others. Living well [beyond their own, internal environmental means](#).

When, as is the 21st century case in China and elsewhere, imports are primarily raw materials and exports primarily manufactured products, then they are artificially expanding their available resource bases through appropriating those of others and, in the process, reorganizing the peoples and environments of those places to facilitate their access to the resources.

As Wily concludes:

The sheer scale of this globalized land acquisition at scale is indicative of a tipping-point in the globalization of the land market. It signals the opening up of virtually all economies and land classes to externally derived land purchases or leases.

This is unlikely to be reversible.

The implications for polarisation in the ownership of natural resources are immense. They are also alarming, considering that they occur in environments where industrialisation has not taken off and where opportunities for alternative wage employment for those deprived of their land are scarce.

Of course, the unfortunate [dispossession of millions of rural people](#) around the world, sacrificed to the overwhelming necessity for global agricultural and other primary resource development required by a rapidly industrializing world has not gone unnoticed.

As industrialized nations step up their pursuit of 'under-utilized' and 'untapped' resources around the world, international organizations publish their intentions to protect those suffering invasion and dispossession. The United Nations has provided one of the most comprehensive of these in their *2030 Agenda for Sustainable Development*. Here is their 'solution' to the problems facing those on the receiving end of the burgeoning 'development' activities of the industrialized world:

Sustainable Development Goals

Goal 1. End poverty in all its forms everywhere

Goal 2. End hunger, achieve food security and improved nutrition and promote sustainable agriculture

Goal 3. Ensure healthy lives and promote well-being for all at all ages

Goal 4. Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all

Goal 5. Achieve gender equality and empower all women and girls

Goal 6. Ensure availability and sustainable management of water and sanitation for all

Goal 7. Ensure access to affordable, reliable, sustainable and modern energy for all

- Goal 8. Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all
- Goal 9. Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation
- Goal 10. Reduce inequality within and among countries
- Goal 11. Make cities and human settlements inclusive, safe, resilient and sustainable
- Goal 12. Ensure sustainable consumption and production patterns
- Goal 13. Take urgent action to combat climate change and its impacts*
- Goal 14. Conserve and sustainably use the oceans, seas and marine resources for sustainable development
- Goal 15. Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss
- Goal 16. Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels
- Goal 17. Strengthen the means of implementation and revitalize the Global Partnership for Sustainable Development

(United Nations, ^œ[Transforming our world: the 2030 Agenda for Sustainable Development](#), 21 October 2015)

'Of making many lists there is no end...'. A Western aphorism says it all: 'The road to hell is paved with good intentions'. As a popular *Bee Gees* song of the 1970s put it: "It's only words..."

¹⁰²⁷ Of course, because Kalecki is living in a time when credit creation is hobbled by the clumsy 1935 directive that the Federal Reserve must [purchase government securities from the private sector](#), specifically, government securities dealers, he uses the term 'borrowing', more appropriate to the understandings of 1920s free-marketeers than to New Deal practices. Where Kalecki uses the term 'borrowing' one should, in line with [his own explanation](#) elsewhere, read 'credit creation'.

¹⁰²⁸ This was not, of course, a new development of the late 20th century. Thomas Huxley (1893) described this attitude to the responsibilities of government in the second-half of the 19th century:

According to their views, not a shilling of public money must be bestowed upon a public park or pleasure ground; not sixpence upon the relief of starvation, or the cure of disease.

...The State is simply a policeman, and its duty is neither more nor less than to prevent robbery and murder and enforce contracts. It is not to promote good, nor even to do anything to prevent evil, except by the enforcement of penalties upon those who have been guilty of obvious and tangible assault upon purses or persons. (1893, p. 258)

¹⁰²⁹ See [Subsistence and status](#) for a discussion of the nature of and relationship between 'private' and 'public' environments in Western communities.

¹⁰³⁰ Adam Smith had explained this two centuries earlier:

The resolute firmness of the person who acts in this manner, and in order to obtain a great though remote advantage, not only gives up all present pleasures, but endures the greatest labor both of mind and body, necessarily commands our approbation.
(1759 Part 4 Ch. 2)

¹⁰³¹ See [Natural Law and Perfection](#)

¹⁰³² See [Reciprocity and Exchange](#) for discussion on the nature of reciprocity and exchange. The presumption that there is only one definition of human exchange, from which actual behavior deviates as a result of constraints and incentives imposed by society, seems to be based on a rather naive understanding of processes of categorization and classification and therefore of processes of human interaction.

¹⁰³³ The World Trade Organization statement of purpose would later explain this:

The economic case for an open trading system based upon multilaterally agreed rules is simple enough and rests largely on commercial common sense...

All countries, including the poorest, have assets - human, industrial, natural, financial - which they can employ to produce goods and services for their domestic markets or to compete overseas.

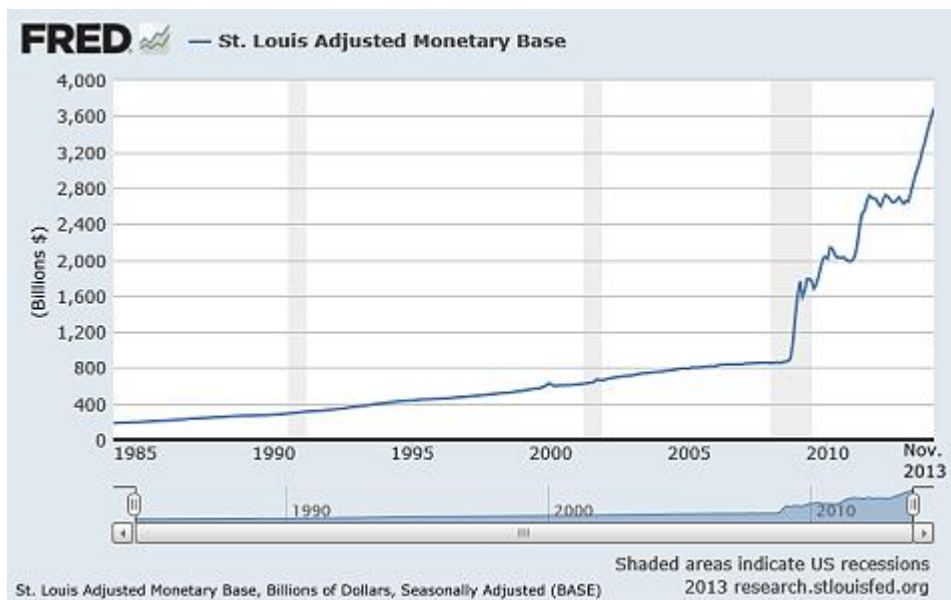

Economics tells us that we can benefit when these goods and services are traded. Simply put, the principle of "comparative advantage" says that countries prosper first by taking advantage of their assets in order to concentrate on what they can produce best, and then by trading these products for products that other countries produce best.

In other words, liberal trade policies - policies that allow the unrestricted flow of goods and services - sharpen competition, motivate innovation and breed success. They multiply the rewards that result from producing the best products, with the best design, at the best price.

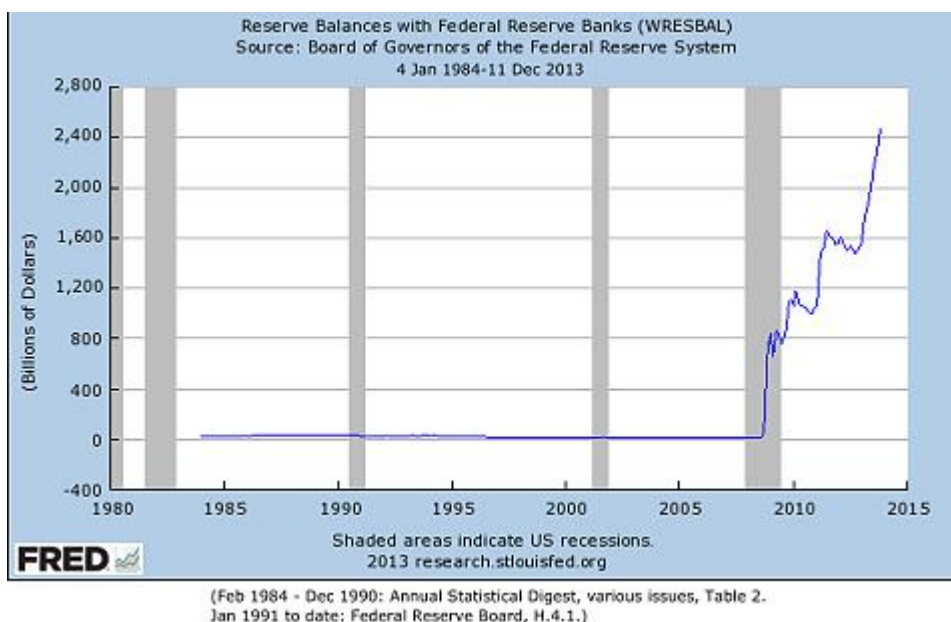

(^œ[WTO](#))

The graphs below show US monetary base expansion from 1984 to 2013:

The US Monetary Base (in billions of dollars, seasonally adjusted) as at November 30 2013 (2013-12-11: 3,715.719 Billions of Dollars)

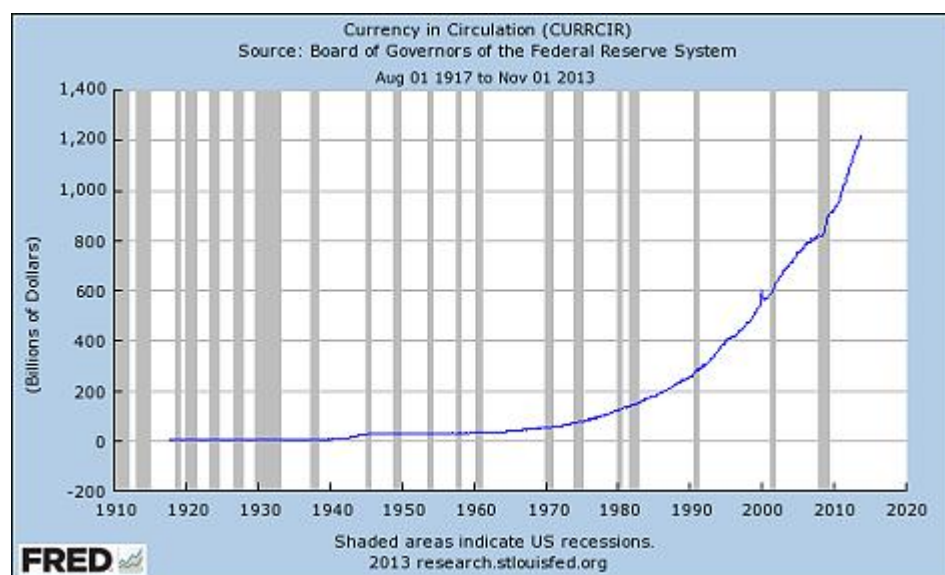

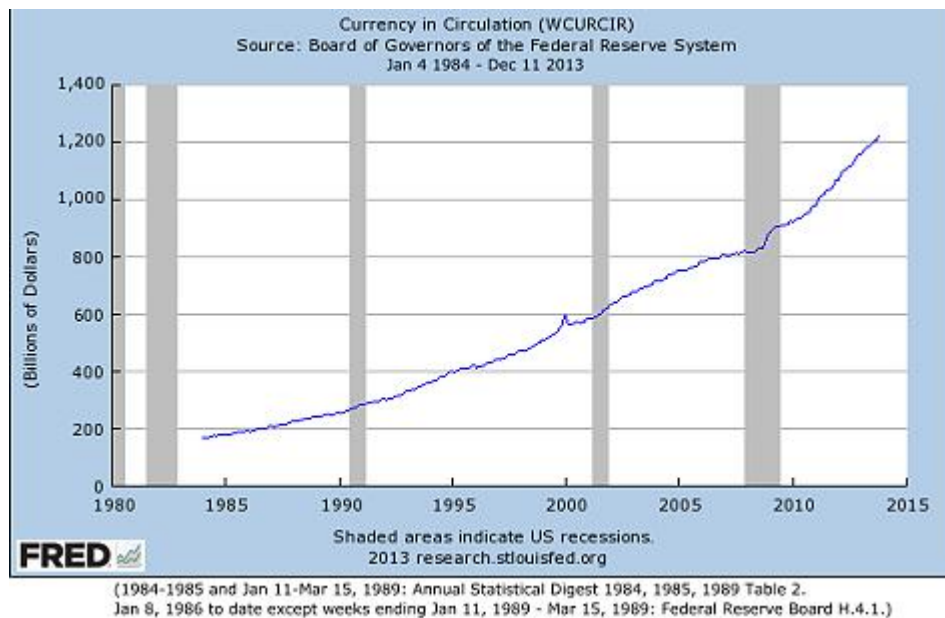

Bank reserves held with Federal Reserve Banks (in billions of dollars) from January 4 1984 to December 11 2013 (2013-12-11: 2,524.024 Billions of Dollars)

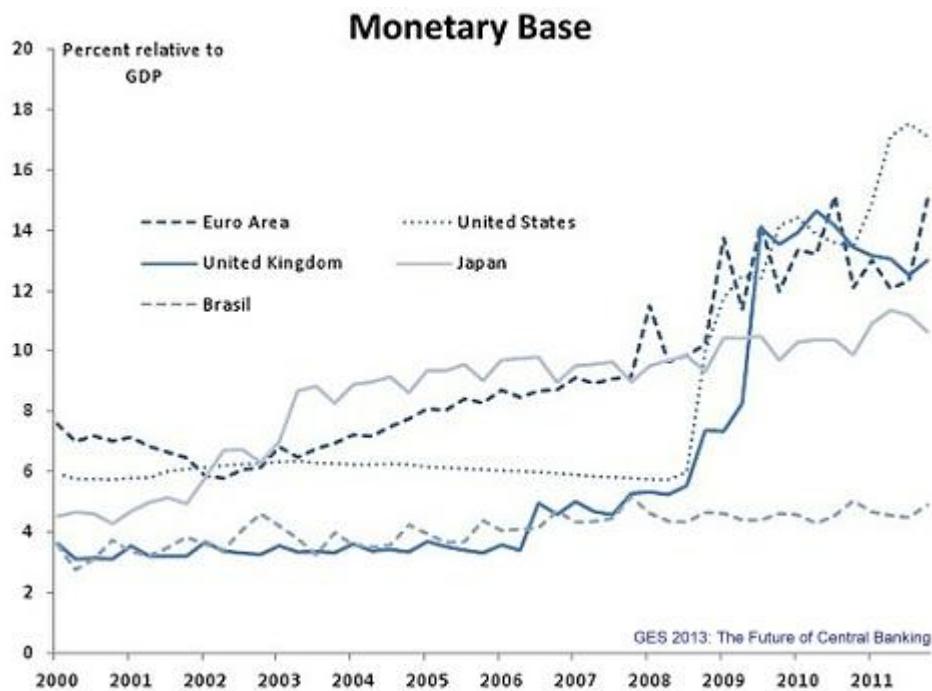

(Reserve balances with Federal Reserve Banks are the difference between "total factors supplying reserve funds" and "total factors, other than reserve balances, absorbing reserve funds." This item includes balances at the Federal Reserve of all depository institutions that are used to satisfy reserve requirements and balances held in excess of balance requirements. It excludes reserves held in the form of cash in bank vaults, and excludes service-related deposits.)

And, US Currency in Circulation (2013-12-11: 1,227.537 Billions of Dollars)

(Currency in circulation includes paper currency and coin held both by the public and in the vaults of depository institutions. The total includes Treasury estimates of coins outstanding and Treasury paper currency outstanding. This definition of currency in circulation differs from the currency component of the money stock, a measure of currency used in some other Federal Reserve reports (for example, the H.6 release), which excludes currency held in vaults of depository institutions.)

Here, for contextualization, is an international comparison of post-2007 monetary base expansion prepared for the 2013 Global Economic Symposium discussion, 'œThe Future of Central Banking: Inflation Targeting versus Financial Stability ':

1034 The *Investopedia* explanation of the nature of 'monetary authorities', which claims that 'in modern economies, the central bank is responsible for the formulation of monetary policy', relies on the presumption that central reserve authorities are entirely independent institutions, responsible for setting their own 'policies'.

The reason why this claim is often made is that, in neoliberal, *laissez faire* economies, it is assumed that central banks should be independent entities, responsible and responsive to private money markets and so governments are assumed not to be involved (or have a secondary role, relying on the guidance of central reserve authorities) in the formulation of monetary policy.

When democratic governments rely on neoliberal understandings, this leads to real confusion as to who is ultimately responsible for setting monetary policy, with governments being required to 'borrow' from central banks [as though they were private entities](#).

To reiterate the obvious: in truly democratic sovereign states, technocrats within administrative departments, institutions and agencies should *never* be allowed to usurp the prerogatives of government: the formulation of the policies they are responsible for implementing.

Politically determined policies may, at the discretion of political decision making bodies, sometimes confer broad powers to technocrats but such powers should always be subject to political oversight. Ambiguous policy directives should *not be manipulated by technocrats*, they should be referred back to the political body responsible for framing them. Poor policy framing should never be allowed to excuse technocratic usurpation of political responsibilities.

Neil Wilson has succinctly commented on all this:

There is a supply side shortage of Solomons. The philosopher kings do not exist. That's why we have democracy.

The central bank should have no authority to change price or quantity. Its job is to clear the government's cheques as determined by the democratic process, regulate the banks so they only lend for the productive purpose and put them through administration when they go bust.

Everything else should be decided by politicians. The governor of the central bank should be an anonymous civil servant in the same way that the head of the social security department is anonymous. They are given their orders by parliament and they execute them within those terms of reference.

(Neil Wilson, Comment on Bill Mitchell's blog entry, [^œThe ECB should not become a fiscal agent](#), *billy blog*, February 21, 2017)

In a later comment on a Bill Mitchell blog posting Neil Wilson has suggested that the 2021 British relationship between its political and technocratic elites is similar to the old state/church confrontation (with the state subservient to the new quasi-religious authorities ([Henry II must be spinning in his grave!](#))):

What we're seeing here... is the ancient battle between the Church and the King playing out for a new generation.

The elected government is still "The Crown" and has the powers of the King.

The new technocratic elite have adopted the manners of "The Church", including high priests of doom, all speaking from sacred texts and censoring anybody who dares cross them. It's the new Holy Roman Empire.

Labour have decided to back the Church.

Derek Henry, in a reply comment, summed it up:

Fiscal policy is the devil - Walk this way and I will provide you with a loan instead.

(Bill Mitchell, [^œIn the battle between government and the hedge fund gamblers - the government has all the cards](#), *Modern Monetary Theory*, October 28, 2021)

¹⁰³⁵ Janet Yellen, chair of the US Federal Reserve Board, in a press conference, gave an appropriately cautionary response to a question posed by Greg Robb from *MarketWatch* :

Greg Robb:

There's been a lot of discussion in last couple months about the slow pace of demand in the global economy, and some economists think that central banks should think about using helicopter money, maybe in Japan first or Europe first. But then, former Fed Chairman Ben Bernanke weighed in saying that he thought it would be a good thing for the Fed to put helicopter money in its toolkit in case there was a downturn in the United States. So I'd like to get your comments on that.

Janet Yellen:

... [I]n normal times, I think it's very important that there be a separation between monetary and fiscal policy, and it's a primary reason for independence of a central bank. We have seen all too many examples of countries that end up with high or even hyperinflation because those in charge of fiscal policy direct their central bank to help them finance it by printing money, and maintaining price stability and low and stable inflation is very much aided by having central bank independence.

Now, that said, in unusual times where the concern is with very weak growth or possibly deflation - rather rare circumstances - first of all, fiscal policy can be a very important tool. And it's natural that

if it can be employed that, just as monetary policy is doing a lot to try to stimulate growth, that fiscal policy should play a role. And normally, you would hope, in an economy with those severe downside risks, monetary and fiscal policy would not be working at cross purposes to get - but together.

Now, whether or not in such extreme circumstances, there might be a case for, let's say, coordination - close coordination, with the central bank playing a role in financing fiscal policy; this is something that academics are debating, and it is something that one might legitimately consider. I would see this as a very abnormal, extreme situation where one needs an all-out attempt, and even then it's a matter that academics are debating, but only in an unusual situation

(^œ[Transcript of Chair Yellen's Press Conference, US Federal Reserve Media Center, June 15, 2016](#))

(30/09/16) Yellen's response echoes the (perhaps justifiable) fear amongst 'professionals' that if monetary and fiscal policy is left with politicians then disaster awaits (though the performance of 'professionals' has been less than inspiring over the past fifty years!). However, her fears merely underscore the need for 'professionals' to take their responsibility for counselling and educating politicians seriously.

A commenter on a blog posting by Paul Krugman has summed it up:

"[A]usterity was the result of right-wing opportunism, exploiting instinctive popular concern about rising government debt in order to reduce the size of the state."

Apparently, observing the obvious is all it takes to be deemed a trenchant mainstream economist.

The question to be answered is: Why have 80 years passed and no countervailing political force disabused the public of such garbage? Or how about just the last 8 years? Or 24? And why have those mainstream economists - ostensibly "experts" on economics - (who are supposed to know better) kept lending their political support to their chosen political team when that team has repeatedly cowardly refused to take on the political responsibility of educating that public?

(ReaganAnd30YearsOfWrong, Commenter, Paul Krugman, ^œ[A General Theory Of Austerity?](#), September 29 2016)

One can but dream that such education and counselling might echo Dan Kervick's (2012) explanation on a blog posting by Bill Mitchell:

Every economic unit except a monetarily sovereign government is stock constrained. It can only spend in excess of its receipts by drawing down its net stock of financial assets, either by spending some of the stock directly, or by issuing a debt claim against that stock. Once the claims against the stock exceed the size of the stock, the unit is insolvent, and can only continue to spend if others are willing to accept its IOUs even in the face of apparent insolvency, granting credit.

For a government like the government of Australia, the US, Japan or Canada, the whole notion that the government possesses a fixed "stock" of financial assets is a bookkeeping fiction. And if one insists on preserving that fiction and referring to the government's asset stock, one might as well view that government as having an infinite

stock. Flows into that bottomless stock do not change the quantity of assets; nor do payments out of the stock change the quantity. Debt claims against that stock do not push the government closer to insolvency, because there is no bottom. The government is not stock constrained; it is only policy constrained.

The chief policy constraints are price stability and full employment. The government's concerns are not with what happens to its infinite financial asset stock, which is a bookkeeping fiction, but only with the way in which flows into the government's infinite well or out of the government's infinite well affect policy aims in the non-governmental sector.

Also, debt is a legally binding promise to pay, and so all of these non-governmental units are bound by laws to their debts, laws that the unit itself does not control. But governments make the laws under which they, themselves operate, and if the makers of the laws - in the case of a democracy the sovereign people - find the laws onerous, they can change the laws.

(Dan Kervick, Commenter, [A voice from the past - budget deficits are neither good nor bad](#), *Billy Blog*, Tuesday, May 22, 2012)

¹⁰³⁶ Reminiscent of [Townsend's view](#) of 16th century disenfranchised peasants. As Paul Krugman put it, discussing US presidential hopeful, Jeb Bush's views,

...The real source of his remark was the "nation of takers" dogma that has taken over conservative circles in recent years - the insistence that a large number of Americans, white as well as black, are choosing not to work, because they can live lives of leisure thanks to government programs.

You see this laziness dogma everywhere on the right. It was the hidden background to Mitt Romney's infamous 47 percent remark. It underlay the furious attacks on unemployment benefits at a time of mass unemployment and on food stamps when they provided a vital lifeline for tens of millions of Americans. It drives claims that many, if not most, workers receiving disability payments are malingerers - "Over half of the people on disability are either anxious or their back hurts," says Senator Rand Paul.

It all adds up to a vision of the world in which the biggest problem facing America is that we're too nice to fellow citizens facing hardship. And the appeal of this vision to conservatives is obvious: it gives them another reason to do what they want to do anyway, namely slash aid to the less fortunate while cutting taxes on the rich.

Given how attractive the right finds the image of laziness run wild, you wouldn't expect contrary evidence to make much, if any, dent in the dogma....

(Paul Krugman, [The Laziness Dogma](#), *New York Times*, The Opinion Pages, July 13, 2015)

¹⁰³⁷ Christopher Krupenyi *et al* have summed it up:

Central to everything that makes us human - including our distinctive modes of communication, cooperation, and culture - is our theory of mind (TOM). TOM is the ability to impute unobservable mental states, such as desires and beliefs, to others.

(Christopher Krupenyi, Fumihiko Kano, Satoshi Hirata, Josep Call

and Michael Tomasello, ^{ae}[Great apes anticipate that other individuals will act according to false beliefs](#), *Science*, 07 Oct 2016: Vol. 354, Issue 6308, pp. 110-114)

So, we are not describing some peculiar misstep in the evolution of neoliberal human brains. It's more likely to be a failure to evolve beyond basic cognitive skills shared with the great apes! Perhaps neoliberal devotees are drawn to its false-beliefs because they have not inherited that common human ability to discriminate between illusion and reality - they suffer from '[arrested-development](#)'. As the authors explain:

In human developmental studies, it is only after age 4 that children pass traditional false-belief tests, in which they must explicitly predict a mistaken agent's future actions.

The question is: Are those neoliberal believers to be pitied but corrected; or allowed to hold back the social/ political/ economic development of the rest of us through imposing the consequences of their immature cognitive skills on us?

We all know the consequences of following their lead in the years prior to the Great Financial Crisis.

We all know that the reality check the GFC provided barely registered in the continued advice and direction their major institutions provided following the crisis.

So, why on earth do we continue to treat any of them as credible guides into the future?

Bill Mitchell has summed it up:

Go back to 2006 when all the true, neo-liberal believers were smugly declaring that the business cycle was dead and that more financial deregulation was required, apparently to enrich us all, whereas in reality, income inequality had been rising at rather stunning rate, such that the enrichment was being concentrated at the top-end-of-town.

In its April 2006 - Global Financial Stability Report - which is a sister publication to the Fiscal Monitor, the IMF waxed lyrical about the strength of the "global financial system".

We learned that:

... globalization and financial innovations have advanced the scope for capital markets to channel credit to various users in the economy. In particular, the emergence of numerous, and often very large, institutional investors and the rapid growth of credit risk transfer instruments have enabled banks to manage their credit risk more actively and to outsource the warehousing of credit risk to a diverse range of investors. A wider dispersion of credit risk has "derisked" the banking sector, which still occupies a strategically important role in the economy, in part because of its role in the payments system. It is widely acknowledged, meanwhile, that holding of credit risk by a diverse multitude of investors increases the ability of the financial system as a whole to absorb potential shocks.

Okay, the rest of the world now knows that this assessment was ridiculous given the circumstances that had emerged after two decades or so of financial market deregulation.

We now know that the financial sector was out of control by 2006 and on the verge of collapse. We now know that only massive government intervention - that is, the use of the currency-issuing capacity of the government and its central banks - saved the world from a financial meltdown.

When the IMF wrote:

Beyond risk diversification, the unbundling and active trading of risk, including through credit derivative markets, seem to have created an efficient, timely, and transparent price discovery process for credit risk.

We now know that the IMF didn't have a clue what it was talking about.

When the IMF wrote that:

Balance sheets of the household sector in major countries have also improved since 2001, because of the rise in house prices and the recovery of international equity markets.

We now know that the estimates of rising household net worth was predicated on the asset-price bubbles created by the credit binge that followed the rise of the financial engineer through deregulation and the corrupt and unethical and criminal behaviour of the increasingly unfettered financial sector.

We now know that a substantial portion of this rising household net worth was illusory and households found that out the hard way, especially in the US, as housing prices crashed.

When the IMF wrote that:

There are several reasons to suggest why concerns of an impending recession in the United States may be overstated ...

We now know what followed 18 months later. The real collapse of the US economy which then resonated throughout the world in one way or another had been predicted by some economists (including all the original Modern Monetary Theory (MMT) authors) for at least a decade prior to the GFC.

The IMF was trying to claim that financial markets were working efficiently to resolve any so-called "'mismatches' between the duration of their assets and liabilities" - that is, the exposure of banks to increasingly risky portfolio positions.

Finally, in 2006, the IMF was claiming that there was a need to:

... rein in fiscal deficits and public debt ... strong policy efforts to contain these trends are needed less these countries face increase market scrutiny when the environment turns less friendly.

The IMF claimed that "sound macroeconomic policy, especially prudent fiscal policy ... is essential to reduce vulnerabilities". That is, they were rehearsing the standard neo-liberal line at the time that fiscal surpluses were a necessary part of a low risk environment for countries.

They never once during this period, leading up to the GFC, acknowledged any understanding of the national account relationships that tell us that a government surplus (deficit) is exactly equal to a non-government deficit (surplus).

And they never once acknowledged an understanding that if the non-government sector is running a continual deficit, then after the exhaustion of savings and asset sales, the only other thing we would observe is rising non-government indebtedness.

This rising indebtedness clearly exposes the non-government sector to increased risk such that fluctuations in asset price and/or incomes can bring the whole house of cards crashing down.

That is exactly what happened in 2008.

It is important to reflect on what might be characterised as the standard narrative at the time propagated by the likes of the IMF, the BIS, and the OECD.

(Bill Mitchell, ["Pragmatic retreats into reality by the IMF will be ephemeral"](#), *Billy Blog*, October 6, 2016)

So: Why on earth do we take their opinions seriously? Any sane, dispassionate assessment should have resulted in, at the very least, a serious culling of deluded advisors. Instead, we continue to solicit their advice, to rely on their direction. Perhaps humanity has not yet cognitively evolved beyond the great apes after all!! ¹⁰⁹⁴

¹⁰³⁸ In capitalist nations, the primacy of the community over the economy presumes [government responsibility for the commonweal](#); the primacy of the economy over the community (the neoliberal focus) presumes profit driven enterprise in the driver's seat. Sam Adler-Bell focuses on these alternatives in an article entitled 'There was always a way to pay for the programs we need' and addresses why, in the 2020 Covid-19 crisis in which governments are committing vast sums to maintaining both their economies and essential services, no-one is asking "How are we going to pay for it?":

...[A]s Congress prepares to pass a \$2 trillion aid package, the largest in modern U.S. history, one question no one is asking is: "How are we going to pay for it?" It has disappeared from the discourse entirely, sucked into the same black hole of irrelevance as our grievances against loud-chewing coworkers and handwringing about mean tweets. There are no "payfors" (i.e. offsets to make it deficit neutral) in the Senate's aid bill, no creative sources of revenue or tax hikes, in fact, it cuts taxes for businesses and individuals alike. "Nobody will pay for anything having to do with the crisis," Biden said during the one-on-one debate with Sanders on March 15. "This is a national emergency... We, out of the treasury, are going to pay for this." In January, Treasury Secretary Steve Mnuchin, said the government needed to cut spending to lower the deficit to sustainable levels; two weeks ago he said, "In different times we'll fix the deficit. This is not the time to worry about it."

He concludes:

...The limits on government spending are not financial. The U.S., as the sole issuer of its own currency, can never run out of money to pay its debts.

Is there ever a bad time for the government to print money into the economy? Yes, of course there is: when the economy is at maximum productive capacity. If Congress passed a trillion dollar green infrastructure plan - financed by deficit spending - in a full employment economy, there wouldn't be anywhere for that money

to go; the federal government would be competing with the private sector for workers, machines, and materials; inflation would result. You'd need to free up resources first - say, by taxing fossil fuel companies into oblivion, breaking up monopolies that create upward pressure on prices, or curbing Wall Street's generation of private credit.

(Sam Adler-Bell, ^œ[There was always a way to pay for the programs we need: Money printer go brrrrrrr](#), *The Outline*, March 30, 2020)

¹⁰³⁹ Zephyr Teachout has provided a sketch of the 1870~ Gilded Age in the United States and contrasted it with what has happened there since 1970:

The so-called Gilded Age in the United States began with the Compromise of 1877, which settled the disputed presidential election of 1876 by awarding the White House to the Republican candidate, Rutherford B. Hayes, in exchange for the withdrawal of federal troops from three Southern states. In the short term, the compromise effectively ended Reconstruction. In the longer term, it empowered white terrorists in the South and led to a major realignment in U.S. politics that weakened the federal government's ability to govern the "Money Power," the term used by critics at the time to describe the forces that were steadily taking over markets and political systems.

By 1900, one percent of the U.S. population owned more than half of the country's land; nearly 50 percent of the population owned just one percent of it. Multimillionaires, who made up 0.33 percent of the population, owned 17 percent of the country's wealth; 40 percent of Americans had no wealth at all. Black men had been violently and systematically deprived of the hard-won right to vote in the South, where authorities had thrown up every possible barrier - literacy tests, poll taxes, gerrymandering, grandfather clauses - to prevent the restoration of Black political rights and the growth of Black economic power. After a quarter century, it had become impossible to see these outcomes as aberrations: monopolization and repression had come to define the American system....

As the robber barons decorated their palaces and mused about their public responsibilities, slums and tenements were rife with disease, farmers struggled under crushing debts, and factory workers and miners risked death and dismemberment to eke out a living.

Meanwhile, the chorus of dissent that had been rising since the 1870s grew louder, as farmers, factory workers, antitrust leagues, labor unions, and local-level politicians joined forces. Three groups emerged as the main opponents of the status quo: the populists, the progressives, and the socialists. What all three realized, to varying degrees, was that the root of the inequalities of the Gilded Age was the extreme concentration of market share, wealth, and political power. American socialism fell short as a political force, but the Populist and Progressive movements - which overlapped and merged in important ways - became powerful vectors of change.

The parallels with the present day are obvious, and it has become commonplace to hear the current era described as a new Gilded Age. As the journalist Barry Lynn points out in his book *Liberty From All Masters*, the robber barons shared with today's high-tech monopolists a strategy of encouraging people to see immense inequality as a tragic but unavoidable consequence of capitalism

and technological change. But as Lynn shows, one of the main differences between then and now is that, compared to today, fewer Americans accepted such rationalizations during the Gilded Age. Today, Americans tend to see grotesque accumulations of wealth and power as normal. Back then, a critical mass of Americans refused to do so, and they waged a decades-long fight for a fair and democratic society. On the other hand, today's antimonopoly movements are intentionally interracial and thus avoid a massive failure of the populists and progressives of the late Gilded Age, who abandoned Black Americans even though they had played a crucial role in fostering both movements.

Over time, the ultrarich and the many well-compensated professionals who are always available to do their bidding chipped away at the progress that the Populist and Progressive movements achieved. Today's populists and progressives would do well to remember what are perhaps the most important lessons of those limited victories: the struggle against inequality is primarily a fight against monopoly power in its many guises, and because monopoly power is never race-neutral, that fight cannot truly succeed unless it does so in an inclusive way....

(Zephyr Teachout, ^œ[Monopoly Versus Democracy: How to End a Gilded Age](#), *Foreign Affairs*, January/February 2021)

¹⁰⁴⁰ Paul Jay, in a 2017 video discussion with Peter Kuznick presented by *The Real News Network*, addressed 'what happened in 1944 when Wallace got dumped as Roosevelt's vice president':

...[W]e want to go back ... to Roosevelt and the New Deal and Henry Wallace, who became Roosevelt's vice president from '41 to '45, what happens in 1944 when Wallace gets dumped as Roosevelt's vice president, and Wallace represents perhaps the most progressive politics that a vice president certainly ever had. Maybe the most progressive politics that someone ever made it to that kind of power ever had in the United States....

Peter Kuznick described what happened at the 1944 Democratic Party Convention:

..In '44 the support was for Wallace but Edwin Pauley, the party treasurer, ran what Pauley called Pauley's Coup, he proudly referred to it as, in conjunction with Bob Hannegan, the Democratic party chair. They run an operation. Roosevelt by '44 is very, very weak. It's clear to everybody that he's not going to last another term. He was the only one who was in denial really about that.

They went around saying, for the nomination for vice president they were saying, "We're not just nominating a vice president. We're nominating the next President of the United States." They made all the deals. They tried to keep the progressives, the Wallace supporters from ever getting access to Roosevelt. They cooked the convention basically. They stacked the convention with anti-Wallace delegates.

The problem was that Wallace was so popular. The night the convention starts, July 20th, Wallace makes the seconding speech for Roosevelt. Even though the party bosses had the convention already stacked and fixed in 1944, like they did in 2016. After Wallace's speech there's a spontaneous demonstration on the floor. It lasts for about an hour. Among the leaders are people like Hubert

Humphrey and Adlai Stevenson.

(Paul Jay, ^œ[Undoing New Deal: The 1944 Coup Against VP Henry Wallace](#), *The Real News Network*, December 4, 2017)

¹⁰⁴¹ As the 2020 Democrat primaries in the US unfolded it became increasingly clear that the ^œ[Democrat Establishment was in the process of engineering victory](#) for their chosen, establishment, presidential candidate.

In April 2020, with Sanders withdrawing from the race and Biden the only remaining Democratic Party presidential candidate, Biden was left with the task of shoring up his bid for the presidency. Sydney Ember and Katie Glueck have explained:

...[J]ust five days after Mr. Sanders withdrew, a sign of how profoundly the coronavirus pandemic has changed the race. The uncertainty caused by the virus, the vast damage to the American economy and the fervent desire to deprive Mr. Trump of a second term prompted an earlier-than-expected alliance between two ideological rivals, aimed at bringing together disparate factions of the party.

"We need you in the White House," Mr. Sanders said to Mr. Biden. "And I will do all that I can to see that that happens."

Mr. Biden said: "I'm going to need you. Not just to win the campaign, but to govern."...

The challenge now for Mr. Biden and Mr. Sanders is to create an agenda that hews to Mr. Biden's relatively moderate policy views, and draws in progressives, but also seems big enough to match the moment in the country.

It is a complicated task for both of them: Mr. Biden, who easily won the Wisconsin primary in results announced Monday evening, will have to persuade more Sanders-supporting liberals that he will fight for their interests. Mr. Sanders is essentially committing himself vouching for Mr. Biden or at least bring more of his followers into the Biden camp. Neither man can predict with any assurance how their political alliance will pan out.

Already, progressive groups and activists were expressing skepticism about how far Mr. Biden would go to incorporate Mr. Sanders's followers.

"Winning over Senator Sanders is one thing, but Joe Biden shouldn't think that the work is over," said Evan Weber, political director for the Sunrise Movement, an organization of young climate activists that had endorsed Mr. Sanders. He added, "There is still work to do to win over progressive leaders and young people."

(Sydney Ember and Katie Glueck, ^œ[Bernie Sanders Endorses Joe Biden for President](#), *New York Times*, April 13, 2020)

With both Party officials and the bulk of Senate and House representatives relying on Big Money donations for their election campaigns, mega-wealth has disenfranchised the 99% and dictated the US political future. The Democrat Establishment has opted for a [hollowed out shell of US democracy](#).

The consequences of Democrat support for the *status quo*, while more subtle than the open ^œ[gerrymandering of voting districts and procedures](#) in the US, is equally effective in ^œ[ensuring the entrenchment of privilege](#)

and wealth and the undermining of the fiduciary responsibilities of government in the nation.

Pavlina Tcherneva, addressing US government responses to the economic - and, of course, social - consequences of the 2020 Covid-19 pandemic in the United States, has focused on what has been rejected and outlined a Roosevelt style 'New Deal' alternative to neoliberal 'pump-priming':

In the United States, over 50% of jobs are at risk from layoffs, furloughs, reduced pay, and lost hours. Virtually every sector of the economy stands to lose a large chunk of its business, household incomes will be devastated, and spending by consumers and firms will rapidly decline. The manufacturing collapse has already begun; the service economy, which employs 80% of all workers, will be next.

One pandemic thus will lead to another - of unemployment. The avalanche of layoffs will bring a wave of defaults, bankruptcies, and depressed profits. The domino effect will continue across many domains, from collapsing state and municipal tax revenues and business failures to impoverished communities, declining health outcomes, homelessness, and "deaths of despair."

How should governments respond? The same way the US government did under President Franklin D. Roosevelt in the World War II era.

The first priority is to mobilize. That means building temporary field hospitals, drive-through clinics, and emergency health centers. It means cranking up production of essential equipment and medication, staffing health facilities adequately, and establishing support services for the hungry, homeless, and most vulnerable. And it means deploying an army to disinfect airports, schools, and critical public places.

Second, we need to make it easier for people to stay home, such as by implementing short-term debt deferments (including on small business and mortgage loans) and suspending utility bills, as some European countries are already doing. Governments also should be providing income support in the form of extended unemployment insurance, food stamps, and housing benefits. In the US, all work requirements for public benefits should be abolished, and the federal government should extend immediate financial assistance to state governments constrained by balanced-budget laws.

The coronavirus-response package recently adopted by the US does not go nearly far enough. As it stands, the legislation still would leave 80% of private-sector workers without medical and paid-leave coverage. The provision for free testing offers no solace to those who are already critically ill, or who will have lost their health insurance as a result of unemployment. The US should use this occasion to make universal paid leave and Medicare for all permanent policies.

Another top priority is to provide emergency cash support to households. Talk of a universal \$1,000 disbursement has gotten Americans excited - \$2,000 would be better. But cash assistance alone will not be enough. On the contrary, without the aforementioned provisions and bold measures to plug the hole in the cratering labor market, much of the cash payout will be wasted.

When employment and income prospects are uncertain, sending cash to families is like pouring water into a leaky bucket. What the US and other countries really need are policies to create good jobs once the crisis has passed.

That's why, after taking all of the steps necessary for today, governments should mobilize again. Only big government, big public investments, and big public-employment programs will ensure a quick bounce back, rather than another protracted jobless recovery. In the last crisis, much of the stimulus fueled runaway inequality; this time needs to be different.

The situation demands not "nudges" or "incentives" but direct action on the model of the New Deal, the US Interstate Highway System, and the Apollo Program. Governments should use this crisis as an opportunity to launch a bold investment program for clean, green infrastructure, as envisioned in the Green New Deal. After all, another viral epidemic is inevitable, and the climate crisis demands FDR-like ambition and resolve...

(Pavlina R. Tcherneva, [What Would Roosevelt Do?](#), *Project Syndicate*, March 20, 2020)

¹⁰⁴² I must admit to a degree of annoyance at this kind of uncritical comparison of 'communism' in two very different nations. It reflects an ignorance of the ^œ[dialectical](#) nature of 'communism' in each nation.

The nature of the dialectical base of Marx's treatise on communism stemmed from reworking of a westernization of 17th century Chinese yin-yang concepts as explained to Leibniz by Jesuit missionaries. 'Communism', in being reintroduced to 20th century China, was subconsciously understood as a variation on old Chinese philosophical understandings and so resulted in a very different form of communism from that extant in Europe.

Rana Mitter, in a review of a Chinese film series entitled 'The Real Roots of Xi Jinping Thought: Chinese Political Philosophers' Long Struggle With Modernity', opens his review with this:

In 2023, Hunan TV, China's second-most-watched television channel, unveiled a series called When Marx Met Confucius. The conceit was literal: actors playing the two thinkers' - Confucius dressed in a tan robe and Karl Marx in a black suit and a leonine white wig' - met at the Yuelu Academy, a thousand-year-old school renowned for its role in developing Confucian philosophy. Over five episodes, Marx and Confucius discussed the nature of politics, arriving at the conclusion that Confucianism and Marxism are compatible' - or that Marx may have subconsciously drawn his theories from a Confucian well.

In one episode, Marx noted that he and his companion "share a commitment to [political] stability," adding that "in reality, I myself was Chinese for a long time," suggesting that his thinking had always been harmonious with traditional Chinese worldviews....

(Rana Mitter, [The Real Roots of Xi Jinping Thought: Chinese Political Philosophers' Long Struggle With Modernity](#), *Foreign Affairs*, February 20, 2024)

What his long and at times insightful examination of the issues of the series misses, as do most Chinese explorations of the nature of the relationship between Marx's writing and Chinese traditional philosophical thought, is the seeding of Marx's thought on the dialectic (which is at the

heart of Marx's *Communist Manifesto*) by various iterations of Leibniz's use of information fed to him by Jesuit missionaries to China in the 17th century.

It is not that Mao and his compatriots explicitly recognized the similarity between the *inverted dialectic* of Marx's treatise and traditional Chinese philosophical writings but that, having been educated in China, they intuitively understood and implemented the Marxist understandings to which they were introduced in terms of [extant Chinese philosophical understandings](#).

And, that, subliminally reworked understanding of Marxism, has persisted and matured over the past century. The 'Marxism' of current Chinese political and academic thinkers is continually, *dialectically*, shaped to suit the requirements of the present.

Political understandings in 'modern China' are those intuitively recognized as being 'appropriate' to the times.

¹⁰⁴³ Lambert Strether has provided a comparison of Biden's early initiatives and those of FDR during a similar time frame. As he says:

The jury is still out on whether President Biden's American Jobs Plan will turn out to be underpowered, or not. My guess is that it will be; the Obama Alumni Association, for all its protestations, has form....

One of the most prominent features of the Jobs Plan rollout was the continued comparison of Biden to FDR. (Now that the rollout is over with, those comparisons have vanished, as if a switch had been thrown; now we are arguing about what "infrastructure" really means, because what could be more attractive to symbol manipulators than semantics?) In any case, here's a small sample of the headlines, the New York Times being lead hagiographer:

1. "Can Biden Be Our F.D.R.?" (New York Times)
2. "F.D.R. Took Down Giants. Biden Can, Too" (New York Times)
3. "What Biden and F.D.R. May End Up Having in Common" (New York Times)
4. "Opinion: Can Biden achieve an FDR-style presidency? A historian sees surprising parallels" (WaPo)
5. "Opinion: Joe Biden's new New Deal" (WaPo)
6. "Biden's early win on COVID-19 relief could be hard to repeat. Or he could be FDR" (Los Angeles Times)
7. "Will Joe Biden take his place alongside FDR and LBJ?" (CNN)
8. "Biden is using FDR as his role model. He's made the no-drama Obama era look wild" (USA Today)
9. "Biden's New Deal: Re-engineering America, quickly" (Axios)
10. "Biden's stimulus looks bigger than the New Deal, economics professor says" (Business Insider)
11. "Biden's FDR moment? President in New Deal-like push that could cement his legacy" (Guardian)
12. "Joe Biden tries on FDR's and LBJ's shoes for size" (Chicago Sun-Times)
13. "FDR had the Great Depression, but Biden has Big Data" (Star-Tribune)

14. "With nods to FDR, JFK and LBJ, Biden goes big on infrastructure plan" (Yahoo News)
15. "Uncle Joe channels FDR" (Toledo Blade)
16. "FDR to LBJ to Joe Biden" (Daily Courier)
17. "Evoking FDR, Biden spending push is a tightrope walk" (Clayton News-Daily)
18. "The Most Vital 100 Days Since FDR" (New Statesman)
19. "The Most Vital 100 Days Since FDR" (Foreign Policy)
20. "Descendants of FDR and His Cabinet Urge Biden to Embrace 'New Deal-Scale' Public Jobs Program" (Common Dreams)
21. "FDR's German Shepherd, Major, Had A History Of 'Biting Incidents,' Too" (HuffPo)
22. "Biden Touted As Modern-Day FDR After Getting Hand Job From Cousin In Upstate New York" (The Onion)

These pieces compare Biden's American Rescue Plan and American Jobs Plan to the New Deal, based on their putative scale (which as we have seen is equivocal, and in any case the test of a plan isn't whether it's "big" or "bold," but whether it's equal to the times). I would like to compare Biden to FDR based on three characteristics of FDR's administration which the Biden administration does not emulate: Fireside chats, relentless experimentation, and the class diversity of his advisors.

(Lambert Strether, ^œ[Why Joe Biden Does Not Remind Me of FDR](#), *nakedcapitalism*, April 12, 2021)

A comment on it all by Michael Hudson is apposite:

OK, Lambert. Your big point is that FDR took a systemic approach to the problems he faced. Biden cannot be systemic, but only "marginal," meaning centrist. that means ACCEPTING the inherently polarizing economic and social tendencies, but trying to postpone the immediate effects by kicking them down the road - e.g., fixing lead piping, not banning fracking that may make water more valuable than oil in some districts. So your contrast is systemic change vs marginalize in a consensus politics with the forces that are responsible for polarizing the economy.

¹⁰⁹⁴ A comment on the Naked Capitalism website by someone pseudonymed 'Alex' has summed it all up well:

Trump, narcissistic and intellectually challenged, is the perfect incarnation of America.

His bad manners and absent sense of decorum are a refreshingly honest representation of his country's hubris.

Biden, like Obama a believer in exceptionalism and manifest destiny, has better manners, sticks to what's on the teleprompter, is less abrasive, more acceptable, and much more dangerous.

The excessively hyped emphasis on the skin color and gender of his cabinet picks evidences how vacuous his politics are. *Status quo* on steroids.

(Alex, ^œ[On a post-Trump Biden US: you get what you vote for!](#) *NakedCapitalism*, December 7, 2020)

1044 Thomas Piketty has given a clear description of the post-Second-World-War United States policies, which minimized inequality and secured the 'welfare -state' (the provision of a minimal level of well-being and social support for all citizens), and their subsequent dismantling:

...From the 1930s until the 1970s, the US were at the forefront of an ambitious set of policies aiming to reduce social inequalities. Partly to avoid any resemblance with Old Europe, seen then as extremely unequal and contrary to the American democratic spirit, in the inter-war years the country invented a highly progressive income and estate tax and set up levels of fiscal progressiveness never used on our side of the Atlantic. From 1930 to 1980 - for half a century - the rate for the highest US income (over \$1m per year) was on average 82%, with peaks of 91% from the 1940s to 1960s (from Roosevelt to Kennedy), and still as high as 70% during Reagan's election in 1980.

This policy in no way affected the strong growth of the post-war American economy, doubtless because there is not much point in paying super-managers \$10m when \$1m will do. The estate tax, which was equally progressive with rates applicable to the largest fortunes in the range of 70% to 80% for decades (the rate has almost never exceeded 30% to 40% in Germany or France), greatly reduced the concentration of American capital, without the destruction and wars which Europe had to face.

...All this was carried through almost without unemployment, since both the level of productivity and the education system allowed it. This is also the time when the US finally put an end to the undemocratic legal racial discrimination still in place in the south, and launched new social policies.

All this change sparked a muscular opposition, particularly among the financial elites and the reactionary fringe of the white electorate. Humiliated in Vietnam, 1970s America was further concerned that the losers of the second world war (Germany and Japan in the lead) were catching up at top speed. The US also suffered from the oil crisis, inflation and under-indexation of tax schedules. Surfing the waves of all these frustrations, Reagan was elected in 1980 on a program aiming to restore a mythical capitalism said to have existed in the past.

The culmination of this new program was the tax reform of 1986, which ended half a century of a progressive tax system and lowered the rate applicable to the highest incomes to 28%.

Democrats never truly challenged this choice in the Clinton (1992-2000) and Obama (2008-2016) years, which stabilized the taxation rate at around 40% (two times lower than the average level for the period 1930 to 1980). This triggered an explosion of inequality coupled with incredibly high salaries for those who could get them, as well as a stagnation of revenues for most of America - all of which was accompanied by low growth (at a level still somewhat higher than Europe, mind you, as the old world was mired in other problems).

(^{oe}Thomas Piketty on the rise of Bernie Sanders: the US enters a new political era, *The Guardian*, Wednesday 17 February 2016)

1045 (22/06/16)(13/07/16) In nations where wages are communally determined, as in Australia, there are usually legislative protections in place which

ensure both wage equity and wage compliance. Labor unions are, themselves, subject to scrutiny in the interests of fair dealing. Bill Mitchell has described, and illustrated, this:

Australia has a system where there are minimum award conditions set out for each occupation/industry. These are legal requirements that have to be met.

In addition, unions can negotiate enterprise bargains with bosses on top of those minimum requirements that become legally binding as long as they pass what is known as the BOOT.

The BOOT stands for - Better Off Overall Test - and requires [that] any voluntary agreements between workers and firms make the workers better off than they would be if they remained on the 'award', the legal minimum requirements for that sector.

(Bill Mitchell, ^œ[Dirty deals by trade unions and minimum wages in Australia](#), *Billy Blog*, June 2, 2016)

However, despite Australia still having a semblance of communally determined wage rates, conditions have deteriorated over the past half century.

Some of the responsibility for this deterioration must be borne by unions themselves. As I experienced while truck driving in the early 1960s, unions, where they could effectively exercise industrial muscle, as on many of the water-fronts of Western nations, sometimes abused the power they acquired, exercising their muscle in activities which could only marginally be considered legitimate union concerns. At times, as I found to my surprise, having rather naively presumed the democratic nature of union organizations, some union leaders gained control over the central organizations and were able to treat them as their personal fiefdoms.

They often demanded and gained excessively generous conditions for both themselves and their members. In the process they increasingly alienated both employing bodies and members of other unions, required to accept the conditions they imposed.

By the mid-1960s, water-front unions had often so alienated western voting populations that they found little sympathy when confronted by massive dislocation to their industries and lives with the advent of containerization.

While, as Roosevelt recognized, worker empowerment is essential, it needs to be well regulated. This requires, not simply an arbitration process between unions and employers but also third-party scrutiny of the demands and conditions imposed and accepted by both involved bodies. It also requires leadership election processes which ensure that small groups cannot highjack the process and disenfranchise the members.

One of the weaknesses of many unions is that members belong to a large number of small to medium enterprises and their only connection to the wider membership is through their elected delegate[s]. Delegates are relatively easily controlled by the central leadership which, if not subject to regular electoral challenge, can highjack the organization.

My experiences during the 1960s bear this out. It could be extremely frustrating to attend mass union meetings called to initiate or end strike action, to find that those running the meeting were brazenly willing to brusquely shut down opposing opinions from the body of union

members, effectively short-circuiting any opposition to their already determined decisions.

Very often, the delegates from an enterprise would agree that, since there were so many of them, they had as little true influence as regular members in mass gatherings.

There are no easy solutions to such problems but regular, well regulated, union elections are important in ensuring that union leaders remain connected with and responsive to the members.

¹⁰⁴⁶ Many neoliberal arguments for the benefits of globalization focus on the increased capacity for credit accumulation which exists in a globalized world. However, most of those [benefits accrue to multinational enterprises](#) able to exploit the possibilities of deregulation implied in operating freely across national boundaries.

This presumes the primacy of the internationalized marketplace over communities and leads, inevitably, to international credit accumulation in places where the costs of accumulating those credits are lowest. There is little or no benefit derived by exporting countries where profits accumulated by private enterprise are diverted to tax havens.

¹⁰⁴⁷ Thomas Tørsløv, Ludvig Wier and Gabriel Zucman (June 5, 2018) have decribed the consequences for transnational corporations:

Perhaps the most striking development in tax policy throughout the world over the last few decades has been the decline in corporate income tax rates. Between 1985 and 2018, the global average statutory corporate tax rate has fallen by more than half, from 49% to 24%. In 2018, most spectacularly, the United States cut its rate from 35% to 21%.

Why are corporate tax rates falling? The standard explanation is that globalization makes countries compete harder for productive capital, pushing corporate tax rates down. By cutting their rates and providing public services and infrastructure more efficiently, countries can attract more machines, plants, and equipment, which makes workers more productive and boosts their wage.

Global economic integration has made capital location more sensitive to differences in taxes and led to a more perfect competition between nations.

This theory provides a consistent explanation for the global decline in tax rates observed over the last twenty years and offers nuanced normative insights (see ^œ[Keen and Konrad, 2013](#), for a survey of the large literature on tax competition).

Our paper asks a simple question: is this view of globalization and of the striking tax policy changes of the last years well founded empirically? Our simple answer is "no." Machines don't move to low-tax places; paper profits do.

By our estimates, close to 40% of multinational profits are artificially shifted to tax havens in 2015. This tax avoidance and the failure to curb it are the main reason why corporate tax rates are falling globally - not tax competition for productive capital.

The decline in corporate tax rate is the result of policies in high-tax countries - not a necessary by-product of globalization. The redistributive consequences of this process are major, and different than in the textbook model of tax competition. Instead of increasing

capital stocks in low-tax countries, boosting wages along the way, profit shifting merely reduces the taxes paid by multinationals, which mostly benefits their shareholders, who tend to be wealthy.

It is apparent to many observers that the textbook model of tax competition doesn't capture the behavior of today's largest multinational companies well. These firms don't seem to move much tangible capital to low-tax places - they don't even have much tangible capital to start with. Instead, they avoid taxes by shifting accounting profits.

In 2016 for instance, Google Alphabet made \$19.2 billion in revenue in Bermuda, a small island in the Atlantic where it barely employs any worker nor owns any tangible assets, and where the corporate tax rate is zero percent. Contrary to the central postulate of the tax competition model, Bermuda does not have much to gain from attracting paper profits that don't improve wages for the population and that it taxes at 0%.

Despite this, the standard view of tax competition between nations continues to permeate much of the discussion about tax policy. The most likely reason is that we do not currently have comprehensive estimates of how much profits multinationals shift to low-tax places...

(Thomas Tørsløv, Ludvig Wier and Gabriel Zucman, ["The Missing Profits of Nations"](#), 05 June, 2018)

¹⁰⁴⁸ By 1947 the descendants of those 1920s free-marketeers were resurgent, powerful enough within the US Federal Reserve to rewrite the first (1939) edition of [The Federal Reserve System - Its Purposes and Functions](#) and suppress the original. As S. W. Adams put it in 1958:

I am herewith reprinting verbatim the Federal Reserve book, first printed in 1939: THE FEDERAL RESERVE SYSTEM - Its Purposes and Functions.

This book was printed and published under and by the authority of the Board of Governors of the Reserve System - a board of seven members appointed by the President and confirmed by the Senate, for terms of 14 years.

I am doing this because when Mr. Eccles, the then chairman of the Board, retired, the Board had discovered that the book had made banking so simple that the masses could understand it and that was intolerable: money must be kept a mystery. The few who got hold of the book began to ask why Congress should surrender a delegated Constitutional power to private corporations who used it for private gain.

They began to ask: "Why should the people give to bankers U.S. Bonds, and pay an annual interest on these bonds, that they might use their own credit? Why should the Government have to borrow its own money (use its own credit) when forced to use more revenues than current taxes afforded?

Our bonded indebtedness in 1913, at the time the first Reserve Act was passed was less than \$10 billion dollars! In 1939 it had jumped to over \$45 billion.

So in 1939, 1940 and 1941 there was such a demand for this revealing book, that the Board made five printings. The Board had come to realize the great danger to their money power gained and

exercised through the Reserve Act of 1913, promptly stopped the distribution of this book, and had it rewritten, completely omitting or obscuring the damaging statements.

Finding that additional copies could not be had, I decided, after 15 years of waiting and trying to get additional copies, to reprint the book myself.

(^œ*The Federal Reserve System Its Purposes And Functions* : As Originally Published, Washington, D.C., 1939, By the Board of Governors of the Federal Reserve System at the time Marriner Eccles was Chairman, A Reprint of a Suppressed Public Document Published by OMNI Publications, May 1, 1958)

¹⁰⁴⁹ Of course, such 'swaps' need not be based on actual currency supply - with each reserve bank holding stocks of currency notes from other nations. All that 'currency swaps' imply is that each reserve bank creates credit accounts in the names of those with whom it is 'swapping' currency and that, when the holders of those created accounts decide to 'spend' the currency, the original central bank transfers whatever amount is required from the appropriate currency account to the payee's account.

It is, in fact, unnecessary for any physical currency to be involved in such 'swaps'. And, of course, this arrangement can also be applied to private entities. Reserve banks already do this internally (that is, in reality, *what a 'bond' sale is*). Bilateral currency swaps are not nearly as difficult to manage as many commentators seem to believe.

¹⁰⁵⁰ It seems inevitable that, should a world central bank eventuate, it would develop very similar credit creation policies and practices to those found in private banks, providing *central bank financing through money creation*. This would, almost certainly, result in mounting sovereign central bank debts 'owed' to the world central bank and consequent subservience of sovereign central banks to that 'world' bank. Stranger things have happened, as *Wynne Godley* has described

The Bank for International Settlements (BIS) is sometimes described as 'a sort of central bank of central banks'. It is, however, another of those ^œ*anachronistic international institutions (like the World Bank and International Monetary Fund)* which has been periodically reinvented and currently acts as a clearing house for international credit and currency trading. It also hosts the Basel Committee on Banking Supervision, a committee charged with a peculiar neoliberally inspired responsibility for setting central bank capital adequacy requirements and reserve transparency (reflecting a presumption that sovereign central banks are not *unencumbered credit issuing institutions*).

The BIS may better be described as a neutered international version of a US regional central bank. Neutered because it has no access to (or legitimation by) an unencumbered credit issuing central reserve authority of its own.

¹⁰⁵¹ It is in this way that orthodoxies, sects and schisms arise. Western people are most aware of this phenomenon within religious movements (resulting from the *separation of the supernatural from the natural* and focus on the natural world in Western thought). However, the seemingly inevitable fracturing of religious movements into competing orthodoxies, each with its own *theo* logical complex of buttressed explanations through which it defines its distinctive *raison d'être*, is merely a special case of a common ideological phenomenon.

Capitalism is no less [fractured into competing orthodoxies](#), sects and schisms, each with its own motivationally and directive bolstered [economy logical complexes](#). (Since, despite frequent reliance upon a metaphysically justified 'invisible hand', economic divisions are focused within 'this' world, I guess we can't really call them *theological* complexes!)

¹⁰⁵² Since federal bonds are implicitly redeemable for sovereign currency, the directive that the Federal Reserve should 'buy United States bonds directly from the Treasury' implies a paradox. If a bond is issued by the treasury, to the Federal Reserve, which then supplies sovereign credit to the Treasury; to whom does the Federal Reserve present the 'bond' which it now holds in order to obtain the implied sovereign currency which it presumably guarantees?

After all, sovereign credit is *created out of thin air* by the Federal Reserve.

The language employed in the directive 'buy United States bonds directly from the Treasury' leaves open the possibility of erroneously assuming that the Treasury is becoming progressively more indebted to the Central Bank which *creates*, and then supplies, the credit it receives.

So, the fiction can be maintained (either naively or in support of the neoliberal belief that Central Banks should be responsible to private money markets rather than government) that there is a constantly growing 'federal deficit' which the Treasury (and so 'The Government') owes to the Central Bank. Of course this fiction requires an independently existing 'Central Bank' - a free-floating entity which is presumed to be only responsible to itself - an Alice in Wonderland fiction!

So, logic dictates that the language of the bill should be amended to eliminate this paradox (at the same time, that [self-serving amendment inserted into the bill](#) at the behest of private sector sovereign bond dealers should be removed).

The actual process is that the Federal Reserve is *authorized* by a Treasury request (or *requisition*) to create the sovereign credit it needs. The resulting document, received by the Federal Reserve, is merely a record of the request made by the Treasury. It **is not a 'debt'** owed by the Treasury to the Central Bank - it is **merely a record of the request** which triggers Central Bank credit creation on behalf of the treasury.

¹⁰⁵³ No, I am not suggesting that sovereign governments should provide lower levels of government with unlimited credit. Sovereign governments have a [responsibility to regulate credit supply](#).

As an alternative to the private sector 'disciplines' on borrowing imposed on lower levels of government (various fees and charges), Central Banks would inevitably need to impose governmental disciplines on credit availability such as requiring balancing rates and levies on their constituents where credit demands are deemed excessive or unsustainable. Such requirements already exist in almost all [sovereign governmental institutionalized 'internal rebalancing'](#) policies and procedures.

¹⁰⁵⁴ ^(10/11/16) 'President Trump' no longer needs quotation marks - that's who the US elected in 2016.

Pavlina Tcherneva has expressed it well:

Economic consequences

A lot has been said already. For me, this was the culmination of a decades-long process where the Democrats sold out their progressive agenda and happily embraced the Republican's neoliberal economic policies...

My own view is that the Democrats have not had an economic policy of their own for nearly half a century, just an 'inferior' version of what Republicans usually champion - tax cuts on the wealthy, dismantling the public safety-net, 'fighting' inflation by creating unemployment, market liberalization and deregulation across the board, which among other things brought us a colossal financial sector that has cannibalized the productive economy.

Democrats need to grapple with the reality that Bill Clinton completed the Reagan revolution, and what we got from both parties is rabid financialization, extreme inequality, corporate welfare, joblessness, and economic insecurity: precisely the conditions that fan the flames of social antagonism and deep-seated racism and bigotry. There are many ways to tell this story but, just think, the real incomes of the vast majority of US households have barely moved in the last two decades. Most of us live in stagnation (at best) and many communities are mired in an ongoing recession (even depression), while the economy is 'officially' growing.

Neo-liberalism on steroids

As vile as Trump's campaign was, many of his supporters have legitimate gripes about the state of the economy and about big money in politics. Of course, the notion that Trump is the 'man of the people' who will deliver the kind of change they (we) need is preposterous. In fact, his entire economic platform is basically the one I already described above. Nothing has changed. It is the same old plain vanilla "trickle-down economics" we know too well.

(Pavlina R. Tcherneva, ^œ[The Economic Consequences Of Donald Trump](#), *New Economic Perspectives*, November 10, 2016)

George Blackford has summed it up:

Here's something for Democrats to think about:

- a. In the 70s, a Democratic president continued the deregulatory process of a Democratic congress that reached its climax in the Crash of 08.
- b. A Democratic congress continued the deregulatory process in the 80s as they cut taxes on the rich, increased taxes on the not so rich, and cut SS benefits.
- c. A Democratic president reappointed Greenspan to the Fed, further deregulated the financial system and implemented disastrous crime, welfare, and student loan bills in the 90s
- d. Democrats took back the congress in 2007 and did nothing to hold the people responsible for the wrongs that had been committed as we were led into a war under false pretenses and turned into a nation of torturers; income and wages stagnated; and then the economy blew up.
- e. Democrats took complete control of the federal government in 2009 and bailed out the banks, students and homeowners were allowed to founder, and a Heritage Foundation health

plan was implemented that bailed out the insurance and drug companies at the expense of the middle class.

f. The middle class is devastated throughout the process.

And, somehow, it's supposed to be the voters' fault we ended up with a throw the bums out Trump instead of a more of the same Hillary? I don't think so!

(^œ[George H. Blackford](#), Commenter, on a strangely myopic blog posting by Paul Krugman, ^œ[Ending the American Romance](#), *New York Times* Opinion Pages, November 9, 2016)

We are entering 'Interesting Times'!

¹⁰⁵⁵ (21/11/16) I must confess that I have an inbuilt, and growing, aversion to using the term 'debt' in describing and explaining the nature and purpose of public bonds. [Daniel Thornton's claim](#) that "the U.S. Treasury has only one option for financing deficit spending - issuing debt", or Bill Mitchell's use of the term 'public debt instruments' (below) in describing the nature of public bonds, conflate government bonds and 'government debt'. As [Mitchell has since explained](#), this confusion is due to the historical importance of the Gold Standard in establishing Western currency systems. Once nations moved to fiat currency systems the gold standard rationale for assuming 'government debt' became anachronistic. There is no 'natural law' of financing which requires the presumption of Government Debt in issuing credit and/or currency:

In macroeconomics, we summarise the plethora of public debt instruments with the concept of a bond. The standard bond has a face value - say \$1000 and a coupon rate - say 5 per cent and a maturity - say 10 years. This means that the bond holder will get \$50 dollars per annum (interest) for 10 years and when the maturity is reached they would get \$1000 back.

Bonds are issued by government into the primary market, which is simply the institutional machinery via which the government sells debt to the non-government bond dealers.

In a modern monetary system with flexible exchange rates it is clear the government does not have to finance its spending so the institutional machinery is voluntary and reflects the prevailing neo-liberal ideology - which emphasises a fear of fiscal excesses rather than any intrinsic need for funds (of which the currency-issuing government has an infinite capacity).

(Bill Mitchell, ^œ[The penny drops - WSJ acknowledges UK government can never run out of money](#), *Billy Blog*, November 3, 2016)

Mitchell has a later blog entry which expands the discussion:

The general rule for fixed-income bonds is that when the prices rise, the yield falls and vice versa. Thus, the price of a bond can change in the market place according to interest rate fluctuations.

When interest rates rise, the price of previously issued bonds fall because they are less attractive in comparison to the newly issued bonds, which are offering a higher coupon rates (reflecting current interest rates).

When interest rates fall, the price of older bonds increase, becoming more attractive as newly issued bonds offer a lower coupon rate than the older higher coupon rated bonds.

Further, rising yields may indicate a rising sense of risk (mostly from future inflation although sovereign credit ratings will influence this).

But they may also indicate a recovering economy where people are more confident investing in commercial paper (for higher returns) and so they demand less of the risk free government paper.

So you see how an event (yield rises) that signifies growing confidence in the real economy is reinterpreted (and trumpeted) by the conservatives to signal something bad (crowding out, increased cost of government spending).

The yield reflects the last bid in the bond auction. So if diversification is occurring reflecting confidence and the demand for public debt weakens and yields rise this has nothing at all to do with a declining pool of funds being soaked up by the bingeing government!

(Bill Mitchell, ^œ[Bank of Japan is in charge not the bond markets](#), *Billy Blog*, November 21, 2016)

As Mitchell implies, bonds are **not** the means by which 'the government sells debt to the non-government bond dealers'. Bonds are bonds (just as currency is currency). Neoliberal explanation might attempt to conflate government bonds with 'government debt', but, in reality, no debt is created in issuing bonds, and [no debt is purchased](#) when those bonds are sold.

No matter how much bond markets might fluctuate, those fluctuations are contained within the private sector 'bond markets'. They have as little impact on a Government's ability to 'fund its commitments' as fluctuation in the watermelon market! Mitchell explains it well,

the central bank (that is, the government) can **always** set bond yields at whatever level it chooses including zero.

The bond markets do not have the power to set yields unless the government allows them that flexibility. The government rules, not the markets.

Not to mention that the government doesn't even need to issue debt in primary markets in order to spend.

To break out of this neoliberal mindset it really is necessary to spell it all out. Otherwise we become party to the current neoliberal reordering of reality, which leads to the conclusion that governments fund their spending through selling 'debt securities' to private investors.

¹⁰⁵⁶ Once this sleight-of-hand charade is recognized for what it is, it is easy to presume that nobody could be so deluded as to actually believe that the masquerade they seem intent on playing out is 'necessary'. As Bill Mitchell has put it:

The Government plays along with the charade releasing what it deems to be cleverly crafted documents, shifting revenue and spending across year lines to give one impression or another of the state of affairs. None of the charade is based on any fundamental economic understanding. None of it means anything other than a demonstration of a national scam to hide the truth from the ordinary citizen who for one reason or another relies on experts to summarise technical detail into meaningful sound bites.

The nation then goes about its business in this cloud of ignorance, while the elites continue to suppress wages and living standards and march off with increasing shares of national income. They know what is going on and it is in their interests to keep the rest of us from having the same information. It is the same the world over. Well, here is what is going on with a framework that allows the reader to cut through the lies ...

(Bill Mitchell, ^œ[A lying government pushing economy towards recession and greater inequality](#), *Billy Blog*, December 20, 2016)

I strongly suspect that neither Western governments nor Western elites are aware that [the nonsense being perpetrated](#) upon 'the nation' is nonsense. They are as convinced that the charade is based in fundamental economic understandings as the 'experts', 'informed commentators' and the general public. They all live in the same ideologically contrived, bounded reality.

It is the [nature of any ideology](#), that those whose lives are shaped by its requirements come to believe that [there is no other reality](#).

Those who can see the absurdity of it all face herculean difficulties and dangers in attempting to re-educate Western populations. It is one thing to voice one's opinions to those of like mind, it is quite another to attempt to re-educate true believers.

¹⁰⁵⁷ (20/03/18) This refers to a US law which already presumes the legitimacy of bundling government department and agency unencumbered credit requirements as 'debt' - superficially supporting the idea that purchasing government bonds is purchasing 'government debt' and so should be rewarded with an interest return on those bonds. This law is based on a ruling by the US Committee on Banking and Currency (May 13, 1935, p. 13). As Kenneth Garbade (August 2014) explained:

The committee report did not explain the reason for the prohibition, stating only that "Section 207 of the bill as it passed the House ... has been modified ... so as to provide that direct [and guaranteed] obligations of the United States ... may be purchased only in the open market."

(Kenneth D. Garbade, ^œ[Direct Purchases of U.S. Treasury Securities by Federal Reserve Banks](#), *Federal Reserve Bank of New York*, Staff Report No. 684, August 2014, page 5)

The consequence of this amendment, requiring that 'direct [and guaranteed] obligations of the United States ... may be purchased *only in the open market*', results in the US Treasury having to issue Federal bonds to private sector bond markets equal in value to the funding needed to meet the 'direct [and guaranteed] obligations of the United States'. The Federal Reserve must then purchase those bonds from the private sector bond markets in order to justify the issue of unencumbered credit to the US Treasury.

This absurd charade is an obfuscatory redundancy since it introduces an irrelevant step in the generation of sovereign credit to fund the costs of government.

Amending bills as they 'pass the House' is, of course, common US Congressional practice. The 'amendments', tacked onto bills as they are finalized, are often not subjected to close (or even any) scrutiny. Unexplained, unjustified and anomalous directives such as this, once passed into law, can be very difficult to remove. As [Maitland explained](#) of the evolution of English law:

... [I]t is rather the enormous bulk than any dearth of available materials that prevents us from tracing the transformation of every old doctrine and the emergence and expansion of every new idea.

Before long, the intellectually expedient 'it must be there for a reason' argument becomes the response to challenges to its existence. And, once established, it is not long before varied 'explanations' of the reasons for its existence emerge in the literature, cementing its validity. One such, almost convincing, explanation was provided by [Kalecki in 1943](#):

To understand this process it is best, I think, to imagine for a moment that the government pays its suppliers in government securities... what the economy lends to the government are goods and services whose production is 'financed' by government securities.

In reality the government pays for the services, not in securities, but in cash, but it simultaneously issues securities and so drains the cash off...

He would, of course, have done everyone a favor if he had challenged the validity of the directive rather than attempting to explain away its existence.

Clearly, US Central Reserve policies and procedures must, in a nation which claims to live by 'The Rule of Law', conform to existing legal directives and guidelines. However, as Kalecki very clearly explained, US Federal bonds, which form the 'government securities' 'purchased... in the open market' are, inescapably, created 'out of thin air' by the US Treasury. The private sector 'revenue raised' through their sale is federally guaranteed [private sector credit](#). Which is why the elaborate charade is required of:

- relabeling government agencies' [unencumbered](#) sovereign credit requirements as 'government debt';
- funding the direct [and guaranteed] obligations of the United States - which are supposed to be 'financed' by government securities - in 'cash', in 'anticipation' of the sale of the 'debt securities';
- selling those 'debt securities' (a [justificatory renaming of Federal bonds](#)) to private sector buyers (and so '[draining the cash off](#)' that the government has already paid its suppliers); and
- obtusely claiming that the 'revenue raised' to pay for the direct [and guaranteed] obligations of the United States has not been generated during the initial credit creation and simultaneous issuing of the securities (which, as Kalecki explained, 'drain the cash off' (withdrawing the sovereign credit used to fund those obligations from the private sector and, in doing so, committing the government to long-term 'interest payments' to private sector bond buyers - which might well be the [hidden purpose of the charade!](#))).

Of course, it is this charade which is used by neoliberal devotees to justify their claim that all credit is created in the private realm and that government spending must, always, be constrained by revenue it can raise from the private sector.

It is this irrelevant 'balancing' of Treasury authorizations and buy back of those authorizations from the private sector bond markets by the Federal Reserve which provides the rationale for the post-1970s obsession with 'balancing the budget'. After all, as all well-educated neoliberal aficionados know, '[there is no such thing as public money](#); there is only taxpayers' money'.

¹⁰⁵⁸ The often raised chant 'What About Zimbabwe?' or 'What about 1920s Germany?' to counter suggestions that sovereign credit is unencumbered is, of course, based in a misunderstanding of the [nature of sovereignty](#). The suggestion that early 21st century Zimbabwe or 1920s Germany are/were in control of their own destinies is simplistic. In both cases, powerful external actors are/were in play, undermining sovereignty and seriously challenging any belief that either 'sovereign' nation is/was in control of their economic destinies.

¹⁰⁵⁹ Which relies, of course, on circular reasoning: private credit creation assumes access to sovereign credit which, in this Alice in Wonderland world, is a consequence of private credit creation. What a mystic wonderland is revealed when one munches on those magic mushrooms - or is it 'one is sprinkled with magic fairy dust'?

¹⁰⁶⁰ (01/11/16) Bryce Covert has demonstrated the pseudo-erudition which underpins neoliberal 'knowledgeable comment' (based on that myopic neoliberal belief that [all credit is created in the private realm](#)). Apparently, it is 'necessary' to enable private financial institutions and investment agencies to interpose a private sector tax on US government spending:

Economic growth has been sluggish since the Great Recession, as the Republican primary candidates were all too happy to point out. Growth in the gross domestic product has run under 2 percent this year. The recovery has been weaker than past recoveries from recessions and worse than what officials originally expected.

At the same time, interest rates on the country's debt are incredibly low, hovering around 2 percent. That means we could borrow more money at a very low cost. What would we do with it? New money could be put to incredibly good use, rebuilding deteriorating roads and bridges or investing in education.

This is the stance of an increasing number of economists, including prominent voices like Lawrence Summers and Douglas Elmendorf: The United States needs to borrow money and invest it in growing the economy.

We're also not in danger of being unable to pay back what we owe. The cost of paying interest on the government's debt is at a 50-year low, consuming just 6 percent of the federal budget.

(Bryce Covert, ^œ[Hillary Clinton's Bad Promise on Debt](#), *New York Times*, Opinion Pages, October 31, 2016)

Alan Longbon has [put the problem in a nutshell](#):

The core idea behind this neo-liberal groupthink is to protect the exorbitant free lunch enjoyed by the private banks for providing the government with loans of the government's own money at interest.

Banks have attached themselves as a parasite onto the government and work very hard to convince the government and the voting public that this parasitic relationship is necessary for the health of all. An example of rentier rent extraction at the very highest level.

(Alan Longbon, Commenter, on Bill Mitchell, ^œ[Currency-issuing governments can keystroke their outstanding debt into oblivion](#), *Billy Blog*, October 13, 2016)

Alan Longbon's explanation extends an opinion expressed by Marriner Eccles¹⁰⁹⁵ in 1947. Addressing why Section 206(a) of the Banking Act of August 23, 1935 explicitly prohibited direct purchases of Treasury securities by Federal Reserve Banks, he pointed out that 'the prohibition was inserted at the behest of Government securities dealers':

... authority [to purchase directly from the Treasury] was taken away from the Reserve System primarily at the instance of some of the dealers ...

I think the real reasons for writing the prohibition into the [Banking Act of 1935] ... can be traced to certain Government bond dealers who quite naturally had their eyes on business that might be lost to them if direct purchasing were permitted.

([Garbade, 2014, p. 7](#))

(23/11/16) Once economic processes and structures have been established, based on particular sets of presumptions about and understandings of 'economic reality', it appears that no-one is able to challenge them. They must be there because they are necessary. Their existence is evidence, if any were needed, of the deep and almost mystical nature of 'the economy' - beyond the understanding of 'mere mortals'.

As with any ideological construct, the features are to be 'explained' and justified, not questioned and challenged. If there are features which appear redundant that is not because they are redundant but because there are features of economies which require *specialist knowledge* (bringing to mind Mike Lofgren's explanation of *fachidiocy*). Without that knowledge people can believe that they are unnecessary, but the 'specialists' know their deeper significance. It was, indeed, appropriate that the 'natural laws' of economics would first be 'explained' by someone trained for the Anglican clergy.

¹⁰⁶¹ The term 'apogee' assumes an orbit, however eccentric its ellipse. But, were Trump's budget to be enacted, it would be naive to assume some later return to 'normality'. Disturb an orbiting object at its apogee and the chances are high that the orbit will, at the very least, be altered and that the cumulative changes will reverberate through time.

(07/08/17) The world may well be on the cusp of a geopolitical seismic shift. In attempting to understand the likely trajectory of such a shift, one needs to keep in mind:

- [The escalation in US military funding](#) which is occurring in both nuclear and conventional spheres;
- Coupled with the long-standing US belief that they are [under threat from powerful external enemies](#).

(In the second decade of the 21st century this is almost entirely imaginary:

The Russians - or is it the Chinese or the Iranians or... - are out to get us!

Or self-instigated through US military adventures around the world);

- The determined push for financial deregulation and [gutting of central government authority and responsibility](#) which has become the sub-text of President Trump's bumbblings within the US Congress.

(The question to be asked is:

Have President Trump's ineptitudes provided the smoke-screen behind which more coherent 'small-government' forces (of both political parties) in the US Congress are left free to pursue their [long-incubated agenda](#) aimed at [reducing central government to being the police force of neoliberalism?](#))

- And, of course, the absurd climate change denial implicit in Trump's withdrawal from the 2016 Paris climate agreement.

Steven Metz has described the inexorable drift toward the privatization of US military activity since September 11 2001 - a [feature of the over-extension of Western imperialism](#) since Roman times:

After nearly 16 years of military and diplomatic efforts, the U.S. cannot secure Afghanistan from the Taliban. During that time, the administrations of George W. Bush, Barack Obama and Donald Trump all wanted to believe that if they could just find the right U.S. troop levels and fine-tune the assistance provided to the government of Afghanistan, things would work out. But it never happened. Victory remains elusive.

Now, as the American public and its elected leaders grow impatient with the unending war and realize that doing more of the same will never produce different results, out-of-the-box proposals are on the table. As is often the case, frustration is making things that once appeared infeasible suddenly seem appealing. One such proposal is the idea of replacing some or even most U.S. troops in Afghanistan with private security contractors...

Another sign of the privatization of security is the American military's extensive reliance on contractors for intelligence, cyber warfare and logistics, as well as for VIP protection and site security. But again, rather than approaching this as something permanent, U.S. political and military leaders treat it as an abnormality - a temporary expedient made necessary by the rapid expansion of operations in Iraq and Afghanistan.

Large corporations, too, are turning to private security firms. For commercial shipping, onboard security detachments have helped blunt the piracy problem that shipping firms faced. Many extractive industries in unsettled parts of the world hire security forces mostly composed of former members of national militaries.

(Steven Metz, [The Privatization of Security Is Coming. The U.S. Must Start Preparing for It](#), *World Political Review*, Friday, July 21, 2017)

And, of course, [outsourcing war](#) makes public oversight of the activities, funding, and personnel of those [privatized and corporatized](#) mercenary organizations more difficult. Citizens become dissociated from the prosecution of wars undertaken in their names; ensuring reduced public control over the activities and funding of that military industrial complex [bequeathed by Eisenhower](#).

The US might, indeed, as Noam Chomsky has suggested, become the "Most Dangerous Country in the World".

(02/08/17)As George Orwell explained in his 1984 and Kissinger suggested, a population beset by real and/or imagined fears is easily manipulated.

Guy Saperstein and Kelsey Abkin described such a population, ripe for manipulation:

At a rally in North Carolina in December 2016, a 12-year-old girl said to candidate Donald Trump, "I'm scared. What are you going to do to protect this country?"

"You know what, darlin'?" Trump replied. "You're not going to be scared anymore. They're going to be scared."

Throughout his campaign, Trump played off the rising fear of the American public. His us-vs.-them rhetoric eroded people's trust in facts, numbers, nuance, government and the news media and augmented the already fragile line of truth. Trump knew Americans were afraid and that they would vote accordingly.

...So how is it that we are living in what is arguably the safest time in history, yet we as a country exist in a culture of fear?

Christopher Fettweis, author of *The Pathologies of Power: Fear, Honor, Glory, and Hubris in U.S. Foreign Policy*, says it is because

"our fear is not based on an intellectual conclusion, it's a belief."

America's fear has become a framework of belief, surpassing far beyond the plasticity of opinions. And as history has proved time and time again, beliefs are near impossible to change.

The reality is "facts" don't mean much in the way of beliefs. Telling a person, who has the sincerest gut belief, the statistic that more Americans are killed each year by furniture than by terrorism becomes somehow unconvincing, or rather disagreeable.

Political psychologists call this tendency to conform assessments of information to some goal or end extrinsic to accuracy "motivated reasoning." In other words, people believe what they want to believe. This cognitive process infiltrates everything from us convincing ourselves a gluten-free cupcake is healthy to our groundless denial of climate change and gun violence.

So why is this process so crucial in understanding the culture of fear in America?

It perpetuates it. Because humans will dismiss rational thinking for the sake of reconfirming their identity, their fears will eclipse facts.

A conservative turns on the news to see a terrorist attack in London. Then he goes on Twitter to see fellow conservatives' rant about building a wall and protecting our borders. His fear is legitimized within their cushy network of familiarity. If the conservative encountered the fact that "zero refugees from countries included in the president's travel ban have killed anyone in terrorist attacks on American soil," he would ignore it, because it does not fit with his worldview.

The individual does not conform to adjust his perspective, but emerges unconvinced and indignantly dogged.

According to psychologist Tom Gilovich, this is because the fundamental questions we ask ourselves in response to particular

information conforms to what we want to believe. "For desired conclusions," he writes, "it is as if we ask ourselves 'Can I believe this?,' but for disagreeable conclusions we ask, 'Must I believe this?'"

People do not confront new information looking for truth, but rather looking for their truth and this means facts take a backseat to deeply ingrained fears.

(Guy T. Saperstein and Kelsey Abkin, ["Why Are Americans So Afraid? Facts take a backseat to deeply ingrained fears."](#) *AlterNet*, July 29, 2017)

How desperately the US needs a president of FDR's caliber:

This is preeminently the time to speak the truth, the whole truth, frankly and boldly. Nor need we shrink from honestly facing conditions in our country today.

This great Nation will endure as it has endured, will revive and will prosper. So, first of all, let me assert my firm belief that the only thing we have to fear is fear itself - nameless, unreasoning, unjustified terror which paralyzes needed efforts to convert retreat into advance.

In every dark hour of our national life a leadership of frankness and vigor has met with that understanding and support of the people themselves which is essential to victory. I am convinced that you will again give that support to leadership in these critical days.

(Franklin D. Roosevelt, ["Inaugural Address,"](#) *The American Presidency Project*, March 4, 1933)

¹⁰⁶² Athanasios Orphanides has examined "the flawed political structure of the euro area that permitted governments of some member states to exploit problems in other member states that share the common currency". As he explained:

Five years after the beginning of the euro area crisis the outlook for the common currency looks bleak. The euro has failed its first major test since its introduction. Rather than promote prosperity in Europe, the euro has trapped numerous states into a protracted slump. Rather than promote the euro area's economic strength in the global economy, the euro has sapped economic potential, leading to a widening gap in economic performance relative to other economies. Rather than complete the European project, the euro has promoted mistrust among the people of Europe and contributed to the disintegration of the euro area.

What are the causes of this failure? Study of the failed EU/IMF program that was imposed on Greece in May 2010 - the original sin of the crisis - provides rich information that can help explain both the nature of the problem and the difficulty regarding its resolution. Information that is now in the public domain can shed light on how and why flawed decisions were made during the crisis. The analysis suggests that mismanagement of the crisis can be traced to the political structure of the euro area that leveraged the power of some member state governments against the interests of other member states and the euro area as a whole.

(Athanasios Orphanides, ["The Euro Area Crisis Five Years After the Original Sin,"](#) MIT, Sloan School Working Paper 5147-15 10/19/2015)

Wynne Godley, in 1992, spelt out the problems of a future Eurozone underpinned by neoliberal presumptions:

The central idea of the Maastricht Treaty is that the EC countries should move towards an economic and monetary union, with a single currency managed by an independent central bank. But how is the rest of economic policy to be run? As the treaty proposes no new institutions other than a European bank, its sponsors must suppose that nothing more is needed. But this could only be correct if modern economies were self-adjusting systems that didn't need any management at all.

I am driven to the conclusion that such a view - that economies are self-righting organisms which never under any circumstances need management at all - did indeed determine the way in which the Maastricht Treaty was framed. It is a crude and extreme version of the view which for some time now has constituted Europe's conventional wisdom (though not that of the US or Japan) that governments are unable, and therefore should not try, to achieve any of the traditional goals of economic policy, such as growth and full employment. All that can legitimately be done, according to this view, is to control the money supply and balance the budget. It took a group largely composed of bankers (the Delors Committee) to reach the conclusion that an independent central bank was the only supra-national institution necessary to run an integrated, supra-national Europe.

But there is much more to it all. It needs to be emphasised at the start that the establishment of a single currency in the EC would indeed bring to an end the sovereignty of its component nations and their power to take independent action on major issues. As Mr Tim Congdon has argued very cogently, the power to issue its own money, to make drafts on its own central bank, is the main thing which defines national independence. If a country gives up or loses this power, it acquires the status of a local authority or colony. Local authorities and regions obviously cannot devalue. But they also lose the power to finance deficits through money creation while other methods of raising finance are subject to central regulation. Nor can they change interest rates. As local authorities possess none of the instruments of macro-economic policy, their political choice is confined to relatively minor matters of emphasis - a bit more education here, a bit less infrastructure there. I think that when Jacques Delors lays new emphasis on the principle of 'subsidiarity', he is really only telling us we will be allowed to make decisions about a larger number of relatively unimportant matters than we might previously have supposed. Perhaps he will let us have curly cucumbers after all. Big deal!

Let me express a different view. I think that the central government of any sovereign state ought to be striving all the time to determine the optimum overall level of public provision, the correct overall burden of taxation, the correct allocation of total expenditures between competing requirements and the just distribution of the tax burden. It must also determine the extent to which any gap between expenditure and taxation is financed by making a draft on the central bank and how much it is financed by borrowing and on what terms. The way in which governments decide all these (and some other) issues, and the quality of leadership which they can

deploy, will, in interaction with the decisions of individuals, corporations and foreigners, determine such things as interest rates, the exchange rate, the inflation rate, the growth rate and the unemployment rate. It will also profoundly influence the distribution of income and wealth not only between individuals but between whole regions, assisting, one hopes, those adversely affected by structural change.

... If a country or region has no power to devalue, and if it is not the beneficiary of a system of fiscal equalisation, then there is nothing to stop it suffering a process of cumulative and terminal decline leading, in the end, to emigration as the only alternative to poverty or starvation. I sympathise with the position of those (like Margaret Thatcher) who, faced with the loss of sovereignty, wish to get off the EMU train altogether. I also sympathise with those who seek integration under the jurisdiction of some kind of federal constitution with a federal budget very much larger than that of the Community budget. What I find totally baffling is the position of those who are aiming for economic and monetary union without the creation of new political institutions (apart from a new central bank), and who raise their hands in horror at the words 'federal' or 'federalism'. This is the position currently adopted by the Government and by most of those who take part in the public discussion.

(Wynne Godley, ^œ[Maastricht and All That](#), *London Review of Books*, Vol. 14 No. 19 - 8 October 1992, Pages 3-4)

¹⁰⁶³ Barry Eichengreen and Charles Wyplosz have addressed the "Minimal conditions for the survival of the euro":

...[W]e set out minimal conditions for the survival of the euro. Typically this issue is framed as whether European monetary integration, which reached its apogee with the euro, will now be complemented by the political integration needed for the single currency to survive. This is how the technocrats and political intelligentsia responsible for the euro's creation saw things; since monetary union is not possible without political union, creating the euro was a way of forcing the pace of political integration.

Limits to political integration

This is not how we see things. Over the timeframe relevant for the euro's survival, political integration in Europe has its limits. This is what historical comparisons suggest. It took the US more than a century including the experience of a devastating civil war before it became a true, irrevocable political union, and Europe is only a short way down that path. The euro's existential crisis is likely to be resolved one way or the other long before that political destination is reached.

Economic theory similarly suggests limits to European political integration. Public finance theory (e.g. Buchanan 1965) points to the existence of economies of scale in the provision of public goods (integration allows public goods like fiscal coinsurance and a well-regulated banking system to be provided more cheaply), underscoring the advantages of political integration and centralisation. But it also highlights the costs of centralised provision since populations are heterogeneous and preferences for public goods differ across groups and regions - costs that create understandable resistance to pooling responsibility for provision.

This tension is evident in how Europe has responded to its crisis. In some areas where evidence of increasing returns is overwhelming, Europe has moved toward centralised provision. Examples include centralised provision of backstop facilities for sovereign debt markets (the European Central Bank's Outright Monetary Transactions) and creation of the Single Supervisor (with responsibility for oversight of the banking system).

But in other areas the benefits of centralised provision are dominated by the costs of uniformity, creating resistance to further centralisation. This is true most obviously of fiscal policy where different countries have different tastes (insofar as countries as distinct from individuals have tastes) for fiscal rectitude and stabilisation, and different degrees of tolerance of debt and deficits. This heterogeneity in turn creates a problem of trust, i.e. can those formulating and executing the common policy be trusted to do so in a manner consistent with a group's tastes. This is analogous to the problem that results in an undersupply of public goods like policing and schools in localities where the population is heterogeneous, wherein each group is reluctant to pay additional taxes for fear that the resources so mobilised will go to pay for public goods valued by other groups but not by itself (Alesina et al. 1999).

(Barry Eichengreen, Charles Wyplosz, [Minimal conditions for the survival of the euro](#), VOX, 14 March 2016)

As they summarize:

The Eurozone crisis has shown that monetary union entails more than just sharing monetary policies. This column, first published on 12 February 2016, identifies four minimal conditions for solidifying the monetary union. In the case of fiscal policy, this means a decentralised solution. In the case of financial supervision and monetary policy, centralisation is unambiguously the appropriate response. In the case of a fourth condition, debt restructuring, either approach is possible, but the authors prefer a solution that involves centrally restructuring debts while allocating costs at national level.

Bill Mitchell, in a blog posting, has provided an examination of related issues, arguably either stemming from or exacerbated by the flaws in Europe's Euro Zone adventure: [Chaos in Europe and the flawed monetary system](#), *Billy Blog*, Wednesday, March 23, 2016.

¹⁰⁶⁴ As Gerald Epstein has explained,

...On the campaign trail, then-candidate Trump jumped on the bandwagon, decrying America's "Third World" infrastructure and touting his ability to fix it in short order - as "demonstrated" by his "building prowess" in New York City and "around the world." Trump promised to quickly fix the country's decaying infrastructure and generate millions of good paying jobs with a \$1 trillion program that will "Make America Great Again."

That Trump had hit a political "sweet spot" was made clear early on by the number of prominent Democrats and labor leaders who announced not only an interest but real enthusiasm for cooperating with Trump on making a \$1 trillion building-spree a reality. How could they resist?

A true, well designed, well-implemented \$1 Trillion government investment in infrastructure is a plan many Democrats, progressive

economists and labor leaders had been promoting for years. As Richard Trumpka, President of the AFL-CIO explained:

During my January meeting with President Trump, we identified a few important areas where compromise seemed possible. On manufacturing, infrastructure and especially trade, we were generally in agreement. Mr. Trump spoke of \$1 trillion to rebuild our schools, roads and bridges. He challenged companies to keep jobs in the United States. He promoted 'Buy America.' He promised to renegotiate the North American Free Trade Agreement.

Of course, many Democrats and some economists understood that Trump's infrastructure "sketch" (he has never come out with a true plan) was quite different from a genuine government-financed \$1 trillion plan.

From the beginning, Trump's team had made it clear that this was going to be a private-public partnership in which the government would put in significantly less than a trillion dollars - perhaps \$200 or \$400 billion of corporate tax subsidies over 10 years - as a way to help facilitate a privatization of public assets. Think: turning public roads into privately owned toll roads and public tunnels into privately owned toll tunnels.

This type of privatization, critics argued, would end up as a typical crony capitalist gold mine, giving away public assets to well-connected and politically pliant capitalists and maybe, just maybe, getting some improved but very expensive infrastructure and a few jobs in the process. But some Democrats and labor leaders were, perhaps understandably, desperate to engage in wishful thinking and tentative support - given the apparent political pressure from their constituencies.

Still, some observers warned that the dangers of this infrastructure sweet spot were even greater than might at first appear. In an article in Challenge Magazine, "Trumponomics: Should We Just Say No?" I argued that not only is the so-called "infrastructure" program mostly a thinly disguised privatization scam; it was also a sinister gambit to broaden the political support and therefore the power of Trump and Trumpism, a proto-fascist regime and movement, whose goal is to undermine democracy, enrich those wealthy capitalists willing to play along, and divide and conquer the domestic population by sowing racial, gender, religious and national hatred and intolerance.

(Gerald Epstein, [Trump and the Infrastructure of Fascism](#), *TripleCrisis*, August 18, 2017)

¹⁰⁶⁵ Bill Mitchell has spelt out similar 21st century consequences in Germany:

Germany has become so obsessed with recording fiscal surpluses that its trucks can no longer transit important bridges and so the export model is being undermined. It is so obsessed with screwing its own people and overseeing an increasing bias to precarious work with low pay that the future retirements of their workforce is in jeopardy. The chickens are coming home to roost in a big way for Europe's so-called powerhouse. No other nation should follow its lead....

The austerity-obsessed German government is claiming the solution lies in private-public partnerships with the private sector stumping up the funding.

We have been down this road before in many Anglo nations and have learned the hard way - PPPs are generally disastrous.

Please read my blogs - ^œ[Public infrastructure 101 - Part 1](#) and ^œ[Privatisation failure - the micro analogue of fiscal surplus obsessions](#) - for more discussion on this point.

(Bill Mitchell, ^œ[The chickens are coming home to roost for Europe's so-called powerhouse](#), *Billy Blog*, August 10, 2017)

¹⁰⁶⁶ Bill Mitchell has explained the nature of private credit - whether tokenized or not - well:

...the "money supply" in an "entrepreneurial economy" is demand-determined - as the demand for credit expands so does the money supply. As credit is repaid the money supply shrinks. These flows are going on all the time and the stock measure we choose to call the money supply, say M3 is just an arbitrary reflection of the credit circuit.

(Bill Mitchell, ^œ[Indexed bank reserve support schemes will not expand credit](#), *Billy Blog*, August 31, 2016)

¹⁰⁶⁷ An obvious, though probably politically difficult way in which the US Federal Reserve Board might address this unprecedented blowout in bank reserves would be to repackage excess bank reserves as 'long-term bank stabilization securities', which can be accessed only at the discretion of the Federal Reserve Board. This change might be glossed as a return to 'normal practice' following an economic crisis. In a second phase of this change, the credit leakage which is implied in paying interest on those transferred bank reserves might progressively be stemmed through adjusting the rate.

While banks will, of course, loudly protest the inequity of such repackaging, the rationale for doing so should appeal to that large majority of US voters which believes that the banks have been rewarded for profligacy bordering on criminality. After all, the securities purchased by the Fed over the past several years were in large part funded by unsecured-credit-creating private bank activity, made possible through [the deregulation of bank activity and capital account liberalization](#) over the past several decades.

Perhaps the following is a half-hearted attempt, on the part of the US Fed, to address the problem (inducing banks to trade bank reserves for US Government securities): AUTHORIZATION FOR DOMESTIC OPEN MARKET OPERATIONS (As amended effective January 28, 2014), ^œ[Minutes of the Federal Open Market Committee](#), January 28 - 29, 2014, p.3. It will be interesting to see whether the major players are willing voluntarily to forgo their bank reserves for US securities, though the long-term problems associated with the blowout in the monetary base are not really addressed by such measures.

¹⁰⁶⁸ A minor point here, which should not cloud the far more important issues addressed by Alt. I doubt that one needs to provide a justification for sovereign credit creation (e.g. "A U.S. Dollar is an I.O.U. issued by the sovereign U.S. government which says "I owe you one Dollar's worth of credit on the Federal Taxes you owe me.")). This seems to echo the old gold standard rationale.

Governments create credit.

That sovereign currency might be presented in the form of an IOU has become, since movement from the gold standard, an anachronism which often stimulates a felt need to provide a rationale for the existence of such IOUs. The rationale for the existence of sovereign monetary bases (and associated currencies) is that such bases are required in capitalist societies. This same rationale underpins the existence and features of most government institutions and agencies.

The old 'Gold Standard' was always a convention to justify maintaining relatively fixed exchange rates, taken far too literally by the US Government in purchasing and holding enough gold to underwrite its monetary base (a literalism which has, to the present, blinkered and constrained US economic understanding and model building).

¹⁰⁶⁹ The case for Central Bank independence was well made by US Federal Reserve Chairman Ben Bernanke (2010):

A broad consensus has emerged among policymakers, academics, and other informed observers around the world that the goals of monetary policy should be established by the political authorities, but that the conduct of monetary policy in pursuit of those goals should be free from political control. This conclusion is a consequence of the time frames over which monetary policy has its effects. To achieve both price stability and maximum sustainable employment, monetary policymakers must attempt to guide the economy over time toward a growth rate consistent with the expansion in its underlying productive capacity. Because monetary policy works with lags that can be substantial, achieving this objective requires that monetary policymakers take a longer-term perspective when making their decisions. Policymakers in an independent central bank, with a mandate to achieve the best possible economic outcomes in the longer term, are best able to take such a perspective.

(^œ[Central Bank Independence, Transparency, and Accountability](#), Remarks by Ben S. Bernanke, Chairman, Board of Governors of the Federal Reserve System, at the Institute for Monetary and Economic Studies International Conference, Bank of Japan, Tokyo, Japan, May 26, 2010)

¹⁰⁷⁰ As the ^œ[Basic Income Action](#) website says:

What is a basic income, exactly? How does it work?

It's simple, and that's what makes it so powerful.

Set an amount - maybe \$1,000 a month, or \$800 or \$1,500 a month - and have government provide that to every adult American. Everyone gets the same amount, ideally enough to guarantee that people can afford food, clothes, shelter, and other necessities.

We can adjust the amount occasionally when economic conditions require it. State and local governments can supplement it, using local revenues.

This is an income independent of what people earn at a job or through investments, and everyone gets it, no questions asked, either as a direct payment or combined into the tax system. It's economic security for every American...

A basic income of \$1,000 a month is \$24,000 a year for a couple. That's more than the current official poverty level for a family of four. We can end hunger, end homelessness, end extreme poverty. Current policies cannot possibly achieve that; no way, no how, no hope.

Because it's universal and unconditional, basic income creates a baseline of justice and equality. Everyone will be on the political and economic playing fields, with money to participate actively as citizens and in markets.

Are there specific issues or problems you care about? Racism? Poverty? Income inequality? Health care? Education reform? Global warming and climate change? Political corruption and the power of special interests? Every American will have the means and incentives to work together as citizens, to make our government more efficient, responsive, and accountable...

Concern about inflation is a reason to be diligent about cutting welfare, eliminating corporate welfare, abolishing tax breaks and credits, and ending wasteful spending at all levels, federal, state, and local. Those cuts will offset the basic income.

Many economists are now more concerned about deflation than inflation. Because of stagnant incomes and technology-driven job reductions, Americans have less money to spend, and that lack of spending and demand is hindering economic activity generally.

If there is any inflation, ever, basic income will be a cushion, protecting us from higher prices. We'll stay calm while the Federal Reserve acts to prevent further inflation. Economic conditions will be more stable than today, and stability is good for consumers, businesses, entrepreneurs, and investors.

¹⁰⁷¹ A 'jobs guarantee' is an attractive alternative for those who are concerned about the moral consequences of distributing 'unearned' income. This is most unlikely to be a real problem in a capitalist world since an unearned income solution would never get off the ground. Even 'welfare recipients' are, almost always, keenly aware of those who are 'free-loading' on the system.

Yves Smith has provided an interesting discussion on the rationale for a universal basic income in a blog posting. As she says,

...I know a universal basic income is a popular idea among readers, and I have to tell you, you are being set up.

Like it or not, even though we live in a fiat currency system, most people believe that their Federal taxes are necessary to fund Federal spending. We also live in a capitalist system, where most people have to work to earn income as a condition of their survival.

The big conservative argument for a universal basic income, and many neoliberals buy into it, is because it would be cheaper administratively and fairer than [our patchwork of social safety nets](#).

...One of the reasons that social safety nets are still standing to a degree is that they have business support. Food stamps are good for Big Ag. Medicaid provides more income to the medical industrial complex. And they separately are targeted to recognized human needs. Even people who believe that the poor are really malingerers are more willing to give their precious tax dollars to targeted spending than giving them a check that they stereotype will be used

for drugs or gambling.

(Yves Smith, ^œ[The Conversation About Basic Income is a Mess. Here's How to Make Sense of It, Naked Capitalism](#), April 6, 2017)

In an earlier posting she has explained her preference for a jobs guarantee rather than a universal basic income. (If I were quibbling (I agree with her position on this) I might suggest that the Speenhamland Decrees did not 'produce an unskilled underclass'; that was a consequence of the 18th century dispossession of small holders, displacement of rural laborers, and impoverishment of many of the 'little gentry' and remaining small landholders):

The reason I prefer a jobs guarantee (with an income guarantee at a lower income level) is that the time an income guarantee was implemented on an open-ended, long term basis, it produced an unskilled underclass (see ^œ[our post on the Speenhamland system](#) for more detail).

Moreover, the idea that people are brimming with all sorts of creative things they'd do if they had an income to allow themselves to do it is bunk. For instance, MacArthur Foundation grant recipients, arguably some of the ... most creative people in society, almost without exception do not do anything productive while they have their grant funding. And let us not kid ourselves: most people are not creative and need structure and pressure to get anything done.

Finally, humans are social animals. Work provides a community. If you are extraverted and need to be around people during the day, it's hard to create enough opportunities for interaction on your own. (Yves Smith, ^œ[F@ck Work?, Naked Capitalism](#), January 5, 2017)

1072 The statement

'funded through the recirculation of existing credit, rather than the generation of new credit'

and others like it in the text is a lapse into neoliberal shorthand which should be avoided! It is such a tempting shorthand!! In fact, though verbose, this should have been stated as

'funded through the creation of credit, matched by the withdrawal of existing credit from gross accumulations of credit within the society'.

1073 There seems little to suggest that redistribution has negative 'economic' effects. See: Jonathan D. Ostry, Andrew Berg, and Charalambos G. Tsangarides, ^œ[Redistribution, Inequality and Growth](#) (IMF, Research Department, IMF Staff Discussion Note, February 2014) for an examination of the issues.

For an in-depth examination of "the trends and patterns in inequality and poverty for OECD and emerging countries" see the OECD site: ^œ[Income Inequality and Poverty](#)

Thomas Hungerford (2012) put it succinctly:

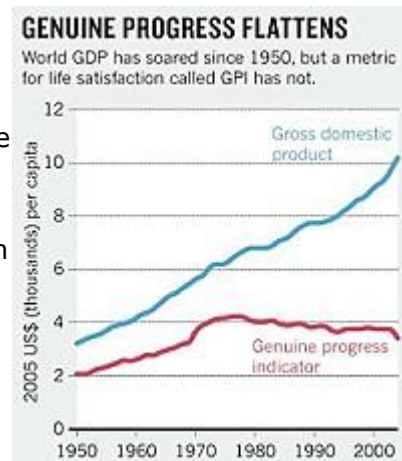

Throughout the late-1940s and 1950s, the top marginal tax rate was typically above 90%; today it is 35%. Additionally, the top capital gains tax rate was 25% in the 1950s and 1960s, 35% in the 1970s; today it is 15%.

The real GDP growth rate averaged 4.2% and real per capita GDP increased annually by 2.4% in the 1950s. In the 2000s, the average

real GDP growth rate was 1.7% and real per capita GDP increased annually by less than 1%.

Robert Costanza *et al* (2014) have questioned the usefulness of GDP measures and proposed alternatives:

Robert F. Kennedy once said that a country's gross domestic product (GDP) measures "everything except that which makes life worthwhile". The metric was developed in the 1930s and 1940s amid the upheaval of the Great Depression and global war. Even before the United Nations began requiring countries to collect data to report national GDP, Simon Kuznets, the metric's chief architect, had warned against equating its growth with well-being.

GDP measures mainly market transactions. It ignores social costs, environmental impacts and income inequality. If a business used GDP-style accounting, it would aim to maximize gross revenue - even at the expense of profitability, efficiency, sustainability or flexibility. That is hardly smart or sustainable (think Enron). Yet since the end of the Second World War, promoting GDP growth has remained the primary national policy goal in almost every country. (Robert Costanza *et al*, ^{oe}[Development: Time to leave GDP behind](#), *Nature* 505, 283 - 285 (16 January 2014))

¹⁰⁷⁴ Bill Black has summed up capitalist plutocracy well:

Von Hayek was one [of] the principal framers of that immoral moral code that glorifies plunder by CEOs. Libertarians glorify von Hayek's bigoted glorification of elites as our moral superiors who have a right to rule and plunder our Nation. Tyler Cowen calls plutocracy and pervasive plunder a "hyper-meritocracy," but it is a rule by the most unethical for the most venal of purposes and it is the greatest enemy of merit and justice.

(William K. Black, ^{oe}[Why the Worst Get on Top - in Economics and as CEOs](#), *New Economic Perspectives*, June 11, 2014)

Of course, technically speaking, governments do not 'redistribute' tax revenues. However, in practical terms, since governments must control the supply of credit in order to limit inflationary pressures and retain confidence in the value of credit, the money supply needs to be kept stable and so, effectively, credit withdrawn through taxation is replaced by 'redistributed' credit. The short-hand for all this, while a little misleading is nonetheless useful: Governments redistribute credit clawed back through taxation and similar forms of revenue collection.

¹⁰⁷⁵ This appeal to 'crisis funding', particularly for military purposes, has continued to justify 'crisis' [funding of US military activities](#) to the present. To justify military spending, link it to a 'crisis'!

While Roosevelt's appeal to sacrifice for the war effort was justified and used, quite deliberately, as a means to introduce high marginal tax rates on the wealthy, it's legacy, with the triumph of neoliberalism, has been support of the military industrial complex, even as marginal tax rates on the wealthy have been constantly reduced.

Roosevelt spelt out his vision for wealth redistribution in an April, 1942 fireside chat to the American people in which he explained: "I do not think that any American citizen should have a net income in excess of \$25,000 per year after payment of taxes" ([∞]about \$370,000 in 2017):

...Although the treacherous attack on Pearl Harbor was the immediate cause of our entry into the war, that event found the American people spiritually prepared for war on a world-wide scale. We went into this war fighting. We know what we are fighting for. We realize that the war has become what Hitler originally proclaimed it to be- a total war.

Not all of us can have the privilege of fighting our enemies in distant parts of the world.

Not all of us can have the privilege of working in a munitions factory or a shipyard, or on the farms or in oil fields or mines, producing the weapons or the raw materials that are needed by our armed forces.

But there is one front and one battle where everyone in the United States-every man, woman, and child-is in action, and will be privileged to remain in action throughout this war. That front is right here at home, in our daily lives, and in our daily tasks. Here at home everyone will have the privilege of making whatever self-denial is necessary, not only to supply our fighting men, but to keep the economic structure of our country fortified and secure during the war and after the war.

This will require, of course, the abandonment not only of luxuries but of many other creature comforts.

Every loyal American is aware of his individual responsibility. Whenever I hear anyone saying "The American people are complacent-they need to be aroused," I feel like asking him to come to Washington to read the mail that floods into the White House and into all departments of this Government. The one question that recurs through all these thousands of letters and messages is: "What more can I do to help my country in winning this war?"

To build the factories, to buy the materials, to pay the labor, to provide the transportation, to equip and feed and house the soldiers, sailors, and marines, and to do all the thousands of things necessary in a war-all cost a lot of money, more money than has ever been spent by any Nation at any time in the long history of the world.

We are now spending, solely for war purposes, the sum of about \$100,000,000 every day in the week. But, before this year is over, that almost unbelievable rate of expenditure will be doubled.

All of this money has to be spent-and spent quickly-if we are to produce within the time now available the enormous quantities of weapons of war which we need. But the spending of these tremendous sums presents grave danger of disaster to our national economy.

When your Government continues to spend these unprecedented sums for munitions month by month and year by year, that money goes into the pocketbooks and bank accounts of the people of the United States. At the same time raw materials and many

manufactured goods are necessarily taken away from civilian use; and machinery and factories are being converted to war production.

You do not have to be a professor of mathematics or economics to see that if people with plenty of cash start bidding against each other for scarce goods, the price of those goods goes up.

Yesterday I submitted to the Congress of the United States a seven-point program of general principles which taken together could be called the national economic policy for attaining the great objective of keeping the cost of living down.

I repeat them now to you in substance:

First. We must, through heavier taxes, keep personal and corporate profits at a low reasonable rate.

Second. We must fix ceilings on prices and rents.

Third. We must stabilize wages.

Fourth. We must stabilize farm prices.

Fifth. We must put more billions into war bonds.

Sixth. We must ration all essential commodities which are scarce.

Seventh. We must discourage installment buying, and encourage paying off debts and mortgages.

I do not think it is necessary to repeat what I said yesterday to the Congress in discussing these general principles.

The important thing to remember is that each one of these points is dependent on the others if the whole program is to work.

Some people are already taking the position that every one of the seven points is correct except the one point which steps on their own individual toes. A few seem very willing to approve self-denial on the part of their neighbors. The only effective course of action is a simultaneous attack on all of the factors which increase the cost of living, in one comprehensive, all-embracing program covering prices, and profits, and wages, and taxes and debts.

The blunt fact is that every single person in the United States is going to be affected by this program. Some of you will be affected more directly by one or two of these restrictive measures, but all of you will be affected indirectly by all of them.

Are you a businessman, or do you own stock in a business corporation? Well, your profits are going to be cut down to a reasonably low level by taxation. Your income will be subject to higher taxes. Indeed in these days, when every available dollar should go to the war effort, I do not think that any American citizen should have a net income in excess of \$25,000 per year after payment of taxes.

Are you a retailer or a wholesaler or a manufacturer or a farmer or a landlord? Ceilings are being placed on the prices at which you can sell your goods or rent your property.

Do you work for wages? You will have to forego higher wages for your particular job for the duration of the war.

(Franklin D. Roosevelt: ^œ"Fireside Chat," April 28, 1942. Online by

1076 (25/05/16) While, at the time, appeal by the New Deal's architects to 'patriotic' sacrifice for the war effort and for post-war reconstruction seemed like a good idea - and, of course, worked! - it set in place [military \(and related\) spending](#) levers through which to trigger public support for US government deficits which have become institutionalized.

Appeals to patriotic support of the 'war' and 'post-war' responsibilities of the US soon morphed into appeals for public funding of major public works projects as means of keeping the country safe from international aggression. The US Federal Highway Administration, in its 50th Anniversary Web Site, invites visitors:

...to explore this Web site devoted to the Dwight D. Eisenhower System of Interstate and Defense Highways on its 50th anniversary. From the start on June 29, 1956, the Eisenhower Interstate System has been known as the Greatest Public Works Project in History.

Elsewhere on the site it explains the rationale for this "greatest public works project in history":

In the 1950's, the issue of evacuation was not in any sense frivolous at the height of the Cold War with the Soviet Union. For example, while President Dwight D. Eisenhower began lobbying congressional leaders on behalf of the highway proposal he would submit on February 22, 1955, he was preoccupied with the Formosa Straits crisis that erupted when the People's Republic of China appeared ready to cross the straits and attack Chinese Nationalists on Formosa (now called Taiwan) over control of the islands of Quemoy and Matsu. This was a major international crisis, as illustrated by Eisenhower biographer Stephen E. Ambrose's observation that, "the United States in early 1955 came closer to using atomic weapons than at any other time in the Eisenhower Administration."

For the President, the Formosa crisis illustrated the need for the Interstate System. He worried about evacuating Washington and other cities in the event of a nuclear attack. He knew the present roads were inadequate for that purpose. Still, in a meeting with legislative leaders on January 11, 1955, the Formosa crisis prompted a discussion of what would happen in the event of a nuclear attack on the United States. The President said he was worried about an atomic bomb attack, which prompted him to suggest the need for a plan to relocate Congress in an emergency... (US Federal Highway Administration, ^œ[Highway History, Interstate System](#), accessed 11 July, 2016)

Over the past half century and more [this same logic has been used](#) to justify a wide range of projects, often inadequately planned and poorly administered but protected from public scrutiny because they are 'necessary to the defense of the nation'.

Bill Hartung has examined US military funding in an essay subtitled 'Slush Funds, Smoke and Mirrors, and Funny Money Equal Weapons Systems Galore':

Now you see it, now you don't. Think of it as the Department of Defense's version of the street con game, three-card monte, or maybe simply as the Pentagon shuffle. In any case, the Pentagon's

budget is as close to a work of art as you're likely to find in the U.S. government - if, that is, by work of art you mean scam.

The United States is on track to spend more than \$600 billion on the military this year - more, that is, than was spent at the height of President Ronald Reagan's Cold War military buildup, and more than the military budgets of at least the next seven nations in the world combined. And keep in mind that that's just a partial total. As an analysis by the Straus Military Reform Project has shown, if we count related activities like homeland security, veterans' affairs, nuclear warhead production at the Department of Energy, military aid to other countries, and interest on the military-related national debt, that figure reaches a cool \$1 trillion.

The more that's spent on "defense," however, the less the Pentagon wants us to know about how those mountains of money are actually being used. As the only major federal agency that can't pass an audit, the Department of Defense (DoD) is the poster child for irresponsible budgeting.

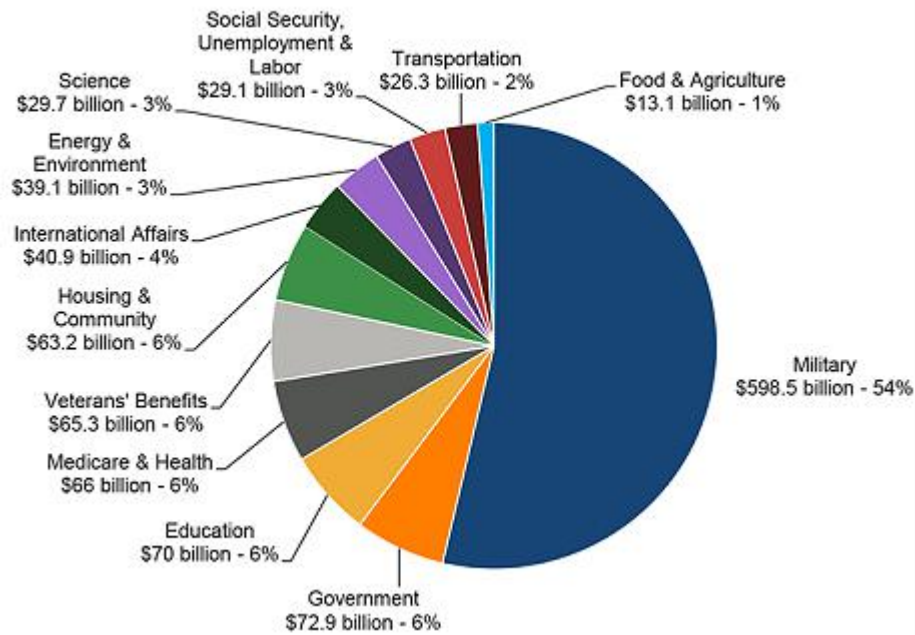

It's not just that its books don't add up, however. The DoD is taking active measures to disguise how it is spending the hundreds of billions of taxpayer dollars it receives every year - from using the separate "war budget" as a slush fund to pay for pet projects that have nothing to do with fighting wars to keeping the cost of its new nuclear bomber a secret. Add in dozens of other secret projects hidden in the department's budget and the Pentagon's poorly documented military aid programs, and it's clear that the DoD believes it has something to hide.

Don't for a moment imagine that the Pentagon's growing list of secret programs and evasive budgetary maneuvers is accidental or simply a matter of sloppy bookkeeping. Much of it is remarkably purposeful. By keeping us in the dark about how it spends our money, the Pentagon has made it virtually impossible for anyone to hold it accountable for just about anything. An entrenched bureaucracy is determined not to provide information that might be used to bring its sprawling budget - and so the institution itself - under control. That's why budgetary deception has become such a standard operating procedure at the Department of Defense. (William D. Hartung, ^œ[The Pentagon's War on Accountability: Slush Funds, Smoke and Mirrors, and Funny Money Equal Weapons Systems Galore](#), *TomDispatch*, May 24, 2016)

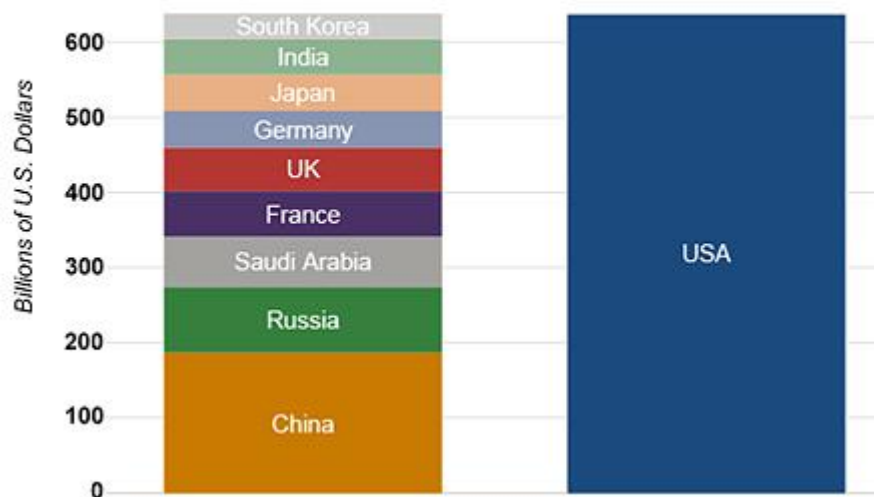

The website *National Priorities Project* has illustrated the degree to which, to the present, 'defense' dominates and justifies federal budgetary spending in the United States - a nation which, in its own mind, has, for more than half a century, been 'under threat':

In fiscal year 2015, military spending is projected to account for 54 percent of all federal discretionary spending, a total of \$598.5 billion. Military spending includes: all regular activities of the Department of Defense; war spending; nuclear weapons spending; international military assistance; and other Pentagon-related spending.

Discretionary Spending 2015: \$1.11 Trillion

U.S. and World Military Spending

(^œFighting for a U.S. federal budget that works for all Americans, *National Priorities Project*, Accessed 2 May 2016)

One should beware the ^œlaw of unintended consequences!

¹⁰⁷⁷ Oxfam America, in a report titled: *Broken at the Top: How America's Dysfunctional Tax System Costs Billions in Corporate Tax Dodging*, has painted a stark picture of the ways in which major corporations avoid taxation around the world:

The big picture on tax dodging

In every country in the world tax revenues pay for schools, hospitals, roads, bridges, first responders, social safety nets and other public services that keep societies running and reduce poverty.

Fair tax systems are vital to finance well-functioning and efficient states and to enable governments to fulfill their obligations to uphold citizens' rights to essential services such as healthcare, education and social protection for low income families. A well-

designed tax system can ensure that those who can afford it most make the largest contribution.

In developing countries in particular, where there is an immense need to strengthen health and education services for the hundreds of millions of people who still live in extreme poverty, revenues from taxes provide the most sustainable way to pay for teachers, doctors and police officers. Every dollar a developing country can raise in taxes is a dollar it does not need to seek from donors. Ultimately, the only way poor countries will be able to sustain themselves without relying on foreign aid is by creating a strong domestic tax base that can fund the essential public services and functioning governments their populations need.

However, national tax codes, as well as the international tax structure, can instead work in reverse so that the biggest burden falls on the poorest people. The current global tax architecture is secretive and uncoordinated, weakening the ability of governments to collect the taxes they are due. These rules facilitate cross-border tax dodging and the concealment of wealth. In particular, tax havens and offshore financial centers - which can be characterized by secrecy, low- or zero-tax rates and the almost complete lack of disclosure of any relevant business information - are the most obvious tools used to enable multinational corporations to escape taxes.

Exploiting tax loopholes and engaging in large-scale tax avoidance are integral components of the profit-making strategies of many multinational corporations. Tax avoidance, or tax dodging, means engaging in transactions which serve no commercial purpose other than to decrease the company's tax bill.

Tax dodging can take many forms. US corporations must pay 35% tax on all profits, wherever they are earned around the globe - but only after that money has been "repatriated" back to the US. Companies report that they have more than \$2 trillion of profits "permanently reinvested" abroad to avoid being taxed in the US - but companies actually can use that money in the US without paying tax by borrowing money domestically using these offshore assets as collateral.

Big corporations and their defenders in Washington, DC are quick to decry "double taxation" to justify their attempts to avoid repatriating their foreign profits and any attempts to close tax loopholes. But this excuse is a red herring. Companies receive a dollar-for-dollar credit for any amount of tax they pay to other countries. When US companies pay taxes to a foreign government, they lower their US tax bill by the same amount, so the profits are not taxed twice.

As a way to avoid paying the US's 35% statutory rate, companies artificially shift the ownership of assets (like patents or other intellectual property) to subsidiaries that exist only on paper in tax havens. For example, a US company might transfer its intellectual property rights to a Cayman Islands subsidiary, even if the underlying technology was developed in the United States. The US subsidiary of the company would then pay royalties to the Caymans subsidiary to use that intellectual property. That payment would decrease the profit of the US subsidiary, which faces the US tax

rate, and boost the profit of the Caymans subsidiary, which faces a low rate.

Even more insidious, companies engage in "earnings stripping" as another way to avoid paying their fair share of taxes. A subsidiary in a high tax country can borrow from a subsidiary in a low tax country enabling the parent company to essentially pay artificially high interest rates to itself. For the global company as whole, it's a wash - profits on one side match losses on the other - and no real business activity has occurred, except that the company's global tax bill is lower.

Perhaps the worst form of tax avoidance is an inversion - when a US company renounces its US citizenship by buying a foreign subsidiary in a low-tax jurisdiction, where it reincorporates. In some cases, nothing changes about the actual business - the new inverted company remains headquartered in the US and still conducts business from the US, enjoying all the advantages of the US market, but no longer pays its rightful share of US taxes.

Governments, including the US, are so far failing to crack down on the global practice of tax avoidance and the associated network of tax havens which enable it. Rather than coming together to stem harmful competition between countries, they are fighting to win a destructive race to the bottom that leaves everyone worse off.

(Oxfam America, *[Broken at the Top: How America's Dysfunctional Tax System Costs Billions in Corporate Tax Dodging](#)*, Oxfam Media Briefing, April 14, 2016)

¹⁰⁷⁸ Bill Mitchell, in a three-part series focusing on the importance of [political control of fiscal policy](#) in democratically organized capitalist nations, has explained this well:

...[T]he transition to a new economic order (that is, neoliberalism) - was achieved primarily through a gradual depoliticisation of economic policy: that is, through the hollowing out of national sovereignty and removal of macroeconomic policy from democratic (parliamentary) control, thereby effectively insulating the neoliberal transition from popular contestation.

...The various policies adopted by Western governments from the 1970s onwards to promote depoliticisation include:

- 1.Reducing the power of parliaments vis-à-vis that of governments and making the former increasingly less representative (for instance, by moving from proportional parliamentary systems to majoritarian ones).
- 2.Making central banks formally independent of governments, with the explicit aim of subjugating the latter to 'market-based discipline'. We note that this 'formality' does not create independence in a functional sense. Central banks and Treasury have to work hand-in-glove on a daily basis to ensure the monetary system functions, central bank boards are appointed by governments, and central bankers regularly deliver pronouncements on fiscal policy and thus enter the political process.
- 3.Adopting rules-bound policies - on public spending, debt as a proportion of GDP, competition, etc. - thereby limiting what politicians can do at the behest of their electorates; removing

controls over capital flows, thus reducing the ability of governments to exercise control over economic policy.

4. Signing trade and investment treaties, which severely limit the capacity of governments to regulate in the public interest. Allowing corporations the power to subjugate the decisions of parliaments if they impede private profit is the exemplar of the anti-democratic shifts under neoliberalism.
5. Surrendering national prerogatives to supranational institutions and para-state and super-state bureaucracies. Allowing the IMF to impose conditions on democratically-elected governments undermines democracy.

In this sense, the erosion of national sovereignty that we have witnessed in recent decades, rather than the consequence of external factors over which states allegedly have little control, should be considered, to a large degree, the result of a deliberate and voluntary reduction of sovereignty by nation-states themselves.

The reason why governments chose willingly to 'tie their hands' is all too clear: as the European case epitomises.

The creation of self-imposed 'external constraints' allowed national politicians to reduce the politics costs of the neoliberal transition - which clearly involved unpopular policies - by 'scapegoating' institutionalised rules and 'independent' or international institutions, which in turn were presented as an inevitable outcome of the new, harsh realities of globalisation.

Thus, the hollowing out of substantive democracy and curtailment of democratic controlling rights that has accompanied the neoliberal transition in recent decades should not be viewed as a separate development, possibly resulting from the pressures of economic and political internationalisation, but as an essential element of the neoliberal project.

The important point is that all these shifts have come with the participation and cooperation of the leaders of the nation states. All these shifts have come via changes to legislation and regulation at the behest of the governments involved.

Short of military invasion, neoliberal interests have to work through the legislative processes. They have to co-opt government to advance their interests at the expense of broader public interest.

The nation state has been hollowed out - but that situation (status) can only be maintained while the polity is cooperative and compliant.

A progressive new polity could unwind those shifts any time it chose, which is why the elites work so hard to keep those political positions subdued.

As I often note in presentations, if the nation state was powerless, why do corporate interests spend billions every year lobbying the politicians to advance their interests?

Answer: obvious!....

(Bill Mitchell, ^œ[The effectiveness and primacy of fiscal policy - Part 2](#), *EconomicOutlook.net*, April 1, 2019)

1079 A comment on a *New York Times* essay entitled 'Don't Let Our Democracy Collapse' sums up the process well:

Democracy is in decline. Mr. Hasen provides further reason to believe that U.S. citizens are now subject to competitive authoritarian rule.

I define "competitive authoritarianism" as:

- a polarized system in which the two major parties compete for donor dollars and base support and, when in power, impose the policies favored by donors and base on the citizenry as a whole;
- a system wherein the trappings of democracy remain in place, but in which democratic norms are undermined and democratic institutions, primarily through the influence of money in politics, are severely weakened;
- a system wherein government officials, in unprecedented ways, abuse state power to aid their allies and disadvantage their adversaries;
- a system in which the considered preferences of the majority of citizens are ignored and abuses of power go well beyond those associated with traditional patronage.

...Many citizens now believe: Since no governmental institution is bigger than the greed and lust for power that drives the person in charge, no institution is to be trusted.

(Andrew G. Bjelland, Sr, Commenter on Richard L. Hasen, ["Don't Let Our Democracy Collapse, New York Times, July 15, 2017"](#))

1080 Danny Sjursen summed Nixon up well:

...He was corrupt. He was petty, angry and resentful. He was also one of the most astute politicians in the annals of the American presidency. Time after time he overcame obstacles and defeats to rise again. His genius, ultimately, was this: He envisioned a new coalition and knew how to channel white resentment over the civil rights and antiwar movements into political triumph. This was his gift, and his legacy. Americans today inhabit the partisan universe that Richard Milhous Nixon crafted.

...Nixon remains an enigma. Though he crafted a lasting conservative majority among American voters, he also supported popular environmental and social welfare causes. He secretly bombed Laos and Cambodia and orchestrated a right-wing coup in Chile but also reached out to the Soviets and Chinese in a bold attempt to lessen Cold War tensions and achieve detente. A product of conflict, Nixon operated in the gray areas of life. Though the antiwar activists, establishment liberals and African-Americans generally hated him, Nixon won two presidential elections, cruising to victory for a second term.

He was popular, far more so than many would like to admit. Although the 1960s began as a time of prosperity and hope, they produced a president who operated from and exploited anxiety and fear, and in doing so found millions of supporters. Nixon was representative of the dark side of American politics, and no one tapped into the darkness as deftly as he did.

The key to his success was his ability to rally what he called the "silent majority" of frustrated Northern whites (most of whom traditionally were Democrats) and angry Southern whites (in what came to be known as his "Southern strategy"). It was cynical, and it worked.

(Danny Sjursen, ^œ[American History for Truthdiggers: Nixon's Dark Legacy](#), *truthdig*, May 18, 2019)

¹⁰⁸¹ Bacevich, in a *TomDispatch* contribution entitled 'Slouching Toward Mar-a-Lago', provides yet "another stab at an approach to governance worthy of a democratic republic":

Where to begin? I submit that Rabbit Angstrom's question offers a place to start: What's the point of being an American?

Authentic progressives and principled conservatives will offer different answers to Rabbit's query. My own answer is rooted in an abiding conviction that our problems are less quantitative than qualitative. Rather than simply more -- yet more wealth, more freedom, more attempts at global leadership -- the times call for different. In my view, the point of being an American is to participate in creating a society that strikes a balance between wants and needs, that exists in harmony with nature and the rest of humankind, and that is rooted in an agreed upon conception of the common good.

My own prescription for how to act upon that statement of purpose is unlikely to find favor with most readers of *TomDispatch*. But therein lies the basis for an interesting debate, one that is essential to prospects for stemming the accelerating decay of American civic life.

Initiating such a debate, and so bringing into focus core issues, will remain next to impossible, however, without first clearing away the accumulated debris of the post-Cold-War era. Preliminary steps in that direction, listed in no particular order, ought to include the following:

- First, abolish the Electoral College. Doing so will preclude any further occurrence of the circumstances that twice in recent decades cast doubt on the outcome of national elections and thereby did far more than any foreign interference to undermine the legitimacy of American politics.
- Second, rollback gerrymandering. Doing so will help restore competitive elections and make incumbency more tenuous.
- Third, limit the impact of corporate money on elections at all levels, if need be by amending the Constitution.
- Fourth, mandate a balanced federal budget, thereby demolishing the pretense that Americans need not choose between guns and butter.
[As ^œ[Yves Smith has cogently observed](#), Bacevich "...misguidedly calls for a [balanced Federal budget](#)..." - but, let's not lose sight of the [absurd imbalance](#) between funding of 'guns and butter' in the US and, increasingly, in many other Western 'democracies'.]
- Fifth, implement a program of national service, thereby eliminating the All-Volunteer military and restoring the

tradition of the citizen-soldier. Doing so will help close the gap between the military and society and enrich the prevailing conception of citizenship. It might even encourage members of Congress to think twice before signing off on wars that the commander-in-chief wants to fight.

- Sixth, enact tax policies that will promote greater income equality.
- Seventh, increase public funding for public higher education, thereby ensuring that college remains an option for those who are not well-to-do.
- Eighth, beyond mere "job" creation, attend to the growing challenges of providing meaningful work -- employment that is both rewarding and reasonably remunerative -- for those without advanced STEM degrees.
- Ninth, end the thumb-twiddling on climate change and start treating it as the first-order national security priority that it is.
- Tenth, absent evident progress on the above, create a new party system, breaking the current duopoly in which Republicans and Democrats tacitly collaborate to dictate the policy agenda and restrict the range of policy options deemed permissible.

These are not particularly original proposals and I do not offer them as a panacea. They may, however, represent preliminary steps toward devising some new paradigm to replace a post-Cold-War consensus that, in promoting transnational corporate greed, mistaking libertinism for liberty, and embracing militarized neo-imperialism as the essence of statecraft, has paved the way for the presidency of Donald Trump.

We can and must do better. But doing so will require that we come up with better and truer ideas to serve as a foundation for American politics.

(Andrew J. Bacevich, ^œ[Slouching Toward Mar-a-Lago: The Post-Cold-War Consensus Collapses](#), *TomDispatch*, August 8, 2017)

¹⁰⁸² In the early 21st century, the term *populism* has been used as shorthand for the demagoguery and neo-fascism which has emerged in response to the excesses of neoliberalism and globalization of the past fifty and more years. This is an entirely inappropriate use of the term. As a commenter on a *New York Times* article has explained:

Trump and his ilk are NOT "Populists"!

See definition below. Language matters! Why does the press persist in repeating this utterly inaccurate term?

Whatever we think of the likes of Trump and Le Pen, etc., they are not "Populists"!

pop-u-list

/ˈpäpy?l?st

» a person who holds, or who is concerned with, the views of ordinary people.

» a member of the Populist Party, a US political party formed in 1891 that advocated the interests of labor and farmers, free

coinage of silver, a graduated income tax, and government control of monopolies.

They have no REAL interest in "ordinary people", they're demagogues. And Trump's policies (healthcare, taxes) HURT "ordinary people." As for "graduated income tax, and government control of monopolies".... we know how he feels about that! (NYer, comment on Quinn Slobodian, ^œ[Trump, Populists and the Rise of Right-Wing Globalization](#), *New York Times*, October 22, 2018)

¹⁰⁸³ John Mearsheimer, in 2014, provided an interesting perspective on the importance to Russia of Ukraine's continued neutrality and of the Ukraine 'crisis' and coup. As he explained:

According to the prevailing wisdom in the West, the Ukraine crisis can be blamed almost entirely on Russian aggression. Russian President Vladimir Putin, the argument goes, annexed Crimea out of a long-standing desire to resuscitate the Soviet empire, and he may eventually go after the rest of Ukraine, as well as other countries in eastern Europe. In this view, the ouster of Ukrainian President Viktor Yanukovich in February 2014 merely provided a pretext for Putin's decision to order Russian forces to seize part of Ukraine.

But this account is wrong: the United States and its European allies share most of the responsibility for the crisis. The taproot of the trouble is NATO enlargement, the central element of a larger strategy to move Ukraine out of Russia's orbit and integrate it into the West. At the same time, the EU's expansion eastward and the West's backing of the pro-democracy movement in Ukraine - beginning with the Orange Revolution in 2004 - were critical elements, too. Since the mid-1990s, Russian leaders have adamantly opposed NATO enlargement, and in recent years, they have made it clear that they would not stand by while their strategically important neighbor turned into a Western bastion. For Putin, the illegal overthrow of Ukraine's democratically elected and pro-Russian president - which he rightly labeled a "coup" - was the final straw. He responded by taking Crimea, a peninsula he feared would host a NATO naval base, and working to destabilize Ukraine until it abandoned its efforts to join the West.

Putin's pushback should have come as no surprise. After all, the West had been moving into Russia's backyard and threatening its core strategic interests, a point Putin made emphatically and repeatedly. Elites in the United States and Europe have been blindsided by events only because they subscribe to a flawed view of international politics. They tend to believe that the logic of realism holds little relevance in the twenty-first century and that Europe can be kept whole and free on the basis of such liberal principles as the rule of law, economic interdependence, and democracy..

But this grand scheme went awry in Ukraine. The crisis there shows that realpolitik remains relevant - and states that ignore it do so at their own peril. U.S. and European leaders blundered in attempting to turn Ukraine into a Western stronghold on Russia's border. Now that the consequences have been laid bare, it would be an even greater mistake to continue this misbegotten policy....

(John J. Mearsheimer, ^œ[Why the Ukraine Crisis Is the West's Fault:](#)

1084 While issuing increasingly unconvincing explanations of Russia's military ambitions in Ukraine, the less than competent US threat of 'sanctions' against Russia in order to 'punish them' for their belligerence seems to be backfiring

Alastair Crooke has given a convincing explanation of how 'Ukraine has morphed - unexpectedly - from the Washington perspective from an 'useful distraction' to becoming Biden's dilemma'

Ukraine has morphed - unexpectedly - from the Washington perspective from an 'useful distraction' to becoming Biden's dilemma. Initially, a major info-war campaign on an unprecedented scale was thought to create a reason for Europe and America to impose 'Sanctions from Hell' that would put paid to Putin's supposed ambitions in Europe, and beyond.

This apocalyptic sanctions ploy had its roots in the 2014 era, when the then Crimea sanctions (wrongly) were believed to be so utterly catastrophic for Russia that Putin's future would be poised in the balance, bringing the possibility that he could be ousted by pro-western oligarchs. (Such was the mistaken analysis given to Angela Merkel by her own Intelligence Services).

It was so wrong: In 2014, Russia experienced only a mild recession (-2.2%), and in the event, its economy proved to be remarkably sanctions-proof, partly as a result of letting the Rouble 'float'. This old meme of sanctions being the 'neutron-bomb' for Putin has been washed, rinsed and repeated by those (same old) Russia hawks - even though Russia's economy is much more sanctions-proof today than it was in 2014. Thus the 'Sanctions from Hell' story has never held up; it is not credible.

The 'imminent invasion' frenzy perhaps, was thought by the hawks who seemed to have grabbed hold of the Washington 'war narrative', to be sufficient to goad Putin into military action - triggering these 'Mother of all Sanctions', or at the very least, a humiliating downsizing of the Russian forces adjacent to the Ukraine border:

(Alastair Crooke, ^œ[Turmoil Will Continue Until a Modified Global Order Emerges](#), *Strategic Culture Foundation*, 07 February, 2022)

1085 An article entitled 'How Democratic is China?' on the *Here Comes China* website provides an interesting perspective on China's 'bottom-up' driven governance.

Like America, China is a republic and, like America, says it is democratic, but how democratic is China? A glance at history is always a good starting point

The People are supreme, the state is secondary and the Ruler is the least important: only those who please the people can rule.

^œ[Mencius](#)

In Roman politics, citizens lost control of politicians after they elected them. It's one of the system's greatest weaknesses and it is no wonder that, like our Roman forebears, we regard government as our biggest problem: we cannot compel them to keep their promises.

Imagine that, instead of hiring eloquent amateurs, we hired professionals - sociologists, statisticians, political scientists, economists - and told them to create solutions to our problems identified by publicly conducted surveys. Then they should support state and local governments to implement policy solutions, track public satisfaction with them for a few years and discard failed policies. California would probably try Canadian medicare and if their medical bills fell fifty percent and Californians showed a three year gain in healthy life expectancy, we'd elect a thousand volunteers and send them - all expenses paid - to Washington so they could audit the results and pass legislation.

That's what China does and it's why their democracy resembles Proctor & Gamble more than Pericles of Athens.

(^œ[How Democratic is China?](#), *Here Comes China*, February 20, 2021)

Raymond Zhong and Cao Li, in an article subtitled

Beijing's drive to free itself from reliance on imported semiconductors has lifted start-ups and big firms alike. Some have flamed out. But there has been progress

have given a good description of the consequences of that Chinese view of themselves as interdependent with the surrounding social context (within which they share reciprocal responsibilities) that Tsui, Farh and Lih identified. Is it really one of those 'authoritarian', 'totalitarian' states so roundly condemned in the US?

China is in the midst of a mass mobilization for chip mastery, a quest whose aims can seem just as harebrained and impossible - at least until they are achieved - as sending rovers to the moon or dominating Olympic gold medals. In every corner of the country, investors, entrepreneurs and local officials are in a frenzy to build up semiconductor abilities, responding to a call from the country's leader, Xi Jinping, to rely less on the outside world in key technologies.

Their efforts are starting to pay off. China remains far from hosting real rivals to American chip giants like Intel and Nvidia, and its semiconductor manufacturers are at least four years behind the leading edge in Taiwan. Still, local companies are expanding their ability to meet the country's needs, particularly for products, such as smart appliances and electric vehicles, that have more modest requirements than supercomputers and high-end smartphones.

The turbocharged chip push could prove one of the most enduring legacies of President Trump's pugilistic trade policies toward China. By turning the country's dependence on foreign chips into a cudgel for attacking companies like Huawei, the administration made Chinese business and political leaders resolve never to be caught out that way again.

(Raymond Zhong and Cao Li, ^œ[With Money, and Waste, China Fights for Chip Independence](#), *New York Times*, December 24, 2020)

¹⁰⁸⁶ As Caitlin Johnstone has put it, in an insane world, madness looks moderate and sanity looks radical:

There are no moderate, mainstream centrists in the US-centralized empire. They do not exist.

It's not that moderate, mainstream centrism is an inherently impossible position. In a healthy world, that's exactly what the predominant worldview would be. But we do not live in a healthy world.

There are no moderate, mainstream centrists anywhere in the tight alliance of nations which function as a single empire on foreign policy, because that functional empire is built upon murder, terrorism, exploitation, oppression, ecocide and the stockpiling of armageddon weapons.

People who support the status quo of this empire are called "moderates", but, just like the so-called "moderate rebels" of Syria, they are in fact violent extremists.

This is the reality of living in a world that is profoundly psychologically unhealthy. If you make a career out of facilitating wars which cause explosives to be dropped from the sky on top of innocent human beings causing their bodies to be ripped to shreds and buried in rubble, then you are treated as an exemplar of ideal leadership and rewarded with prestigious positions in politics, punditry, book publishing and think tankery. If you oppose those same wars, you are marginalized and smeared as at best an extremist whack job and at worst a literal traitor conducting psyops for a foreign government.

Because the plutocratic class owns the political class which advances depraved plutocratic agendas and the media class which normalizes and justifies those agendas, a mainstream consensus has been forcibly manufactured that maintaining the oppressive, exploitative, omnicidal, ecocidal status quo is a good and sane thing to do. Voices which point out that this is bat shit crazy are marginalized and ignored when possible and smeared and demonized when necessary.

The ability of our plutocratic rulers and their lackeys to do this is the only reason why defenders of the status quo get to call themselves "centrists" and "moderates". It's not because their position is middle-of-the-road in any way whatsoever, it's because they stand in alignment with the consensus that has been deliberately artificially manufactured and shoved into the mainstream by sheer force of narrative control.

This consensus manufacturing is then carried home by a glitch in human cognition known as status quo bias, which causes us to tend toward holding to the familiar as a default preference and perceive the risk of losing what we have as far less favorable than the reward gaining something better.

(Caitlin Johnstone, ^œ[In An Insane World, Madness Looks Moderate And Sanity Looks Radical](#), CaitlinJohnstone.com, 07 July, 2020)

¹⁰⁸⁷ ZeroHedge.com, in an article entitled '^œ[Maduro Invokes Vietnam And Iraq Wars In Open Letter to the American People](#)' (08 February, 2019), described the situation in Venezuela:

Slamming US President Trump's aggressive statements "disrupting noble dialogue initiatives" promoted by Uruguay and Mexico, and backed by the Caribbean Community (CARICOM), Maduro warned of "dramatic consequences," and compared the current situation to the US involvement in Vietnam and the fake WMDs in Iraq.

They want to invade and intervene in Venezuela - they say, as they said then - in the name of democracy and freedom. But it's not like that. The history of the usurpation of power in Venezuela is as false as the weapons of mass destruction in Iraq. It is a false case, but it can have dramatic consequences for our entire region. -Nicolás Maduro

Maduro has demanded that the US stop its aggression towards Venezuela, including trying to "suffocate our economy," and "the serious and dangerous threats of military intervention.

As they explained: 'Venezuelan President Nicolas Maduro has penned an open letter to the people of the United States, warning that Washington is "willing to send their sons and daughters to die in an absurd war":

An Open Letter to the American People from President Nicolas Maduro

If I know anything, it is about peoples, such as you, I am a man of the people. I was born and raised in a poor neighborhood of Caracas. I forged myself in the heat of popular and union struggles in a Venezuela submerged in exclusion and inequality. I am not a tycoon, I am a worker of reason and heart, today I have the great privilege of presiding over the new Venezuela, rooted in a model of inclusive development and social equality, which was forged by Commander Hugo Chávez since 1998 inspired by the Bolivarian legacy.

We live today a historical trance. There are days that will define the future of our countries between war and peace. Your national representatives of Washington want to bring to their borders the same hatred that they planted in Vietnam. They want to invade and intervene in Venezuela - they say, as they said then - in the name of democracy and freedom. But it's not like that. The history of the usurpation of power in Venezuela is as false as the weapons of mass destruction in Iraq. It is a false case, but it can have dramatic consequences for our entire region.

Venezuela is a country that, by virtue of its 1999 Constitution, has broadly expanded the participatory and protagonist democracy of the people, and that is unprecedented today, as one of the countries with the largest number of electoral processes in its last 20 years. You might not like our ideology, or our appearance, but we exist and we are millions.

I address these words to the people of the United States of America to warn of the gravity and danger that intend some sectors in the White House to invade Venezuela with unpredictable consequences for my country and for the entire American region. President Donald Trump also intends to disturb noble dialogue initiatives promoted by Uruguay and Mexico with the support of CARICOM for a peaceful solution and dialogue in favour of Venezuela. We know that for the good of Venezuela we have to sit down and talk, because to refuse to dialogue is to choose strength as a way. Keep in mind the words of John F. Kennedy: "Let us never negotiate out of fear. But let us never fear to negotiate". Are those who do not want to dialogue afraid of the truth?

The political intolerance towards the Venezuelan Bolivarian model and the desires for our immense oil resources, minerals and other great riches, has prompted an international coalition headed by the

US government to commit the serious insanity of militarily attacking Venezuela under the false excuse of a non-existent humanitarian crisis.

The people of Venezuela have suffered painfully social wounds caused by a criminal commercial and financial blockade, which has been aggravated by the dispossession and robbery of our financial resources and assets in countries aligned with this demented onslaught.

And yet, thanks to a new system of social protection, of direct attention to the most vulnerable sectors, we proudly continue to be a country with high human development index and lower inequality in the Americas.

The American people must know that this complex multiform aggression is carried out with total impunity and in clear violation of the Charter of the United Nations, which expressly outlaws the threat or use of force, among other principles and purposes for the sake of peace and the friendly relations between the Nations.

We want to continue being business partners of the people of the United States, as we have been throughout our history. Their politicians in Washington, on the other hand, are willing to send their sons and daughters to die in an absurd war, instead of respecting the sacred right of the Venezuelan people to self-determination and safeguarding their sovereignty.

Like you, people of the United States, we Venezuelans are patriots. And we shall defend our homeland with all the pieces of our soul. Today Venezuela is united in a single clamor: we demand the cessation of the aggression that seeks to suffocate our economy and socially suffocate our people, as well as the cessation of the serious and dangerous threats of military intervention against Venezuela. We appeal to the good soul of the American society, victim of its own leaders, to join our call for peace, let us be all one people against warmongering and war.

Long live the peoples of America!

Nicolás Maduro

President of the Bolivarian Republic of Venezuela

¹⁰⁸⁸ Branko Marcetic, in a *Jacobin* posting entitled ¹⁰⁹['For Many Afghans, the US Occupation Was Just as Bad as the Taliban'](#) (19 August, 2021), has reminded us of the 'recklessness and sadism' of Coalition troops in Afghanistan:

...[A] modicum of intellectual honesty means acknowledging that human rights violations were rampant long before US and coalition troops got out, and that they were the ones who were carrying them out.

It's worth remembering the United States is currently under investigation by the International Criminal Court, where prosecutors say they have evidence US troops and the CIA "committed acts of torture, cruel treatment, outrages upon personal dignity, rape and sexual violence" against Afghan detainees. A lot of this is along the lines of the typical kinds of stories we've heard come out of Guantanamo Bay, but it also went further, including beating men on their testicles, and forced "rectal feeding" of alleged hunger strikers

that was so harsh, it gave one detainee "chronic hemorrhoids, an anal fissure, and symptomatic rectal prolapse."

These kinds of atrocities have been carried out by US forces and their Afghan allies from the very start of the invasion, as compiled by Human Rights Watch, the premier liberal human rights organization that, within the human rights world, has mainly been criticized for being too friendly to Washington.

1089 There are several reasons which can be entertained in explaining the ubiquitous failure of US attempts at '[military training' for and in other nations](#). It is not hard to imagine that those who have witnessed the consequences of US training of their nations' armed forces might be deeply concerned about the [possible problems which might arise](#) in their own backyards as a result of such training!

Rachel Tecott has cogently explained some of the problems with US attempts at training and equipping armed forces in other nations:

The United States' effort to strengthen the Afghan security forces has come to an ignominious end. The U.S. military spent 20 years and \$83 billion building up a force that melted away in a matter of weeks, ceding the country to the Taliban over that period with barely a shot fired.

The swift collapse of the Afghan security forces is not an outlier. In fact, it is closer to the norm for local security forces built up with U.S. military assistance. The United States' three largest efforts to build partner militaries' - in Vietnam, Iraq, and now Afghanistan' - have all failed spectacularly. There is good reason the images coming out of Kabul conjure up Saigon in 1975 and Mosul in 2014.

What the military calls "security force assistance," "building partner capacity," or "train-and-equip operations" remains a pillar of U.S. defense strategy. Setting Afghanistan and Iraq entirely aside, the United States spends billions of dollars every year and deploys thousands of personnel to train and assist foreign militaries from countries all over the world. Although the purpose of such assistance varies, its main goal is to increase the capacity of partner militaries to shoulder local security burdens so that the United States can shift its own resources to higher priorities.

The problem, however, is that the United States' partners are often uninterested in building militaries that can fight. As Georgetown University Professor Caitlin Talmadge has shown, political and military leaders have to foster the promotion of competent officers, enforce a chain of command, encourage rigorous training, and put a lid on corruption to create an effective force.

But in the weak or failed states where the United States focuses its security assistance, leaders often prioritize their personal and political survival over strengthening their nations' militaries. These leaders often aim to use their military as a source of patronage or as a cudgel against their domestic political opponents. They may welcome the largess of U.S. military assistance, but they fear building a professional force that could threaten their own power. So they ignore the pleas of U.S. military advisers, implementing policies that keep their militaries weak.

(Rachel Tecott, ^{oe}[Why America Can't Build Allied Armies: Afghanistan Is Just the Latest Failure](#), *Foreign Affairs*, August 26, 2021)

¹⁰⁹⁰ Jonathan Steele, in a *Guardian* article entitled '[10 myths about Afghanistan](#)' (28/09/2011), summarized 10 of the foci in his book *Ghosts of Afghanistan: Hard Truths and Foreign Myths*, providing a clear explanation of the 'many enduring myths [which] have grown up about the war-torn country' of Afghanistan. As he explained:

Armed opposition to the government in Kabul long pre-dated the arrival of Soviet troops in December 1979. Every one of the Pakistan-based Afghan mujahideen leaders who became famous during the 1980s as the Peshawar Seven and were helped by the United States, Pakistan, Saudi Arabia and China had gone into exile and taken up arms before December 1979, many of them years earlier. As Islamists, they opposed the secular and modernising tendencies of Daoud Khan, [the Afghan PM] who toppled his cousin, King Zahir Shah, in 1973.

Western backing for these rebels had also begun before Soviet troops arrived. It served western propaganda to say the Russians had no justification for entering Afghanistan in what the west called an aggressive land grab. In fact, US officials saw an advantage in the mujahedin rebellion which grew after a pro-Moscow government toppled Daoud in April 1978. In his memoirs, Robert Gates, then a CIA official and later defence secretary under Presidents Bush and Obama, recounts a staff meeting in March 1979 where CIA officials asked whether they should keep the mujahideen going, thereby "sucking the Soviets into a Vietnamese quagmire". The meeting agreed to fund them to buy weapons.

¹⁰⁹¹ All those countries included within the 'anti-communist' 'Western Alliance'.

¹⁰⁹² The site [Justifications for War: WMDs and Other Issues](#) provides a well-documented summation of the 'justificatory' distortions of truth and outright lying engaged in by US and other Western leaders and their supporters in the leadup to the various Middle Eastern invasions from 2002~. As Carne Ross testified to the Chilcot Inquiry (July 12, 2010):

...The UK government's assessments about the threat from Iraq were "intentionally and substantially exaggerated" for the public, to the point that the statements made were essentially lies. He also stated that the UK government did not consider, let alone pursue non-violent alternatives prior to the Iraq invasion in 2003 in contravention of just war theory and international law.

An MSNBC report in 2013 provides a salutary summation of US justifications of its Middle East adventures:

As the Obama White House vigorously defends its policy of using drone strikes to kill suspected terrorists - including in some cases American citizens - it invokes the findings of secret intelligence showing that the targets pose an "imminent" threat to the U.S.

But there's a powerful reason to be perennially skeptical of such claims-and perhaps never more so than now, as the country approaches a sobering historic moment: the tenth anniversary of President George W. Bush's invasion of Iraq.

The war that began March 19, 2003, was justified to the country by alarming claims that Iraqi leader Saddam Hussein had weapons of mass destruction and connections to al-Qaida terrorists - almost all of which turned out to be false. Some of the most senior officials in

the U.S. government, including President Bush himself, Vice President Dick Cheney and Secretary of Defense Donald Rumsfeld, asserted these claims in public with absolute confidence, even while privately, ranking U.S. military officers and intelligence professionals were voicing their doubts. *Hubris: The Selling of the Iraq War*, a documentary special hosted by Rachel Maddow (and based on a book I co-authored with David Corn), provides new evidence that the dissent within the administration and military was even more profound and widespread than anybody has known until now.

"It was a shock, it was a total shock-I couldn't believe the vice president was saying this," Gen. Anthony Zinni, the former commander in chief of U.S. Central Command, told me in an interview for the documentary. Zinni, who had access to the most sensitive U.S. intelligence on Iraq, was on a stage in Nashville, Tennessee, receiving an award from the Veteran of Foreign Wars on August 26, 2002, when he heard the vice president launch the opening salvo in the Bush administration's campaign to generate public support for an invasion. "Simply stated, there is no doubt that Saddam Hussein now has weapons of mass destruction," Cheney said. "There is no doubt he is amassing them to use against our friends, against our allies and against us." Zinni, sitting right next to Cheney's lectern, says he "literally bolted" when he heard the vice president's comments. "In doing work with the CIA on Iraq WMD [weapons of mass destruction], through all the briefings I heard at Langley, I never saw one piece of credible evidence that there was an ongoing program."

(MSNBC Documentaries, [How the Bush administration sold the Iraq war](#), 03/22/13)

¹⁰⁹³ While rumors of prisoner torture and rank humiliation abounded during the Vietnam War, US armed forces and government/ political spokespeople routinely denied the activity. They knew that US citizens and allies would rebel against any such acknowledged activity. It was always subject to 'plausible denial'.

That was the mid-20th century.

By the end of the first decade of the 21st century, the perpetrators had grown in confidence. 'Everyone' now knew that prisoners were routinely tortured and humiliated in the interests of 'intelligence gathering'.. But, of course, it never happened on US soil!

Matt Apuzzo, Sheri Fink and James Risen, in a disturbing (would that it were more than that!) report subtitled 'Beatings, sleep deprivation, menacing and other brutal tactics have led to persistent mental health problems among detainees held in secret C.I.A. prisons and at Guantánamo' detail some of the consequences:

Before the United States permitted a terrifying way of interrogating prisoners, government lawyers and intelligence officials assured themselves of one crucial outcome. They knew that the methods inflicted on terrorism suspects would be painful, shocking and far beyond what the country had ever accepted. But none of it, they concluded, would cause long lasting psychological harm.

Fifteen years later, it is clear they were wrong

After enduring agonizing treatment in secret C.I.A. prisons around the world or coercive practices at the military detention camp at Guantánamo Bay, Cuba, dozens of detainees developed persistent

mental health problems, according to previously undisclosed medical records, government documents and interviews with former prisoners and military and civilian doctors. Some emerged with the same symptoms as American prisoners of war who were brutalized decades earlier by some of the world's cruelest regimes.

(Matt Apuzzo, Sheri Fink and James Risen, ⁹⁹[How U.S. Torture Left Legacy of Damaged Minds](#), *New York Times*, October 8, 2016)

How long before such atrocities become accepted interrogation 'techniques' within the borders of the United States of America?

¹⁰⁹⁵ Marriner Eccles: Governor, US Federal Reserve Board (1934-1948) and Governor, Board of Governors of the FRB (1948-1951).

[How to unzip a file on an iOS/Kindle/Android/.. Reader](#)

To unzip a file in the MS Windows system, simply double-click the downloaded file and drag its contents onto the desktop (or elsewhere). The file will be expanded by Windows.

For iOS:: consult file compression information for your machine - I no longer recommend using WinZip as it seems to have been acquired by new owners who have degraded the program - it no longer has the functionality which the earlier versions of the app had.

Most Android readers have built-in compressed file extraction features which operate in the same way as those files in Windows (double-click the '.zip' file and drag its contents to the desktop or elsewhere. The operating system will automatically 'unpack' the contents).

(^œ[See here for other operating system compressed file extractors](#))

<p>result in a rapid rate of ice melt in the Arctic</p> <p>Date: 14/08/2020 There are limits to atmospheric warming beyond which feedback mechanisms take over</p> <p>Date: 13/08/2020 Tropical forest soil carbon is highly sensitive to warming creating a positive feedback to climate change</p> <p>Date: 12/08/2020 The Limits of our ability to implement solutions we know could have averted looming disasters. Is it now too late?</p> <p>Date: 07/08/2020 Time to get ready for Summer: It is also time for Government of & by the People in this increasingly insecure & uncertain neoliberally driven Covid-19 world</p> <p>.....</p> <p>It's that time of year (getting earlier by the year - a week or two earlier than last year): everything is starting to grow again. The place has been looking rather unkempt and needing attention. Lawns are already being mowed, next winter's firewood is already being felled, cut up and stacked and the residue burned (I'm only writing this because a blast of Antarctic weather with strong winds and intermittent light rain is keeping me indoors - a large eucalypt I felled yesterday is awaiting my attention once the weather improves). Sugar Gum seedlings (E. Cladocalyx) are ready for planting as trees which do not coppice are felled (yesterday's eucalypt will coppice!). This time last year wildfires were already burning along the east coast of Australia and in my neck of the woods rainfall totals this year have been below 50% of the average. It's time to collect the understory detritus which has been accumulating through winter and mulch what's left (a cloud of dust accompanies my efforts when I do this - I'm not just wearing a mask for Covid-19 reasons these days, I also need one when mulching under trees). It won't be long before the next fire season is declared. So, updates are likely to be increasingly sporadic over the next month or two.</p> <p>Date: 05/08/2020 The stage is set for climate driven natural disasters Atmospheric GHGs now guarantee escalating catastrophe</p>	<p>'Resource-Rich' nations has TRIPLED since 1970 to feed insatiable consumptive appetites</p> <p>Date: 25/07/2020 Every dollar we've provided is borrowed money that our children and grandchildren will have to repay</p> <p>Date: 23/07/2020 Oh no! What will "share the scraps" jobs focus on next?</p>	<p>Morality to Expediency: Secret detention & torture by the CIA in the 'War on Terror'</p> <p>Date: 09/09/2019 Economic Efficiency & the Virtues of Deregulation The balance between pain & gain: the Pareto Optimum</p>
<p>August 2019:</p> <p>Date: 24/08/2019 US 'leaders' enthralled by magical thinking: Take from the poor; give to the rich: It will trickle down!</p> <p>Date: 19/08/2019 Presumptuous hubris & military adventures Impulsive Bullying as US foreign policy & practice</p> <p>It's that time of year (getting earlier by the year!): everything is starting to grow again. The place looks rather unkempt and needing attention. Lawns need to be mowed, next winter's firewood felled, cut up and stacked and the residue burned. I've already planted 20+ trees (E. polyanthemos & camaldulensis - 'Koala' trees) and have another 15 seedlings (E. melliodora (also Koala fodder) & cladocalyx) to be planted - replacing the trees used for next winter's firewood. Given the wildfires already burning along the east coast of Australia, it's time to collect the understory detritus which has been accumulating through winter before the next fire season is declared (this has already occurred elsewhere). So, updates are likely to be increasingly sporadic over the next month or two.</p> <p>Date: 12/08/2019 Rapid disintegration of global marine resources: Ecosystems that indirectly sustain billions of people</p> <p>Date: 11/08/2019 the assault on Western workers has intensified for those precariously employed: contingent, gig and other contract workers</p>	<p>July 2019:</p> <p>Date: 30/07/2019 What predatory creditors want is not the interest but debtors' assets: to own & control their labor, property & lives</p> <p>Date: 23/07/2019 A 'reserve currency' nation losing credibility: Using Reserve Currency powers to enforce political/military ambitions</p> <p>Date: 22/07/2019 It's War: US violation of their international treaties: Losing control of a world they believed they 'owned'</p> <p>Date: 17/07/2019 Deficits... represent sinful profligate spending This fallacy is based on a false analogy to borrowing by individuals</p> <p>Date: 12/07/2019 National borders & parochial legislatures as impediments; 'Free trade' as a means to Gross accumulations of 'wealth'</p> <p>Date: 09/07/2019 Once we're over the ocean-carbon threshold... ocean acidification, species die-offs, and more become inevitable!</p> <p>Date: 07/07/2019 Is Trump an "inept," "insecure" & "incompetent" leader? August 2016: Date: 30/08/2016 Spring has arrived early this year, the weeds are taking over; dogs are becoming lost in what should be 'lawns'; next year's firewood has to be felled, cut up and stacked; and debris burned in preparation for the fire season, so updates will be spasmodic over coming weeks! Date: 25/08/2016 Date: 24/08/2016 Date: 21/08/2016 Date: 18/08/2016 Date: 14/08/2016 Date: 12/08/2016 Date: 10/08/2016 Date: 09/08/2016 Date: 08/08/2016 Date: 07/08/2016 Date: 06/08/2016 Date: 05/08/2016 Date: 04/08/2016 Date: 01/08/2016	July 2016: Date: 31/07/2016 Date: 30/07/2016 Date: 29/07/2016 Date: 26/07/2016 Date: 25/07/2016 Date: 24/07/2016 Date: 23/07/2016 Date: 22/07/2016 Date: 21/07/2016 Date: 20/07/2016 Date: 19/07/2016 Date: 18/07/2016 Date: 17/07/2016 Date: 16/07/2016 Date: 14/07/2016 Date: 13/07/2016 Date: 11/07/2016 Date: 08/07/2016 Date: 07/07/2016 Date: 06/07/2016 Date: 03/07/2016 Date: 02/07/2016 Date: 01/07/2016	June 2016: Date: 30/06/2016 Date: 28/06/2016 Date: 27/06/2016 Date: 24/06/2016 Date: 23/06/2016 Date: 22/06/2016 Date: 21/06/2016 Date: 20/06/2016 Date: 17/06/2016 Date: 16/06/2016 Date: 15/06/2016 Date: 12/06/2016 Date: 10/06/2016 Date: 09/06/2016 Date: 08/06/2016 Date: 07/06/2016 Date: 06/06/2016 Date: 05/06/2016 Date: 03/06/2016 Date: 01/06/2016	May 2016: Date: 30/05/2016 Date: 28/05/2016 Date: 26/05/2016 Date: 25/05/2016 Date: 24/05/2016 Date: 21/05/2016 Date: 19/05/2016 Date: 16/05/2016 Date: 15/05/2016 Date: 14/05/2016 Date: 08/05/2016 Date: 07/05/2016 Date: 03/05/2016 Date: 02/05/2016
